# CHAPTER 20.620
# CENTRAL PARK SUBAREA PLAN

Sections:

20.620.010 Purpose.

20.620.020 Central Park Plan Area.

20.620.030 Plan Documents.

## 20.620.010 Purpose.

*Purpose*. Prominently located at the Columbia River gateway to Washington state and the Vancouver City Center, the Central Park Planning area possesses unique public destinations of national, state and local significance. The 2008 Central Park Plan envisions a unified sense of place by celebrating a shared historic landscape, announcing gateways into the plan area and to key features, establishing an enhanced and cohesive great street and interconnecting trail network within the plan area and to its neighbors. At the same time, allow the distinct public use and characteristics of the three districts to expand and flourish.

## 20.620.020 Central Park Subarea Plan.

*Establishment of Boundaries*. In general, the Columbia River to the south, Interstate 5 to the west, Fourth Plain Boulevard to the north and East Reserve Street to the east define the plan area, as illustrated in Figure 20.620.020-1.

**FIGURE 20.620.020-1: CENTRAL PARK SUBAREA**

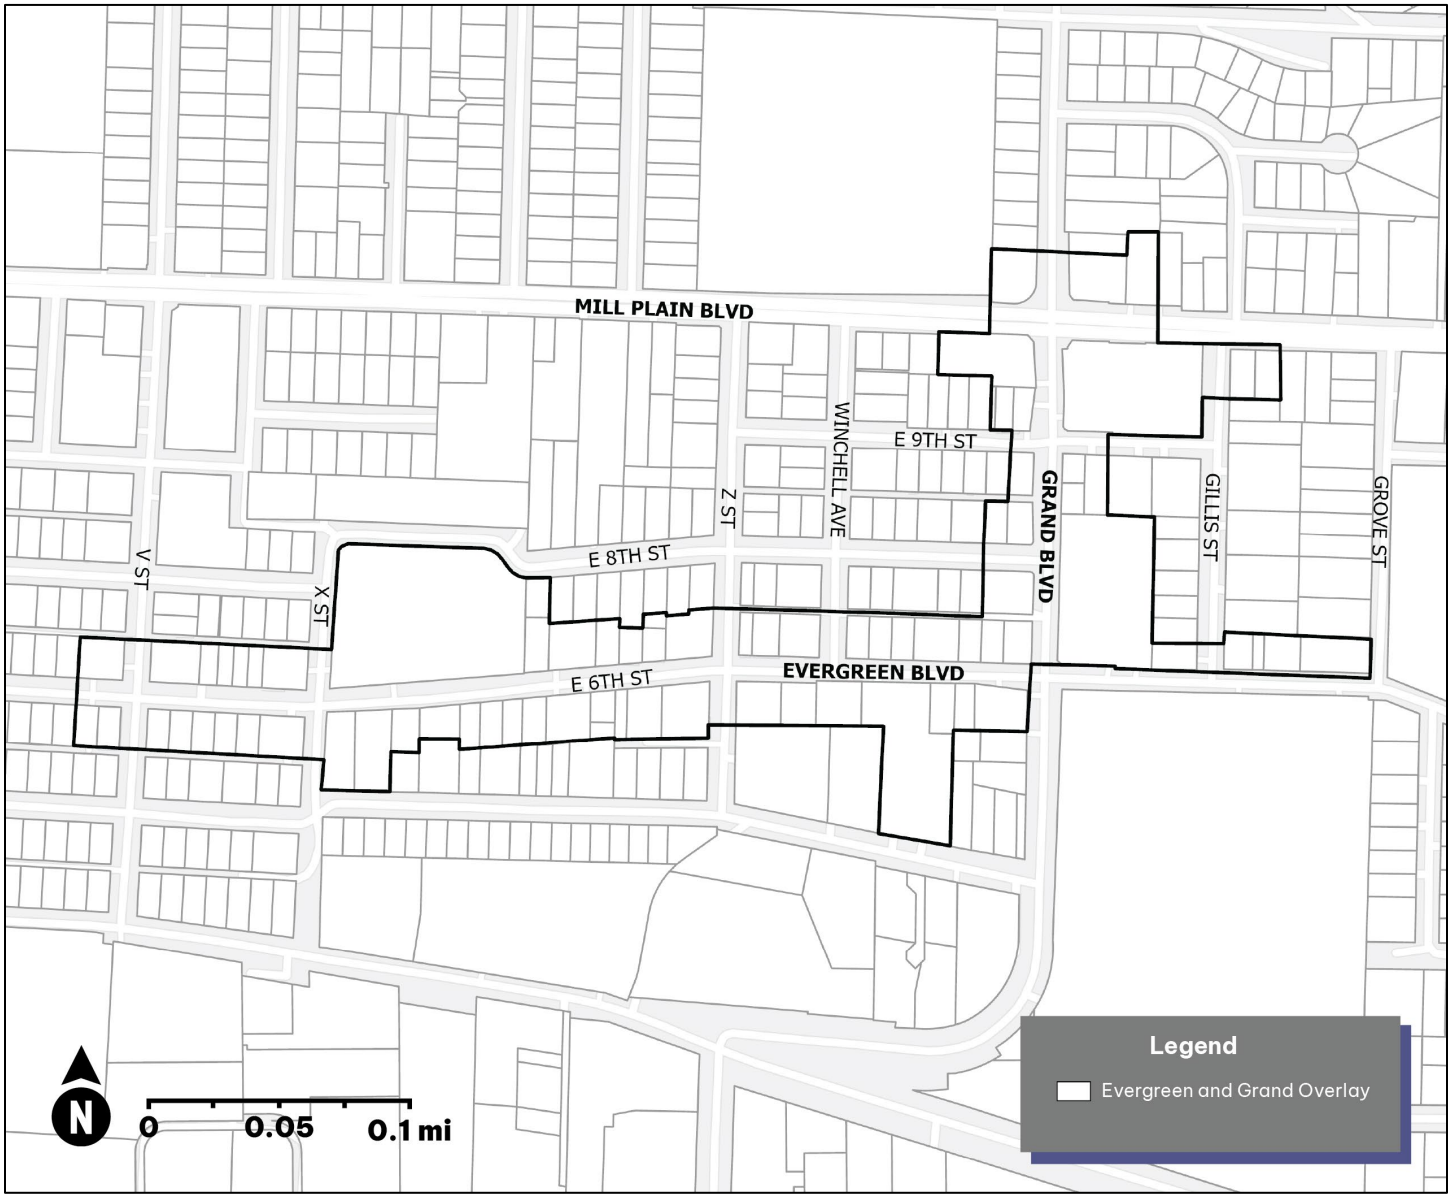
# CHAPTER 20.630
# EVERGREEN AND GRAND COMMERCIAL CORRIDORS PLAN

Sections:

20.630.010 Purpose.

20.630.020 Evergreen and Grand Commercial Plan Area.

20.630.030 Plan Documents.



## 20.630.010 Purpose.

*Purpose.* East Evergreen and Grand Boulevards are locally-oriented corridors that boast an emerging small business district, have a unique character with smaller-scale buildings oriented to the street, and are located in an area adjacent to established neighborhoods. In 2022, the City Council adopted the Evergreen and Grand Commercial Corridors Strategy to guide future development in the corridors. The Strategy outlines a vision for an equitable and diverse corridor that is vibrant, sustainable and mixed use, and that recognizes and builds on the neighborhoods unique setting, history and character

## 20.630.020 Evergreen and Grand Commercial Plan Area.

20.710 Archaeological Resource Protection.

20.720 Critical Areas Protection.

20.730 Shoreline Management Area.

20.740 SEPA Regulations.

# CHAPTER 20.710
# ARCHAEOLOGICAL RESOURCE PROTECTION

Sections:

20.710.010 Purpose.

20.710.020 Applicability.

20.710.030 Development Review Applications.

20.710.040 DAHP Coordination and Permitting.

20.710.050 Documentation and Peer Review.

20.710.060 Tribal Notification.

20.710.070 Predetermination Process.

20.710.080 Archaeological Resource Survey Process.

20.710.090 Discovery Principle.

## 20.710.010 Purpose.

The purposes of this Chapter are to:

A. *Identify and preserve resources.* Encourage the identification and preservation of cultural, archaeological, and historic resources consistent with the Growth Management Act of 1990, as amended, and Vancouver' s Comprehensive Plan, Visions for the Vancouver Urban Area.

B. *Establish procedures and standards.* Establish clear procedures and specific standards for identifying, documenting, and preserving Vancouver's cultural, archaeological, and historic resources.

C. *Use the best technology and techniques.* Ensure use of the best available technology and techniques commonly accepted as standards in the profession of archaeology for identification and preservation of cultural, archaeological, and historic resources.

D. *Balance preservation and development.* Establish a fair and equitable process for balancing the need for identification and preservation of cultural, archaeological, and historic resources with land development.

E. *Provide coordination and consistency.* Ensure coordination and consistency in the implementation of the State Environmental Policy Act, the Shoreline Management Act, the Growth Management Act, RCW Chapters 27.34, 27.44, 27.48, and 27.53, and associated regulations.

## 20.710.020 Applicability.

A. *Universal.* Notwithstanding subsections B and C of this section, the provisions of this chapter shall apply:

1. When any item of archaeological interest is discovered during the course of a permitted ground-disturbing action or activity (VMC 20.710.090).
2. When the Planning Official determines that reliable and credible information indicates the probable existence of an archaeological site in a disturbance area for which an application for a permit or approval for a ground-disturbing action or activity has been submitted to the Planning Official.

B. *General.* The provisions of this chapter shall apply to all applications for ground-disturbing actions or activities for which a permit or approval is required:

1. Where any portion of the disturbance area is within properties with predictive model probability level high.
2. Where the disturbance area is at least five acres in size and wholly within predictive model probability levels moderate-high and moderate.
3. Regardless of disturbance area size or predictive model probability level, when the disturbance area is within one-quarter mile of a known, recorded archaeological site as measured on a horizontal plane extending in all directions. (See subsection (C)(11) of this section for a possible exemption.)

C. *Exemptions.* Applications for the following permits, approvals or other ground-disturbing activities shall be exempt from the provisions of this chapter, except where the provisions of subsection A of this section apply:

1. Land use permits handled as Type 1 actions under VMC 20.210.040, except grading and tree removal permits; or
2. Sign permits (Chapter 20.450.050 VMC); or
3. Conditional use permits (Chapter 20.245 VMC) for a change in use only, not involving ground disturbance for structural modification.
4. Zoning variance approvals (Chapter 20.290 VMC).

5. Ground-disturbing actions or activities classified as exempt actions under VMC 20.210.030 except landscaping activities and single-family and duplex dwellings not requiring an environmental review; or
6. Ground-disturbing actions or activities where the Planning Official determines that the disturbance area was adequately investigated and documented [VMC 20.710.050(A)] in the past and the existence of an archaeological site was determined not to be probable (prior predetermination) or not to be actual (prior survey); or
7. Applications for permits or approvals for ground-disturbing actions or activities which have vested prior to the effective date of this chapter; or
8. Ground-disturbing actions or activities where the provisions of this chapter were previously applied to a related application for a larger, more comprehensive ground-disturbing action or activity which encompasses the scope of the current application; or
9. Ground-disturbing actions or activities where a prior application for a larger, more comprehensive ground-disturbing action or activity which encompasses the scope of the current application was exempt from the provisions of this chapter pursuant to this subsection C; or
10. Ground-disturbing actions or activities where the disturbance area is within one-quarter mile of a known, recorded archaeological site as measured on a horizontal plane extending in all directions may be exempted by the Planning Official when appropriate due to the effects of a geographic barrier; or
11. Ground-disturbing actions or activities proposed in areas in which the Planning Official determines that previous substantial disturbance has been documented.

D. *Predictive Model Application.* When more than one predictive model probability level traverses a disturbance area, the entire disturbance area shall be considered to be within the level with the greatest probability rating.

E. *Coordination*.

1. Where the provisions of this chapter conflict with each other or with other local, state, or federal laws, ordinances, or programs, the more restrictive provisions shall apply.
2. The provisions of this chapter shall apply throughout the city, including areas regulated by Vancouver's Shoreline Management Master Program.
3. The regulations of the State Environmental Policy Act SEPA shall supplement the provisions of this chapter.
4. The provisions of this chapter are intended to coordinate with and supplement the related provisions of state law. [Chapters 27.34, 27.44, 27.48, and 27.53 RCW.]

## 20.710.030 Development Review Applications.

A. A development application shall not be determined counter complete until any required predetermination has been completed and the predetermination report has been submitted to the Planning Official.

B. All documents pertaining to archaeology reviews shall be exempt from any public disclosure requests [RCW 27.53.070].

## 20.710.040 DAHP Coordination and Permitting.

A. *Recording.* Any archaeological site identified pursuant to the provisions of this Chapter shall be recorded with the Washington State Department of Archaeology and Historic Preservation (DAHP). A copy of the State of Washington Archaeological Site Inventory form and cover letter to DAHP shall be submitted to the Planning Official with the required survey report VMC 20.710.080 (C).

B. *Permit required.* A permit from DAHP shall be secured prior to digging, altering, excavating, and/or removing archaeological objects and sites or historic archaeological resources, or removing glyptic or painted records of tribes or peoples, or archaeological resources from native American Indian cairns or graves (WAC 25-48-050, as amended).

## 20.710.050 Documentation and Peer Review.

A. *Documentation.* Archaeological sites shall be adequately investigated and documented. For purposes of this chapter, adequately investigated and documented shall mean that (1) the investigation method, level of analysis, and area covered are sufficient to meet the requirements of VMC 20.710.070 and VMC 20.710.080, as appropriate; and (2) the documentation is sufficient to allow another archaeologist to repeat the investigation and reach a similar conclusion. Adequacy shall be determined by the Planning Official.

B. *When and how to use the peer review process.* In the event that there is substantive disagreement of a technical nature between archaeologists concerning an application subject to the provisions of this Chapter, either the Planning Official or the applicant may invoke the peer review process outlined by the US Department of the Interior, National Park Service September, 1993 publication, "The Peer Review of Public Archaeology Projects: A Procedure Developed by the Departmental Consulting Archaeologist" authored by Bennie C. Keel (ISSN 1057-1574) to resolve the issue. The party who invokes the peer review process shall bear the costs of the proceedings. The applicant and the City shall each appoint one, and together shall agree on the appointment of a third archaeologist to serve on the Peer Review Panel.

## 20.710.060 Tribal Notification.

A. *Tribal registration.* Any Tribe may register to receive notification of required archaeological resource surveys. Such registration shall be in writing, be addressed to the Planning Official, and include the name of the Tribe and the name, title, and mailing address of the designated representative to whom the notice is to be provided.

B. *Updating registration.* It is the responsibility of the Tribe to ensure that this registration information is updated by notifying the Planning Official in writing of any change.

C. *Notification.* Where the Planning Official determines that the existence of an archaeological site is probable and an archaeological resource survey is required (VMC 20.710.080), the Planning Official shall notify the Tribes which have registered with the City of such determination by certified mail, return receipt requested. The Planning Official shall accept comments from registered Tribes for fourteen calendar days from the date the notification was received by the Tribes.

## 20.710.070 Predetermination Process.

A. *Predetermination required.* A predetermination is an archaeological study similar to, but of less intensity and lower cost than, an archaeological resource survey. Its purpose is to determine whether the existence of an archaeological site within a disturbance area is probable. A predetermination is required as follows:

1. For any nonexempt ground-disturbing action or activity for which a permit or approval is required where any portion of the disturbance area is at least partially within predictive model probability level high.

2. For any nonexempt ground-disturbing action or activity for which a permit or approval is required and where the disturbance area is at least five acres in size and wholly within predictive model probability levels moderate-high and moderate.

3. For any nonexempt ground-disturbing action or activity for which a permit or approval is required where the disturbance area is proposed within one-quarter mile of a known, recorded archaeological site.

4. When the planning official determines that reliable and credible information indicates the probable existence of an archaeological site in a disturbance area for which an application for a permit or approval for a ground-disturbing action or activity has been submitted to the planning official.

5. When any item of archaeological interest is discovered during the course of a permitted or approved ground-disturbing action or activity (VMC 20.710.090).

B. *Waiver.* The Planning Official may waive the requirement for a predetermination where the applicant chooses to provide a survey in accordance with the provisions of this chapter instead of a predetermination.

C. *Preapplication review.* The Planning Official may review a predetermination report and issue a determination of the likelihood that archaeological resources exist prior to the submittal of an application for a permit or approval for a ground-disturbing action or activity subject to the provisions of this chapter. Such preapplication review shall require permission for the Planning Official to enter and inspect the property.

D. *Predetermination standards.* Predeterminations shall include at a minimum the following elements and be carried out according to the following minimum standards:

1. Predeterminations shall be performed by a professional archaeologist. Documentation shall be sufficient to allow another archaeologist to repeat the investigation and reach a similar conclusion. Adequacy shall be determined by the Planning Official.

2. Predeterminations shall be performed in accordance with the best available technology and techniques commonly accepted as standards in the profession of archaeology.

3. No artifacts shall be collected during a predetermination.

4. A thorough review of records, documentation, maps, and other pertinent literature shall be performed.

5. A visual inspection of the ground surface shall be completed when conditions yield at least 50 percent visibility of the soil. When conditions yield less than 50 percent visibility of the soil, subsurface investigation shall be required in accordance with subsection (D)(6) of this section.

6. Subsurface investigation shall be conducted as follows:

    a. Subsurface investigation shall be performed:

        i. When conditions yield less than 50 percent visibility of the soil; or

        ii. When otherwise considered necessary by the archaeologist.

    b. When performed, the following standards shall apply:

        i. Subsurface probes shall be no less than eight inches/20 centimeters in diameter (12 inches/30 centimeters or more preferred) at the ground surface, no less than eight inches/20 centimeters in diameter at the base, and shall delve no less than 20 inches/50 centimeters deep into natural soil deposits whenever possible.

        ii. The most appropriate number of and locations for subsurface probes shall be determined by the archaeologist.

iii. All material excavated by subsurface probes shall be screened using both one-quarter-inch and one-eighth-inch hardware mesh cloths or equivalent.

E. *Predetermination reports.* A report shall be completed for each predetermination in accordance with subsection D of this section on standardized reporting forms furnished by the department.

F. *Review of predetermination reports and further action*.

1. Predetermination reports shall be reviewed by the Planning Official.

2. Upon finding that a predetermination report is complete and adequate, the Planning Official shall evaluate the report and determine whether an archaeological site is likely to exist.

a. Where the director determines that the existence of an archaeological site is not probable, the application may proceed through the remainder of the development review process.

b. Where the Planning Official determines that the existence of an archaeological site is probable, an archaeological resource survey shall be required and carried out in accordance with the provisions of this chapter.

c. Where the Planning Official determines that the existence of an archaeological site is probable and an archaeological resource survey is required, the Planning Official shall notify registered tribes of such determination in accordance with the provisions of VMC 20.710.150.

## 20.710.080 Archaeological Resource Survey Process.

A. *Purpose.* The purpose of an archaeological resource survey is to determine whether an archaeological site actually does exist in a disturbance area, and to make a preliminary assessment of the potential significance of such a site. Surveys are to be conducted under the following circumstances:

1. A survey shall be required when the results of a predetermination indicate further investigation is necessary [VMC 20.710.070(F)] and either:

a. No previous survey has been done; or

b. A previous survey or documentation is determined by the Planning Official to be inadequate (20.710.050A VMC).

2. An applicant may choose to provide a survey instead of a required predetermination [VMC 20.710.070(B)].

B. *Survey standards.* Surveys shall include at a minimum the following elements and be carried out according to the following minimum standards:

1. Surveys shall be performed by a professional archaeologist. Documentation shall be sufficient to allow another archaeologist to repeat the investigation and reach a similar conclusion. Adequacy shall be determined by the Planning Official.

2. Surveys shall be performed in accordance with the best available technology and techniques commonly accepted as standards in the profession of archaeology.
3. Artifacts may be collected during a survey only after consultation with DAHP.
4. A thorough review of records, documentation, and other pertinent literature shall be performed.
5. A systematic, 100% visual inspection of the ground surface shall be completed when conditions yield at least 50% visibility of the soil.
6. Subsurface probes shall be required for all surveys as follows:
    a. Subsurface probes shall be no less than 8in/20cm in diameter (12in/30cm or more preferred) at the ground surface, no less than 8in/20cm in diameter at the base, and delve no less than 20in/50cm deep into natural soil deposits whenever possible.
    b. No less than 4 subsurface probes per acre shall be required. For fractions of an acre, no less than one subsurface probe shall be required for each quarter acre. (For example, on a parcel of 2.33 acres, no less than (2x4) + 1 = 9 subsurface probes would be required.)
    c. The most appropriate locations for the subsurface probes shall be determined by the archaeologist.
    d. All material excavated by subsurface probes shall be screened using both 1/4-inch and 1/8-inch hardware mesh cloths or equivalent.

C. *Survey reports.* A report shall be completed for each survey in accordance with VMC 20.710.080(A)(1) and state guidelines. Survey reports shall be submitted to the Planning Official and filed with DAHP. When an archaeological site is identified, the State of Washington Archaeological Site Inventory form shall be submitted to DAHP with the survey report [VMC 20.710.040(A)]

D. *Review of survey reports and further action*.

1. Survey reports shall be filed with DAHP.
2. Survey reports shall be reviewed by the Planning Official. Upon finding a survey report complete and adequate, the Planning Official shall determine whether an archaeological site has been identified. [20.710.070(F)]
3. Where the Planning Official determines that no archaeological site has been identified, the application may proceed through the remainder of the development review process.
4. Where the Planning Official determines that an archaeological site has been identified, the Planning Official shall determine whether the site is likely to be potentially significant in accordance with the significance criteria of VMC 20.710.080(E) and in consultation with DAHP.

5. Where the Planning Official determines that an archaeological site has been identified and is not likely to be potentially significant, the application may proceed through the remainder of the development review process.
6. Where the Planning Official determines that an archaeological site has been identified and is likely to be potentially significant, archaeological resources shall be further evaluated, avoided, properly mitigated, or properly recovered in accordance with the Planning Official's recommendation and the terms of any necessary permit from DAHP [VMC 20.710.040(B)]. Priority for thorough evaluation and data recovery shall be given to potentially significant archaeological sites. Monitoring and future corrective measures may be required to ensure that an archaeological site is not degraded by a permitted development.
7. Where sites are to be avoided, the Planning Official shall require that appropriate land use restrictions be recorded using a proper legal instrument.
8. An escrow or bond shall be required of the applicant to ensure that the site is treated in accordance with the Planning Official's recommendation and provisions of the state permit.

E. *Significance criteria.* A potential significant archaeological site is a site which (1) contains archaeological objects at a density of at least 100 per cubic meter per stratigraphic or cultural unit; or (2) includes at least one feature; or (3) includes at least one relatively uncommon archaeological object; or (4) contains skeletal remains; or (5) is otherwise considered potentially significant by the archaeologist.

## 20.710.090 Discovery Principle.

Uncovering archaeological items. In the event that any item of archaeological interest is uncovered during the course of a permitted or approved ground-disturbing action or activity:

A. *Cessation of activity.* All ground-disturbing activity shall immediately cease.

B. *Notification.* The applicant shall immediately notify the Planning Official and DAHP.

C. *Predetermination report and determination.* The applicant shall provide for a predetermination and a predetermination report prepared in accordance with the provisions of this Chapter. The Planning Official shall review the report and issue a determination in accordance with 20.710.070(F) VMC in a reasonably diligent manner, taking into account all pertinent factors and conditions. Where such determination is that the existence of an archaeological site is not probable, construction may continue. Where such determination is that the existence of an archaeological site is probable, the applicant shall provide a survey and survey report, in accordance with the provisions of this Chapter. The Planning Official shall produce a map of the parcel indicating clearly the portion(s) of the parcel, if any, within which construction may continue under the supervision of a professional archaeologist and monitoring by the Planning Official while the required survey is being completed. The provisions of 20.710.080(D) VMC shall apply.

# CHAPTER 20.720
# CRITICAL AREAS PROTECTION

Sections:

20.720.010 Purpose.

20.720.020 General provisions.

20.720.030 Applicability and exemptions from requirement to obtain permit.

20.720.040 Approval process.

20.720.050 Submittal requirements.

20.720.060 Approval criteria.

20.720.070 Minor exceptions.

20.720.080 Reasonable economic use exceptions.

20.720.090 Unauthorized critical areas alterations and enforcement.

20.720.100 Designation process for habitats of local importance.

20.720.110 Fish and wildlife habitat conservation areas.

20.720.120 Frequently flooded areas.

20.720.130 Geologic hazard areas.

20.720.140 Wetlands.

## 20.720.010 Purpose.

The purpose of this chapter is to designate and protect critical areas and their functions and values, while also allowing reasonable use of property.

A. Critical areas are ecologically sensitive and hazardous areas and protecting them or mitigating any impacts to them is important for protection of the environment and quality of life for the citizens of Vancouver, and is mandated by the Washington Growth Management Act (GMA) (Chapter 36.70A RCW). The GMA requires cities and counties to develop critical area regulations based on best available science. All regulations included herein have been developed in response to best available science at the time of adoption.

B. This chapter provides protection for the following critical areas: wetlands, fish and wildlife habitat conservation areas, geologically hazardous areas, and frequently flooded areas. Critical aquifer recharge areas are covered in Chapter 14.26 VMC.

C. This chapter implements the goals and policies of the Vancouver Comprehensive Plan, under the GMA and other related state and federal laws.

## 20.720.020 General provisions.

A. *No Net Loss of Functions.* Development activity shall result in no net loss of the functions and values of critical areas. The beneficial functions provided by each type of critical area include, but are not limited to:

1. *Fish and Wildlife Habitat Conservation Areas.* Providing habitat for breeding, rearing, foraging, protection and escape, migration, and overwintering; and providing complexity of physical structure, supporting biological diversity, regulating stormwater runoff and infiltration, providing wave attenuation, removing pollutants from water, and maintaining appropriate water temperatures.

2. *Frequently Flooded Areas.* Providing flood storage, conveyance, and attenuation of flood waters; minimizing the amount of development at risk in such areas to protect human life and safety, including reducing damage to homes, places of business, public facilities, and utilities; and minimizing business interruptions.

3. *Geologic Hazard Areas.* Providing erosion control and protecting public safety, including people, structures, and infrastructure, from damage during seismic events, landslides, significant erosion, debris flows, and rock falls.

4. *Wetlands.* Providing carbon sequestration, cleansing surface water, storing and conveying floodwater, and providing fish and wildlife habitat.

B. *Temporary and Permanent Markers and Signs.* With the exception of frequently flooded areas and seismic hazard areas, temporary and permanent markers and signs shall be installed for critical areas as follows:

1. *Temporary Sign Requirements.* The location of the outer perimeter of the critical area(s) and buffer(s) shall be marked in the field and approved by the Planning Official prior to the commencement of permitted activities and maintained throughout the duration of the construction.

2. *Permanent Sign Requirements.*

a. A permanent physical demarcation along the outer/upland boundary of the critical area buffer(s) shall be installed and thereafter maintained. Such demarcation may consist of fencing, hedging, or other prominent physical marking that allows wildlife passage, blends with the critical area environment, and is approved by the Planning Official. If the function and values of the critical area would be degraded by the existing or proposed activity, such as the presence of grazing animals, a fence shall be erected and maintained.

b. Permanent signs are posted at intervals of one every 50 feet, or, if this interval cannot be met, an interval of one per lot for single-family residential uses or at a maximum interval of 200 feet, or as otherwise determined by the Planning Official, and must be perpetually maintained by the property owner. The sign shall be worded as follows or with alternative language approved by the Planning Official: "The area beyond this sign is a critical area or critical area buffer. Alteration or disturbance is prohibited by law. Please call the City of Vancouver for more information."

3. *Applicability.* Applicants will be responsible for signage and demarcation within land that falls on the subject property(ies) included within the application for a critical areas permit.

4. Additional standards for temporary and permanent marking of geologic hazards are contained in VMC 20.720.130.

C. *Relationship to Other Regulations*.

1. The critical areas regulations apply in addition to zoning and other regulations adopted by the city.

2. When more than one critical area is located on a project site, regulations protecting each critical area apply to the site. Where critical areas overlap (e.g., a wetland buffer and a riparian buffer), the most restrictive regulations that provide the most protection for the critical areas present establish the outer boundary of the regulated critical areas. Mitigation will be required for impacts to each critical area to ensure no net loss.

3. When there is a conflict between any provisions of this chapter and any other regulations, the requirement that provides the most protection to the critical area(s) applies.

4. Compliance with the provisions of this chapter does not constitute compliance with other federal, state, and local regulations and permit requirements. The applicant is responsible for complying with other state and federal requirements in addition to the requirements of this chapter.

D. *Jurisdiction.* All areas within the city meeting the definitions within Chapter 20.150 VMC and descriptions within subsection A of this section of one or more critical areas and their buffers, whether mapped or not, are hereby designated critical areas and are subject to the provisions of this chapter.

E. *Warning and Disclaimer of Liability.* Critical areas development should be based on sound scientific and engineering considerations that may be more stringent than those presented in this chapter. The city assumes no liability if these established standards prove to be insufficient protection of property or the environment.

## 20.720.030 Applicability and exemptions from requirement to obtain permit.

A. *Applicability.* No person, company, agency, or applicant shall alter a critical area or buffer except as consistent with the requirements of this chapter, whether or not a permit is required.

B. *Statements of Exemption Process.* For activities listed in subsection (C)(1) of this section, a written statement of exemption from the requirement to obtain a critical areas permit is required prior to undertaking the activity. Activities listed in subsection (C)(2) of this section do not require a statement of exemption. Those seeking an exemption under this chapter are required to demonstrate compliance with the mitigation sequence outlined in VMC 20.720.060.

1. Exempt activities are not required to obtain a critical areas permit. However, all activities in critical areas, including exempt activities, are subject to the policies and regulations of this chapter. If a land use permit is not required, the Planning Official may attach conditions to building and engineering permits, as necessary, to enforce the provisions of this chapter.

2. The request for the statement of exemption shall be in writing, on forms required by the planning official, and include the information required by the Planning Official. Statements of exemption shall be processed as a Type I procedure per Chapter 20.210 VMC, Decision Making Procedures.

C. *Exemptions from Requirement to Obtain a Critical Areas Permit*.

1. Activities requiring a Statement of Exemption.

a. *Existing Structure Remodel – Impervious Surface Increase of 200 Square Feet or Less.* Development or clearing inside a critical area or buffer as necessary to remodel an existing structure, provided:

i The activity will increase the footprint of structures with impervious surfaces by a maximum of 200 square feet cumulatively;

ii The distance from the nearest structure or impervious surface to a critical area is not decreased;

iii All native vegetation disturbed as a result of the development shall be replaced one-to-one, except that trees shall be replaced using tree units derived from Chapter 20.450.035 VMC, Landscaping and Tree Conservation. Native vegetation shall be used where feasible;

iv Impacts to critical areas and buffers shall be minimized and mitigated in accordance with the city's critical areas approval criteria; and

v No adverse impacts to priority Oregon white oak trees may result.

b. No Impervious Surface Increase in the Riparian Management Area (RMA) or Riparian Buffer (RB) and Located outside Frequently Flooded Areas. Development activity on a site within the footprint of existing structures or impervious surfaces that does not increase the impervious surface area in the RMA or RB, is not located in frequently flooded areas, and is not otherwise exempt under subsection B of this section shall be exempt from the provisions of VMC 20.720.110, Fish and Wildlife Habitat Conservation Areas.

The applicant is encouraged to provide enhancement to the extent feasible. Such enhancement activities may include, but are not limited to, landscaping using native plants, additional treatment of stormwater as appropriate, and implementation of best management practices (BMPs) that would enhance habitat functions.

c. *Approved Subarea Plan with EIS.* Development activity covered by and in compliance with all the conditions of an approved subarea plan that contains:

i Baseline information on existing critical areas and their functions at the level of detail required for an environmental impact statement (EIS) under the State Environmental Policy Act (SEPA);

ii An analysis of the impacts of full development at the level of detail required for an EIS under SEPA and in keeping with the plan; and

iii Mitigation for those impacts consistent with the requirements of this chapter.

d. *Fence.* A fence may be installed in a critical area buffer (not in a critical area) where:

i The fence is necessary for safety and security;

ii The property was developed prior to the effective date of this chapter (April 29, 2005); and/or

iii The fence is designed and installed in a manner that protects the critical area and buffer functions and blends with the critical area environment.

e. *On-site Critical Area Will Be Avoided.* Development may be permitted on a site containing a critical area or buffer when the Planning Official determines that impacts to critical areas and buffers will be avoided. In making this determination, the Planning Official shall utilize all of the procedures and criteria listed below to determine that the adverse impacts will be avoided.

i The critical area(s) and buffer(s) has/have been identified in the field, clearly mapped by a qualified professional, and documented by a limited-scope critical areas report (for example, a wetland boundary delineation without categorization or functional assessment, but with the minimum documentation necessary to justify the boundary location).

ii The site plan and preliminary plat show a development envelope that demonstrates that all activity will take place outside critical areas and buffers.

iii The boundaries of the development envelope are clearly outside of all maximum critical areas and all maximum buffers.

f. *Maintaining Fire-Defensible Space.* Maintaining fire-defensible space around a structure to reduce fire hazards, involving regular maintenance of existing trees at least six inches in diameter at breast height, grasses, and underbrush, not tree removal or other ground-disturbing or soil-destabilizing activities. Creating fire-defensible space or undertaking other development requires a critical areas permit per the critical areas approval process and could require other permits as well.

i Pruning trees, grasses, and brush within a critical area or buffer to maintain fire-defensible space around a structure may be permitted when one or more of the following criteria are met:

(A). The structure nearest the property line is within 30 feet of a slope of at least 25 percent (also designated as a landslide hazard area under this chapter);

(B). The nearest structure is within 30 feet of a forested area;

(C). The vegetation within 30 feet of the structure is comprised of less than 50 percent native species;

(D). The vegetation within 30 feet of the structure is higher than 12 inches;

(E). Trees are crowded within 30 feet of the structure or overhanging the structure's roof; or

(F). The structure is located in an area designated by the fire marshal as a "wildfire safety area."

ii When maintenance of a fire-defensible space is permitted, the following standards shall apply:

(A). Trees may be pruned or limbed-up to mitigate a hazard, but trees may not be removed without a critical areas permit and any other necessary permit(s).

(B). Topping trees is prohibited.

(C). Grasses and underbrush shall be maintained between eight and 12 inches in height.

(D). Any debris from pruning shall be disposed of promptly and properly.

g. *Development Located within Soil Erosion Hazard Areas Only.* When no other type of critical area, including other types of geologic hazards, is present, development within soil erosion hazard areas shall meet the requirements of Chapter 14.24 VMC, Erosion Control, including preparation of a stormwater report, if required. In addition, the applicant shall file a limited scope geotechnical report prepared by a qualified professional as defined by Chapter 20.150 VMC, which shall be provided to the Planning Official for review at the earlier of development application, engineering document review, or building permit review. Upon review of the limited scope geotechnical report, the Planning Official may exempt the development from the need for a critical areas permit.

h. *Development/Expansion of a Single-Family Residence with a Loss of a Single, Standalone Oregon white oak.* The loss of a single, standalone Oregon white oak tree that meets the WDFW PHS status (must not be part of a woodland that includes off-site trees) and in accordance with the definition listed in VMC 20.150.040D that is equal to or less than six inches dbh for the purpose of developing a single-family residence or expansion of an existing single-family residence structure (does not include expansion of detached garages, outbuildings, accessory dwellings, decks, gardens, etc.).

2. *Activities for which a Statement of Exemption is not required.* Reasonable methods shall be used to avoid potential impacts to critical areas. Any damage to, or alteration of, a critical area that is not a necessary outcome of the exempt activity shall be corrected at the property owner's expense.

The following activities are exempt from needing a critical areas permit and do not require a statement of exemption:

a. *Emergencies.* Those activities necessary to prevent an immediate threat to public health, safety, or welfare, or that pose an immediate risk of property damage and that require remedial or preventative action in a time frame too short to allow for compliance with the requirements of this chapter, so long as all of the following apply:

i The emergency action uses reasonable methods to address the emergency.

ii The emergency action must have the minimum possible impact to the critical area or its buffer.

iii The property owner, person, or agency undertaking such action shall notify the city within 10 working days following commencement of the emergency activity.

iv Within 14 days, the planning official shall determine if the action taken was within the scope of the emergency actions allowed in this section. If the Planning Official determines that the action taken, or any part of the action taken, was beyond the scope of an allowed emergency action, then the critical areas enforcement provisions shall apply.

v After the emergency, the property owner, person or agency undertaking the action shall fully fund and conduct necessary restoration and/or mitigation for any impacts to the critical area and buffers resulting from the emergency action in accordance with an approved critical areas report and mitigation plan. The property owner, person or agency undertaking the action shall apply for review. The alteration, critical areas report, and mitigation plan shall be reviewed by the city in accordance with the review procedures contained in this chapter.

vi Restoration and/or mitigation activities must be initiated within three months of the date of an approved critical areas report and mitigation plan or as otherwise determined by the Planning Official and completed in a timely manner.

b. *Hazard Tree.* Emergency or hazard tree removal (as defined in Section 20.450.035 VMC) conducted so that critical area impacts are minimized.

c. *Landscape Maintenance.* Landscape maintenance (other than tree removal) consistent with accepted horticultural practices, such as those recommended by the Washington State University Extension Service, within the boundaries of an existing lawn, garden or landscaped area and not associated with development.

d. *Noxious or Invasive Plants.* Clearing of noxious or invasive plants using handheld equipment such as a weed-whacker, provided (i) fueling and maintenance take place outside the critical area and buffer; (ii) all cleared vegetation is taken away and disposed of properly; and (iii) denuded soils are stabilized with native vegetation. The city of Vancouver's noxious or invasive plants list and native plant species list are available from the Planning Official.

e. *Pesticides, Herbicides, Fungicides, or Fertilizers.* Application of pesticides, herbicides, fungicides, or fertilizers, when done as directed in the package instructions as required by state and federal laws.

f. *State or Federally Approved Conservation or Preservation.* State or federally approved conservation or preservation of soil, water, vegetation, fish, shellfish, and other wildlife that does not entail changing the structure or functions of the existing critical area or buffer.

g. *Harvesting Wild Crops.* The harvesting of wild crops in a manner that is not injurious to natural reproduction of such crops or other native vegetation and provided the harvesting does not require tilling of soil, planting of crops, chemical applications, or alteration of the critical area or buffer by changing existing topography, water conditions or water sources.

h. *Passive Activities.* Passive outdoor recreation, education, and scientific research activities such as fishing, hiking, and bird watching that do not degrade the critical area or buffer.

i. *Land surveys, soil sampling, percolation tests, and other related activities.* In every case, impacts to the critical area or buffer shall be minimized and disturbed areas shall be stabilized and replanted immediately.

j. *Navigational Aids and Boundary Markers.* Construction or modification of navigational aids and boundary markers. Impacts to the critical area or buffer shall be minimized and disturbed areas shall be restored within 72 hours.

k. *Agricultural Activities.* Existing and ongoing agricultural activities protected under the federal Food Security Act occurring in wetland areas.

Existing and ongoing agriculture within fish and wildlife habitat conservation areas so long as livestock and application of pesticides, herbicides, fungicides, and fertilizers is done in accordance with package instructions.

l. *State or Federally Approved Restoration or Enhancement Project.* Implementation of a state or federally approved restoration or enhancement project not related to any development project.

m. *Operation, Repair and Maintenance.* Operation, repair and maintenance of existing structures, infrastructure, roads, sidewalks, railroads, trails, dikes, or levees or water, sewer, stormwater, power, gas, telephone, cable, or fiber optic facilities if the activity does not further increase the impact to, or encroach farther within, the critical area or buffer and there is no increased risk to life or property as a result of the proposed operation, repair, or maintenance.

n. *Public Improvement Projects.* Public improvement projects located within existing impervious surface areas.

o. *City, State or Federally Approved Stand-alone "Critical Area" Creation Project.* Implementation of a city, state or federally approved stand-alone "critical area" creation project that is not mitigation. Also see the definition of "wetlands" in Chapter 20.150 VMC.

p. *Clearing in Frequently Flooded Areas and Seismic Hazard Areas Only.* Clearing vegetation within the floodplain and within a seismic hazard area, but outside other types of critical areas.

q. *Vegetation Clearing.* Clearing vegetation in critical areas that are only seismic hazard areas.

r. *Fence Repair.* Maintenance, repair, and in-kind replacement of existing fences.

s. *Liquefaction Hazard Areas and Ground Shaking Amplification Hazard Areas Only.* Sites identified as located within only a liquefaction and ground shaking amplification hazard area (VMC 20.720.130, Geologic Hazard Areas) shall be exempt from needing to obtain a critical areas permit. All projects within the liquefaction and ground shaking amplification hazard area must comply with the building code at time of building permit review, including providing a geotechnical report.

## 20.720.040 Approval process.

A. Critical Areas Permit Process.

1. *Pre-application Conference Required.* A pre-application meeting or waiver per Chapter 20.210 VMC is required prior to submitting a critical areas permit. Pre-application conferences shall not be required for the following:

   a. Activities and developments listed as exempted from critical areas standards and permits.

   b. Proposals involving only an addition to an existing single-family or duplex house, including accessory structures, such as accessory dwelling units, attached and detached garages, and/or carports, shops, and sheds.

   c. Other minor improvements determined by the Planning Official to not warrant a pre-application meeting or waiver.

2. *Critical Areas Permit.* If a proposed development activity is determined not to be exempt per the listed critical areas exemptions, the applicant and/or owner shall obtain a critical areas permit prior to commencing the development activity. Critical areas permits shall be processed as a Type I permit when no other permits are filed concurrently or reviewed according to the procedures of the underlying land use application pursuant to Chapter 20.210 VMC.

3. *Review Procedure.* The Planning Official shall make a determination as to whether the proposed activity and mitigation, if any, are consistent with the critical areas approval criteria of this chapter and in compliance with the performance standards for the type(s) of critical area(s) involved. The city may consult with state agencies for preliminary review of mitigation.

4. *Expiration of Permit.* The critical areas permit shall be valid for as long as the underlying land use permit is in effect or as otherwise specified by the Planning Official.

B. Notice on Title – Covenant and Tracts.

1. *Covenants.* This section applies to all nonexempt projects that involve critical areas and buffers, with the exception of frequently flooded areas.

   a. The owner of any property containing a critical area or buffer on which a development proposal is approved shall file a covenant with the county records and elections division according to the direction of the city. The covenant shall state the presence of the critical area and/or buffer on the property, the application of this chapter to the property, and the fact that limitations on actions in or affecting the critical area or buffer may exist, including that the area(s) within the conservation covenant be maintained in a natural state without disturbance to vegetation or other features unless otherwise approved by the city. The covenant shall run with the land in perpetuity. The covenant shall include a map and legal description of the critical area, with wording in the notice substantially similar to the following:

*Prior to and during the course of any grading, building construction or other development activity on this property containing or abutting a critical area, the area of development activity must be fenced or otherwise marked to the satisfaction of the City. The critical area shall be maintained in its natural state without disturbance to vegetation or other features, except as provided for by Chapter 20.740 VMC, Critical Areas Protection. Yard waste, debris, fill, equipment, vehicles, and materials shall not be placed in the critical area.*

b. The applicant shall submit proof that the covenant has been filed for public record before the city approves any site development or construction for the property or, in the case of subdivisions, short subdivisions, planned unit developments, binding site plans, and other developments that involve platting, at or before recording of the plat.

c. Any modifications to an established and recorded conservation covenant shall be consistent with the standards of this chapter and the originally issued critical areas permit that established the subject conservation covenant. The modification shall be processed as under a Type I review process. Any modification of the covenant that is inconsistent with the originally issued critical areas permit or with the standards of this chapter shall be subject to a review and receive a critical areas permit consistent with the standards of this chapter.

2. *Tracts.* This section applies, in addition to subsection (B)(1) of this section, to projects that involve platting on properties containing fish and wildlife habitat conservation areas, wetlands, geologic hazard areas, and their buffers.

a. The property owner shall place the subject critical areas and buffers in one or more nondevelopable tracts except when the responsible official determines that a tract cannot be provided given the constraints of the site, such as size of the property in question, while meeting all other standards of this title.

b. When the exception in subsection (B)(2)(a) of this section applies, residential lots may extend into the critical area(s) or buffer(s) provided:

i Temporary and permanent markers and signs are installed in compliance with the requirements of VMC 20.720.020, General provisions.

ii The applicant records a conservation covenant protecting the critical area in perpetuity in conformance with subsection (B)(1) of this section.

C. *Financial Assurances*.

1. When mitigation required pursuant to a development proposal is not completed prior to the city's final permit approval, such as final plat approval or final building inspection, the city shall require the applicant to provide security in a form deemed acceptable by the city, including to ensure that mitigation is fully functional, taking into account remaining construction, maintenance, and monitoring.
2. The security shall be in the amount of 125 percent of the estimated cost of restoring the functions of the critical area that are at risk.
3. The security shall remain in effect until the city determines, in writing, that the applicable standards have been met. The security shall be held by the city for a minimum of five years to ensure fully functional mitigation.
4. Depletion, failure, or collection of bond funds shall not discharge the obligation of an applicant or violator to complete required mitigation, maintenance, monitoring, or restoration.
5. Public development proposals shall be relieved from having to comply with the bonding requirements of this section if public funds have previously been committed for mitigation, maintenance, monitoring, or restoration.
6. Failure to satisfy any critical area requirements established by law or condition including, but not limited to, the failure to provide a monitoring report within 30 days after it is due or comply with other provisions of an approved mitigation plan shall constitute a default, and the city may demand payment of any financial guarantees or require other action authorized by the city code or any other law.
7. Any funds recovered pursuant to this section shall be used to complete the required mitigation. Excess funds shall be returned to the applicant.

D. *Critical Area Inspections.* Reasonable access to the site shall be provided to the city, state, and federal agency review staff for the purpose of inspections during any proposal review, delineation, restoration, emergency action, or monitoring period.

E. *Burden of Proof.* The burden of proof shall be on the applicant to bring forth evidence in support of the application and to provide sufficient information on which any decision has to be made on the exemption, critical areas permit, minor exception, reasonable use exception, or any other approval requested under this chapter.

F. *Appeals.* Any decision to approve, condition, or deny a development proposal or other activity based on the requirements of this chapter may be appealed according to VMC 20.210.130.

G. *Programmatic Permits.* The purpose of a programmatic permit is to provide for ongoing, routine maintenance, operation, or repair activities on sites containing critical areas or buffers (1) so as not to impair an agency's or business's ability to operate effectively and efficiently by requiring separate critical areas permits for each activity; and (2) at the same time protect critical areas and buffers in accordance with this chapter.

1. In addition to the submittal requirements in VMC 20.720.050, and any additional critical areas report requirements under VMC 20.720.110 through 20.720.140, applicants for a programmatic permit shall submit a proposed management plan. The management plan shall contain:
   a. A narrative explaining the need for the programmatic permit;
   b. A list of the ongoing, routine, maintenance, operation, or repair activities that impact or potentially impact critical areas and buffers;
   c. A description of the potentially impacted critical area and buffer functions;
   d. Proposed measures and standards for avoiding impacts to critical area and buffer functions and, where unavoidable, mitigating those impacts to achieve no net loss of functions; and
   e. A training program ensuring that all employees, contractors, and individuals under the supervision of the applicant who are involved in permitted activities understand and perform them in accordance with the terms of the permit.
2. A programmatic permit may be approved for up to seven years. The permit duration may be tied to other permits or processes.
3. Every two years for the duration of the programmatic permit 30 days prior to the original date of permit issuance, the applicant shall submit a report to the Planning Official summarizing activities undertaken. The report shall also document the training provided in accordance with subsection (G)(1)(e) of this section.
4. The applicant or the city may initiate an amendment to the programmatic permit if anticipated activities, terms, or conditions of the programmatic permit will change. An amendment shall be considered through a Type 1 process following a pre-application conference.
5. An application for reauthorization of a programmatic permit shall be submitted at least 90 days prior to the date the current permit expires. Programmatic permits may be reauthorized through a Type 1 process following a required pre-application conference. Permit standards and conditions may be modified to conform to the current codes, policies, and standards or based on past performance. Where the review of the reauthorization application will extend beyond the expiration date of the current programmatic permit, the Planning Official may extend the duration of the current permit for up to 60 days at a time, not to exceed 180 days.

## 20.720.050 Submittal requirements.

A. *Preparation by Qualified Professional.* Any required critical areas report shall be prepared by a qualified professional as defined in Chapter 20.150 VMC.

B. *General Critical Areas Report Contents.* At a minimum, the critical areas report shall contain the following:

1. The name and contact information of the applicant, a description of the proposal, and identification of the permit requested;

2. A copy of the site plan for the development proposal, including:

   a. A map to scale depicting critical areas, buffers, the development proposal, and any areas to be altered or developed; and

   b. A proposed stormwater management and sediment control plan for the development, including a description of any impacts to drainage alterations;

3. The dates, names, and qualifications of the persons preparing the report and documentation of any fieldwork performed on the site. Critical areas reports shall be prepared by a qualified professional for the type of critical area involved;

4. Identification and scientific characterization of all critical areas and buffers. The scientific characterization shall include a detailed assessment of the functional characteristics of the critical areas;

5. An assessment of the probable impacts to critical areas and buffers and risk of injury or property damage including permanent, temporary, and indirect impacts resulting from development of the site and the operations of the proposed development;

6. A written response to each of the approval criteria in VMC 20.720.060;

7. Plans for adequate mitigation, as needed, to offset any impacts, in accordance with subsection E of this section, Mitigation Plan Requirements; and

8. *Additional Information.* Any additional information required for the specific critical areas and buffers as specified in VMC 20.720.110, Fish and wildlife habitat conservation area, VMC 20.720.120, Frequently flooded areas, VMC 20.720.130, Geologic hazard areas, and VMC 20.720.140, Wetlands.

C. *Other Reports or Studies.* Unless otherwise provided, a critical areas report may be supplemented by or composed, in whole or in part, of any reports or studies required by other laws and regulations or previously prepared for and applicable to the development proposal site, as approved by the Planning Official; provided, the site conditions shall not have changed since the earlier report or study was completed.

D. *Critical Areas Report – Modifications to Requirements.* The applicant may consult with the Planning Official prior to or during preparation of the critical areas report when the Planning Official determines and a qualified professional recommends that less information is necessary to adequately address the potential impacts to any critical areas or buffers and the required mitigation. In such case the Planning Official may allow a reduced scope critical areas report.

E. *Mitigation Plan Requirements.* When mitigation is required, the applicant shall submit a mitigation plan as part of the critical areas report. The mitigation plan shall include:

1. *Mitigation rationale.* A discussion of the rationale for the proposed mitigation that includes other mitigation options and why the proposed method best achieves the approval criteria in VMC 20.720.060 as compared with other forms and locations for mitigation.

2. *Detailed Construction Plans.* The mitigation plan shall include descriptions and plans of the mitigation proposed, such as:

   a. The proposed construction sequence, timing, and duration;

   b. Grading and excavation details;

   c. Erosion and sediment control features;

   d. A planting plan specifying plant species, quantities, locations, size, spacing, and density;

   e. Measures to protect and maintain plants until established; and

   f. Detailed site diagrams, scaled cross sectional drawings, topographic maps showing slope percentage and final grade elevations, and any other drawings appropriate to show construction techniques or anticipated final outcome.

3. *Adaptive Management.* The mitigation plan shall include identification of potential courses of action and any corrective measures to be taken if monitoring or evaluation indicates project performance standards are not being met.

4. *Monitoring Program.* The mitigation plan shall include a program for monitoring construction of the mitigation project and for assessing a completed project.

   a. A protocol shall be included outlining the schedule for site monitoring, and how the monitoring data will be evaluated to determine if the performance standards are being met.

   b. A monitoring report shall be submitted as needed to document milestones, successes, problems, and contingency actions of the mitigation project. The mitigation project shall be monitored for a period necessary to establish that performance standards have been met, but not for a period less than five years or more than 10 years, unless otherwise specified in this code.

c. When the applicant believes that the conditions of the monitoring plan are met, the applicant shall contact the city and request that the city certify so in writing. The city shall conduct an on-site assessment as part of the verification process.

d. When the city has verified and certified that the conditions of the monitoring plan have been met, the critical area shall no longer be considered as mitigation, but as a critical area when processing a future development permit application(s).

F. Development may be permitted on a site containing a critical area(s) or buffer(s) which may also be subject to state or federal permits prior to all necessary state or federal permits being obtained when all of the following criteria are met:

1. A phased master plan is submitted under Chapter 20.260 or 20.268 VMC, as appropriate, demonstrating:

a. How the maximum critical area(s) and maximum buffer(s) will be clearly avoided until all local, state, or federal permits are obtained;

b. How each phase could be permitted as an individual project not relying on development of any other phases in any way;

c. How each phase could be developed regardless of whether any or all of the pending state or federal permits are ever obtained; and

d. The applicant demonstrates that there will be no net loss of critical area functions for each phase or for the project as a whole even if state and/or federal permits are not obtained.

2. Development is permitted only in the area that clearly avoids the maximum critical area(s) and buffer(s).

## 20.720.060 Approval criteria.

Any activity or development subject to this chapter shall be reviewed and approved, approved with conditions, or denied based on the proposal's ability to comply with all of the following criteria. The city may condition the proposed activity as necessary to mitigate impacts to critical areas and their buffers and to conform to the standards required by this chapter.

A. *Mitigation Sequence.* Applications for a critical area permit shall demonstrate avoidance of impacts to the greatest extent practicable. The measures below are listed in order of preference:

1. *Avoid Impacts.* The applicant shall first seek to avoid impacts altogether that degrade the functions and values of a critical area(s). This may include not taking a certain action or parts of an action, or necessitate a redesign of the proposal. The applicant shall provide sufficient evidence to demonstrate no practicable alternative exists that results in less impacts before proceeding through the rest of the mitigation sequence.

2. *Minimize Impacts.* Where avoidance is not feasible, the applicant shall adequately demonstrate why impacts could not be avoided, then minimize the impact of the activity by limiting the degree or magnitude of the action and its implementation, by using appropriate technology, or by taking affirmative steps to avoid or reduce impacts. The applicant shall seek to minimize the fragmentation of the resource to the greatest extent possible.
3. *Rectifying.* Rectify the impact by repairing, rehabilitating, or restoring the affected environment.
4. *Reducing.* Reduce or eliminate the impact over time by preservation and maintenance operations during the life of the action.
5. *Compensatory Mitigation.* After the applicant has demonstrated why impacts could not be minimized, the applicant shall compensate for the unavoidable impacts by replacing each of the affected functions. The compensatory mitigation shall be designed to achieve the functions as soon as practicable. Compensatory mitigation shall be in-kind and on site, when feasible, and sufficient to maintain the functions of the critical area, and to prevent risk from a hazard posed by a critical area to a development or by a development to a critical area.

Compensatory mitigation priority for wetlands is specified in VMC 20.720.140(C)(2)(c). Compensatory mitigation shall offset both permanent and temporal impacts. Fish and wildlife habitat conservation areas are subject to additional compensatory mitigation requirements under VMC 20.720.110(C)(1)(b).

B. *No Net Loss.* The proposal protects the critical area functions and values and results in no net loss of critical area functions and values. If loss of critical area functions are expected, adequate mitigation is provided to offset impacts of anticipated loss.

C. *Incorporate Best Available Science.* The proposal shall demonstrate measures to protect, avoid, and mitigate impacts to the critical area functions and values consistent with best available science known at the time of permit submittal.

D. *Monitoring.* The proposal demonstrates adequate measures to monitor the impacts, and measure the effectiveness of proposed mitigation measures. When corrective action is required to ensure no net loss of functions, the proposal outlines the methods by which such correction shall occur.

E. *Consistency with General Purposes.* The proposal is consistent with the general purposes of this chapter and does not pose a significant threat to the public health, safety, or welfare on or off the development proposal site.

F. *Performance Standards.* The proposal meets the specific performance standards of VMC 20.720.110, Fish and wildlife habitat conservation areas, VMC 20.720.120, Frequently flooded areas, VMC 20.720.130, Geologic hazard areas, and VMC 20.720.140, Wetlands, as applicable.

## 20.720.070 Minor exceptions.

A. *Minor Exceptions Authorized.* Minor exceptions of no greater than 10 percent from the numeric standards of this chapter may be authorized by the city in accordance with the Type II procedures set forth in Chapter 20.210 VMC. Minor exceptions shall not be combined with buffer averaging or buffer reduction for fish and wildlife habitat conservation areas or wetlands. Minor exceptions from the National Flood Insurance Program development standards of VMC 20.720.120, Frequently flooded areas, are prohibited.

B. *Minor Exception Criteria.* A minor exception from the standards of this chapter may be granted only if the applicant demonstrates that the requested action conforms to all of the following criteria:

1. Unusual conditions or circumstances exist that are specific to the intended use, the land, the lot, or something inherent in the land, and that are not applicable to all other lands in the same vicinity or zoning district;
2. The unusual conditions or circumstances do not result from the actions of the applicant;
3. Granting the minor exception requested will not confer on the applicant any special privilege that is denied by this chapter to other lands, structures, or buildings under similar circumstances;
4. The minor exception is necessary for the preservation and enjoyment of a substantial property right of the applicant such as is possessed by the owners of other properties in the same vicinity or district;
5. The minor exception requested is the least necessary and no greater than 10 percent of the subject standard to relieve the unusual circumstances or conditions identified in subsection (B)(1) of this section;
6. The granting of the minor exception or the cumulative effect of granting more than one minor exception is consistent with the general purpose and intent of the city of Vancouver comprehensive plan, this title, this chapter, and the underlying zoning district;
7. Degradation of the functions (including public health and safety) of the subject critical areas and any other adverse impacts resulting from granting the minor exception will be avoided, minimized and mitigated to the extent feasible in accordance with the provisions of this chapter;
8. Granting the minor exception will not otherwise be materially detrimental to the public welfare or injurious to the property or improvements in the vicinity of the subject property; and
9. The proposed development complies with all other applicable standards.

C. *Conditions May Be Required.* In granting any minor exception, the city may attach such conditions and safeguards as are necessary to secure adequate protection of critical areas and developments from adverse impacts, and to ensure conformity with this chapter.

## 20.720.080 Reasonable economic use exceptions.

A. *Exception Request and Review Process.* If the application of this chapter would deny all reasonable economic use of the subject property, the city shall determine if compensation is an appropriate action, or the property owner may apply for an exception pursuant to this section. Exceptions from the standards of this chapter may be authorized by the city in accordance with the Type III procedures set forth in Chapter 20.210 VMC .

An application for a reasonable economic use exception shall be made to the city and shall include a critical areas report with a mitigation plan and any other related project documents, such as permit applications to other agencies, special studies, and environmental documents prepared pursuant to the State Environmental Policy Act (Chapter 43.21C RCW). The Planning Official shall prepare a recommendation to the Hearing examiner based on review of the submitted information, a site inspection, and the proposal's ability to comply with the critical areas reasonable use exception criteria.

B. *Reasonable Use Review Criteria.* The city shall approve applications for reasonable use exceptions when all of the following criteria are met:

1. The application of this chapter would deny all reasonable economic use of the property;
2. No other reasonable economic use of the property has less impact on the critical area;
3. The proposed impact to the critical area is the minimum necessary to allow for reasonable economic use of the property;
4. The inability of the applicant to derive reasonable economic use of the property is not the result of actions by the applicant after the effective date of this chapter, or its predecessor;
5. The proposal does not pose a significant threat to the public health, safety, or welfare on or off the development proposal site;
6. The proposal mitigates for the loss of critical area functions to the greatest extent feasible; and
7. The proposal is consistent with other applicable regulations and standards.

## 20.720.090 Unauthorized critical areas alterations and enforcement.

A. *Enforcement*.

1. It shall be unlawful to violate the provisions of this chapter. Any violation of this chapter shall constitute a public nuisance.
2. VMC Title 22 shall provide the enforcement provisions for this chapter. VMC Title 22 may impose any of the remedies, requirements or corrective actions contained in this chapter. In lieu of or in addition to the enforcement provisions contained in VMC Title 22, the city may also seek injunctive or other relief from any court of competent jurisdiction.

B. *Requirement for Restoration Plan.* In the event the city initiates enforcement action under VMC Title 22 or files a complaint in court, the city may require a restoration plan consistent with the requirements of this chapter. Such a plan shall be prepared by a qualified professional using the best available science and shall describe how the actions proposed meet the minimum performance standards for restoration requirements. The Planning Official shall, at the violator's expense, seek expert advice in determining whether the plan restores the affected area to its preexisting condition or, where that is not possible, restores the functions of the affected area. Inadequate plans shall be returned to the applicant or violator for revision and resubmittal.

C. *Minimum Performance Standards for Restoration*.

1. For alterations to frequently flooded areas, wetlands, and fish and wildlife habitat conservation areas, the following minimum performance standards shall be met for the restoration of a critical area; provided, that if the violator can demonstrate that greater functional and habitat values can be obtained, these standards may be modified:

   a. The structure and functions of the critical area or buffer prior to violation shall be restored, including water quality and habitat functions;

   b. The soil types and configuration prior to violation shall be replicated;

   c. The critical area and buffers shall be replanted with native vegetation (a list of native species is available from the Planning Official). If the critical area or buffer is on a site that meets the criteria of VMC 20.720.030(C)(1)(f)(i), the vegetation for replanting must be not only native but also fire-resistant. A list of native, fire-resistant species is available from the Planning Official; and

   d. Information demonstrating compliance with this chapter's mitigation plan requirements shall be submitted to the Planning Official.

2. For alterations to frequently flooded and geologic hazard areas, the following minimum performance standards shall be met for the restoration of a critical area or buffer; provided, that if the violator can demonstrate that greater safety can be obtained, these standards may be modified:

   a. The hazard shall be reduced to a level equal to, or less than, the pre-violation hazard;

   b. The risk of personal injury resulting from the alteration shall be eliminated or minimized;

   c. Drainage patterns shall be restored to those existing before the alteration; and

d. The hazard area and buffers shall be replanted consistent with pre-violation conditions with native vegetation sufficient to minimize the hazard. If the critical area or buffer is on a site that meets the criteria of VMC 20.720.030(C)(1)(f)(i), the vegetation for replanting must be not only native but also fire-resistant. A list of native, fire-resistant species is available from the Planning Official.

D. *Site Investigations.* The Planning Official is authorized to make site inspections and take such actions as are necessary to enforce this chapter.

E. *Noncompliance in Frequently Flooded Areas.* No structure or land shall hereafter be constructed, located, extended, converted, or altered without full compliance with the terms of this chapter and other applicable regulations. Violations of the provisions of this chapter by failure to comply with any of its requirements (including violations of conditions and safeguards established in connection with conditions) shall constitute a misdemeanor. Any person who violates this chapter or fails to comply with any of its requirements shall upon conviction be subject to enforcement under subsection A of this section. Nothing herein contained shall prevent the city from taking such other lawful action as is necessary to prevent or remedy any violation.

## 20.720.100 Designation process for habitats of local importance.

A. *Eligibility and Approval Criteria.* Habitats of local importance are fish and wildlife habitat conservation areas that are not designated under VMC 20.720.110, but are designated as locally significant by the city. Criteria for designation include all of the following:

1. A need for protection exists due to a high diversity of fish or wildlife species, declining populations, scarcity of the habitat type, sensitivity to disturbance from human activity or development, or other unique local habitat functions.
2. The area is sufficient in size to support the species or habitat functions for which it is designated.
3. The designation will not compromise the ability of the city to achieve the goals of the comprehensive plan.
4. There is a proposed management strategy describing how the functions of the habitat will be protected after designation.
5. The area and habitat are not otherwise protected under other critical areas regulations.

B. *Designation Process.* Habitats of local importance may be proposed by the property owner or the city and shall be designated according to a Type IV legislative procedure (Chapter 20.210 VMC).

## 20.720.110 Fish and wildlife habitat conservation areas.

A. *Designation and Location*.

1. The city designates the following identified areas as fish and wildlife habitat conservation areas. Final designations shall be based on site conditions and other available data or information (see VMC 20.720.020(C)(1)).

a. Areas where endangered, threatened, and sensitive species have a primary association, including priority habitats and areas associated with priority species as defined by the Washington Department of Fish and Wildlife (WDFW) PHS List. Within the city, these areas and species primarily include, but may not be limited to, the following:

i Riparian areas composed of riparian management areas (RMAs) and riparian buffers (RBs);

ii Priority Oregon white oak habitat;

iii Biodiversity areas;

iv Waterfowl concentrations; and

v Aquatic habitat;

b. Forage fish spawning areas;

c. Naturally occurring ponds under 20 acres and their submerged aquatic beds that provide fish and wildlife habitat;

d. Waters of the state;

e. Lakes, ponds, streams, and rivers planted with game fish by a governmental or tribal entity;

f. State natural area preserves, natural resource conservation areas, and state wildlife areas; and

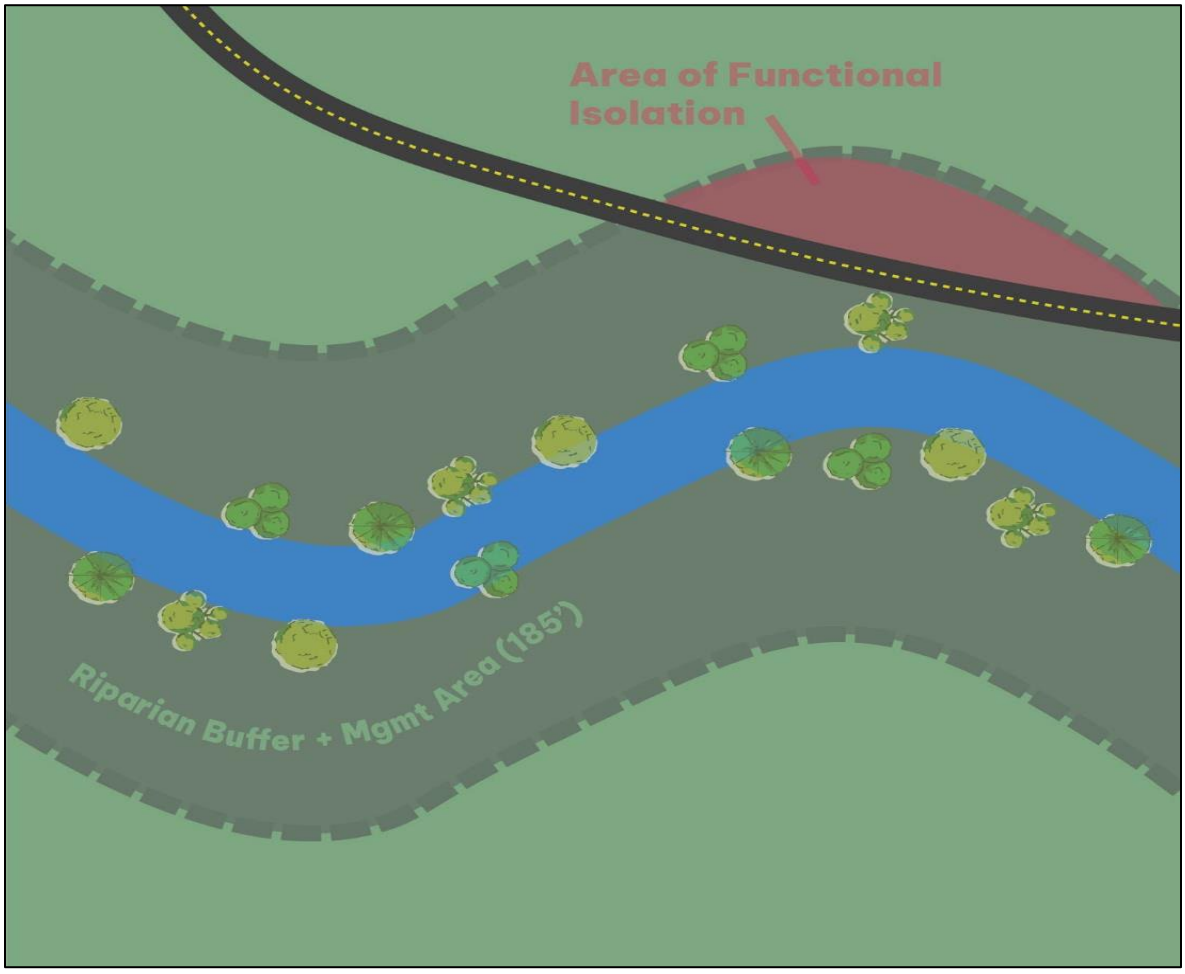
g. *Habitats and Species of Local Importance.* Fish and wildlife habitat conservation areas or individual species that are designated as locally significant by the city in accordance with VMC 20.720.100.

h. *Fish and Wildlife Habitat Conservation Area Locations.* Information on the approximate location and extent of fish and wildlife habitat conservation areas is available from the following sources:

i U.S. Fish and Wildlife Service (USFWS) and National Oceanic and Atmospheric Administration (NOAA) Fisheries species list;

ii WDFW priority habitat and species maps;

iii WDFW anadromous and resident salmonid distribution maps in the Salmon and Steelhead Habitat Inventory Assessment Program (SSHIAP);



iv StreamNet.org maps from the Pacific States Marine Fisheries Commission;

v Washington State Department of Natural Resources (DNR) official water type reference maps; and

vi Other information acquired by the city such as site-specific or area-specific delineations or studies.

B. *Development activities that functionally or physically isolate the RMA or RMB buffer.* When existing impervious surfaces or other built structures functionally or physically isolate the RMA or RB buffer from the water body, the regulated RMA or RB wetland buffer shall extend landward from the ordinary high water mark (OHWM) or channel migration zone (CMZ), whichever is greater, and terminate at the waterward edge of the impervious surface or manmade structure. Development activities that occur within the area of functional isolation, or further landward, are exempt from the requirement to obtain a critical areas permit.

FIGURE 20.720.110-1. FUNCTIONAL ISOLATION

The obstruction causing the physical isolation shall be significant enough in size and stature that protective buffers or other mitigation measures cannot reasonably restore ecological functions or benefits. The Planning Official may rely on a site visit, aerial photographs, other evidence provided by the applicant or the applicant's qualified professional, and consultation with the Washington Department of Fish and Wildlife (WDFW) in making a determination to reduce the width of the RMA, RB, or wetland buffer based on functional and/or physical isolation. The following obstructions shall not constitute functional isolation:

1. Trails, paths, or sidewalks;
2. Minor accessory structures;
3. Driveways or drive aisles;
4. Subsurface utilities.

Note: RMAs and RBs are measured from the OHWM or the edge of a channel migration zone (CMZ), whichever is further landward. However, no CMZs have been identified within the city limits as of the date this chapter was adopted.

C. Performance Standards.

1. Development Standards.

a. Development and Clearing Activities.

i Development or clearing activities shall protect the functions of the fish and wildlife habitat conservation areas on the site and shall result in no net loss of functions, as required by the approval criteria of this chapter.

ii If development or clearing activity is within a priority habitat and species area, the applicant shall follow WDFW management guidelines, management recommendations, or other standards approved by WDFW.

iii Functionally significant habitat, defined as habitat that cannot be replaced or restored within 20 years, shall be preserved unless the activity meets the conditions of subsection (C)(2)(c) of this section. An example of habitat that cannot be replaced within 20 years would be a stand of mature trees or a peat bog.

b. *Mitigation*.

i Mitigation for impacts within fish and wildlife habitat conservation areas shall follow the sequence specified in this chapter's approval criteria. WDFW shall be consulted when a project may potentially impact priority habitats and species (PHS) on or adjacent to the project area.

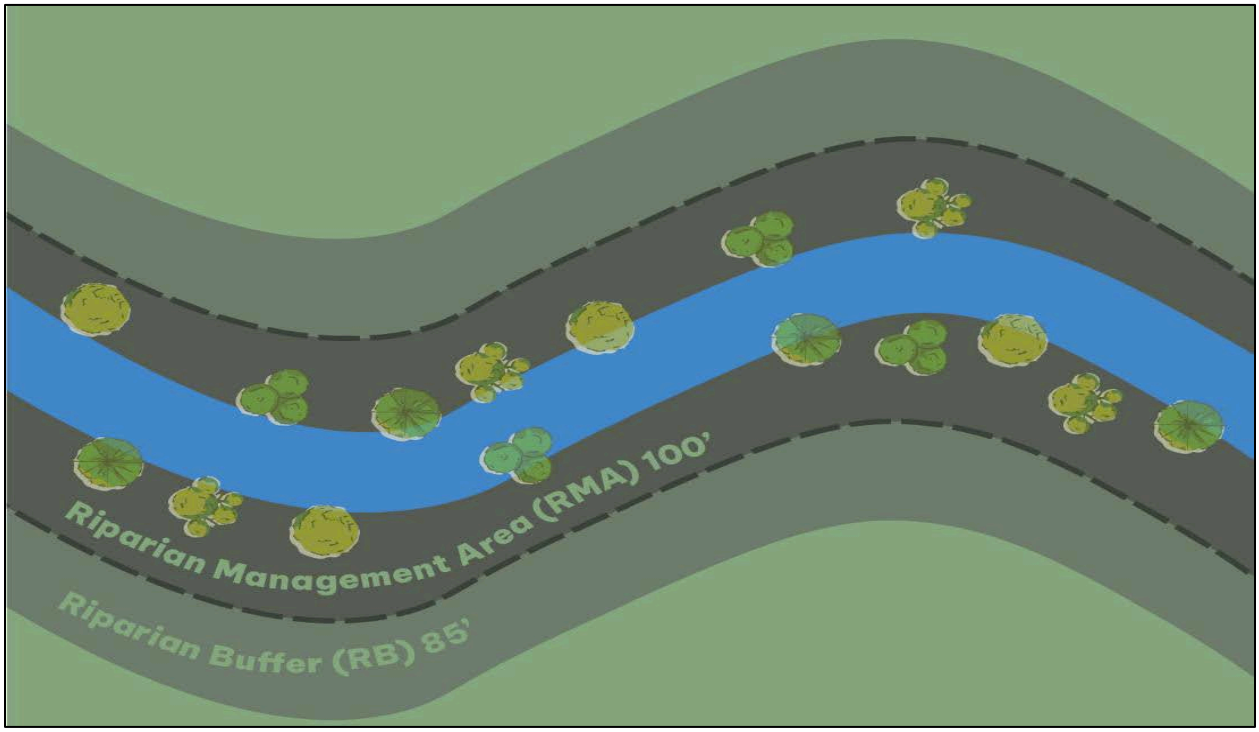
ii Disrupted functions and values shall be mitigated on site as a first priority, and off site thereafter.

iii An up-to-date science-based guide, such as applicable watershed, fish recovery, sub-basin, or other science-based plans should be used to guide the proposed mitigation. Any science used to guide mitigation actions, whether on site or off site, must meet the criteria and characteristics of best available science listed in WAC 365-195-905 (Criteria for determining which information is the "best available science"), or the state standards in effect at the time of application.

c. *Signs for Fish and Wildlife Conservation Areas*.

i Temporary and permanent markers and signs shall be installed as required by this chapter's general provisions.

2. *Standards for RMAs and RBs*.



a. *RMA and RB Location and Width*.

i *Standard Width.* Standard RMA widths are 100 feet for shorelines of the state (Type S), for both fish-bearing and non-fish-bearing water bodies and for unclassified streams. The RB is 85 feet for all classified and unclassified water body types. The RMA and RB widths shall be combined for a total regulated riparian area width of 185 feet.

ii *Site Potential Tree Height (SPTH) RMA and RB Width.* If the applicant cannot accommodate the standard-width RMA and RB on the project site for the proposed development, applicants may use the 200-year SPTH mapping tool referenced in WDFW's Riparian Ecosystems, Volume 2: Management Recommendations and justify a lesser-width RMA and/or RB in the project's critical areas report. For project locations with multiple SPTH values, the largest SPTH value shall be used to establish the riparian area width. If the tool does not have data available to establish SPTH, the minimum combined RMA and RB width shall be the standard width as established in subsection (C)(2)(a)(i) of this section.

iii *Measurement.* Whether the standard or SPTH RMA and RB is used, the RMA is measured horizontally from the OHWM of the stream, river, or lake or from the CMZ, where present, to the specified width. The RB is measured horizontally from the landward boundary of the RMA as shown in Figure 20.720.110-2.

**FIGURE 20.720.110-2.**

b. *Riparian Management Area Width Averaging.* The width of the RMA may be modified if all the following are met:

   i The total square footage of the RMA (subsection (C)(2)(a)(i) of this section) is not reduced;

   ii There is no net loss of functions as a result of the averaging; and

   iii The reduction of the RMA width at any location is no greater than 25 percent of the required standard or SPTH width under subsection (C)(2)(a)(i) or (C)(2)(a)(ii) of this section.

c. *Permitted Development and Uses within RMAs and RBs and Development Standards*.

   i *Development and Uses within the Riparian Buffer.* Development or clearing activity is permitted in the RB that meets the general performance standards in this subsection.

   ii *Development and Uses within the RMA.* No development or clearing activity is allowed within the RMA unless such activity is:

      (A). A water-dependent, water-related or water-enjoyment activity for which there are no feasible alternatives that would have a less adverse impact on the RMA;

      (B). Infrastructure or utilities that cannot feasibly be located outside of the wetland, that minimize the impact, that mitigate for any unavoidable impact to functions, and have received authorization from applicable federal and state regulating agencies;

(C). Mitigation for activities allowed by this chapter, providing the activity results in no net loss of riparian habitat functions on the site; or

(D). Trails and wildlife viewing structures; provided, that the trails and structures minimize the impact and are constructed so that they do not interfere with hydrology of the water body and do not result in increased sediment entering the water body.

iii *Modifications to Existing Development.* When replacing or removing existing development within an RMA or RB, the applicant shall implement the following, where applicable, during site construction:

(A). Evaluate the RMA and RB to pinpoint the best sites to restore and consider connectivity and adjacency to other priority habitats;

(B). Improve aquatic connectivity by replacing culverts and removing barriers to movement;

(C). Revegetate with native plants and consider improvements for wildlife by integrating structures necessary for nesting, breeding, and foraging;

(D). As existing development is remodeled or replaced, incorporate additional setbacks for streams;

(E). Control access to RMAs and RBs during construction to limit soil compaction. Avoid operating equipment near water bodies to reduce sedimentation and soil compaction; and

(F). Avoid using chemicals in the RMA and RB that are not approved by the Washington State Department of Ecology (Ecology).

iv *Mitigation.* When mitigating on-site impacts, the following guidelines, where applicable, shall be implemented when designing mitigation for impacted riparian areas, if a restoration opportunity is available on site and within the RMA or RB:

(A). Protect riparian functions that remain, especially in places that are high functioning and implement actions that enhance degraded functions;

(B). Increase riparian width in areas of high function; and

(C). Prioritize opportunities to maintain and restore in-stream and riparian connectivity.

D. *Additional Critical Areas Report Requirements*.

1. A critical areas report for an RMA or RB shall include:

a. The SPTH riparian area width in the mapping tool referenced in WDFW's Riparian Ecosystems, Volume 2: Management Recommendations document, if the applicant is not proposing to use the standard-width RMA and RB.

b. In addition to the standards of VMC 20.720.050(E), where a mitigation plan is required as part of the critical areas report for a fish and wildlife habitat conservation area that involves a water body, RMA, or RB, the monitoring program protocol shall include, where relevant to the impacted functions:

i Observations and measurements of riparian integrity and quality (buffer width, riparian corridor continuity or fragmentation, species diversity, stand age, plant survival rates);

ii Large woody debris surveys;

iii Streamflow monitoring;

iv Water quality monitoring to detect pollution impacts; and

v Biological monitoring including fish surveys and benthic macroinvertebrate sampling.

2. If the clearing or development activity is in the RMA, the critical areas report shall contain all the following information, if applicable:

a. How the clearing or development activity constitutes a water-dependent, water-related, or water-enjoyment use;

b. How the clearing or development activity cannot feasibly be located on the site outside of the RMA;

c. How the proposal meets the RMA width averaging standard (subsection (C)(2)(b) of this section); and

d. How the proposal will not adversely affect the connectivity of habitat functions.

3. For land use and development-related activities on a site with PHS-designated priority Oregon white oak woodland habitat, the applicant shall be required to demonstrate compliance with WDFW's latest guidance: Best Management Practices for Mitigating Oregon White Oak Priority Habitat (January 2024) and any subsequent revisions. The report shall include mapping and an evaluation of the habitat functions.

a. The critical areas report shall also identify protection and mitigation for the impacted Oregon white oaks on the site. In circumstances where it is demonstrated that preservation or mitigation of impacts on site is not practicable, the applicant shall provide a minimum of two alternative site designs and layouts to demonstrate that impacts cannot be avoided or be reduced to result in less impacts. The planning director may approve reductions to numerical standards including parking and setbacks under the minor exception process in VMC 20.720.070 to avoid or reduce impacts.

b. If compensation is determined to be the only available option for the proposed impact, the report shall include the quantity and method of mitigation to compensate for permanent and temporal impacts in accordance with WDFW's Best Management Practices for Mitigating Impacts to Oregon White Oak Priority Habitat, including the following:

   i Assessment of priority Oregon white oak woodlands and individuals to determine if they meet the designation criteria for priority habitat and species, the size of each woodland or individual, and the level of ecological function provided;

   ii Analysis of the physical and temporal loss of the impacted Oregon white oak woodland habitat;

   iii The corresponding mitigation ratios for both physical and temporal loss of the impacted Oregon white oak habitat and the location of such mitigation; and

   iv Description of monitoring as outlined by WDFW's guidance.

## 20.720.120 Frequently flooded areas.

This section shall apply to all special flood hazard areas within the boundaries of the city of Vancouver.

A. *Designation.* Frequently flooded areas are the areas of special flood hazards identified by the Federal Insurance Administrator and the Federal Emergency Management Agency (FEMA), respectively, in scientific and engineering reports entitled Flood Insurance Study: Clark County, Washington and Incorporated Areas, Volumes 1 and 2 (Numbers 53011CV001A and 53011CV002A, respectively) effective September 5, 2012, and any revisions thereto, with accompanying Flood Insurance Rate Maps (FIRMs and their digital version, DFIRMs) and any revisions thereto, which are hereby adopted by reference and declared to be part of this chapter. The Flood Insurance Study (FIS), FIRMs and DFIRMs are available from the Planning Official, 415 West 6th Street, Vancouver, WA 98660. (See VMC 20.150.040A and 20.150.040B, Meanings of Specific Words and Terms, for definitions for "areas of special flood hazards," "floodplain," "floodway," and "frequently flooded areas.")

When base flood elevation (BFE) data has not been provided in frequently flooded areas (Zone A), the Planning Official shall obtain, review, and reasonably utilize any base flood elevation and floodway data available from a federal, state or other source in order to administer the provisions of this chapter. This best available information for flood hazard area identification shall be the basis for regulation until a new FIRM/DFIRM is issued.

B. *Compliance.* All development within special flood hazard areas is subject to the terms of this chapter and other applicable regulations.

C. *Penalties for Noncompliance.* See VMC 20.720.090.

D. *Abrogation and Greater Restrictions.* This chapter is not intended to repeal, abrogate, or impair any existing easements, covenants, or deed restrictions. However, where this chapter and another ordinance, easement, covenant, or deed restriction conflict or overlap, whichever imposes the more stringent restrictions shall prevail.

E. *Interpretation (Not Mandatory).* In the interpretation and application of this chapter, all provisions shall be:

   1. Considered as minimum requirements;

   2. Liberally construed in favor of the governing body; and

   3. Deemed neither to limit nor repeal any other powers granted under state statutes.

F. *Warning and Disclaimer of Liability.* The degree of flood protection required by this chapter is considered reasonable for regulatory purposes and is based on scientific and engineering considerations. Larger floods can and will occur on rare occasions. Flood heights may be increased by manmade or natural causes. This chapter does not imply that land outside the areas of special flood hazards or uses permitted within such areas will be free from flooding or flood damages. This chapter shall not create liability on the part of the city of Vancouver, any officer or employee thereof, or the Federal Insurance Administrator for any flood damages that result from reliance on this chapter or any administrative decision lawfully made hereunder.

G. *Severability.* This chapter and the various parts thereof are hereby declared to be severable. Should any section of this chapter be declared by the courts to be unconstitutional or invalid, such decision shall not affect the validity of the chapter as a whole, or any portion thereof other than the section so declared to be unconstitutional or invalid.

FIGURE 20.720.120-1. FREQUENTLY FLOODED AREAS/AREAS OF SPECIAL FLOOD HAZARDS

Adapted from Floodplain Management: A Local Administrator's Guide to the National Flood Insurance Program, Fifth Edition, FEMA Region 10

H. *Designation of the Floodplain Administrator (44 CFR 59.22(b)(1)).* The land use program manager is hereby appointed to administer, implement, and enforce this chapter by granting or denying development permits in accordance with its provisions. The floodplain administrator may delegate authority to implement these provisions.

1. *Duties and Responsibilities of the Floodplain Administrator.* Duties of the floodplain administrator shall include, but not be limited to:

a. *Development Review.* Review all proposed developments to:

i Determine whether a floodplain permit is required;

ii Make interpretations where needed as to the exact location of special flood hazard area boundaries, with respect to the flood insurance study maps and zoning district boundaries.

b. *Permit Review.* Review all development permits to determine that:

i The permit requirements of this chapter have been satisfied;

ii All other required state and federal permits have been obtained;

iii The site is reasonably safe from flooding;

iv The proposed development is not located in the floodway. If located in the floodway, ensure the encroachment provisions of Section 5.4-1 are met;

v Notify FEMA when annexations occur in the special flood hazard area.

I. *Additional Critical Areas Report Requirements.* In addition to the critical areas report requirements in VMC 20.720.050, the following information shall be submitted. Elevation data shall reference the NAVD 1988 Datum.

1. Base (100-year) flood elevation in relation to mean sea level. When base flood elevation has not been provided or is not available from an authoritative source, it shall be generated by the applicant for developments which contain at least 50 lots or five acres, whichever is less.
2. Elevation in relation to mean sea level of the lowest floor (including basement) of all existing and proposed structures.
3. Elevation in relation to mean sea level to which any structure's lowest floor (including basement) is raised to be at least one foot above the base flood elevation or for nonresidential flood-proofed structures, the elevation in relation to mean sea level to which any structure is flood-proofed.
4. Location of the channel migration zone. See the Clark County Shoreline Inventory and Characterization Report, Volume 1, Lewis and Salmon-Washougal Watersheds and Rural Areas, Map 27, Potential Channel Migration Zone (CMZ) Areas for general locations of channel migration zones. The actual location of the channel migration zone on site must be identified by a qualified professional and mapped in accordance with the submittal requirements of VMC 20.720.050.
5. Description of strategies taken to avoid, minimize, and mitigate unavoidable impacts to public safety. When the base flood elevation has not been provided or is not available from an authorized source (subsection A of this section), the critical areas report shall include a discussion of how and whether the proposed development would be reasonably safe from flooding. Historical data, high water marks, photographs of past flooding and other available information will be used as the basis for this discussion and conclusion.
6. Certification, documentation, and demonstration by a qualified professional of how the applicable standards of subsection J of this section will be met. To support the "no rise" analyses required in subsection (J)(1) of this section, the documentation required in the most recently updated or amended FEMA Region 10 publication, Floodplain Management: A Local Floodplain Administrator's Guide to the National Flood Insurance Program shall be submitted.

J. *Performance Standards.* Except as noted, the following standards apply to all structures and development (including but not limited to the placement of manufactured homes, substantial improvement, roads, railroads, trails, dikes, levees, or water, sewer, stormwater conveyance, gas, power, cable, fiber optic or telephone facilities) in all areas of special flood hazards and channel migration zones (CMZs). Additional restrictions apply in the floodway.

1. *Encroachments*.
   a. *Designated Floodway: Prohibited Encroachments.* The following are prohibited in the floodway:
      i Water wells (subsection (J)(4)(a) of this section).
      ii On-site waste disposal systems (subsection (J)(5)(a) of this section).
      iii Residential structures or other structures for human habitation including but not limited to:

(A). Building envelopes within subdivisions (subsection (J)(9)(a) of this section);

(B). New construction or reconstruction of residential structures (subsection (J)(10)(b)(i) of this section);

(C). Placement or replacement of manufactured homes (all types) (subsection (J)(10)(b)(ii) of this section);

(D). Critical facilities housing vulnerable populations and emergency services (subsection (J)(12)(a) of this section); and

(E). Recreational vehicles (subsection (J)(13)(a) of this section).

b. *Designated Floodway – Allowed Encroachments.* In areas where the base flood elevation has been provided and a regulatory floodway has been designated, other encroachments including but not limited to fill, new construction, replacement structures, substantial improvements and other development shall be prohibited unless:

i Certification by a qualified professional (in this case, a registered professional engineer) is provided, demonstrating through hydrologic and hydraulic analyses performed in accordance with standard engineering practice that the proposed encroachment would not result in a net increase in base flood elevation (less than 0.00 feet, rounded) or flood velocity during the occurrence of the base flood discharge. At a minimum, such "no rise" analyses shall include a step-backwater analysis and a conveyance compensation analysis as required in the most recently updated or amended FEMA Region 10 publication, Floodplain Management: A Local Floodplain Administrator's Guide to the National Flood Insurance Program; and

ii The applicable standards of subsections (J)(2) through (J)(15) of this section are also met.

c. *No Designated Floodway – Allowed Encroachments.* In areas where the base flood elevation has been provided but a regulatory floodway has not been designated, no encroachments including but not limited to new construction, substantial improvement, or other development (including fill) shall be permitted, unless:

i The applicant has demonstrated that the cumulative effect of the proposed development, when combined with all other existing and anticipated development will not increase the water surface elevation of the base flood more than one foot at any point; and

ii The applicable standards of subsections (J)(2) through (J)(15) of this section are also met.

d. *Other Areas of Special Flood Hazards and CMZs.* In areas of special flood hazards except the floodway or where the BFE has not been provided, or in channel migration zones, encroachments, including but not limited to fill, new construction, replacement structures, substantial improvements and other development, shall be prohibited, unless:

i A qualified professional provides certification demonstrating that the proposed project would not result in a net loss of flood storage capacity; and

ii The applicable standards of subsections (J)(2) through (J)(15) of this section are also met.

2. *Property Damage.* Development shall not result in adverse impacts to other properties either upstream or downstream.

3. *Drainage.* Drainage paths around structures and on slopes shall be adequate to guide floodwaters around and away from proposed structures and adjacent properties.

4. *Water.*

   a. Water wells are prohibited in the floodway.

   b. In areas of special flood hazards except the floodway and in CMZs, water wells shall be constructed to withstand a 100-year flood without adversely impacting groundwater quality (WAC 173-160-171).

   c. All new and replacement water supply systems shall be designed to minimize or eliminate infiltration of flood waters into the system.

5. *Waste*.

   a. On-site waste disposal systems are prohibited in the floodway.

   b. In areas of special flood hazards except the floodway and in CMZs, on-site waste disposal systems shall be located to avoid flood damage to them or release of contaminants from them during a base flood event.

   c. New and replacement sanitary sewage systems shall be designed to minimize or eliminate infiltration of floodwaters into the systems and discharge from the systems into floodwaters.

6. *Construction Materials and Methods*.

   a. Construction methods and practices shall minimize flood damage.

   b. Construction materials and utility equipment shall be resistant to flood damage. For guidance on flood-resistant materials see the most current FEMA Technical Bulletin 2, Flood-Resistant Materials Requirements.

   c. Electrical, heating, ventilation, plumbing, and air conditioning equipment and other service facilities shall be designed and/or otherwise elevated or located so as to prevent water from entering or accumulating within the components during a base flood event. For guidance on the placement of building utility systems, see the most current FEMA Publication No. 348, Protecting Building Utilities from Flood Damage.

7. *Anchoring.* All new construction including substantial improvements and all types of manufactured homes shall:
    a. Be elevated on a permanent foundation and securely anchored to an adequate foundation system to prevent flotation, collapse, or lateral movement of the structure resulting from hydrodynamic and hydrostatic loads including the effects of buoyancy.
    b. Be installed or placed using methods and practices that minimize flood damage. Manufactured home placement shall follow the guidance in the most current FEMA P-85, Protecting Manufactured Homes from Floods and Other Hazards.
8. *Enclosed Areas Below the Base Flood Elevation*.
    a. Enclosed areas below the base flood elevation shall be used only for vehicle parking, building access, or storage.
    b. New or substantially improved enclosed areas below the base flood elevation shall be constructed in accordance with:
        i Subsection (J)(7) of this section, Anchoring;
        ii Subsections (J)(10)(c)(ii) and (J)(10)(d) of this section, Residential Construction;
        iii Subsections (J)(6)(b) and (J)(6)(c) of this section, Construction Materials and Methods.
    c. Enclosed areas below the BFE shall not be considered to be the lowest floor when they are not part of a basement and meet the requirements of subsection (J)(10)(d) of this section.
    d. *Crawlspace Construction.* Crawlspaces are a type of enclosed area below the BFE. Crawlspaces constructed at or above the lowest adjacent exterior grade are preferred. (Note: Insurance premiums for structures with below-grade crawlspaces will be higher than those with the interior elevation at or above the lowest adjacent exterior grade.) Refer to the most current FEMA Technical Bulletin 11, Crawlspace Construction for Buildings Located in Special Flood Hazard Areas (available from the Planning Official) for more information. Crawlspaces:
        i Are prohibited in areas with flood velocities greater than five feet per second unless designed by a qualified professional (in this case an architect or professional engineer).
        ii Shall meet the requirements of subsections (J)(8)(a) through (J)(8)(c) of this section, Enclosed Areas Below the Base Flood Elevation.
        iii Shall not be considered “basements” for the purposes of this section when constructed according to the following standards:
            (A). The interior grade of a crawlspace below the base flood elevation must not be more than two feet below the lowest adjacent exterior grade.

(B). The height of the below-grade crawlspace, measured from the interior grade of the crawlspace to the top of the crawlspace foundation wall, must not exceed four feet at any point.

(C). The crawlspace must be equipped with a drainage system that removes floodwaters from the interior area of the crawlspace in a reasonable period of time after a base flood event.

9. *Subdivisions*.

a. *All subdivisions shall be designed*:

i To ensure that no residential structure or other structures for human habitation are located in the floodway even though lots may extend into the floodway;

ii To avoid placement of any structures in areas of special flood hazards and in CMZs;

iii Where it is not possible to design a subdivision in a manner to avoid placement of any structures in areas of special flood hazards or CMZs, the subdivision shall be designed to minimize or eliminate potential flood damage.

b. All subdivisions shall have facilities such as sewer, gas, power, cable, fiber optic, telephone, stormwater and water systems located and constructed to minimize or eliminate flood damage. (See subsection (J)(2) of this section, Property Damage; subsection (J)(4) of this section, Water; subsection (J)(5) of this section, Waste; subsection (J)(6) of this section, Construction Materials and Methods; and subsection (J)(7) of this section, Anchoring.)

c. All subdivisions shall have adequate drainage provided to reduce exposure to flood damage. (See subsection (J)(3) of this section, Drainage.)

10. *Residential Construction (Including Manufactured Homes)*.

a. *Residential Construction in the Floodway*.

i New construction and reconstruction of residential development including placement and replacement of all types of manufactured homes is prohibited in the floodway, unless sited as a temporary use in accordance with requirements listed in this section.

ii Existing residential structures and manufactured homes in the floodway are nonconforming, but may be repaired or improved, provided:

(A). The repair or improvement does not increase the ground floor area of the structure; and

(B). The repair or improvement does not result in adverse impacts to other properties either upstream or downstream; and

(C). The cost of the repair or improvement does not exceed 50 percent of the market value of the structure either:

(1). Before the start of repair or improvement where there is no damage to the structure; or

(2). Before flood or other damage to the structure occurred.

(D). Any project for improvement of a structure to correct existing violations of local health, sanitary, or safety code specifications which have been identified by the Planning Official and which are the minimum necessary to ensure safe living conditions may be excluded from the 50 percent.

(E). Any project for improvement to a structure identified as a historic place may be excluded from the 50 percent.

b. *Residential Construction in Other Areas of Special Flood Hazards and CMZs.* In areas of special flood hazards except the floodway and in channel migration zones:

i New residential construction and reconstruction, including all types of manufactured homes and other structures for human habitation, shall meet all the provisions of this chapter, including subsections (J)(8) and (J)(10)(c) through (J)(10)(d) of this section.

ii New placement or replacement of all types of manufactured homes shall meet the standards of subsection (J)(7) of this section, Anchoring.

iii *Repair or Substantial Improvement.* All provisions of this chapter (including the elevation standards of subsections (J)(8), (J)(10)(c) and (J)(10)(d) of this section), all state and local health, sanitary, safety codes, and where applicable, historic preservation codes shall be met when the cost of repair or improvement of an existing residential structure exceeds 50 percent of the market value of the structure either:

(A). Before the start of repair or improvement where there is no damage to the structure; or

(B). Before flood or other damage to the structure occurred.

c. *Elevation*.

i *BFE Established.* The lowest floor (including basement) of new residential structures (including but not limited to reconstruction, substantial improvement, the placement or replacement of all types of manufactured homes) shall be elevated at least one foot above base flood elevation. Structures shall be elevated using means other than fill (such as extended foundation or other enclosure walls, piles, or columns) whenever feasible. Mechanical equipment and utilities shall be waterproofed or elevated at least one foot above the BFE.

ii *No BFE.* In areas where the base flood elevation has not been provided or is not available from an authorized source (subsections A and (I)(5) of this section) and the critical areas report demonstrates to the satisfaction of the Planning Official that the proposed development would be reasonably safe from flooding, new residential construction (including but not limited to substantial improvement and the placement of manufactured homes) shall be elevated at least two feet above the highest adjacent grade. (Note: Failure to elevate at least two feet above the highest adjacent grade may result in higher insurance rates.)

d. *Fully Enclosed Areas Below Lowest Floor.* Fully enclosed areas below the lowest floor that are subject to flooding are prohibited unless designed to automatically equalize hydrostatic flood forces on exterior walls by allowing for the entry and exit of floodwaters. Designs for meeting this requirement must be certified by a qualified professional (in this case, a registered professional engineer or architect), or must meet or exceed the following minimum criteria:

i Contain a minimum of two openings having a total net area of not less than one square inch for every one square foot of enclosed area subject to flooding;

ii The bottom of all openings are no higher than one foot above grade; and

iii Openings permit the automatic entry and exit of floodwaters even when equipped with screens, louvers, or other coverings or devices.

iv For guidance on flood openings, see FEMA Technical Bulletin 1-93, Openings in Foundation Walls.

v A garage attached to a residential structure, constructed with the garage floor slab below the BFE, must be designed to allow for automatic entry and exit of floodwaters.

11. *Nonresidential Construction.* New construction and substantial improvement of any nonresidential structure shall either be elevated (subsection (J)(11)(a) or (J)(11)(b) of this section) or flood-proofed (subsection (J)(11)(c) of this section):

a. *Be Elevated – BFE Established*.

i Have the lowest floor, including basement, elevated at least one foot above the base flood elevation or elevated as required by ASCE 24, whichever is greater;

ii Meet the same standards for space below the lowest floor as described in subsections (J)(8)(d) and (J)(10)(d)(i) through (J)(10)(d)(iii) of this section; and

iii Have mechanical equipment and utilities waterproofed or elevated at least one foot above the BFE, or as required by ASCE 24, whichever is greater.

b. *Be Elevated – No BFE*.

i In areas where the base flood elevation has not been provided or is not available from mapped data from federal or state sources and the critical areas report demonstrates to the satisfaction of the Planning Official that the proposed development would be reasonably safe from flooding, new nonresidential construction shall be elevated at least two feet above the highest adjacent grade. Failure to elevate at least two feet above the highest adjacent grade may result in higher insurance rates; and

ii Meet the same standards for space below the lowest floor as described in subsections (J)(8)(d) and (J)(10)(d) of this section; or

c. *Be Flood-Proofed.* Together with attendant utility and sanitary facilities shall:

i Be flood-proofed so that below one foot (or more) above the base flood elevation, the structure is watertight with walls substantially impermeable to the passage of water or dry flood-proofed to the elevation required by ASCE 24, whichever is greater;

ii Have structural components capable of resisting hydrostatic and hydrodynamic loads and effects of buoyancy;

iii Be certified by a registered professional engineer or architect that the design and methods of construction are in accordance with accepted standards of practice for meeting provisions of this subsection based on their development and/or review of the structural design, specifications and plans. Such certifications shall be provided to the Planning Official as set forth in subsection L of this section.

12. *Critical Facilities*.

a. Critical facilities housing vulnerable populations and emergency services shall be prohibited in the floodway.

b. In areas of special flood hazards except the floodway and in CMZs, construction of new critical facilities shall be prohibited unless the applicant demonstrates that:

i No feasible alternative site is available; and either:

(A). The lowest floor, entrances, egresses, and to the extent feasible access routes are elevated to three feet above the base flood elevation or to the elevation of the 500-year flood, whichever is higher; or

(B). The applicant demonstrates that other measures would ensure that in the event of a flood, the facility would remain safe and fully operational and that potentially harmful materials would not be displaced by or released into floodwaters. Such measures shall be conditions of approval of the critical areas permit.

13. *Recreational Vehicles*.

a. Recreational vehicles shall be located outside the floodway.

b. Recreational vehicles in areas of special flood hazard except the floodway and in CMZs shall either:

i Be on the site for fewer than 180 consecutive days;

ii Be fully licensed and ready for highway use, on its wheels or jacking system, attached to the site only by quick disconnect type water, sewer, stormwater, gas, power, cable, fiber optic, telephone, and security devices, and have no permanently attached additions; or

iii Meet the requirements of subsection (J)(7) of this section, Anchoring; subsection (J)(8) of this section, Enclosed Areas below the Base Flood Elevation; and subsection (J)(10)(c) of this section, Elevation.

14. *Appurtenant Structures (Detached Garages and Small Storage Structures)*. For A zones:

a. Appurtenant structures used solely for parking of vehicles or limited storage may be constructed such that the floor is below the BFE, provided the structure is designed and constructed in accordance with the following requirements:

i Use of the appurtenant structure must be limited to parking of vehicles or limited storage;

ii The portions of the appurtenant structure located below the BFE must be built using flood-resistant materials;

iii The appurtenant structure must be adequately anchored to prevent flotation, collapse, and lateral movement;

iv Any machinery or equipment servicing the appurtenant structure must be elevated or flood-proofed to or above the BFE;

v The appurtenant structure must comply with floodway encroachment provisions in Section 5.4-1;

vi The appurtenant structure must be designed to allow for the automatic entry and exit of floodwaters in accordance with Section 5.2-1(5);

vii The structure shall have low damage potential;

viii If the structure is converted to another use, it must be brought into full compliance with the standards governing such use; and

ix The structure shall not be used for human habitation.

b. Detached garages, storage structures, and other appurtenant structures not meeting the above standards must be constructed in accordance with all applicable standards in Section 5.2-1.

c. Upon completion of the structure, certification that the requirements of this section have been satisfied shall be provided to the floodplain administrator for verification.

15. *Alteration of Watercourse*.

a. The Planning Official shall notify adjacent communities and the state coordinating agency, Washington State Department of Ecology, prior to any alteration or relocation of a watercourse, and submit evidence of such notification to the Federal Insurance Administrator.

b. Alteration or relocation of a watercourse shall be allowed only after:

i Certification by a qualified professional that the alteration or relocation:

(A). Is the only feasible alternative or is part of a restoration project approved by the appropriate state or federal agencies;

(B). Will not diminish the flood-carrying capacity of the watercourse;

(C). Will not block side channels;

(D). Will be accomplished using soft armoring techniques wherever possible;

(E). Will avoid to the extent possible and then minimize and mitigate removal of vegetation including downed woody vegetation; and

(F). Will not endanger development in the channel migration zone.

ii The applicant provides assurance acceptable to the Planning Official of maintenance of the relocated channel such that the flood-carrying capacity of the watercourse is not diminished.

16. *Changes to Special Flood Hazard Area*.

a. If a project will alter the BFE or boundaries of the SFHA, then the project proponent shall provide the community with engineering documentation and analysis regarding the proposed change. If the change to the BFE or boundaries of the SFHA would normally require a letter of map change, then the project proponent shall initiate within 180 days of the information being made available, and receive approval of, a conditional letter of map revision (CLOMR) prior to approval of the development permit. The project shall be constructed in a manner consistent with the approved CLOMR.

b. If a CLOMR application is made, then the project proponent shall also supply the full CLOMR documentation package to the floodplain administrator to be attached to the floodplain development permit, including all required property owner notifications.

K. *Variances and Minor Exceptions.* Variances as interpreted in the National Flood Insurance Program are based on the principle that they pertain to a physical piece of property. They apply to the land and are not personal in nature, do not pertain to the structure, its inhabitants, or economic or financial circumstances. The development standards contained in this section are required by the Federal Emergency Management Agency (FEMA) under the National Flood Insurance Program (NFIP) to protect life and property from flood damage.

Variances from the NFIP standards of this section shall meet the approval criteria and other requirements of this subsection in addition to any other applicable variance criteria or requirements. Variances from the NFIP standards of this section shall be processed as Type I or II variances or shoreline variances as appropriate, not as minor exceptions (VMC 20.720.070).

Variances or minor exceptions from other critical area standards (any standards of this chapter not in this section) shall meet the applicable criteria and follow the applicable procedures for the relief requested (VMC 20.720.070, or Chapter 20.290).

1. NFIP variances may be allowed:

    a. For historic structures. NFIP variances may be issued for the repair, reconstruction, rehabilitation or restoration of historic structures upon a determination that the proposed repair or rehabilitation will not preclude the structure's continued designation as a historic structure and the variance is the minimum necessary to preserve the historic character and design of the structure. This variance possibility is only available to those structures that are:

        i Listed individually in the National Register of Historic Places (a listing maintained by the Department of the Interior) or preliminarily determined by the Secretary of the Interior as meeting the requirements for individual listing on the National Register;

        ii Certified or preliminarily determined by the Secretary of the Interior as contributing to the historical significance of a registered historic district or a district preliminarily determined by the Secretary to qualify as a registered historic district;

        iii Individually listed on a state inventory of historic places in states with historic preservation programs which have been approved by the Secretary of the Interior;

        iv Individually listed on a local inventory of historic places in communities with historic preservation programs that have been certified either:

            (A). By an approved state program as determined by the Secretary of the Interior; or

            (B). Directly by the Secretary of the Interior in states without approved programs.

        v The proposed development will not preclude the structure's continued designation as a historic structure.

b. From the elevation standard. An NFIP variance from the elevation standard may be issued for new construction and substantial improvements to be erected on a small or irregularly shaped lot contiguous to and surrounded by lots with existing structures constructed below the base flood elevation. As the lot size increases, the technical justification required for issuing the variance increases.

c. From the flood-proofing standard for nonresidential buildings. NFIP variances may be issued for nonresidential buildings to allow a lesser degree of flood-proofing than watertight or dry flood-proofing where it can be determined that such action:

i Will have low damage potential;

ii Complies with all other NFIP variance criteria except subsection (K)(1)(a)(ii) of this section;

iii Complies with subsection (J)(4) of this section, Water; subsection (J)(5) of this section, Waste; subsection (J)(7) of this section, Anchoring; and subsection (J)(9) of this section, Subdivisions.

d. For allowed development within the floodway. NFIP variances may be issued for development within a floodway only when the requirements of subsection (J)(1)(b) of this section are met.

2. *NFIP Variance Approval Criteria.* NFIP variances from elevation and flood-proofing standards, and for development in the floodway (subsections (K)(1)(a)(ii) through (K)(1)(a)(iv) of this section may be granted only if the applicant demonstrates that the requested action conforms to all of the following criteria:

a. The NFIP variance is the minimum necessary, considering the flood hazard, to afford relief.

b. The applicant has demonstrated good and sufficient cause.

c. Failure to grant the NFIP variance would result in exceptional hardship to the applicant. (Exceptional hardship for an NFIP variance is described in a FEMA memorandum dated July 22, 1986, entitled Resource Materials on NFIP Variance Criteria, available from the Planning Official)

d. Granting the NFIP variance will not result in increased flood heights or velocities, additional threats to public safety, significantly increased property damage potential, extraordinary public expense, or conflict with existing local laws or ordinances.

e. Demonstration that the following factors have been considered:

i The danger that materials may be swept onto other lands to the injury of others;

ii The danger to life and property due to flooding or erosion damage;

iii The susceptibility of the proposed facility and its contents to flood damage and the effect of such damage on the individual owner;

iv The importance of the services provided by the proposed facility to the community;

v The necessity to the facility of a waterfront location, where applicable;

vi The availability of alternative locations for the proposed use which are not subject to flooding or erosion damage;

vii The compatibility of the proposed use with existing and anticipated development;

viii The relationship of the proposed use to the comprehensive plan;

ix The safety of access to the property in times of flood for ordinary and emergency vehicles;

x The expected heights, velocity, duration, rate of rise, and sediment transport of the floodwaters and the effects of wave action, if applicable, expected at the site; and

xi The costs of providing governmental services during and after flood conditions, including maintenance and repair of facilities such as sewer, gas, electrical, stormwater, and water systems, and streets and bridges.

3. *Notices Required.* A notice to the applicant is required whenever a variance is approved, approved with conditions, or denied. Such notice shall include the decision and the reasons for the decision. When a variance from the elevation standard is approved or approved with conditions, such notice shall state that the structure will be permitted to be built with a lowest floor elevation below that normally required with respect to the base flood elevation and that the cost of flood insurance will be commensurate with the increased risk resulting from the reduced lowest floor elevation.

L. *Information to Be Obtained and Maintained*.

1. For all new and substantially improved structures and development, the Planning Official shall complete Section B of a current elevation certificate and obtain and record on that certificate:

a. For elevated (rather than flood-proofed) structures and development, the actual (as-built) elevation in relation to mean sea level of the lowest floor (including basement), and whether or not the structure contains a basement.

b. For nonresidential, flood-proofed structures, the elevation to which the structure was flood-proofed. All flood-proofing certifications shall also be maintained.

c. Maintain all records pertaining to development in frequently flooded areas subject to the provisions of this chapter for public inspection.

2. *Records of Variance Actions.* The Planning Official shall keep records of all variance actions and report any approved variances to the Federal Insurance Administrator upon request.

3. *Records of Appeal Actions.* The Planning Official shall keep records of all appeal actions.

## 20.720.130 Geologic hazard areas.

A. *Designation and Location*.

1. Designated or potential geologic hazard areas include landslide, seismic, and erosion hazard areas. With the exception of bank erosion hazard areas and fault rupture hazard areas, their potential locations are shown on maps available from the city of Vancouver, Clark County, and the state of Washington. Final designations shall be based on site conditions and other available data or information (see this chapter's general provisions section).

2. *Landslide Hazard Areas.* These areas are subject to landslides due to a combination of geologic, topographic, and hydrologic factors. They include any areas susceptible to landslide because of any combination of bedrock, soil, slope (gradient), slope aspect, structure, hydrology, or other factors as defined in Chapter 20.150 VMC. Landslides are areas shown as "areas of historic or active landslides," "areas of potential instability," and "areas of older landslide debris" on maps available from Clark County maps online ("Slope Stability of Clark County" report (1975) and "Geologic Map of Vancouver Quadrangle" map (1987)) and maps available through the DNR's Geologic Information Portal, including but not limited to the "Washington Geologic Survey-Protocol Landslide Mapping" and "Other Compiled Landslide Mapping" layers.

3. *Seismic Hazard Areas.* Seismic hazard areas include liquefaction, ground shaking amplification, and fault rupture hazard areas as designated below and defined in Chapter 20.150 VMC.

   a. *Liquefaction Hazard Areas.* Settlement and soil liquefaction conditions occur in areas underlain by cohesionless soils of low density, typically in association with a shallow groundwater table. The following are designated liquefaction hazard areas:

      i Areas with low to moderate, moderate, moderate to high, or high liquefaction susceptibility or peat deposits as indicated on liquefaction susceptibility maps from the DNR Geologic Information Portal as revised or superseded.

   b. *Ground Shaking Amplification Areas.* The following are designated ground shaking amplification hazard areas:

      i Site Classes C to D, D, D to E, E and F, as shown on the National Earthquake Hazard Reduction Program (NEHRP) Seismic Site Class layer available on the DNR Geologic Information Portal.

   c. *Fault Rupture Hazard Areas.* Potential fault rupture hazard areas are faults identified by the DNR Geologic Information Portal "Seismogenic Folds, Known or Suspected" and "Active Faults, Known or Suspected" layers; USGS, on geologic maps available from the Oregon Department of Geology and Mineral Industries (DOGAMI), Clark County maps online, or identified from other available data or in the field by a qualified professional and adjacent areas within 100 feet.

4. *Erosion Hazard Areas.* Erosion hazard areas include soil erosion and bank erosion hazard areas and as defined in Chapter 20.150 VMC. These are also areas that are likely to become unstable, such as bluffs, steep slopes, and areas with unconsolidated soils.

    a. *Soil Erosion Hazard Areas.* The following are designated soil erosion hazard areas:

        i *Severe or Very Severe Erosion Hazard Areas.* Areas with soils identified as having a severe or very severe erosion hazard by the 1972 U.S. Department of Agriculture (USDA) Soil Conservation Service Soil Survey of Clark County, Washington.

        ii *Bank Erosion Hazard Areas.* Bank erosion hazard areas are areas along lakes, streams, and rivers that are subject to regression or retreat due to lacustrine or fluvial processes and adjacent land within 100 feet.

B. *Performance Standards*.

1. *General Standards*.

    a. Critical facilities, as defined in Chapter 20.150 VMC, are prohibited in the following areas unless there is no other location available, a mitigation proposal is included in the development plan, and a critical areas report prepared by a qualified professional for geologically hazardous areas establishes that the area is safe for development for the type of facility proposed and the type of hazard:

        i Landslide hazard areas;

        ii Bank erosion hazard areas;

        iii Fault rupture hazard areas.

    b. Buffer width shall be measured on a horizontal plane from a perpendicular line established at all edges of the geologic hazard area (see Chapter 20.170 VMC).

    c. The applicant shall demonstrate that, during construction and for the anticipated life of the proposed development, the proposed use(s), activity(ies), and structure(s):

        i Are designed so that the hazard to the proposed project is eliminated or mitigated to a level equal to or less than pre-development conditions;

        ii Will not adversely impact other critical areas, if avoidable, given the type of critical areas involved and the characteristics of the site;

        iii Are designed to minimize or eliminate life safety risk; and

        iv Are certified by a qualified professional as safe as designed and under anticipated conditions.

2. *Landslide and Erosion Hazard Areas.* Development in nondisturbance areas shall be prohibited. In other areas, development in landslide and erosion hazard areas and their buffers shall be prohibited except where the applicant has demonstrated compliance with the following standards or requirements:

    a. Landslide hazard areas may be able to be mitigated through grading based on a critical areas report that demonstrates that the slope will be stabilized as described in additional critical areas report requirements for geologic hazards.

        i The critical areas permit shall be conditioned on a final inspection approval confirming that the grading and site are stable. At the applicant's expense, after site grading, the applicant shall:

            (A). Provide inspection specifications from the qualified professional who prepared the critical areas report; and

            (B). Inspect the grading and the site using an inspector acceptable to the city building official and submit a report to the city indicating whether the site is stable.

        ii Clearing, grading, uprooting, or otherwise impairing the soil stabilizing function of vegetation shall be prohibited during the wet season (November to May), except as authorized under a valid state or federal permit or a city Type I permit.

    b. Any required erosion mitigation work is to be performed by a certified erosion and sediment control lead in accordance with Ecology requirements.

    c. The requirements of Chapter 14.24 VMC, Erosion Control, shall be met.

    d. Drainage patterns shall not be altered such that potential for damage or risk to the proposed project, the geologic hazard area, or other critical areas or buffers is increased.

    e. Trails shall be for pedestrian and nonmotorized vehicular use only and shall be the minimum width necessary to meet applicable regulations.

    f. *Roads in Landslide and Bank Erosion Hazard Areas.* A road through or across a landslide or bank erosion hazard area shall meet the standards of subsection (B)(2) of this section and shall not be:

        i The sole access for a proposed subdivision (not including short subdivision) or critical facility;

        ii Longer than 200 feet; or

        iii Steeper than a 15 percent grade.

    g. *Markers and Signs in Landslide Hazard Areas*.

i The boundary at the outer edge of the furthest of the landslide hazard area, nondisturbance area (see this chapter's additional critical areas report requirements for geologic hazard areas), or buffer shall be identified with temporary signs prior to any site alteration.

ii These provisions may be modified by the Planning Official as necessary to ensure protection of people and structures from the hazard.

h. *Stabilization in Bank Erosion Hazard Areas*.

i Bank stabilization measures may be employed to protect an existing structure when a critical areas report conclusively demonstrates all of the following:

(A). Bank erosion threatens an established use or existing structure(s) within a three-year timeframe;

(B). The threatened use or structure(s) cannot be relocated landward of any nondisturbance area (subsection (C)(7)(a)(ii) of this section);

(C). Bank stabilization measures will not cause a significant adverse impact on upstream or downstream properties or an impact that cannot be mitigated without developing bank stabilization measures for those properties; and

(D). Bank stabilization measures will not cause a significant adverse impact on a fish and wildlife habitat conservation area protected by this chapter.

i. When bank stabilization is allowed, it shall be accomplished using beach nourishment, bioengineering (soft armoring) techniques, or a combination of the two. Other techniques may be used when an approved critical areas report demonstrates conclusively that beach nourishment, bioengineering (soft armoring) techniques, or a combination of the two will not provide sufficient protection for the remaining useful life of the structure(s) to be protected.

j. *Buffer.* The following regulations apply to landslide and bank erosion hazard area buffers:

i *Buffer widths*.

(A). No buffer is required for soil erosion hazard areas.

(B). The minimum buffer width from the top and bottom of slope for landslide and bank erosion hazard areas shall be equal to two times the slope height or as recommended by a qualified professional in a geotechnical report.

(C). A larger buffer width may be required for landslide and bank erosion hazard areas at the discretion of the Planning Official when:

(1). The adjacent land is susceptible to severe erosion and erosion control measures will not effectively prevent adverse impacts;

(2). The area has a severe risk of slope failure or downslope stormwater drainage impacts;

(3). The area is directly adjacent to a riparian area, or wetland; or

(4). Recommended in an approved critical areas report.

ii Buffers may be included in nondisturbance areas (subsection (C)(7)(a)(ii) of this section) and required planting and maintenance activities may be undertaken within them.

iii The buffer around landslide and bank erosion hazard areas shall be vegetated and shall be maintained by the property owner. New plantings shall consist of native vegetation.

iv No alteration to the buffer that involves clearing of vegetation shall be undertaken without an erosion control plan approved pursuant to the provisions of Chapter 14.24 VMC, Erosion Control, and this chapter.

3. *Seismic Hazard Areas*.

a. *Liquefaction or Dynamic Settlement and Ground Shaking Amplification Hazard Areas.* All building structures in liquefaction or ground shaking amplification hazard areas shall comply with the requirements of VMC Title 17, Buildings and Construction. No buffer is required for liquefaction or ground shaking amplification hazard areas.

b. *Fault Rupture Hazard Areas.*

i A road through or across a fault rupture hazard area shall not be:

(A). The sole access for a proposed subdivision (not including short subdivision) or critical facility;

(B). Longer than 200 feet; or

(C). Steeper than a 15 percent grade.

ii *Buffer*.

(A). The buffer width shall be the greater of the following distances:

(1). Fifty feet from all edges of a fault rupture hazard area, except where critical facilities are involved, the minimum buffer distance shall be 100 feet (see VMC 20.170.030(L)); or

(2). The minimum distance recommended in an approved critical areas report.

(B). A larger buffer width may be required when the Planning Official determines that the buffer is not adequate to protect the proposed development.

iii New structures for human habitation shall be prohibited within fault rupture hazard areas and buffers.

C. *Additional Critical Areas Report Requirements.* In addition to the requirements of VMC 20.720.050, the following are critical areas report requirements for development proposals in potential geologic hazard areas. These requirements may be adjusted as appropriate by the Planning Official. The critical areas report will result in a conclusion as to whether the potential geologic hazard area is an actual geologic hazard area and would be subject to a permit (see subsection (C)(6) of this section). If it is, the critical areas report requires the following additional information, mapping, and analysis (see subsection (C)(7) of this section):

1. Identification of the site and project area (defined at Chapter 20.150 VMC); topography of the site in two-foot contours (or other increment at the discretion of the Planning Official); planned gas, power, cable, fiber optic, telephone, sewer, water, and stormwater management facilities, wells, on-site septic systems, dikes, levees; and existing structures on the site plan required by VMC 20.720.050;
2. Detailed review of field investigations, published data and references, data and conclusions from past geologic studies or investigations, site-specific measurements, tests, investigations, or studies, and the methods of data analysis and calculations that support the results, conclusions, and recommendations;
3. Field investigation and evaluation of the areas on landslide, erosion, liquefaction or dynamic settlement, ground shaking amplification, bank erosion hazard areas and fault rupture hazard areas on or within 100 feet of the site;
4. A description of the surface and subsurface geology, hydrology, drainage patterns, soils, and vegetation for liquefaction or dynamic settlement, ground shaking amplification, fault rupture, soil erosion hazards, landslide, and bank erosion hazard areas on or within 100 feet of the site;
5. Identification of any hazard area indicators that were found on site for liquefaction or dynamic settlement, ground shaking amplification, fault rupture, and soil erosion hazards areas and on or within 100 feet of the site for landslide and bank erosion hazard areas;
6. Conclusion as to whether there is a geologic hazard area on site or within 100 feet of the site; and
7. If a geologic hazard is found to exist on site or if a landslide or bank erosion hazard is found to exist on or within 100 feet of the site, the report must include the following:
    a. Labeling and showing the following on the site plan required by VMC 20.720.050:
        i The location(s), extent, and type(s) of geologic hazard area(s) identified;

ii The location(s) and extent of any area(s) that must be left undisturbed to protect the proposed development from damage or destruction and to protect the hazard area(s) from the impacts of the proposed development;

iii The boundaries of the area that may be disturbed;

iv The dimension of the closest distance(s) between the geologic hazard area(s) and nondisturbance area and the project area;

v For bank erosion hazard areas, show these areas, boundaries, and dimensions based upon natural processes and, if applicable, proposed bank stabilization measures; and

vi The recommended buffer for bank erosion hazard areas.

b. Analysis of the erosion processes on site for soil erosion hazard areas and on or within 100 feet of the site for bank erosion hazard areas;

c. Evaluation of the impact of the geologic hazard area(s) on the proposed development, other properties, and other critical areas, as follows:

i *Landslide Hazard Areas.* The impact of the run-out hazard of landslide debris from both upslope and downslope shall be included in the evaluation.

ii *Bank Erosion Hazard Areas.* Evaluation of impacts on other properties shall include properties both upstream and downstream of the subject property.

d. Evaluation of the impact of the proposed development on the geologic hazard area(s).

e. Assessments and conclusions regarding geologic hazard(s) for both existing and proposed (post-development) site conditions. The ultimate build-out scenarios must be considered and addressed in cases such as land division and master planning where build-out is not scheduled to occur as a direct or immediate result of project approval.

f. Written discussion of:

i The risk of damage or destruction from the geologic hazard(s) with respect to human health and safety; infrastructure; the proposed development; other properties (both upstream and downstream for bank erosion hazard areas); and other critical areas; and

ii Whether and to what degree the proposed development would increase the risk from the geologic hazard(s), such as the occurrence of a landslide or the rate of regression.

g. Recommendations for mitigation of impacts to protect:

i Human health and safety;

ii Infrastructure;

iii The proposed development;

iv Other properties (both upstream and downstream for bank erosion hazard areas);

v Other critical areas; and

vi The hazard area during construction and for the anticipated life of the proposed development. The ultimate build-out scenarios must be considered and addressed in cases such as land division and master planning where build-out is not scheduled to occur as a direct or immediate result of project approval.

h. A demonstration of how the standards of this subsection applicable to each geologic hazard area will be met.

## 20.720.140 Wetlands.

A. *Designating and Rating Wetlands*.

1. *Designating Wetlands.* Wetlands are areas that have been designated in accordance with the 1987 Federal Wetland Delineation Manual and the Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Western Mountains Valleys and Coast Region Version 2.0 (2010 or as further updated) and are defined in Chapter 20.150 VMC. Wetlands are subject to a local government's regulatory authority if they meet the definition of wetlands, including non-federally regulated (isolated) wetlands. Final designations shall be based on site conditions as documented in a wetland critical areas report, and other available data or information (see VMC 20.720.020(C)(1)).

2. *Wetland Ratings.* Wetlands shall be rated according to the Ecology wetland rating system, Ecology Publication No. 23-06-009, Washington State Wetland Rating System for Western Washington: 2014 Update, published July 2023, or as revised by Ecology. The rating system document contains the definitions and methods for determining if the criteria below are met. The most recent version of the rating system form must be used.

a. Wetland Rating Categories.

i *Category I.* Category I wetlands are:

(A). Wetlands of high conservation value that are identified by scientists of the Washington Natural Heritage Program of the DNR;

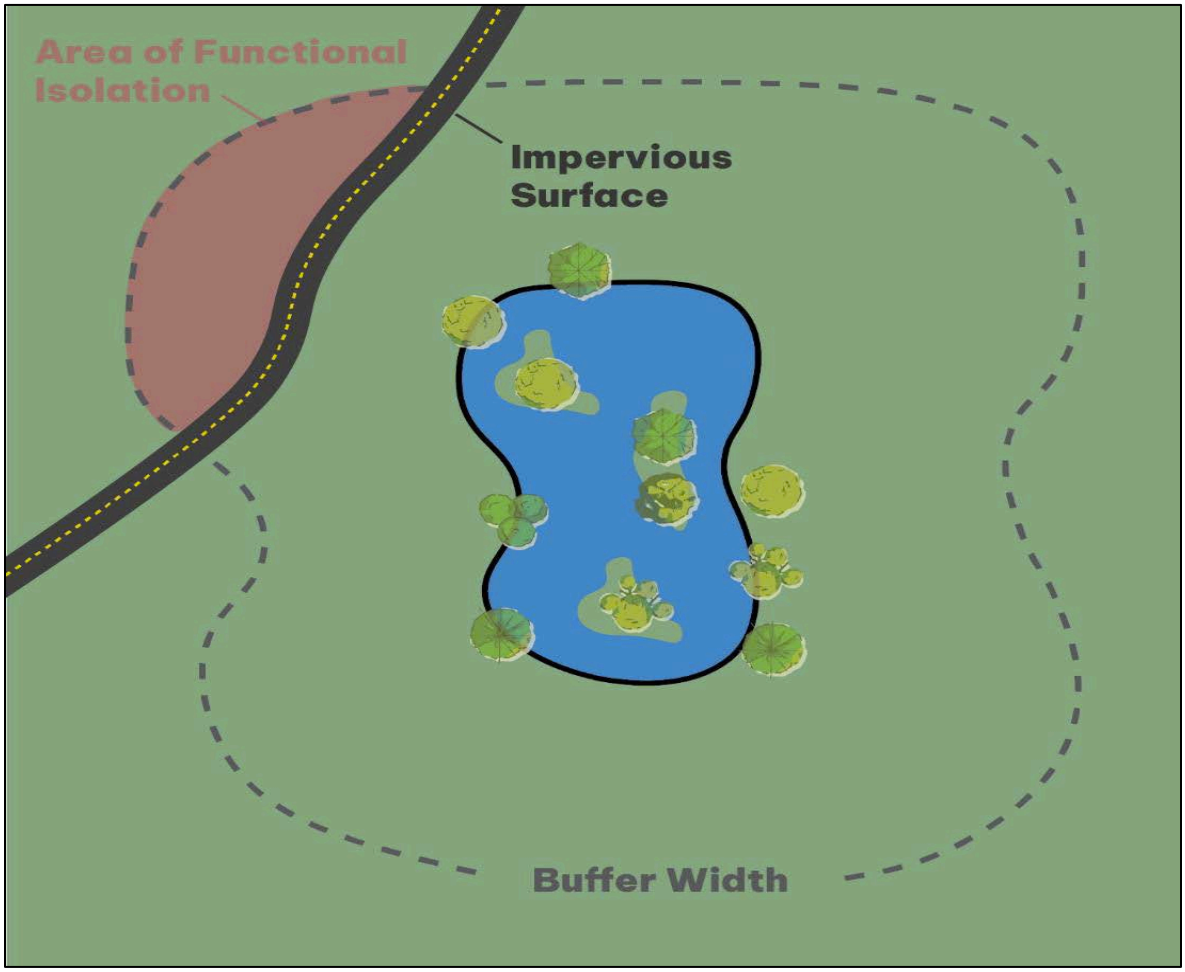
(B). Bogs;

(C). Mature and old-growth forested wetlands larger than one acre;

(D). Wetlands that perform functions at a high level, scoring 23 points or more.

ii *Category II.* Category II wetlands function at a moderately high function and are difficult, though not impossible, to replace, scoring between 20 and 22 points.

iii *Category III.* Category III wetlands have generally been disturbed in some way and are often less diverse or more isolated from other natural resources in the landscape than Category II wetlands. Category III wetlands:



(A). Have a moderate level of functions, scoring between 16 and 19 points; and

(B). Can often be adequately replaced with a well-planned mitigation project.

iv *Category IV.* Category IV wetlands have the lowest levels of functions (scoring fewer than 16 points) and are often heavily disturbed. These are wetlands that should be able to be replaced, or in some cases improved. However, experience has shown that replacement cannot be guaranteed in any specific case. These wetlands may provide some important functions, and should be protected to some degree.

B. *Development activities that functionally or physically isolate the wetland buffer.* When existing impervious surfaces or other built structures functionally or physically isolate the wetland buffer from the water body or wetland, the regulated wetland buffer shall extend landward from the ordinary high water mark (OHWM) or channel migration zone (CMZ), whichever is greater, and terminate at the waterward edge of the impervious surface or manmade structure. Development activities that occur within the area of functional isolation, or further landward, are exempt from the requirement to obtain a critical areas permit.

FIGURE 20.720.140-1. FUNCTIONAL ISOLATION

The obstruction causing the physical isolation shall be significant enough in size and stature that protective buffers or other mitigation measures cannot reasonably restore ecological functions or benefits. The Planning Official may rely on a site visit, aerial photographs, other evidence provided by the applicant or the applicant's qualified professional, and consultation with the Washington Department of Fish and Wildlife (WDFW) in making a determination to reduce the width of the wetland buffer based on functional and/or physical isolation. The following obstructions shall not constitute functional isolation:

1. Trails, paths, or sidewalks;
2. Minor accessory structures;
3. Driveways or drive aisles;
4. Subsurface utilities.

C. *Performance Standards*.

1. *General Requirements.* Development or clearing activities shall protect the functions of wetlands and wetland buffers on the site. Activities shall result in no net loss of wetland or buffer functions. Protection may be provided by avoiding (preferred) or minimizing and mitigating as described in the general critical areas performance standards (VMC 20.720.060).

a. *Uses in Wetlands*.

i In Category I wetlands, only the following activities may be allowed:

(A). Infrastructure or utilities that cannot feasibly be located outside of the wetland, that minimize the impact, that mitigate for any unavoidable impact to functions, and have received authorization from applicable federal and state regulating agencies;

(B). Trails and wildlife viewing structures; provided, that the trails and structures minimize the impact, are located in the outer 25 percent of the buffer, and are constructed so that they do not interfere with wetland hydrology and do not result in increased sediment entering the wetland;

(C). Enhancement and restoration activities aimed at protecting the soil, water, vegetation, or wildlife; and

(D). Repair and maintenance of legally established nonconforming uses or structures, provided they do not increase the degree of nonconformity.

ii In Category II wetlands, only the following activities may be allowed:

(A). Activities allowed in Category I wetlands pursuant to subsection (C)(1)(a)(i) of this section;

(B). A water-dependent, water-related or water-enjoyment activity where there are not feasible alternatives that would have less impact on the wetland. Where non-water-dependent, related, or enjoyment activities are proposed, it shall be presumed that alternative locations are available, and activities and uses shall be prohibited unless the applicant demonstrates that the basic project purpose cannot reasonably be accomplished and successfully avoid or result in less adverse impacts on a wetland on another site or sites in the city or Vancouver urban growth area.

iii In Category III wetlands, only the following activities may be allowed:

(A). Activities allowed in Category II wetlands pursuant to subsection (C)(1)(a)(ii) of this section;

(B). Stormwater management facilities. A Category III wetland can be physically or hydrologically altered to meet the requirements of a low impact development (LID) methodology or flow control BMP, if all of the following criteria are met:

(1). If proposed, an LID BMP is determined to be feasible through a site-specific characterization;

(2). The wetland has a habitat score of three to five points;

(3). There will be no net loss of functions and values of the wetland;

(4). The wetland does not contain a breeding population of any native amphibian species;

(5). The hydrologic functions of the wetland can be improved as outlined in questions 3, 4, and 5 of Chart 4 and questions 2, 3, and 4 of Chart 5 in Selecting Mitigation Sites Using a Watershed Approach (Western Washington Ecology Publication No. 09-06-032 or 10-06-007, or as revised); or the wetland is part of a restoration plan intended to achieve restoration goals identified in the city of Vancouver's shoreline master program or a local or regional watershed plan;

(6). The wetland lies in the natural routing of the runoff, and the discharge follows the natural routing;

(7). All regulations regarding stormwater and wetland management are followed, including in this chapter and Chapter 14.24 VMC, Erosion Control; and

(8). Modifications that alter the structure of a wetland or its soils will require permits. Existing functions and values that are lost will need to be compensated for in accordance with the requirements of this chapter.

(C). Other activities may be allowed if the applicant demonstrates that the basic project purpose cannot reasonably be accomplished and avoid or result in less adverse impacts on a wetland or its buffer than alternative uses or designs (including reduction in the size, scope, configuration or density of the project).

iv In Category IV wetlands, activities and uses that result in impacts may be permitted in accordance with an approved critical areas report and mitigation plan if the proposed activity is the only reasonable alternative that will accomplish the applicant's objectives. Full mitigation for the loss of acreage and functions shall be provided under the terms established pursuant to subsection (C)(2) of this section.

(A). If stormwater management facilities are proposed, they must meet the requirements of an LID or flow control BMP as specified for Category III wetlands.

b. *Wetland Buffers*.

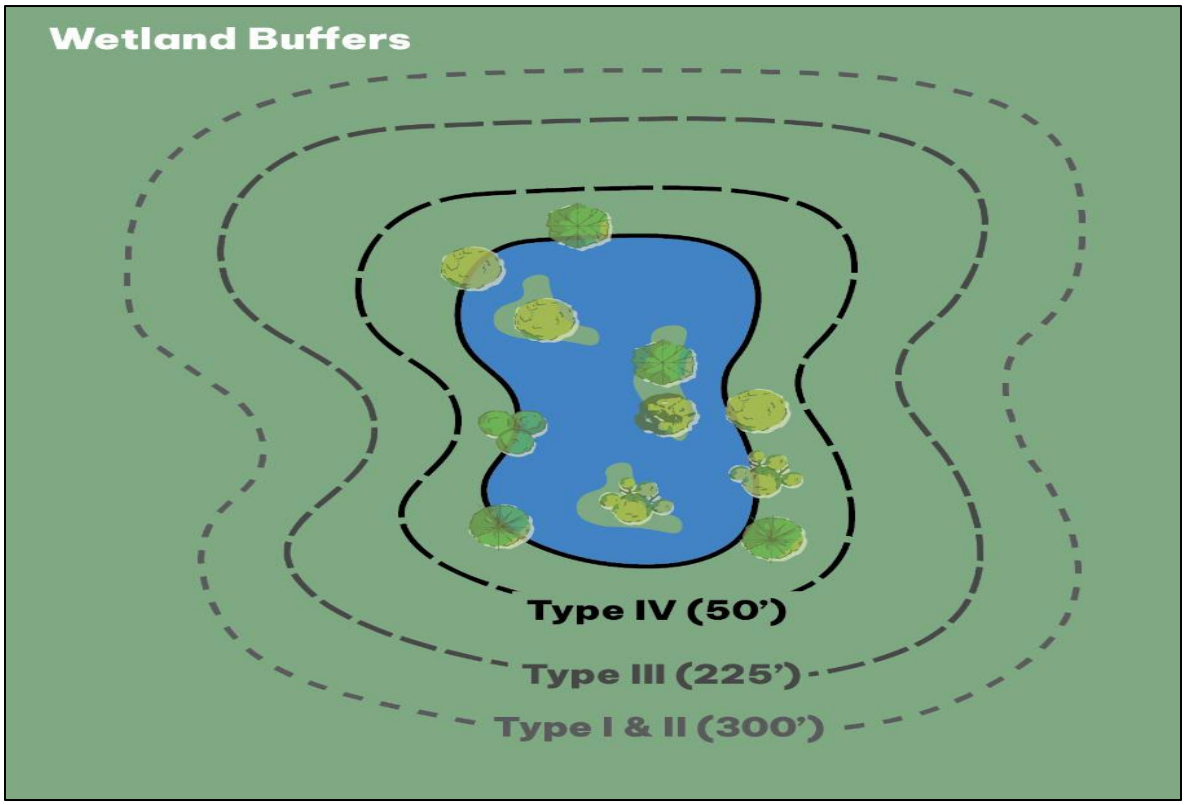
i *Required Buffer Widths.* Standard buffer widths are measured in feet from the edge of the wetland (see VMC 20.170.030(B) and (H)). Applicants are required to implement the wetland buffer widths by wetland category as shown in Table 20.720.140-1.

ii If the applicant is unable to implement the full width buffers from Table 20.720.140-1 and avoid impacts as a result of proposed development, the planning director shall permit the applicant to use the alternative buffer widths in subsections (C)(1)(b)(v)(B) and (C)(1)(b)(v)(C) of this section, if the applicant has first demonstrated they have met the following criteria:

(A). The applicant has met the mitigation sequencing in VMC 20.720.060(A) through (E).

(B). The applicant shall provide a minimum of two alternative site designs and layouts to demonstrate that impacts cannot be avoided or be reduced to result in less impacts. The planning director may approve reductions to numerical standards including parking and setbacks under the minor exception process in VMC 20.720.070 to avoid or reduce impacts.

iii The required and alternative buffer widths assume that the buffer is vegetated with a native plant community appropriate for the ecoregion. If the existing buffer is unvegetated, sparsely vegetated, and/or vegetated with invasive species that do not perform needed functions, the buffer must either be planted to create the appropriate native plant community or be widened to ensure that the buffer provides adequate functions to protect the wetland.



iv If the buffer is functionally isolated by an existing impervious surface or built structure, the remaining buffer area must be revegetated with native species, but the buffer does not need to be widened to exceed widths greater than those listed in Tables 20.720.140-1, 20.720.140-2, and 20.720.140-4.

(A). Required buffers based on wetland category – see Table 20.720.140-1.

TABLE 20.720.140-1. WETLAND BUFFER WIDTH REQUIREMENTS

| Wetland | Buffer Width |
|---|---|
| I | 300 |
| II | 300 |
| III | 225 |
| IV | 50 |

FIGURE 20.720.140-2. WETLAND BUFFER WIDTH REQUIREMENTS

(B). Alternative 1 wetland buffers: buffers based on wetland category, wetland type, and habitat score and providing a habitat corridor and implementing minimization measures.

(1). In order for an applicant to use the buffer widths of Table 20.720.140-2, the applicant must provide a habitat corridor as outlined in this subsection and implement the impact minimization measures listed in Table 20.720.140-3. Not all impact minimization measures are applicable. An undisturbed vegetated corridor at least 100 feet wide must be provided between the wetland and another priority area for preservation that meets the following:

(a). A legally protected, high-functioning vegetated area (priority habitats; other compensation sites; wildlife areas/refuges; or national, county, and state parks that have management plans with identified areas designated as natural, natural forest, or natural area preserve);

(b). An area that is the site of a watershed project identified within and fully consistent with a watershed plan, as these terms are defined by RCW 89.08.460;

(c). An area where development is prohibited under the provisions of the local shoreline master program;

(d). An area with equivalent habitat quality that has conservation status in perpetuity, in consultation with WDFW;

(e). The corridor is permanently protected for the entire distance between the wetland and the legally protected area by a conservation easement, deed restriction, or other legal means;

(f). Presence of the shoreline or priority habitat must be confirmed by a qualified biologist or the Planning Official;

(g). If a wetland scores five or fewer habitat points, only the impact minimization measures listed in Table 20.720.140-3 are required in order to use the buffers in Table 20.720.140-2; or

(h). If an applicant does not apply the mitigation measures in Table 20.720.140-3 and is unable to provide a protected corridor, then the buffers in Table 20.720.140-1 or 20.720.140-4 shall be used.

TABLE 20.720.140-2. ALTERNATIVE 1: WETLAND BUFFER WIDTH REQUIREMENTS

| Category of Wetland | Habitat Score 3 to 5 Points (Corridor Not Required) | Habitat Score 6 to 7 Points | Habitat Score 8 to 9 Points |
|---|---|---|---|
| **Category I: Bogs and Wetlands of High Conservation Value** | NA | NA | 225 feet |
| **Category I: Forested** | 75 feet | 110 feet | 225 feet |
| **Category I or II: Based on Rating of Wetland Functions (and not listed above)** | 75 feet | 110 feet | 225 feet |
| **Category III: All Types** | 60 feet | 110 feet | 225 feet |
| **Category IV: All Types** | 40 feet | 40 feet | 40 feet |

Note: Special characteristics are defined in the Washington State Wetland Rating System for Western Washington: 2014 Update, published July 2023, or as revised by Ecology.

TABLE 20.720.140-3. IMPACT MINIMIZATION MEASURES REQUIRED TO IMPLEMENT ALTERNATIVE 1 WETLAND BUFFERS

| Examples of Disturbance | Uses and Activities that Cause the Disturbance | Examples of Measures to Minimize Impacts |
|---|---|---|
| **Lights** | Parking lots, warehouses, manufacturing, residential, recreational | Direct lights away from wetland.<br><br>Only use lighting where necessary for public safety and keep lights off when not needed.<br><br>Use motion-activated lights.<br><br>Use full cut-off filters to cover light bulbs and direct light only where needed.<br><br>Limit use of blue-white colored lights in favor of red-amber hues.<br><br>Use lower-intensity LED lighting.<br><br>Dim light to the lowest acceptable intensity. |

| Examples of Disturbance | Uses and Activities that Cause the Disturbance | Examples of Measures to Minimize Impacts |
|---|---|---|
| **Noise** | Manufacturing and other industrial, residential, commercial, recreational | Locate activity that generates noise away from wetland.<br><br>Construct a fence to reduce noise impacts on adjacent wetland and buffer.<br><br>Plant a strip of dense shrub vegetation adjacent to wetland buffer. |
| **Toxic runoff** | Parking lots, roads, manufacturing, residential, application of agricultural or landscaping chemicals, landscaping | Route only treated runoff to a wetland and route untreated runoff away from wetland while ensuring wetland is not dewatered.<br><br>Establish covenants limiting use of toxic chemicals within 150 feet of wetland.<br><br>Apply integrated pest management. |
| **Stormwater runoff** | Parking lots, roads, residential, commercial/industrial, recreational, landscaping/lawns, and other impermeable surfaces/compacted soils | Retrofit stormwater detention and treatment for roads and existing adjacent development.<br><br>Prevent channelized or sheet flow from lawns that directly enters the buffer.<br><br>Infiltrate or treat, detain, and disperse new runoff from impervious surfaces and lawns. |
| **Change in water regime** | Impervious surfaces, lawns, tilling | Infiltrate or treat, detain, and disperse new runoff into buffer. |
| **Pets and human disturbance** | Residential, recreational, commercial, industrial | Plant dense vegetation around buffer, such as rose or hawthorn, to delineate buffer edge and discourage disturbance.<br><br>Place wetland and its buffer in a separate tract. |

| Examples of Disturbance | Uses and Activities that Cause the Disturbance | Examples of Measures to Minimize Impacts |
|---|---|---|
| | | Place signs around the wetland buffer every 50 to 200 feet and for subdivisions place signs at the back of each residential lot.<br><br>When platting new subdivisions, locate greenbelts, stormwater facilities, and other lower intensity uses adjacent to wetland buffers. |
| **Human disturbance** | Residential, commercial, industrial | Plant dense vegetation around buffer, such as rose or hawthorn |
| **Dust** | Tilled fields, roads | Utilize best management practices to control dust. |

(C). Alternative 2 wetland buffer widths: buffers based on wetland category wetland type, and habitat score (see Table 20.720.140-4) without providing a habitat corridor or minimization measures as outlined in subsection (C)(1)(b)(iv)(B) of this section.

TABLE 20.720.140-4. ALTERNATIVE 2 WETLAND BUFFER WIDTH REQUIREMENTS

| Category of Wetland | Habitat Score 3 to 5 Points (Corridor Not Required) | Habitat Score 6 to 7 Points | Habitat Score 8 to 9 Points | Buffer Width Based on Special Characteristics |
|---|---|---|---|---|
| **Category I: Bogs and Wetlands of High Conservation Value** | NA | NA | 300 feet | 250 feet |
| **Category I: Forested** | 100 feet | 150 feet | 300 feet | NA |
| **Category I or II: Based on rating of wetland functions (and not listed above)** | 100 feet | 150 feet | 300 feet | NA |
| **Category III: All Types** | 80 feet | 150 feet | 300 feet | NA |
| **Category IV: All Types** | 50 feet | 50 feet | 50 feet | 50 feet |

v *Wetland Buffer Width Averaging.* The Planning Official may allow modification of the standard wetland buffer width in accordance with an approved critical areas report by averaging buffer widths. Buffer width averaging shall not be used in combination with buffer width reduction or a minor exception (VMC 20.720.070). Averaging of buffer widths (see VMC 20.170.080(B)(2)) may only be allowed when implementing the impact minimization measures, as applicable, in Table 20.740.140-3 and where a qualified professional wetland scientist demonstrates that:

(A). Such averaging will not reduce wetland functions or functional performance;

(B). The wetland varies in sensitivity due to existing physical characteristics, or the character of the buffer varies in slope, soils, or vegetation, and the wetland would benefit from a wider buffer in places and would not be adversely impacted by a narrower buffer in other places;

(C). The total area contained in the buffer area after averaging is no less than that which would be contained within the standard buffer; and

(D). The buffer width is not reduced at any point by more than 25 percent of the standard width and is no less than 30 feet wide.

vi *Buffer Maintenance.* Except as otherwise specified or allowed in accordance with this chapter, wetland buffers shall be maintained and fully vegetated according to the approved critical areas permit.

vii *Buffer Uses.* The following uses may be permitted within a wetland buffer in accordance with the review procedures of this chapter; provided, they are not prohibited by any other applicable laws or regulations and they are conducted in a manner so as to minimize impacts to the buffer and the wetland:

(A). Activities allowed under the same terms and conditions as in the associated wetlands pursuant to subsection (C)(1)(a) of this section;

(B). Enhancement and restoration activities aimed at protecting the soil, water, vegetation or wildlife.

(1). Removal of invasive plant species shall be restricted to hand removal. All removed plant material shall be taken away from the site and appropriately disposed of. Plants that appear on the city's noxious weed list should be handled and disposed of according to a noxious weed control plan appropriate to that species. Revegetation with appropriate native species at natural densities is allowed in conjunction with removal of invasive plant species;

(C). Passive recreation facilities, including trails and wildlife viewing structures; provided, that the trails and structures are constructed with a surface that does not interfere with wetland hydrology.

(1). Trails shall be located in the outer 25 to 50 percent of the buffer, when feasible;

(D). Stormwater management facilities are not allowed in Category I or II wetland buffers. Stormwater management facilities must meet the requirements of an LID or flow control BMP as specified for uses in Category III wetlands;

(E). Educational and scientific research activities;

(F). Normal and routine maintenance and repair of any existing public or private facilities within an existing right-of-way; provided, that the maintenance or repair does not increase the footprint or use of the facility or right-of-way;

(G). The harvesting of wild crops in a manner that is not injurious to natural reproduction of such crops; and provided, that the harvesting does not require tilling of soil, planting of crops, chemical applications, or alteration of the wetland by changing existing topography, water conditions, or water sources; and

(H). Drilling for utilities/utility corridors under a buffer, with entrance/exit portals located completely outside of the wetland buffer boundary; provided, that the drilling does not alter the groundwater connection to the wetland or percolation of surface water down through the soil column.

(1). Specific studies by a hydrologist are necessary to determine whether the groundwater connection to the wetland or percolation of surface water down through the soil column would be disturbed.

c. Temporary and permanent markers and signs for wetlands.

i Temporary and permanent markers and signs are installed in compliance with the requirements of VMC 20.720.020, General Provisions.

2. *Compensatory Mitigation.* Compensatory mitigation for impacts to wetlands shall be provided pursuant to VMC 20.720.060 and shall be consistent with Ecology's Wetland Mitigation in Washington State, Part 1: Agency Policies and Guidance, Version 2, Ecology Publication No. 21-06-003 April 2021, and Part 2: Developing Mitigation Plans, Version 1, Ecology Publication No. 06-06-011b, March 2006, or as revised by Ecology.

Watersheds are defined in Chapter 20.150 VMC.

a. *Mitigation for Lost or Affected Functions.* Compensatory mitigation actions shall address functions affected by the alteration to achieve functional equivalency or improvement and shall provide wetland or buffer functions similar to those lost, except when:

i The lost wetland or buffer provides minimal functions as determined by a site-specific functional assessment, and the proposed compensatory mitigation action(s) will provide equal or greater functions or will provide functions shown to be limited within a watershed through a formal Washington State watershed assessment plan or protocol; or

ii Out-of-kind replacement will best meet formally identified watershed goals, such as replacement of historically diminished wetland types.

b. *Compensatory Mitigation Actions.* If, through mitigation sequencing in accordance with VMC 20.720.060, it is determined that compensatory mitigation is necessary, the applicant must provide an alternative approach to compensation. Compensation is prioritized as follows:

i Mitigation bank credits: Allows applicants to compensate for wetland loss by purchasing credits from a bank that is commissioned to restore, create, enhance, or preserve wetland areas in providing compensatory mitigation for authorized impacts to wetlands;

ii In-lieu fee program credits: Allows applicants to compensate for wetland losses by paying a fee to a third party, such as a government agency or conservation organization, where the fee is used to ensure protection, creation, and enhancement of wetlands;

iii Permittee-responsible mitigation (PRM) under a watershed approach;

iv PRM that is on site and in-kind;

v PRM that is off site and/or out-of-kind.

c. PRM includes the following approaches:

i *Creation.* The manipulation of the physical, chemical, or biological characteristics present to develop a wetland where a biological wetland did not previously exist. Activities typically involve excavation of upland soils to elevations that will produce a wetland hydroperiod, create hydric soils, and support the growth of hydrophytic plant species. Creation results in a gain in wetland acres and functions.

ii *Reestablishment.* The manipulation of the physical, chemical or biological characteristics of a site with the goal of returning natural or historic functions and environmental processes to a former wetland. Activities could include removing fill material, plugging ditches or breaking drain tiles. Reestablishment results in a gain in wetland acres and functions.

iii *Rehabilitation.* The manipulation of the physical, chemical, or biological characteristics of a site with the goal of repairing natural or historic functions and processes of a degraded wetland. Activities could involve breaching a dike to reconnect wetlands to a floodplain, restoring tidal influence to a wetland, or breaking drain tiles and plugging drainage ditches. Rehabilitation results in a gain in wetland functions but not in wetland acres.

iv *Preservation.* The removal of a threat to, or preventing the decline of, wetland conditions by an action in or near a wetland. This term includes activities commonly associated with the protection and maintenance of wetlands through the implementation of appropriate legal and physical mechanisms (such as recording conservation easements and providing structural protection like fences and signs). Preservation does not result in a gain of wetland area and functions (but may result in a gain in functions over the long term).

v *Enhancement.* The manipulation of the physical, chemical, or biological characteristics of a biological wetland to increase or improve specific functions or to change the growth stage or composition of the vegetation present.

Enhancement is undertaken for specified purposes such as water quality improvement, floodwater retention or wildlife habitat. Activities typically consist of planting vegetation, controlling nonnative or invasive species, modifying site elevations to result in open water ponds, or some combination of these. Enhancement results in a change in certain wetland functions and can lead to a decline in other wetland functions. It does not result in a gain in wetland acres.

vi *Mixed Compensatory Mitigation.* Involves more than one of the listed types of compensatory mitigation.

d. Mitigation Ratios.

i Replacement Ratios.

(A). The replacement ratios shall apply to wetland mitigation that: (1) is for the same hydrogeomorphic subclass (e.g., riverine flow-through, depressional outflow, or flats), and Cowardin class (e.g., palustrine emergent, palustrine forested or estuarine wetlands); (2) is on site; (3) is in the same category; (4) is implemented prior to or concurrent with alteration; and (5) has a high probability of success.

(B). *Mitigation Ratios.* Mitigation ratios are as follows (see subsection (C)(2)(b) of this section for definitions of mitigation actions):

**TABLE 20.720.140-5. MITIGATION REPLACEMENT RATIOS**

| Wetland Category and Type | Reestablishment or Creation | Rehabilitation | Preservation | Enhancement |
|---|---|---|---|---|
| **Category I forested** | 6:1 | 12:1 | 24:1 | 24:1 |
| **Bog** | NA | NA | 24:1 | NA |
| **Wetlands of High Conservation Value** | Consult with DNR | Consult with DNR | 24:1 | Consult with DNR |
| **Category II** | 3:1 | 6:1 | 12:1 | 12:1 |
| **Category III** | 2:1 | 4:1 | 8:1 | 8:1 |
| **Category IV** | 1.5:1 | 3:1 | 6:1 | 6:1 |

ii *Adjustment of Replacement Ratios.* The Planning Official may adjust the replacement ratios to compensate for deviations from the requirements under this section, subject to the following:

(A). In most cases, adjustments to the replacement ratios will increase the required amount of mitigation. The required mitigation may be decreased under exceptional circumstances – for example, if programmatic out-of-kind mitigation yields watershed-scale benefits that would not be realized from in-kind mitigation, or if out-of-kind mitigation would protect irreplaceable wetlands.

e. *Mitigation Timing.* The mitigation shall be implemented prior to or concurrent with alterations. If mitigation is implemented after alteration is allowed, the Planning Official may require additional mitigation to compensate for temporal losses of wetland functions.

f. *Buffers for Mitigation Wetlands.* Refer to Wetland Buffer Tables 20.720.140-1 through 20.720.140-4.

g. *Wetland Mitigation Banks.*

i Credits from a wetland mitigation bank may be approved for use as mitigation for unavoidable impacts to wetlands when:

(A). The bank is certified under Chapter 173-700 WAC;

(B). The Planning Official determines that the wetland mitigation bank provides appropriate mitigation for the authorized impacts; and

(C). The proposed use of credits is consistent with the terms and conditions of the bank's certification.

ii Replacement ratios for projects using bank credits shall be consistent with replacement ratios specified in the bank's certification.

iii Credits from a certified wetland mitigation bank may be used to compensate for impacts located within the service area specified in the bank's certification. In some cases, bank service areas may include portions of more than one adjacent drainage basin for specific wetland functions.

D. *Additional Critical Areas Report Requirements.* A critical areas report for wetlands shall be prepared according to the Washington State Wetland Rating System for Western Washington – 2014 Update, Ecology Publication No. 23-06-009, Washington State Wetland Rating System For Western Washington: 2014 Update, published October 2014 (updated July 2023) or as revised by Ecology. The critical areas report shall contain an analysis of the wetlands including the following site- and proposal-related information:

1. A written assessment, data sheets, and accompanying maps of any wetlands or buffers on the site, including the following information:

a. Hydrogeomorphic (HGM) subclassification and Cowardin class;

b. Wetland category;

c. Wetland delineation and required buffers;

d. Existing wetland acreage;

e. Vegetative, faunal, and hydrologic characteristics;

f. Soil types and substrate conditions;

g. Topographic elevations, at one-foot contours; and

h. A discussion of the water sources supplying the wetland and documentation of hydrologic regime (locations of inlet and outlet features, water depths throughout the wetland, evidence of recharge or discharge, or evidence of water depths throughout the year, including drift lines, algal layers, moss lines, and sediment deposits).

2. Functional evaluation for the wetland and buffer using Ecology's most current approved data sheets method and including the reference of the method and all data sheets.

3. Proposed mitigation, if needed, including a discussion of alternatives and trade-offs of the various alternatives (for example, where enhancement for one function would adversely affect another) and a written description and accompanying maps of the mitigation area, including the following information:

a. Existing and proposed wetland acreage;

b. Existing and proposed vegetative and faunal conditions;

c. Surface and subsurface hydrological conditions of existing and proposed wetlands and hydrologically associated wetlands, including an analysis of existing hydrologic regime and proposed hydrologic regime for enhanced, created, or restored mitigation areas;

d. Relationship to lakes, streams, and rivers in the watershed;

e. Soil type and substrate conditions;

f. Topographic elevations, at one-foot contours;

g. Required wetland buffers including existing and proposed vegetation;

h. Identification of the wetland's contributing area; and

i. A functional assessment of proposed mitigation to ensure no net loss of shoreline ecological function.

# CHAPTER 20.730
# SHORELINE MANAGEMENT AREA

Sections:

20.730.010 Purpose.

20.730.020 Establishment of Boundaries.

20.730.030 Regulation of Uses.

20.730.040 Special Standards.

20.730.050 Administration and Enforcement.

20.730.060 Shoreline Permit Procedures.

20.360.070 Changes, Amendments, or Revisions.

## 20.730.010 Purpose.

*General*. The purpose of this Chapter is to implement the policies and procedures set forth by the Shoreline Management Act of 1971, as amended, and all applicable provisions contained in the Washington Administrative Code.

## 20.730.020 Establishment of Boundaries.

*Establishment of boundaries*. The provisions of the Shoreline Management Master Program together with the map entitled "Shoreline Environment Designations" shall define the boundaries of the Shoreline Management Area.

## 20.730.030 Regulation of Uses.

*Regulation of uses*. The Shoreline Management Master Program shall be used to regulate uses within the Shoreline Management Area.

## 20.730.040 Special Standards.

*Special standards*. The Shoreline Management Master Program shall provide development standards for uses within the Shoreline Management Area.

## 20.730.050 Administration and Enforcement.

*Administration and enforcement*. The Shoreline Management Master Program shall be used to administer and enforce the regulations within the Shoreline Management Area.

## 20.730.060 Shoreline Permit Procedures.

*Permits*. Shoreline permits shall be processed according to the procedures contained in 20.210 VMC Decision-Making Procedures, in conjunction with Shoreline Management Master Program permitting procedures where applicable, within the Shoreline Management Area.

## 20.730.070 Changes, Amendments, or Revisions.

*Changes, amendments or revisions*. The Shoreline Management Master Program process for changes, amendments or revisions shall be used within the Shoreline Management Area.

# CHAPTER 20.740
# SEPA REGULATIONS

Sections:

20.740.010 Authority.

20.740.020 Contents.

20.740.100 General Requirements.

20.740.110 Purpose of this Part and Adoption by Reference.

20.740.120 Designation of Responsible Official.

20.740.130 Lead Agency Determination and Responsibilities.

20.740.140 Additional SEPA Timing Considerations.

20.740.200 Categorical Exemptions and Threshold Determinations

20.740.210 Purpose of this Section and Adoption by Reference.

20.740.220 Environmental Checklist.

20.740.230 Optional DNS Process.

20.740.240 Mitigated DNS.

20.740.250 Determination of Significance (DS)/Initiation of Scoping.

20.740.300 Environmental Impact Statements (EIS).

20.740.310 Purpose of this Part and Adoption by Reference.

20.740.320 Scoping.

20.740.330 Preparation of EIS – Additional Considerations.

20.740.400 Notification and Commenting.

20.740.410 Purpose of this Part and Adoption by Reference.

20.740.420 Filing of Environmental Documents.

20.740.430 Public Notice.

20.740.440 Comments and Responses.
20.740.450 Designation of Official to Perform Consulted Agency Responsibilities.
20.740.500 Use of Existing Environmental Documents.
20.740.510 Purpose of this Part and Adoption by Reference.
20.740.520 Methods for Utilizing Existing Document.
20.740.530 Planned Action Review.
20.740.600 SEPA and City Decisions.
20.740.610 Purpose of this Part and Adoption by Reference.
20.740.620 Substantive Authority.
20.740.630 SEPA Policies.
20.740.640 Appeals.
20.740.700 Definitions.
20.740.710 Purpose of this Part and Adoption by Reference.
20.740.720 Additional Definitions.
20.740.800 Categorical Exemptions.
20.740.810 Purpose of this Part and Adoption by Reference.
20.740.820 Use of Exemptions.
20.740.830 Exemption from Threshold Determinations.
20.740.840 Exempt Levels for Minor New Construction.
20.740.900 Agency Compliance.
20.740.950 Forms.

## 20.740.010 Authority.

The City adopts this ordinance under the authority and mandates of the State Environmental Policy Act (SEPA), 43.21C.120 RCW and 43.21C.135 RCW, and the SEPA rules, Chapter 197-11 WAC.

## 20.740.020 Contents.

*Contents*. The ordinance codified in this Chapter contains the City's SEPA procedures and policies. The SEPA rules, Chapter 197-11 WAC, are to be used in conjunction with this Chapter. As contemplated by such rules (WAC 197-11-904), the sections of the SEPA rules hereinafter set forth by number are adopted by reference as if fully set forth. Copies of the statute and the rules (WAC Chapter 197-11) shall be kept available for public inspection in the planning office at City Hall, and a section by section summary of the adopted rules shall be advertised, all as contemplated by 43.21C.135(2) RCW.

# 20.740.100
# GENERAL REQUIREMENTS

Sections:

20.740.110 Purpose of this Part and Adoption by Reference.

20.740.120 Designation of Responsible Official.

20.740.130 Lead Agency Determination and Responsibilities.

20.740.140 Additional SEPA Timing Considerations.

## 20.740.110 Purpose of this Part and Adoption by Reference.

*Adoption of SEPA provisions*. This part contains the basic requirements that apply to the SEPA process. As supplemented by the provisions of this part, the City adopts the following sections of the SEPA rules by reference:

| | |
|---|---|
| WAC 197-11-030 | Policy |
| WAC 197-11-040 | Definitions |
| WAC 197-11-050 | Lead Agency |
| WAC 197-11-055 | Timing of the SEPA Process |
| WAC 197-11-060 | Content of Environmental Review |
| WAC 197-11-070 | Limitations on Actions During SEPA Process |
| WAC 197-11-080 | Incomplete or Unavailable Information |
| WAC 197-11-090 | Supporting Documents |
| WAC 197-11-100 | Information Required of Applicants |

| | |
|---|---|
| WAC 197-11-158 | GMA Project Review-Reliance on Existing Plans, Laws and Regulations |
| WAC 197-11-210 | SEPA/GMA Integration |
| WAC 197-11-220 | SEPA/GMA Definitions |
| WAC 197-11-228 | Overall SEPA/GMA Integration Procedures |
| WAC 197-11-230 | Timing of an Integrated GMA/SEPA Process |
| WAC 197-11-232 | SEPA/GMA Integration Procedures for Preliminary Planning, Environmental Analysis, and Expanded Scoping |
| WAC 197-11-235 | Documents |
| WAC 197-11-238 | Monitoring |
| WAC 197-11-250 | SEPA/Model Toxics Control Act Integration |
| WAC 197-11-253 | SEPA Lead Agency for MTCA Actions |
| WAC 197-11-256 | Preliminary Evaluation |
| WAC 197-11-259 | Determination of Nonsignificance for MTCA Remedial Action |
| WAC 197-11-262 | Determination of Significance and EIS for MTCA Remedial Actions |
| WAC 197-11-265 | Early Scoping for MTCA Remedial Actions |
| WAC 197-11-268 | MTCA Interim Actions |

## 20.740.120 Designation of Responsible Official.

A. *Responsible official.* For public proposals, the head administrative official of the lead City department or division making the proposal shall be the responsible official. Whenever possible, agency people carrying out SEPA procedures should be different from agency people making the proposal.

B. *Private proposals.* For private proposals, the head administrative official of the department or division with primary responsibility for approving or processing the permits and licenses for the proposal shall be the responsible official. When multiple officials have permitting authority, the assignment of responsibility shall be reached by agreement.

C. *When City is lead agency*. For all proposals for which the City is the lead agency, the responsible official shall make the threshold determination, supervise scoping and preparation of any required environmental impact statement (EIS), and perform any other functions assigned to the lead agency or responsible official by those sections of the SEPA rules that are adopted by reference in this Chapter, or otherwise assigned by the supplemental provisions of this Chapter.

D. *Retention of documents.* The City shall retain all documents required by the SEPA rules (Chapter 197-11 WAC) and make them available in accordance with Chapter 42.17 RCW.

## 20.740.130 Lead Agency Determination and Responsibilities.

A. *Determination of lead agency.* The department within the City receiving an application for or initiating a proposal that involves a nonexempt action shall determine the lead agency for that proposal under the applicable SEPA rules and supplemental provisions adopted in 20.740.900 VMC of this Chapter, unless the lead agency has been previously determined or the department is aware that another department or agency is in the process of determining the lead agency.

B. *When City is lead agency*. When the City is the lead agency for a proposal, the department receiving the application shall determine the responsible official who shall supervise compliance with the threshold determination requirements and supervise preparation of the EIS if an EIS is required.

C. *When City is not lead agency*. When the City is not the lead agency for a proposal, all departments of the City shall use and consider, as appropriate, either the Determination of Non-Significance (DNS) or final EIS of the lead agency in making decisions on the proposal. No City department shall prepare or require preparation of a DNS or EIS in addition to that prepared or required by the lead agency, unless required under 197-11-600 WAC. In some cases, the City may conduct supplemental environmental review under 197-11-600 WAC.

D. *Inappropriate designation.* If the City or any of its departments receives a lead agency determination made by another agency that appears to be inconsistent with the criteria of the SEPA rules and supplemental provisions adopted in 20.740.900 VMC of this Chapter, it may object to the determination and assume lead agency status or seek Ecology resolution of lead agency disputes, according to the SEPA rules and supplemental provisions adopted in 20.740.900 VMC of this Chapter.

E. *Inter-departmental agreement.* Departments of the City are authorized to make agreements as to lead agency status or shared lead agency duties for a proposal, in accordance with the provisions of the SEPA rules and supplemental provisions adopted in 20.740.900 VMC of this Chapter; provided, that the responsible official and any department that will incur responsibilities as the result of such agreement approve the agreement.

F. *Requirement of sufficient information.* Any department making a lead agency determination for a private project shall require sufficient information from the applicant to identify which other agencies have jurisdiction over the proposal, including agencies which require nonexempt licenses.

G. *MCTA remedial action.* When the City is lead agency for a MTCA remedial action, Ecology shall be provided an opportunity under 197-11-253(5) WAC to review the environmental documents prior to public notice being provided. If the SEPA and MTCA documents are issued together with one public comment period under 197-11-253(6) WAC, the City shall decide jointly with Ecology who receives the comment letters and how copies of the comment letters will be distributed to the other agency.

## 20.740.140 Additional SEPA Timing Considerations.

The following time limits, expressed in calendar days shall apply when the City processes licenses, approvals and project permits for all private projects and those governmental proposals submitted to the City by other agencies requesting the City to perform lead agency duties:

A. *Categorical exemptions.* The City shall identify whether an action will likely be categorically exempt under the SEPA rules and supplemental provisions adopted in 20.740.800 VMC of this Chapter no later than in its issuance of the preapplication conference summary under Section 20.210.080(H) VMC. If a preapplication conference is not required under Section 20.210.080 VMC, the City shall determine whether the project is categorically exempt within 28 days of receiving an application.

B. *Threshold determinations for project permit applications.*

1. No threshold determination shall be issued prior to the expiration of the comment period for any notice of application required by Chapter 20.210 VMC, Decision-Making Procedures, unless the responsible official uses the optional DNS provisions contained in 20.740.200 VMC of this Chapter.

2. A final determination shall be issued at least 15 days prior to any open record hearing or open record pre-decision hearing required pursuant to Chapter 20.210 VMC, Decision-Making Procedures.

3. If a determination of significance is made under this Chapter concurrently with any notice of application under Chapter 20.210 VMC, Decision-Making Procedures, the notice of application shall be combined with the determination of significance and scoping notice; provided, that nothing in this Section prevents a determination of significance and scoping notice from being issued prior to the notice of application.

4. Nothing in this Section prevents a lead agency, when it is a project proponent or is funding a project, from conducting its review under SEPA or from allowing appeals of procedural determinations prior to submitting a project permit application.
5. The optional DNS process provided in 20.740.200 VMC of this Chapter may be used to indicate on the notice of application that the lead agency is likely to issue a DNS. If this optional process is used, a separate comment period on the DNS may not be required.
6. If the City's only action on a proposal is a decision on a building permit or other license that requires detailed project plans and specifications, the applicant may request in writing that the City conduct environmental review prior to submission of the detailed plans and specifications and the responsible official may agree to such request; provided, that for project permit proposals, the earliest point at which environmental review may be initiated is upon filing of a fully-complete application, including an environmental checklist, as determined by Chapter 20.210 VMC, Decision-Making Procedures.
7. *Early notice.* An applicant may request in writing early notice of whether a determination of significance (DS) is likely under WAC 197-11-350. The request must:
    a. Follow submission of a permit application and environmental checklist for a nonexempt proposal for which the department is lead agency; and
    b. Precede the City's actual threshold determination for the proposal.
8. *City's response.* The responsible official shall respond in writing to the request in 7 working days. Such response will:
    a. State whether the City currently considers issuance of a DS likely and, if so, indicate the general or specific area(s) of concern that is/are leading the City to consider a DS; and
    b. State that the applicant may change or clarify the proposal to mitigate the indicated impacts, revising the environmental checklist and/or permit application as necessary to reflect the changes or clarifications.
9. *Status of written response.* The City's written response under Subsection (B) of this Section shall not be construed as a determination of significance. In addition, preliminary discussion of clarifications or changes to a proposal, as opposed to a written request for earl notice, shall not bind the City to consider the clarifications or changes in its threshold determination.

C. *Threshold determinations for nonproject permit proposals*.

1. For all proposals not classified as project permits, the City should complete threshold determinations which may be determined solely upon review of the environmental checklist within 14 days of determining that an adequate application and completed checklist have been submitted.

2. When the responsible official requires further information or studies from the applicant or consultation with other agencies with jurisdiction:
    a. The City should request such further information or studies within 14 days of determining that an adequate application and checklist have been submitted for nonproject permit proposals.
    b. The City shall wait no longer than 30 days for a consulted agency to respond.
    c. The responsible official should complete the threshold determination within 14 days of receiving the requested information or studies from the applicant or the consulted agency; provided, that in the case of information requested from a consulted agency that does not respond within 30 days, the responsible official should complete the threshold determination immediately unless further information was also requested from the applicant or another agency, provided further, that the provisions of Subsection 20.740.140(B) shall apply to project permit proposals.
3. Where the City must initiate further studies, including field investigations, to obtain the information to make the threshold determination, the City should complete the studies within 30 days of receiving a fully-complete application and checklist for project permit proposals, and within 30 days of receiving an adequate application and checklist for nonproject permit proposals.
4. For nonexempt proposals where action by an advisory or decision-making body such as the Planning Commission, Hearing Examiner, or City Council is required, the determination of nonsignificance (DNS) or final EIS for the proposal shall accompany the City's staff recommendation to the advisory or decision-making body.

# 20.740.200 ENVIRONMENTAL CHECKLIST AND THRESHOLD DETERMINATIONS

Sections:

20.740.210 Purpose of this Section and Adoption by Reference.

20.740.220 Environmental Checklist.

20.740.230 Optional DNS Process.

20.740.240 Mitigated DNS.

20.740.250 Determination of Significance (DS)/Initiation of Scoping.

## 20.740.210 Purpose of this Section and Adoption by Reference.

*Adoption of SEPA provisions*. This part contains the rules for deciding whether a proposal has a probable significant, adverse environmental impact requiring an environmental impact statement (EIS) to be prepared. This part also contains rules for evaluating the impacts of proposals not requiring an EIS. As supplemented by the provisions of this part, the City adopts the following Sections of the SEPA rules by reference:

| | |
|---|---|
| WAC 197-11-300 | Purpose of this Part, Relating to Categorical Exemptions and Threshold Determinations |
| WAC 197-11-305 | Categorical Exemptions |
| WAC 197-11-310 | Threshold Determination Required |
| WAC 197-11-315 | Environmental Checklist |
| WAC 197-11-330 | Threshold Determination Process |
| WAC 197-11-335 | Additional Information |

WAC 197-11-340 Determination of Nonsignificance (DNS)

WAC 197-11-350 Mitigated DNS

WAC 197-11-355 Optional DNS Process

WAC 197-11-360 Determination of Significance (DS)/Initiation of Scoping

WAC 197-11-390 Effect of threshold Determination

## 20.740.220 Environmental Checklist.

A. *When required.* Except as provided in Subsection (B) of this Section, a completed environmental checklist or a copy, in the form provided in 197-11-960 WAC, shall be filed at the same time as an application for a permit, license, certificate or other approval not specifically exempted in this Chapter.

B. *Exemptions.* An environmental checklist is not needed for the following proposals:

1. Proposals where the City and applicant agree an EIS is required.
2. Proposals where SEPA compliance has been previously completed.
3. Proposals where SEPA compliance has been initiated by another agency.
4. Public proposals on which the lead agency has decided to prepare its own EIS.

C. *Other provisions*.

1. The City shall use the environmental checklist to determine the lead agency and, if the City is the lead agency, to determine the responsible official for making the threshold determination.
2. For private proposals, the City will require the applicant to complete the environmental checklist, providing assistance as the City determines necessary.
3. For City proposals, the department initiating the proposal shall complete the environmental checklist for that proposal.
4. The City may require that it, and not the private applicant, will complete all or a part of the environmental checklist for a private proposal, if either of the following occurs:
    a. The City has technical information on a question or questions that is unavailable to the private applicant; or
    b. The applicant has provided inaccurate information on previous proposals or on proposals currently under consideration.

5. For projects submitted as planned actions under 197-11-164 WAC, the City shall use its existing environmental checklist form or may modify the environmental checklist form as provided in 197-11-315 WAC. The modified environmental checklist form may be prepared and adopted along with or as part of a planned action ordinance; or developed after the ordinance is adopted. In either case, a proposed modified environmental checklist form must be sent to Ecology to allow at least a 30 day review prior to use.

## 20.740.230 Optional DNS Process.

A. *General.* For any project permit proposal, where the responsible official determines upon a reasonable basis that significant, adverse environmental impacts are unlikely, the responsible official may use a single integrated comment period to obtain comments on the notice of application issued under Chapter 20.210 VMC, Decision-Making Procedures, and the likely threshold determination for the proposal. When this process is used, a separate comment period for the DNS will typically not be required when the initial Threshold Determination is issued.

B. *Optional DNS process.* Where the optional DNS process is used, the responsible official shall:

1. State on the first page of the notice of application that it expects to issue a DNS for the proposal and that:
    a. The optional DNS process will be used;
    b. That the comment period for the notice of application may be the only opportunity to comment on the environmental impacts of the proposal;
    c. That the proposal may include mitigation measures under applicable codes, and the project review process may incorporate or require mitigation measures regardless of whether an EIS is prepared; and
    d. That a copy of the final threshold determination for the specific proposal may be obtained upon written request.
2. List in the notice of application the conditions being considered to mitigate environmental impacts, if a mitigated DNS is expected;
3. Comply with the requirements for a notice of application and public notice in 36.70B.110 RCW and Chapter 20.210 VMC, Decision-Making Procedures; and
4. Send the notice of application and environmental checklist to:
    a. Agencies with jurisdiction, Ecology, affected tribes, and each local agency or political subdivision whose public services would be changed as a result of implementation of the proposal; and
    b. Anyone who requests a copy in writing of the environmental checklist for the specific proposal.

C. *Additional provisions.* If the lead agency indicates on the notice of application that a DNS is likely, an agency with jurisdiction may assume lead agency status during the comment period on the notice of application;

D. *Consideration of comments.* The responsible official shall consider timely comments on the notice of application and either:

1. Issue a final DNS or Mitigated Determination of Non-Significance (MDNS) with no comment period using the procedures in Subsection (E) of this Section;

2. Issue a final DNS or MDNS with a comment period using the procedures in Subsection (E) of this Section, if the responsible official determines a comment period is necessary;

3. Issue a DS; or

4. Require additional information or studies prior to making a final threshold determination; and

E. *Copies of issued DNS or MDNS.* If a DNS or MDNS is issued under Subsection (D)(1) of this Section, the lead agency shall send a copy of the DNS or MDNS to agencies with jurisdiction, Ecology, those who commented, and anyone who requests a copy in writing. A copy of the environmental checklist need not be circulated.

## 20.740.240 Mitigated DNS.

As provided in this Section and in 197-11-350 WAC, the responsible official may issue a mitigated determination of nonsignificance (DNS) based on conditions attached to the proposal by the responsible official or based on changes to, or clarifications of, the proposal made by the applicant.

A. *Early notice.* An applicant may request in writing early notice of whether a determination of significance (DS) is likely under WAC 197-11-350. The request must:

1. Follow submission of a permit application and environmental checklist for a nonexempt proposal for which the department is lead agency; and

2. Precede the City's actual threshold determination for the proposal.

B. *City's response.* The responsible official shall respond in writing to the request within 7 working days. Such response will:

1. State whether the City currently considers issuance of a DS likely and, if so, indicate the general or specific area(s) of concern that is/are leading the City to consider a DS; and

C. *Identification of impacts.* As much as reasonably possible, the City should assist the applicant with identification of impacts to the extent necessary to formulate mitigation measures.

D. *Submission of changes or changed proposal.* When an applicant submits a changed or clarified proposal, along with a revised environmental checklist, the City shall base its threshold determination on the changed or clarified proposal and should make the determination within 14 days of receiving the changed or clarified proposal:

1. If the City indicated specific mitigation measures in its response to the request for early notice and that such measures would lead to a DNS, and if the applicant changed or clarified the proposal to include those specific mitigation measures, the City shall issue and circulate a DNS under 197-11-340 WAC.
2. If the City indicated areas of concern, but did not indicate specific mitigation measures that would allow it to issue a DNS, the City shall make the threshold determination, issuing a DNS or DS as appropriate.
3. The applicant's proposed mitigation measures e.g., clarification, changes or conditions, must be in writing and must be specific. For example, a proposal to "control noise" or "prevent stormwater runoff" would be inadequate, whereas a proposal to "muffle machinery to X decibel" or to "construct 200' stormwater retention pond at Y location" would be adequate.
4. Mitigation measures which justify issuance of a mitigated DNS may be incorporated in the DNS by reference to agency staff reports, studies or other documents.

E. *Issuance of mitigated DNS.* A mitigated DNS is issued under either 197-11-340(2) WAC, requiring a 14 day comment period and public notice, or 197-11-355 WAC, which may require no additional comment period beyond the comment period on the notice of application.

F. *Conditions of approval.* Mitigation measures incorporated in the mitigated DNS shall be deemed conditions of approval of the permit decision and may be enforced in the same manner as any term or condition of the permit, or enforced in any manner legally available to the City.

G. *Lack of mitigation measures.* If the City's tentative decision on a permit or approval does not include mitigation measures that were incorporated in a mitigated DNS for the proposal, the City should evaluate the threshold determination to assure consistency with 197-11-340(3) WAC governing withdrawal of DNS.

## 20.740.250 Determination of Significance (DS)/Initiation of Scoping.

Initiation of scoping. If a determination of significance is made under 197-11-360 WAC concurrently with any notice of application required pursuant to Chapter 20.210 VMC, Decision-Making Procedures, such notice of application shall be combined with the DS/scoping notice.

# 20.740.300
# ENVIRONMENTAL IMPACT STATEMENTS (EIS)

Sections:

20.740.310 Purpose of this Part and Adoption by Reference.

20.740.320 Scoping.

20.740.330 Preparation of EIS – Additional Considerations.

## 20.740.310 Purpose of this Part and Adoption by Reference.

*Adoption of SEPA provisions*. This part contains the rules for preparing environmental impact statements. As supplemented by the provisions of this part, the City adopts the following sections of the SEPA rules by reference:

| | |
|---|---|
| WAC 197-11-400 | Purpose of EIS |
| WAC 197-11-402 | General Requirements |
| WAC 197-11-405 | EIS Types |
| WAC 197-11-406 | EIS Timing |
| WAC 197-11-408 | Scoping |
| WAC 197-11-410 | Expanded Scoping |
| WAC 197-11-420 | EIS Preparation |
| WAC 197-11-425 | Style and Format |
| WAC 197-11-430 | Format |

| | |
|---|---|
| WAC 197-11-435 | Cover Letter or Memo |
| WAC 197-11-440 | EIS Contents |
| WAC 197-11-442 | Contents of EIS on Nonproject Proposals |
| WAC 197-11-443 | EIS Contents When Prior Nonproject EIS |
| WAC 197-11-444 | Elements of the Environment |
| WAC 197-11-448 | Relationship of EIS to Other Considerations |
| WAC 197-11-450 | Cost-Benefit Analysis |
| WAC 197-11-455 | Issuance of DEIS |
| WAC 197-11-460 | Issuance of FEIS |

## 20.740.320 Scoping.

*Scoping*. Scoping under 197-11-408 WAC is required for the preparation of every new draft EIS (DEIS), but is optional at the direction of the responsible official for the preparation of a supplemental EIS (SEIS) or when adopting another environmental document as the EIS pursuant to Part Six of this Chapter.

A. *Comment period for DS/scoping notice.* If the responsible official issues the DS/scoping notice with a notice of application issued under the provisions of Chapter 20.210 VMC, Decision-Making Procedures, the comment period on the notice of application shall be no less than 14 days.

B. *Expansion of scoping process.* The responsible official may expand the scoping process to incorporate the provisions of 197-11-410 WAC, governing expanded scoping, where the responsible official determines that such expanded scoping is reasonably necessary to evaluate the potential adverse impacts and reasonable alternatives for a proposal.

## 20.740.330 Preparation of EIS – Additional Considerations.

*Additional considerations*. Preparation of draft and final Environmental Impact Statements (DEIS and FEIS) and draft and final supplemental Environmental Impact Statements (SEIS) shall be under the direction of the responsible official. Before the City issues an EIS, the responsible official shall be satisfied that it complies with this Chapter and the SEPA rules.

A. *Who prepares EIS.* The DEIS and FEIS or draft and final SEIS may be prepared by City staff, the applicant, or by a consultant selected by the City or the applicant. If the responsible official requires an EIS for a proposal and determines that someone other than the City will prepare the EIS, the responsible official shall notify the applicant immediately after completion of the threshold determination. The responsible official shall also notify the applicant of the City's procedure for EIS preparation, including approval of the DEIS and FEIS prior to distribution.

B. *Who provides additional information.* The City may require an applicant to provide information the City does not possess, including specific investigations. However, the applicant is not required to supply information that is not required under this Chapter or that is being requested from another agency; provided, that this does not apply to information the City may request under another ordinance or statute.

# 20.740.400
# NOTIFICATION AND COMMENTING

Sections:

20.740.410 Purpose of this Part and Adoption by Reference.

20.740.420 Filing of Environmental Documents.

20.740.430 Public Notice.

20.740.440 Comments and Responses.

20.740.450 Designation of Official to Perform Consulted Agency Responsibilities.

## 20.740.410 Purpose of this Part and Adoption by Reference.

*Adoption of SEPA regulations*. This part contains the rules for consulting, commenting, and responding on all environmental documents under SEPA, including rules for public notice and hearings. As supplemented by the provisions of this part, the City adopts the following sections of the SEPA rules by reference:

| | |
|---|---|
| WAC 197-11-500 | Purpose of this Part, Relating to Commenting |
| WAC 197-11-502 | Inviting Comment |
| WAC 197-11-504 | Availability and Cost of Environmental Documents |
| WAC 197-11-508 | SEPA Register |
| WAC 197-11-510 | Public Notice |
| WAC 197-11-535 | Public Hearings and Meetings |
| WAC 197-11-545 | Effect of No Comment |
| WAC 197-11-550 | Specificity of Comments |

WAC 197-11-560 FEIS Response to Comments

WAC 197-11-570 Consulted Agency Costs to Assist Lead Agency

## 20.740.420 Filing of Environmental Documents.

A. *Submission of documents.* The City shall submit the following documents in a timely manner to Ecology for publication in the SEPA register:

1. DNSs issued under the provisions of 197-11-340 WAC;
2. DNSs issued under the optional provisions of 197-11-355 WAC and Section 20.740.320 VMC;
3. All mitigated DNSs issued under the provisions of 197-11-350 WAC Section 20.740.330 VMC;
4. All determinations of significance (DS/scoping notices) issued under the provisions of 197-11-360 WAC;
5. All EISs, including DEIS, FEIS, and SEIS documents, and notices of adoption of EISs; and
6. All Notices of Action published under the provisions of 43.21C.080 RCW and 43.21C.087 RCW.

B. *Other SEPA documents.* SEPA documents not listed in Subsection (A) of this Section involve no statutory comment or response period, and are limited to certain EIS addenda (197-11-625 WAC) and DNS documents on proposals for which the City is the only agency with jurisdiction. These documents may, but are not required to, be circulated for agency and public review or comment.

## 20.740.430 Public Notice.

A. *When notice is required.* When the SEPA rules require notice to be given under 197-11-510 WAC, the City shall provide notice under this Section. The City shall use reasonable methods to inform the public and other agencies that an environmental document is being prepared or is available and that public hearings, if any, will be held.

B. *Notice of action.* A notice of action may be publicized in the manner prescribed by 43.21C.080 RCW and 43.21C.087 RCW. The form of notice shall be substantially in the form provided in 197-11-990 WAC. The notice shall be published by the City Clerk, applicant or proponent pursuant to Section 43.21C.080 RCW.

C. *Integration of notification.* Whenever possible, the City shall integrate the public notice required under this Section with existing notice procedures for the City's nonexempt permit(s) or approval(s) required for the proposal. Whenever the City issues a DNS under 197-11-340(2) WAC or a DS under 197-11-360(3) WAC the City shall give public notice as follows:

1. If public notice is required for a nonexempt license, the notice shall state whether a DS or DNS has been issued and when comments are due.
2. If an environmental document is issued concurrently with the notice of application, the public notice requirements for the notice of application in 36.70B.110(4) RCW will suffice to meet the SEPA public notice requirements in 197-11-510(1) WAC.
3. If no public notice is otherwise required for the permit or approval, the City shall give notice of the DNS or DS by at least one of the following methods:
    a. Posting the property, for site-specific proposals;
    b. Publishing notice in a newspaper of general circulation in the City or general area where the proposal is located;
    c. Notifying public or private groups which have expressed interest in a certain proposal or in the type of proposal being considered;
    d. Notifying the news media;
    e. Placing notices in appropriate regional, neighborhood, ethnic or trade journals; and/or
    f. Publishing notice in City newsletters and/or sending notice via City or neighborhood association mailing lists.
4. Whenever the City issues a DS under 197-11-360(3) WAC, the City shall state the scoping procedure for the proposal in the DS as required in 197-11-408 WAC and in the public notice.

D. *Public notice requirements for optional DNS process.* If a DNS is issued using the optional DNS process, the public notice requirements for a notice of application in 36.70B.110(4) RCW as supplemented by the requirements in 197-11-355 WAC will suffice to meet the SEPA public notice requirements in 197-11-510(1)(b) WAC.

E. *Notice of availability of documents.* Whenever the City issues a DEIS under 197-11-455(5) WAC or a SEIS under 197-11-620 WAC, notice of the availability of those documents shall be given by:

1. Indicating the availability of the DEIS in any public notice required for a nonexempt licenses and at least one of the following methods:
    a. Posting the property, for site-specific proposals;
    b. Publishing notice in a newspaper of general circulation in the City or general area where the proposal is located;
    c. Notifying public or private groups which have expressed interest in a certain proposal or in the type of proposal being considered;
    d. Notifying the news media;

e. Placing notices in appropriate regional, neighborhood, ethnic, or trade journals; and/or

f. Publishing notice in City newsletters and/or sending notice via City or neighborhood association mailing lists.

F. *Public notice for planned actions.* Public notice for projects that qualify as planned actions shall be tied to the underlying permit as specified in 197-11-172(3) WAC.

G. *Responsible party.* The City may require an applicant to complete the public notice requirements for the applicant's proposal at his or her expense.

## 20.740.440 Comments and Responses.

A. *Invitation of comments.* The City shall invite comment under 197-11-502 WAC as supplemented in this Section.

B. *Definition of reasonable methods.* The City shall use reasonable methods to inform agencies and the public of environmental determinations, document availability, and review or comment opportunities. In particular, the City shall invite written comments on the environmental aspects of any nonexempt proposal to be submitted in the manner and within the prescribed time limits set forth in this Section.

C. *Timelines of response.* Consulted agencies have a responsibility to respond in a timely and specific manner to requests for comments. If a consulted agency does not respond with written comments within the time periods for commenting on environmental documents, the City may assume that the consulted agency has no information relating to the potential impact of the proposal as it relates to the consulted agency's jurisdiction or special expertise. Any consulted agency that fails to submit substantive information to the City in response to a draft EIS is thereafter barred from alleging any defects in the City's compliance with Section 20.740.300 VMC of this Chapter, or the SEPA rules.

D. *Failure to comment.* Failure to comment by agencies with jurisdiction or members of the public on environmental documents, within the time periods specified by this part, shall be construed as lack of objection to the environmental analysis, if the requirements of Section 20.740.520 VMC are met.

E. *Specificity of comments.* Written comments on environmental documents submitted by any person or agency should be as specific as possible and shall meet the requirements of 197-11-550 WAC. The City shall consider and may respond to comments as deemed appropriate, and may decline to consider comments which do not meet the requirements of this Section.

F. *Threshold determinations.*

1. The City shall send DNSs to other agencies with jurisdiction, as required by 197-11-340 WAC and Section 20.740.320 VMC.

2. For DNSs issued under 197-11-340(2) WAC, the City shall provide public notice under Section 20.740.520 VMC and receive comments on the DNS for 14 days.

3. Comments on a DNS may be used in re-evaluating the threshold determination and in considering mitigation measures, but will normally involve no written response.

G. *Scoping*.

1. The City shall circulate the DS and invite comments on the scope of an EIS, as required by 197-11-360 WAC, 197-11-408 WAC, Section 20.740.410 VMC and Section 20.740.520 VMC.
2. The City may use other reasonable methods to inform agencies and the public, such as those indicated in 197-11-410 WAC.
3. The City determines the method for commenting, as governed by 197-11-408 and 197-11-410 WAC.
4. Comments on a DS will be used in determining the scope of an EIS.

H. *DEIS*.

1. The City shall invite comments on and circulate DEISs as required by 197-11-455 WAC.
2. The commenting period shall be 30 days unless extended by the City under 197-11-455 WAC.
3. Agencies shall comment and respond as stated in this part. This part meets the Act's formal consultation and comment requirement in 43.21C.030(2)(d) RCW.
4. Comments on a draft EIS will be evaluated for response in the FEIS by one or more of the following means:
    a. Modify alternatives including the proposed action;
    b. Develop and evaluate alternatives not previously given detailed consideration;
    c. Supplement, improve or modify the analysis;
    d. Make factual corrections; or
    e. Explain why the comments do not warrant further City response, citing the sources, authorities or reasons that support the City's response and, if appropriate, indicate those circumstances that would trigger further agency reappraisal or further response.
5. In carrying out Subsection (4), the City may respond to each comment individually, respond to a group of comments, cross-reference comments and corresponding changes in the EIS, or use other reasonable means to indicate an appropriate response to comments.

I. *FEIS.*

1. The City shall prepare a FEIS whenever a DEIS has been prepared, unless the proposal is withdrawn or indefinitely postponed.
2. An FEIS shall be issued and circulated under the provisions of 197-11-460 WAC.

3. All substantive comments on a DEIS shall be appended to the FEIS, or summarized, where comments are repetitive or voluminous, and the summary appended. If a summary of the comments is used, the names of the commenters shall be included.

4. If the City does not receive any comments critical of the scope or content of the DEIS, the City may state so in an updated fact sheet, 197-11-440(2) WAC, which shall be circulated under 197-11-460 WAC. The FEIS shall consist of the DEIS and updated fact sheet.

5. If changes in response to comments are minor and are largely confined to the responses described in Subsections (G)(4)(d) and (G)(4)(e) of this Section, the City may prepare and attach an addendum, which shall consist of the comments, the responses, the changes, and an updated fact sheet. The FEIS shall consist of the DEIS and the Addendum, and shall be issued under WAC 197-11-460, except that only the addendum need be sent to parties who received the DEIS.

J. *Public hearings and meetings*.

1. Public hearings or meetings may be held 197-11-535 WAC. Notice of public hearings shall be given under Section 20.740.520 VMC and may be combined with other agency notice.

2. In conjunction with the requirements of Section 20.740.520 VMC, notice of public hearings shall be published no later than 10 days before the hearing. For nonproject proposals, notice of the public hearing shall be published in a newspaper of general circulation in the City. For nonproject proposals having a regional or state-wide applicability, copies of the notice shall be given to the Olympia bureau of the Associated Press and United Press International.

K. *Supplements*.

1. Notice for and circulation of draft and final SEISs shall be done in the same manner as other draft and final EISs.

2. When a DNS is issued after a DS has been withdrawn, governed by 197-11-360 WAC, the City shall give notice under Section 20.740.520 VMC and receive comments for 14 days.

3. An addendum need not be circulated unless required under 197-11-625 WAC.

L. *Appeals.* Notice provisions for appeals are contained in part seven of this Chapter.

M. *Circulation of additional documents.* The City may circulate any other environmental documents for the purpose of providing information or seeking comment, as an agency deems appropriate.

N. *Use of other reasonable methods.* In addition to any required notice or circulation, the City may use other reasonable methods, to inform agencies and the public that environmental documents are available or that hearings will occur.

O. *Combining notices.* The City may combine SEPA notices with other agency notices. However, the SEPA information must be identifiable.

## 20.740.450 Designation of Official to Perform Consulted Agency Responsibilities.

A. *Designation of official.* The Planning Official shall be responsible for preparation of written comments for the City in response to a consultation request prior to a threshold determination, participation in scoping, and reviewing a DEIS.

B. *Responsibilities.* This Planning Official shall be responsible for the City's compliance with 197-11-550 WAC whenever the City is a consulted agency and is authorized to develop operating procedures that will ensure that responses to consultation requests are prepared in a timely fashion and include data from all appropriate departments of the City.

# 20.740.500
# USE OF EXISTING ENVIRONMENTAL DOCUMENTS

Sections:

20.740.510 Purpose of this Part and Adoption by Reference.

20.740.520 Methods for Utilizing Existing Document.

20.740.530 Planned Action Review.

## 20.740.510 Purpose of this Part and Adoption by Reference.

*Adoption of SEPA regulations*. This part contains the rules for using and supplementing existing environmental documents prepared under SEPA or the National Environmental Policy Act (NEPA) for the City's own environmental compliance. As supplemented by the provisions of this part, the City adopts the following sections of the SEPA rules by reference:

| | |
|---|---|
| WAC 197-11-164 | Planned Actions-Definition and Criteria |
| WAC 197-11-168 | Ordinances or Resolutions Designating Planned Actions-Procedures for Adoption |
| WAC 197-11-172 | Planned Actions-Project review |
| WAC 197-11-600 | When to Use Existing Environmental Documents |
| WAC 197-11-610 | Use of NEPA Documents |
| WAC 197-11-620 | Supplemental Environmental Impact Statement-Procedures |
| WAC 197-11-625 | Addenda-Procedures |
| WAC 197-11-630 | Adoption-Procedures |
| WAC 197-11-635 | Incorporation by Reference-Procedures |

WAC 197-11-640 Combining Documents

## 20.740.520 Methods for Utilizing Existing Document.

*Use of existing documentation*. Whenever possible, the City shall reduce paperwork and the accumulation of background data by using existing environmental documents under WAC 197-11-600.

## 20.740.530 Planned Action Review.

A. *Pre-application review.* Pre-application review under the provisions of Section 20.210.080 VMC shall be required for all development applications which may qualify as planned action projects, unless waived, in writing, pursuant to Section 20.210.080(B) VMC.

B. *Submitted requirements.* Development applications which may qualify as planned action development applications shall be subject to the submittal requirements for counter-complete status, as governed by Section 20.210.090 VMC. A SEPA checklist or other project review form as specified in Section 197-11-315 WAC and Section 20.740.310(7) VMC is required.

C. *Review for fully-complete status.* Development applications which may qualify as planned action development applications shall be subject to review for fully-complete status under Section 20.210.100 VMC. In addition to the usual submittal requirements, such an application shall not be deemed fully complete until all information necessary to evaluate the proposal's qualification as a planned action project and its compliance with the mitigation requirements contained in the planned action ordinance, have been provided.

D. *Written documentation required.* Within 14 calendar days after the determination that a development application which may qualify as a planned action project is fully complete, the Planning Official shall make a written determination of whether the proposed project qualifies for designation as a planned action project, according to the criteria listed below. Any Notice of Application issued under Chapter 20.210 VMC, Decision-Making Procedures, shall contain the written determination of whether the proposed project qualifies as a planned action. The Planning Official's determination under this Subsection shall be appealable only in conjunction with an appeal of the approval, conditional approval, or denial of the project, in accordance with Subsection (I) of this Section, or the provisions of Section 20.210.130 VMC, whichever is applicable.

1. The proposed project is located within the geographic area of an identified planned action subarea and the proposed project's impacts are within the thresholds identified within the applicable planned action ordinance, subarea plan and EIS;

2. The zoning designation upon the property upon which the project is proposed is consistent with those designations analyzed in the subarea plan and EIS adopted for the planned action subarea;

3. The use(s) and intensity of use(s) proposed are among or consistent with the uses and intensity of uses identified in the planned action ordinance, subarea plan and EIS, adopted for the planned action subarea;
4. The proposed project's environmental impacts, both project specific and cumulative, have been adequately addressed and analyzed in the subarea plan and EIS for the planned action subarea;
5. The proposed project implements the goals and policies of the applicable subarea plan and is consistent with the City's Comprehensive Plan;
6. The proposed project's significant environmental impacts will be adequately mitigated or avoided through application of the mitigation measures and other conditions required by the planned action ordinance, subarea plan or EIS for the planned action subarea;
7. The proposed project is in compliance with all applicable local, state, and federal regulations and development standards;
8. The proposed project is within the Vancouver Urban Growth Boundary;
9. The proposed project meets the requirements for designation as a planned action set forth in Section 43.21C.031 RCW, Section 197-11-164 WAC, and Section 20.740.630 VMC; and
10. The proposed project meets any other criteria for designation as a planned action project set forth in the applicable planned action ordinance.

E. *Threshold determination for planned actions.* No threshold determination shall be required to be issued for planned action projects; provided, that a planned action project may be conditioned to mitigate any adverse environmental impacts which are reasonably likely to result from the project action.

F. When a project is not a planned action. Where the Planning Official determines that a project application does not qualify as a planned action development application under the provisions of Subsection (E), a threshold determination is required. The application shall be reviewed, processed, and subject to appeal under the decision-making procedures otherwise applicable under Chapter 20.210 VMC, Decision-Making Procedures, and the project application shall be reviewed under the City's SEPA regulations, as governed by this Chapter. When reviewed under this Chapter, the applicant may use or incorporate relevant elements of the environmental analysis in the EIS or subarea plan adopted for the planned action subarea.

G. *Context of Final Decisions and Notice of Decision.* Any Final Decision and Notice of Decision issued under Chapter 20.210 VMC, Decision-Making Procedures, shall contain:

1. A statement of the findings supporting the conclusions that the project meets the criteria for designation as a planned action, that the project will implement relevant goals and policies of the subarea plan, and that the project is consistent with the Comprehensive Plan;

2. A statement of the requirements, standards, and mitigation measures conditioned or required pursuant to the applicable planned action ordinance, subarea plan, EIS, Vancouver Municipal Code and other applicable laws and regulations;

3. A statement that the probable adverse environmental impacts of the project have been adequately addressed and mitigated by application of the mitigation measures required by the applicable planned action ordinance, subarea plan, EIS, the Vancouver Municipal Code, and other applicable laws and regulations.

H. *Procedures for approval and appeal.* The procedures for approval and appeal set forth in this Section shall be applied to all applications and approvals which are designated as planned action projects pursuant to subsection (E); provided, that the procedures set forth in this Section for approval and appeal of planned action projects may be supplemented or modified by procedures set forth in the applicable planned action ordinance.

I. *Appeal of Final Decision.* The Final Decision on a planned action development application shall be subject to appeal pursuant to Section 20.210.130 VMC; provided, that the environmental analysis and mitigation measures or other conditions contained in the planned action ordinance, subarea plan, or EIS shall be afforded substantial weight by the review authority on appeal.

# 20.740.600
# SEPA AND CITY DECISIONS

Sections:

20.740.610 Purpose of this Part and Adoption by Reference.

20.740.620 Substantive Authority.

20.740.630 SEPA Policies.

20.740.640 Appeals.

## 20.740.610 Purpose of this Part and Adoption by Reference.

*Adoption of SEPA regulations*. This part contains the rules and policies for exercising SEPA's substantive authority, such as decisions to mitigate or reject proposals as a result of SEPA. This part also contains procedures for appealing SEPA determinations to agencies or the courts. As supplemented by the provisions of this part, the City adopts the following sections of the SEPA rules by reference:

| | |
|---|---|
| WAC 197-11-650 | Purpose of this Part |
| WAC 197-11-655 | Implementation |
| WAC 197-11-660 | Substantive Authority and Mitigation |
| WAC 197-11-680 | Appeals |

## 20.740.620 Substantive Authority.

A. *Supplementary to City authorization.* The policies and goals set forth in this Chapter are supplementary to those in the existing authorization of the City of Vancouver.

B. *Conditions of approval.* Subject to RCW 43.21C.060 and 43.21C.240, the city may attach conditions to a permit or approval for a proposal so long as:

1. Such conditions are necessary to mitigate specific probable adverse environmental impacts identified in environmental documents prepared pursuant to this title; and

2. Such conditions are in writing; and

3. The mitigation measures included in such conditions are reasonable and capable of being accomplished; and
4. The city has considered whether other local, state or federal mitigation measures applied to the proposal are sufficient to mitigate the identified impacts; and
5. Such conditions are based on one or more policies in VMC 20.740.630 and cited in the decision document.

C. *When additional mitigation is not required*. If during project review the City determines that the requirements for environmental analysis, protection and mitigation in the City's development regulations or Comprehensive Plan, or in other applicable local, state or federal laws or rules provide adequate analysis of and mitigation for the specific adverse environmental impacts under 43.21C.240 RCW, the City shall not impose additional mitigation under this Chapter.

D. *Content of findings.* Subject to 43.21C.060 RCW and 43.12C.240 RCW, the City may deny a permit or approval for a proposal on the basis of SEPA so long as findings are made that:

1. Approving the proposal would result in probable significant, adverse environmental impacts that are identified in a FEIS or final SEIS prepared pursuant to this Chapter; and
2. There are no reasonable mitigation measures capable of being accomplished that are sufficient to mitigate the identified impact; and
3. The denial is based on one or more policies identified in Section 20.740.630 VMC and identified in writing in the decision document.

## 20.740.630 SEPA Policies.

The City designates the following general policies as the basis for the City's exercise of authority pursuant to this Chapter. The City shall use all practicable means, consistent with other essential considerations of State policy, to improve and coordinate plans, functions, programs and resources to the end that the State and its citizens may:

A. *Environmental stewardship.* Fulfill the responsibilities of each generation as trustee of the environment for succeeding generations;

B. *Protect Washington's interests.* Assure for all people of Washington safe, healthful, productive and aesthetically and culturally pleasing surroundings;

C. *Widest range of beneficial uses.* Attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences;

D. *Preservation of national and local heritage.* Preserve important historic, cultural and natural aspects of our national and local heritage;

E. *Supportive of diversity and choice.* Maintain, wherever possible, an environment which supports diversity and a variety of individual choice;

F. *Balance.* Achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities; and

G. *Enhancement of renewable resources.* Enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources.

1. The City recognizes that each person has a fundamental and inalienable right to a healthful environment and that each person has a responsibility to contribute to the preservation and enhancement of the environment.

2. The city incorporates by reference the policies in the cited city codes, ordinances, resolutions and plans, and all amendments to them in effect prior to the date of fully complete application of any building permit or preliminary plat, or prior to issuance of a DNS or DEIS for any other action:

   a. 20.110 VMC, Intent and Purpose;

   b. 20.120 VMC, Legal Provisions;

   c. 20.130 VMC, Zoning Map Administration;

   d. 20.140 VMC, Enforcement;

   e. 20.150 VMC, Definitions;

   f. 20.160 VMC, Use Classifications;

uu. 20.710 VMC, Archaeological Resource Protection;

vv. 20.720 VMC, Critical Areas Protection;

ww. 20.730 VMC, Shoreline Management Area

xx. 20.740 VMC, SEPA Regulations;

H. *Endangered Species Act.* The City incorporates by reference the evaluation criteria for protecting, during development, threatened and endangered salmon species listed under the federal Endangered Species Act as presented in the Federal Register, Vol 65, No. 132, Monday, July 10, 2000, Rules and Regulations and in "A Citizen's Guide to the 4(d) Rule for Threatened Salmon and Steelhead on the West Coast," National Marine Fisheries Service, June 20, 2000. As applied in the City of Vancouver, it is the City's policy that development within the City limits shall to the degree necessary to protect threatened and endangered species:

1. Meet demands on water supply without affecting, either directly or through groundwater withdrawals, the flows salmon need.
2. Avoid inappropriate areas such as unstable slopes, wetlands, areas of high habitat value, and similarly constrained sites.
3. Avoid stream crossings, whether by roads, utilities, or other linear development, wherever possible and where crossings must be provided, minimize impacts.
4. Protect wetlands, wetland buffers and wetland function, including isolated wetlands.
5. Prevent erosion and sediment run-off during and after construction, thus preventing sediment and pollutant discharge to streams, wetlands and other water bodies that support listed fish.
6. Adequately prevent stormwater discharge impacts on water quality and quantity and stream flow patterns in the watershed – including peak and base flows in perennial streams.
7. Adequately preserve permanent and intermittent streams' ability to pass peak flows.
8. Stress landscaping with native vegetation to reduce the need to water and apply herbicides, pesticides and fertilizer.
9. Adequately protect historic stream meander patterns and channel migration zones and avoid hardening stream banks and shorelines.
10. Protect riparian areas to attain or maintain properly functioning conditions for salmonid habitat around all rivers, estuaries, streams, lakes, deepwater habitats, and intermittent streams.
11. Where application of these policies creates a conflict with existing development regulations, the level of protection necessary to protect threatened salmon species shall apply.

I. *Through the project review process.*

1. If the applicable regulations require studies that adequately analyze all of the project's specific probable adverse environmental impacts, additional studies under this Chapter will not be necessary on those impacts;
2. If the applicable regulations require measures that adequately address such environmental impacts, additional measures would likewise not be required under this Chapter; and
3. If the applicable regulations do not adequately analyze or address a proposal's probable adverse environmental impacts, this Chapter provides the authority and procedures for additional review.

## 20.740.640 Appeals.

A. *Governing regulations.* It is the purpose of this Chapter to combine environmental considerations with public decisions, and for this reason, any appeal brought under this Chapter shall be linked to a specific governmental action. Appeals under this Chapter are not intended to create a cause of action unrelated to a specific governmental action.

B. *Formal elimination of appellate procedures.* The appellate procedures provided for by 43.21C.060 RCW, which provides for an appeal to a local legislative body of any decision by a nonelected official conditioning or denying a proposal under authority of SEPA, are formally eliminated. The administrative appeal procedures provided by this part shall be construed consistently with 43.21C.075 RCW, Chapter 36.70B RCW, and 197-11-680 WAC.

C. *Relevant determinations.* Appeals under the provisions of this part shall be limited solely to those actions and/or determinations listed below. No administrative appeals shall be allowed for other actions and/or determinations taken or made pursuant to this Chapter (such as lead agency determination, a determination that a proposal is categorically exempt, scoping, draft EIS adequacy, etc.).

1. Procedural Appeals which shall consist of an appeal of the responsible official's compliance with the provisions of SEPA, the SEPA rules, and this Chapter with respect to the following:
   a. Determination of nonsignificance;
   b. Determination of significance;
   c. Adoption or issuance of a Final Environmental Impact Statement.
2. Substantive Appeals which shall consist of an appeal of any nonelected official's or tribunal's action or omission with respect to the conditioning or denying of a proposal under the substantive authority set forth in Section 20.740.710 VMC.

D. *Consolidation of appeals.* Except as provided in Subsection (E) of this Section, an appeal under this Section shall consolidate any available SEPA appeal with a hearing or appeal on the underlying governmental action in a single simultaneous hearing before one hearing officer or body. The hearing or appeal shall be one at which the hearing officer or body will consider either the agency's decision or a recommendation on the proposed underlying governmental action. If no hearing or appeal on the underlying governmental action is otherwise provided, then no SEPA appeal is allowed under this Section, except as allowed under Subsection (E) of this Section.

E. *When consolidation is not required*. The following appeals of SEPA procedural or substantive determinations need not be consolidated with a hearing or appeal on the underlying governmental action:

1. An appeal of a determination of significance;
2. An appeal of a procedural determination made by an agency when the agency is a project proponent, or is funding a project, and chooses to conduct its review under this Chapter, including any appeals of its procedural determinations, prior to submitting an application for a project permit;
3. An appeal of a procedural determination made by an agency on a nonproject action.

F. *Filing requirements.* All procedural and substantive SEPA appeals provided under this Section shall be initiated by filing a written notice of SEPA administrative appeal with the Planning Official, accompanied with the applicable appeal fee; provided, that no additional appellate fee shall be charged in conjunction with an available hearing on the underlying permit or approval.

1. The notice of appeal required by this Section shall include, at a minimum:
   a. The name and address of the party or agency filing the appeal;
   b. An identification of the specific proposal and specific SEPA actions, omissions, conditions or determinations for which appeal is sought;
   c. A statement of the particular grounds or reasons for the appeal.
2. The Planning Official shall arrange to conduct the SEPA appeal in conjunction with a hearing or appeal on the underlying permit or approval, where required to consolidate the SEPA appeal with a hearing on the underlying governmental action. Where consolidation is not required, the Planning Official shall schedule the hearing to be conducted within 90 days of the date of filing the notice of appeal.
   a. SEPA procedural appeals shall be initiated and conducted in the manner set forth below:
      i. An appeal to the issuance of a DNS), MDNS or FEIS may be filed by any agency or aggrieved person as follows:

(A). For proposals which may be approved by an administrative official without public hearing, an appeal shall be filed within 14 days after notice that the determination has been made has been issued. Such SEPA appeal shall be heard in conjunction with the appeal of the underlying permit or approval, where such appeal is allowed; provided, that if no administrative appeal of the underlying permit or approval is otherwise provided for, and consolidation is not required by Subsection (D) above, an appeal of the DNS/FEIS shall be heard and decided in an open record hearing by the Hearing Examiner appointed in Chapter 20.290 VMC, Review Bodies. The decision of the Hearing Examiner on the SEPA procedural appeal shall be final and not subject to further administrative appeal.

(B). For proposals which may only be approved by open-record hearing or open-record pre-decision hearing recommendation before the Hearing Examiner or Planning Commission, an appeal shall be filed within 14 calendar days following the last day of any comment period required to be provided by this Chapter, or where no comment period is required, then within fourteen (14) days following the date of issuance or adoption of the DNS/FEIS, and shall be heard and decided in the open-record hearing by the Hearing Examiner or Planning Commission in conjunction with the decision or recommendation on the underlying proposal. The decision of the hearing examiner or planning commission on the SEPA procedural appeal shall be final and not subject to further administrative appeal.

(C). An appeal to a DS may be filed by the proposal applicant or sponsor within 14 days of the issuance of the DS/scoping notice. The appeal shall be heard in an open-record hearing and decided by a Hearing Examiner appointed pursuant to Chapter 20.290 VMC, Review Bodies, whose decision shall be final and not subject to further administrative appeal.

(D). The SEPA procedural determination of the responsible official shall be entitled to substantial weight, and the appellant shall bear the burden to establish a violation of SEPA, the SEPA rules, or the provisions of this Chapter.

(E). A SEPA procedural determination shall be deemed to be conclusively in compliance with SEPA, the SEPA rules, and the provisions of this Chapter, unless a SEPA procedural appeal is filed in accordance with this part.

(F). Where the Hearing Examiner or Planning Commission determines that the procedural determination is in violation of SEPA, the SEPA rules, or the provisions of this Chapter, the Hearing Examiner or Planning Commission may remand the procedural SEPA determination to the responsible official and, in such event, shall continue the open record hearing or open record pre-decision hearing until such time as a new or modified SEPA procedural determination is issued under the provisions of this Chapter. The decision of the Hearing Examiner or Planning Commission to remand the SEPA procedural determination shall be a final administrative decision not subject to further administrative appeal. Where applicable, such remand shall toll any period for project permit approval required by Chapter 36.70B RCW or other statutes, or otherwise required by other provisions of this code.

b. SEPA substantive appeals shall be initiated and conducted in the manner set forth below:

i. For proposals subject to final administrative action, approval, or recommendation by a nonelected administrative official or tribunal for which no administrative appeal is otherwise provided, and for which consolidation is not required by Subsection (D) of this Section, any agency or aggrieved person may file a substantive SEPA appeal within 14 days of the issuance of the administrative decision approving, conditioning, or denying the proposal on the basis of substantive SEPA authority. Such substantive SEPA appeal shall be heard and decided by the Hearing Examiner appointed in Chapter 2.51 RCW in an open record hearing, unless the proposal is a project permit which has been subject to a previous open record hearing, in which case the SEPA appeal hearing shall be a closed-record hearing. The substantive SEPA appeal shall be heard in conjunction with any procedural SEPA appeal. The decision of the Hearing Examiner on the SEPA substantive appeal shall be final and not be subject to further administrative appeal.

ii. For all proposals subject to final administrative action, approval or recommendation, by a nonelected administrative official or tribunal, for which an administrative appeal or further approval hearing is otherwise provided or required, any agency or aggrieved person may file a substantive SEPA appeal within 14 days of the issuance of the administrative decision approving, conditioning or denying the proposal on the basis of substantive SEPA authority; provided, that if the proposal is a project permit, as defined in Part 20.740.700 VMC of this Chapter, a substantive SEPA appeal shall be filed within 14 days after issuance of any notice of decision under Chapter 20.210 VMC, Decision-Making Procedures. Any substantive SEPA appeal shall be conducted in the same manner and with the same process as otherwise provided for the appeal or approval hearing of the underlying administrative action.

iii. The SEPA substantive determination to condition or deny a proposal shall be deemed to be conclusively in compliance with SEPA, the SEPA rules, and the provisions of this Chapter, unless a SEPA substantive appeal is filed in accordance with this Part.

c. any appeal under this Subsection, the City shall provide for a record that shall consist of the following:

i. Findings and conclusions;

ii. Testimony under oath; and

iii. A taped or written transcript.

G. *Judicial appeal.*

1. Any available administrative appeal provided under this Section must be utilized by an agency or aggrieved person prior to initiating judicial review of any SEPA action, omission or determination made or taken under this Chapter.
2. A judicial appeal of any SEPA action, omission or determination made or taken under this Chapter must be filed within the time limitations established by any statute or ordinance for appeal of the underlying governmental action.
3. The City shall give official notice of the date and place for commencing a judicial appeal, in accordance with 197-11-680(5) WAC, where there is a statute or ordinance establishing a time limit for commencing judicial appeal.

# 20.740.800
# CATEGORICAL EXEMPTIONS

Sections:

20.740.810 Purpose of this Part and Adoption by Reference.

20.740.820 Use of Exemptions.

20.740.830 Exemption from Threshold Determinations.

20.740.840 Exemption Levels for Minor New Construction.

## 20.740.810 Purpose of this Part and Adoption by Reference.

*Adoption of SEPA regulations*. This part contains rules for determining if a proposal is exempt from environmental review under this ordinance. This part also applies optional criteria for exemptions, including establishment of local thresholds, designation of critical areas, and selection of nonexempt actions within those areas. As supplemented by the provisions of this part, the City adopts the following sections of the SEPA rules by reference:

| | |
|---|---|
| WAC 197-11-305 | Categorical Exemptions |
| WAC 197-11-800 | Categorical Exemptions |
| WAC 197-11-880 | Emergencies |
| WAC 197-11-890 | Petitioning DOE to Change Exemptions |
| WAC 197-11-908 | Critical Areas |

## 20.740.820 Use of Exemptions.

A. *Determination of exception.* Each department within the City that receives an application for a license or, in the case of governmental proposals, the department initiating the proposal, shall determine whether the license and/or the proposal is exempt. The department's determination that a proposal is exempt shall be final and not subject to administrative review. If a proposal is exempt, none of the procedural requirements of this ordinance apply to the proposal. The City shall not require completion of an environmental checklist for an exempt proposal.

B. *Identification of licenses.* In determining whether or not a proposal is exempt, the department shall make certain the proposal is properly defined and shall identify the governmental licenses required (197-11-060 WAC). If a proposal includes exempt and nonexempt actions, the department shall determine the lead agency, even if the license application that triggers the department's consideration is exempt.

C. *Proposals with exempt and nonexempt actions.* Subject to the provisions of Section 20.740.920(A) VMC, if a proposal includes both exempt and nonexempt actions, the City may authorize exempt actions prior to compliance with the procedural requirements of this ordinance, except that:

1. The City shall not give authorization for:

   a. Any nonexempt action;

   b. Any action that would have an adverse environmental impact; or

   c. Any action that would limit the choice of alternatives.

2. *Withholding approval of an exempt action.* A department may withhold approval of an exempt action which would lead to modification of the physical environment, when such modification would serve no purpose if nonexempt action(s) subsequently were not approved; and

3. *When substantial financial expenditures result.* A department may withhold approval of exempt actions that would lead to substantial financial expenditures by a private applicant when the expenditures would serve no purpose if nonexempt action(s) were not approved.

## 20.740.830 Exemption from Threshold Determinations.

A. *Exceptions.* If a proposal fits within any of the exemption provisions in this part, the proposal shall be categorically exempt from threshold determination requirements, except as follows:

1. The proposal is not exempt under WAC 197-11-908 and Chapter 20.720 VMC, critical areas.

2. The proposal is a segment of a proposal that includes:

   a. A series of actions, physically or functionally related to each other, some of which are categorically exempt and some of which are not; or

b. A series of exempt actions that are physically or functionally related to each other and that together may have a probable significant, adverse environmental impact in the judgment of the agency with jurisdiction. If so, that agency shall be the lead agency, unless the agencies with jurisdiction agree that another agency should be the lead agency. Agencies may petition Ecology to resolve disputes, as governed by WAC 197-11-946. For such proposals, the agency or applicant may proceed with the exempt aspects of the proposals, prior to conducting environmental review, if the requirements of WAC 197-11-070 are met.

B. *Documentation of categorically exempt proposals.* An agency is not required to document that a proposal is categorically exempt. Agencies may note on an application that a proposal is categorically exempt or place such a determination in agency files.

## 20.740.840 Exempt Levels for Minor New Construction.

A. *Minor new construction funding.* Pursuant to discretion and authority contemplated in WAC 197-11-800(c), the city establishes the following exempt levels for "minor new construction," finding, as a matter of fact, that such exempt levels are supported by local conditions, including zoning and other land use plans or regulations, and by the fact that the city is an almost entirely urban and developed area:

1. Residential projects: those containing 200 multifamily dwelling units or fewer, 30 single-family units or fewer, or 100 single-family units or fewer on lots less than 1,500 square feet in size.
2. Agricultural structures: those containing 40,000 gross square feet or less.
3. Office, school, commercial, recreational, service or storage buildings: those containing 30,000 gross square feet or less, and which contains 90 parking spaces or fewer.
4. Parking lots: those containing 90 parking spaces or fewer.
5. Landfills and excavations: those consisting of 1,000 cubic yards or less.

B. *Establishing new exemptions levels.* Whenever the city establishes new exempt levels under this section, it shall send them to the Headquarters Office of Ecology under WAC 197-11-800(1)(c).

| | (e.g., "right-of-way," "community-serving," "equity-priority communities," "self-evaluation"); and capitalization corrections. | | |
| Staff | Clearly differentiate the difference between third spaces, community space, and public spaces. As written throughout the plan, it is unclear what's being referred to in certain circumstances. | Glossary and various | Added definitions to the Glossary: "Public Spaces" and "Community Spaces" (including note that these terms are generally synonymous with "third places" and "community gathering spaces" for purposes of this plan).<br><br>Made several updates throughout the plan where these items are defined. |
| Staff | Accessibility edits and updates | Various | • Left-aligned text/un-justified text<br>• Changed some text color for higher contrast<br>• Added alt text for images or marked them as decorative<br>• Un-italicized text if there were multiple lines of it italicized<br>• Cleaned up hidden formatting<br>• Applied list formatting to lists<br>• Applied heading styles where appropriate<br>• Repeated table header rows across pages<br>• Adjusted tables to avoid them being split across pages<br>• Added heading text behind each chapter cover and goal to create formatted headers and bookmarks while retaining initial design<br>• Added 'bookmarks' in PDF |

## Chapter 2: Equity and Inclusion

| Feedback Source | Comment | Section | Resolution |
|---|---|---|---|
| Staff | Disparities and inequities have been used interchangeably throughout the document when they are really separate concepts. Clearly differentiate these two items and update their use throughout the document. | Glossary, various | Established the following definitions. Updated terminology throughout the document when talking about measurable differences in outcomes (disparities), versus the uneven distribution of investment and resources (inequities).<br><br>**Disparities:** Measurable differences in outcomes between population groups, including differences in health, economic conditions, well-being, environmental exposure, and access to housing, services, resources, and opportunities.<br>• **Racial disparities:** Differences in outcomes across racial groups.<br>• **Economic disparities:** Differences in income levels and related economic indicators.<br><br>**Inequities** - The uneven distribution of investment, resources, and environmental hazards across communities, resulting from exclusionary policies, practices, and processes. Historical, structural, and systemic inequities represent compounding layers of injustice where past discrimination (historical) is embedded into laws and policies (structural), creating a pervasive, self-reinforcing system (systemic) that disadvantages specific groups. |

## Chapter 3: Land Use and Development

| Feedback Source | Comment | Section | Resolution |
|---|---|---|---|
| Staff | Table 2 citywide zoned acreage total (24,476 acres) does not appear to account for all land within city limits (~32,000 gross acres). Clarify how the total was calculated and add explanatory note. | Land Capacity, Table 2 | Added footnote to Table 2: "*Citywide acreage total does not account for public right-of-way and other non-parcelized land." |
| Staff | Add a footnote to figure 9 ensuring that the zoning map in Title 20 isn't adopted within the plan itself, necessitating a comp plan amendment each time a property is rezoned. | Zone Districts, Figure 9 | Added the following footnote to Figure 9:<br><br>**Figure 9, provides high level informal mapping of zoning designations applied to all properties in the City of Vancouver. A formal, more detailed zoning map version of figure 9 suitable for review of individual properties is adopted as part of the Vancouver Municipal Code Title 20 Development Code.* |
| Staff | Refined summary of community feedback in some chapters to be as comprehensive as possible. | Community Feedback | Updated community feedback content. |

## Chapter 4: Housing

| Feedback Source | Comment | Section | Resolution |
|---|---|---|---|
| Staff | Update footnote regarding housing allocation by income to reflect updates in Appendix P (Housing Needs and Land Capacity Analysis). | Various | Updated footnote to note that allocations vary from County allocations but still demonstrate capacity by income category. |

| Feedback Source | Comment | Section | Resolution |
|---|---|---|---|
| Staff | Add ADU capacity information to the Housing chapter. | Various | Added language in ADU section noting that Appendix P shows capacity for 1,280 ADUs by 2045. |
| Staff | Confirm state has allocated no new resources; update language accordingly. | Housing Needs | Language confirmed and updated. |
| Staff | Accessibility – avoid split or merged cells in tables | Housing Needs, tables 3 and 5 | • Table 3 - Transposed data for readability and added a total row.<br>• Table 5 - Removed the second column in, because it is the same information as table 3, and adjusted the income level brackets in the first column to avoid merged/split cells and align the content with the narrative. |

## Chapter 5: Economic Opportunity

| Feedback Source | Comment | Section | Resolution |
|---|---|---|---|
| Staff | Refined summary of community feedback in some chapters to be as comprehensive as possible. | Community Feedback | Updated community feedback content. |

## Chapter 6: Climate and Environment

| Feedback Source | Comment | Section | Resolution |
|---|---|---|---|
| Staff | Policy on Pollinator Habitats (Policy 103): Update policy language to: "Support a healthy urban ecosystem by embedding pollinator habitat into public and private development, prioritizing pesticide-free landscaping, **removal and** | CL-2, CL-4, PR-2, PR-3, Appendix U | Updated policy language in plan and Appendix U (Policy 103). **Bolded language** is new. |

| Feedback Source | Comment | Section | Resolution |
|---|---|---|---|
| | **reducing use of invasive species**, enhancing biodiversity, and connecting natural spaces across the City through pollinator-friendly plantings." | | |
| Staff | Update wording of Policies 29 and 72 to distinguish them from one another: Policy 29 (Climate Resilient Spaces) to focus on public spaces/buildings/infrastructure; Policy 72 (Climate Resilient Development) to focus on the City's review of new development. | CL-1, CE-1, PR-1, PFS-3, LU-3 and CL-1, CL-2, PFS-1 | Revised policy language to distinguish Policy 29 and Policy 72 based on the City's primary tools (capital investment vs. development review). Pending confirmation. |
| Staff | Refined summary of community feedback in some chapters to be as comprehensive as possible. | Community Feedback | Updated community feedback content. |

## Chapter 7: Parks, Recreation, and Cultural Services

| Feedback Source | Comment | Section | Resolution |
|---|---|---|---|
| Staff | Accessibility – avoid split or merged cells in tables | Park Demand, Park Need, and Total Level of Service | • Table 14 – transposed and reconfigured table to avoid merged cells<br>• Table 15 and 16 – split initial table 15 into two tables (15 and 16) to avoid merged cells<br>• Table 17 and 18 – split initial table 16 into two tables (17 and 18) to avoid merged cells |

## Chapter 8: Transportation and Mobility

| Feedback Source | Comment | Section | Resolution |
|---|---|---|---|
| RTC | Add Level of Service (LOS) information for transit and highways. | Concurrency and Multimodal Level of Service | Added paragraph and Table 24 for highway LOS. |
| Staff | Change title of Figure 27 to "Transportation Capital Project Funding Sources." | Financial Analysis, Figure 27 | Updated figure title. |
| RTC and C-TRAN | Add information from C-TRAN on Transit Multimodal Level of Service (MMLOS). | Concurrency and Multimodal Level of Service | Added MMLOS content for transit. |
| Staff | Add summary from Multimodal Evaluation and Active Trip Potential analysis to the Transportation chapter. Added Multimodal Evaluation and Active Trip Potential analysis memo to appendices. | Various | Added summary details from Multimodal Evaluation and Active Trip Potential analysis into Transportation Chapter, and Multimodal Evaluation and Active Trip Potential analysis memo to appendices. |

## Chapter 9: Public Facilities and Services

| Feedback Source | Comment | Section | Resolution |
|---|---|---|---|
| Staff | Accessibility – avoid split or merged cells in tables | Capital Facilities Forecast, Table 35 | Table 35 – duplicated content in the first and last column to un-merge cells |

## Chapter 10: Annexation

| Feedback Source | Comment | Section | Resolution |
|---|---|---|---|
| Planning Commission / Staff | Update annexation map (Figure 33) to include street labels. | Adapting to Changing Conditions, Figure 33 | Added street labels to Figure 33. |

## Conclusion

| Feedback Source | Comment | Section | Resolution |
|---|---|---|---|
| Staff | The plan ends abruptly after the Annexation Goal AN-2 page before the back cover — needs a closing page. | Final pages | Added a closing imagery page with acknowledgment text: "This plan represents a shared commitment to shaping Vancouver's future—one that responds to change, reflects our community's values, and ensures that growth benefits all. Its success will be measured through continued partnerships, accountability, and the collective action that bring this vision to fruition over time. Thank you to all that were involved in the process of developing this plan, and to those that will implement it in the future." |

## Appendices

| Feedback Source | Comment | Section | Resolution |
|---|---|---|---|
| Staff | Update title of full policy list from "Exhibit U" to "Appendix U." | Appendix U | Updated PDF with correct title (Appendix U). |
| Staff | Add Appendix T: Multimodal Evaluation and Active Trip Potential. | Appendix T | Finalized memo and uploaded PDF to Appendices folder. |

# Change Log - Vancouver Municipal Code Title 20 Third Draft (since 4/7 publish)

| Feedback Source | Comment | Resolution |
|---|---|---|
| City Council Workshop (4/13/26) | Concern about 2-year exemption from minimum density in the MS for catastrophic events | • Time to replace single-family homes in the MS district changed from 2 year to 3 years.<br>• Planning Official to grant an exception beyond 3 years if applicant can show delay is associated with insurance claims, estate resolution or other legal process. |
| Various | Ground floor active use and emergency services | • Exemption to ground floor active and ground floor ready use requirements for emergency service uses |
| Industrial stakeholders | Posting requirements for sites without frontage difficult to meet | • Updated large format sign posting exemption for sites that do not have frontage along a street |

# Change Log - Vancouver Municipal Code Title 20 Second Draft (since 2/19 publish)

| Feedback Source | Comment | Resolution |
|---|---|---|
| City Council Workshop (1/26/26 and 2/23/26) | Manufactured Home Park (MH) District – having no building types allowed is confusing, clarifications to various sections of the base zones, definitions and use table needed to make it easier to understand what is allowed | • Clarified and simplified definitions to manufactured/modular housing definitions<br>• Updated purpose and character description to clarify that repair, replacement and expansion of manufactured/modular housing is allowed in MH district<br>• Added that accessory structures/uses supporting primary use are allowed, including community recreation facilities and childcare.<br>• Allow for additional building types and development in the MH district if permanently affordable at 60% of the Area Median Income (AMI) or below |
| City Council Workshop (1/26/26 and 2/23/26) | Unclear where manufactured/modular housing construction is allowed | • Clarification that manufactured/modular housing is allowed in all base districts that allow household living provided they comply with development standards. |
| City Council Workshop (2/23/26) | Update bicycle parking to include small mobility | • Bicycle parking section has been updated to include small mobility |
| City Council Workshop (2/23/26) | Keep the automatic opt in notification for neighborhoods where pre-applications take place in their neighborhoods | • Officers of City-recognized neighborhood associations automatically notified of pre-application conferences for projects in their boundaries |

| Feedback Source | Comment | Resolution |
|---|---|---|
| Planning Commission (2/20/26) and Market Rate Housing Community Working Group (CWG) (3/3/26) | Long-term bicycle parking requirements can take up valuable space for housing or other amenities. | • Reduction in bicycle/small mobility long-term parking requirements for multi-family housing. February draft required 1 space per unit, updated draft requires 0.75 space per unit. Draft still includes the provision to allow 75% of long-term parking requirements to be met in unit and a 50% reduction for affordable housing. |
| City Center Redevelopment Authority (CCRA) (3/16/26) and Market Rate CWG | Ground floor transparency could be difficult to meet with Washington Energy Code | • Reduction in ground floor transparency requirements for denser building types |
| CCRA (3/16/26) and Market Rate CWG | Weather protection requirements will add additional costs and don't make sense outside of pedestrian-focused areas or where the building is not located along the right-of-way | • Reduction in weather protection requirements and only required when the building is located at the right-of-way |
| CCRA (3/16/26) and various stakeholder groups | Ground floor ceiling heights, how is this measured? | • Clarified definition of ground to ceiling height to specify that is top of finished floor to bottom of ceiling structure. |
| Industrial Stakeholders | Requiring industrial buildings close to the street is difficult for many of these operations | • Allowance for increased setbacks for industrial buildings in employment and industrial base districts. |
| Various | Make childcare easier to site | • Childcare allowed everywhere except Heavy Industrial district, City regulations no more restrictive than state. |
| Various | The one-year timeframe to rebuild/replace a single-family home in the Medium-Scale Neighborhood without meeting minimum density is too short in some cases to settle with insurance. | • Time to replace single-family homes in the MS district changed from 1 year to 2 years and clarification that time limit is to building permit submittal, not issuance. |
| Staff | Annexation section out of date | • Updated annexation section to reflect new base districts and remove outdated terms and language. |
| Staff | Master Plan section out of date | • Updated master plan requirements for large sites |
| Staff | Development agreement section out of date | • Updated development agreement section includes public benefit requirements and term expectations |
| Staff | Outdated fee schedule | • Fee schedule updated for new processes and middle housing |
| Staff | Maps out of date | • Maps have been updated for new overlays and to be consistent with new comprehensive plan and code |

*CWG = Community Working Group; several groups focused on different topic areas were convened as part of the Comprehensive Plan update process.

OUR VANCOUVER

OUR FUTURE 2045

# EQUITY FRAMEWORK

**Prepared by Seva Workshop**

**December 18, 2023**

## Introduction

The Vancouver Comprehensive Plan is one of our community's most important tools to help plan for the future. It provides the overall long-term vision and policy direction for managing the built and natural environment in Vancouver, and providing necessary public facilities. State law establishes the elements that cities with fast-growing populations must plan for, such as land use, housing, utilities, and transportation. While minor updates may be made as frequently as once a year, in 2023, the City of Vancouver embarked on a full Comprehensive Plan update to review and revise the entire plan to guide growth and development through 2045. This update is a major opportunity to integrate equity throughout the Plan.

## Why Have an Equity Framework?

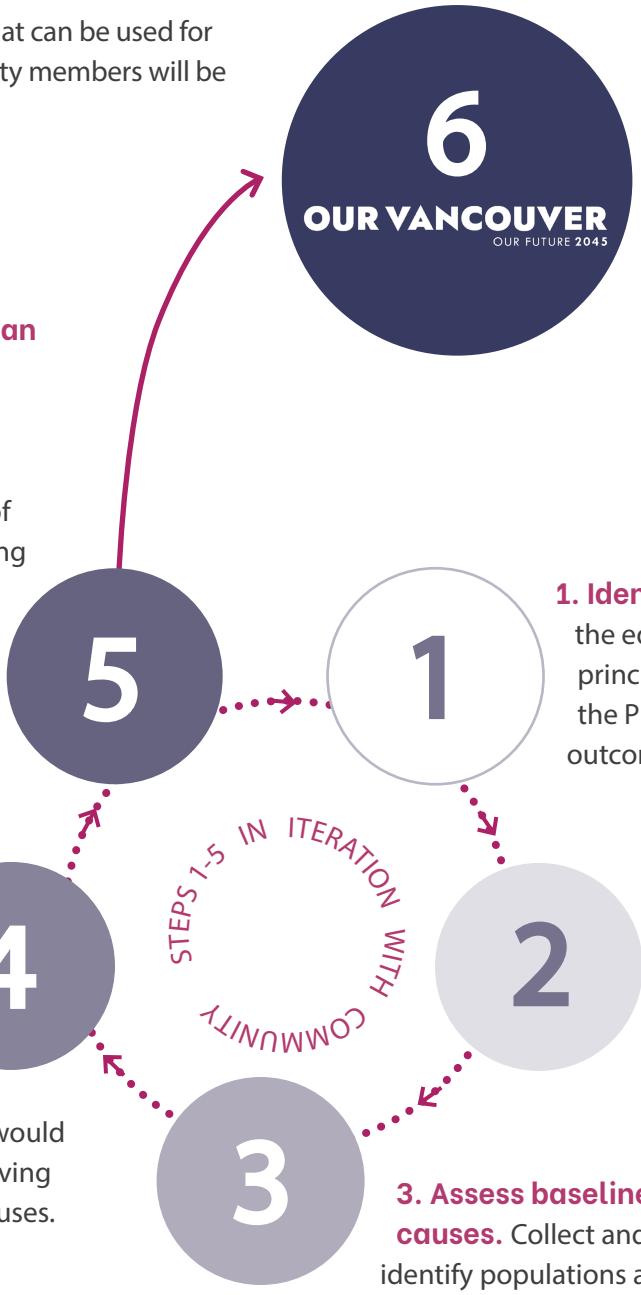
Comprehensive plans are major drivers of whether communities are equitable or not because they guide the distribution of rights and resources. Without an intentional focus, plans are likely to continue current inequities. An Equity Framework summarizes the process and principles for planning teams to consider equity in their technical work.

## Equity Definition

Equity. A state or system of fairness or justice that recognizes and balances different challenges, opportunities, and needs across groups of individuals.

## Equity Principles

- Understand and acknowledge the City's full historical context, including past harms and seek opportunities to rectify them.
- Think beyond individual programs and projects to institutionalize equity in sustainable and meaningful ways.
- Prioritize communities that have historically been marginalized in future visioning for the built environment.
- Engage the community in creative ways that create a shared sense of vision, empowers people, and creates learning opportunities, trust, and relationships that last beyond this project.
- Be explicit about systemic racism in planning and the racial disparities that persist, in part because of this.



## Priority Communities

The accompanying Equity Analysis and Equity Team discussion identified these communities as historically marginalized and/or most vulnerable. These groups will be centered in the engagement and planning process.

- BIPOC community
- People with low incomes
- People with disabilities, including neurodivergent
- Youth and children
- LGBTQ+ individuals
- Renters
- People without an address/ people experiencing homelessness
- Small business owners
- Refugees
- Undocumented population
- Formerly incarcerated population

# Comprehensive Plan Framework

The framework is a simple process that can be used for every element of the Plan. Community members will be engaged at each step.

**6. Implement with transparency and accountability.** Communicate the outcomes and continue engaging community members who have contributed to the planning process.

**5. Analyze and refine goals, policies, and strategies with an equity lens.** In partnership with community, ask:

- Who benefits and who is burdened by implementation of this policy? Does this policy bring the City closer to equity?
- What are potential unintended impacts of this policy? How can we monitor and mitigate these impacts?

**1. Identify outcomes.** Apply the equity definition and principles (previous page) to the Plan element to identify key outcome(s) of interest.

**2. Develop metrics.** Identify a measurable way to know if the outcome(s) is (are) achieved.

**3. Assess baseline for gaps and root causes.** Collect and analyze data to identify populations and regions farthest from achieving the desired outcome according to the metrics. Build on the context and conditions analysis. Investigate disparities for their root causes (in other words, ask "why") and identify the gaps that are within the City's influence.

**4. Propose goals, policies, and strategies.** Develop goals, policies, and strategies that would bring the City closer to achieving equity by addressing root causes.

A Brief History of Vancouver and Housing Exclusion 5

A Current Profile of City of Vancouver Residents 15

Community Outcomes 30

**Engagement Themes** 62

# Introduction

The City of Vancouver is a growing city of an estimated 188,331 individuals (2021) in Clark County of Southwest Washington. Growth has been especially rapid in the latter half of the last decade when the population increased by 11% compared to the first half when it grew by 5%. The city has also grown in the proportion of residents who are people of color (POC). In 2021, just over 30% of the population was POC compared to 23% a decade earlier.

The Vancouver Comprehensive Plan is one of our community's most important tools to help plan for future growth. It provides the overall long-term vision and policy direction for managing the built and natural environment in Vancouver, and providing necessary public facilities. State law establishes the elements that cities with fast-growing populations must plan for, such as land use, housing, utilities, and transportation.

While minor updates may be made as frequently as once a year, in 2023, the City of Vancouver embarked on an ambitious update to its existing comprehensive plan—determining a new path forward for growth and development out to 2045. This update is a major opportunity to integrate equity throughout the plan.

This document includes context and conditions analysis that helps identify which communities have been historically marginalized* and which communities are most vulnerable to displacement and policy changes. These communities should be prioritized in future planning to address past inequities.

This equity analysis references 5-year estimates of 2017–2021 American Community Survey (ACS) data. The Housing Needs Assessment uses 1-year estimates of 2021 ACS data. More recent documents may reference 2022 data released after this document was completed.

* To be marginalized is to be treated as insignificant by those in power, including municipal government.

## Highlights from Equity Analysis

The City of Vancouver's Comprehensive Plan, Our Vancouver 2045, will address several crucial topics related to the city's future growth and development through technical analysis and community engagement. These topics include housing; land use, development, and infrastructure; equity, and opportunity; and climate and environment. The equity analysis provides a foundation from which planners and their community partners can understand the shifting dynamics of the city and design community engagement and analysis to plan the future of the city together.

In addition to the fundamental aim of accommodating growth, the Equity Team has highlighted affordable housing, transportation infrastructure, and the need for reparative policies to undo past harms as equity goals for the planning process. Here we summarize a few important themes to contextualize these goals.

**Vancouver is a relatively affordable community for the region, attracting young workers and single-person households.** However, the city has become less and less affordable in recent years. First-time renters and owners report difficulty gaining entry to the housing market, while longer term residents report that they would not have been able to access housing under current conditions. Compared to the State of Washington overall, Vancouver residents are less likely to be in married couple households, and more likely to be single female householders with no spouse or partner. The community also has a relatively high number of young people between 25 and 29 years of age. Vancouver is part of the Portland-Vancouver-Beaverton-Hillsboro, OR-WA Metropolitan Statistical area which has one of the country's highest proportions of individuals identifying as LGBTQ at 6.1% (second only to San Francisco).

**The City of Vancouver is experiencing shifting demographics, just over 30% of the population is POC compared to 24% in 2011.** Compared to the State, Vancouver residents are slightly more likely to have moved recently. Residents identifying as white alone, Black, or American Indian and Alaska Native have declined as a share of the total population over the last decade. Native Hawaiian and Other Pacific Islanders and Hispanic or Latino groups are increasing as a share of population, as are those of two or more races.

**People of color are more likely to live within City of Vancouver boundaries than in other parts of Clark County.** Within Vancouver, pockets around Fruit Valley, Fourth Plain and East Mill Plain house the greatest proportions of POC. However, these pockets differ by race and ethnicity within POC. For example, Asian residents are relatively more concentrated in the eastern parts of the city, while Hispanic/Latine residents are proportionately more likely to reside in Fourth Plain and Fruit Valley areas.

**Over fifteen percent of resident households are living below the federal poverty line.** Extreme rates (over 50%) of early childhood poverty are found in a few neighborhoods within city boundaries, including Bagley Downs and Meadow Homes and southeast. These are also areas with relatively high rates of POC residents.

**Vancouver neighborhoods vary greatly in terms of access to high quality public schools, access to parks and open space, access to affordable healthy food, and tree cover, creating disparities by race and ethnicity.** For example, Sacajawea Elementary School has 93.2% students arriving kindergarten ready, while Harmony Elementary has 17.5%. There are significant pockets of Vancouver outside of 10-minute walk to parks. Tree cover by neighborhood ranges from a high of 47% in South Cliff to 9% in Esther Short. Neighborhoods with higher proportions of POC have 2.4% less tree cover than the city average. These areas often coincide with areas that are low-income and low in access to food, contributing to cycles that further entrench poverty and disadvantage.

**Residents' race is associated with different median incomes, as well as housing cost burden and likelihood of owning a home.** The median household income where the householder is Black or African American, for example, is over $24,000 less than the overall median. On the other hand, households with an Asian head of household have a median income that is over $24,000 more than the overall median.

**The rental market predominates in Vancouver where the rates of owner-occupied housing (51%) are much lower compared to Washington State (64%).**[1] Asian residents are the most likely to live in owner-occupied housing (71%), roughly twice as likely as other POC groups. Renting households are more likely to experience cost-burden, and severe cost-burden. Overall, as of 2022 there are 85,511 housing units in Vancouver.

**Over two-thirds of the lowest income households are paying more than half their income for housing.** In addition to lower home ownership rates, Black and Hispanic/Latine headed households are the most likely to be experiencing housing cost burden and therefore displacement risk.

**Housing stock increased by 15% between 2011 and 2021, slightly lagging population growth of about 17% over the same period.** The housing mix has remained over half detached single family residential with some shift to larger developments within multifamily housing. Nearly half (46%) of Vancouver's renting households are cost burdened, and 20% severely so. Asian residents are disproportionately likely to live in detached single family housing. Black, Hispanic and Latine, and Native Hawaiian and Other Pacific Islander, and those of other or two or more races are more likely to live in multifamily.

**A significant proportion of households, 7.3%, are without access to a vehicle, though Vancouver is a relatively car-dependent city. 83% of workers take a vehicle to work, alone or using a taxi or carpool.** Another 12% of workers work from home. Only 3% of workers take public transportation and the likelihood of using public transportation to go to work decreases as income increases.

As illustrated in the equity analysis, Vancouver's planning and equity goals are deeply intertwined. Race and ethnicity intersect with income and wealth, and therefore determine the available housing and neighborhood choices. Neighborhoods in turn vary greatly in access to amenities, infrastructure, and social supports - in other words - quality of life. Creating an equitable city will require focused attention on the neighborhoods and communities farthest from opportunity.

# Context and Conditions

This context and conditions analysis helps identify which communities have been historically marginalized and which communities are most vulnerable to displacement and policy changes. First, A Brief History of Vancouver and Housing Exclusion provides historical perspective on land use and housing dating to when the area was first settled. Following that, A Current Profile of City of Vancouver Residents presents data from the last decade on demographics. Finally, demographic intersections with community outcomes, such as income, education, and quality of life indicators are presented.

## A Brief History of Vancouver and Housing Exclusion

### The Chinook, Vancouver's First Peoples

Indigenous people have lived in what is now known as Vancouver, Washington since time immemorial. For at least 10,000 years before the arrival of European-Americans, the Chinook people made their homes along the north bank of the "Wimahl" River, or "Big River," near its confluence with Oregon's Willamette River.[2] Before contact with white explorers, the Chinook people lived in large rectangular houses made of cedar planks, located in towns close to the water.[3] Rich in salmon, plants, and berries, the Chinook lived in relative abundance and became prolific traders. Cowlitz and Klickitat tribes also lived in the nearby region.

European explorers first reached the shores of Washington in the 16th and 17th centuries but did not have significant lasting contact with the Chinook until the late 1700s.[4] Despite this, smallpox and other diseases began to decimate the Tribes of the Pacific Northwest (including the Chinook) beginning in the mid-1700s. The first American ships to enter the mouth of the "Wimahl" River arrived in 1792 under the command of Captain Robert Gray, who renamed

the waterway the Columbia River after his ship, the Columbia Rediviva.[5] Over the ensuing decades, the region was opened to the influence of European-American fur traders and maritime explorers. These white newcomers and the waves of disease they brought with them devastated Chinook society. When Lewis and Clark visited what is now Vancouver in 1805, they estimated that there were approximately 400 Chinooks living around Cape Disappointment (already a significantly decreased number due to the epidemics of the mid-18th century). By 1830, that population was down to a mere 30–40 people.[6]

Today, the Chinook Indian Nation is made up of five constituent tribes—the Clatsop and Cathlamet (Kathlamet) of present-day Oregon and the Lower Chinook, Wahkiakum (Waukikum) and Willapa (Weelappa) of what is now Washington State.[7] In 2001, after over a century of advocacy by Tribal members, the Chinook Indian Nation was granted federal recognition as a Tribe. However, this recognition was revoked in 2002. Without federal recognition, the approximately 3,000 members of Chinook Indian Nation do not have legal protections or benefits as American Indians, including support for housing or reservation land.[8]

### 1800s: Hudson's Bay Company and Early Non-Native Settlement

In 1825, the British Hudson's Bay Company (HBC) opened Fort Vancouver on the future site of the City of Vancouver.[9] The Fort quickly expanded beyond a mere fur trading post; soon, it was the center of commerce for the entire region—boasting the first school, first library, and first theater in what is now Washington State.[10] By the 1840s, it was home to the largest concentration of people on the west coast. The trading operations at Fort Vancouver brought with them a robust and diverse group of inhabitants. While HBC officers and clerks lived inside the stockade, other workers and their families lived outside the fort, mostly in the Kanaka Village to the northwest. The word "Kanaka" comes from the Hawaiian word for "people," so named because of the many Hawaiian Islanders who came to work here, brought on fur trading ships that stopped in Hawaii on

Fort Vancouver, 1845 Sketch by Lt. Henry Warre (UW Special Collections, WAS0374)

their way back from China.[11] This village of roughly 1,100 people was described as "a boisterous little community... where the [Hudson's Bay] Company employees of lower rank—Iroquois, Hawaiian, French métis—lived with their Indian wives and families."[12]

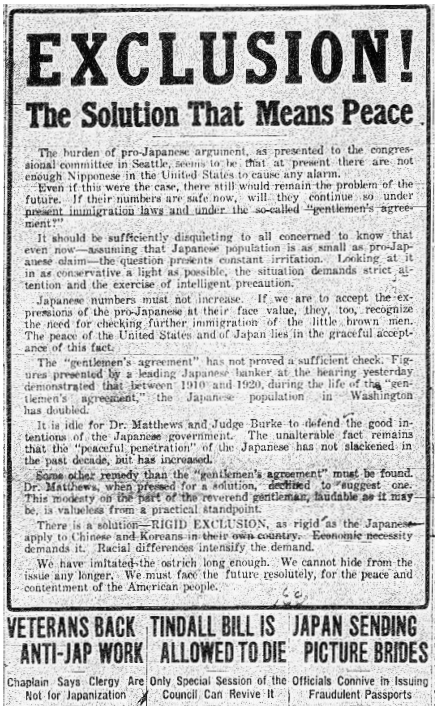
The mid-1800s saw a great deal of change to the area. The first American settlers arrived in 1844. The HBC was not immediately hostile to the new arrivals, but encouraged them to settle south of the Columbia River rather than in modern-day Vancouver. After the US-Canadian border was settled at 49°N in 1846, Fort Vancouver declined in significance as HBC moved its operations further north, safely into British territory. In 1849, the US Army began building their own barracks, leading to a flood of American settlers. Although technically illegal in the American West, these new military officers sometimes brought with them the "peculiar institution" of slavery—arriving with personal servants who were barely distinct from slaves.[13]

In 1850, just 220 people lived north of the Columbia River in modern-day Vancouver, compared to nearly 12,000 people living south of the river in what is now Portland.[14] Washington Territory was officially formed in 1853 and the incorporation of the City of Vancouver followed shortly thereafter in 1857, making it one of the territory's first incorporated cities. By 1880, it was the third most populous town in Washington Territory with 1,722 residents.[15]

Although most of these residents were European-Americans, there were also new non-white arrivals to Vancouver in the late 19th century. Records show that, throughout the 1880s and 1890s, several groups of Chinese immigrants were hired for labor crews in or near Vancouver.[16] Generals and perhaps other officers at Vancouver Barracks sometimes had domestic staff of Chinese ancestry. For example, General Oliver Otis Howard employed cook Mick Lai from China, who lived in the upstairs back of his home.[17] Notably, 1899 also saw the arrival of a company of 103 Buffalo Soldiers—segregated black calvary troops—from the U.S. Army's 24th Infantry. This regiment was treated with suspicion and hostility from some in the Army and in Vancouver's white community. The regiment was demoted from its leadership position as soon as white replacements arrived. [18]

### Early 20th Century: Slow Growth and National Trends

In the decades before World War II, Vancouver, like the rest of the nation, contended with labor strife, Prohibition, Depression, and changing social dynamics. Despite the 1908 arrival of the train, Vancouver and Clark County remained primarily agricultural (particularly prunes) until the 1940s. The economy was also driven by logging, lumber mills, and the railroad. By 1920, the population of Vancouver was around 12,600. Although the vast majority was white, census rolls showed a small percentage of African American, Native American, Chinese, and Japanese residents.[19] The Vancouver Barracks remained an important foundation of the community, but many other civic institutions had been firmly established by 1920, including a library, churches, and schools. Development concentrated west of where Interstate 5 runs today.[20]



The 1920s saw a resurgence of the Ku Klux Klan across the country. The Klan burst onto the Vancouver scene on March 11, 1921, when three Klansmen in regalia charged into the Clark County Courthouse.[21] The Klansmen provided $45 cash to pay medical expenses for a local child, eliciting sympathy from the local community. In 1924, 500 Klansmen congregated at Vancouver's Bagley Downs for the largest Ku Klux Klan rally in the Northwest, with 10,000 onlookers and a flaming cross.[22] The Klan grew in political and social power in Vancouver throughout the 1920s, presenting itself as a patriotic Christian organization. This influence undoubtedly exacerbated discriminatory attitudes towards minority groups in Vancouver.

Throughout the 1920s, 1930s, and 1940s, restrictive covenants played a major role in urban development across the United States, as communities throughout Washington State adopted deed restrictions to keep out non-white families. These deed restrictions forbid property owners from selling, leasing, or renting to specified groups because of their race, color, or religion. To date, there has been no major study of the use of racial restrictive covenants in Clark County, so it is unknown how prevalent such restrictions were in Vancouver. However, the ongoing Racial Restrictive Covenants Project—involving research teams at the University of Washington and Eastern Washington University—has identified about 40,000 restricted properties in hundreds of neighborhoods within the five Washington counties they have studied to date (Whatcom, Snohomish, King, Pierce, and Thurston).[23] The research teams plan on conducting similar research in Clark County in the years to come.

Vancouver developers *are* known to have placed financial restrictions on plats to prevent the development of lower cost housing. For example, in 1904, the Mountain View addition on Main and 19th Streets advertised that, "No purchaser will be permitted to build a house costing less than $1000" as "no cheap shacks will be permitted to disfigure [the development]."[24]

### Japanese-American Families in Vancouver

Japanese immigrants first arrived in the Pacific Northwest in the 1880s. When the Chinese Exclusion Act stopped the flow Chinese immigration in 1882, American industrialists quickly turned to Japan to fill the demand for low-cost labor left behind by the Chinese, particularly in the railroad industry.[25] These Japanese immigrants, however, were subject to discrimination and exclusionary "Alien Land Laws." The 1889 Washington State Constitution prohibited land ownership for aliens (non-citizens). Although the prohibition contained an exception for "those who in good faith have declared their intention to become citizens of the United States," this did not apply to Asian immigrants, who had been banned from obtaining citizenship under any circumstances by US Congress in 1875. After World War I, local nativist activists such as the Hood River Anti-Alien Association pushed one step further, convincing the State to pass the Alien Land Law in 1921, which also took away non-citizens' rights to lease or rent land.[26] This meant that Japanese immigrants could not own *or* lease land in Vancouver. Nonetheless, the Nikkei community (Japanese immigrants and their descendants) persisted in Clark County, playing a large role in Vancouver's truck farms. By 1930, 47% of truck farmers in Clark County were Japanese American.[27] In 1940, Clark County was home to roughly 40 Japanese and Japanese-American residents.[28]

EXCLUSION!

The Solution That Means Peace

The burden of pro-Japanese argument, as presented to the congressional committee in Seattle, seems to be that at present there are not enough Nipponese in the United States to cause any alarm.

Even if this were the case, there still would remain the problem of the future. If their numbers are safe now, will they continue so under present immigration laws and under the so-called "gentlemen's agreement?"

It should be sufficiently disquieting to all concerned to know that even now—assuming that Japanese population is as small as pro-Japanese claim—the question presents constant irritation. Looking at it in as conservative a light as possible, the situation demands strict attention and the exercise of intelligent precaution.

Japanese numbers must not increase. If we are to accept the expressions of the pro-Japanese at their face value, they, too, recognize the need for checking further immigration of the little brown men. The peace of the United States and of Japan lies in the graceful acceptance of this fact.

The "gentlemen's agreement" has not proved a sufficient check. Figures presented by a leading Japanese banker at the hearing yesterday demonstrated that between 1910 and 1920, during the life of the "gentlemen's agreement," the Japanese population in Washington has doubled.

It is idle for Dr. Matthews and Judge Burke to defend the good intentions of the Japanese government. The unalterable fact remains that the "peaceful penetration" of the Japanese has not slackened in the past decade, but has increased.

Some other remedy than the "gentlemen's agreement" must be found. Dr. Matthews, when pressed for a solution, declined to suggest one. This modesty on the part of the reverend gentleman, laudable as it may be, is valueless from a practical standpoint.

There is a solution—RIGID EXCLUSION, as rigid as the Japanese apply to Chinese and Koreans in their own country. Economic necessity demands it. Racial differences intensify the demand.

We have imitated the ostrich long enough. We cannot hide from the issue any longer. We must face the future resolutely, for the peace and contentment of the American people.

Chaplain Says Clergy Are Not for Japanization

Only Special Session of the Council Can Revive It

Officials Connive in Issuing Fraudulent Passports

1920 editorial in The Seattle Star (The Seattle Star files)

World War II had a devastating impact on Vancouver's small Nikkei community. On February 19, 1942, President Roosevelt issued Executive Order 9066, requiring the removal of 120,000 Japanese and Japanese-Americans from the western coastal areas to inland concentration camps.[29] In March 1942 the *Columbian* reported: "Japanese, German and Italian aliens and American Japanese are forbidden hereafter to live in southern and western Clark county."[30] By the end of the month, Clark County's 19 Japanese-American households has been forcibly removed. After the war, only one of those families returned—and they were required to buy their land back from its caretaker and start over from scratch.[31] Most didn't

Japanese farm ownership in Washington State 1920-31 (University of Washington archives)

try to return to Clark County. For example, Pearl Yoshikawa, a direct descendant of the first Japanese pioneer in Oregon, was born and raised on a Vancouver farm. During the war, she was removed to the Minidoka concentration camp in Idaho. After, she opted to move to New York instead of returning to her former home.[32]

### World War II: Explosive Growth and the Vancouver Housing Authority

The arrival of several major industries in the 1940s ushered in a period of unprecedented growth in Vancouver. The Alcoa Aluminum plant opened in 1940, bringing many new jobs and residents to the region. However, the biggest change came with the arrival of the Kaiser Shipyard in 1942. This was one of three massive WWII shipyards in the Pacific Northwest (the other two being across the river in Portland). The 400-acre shipyard assembled and launched its first ship in 165 days. By end of the war, it had produced ten Liberty ships, 30 landing crafts, 50 escort aircraft carriers, 31 attack transports, 12 C4 troopships, eight C4 cargo vessels, and two 14,000 ton drydocks.[33]

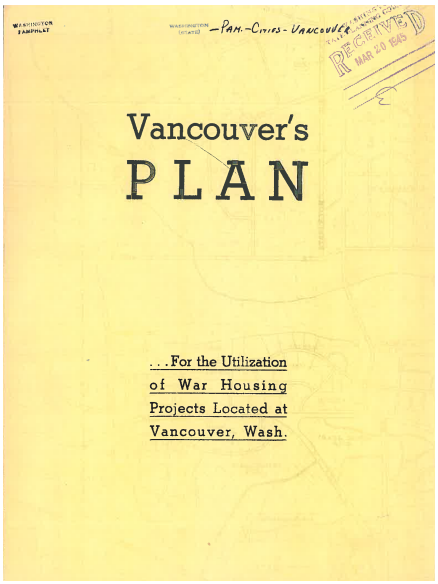
The shipyards attracted workers from across the country. Before the attack on Pearl Harbor in December 1941, Vancouver had a population of roughly 18,800 people, the vast majority (92%) of which was white.34 By December 1943, the population was over 83,000.35 During this time, the African American population of Vancouver grew from 18 to 8,825.36 The shipyard needed a great deal of labor to operate, and so conducted targeted recruiting and marketing efforts across the country. This included large recruitment pushes to both white and black workers in the South. The thousands of black workers and families who arrived in Vancouver were just a fraction of the nearly 1.5 million African Americans who left the South in the 1940s, drawn North and West by WWII industries and jobs.37 These families faced a large cultural shift in their move to the Pacific Northwest, trading openly violent and legally mandated segregation for less obvious (but still damaging) racist systems in education, employment, and housing.

Hudson House on the Kaiser shipyard site (Vancouver Housing Authority archives)

The major and rapid influx of population was accompanied by growth in infrastructure and services in Vancouver, including roads, schools, churches, and a great deal of housing. To deal with the major housing demand, the Vancouver Housing Authority (VHA) was founded in 1942. The VHA built six major housing developments over 18 months, including: McLoughlin Heights, Burton Homes, Fourth Plain Village, Fruit Valley, Ogden Meadows, and Bagley Homes.38 Collectively, these developments included nearly 12,400 family units and 10,000 dormitory units spread across 1950 acres of land.39 While a small percentage of these projects were meant to be permanent—and can still be spotted along Grand Boulevard—most were intended as temporary buildings, meant to be demolished after the wartime need subsided.40

The VHA housing projects had no official racial segregation policy. However, many residents and historians have noted that black and white families seemed to live in separate areas within the developments. "On paper there was no race-based housing, but people had experiences that counter that," says Melissa Williams, author of "Those Who Desire Very Much to Stay: African Americans and Housing in Vancouver, Washington, 1940 to 1960."41 Val Joshua, for example, came to Vancouver with her husband from Texas in 1944 and later helped start the local NAACP. She recalls that, when they first arrived in the McLoughlin Heights war housing project, "the whites were on one side of the street and the African-Americans were on the other side."42 Another black resident, Horsea Lewis, recalls trying to move into the Fruit Valley housing development with her young family and being met with threats of arson. She eventually landed in a growing black enclave around 13th Street in Harney Heights, the site of today's Community AME Zion Church.43

Due in large part to this type of housing discrimination, members of the black community formed a local branch of the NAACP (National Association for the Advancement of Colored People). NAACP Branch #1139 began serving Vancouver in 1945, advocating for housing desegregation as well as increased employment and education opportunities for black residents.44 The Vancouver NAACP soon became involved with other groups, such as the Vancouver Civic Unity League, white church leaders, and



The 1949 meeting of the Washington State Conference of the NAACP was held in Vancouver on April 30. (Clark County Historical Museum, 2007.1.2.32)

the Mayor's office, on the issue of housing segregation. The NAACP also looked towards the future—with WWII drawing to a close, they wanted to ensure that permanent housing would be available to African Americans who wanted to remain in the city.

### 1945–1958: War's End and the Conversion of Wartime Housing

The end of WWII in 1945 meant a reduction in wartime industries, and the shipyard soon laid off 30,000 workers. This led to discussions about what to do with the VHA's massive wartime housing projects. The vast majority of these had been designed as temporary developments, and there was heavy concern amongst longtime white residents that continued public housing would grow to be a blight on the city.[45] The city opted to demolish the temporary housing and convert the developments into privately owned subdivisions, with the final family moving out of remaining wartime housing in 1958.

Vancouver's Plan for War Housing (Washington Department of Archaeology and Historic Preservation)

The official policy of non-discrimination continued in sales of these properties and (unlike Seattle and Portland) Vancouver did not have a formal red lining policy.[46] The city also created a Mayor's Commission on Open Housing in 1952. This committee, which worked with the local NAACP and boasted a diverse membership, aimed to create non-discriminatory housing for all and handled complaints from across the city.[47] On January 3, 1958, Vancouver also became the first city in Washington to secure special mortgage insurance to finance 150 units of low-cost private housing. [48]

Despite these efforts, unofficial segregation and discrimination continued in the post-war housing market, as families of color were discouraged from renting or buying in many neighborhoods. For example, in 1957 a white woman protested her neighbor's plan to rent one side of her duplex to a black family.[49] In 1958, another white woman circulated a petition trying to force a newly arrived black family in her neighborhood to leave.[50] Even a newspaper report commending Vancouver for its successes in integration confirmed that the arrival of a black family would often lead to "panic selling" in a neighborhood.[51]

In addition to incidents like these, a lack of viable employment opportunities pushed many black families out of the city after the war's end. In 1946, a survey found 77% unemployment among black family heads.[52] "Now that the war is over, you people can go home," is how it felt to Joseph H. Bailey, a Black shipyard worker interviewed

later by *The Columbian*.[53] In response, the local NAACP lobbied major employers in to hire black workers. Although they were met with limited success in Vancouver, their efforts contributed to the passage of the 1949 Washington State Law Against Discrimination in Employment.[54]

Residents fleeing the Vanport flood, May 30, 1948, N Denver Ave, Portland (The Columbian files)

A 1945 VHA survey showed that 57% of black families wanted to stay in Vancouver after the war.[55] Despite this, the African American population declined from 8,825 in 1944 to 879 in 1950 to 494 in 1960.[56] Many black families relocated to the city of Vanport, Oregon, which was destroyed in a catastrophic flood in 1948. Others returned to homes elsewhere in the country or moved to Seattle or Portland to join existing black communities. The NAACP encouraged black families that stayed in Vancouver to settle throughout the city, to prevent the creation of a "black section" that could be targeted for neighborhood violence and intentional disinvestment.[57]

### 1955–1970s: Arrival of I-5 and Urban Renewal

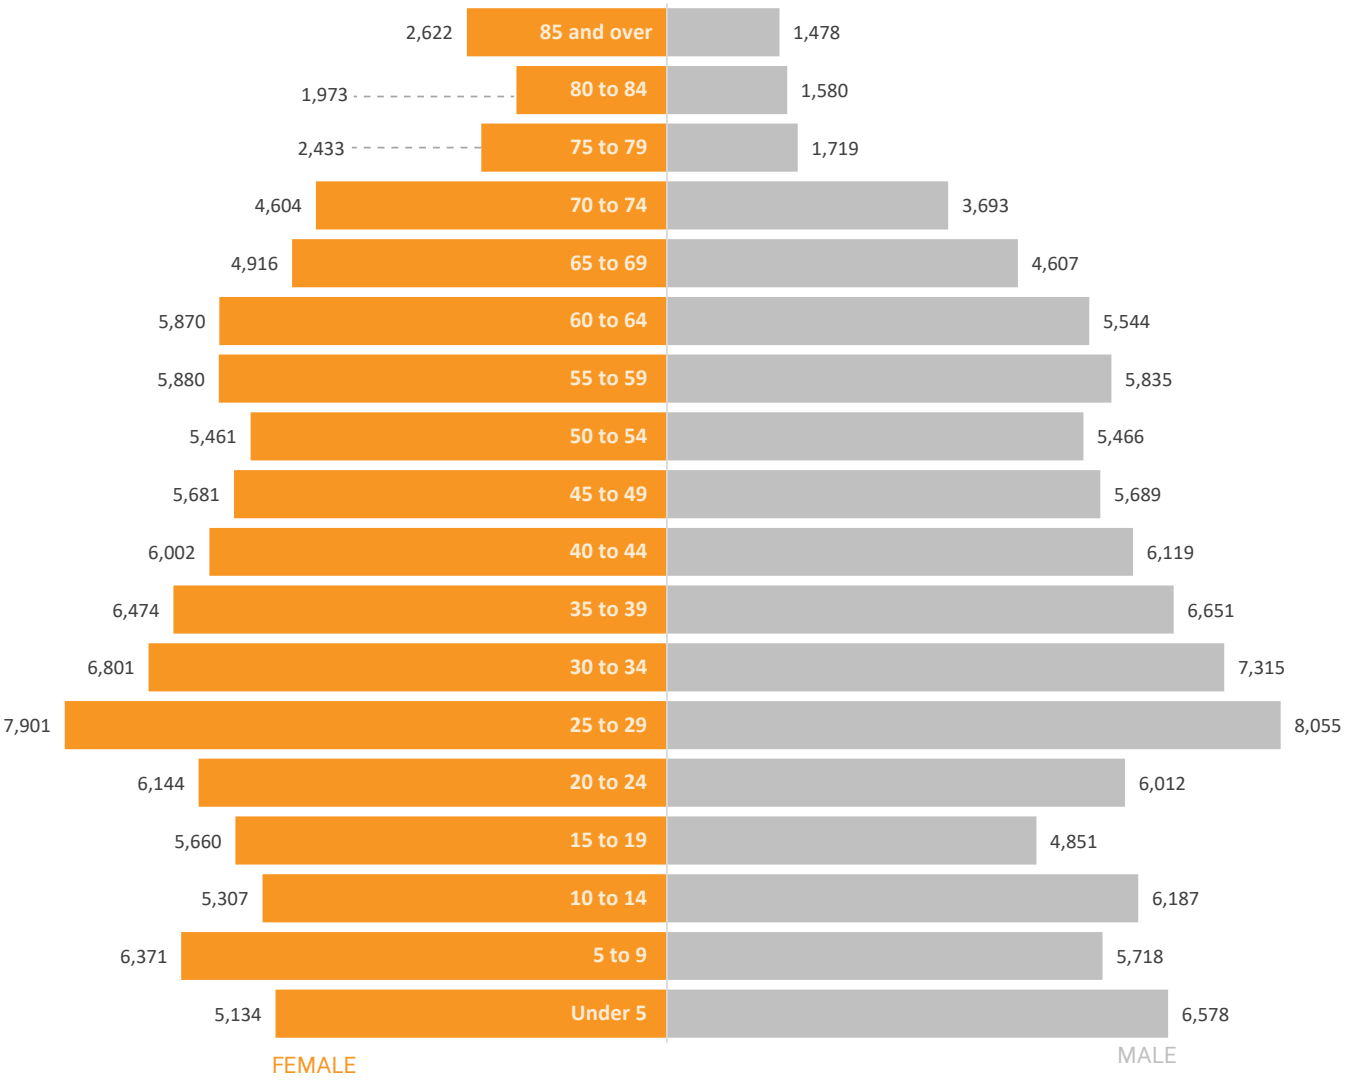
The arrival of Interstate 5 (I-5) in March 1955 cut off downtown Vancouver and forever altered the fabric of the city. I-5 closed Vancouver's 5th Street—formerly a major arterial and the only road across the military reservation—and made downtown difficult to access due to lack of freeway exits.[58] These changes, combined with the rise of shopping malls, drew many businesses away from Vancouver's city center.

The urban renewal movement of the 1960s and 1970s struck another blow to downtown Vancouver by removing most of the neighborhood's remaining housing. Throughout those decades, metropolitan areas across the country focused on the removal of "blighted" areas in an effort to "clean up" their cities. In practice, this often led to gentrification, as longtime residents—usually communities of color—lost their homes and were priced out of any new developments in the area. This urban renewal movement also threatened historic buildings. For example, the historic Slocum House (built in 1877), was threatened with demolition as part of Vancouver's urban renewal movement. Luckily, community groups rallied to preserve and move it to the southwest corner of Esther Short Park.[59]

By 1970, 99% of Clark County's residents identified as white. Out of a population of 128,500, there were only 548 black, 398 indigenous, 371 Asian Pacific Islander, and 151 Hispanic residents, many of whom lived in an impoverished Vancouver neighborhood near the I-5 bridge spanning the Columbia River.[60]

### 1980s to present: Growth and Revitalization

The past 50 years have witnessed another period of growth within the city of Vancouver. While this growth is due in part to several major annexations (including the largest in state history), the city has also drawn newcomers with the arrival of many high-tech businesses. In 2020, Vancouver boasted a population of nearly 193,000 residents, making it the fourth largest city in Washington State. 70% of the population identifies as white—a significant decrease from 1970.[61] The VHA still serves residents, providing subsidized housing for families, disabled people, and the elderly. NAACP Branch #1139 also continues to be a vital part of Vancouver's community. The city center has undergone an impressive revitalization, guided by Vancouver's Downtown Association since 1989.[62]



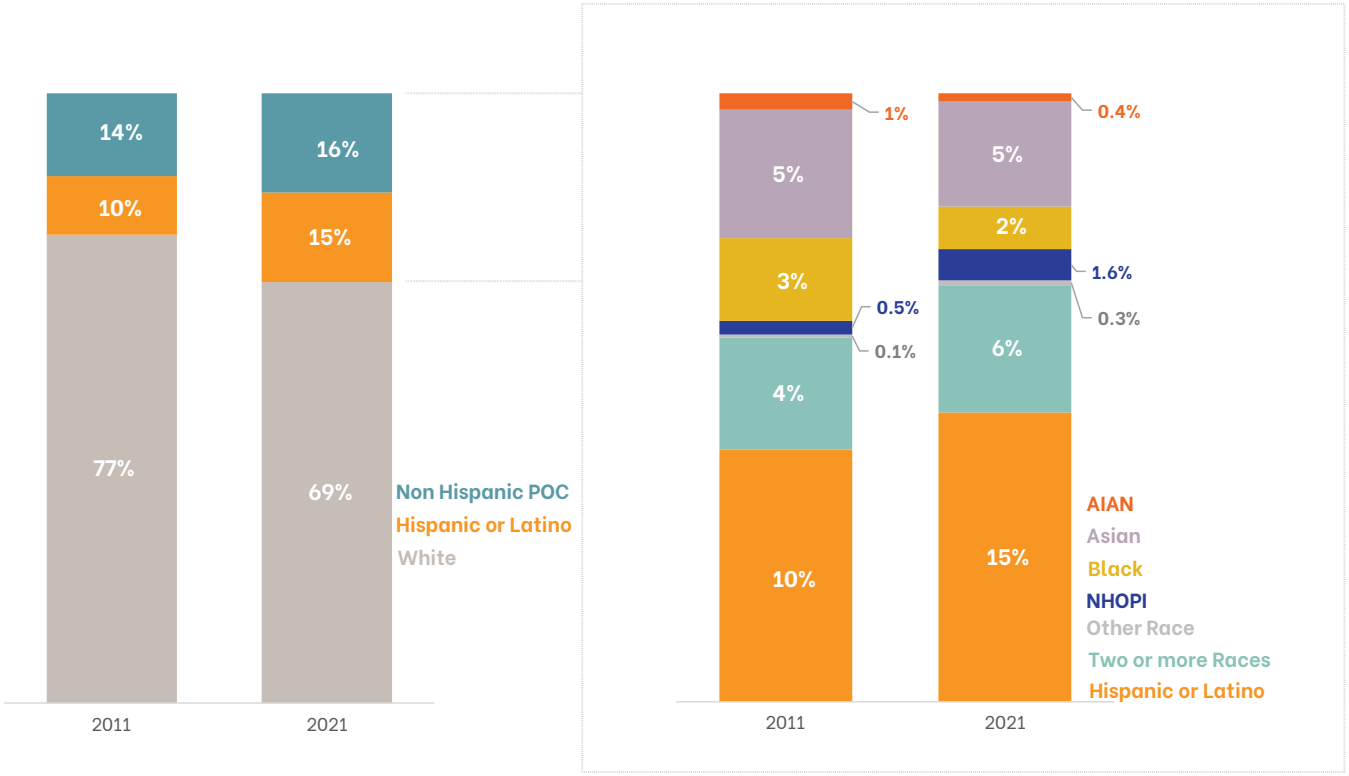
## A Current Profile of City of Vancouver Residents

The most recent American Community Survey (2017-2021 5-year estimates) estimate the total population of Vancouver to be 188,331. The population pyramid indicates a relatively high prevalence of young people between 25 and 29 years of age, as well relatively high numbers of young children and adults between 55 and 64 years of age. The rectangular shape is typical for a relatively stable or stationary population, in other words not expected to grow or constrict rapidly through natural means. However, Vancouver is growing due to immigration and urbanization as well as though the annexation program.

Approximately 30,000 adults or 15.7% percent of the population of is aged 65 or older. On the other end of the spectrum, 41,569 residents, or 22.1% of the population, are under 18 years of age.

**Vancouver has a stable population with a relatively high number of young people between 25 and 29 years of age.**

Exhibit 1 Population by Age and Sex



Source: American Community Survey 5-year estimates 2017-2021

Despite being the original inhabitants of the land on which Vancouver sits, the American Indian and Alaska Native population comprises less than one percent of the current population. Native Hawaiian and Pacific Islanders and Black or African Americans each make up about 2% of the total Vancouver population. Individuals identifying as two or more races make up 6%, Asians comprise 5%. Fifteen percent (15%) are Hispanic or Latine (of any race) and 69% of the population of Vancouver identifies as non-Hispanic white alone.

**Just over 30 percent of Vancouver's population is POC. Hispanic and Latines of any race are the largest group of POC. However, as shown in Exhibit 2, there are several block groups within Vancouver that are majority POC.**

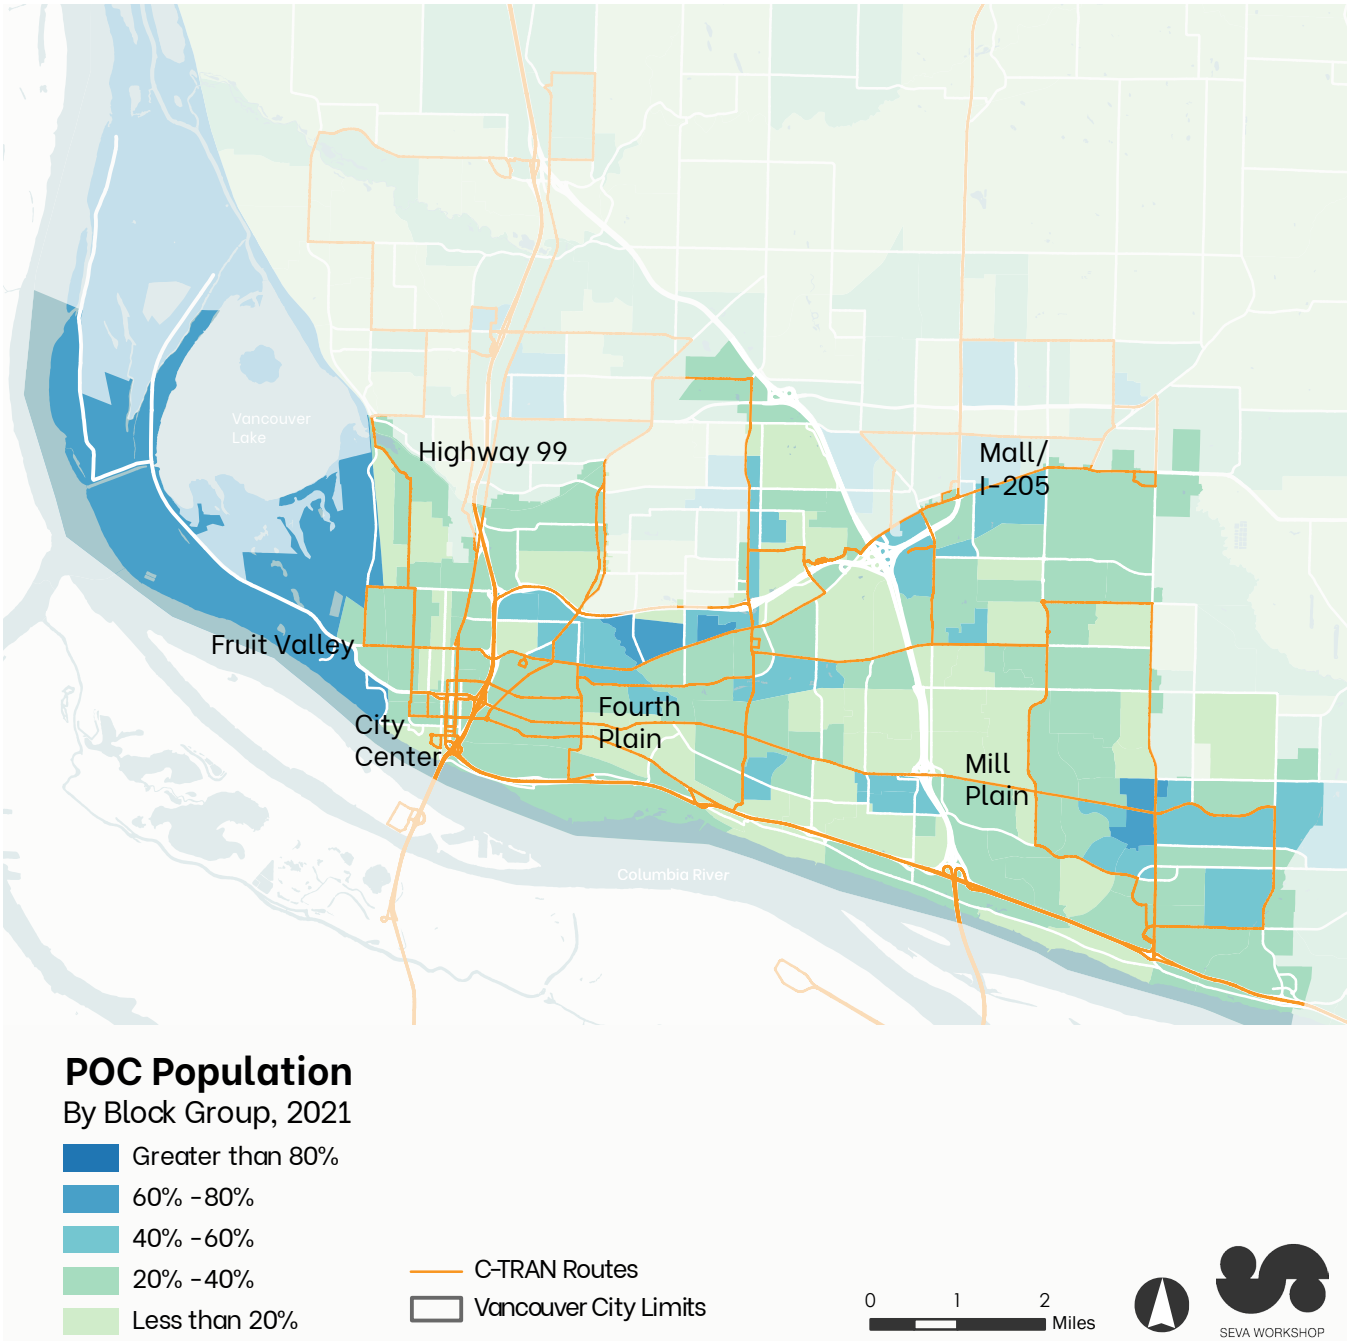


Exhibit 2 Population by Race and Ethnicity: People of Color Detail

Notes: AIAN=American Indian and Alaska Native; NHOPI=Native Hawaiian and Other Pacific Islander. Hispanic or Latine is an ethnicity. The Hispanic or Latine category includes Hispanic and Latine people of all races. All other categories show non-Hispanic races.
Source: American Community Survey 5-year estimates 2017-2021

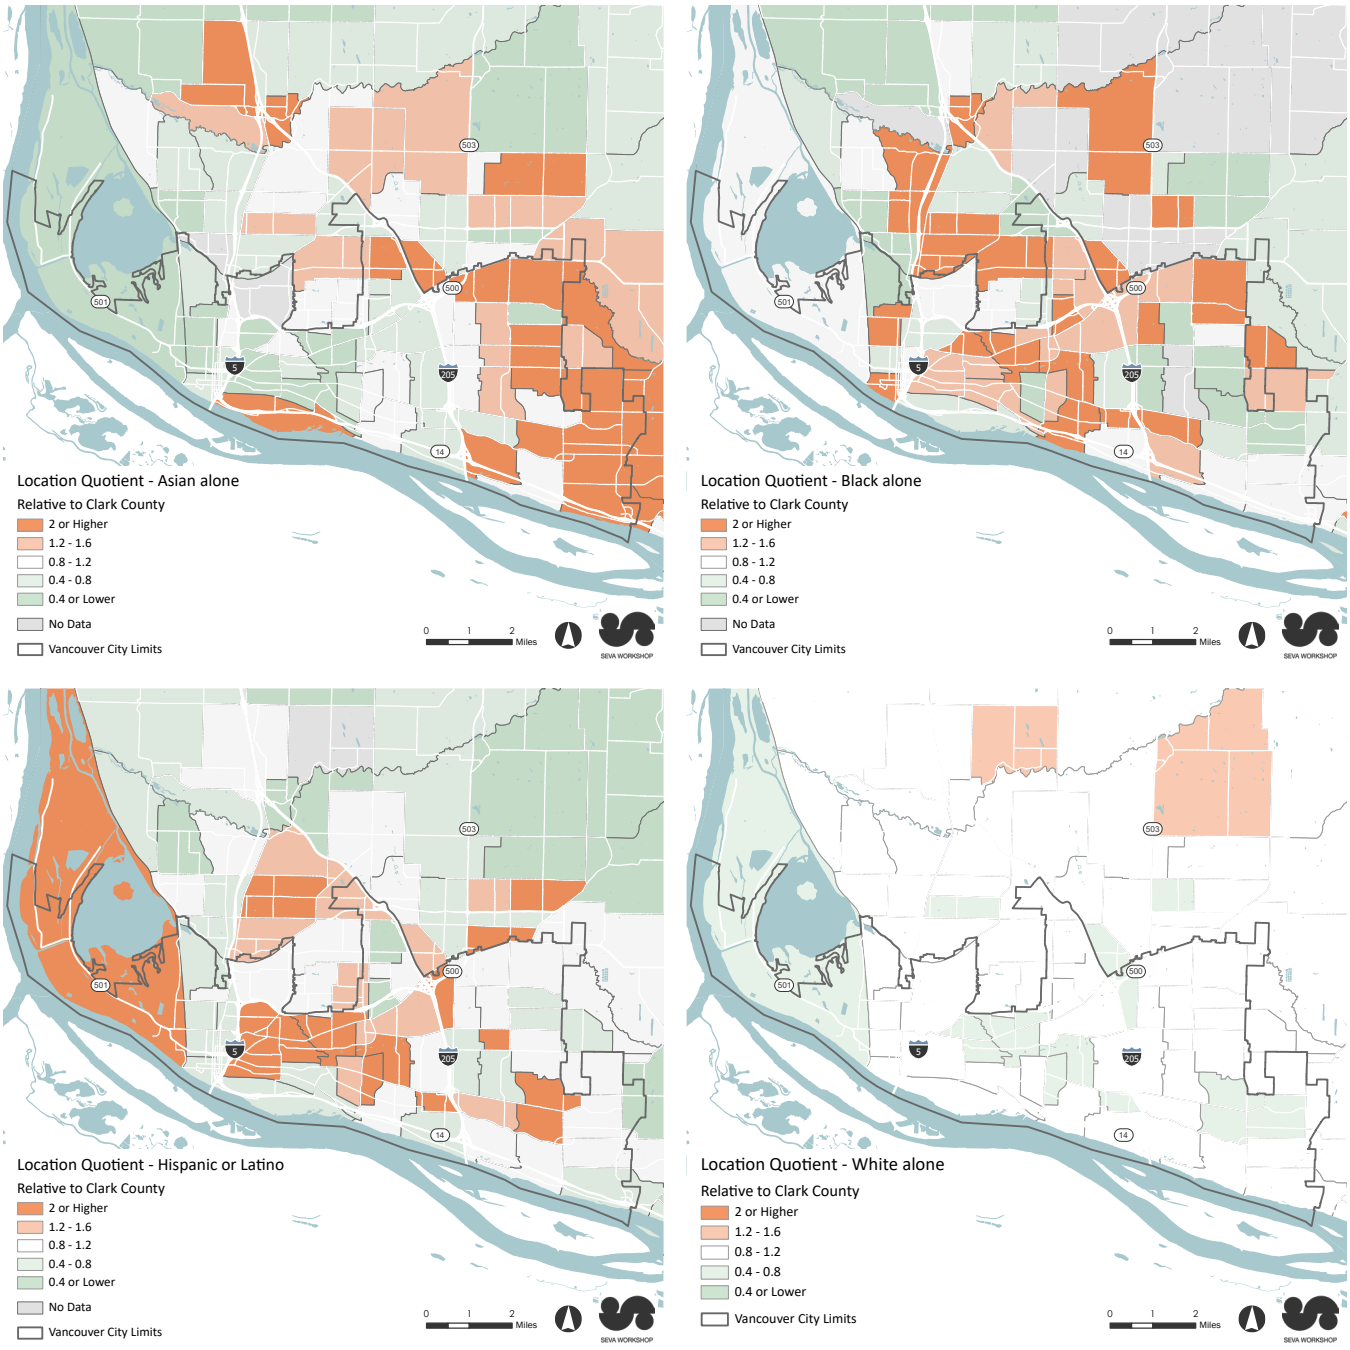
Areas reaching north along the I-5 and I-205 corridors just outside of the City of Vancouver's boundaries show similar levels of population density and diversity as within. There are distinct concentrations of people of color within certain census tracts in this area.

Exhibit 3 People of color population by block group

Source: American Community Survey 5 year estimates 2017-2021

**The City of Vancouver and outlying areas show patterns of location by race and ethnicity.**

Exhibit 4 Population density by race and ethnicity and tract



Source: American Community Survey 5-year estimates 2017–2021

A location quotient directly compares the prevalence of a population in a block group to their prevalence in the county overall. A higher quotient indicates a relative concentration of a

group. Patterns in the concentrations of certain populations may reflect de jure or de facto housing discrimination and exclusion, as well as “natural” patterns in housing and location preferences. The Asian population in Vancouver is largely concentrated in eastern block groups bordering with Camas. Black, Hispanic and Latine populations are more likely found in the central and west neighborhoods. The Black population peaked during WWII due to Kaiser shipyard work and was concentrated in neighborhoods nearby. However, the Black population has been declining and dispersing ever since.

**Compared to their distribution in the County overall, POC are more likely to live in urban areas.**

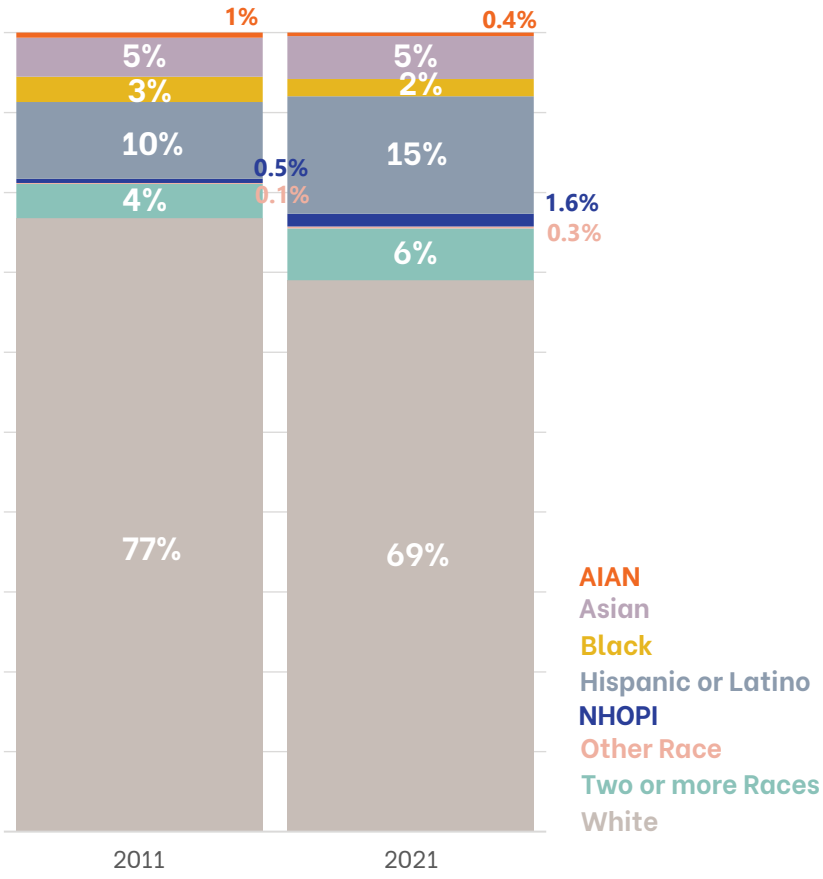


Exhibit 5 Location quotient by tract, Asian, Hispanic or Latine, Black or African American, and White

Source: American Community Survey 5-year estimates 2017-2021

**The Vancouver population has grown in diversity over the last 10 years. The Hispanic and Latine, Native Hawaiian and Other Pacific Islander, and multiracial populations are growing as a share of population.**

Exhibit 6 Vancouver Population by Race and Ethnicity, 2011 and 2021

Source: American Community Survey 5-year estimates 2017-2021

The American Indian and Alaska Native population, already small by 2010, has declined by almost another third in the last decade. The Black and African American population has also been on the decline in the City of Vancouver (-9%). This trend is a continuation of decades of declining Black population in total numbers and as a share of the population from a pre-WWII peak of over 8,000. Though from a small base, the fastest growing population by race is Native Hawaiian and Other Pacific Islanders (+91%) and the population identifying as two or more races (+120%). The Asian alone population has also been growing at a rate higher than the population overall (27%).

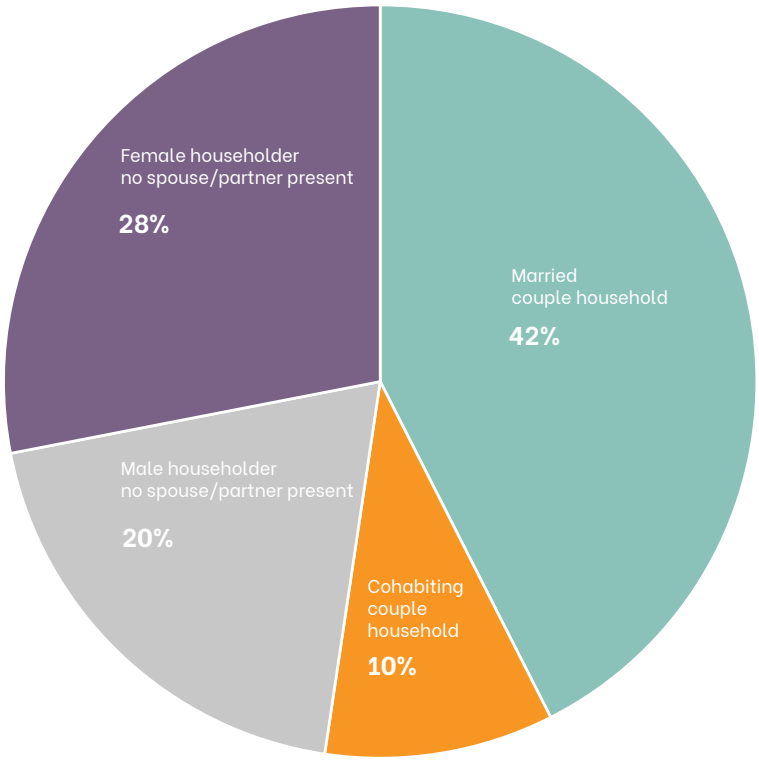
**The fastest growing populations of the last decade are Native Hawaiian and Other Pacific Islander although from a very small base.**

Exhibit 7 Population by Race, 2010 to 2021

| | 2011 | 2021 | Percent Change |
|---|---|---|---|
| AIAN | 1,006 | 788 | -22% |
| Asian | 7,914 | 10,079 | +27% |
| Black | 5,099 | 4,076 | -20% |
| Hispanic or Latine | 15,544 | 27,744 | +78% |
| NHOPI | 852 | 2,988 | +251% |
| Other race | 179 | 471 | +163% |
| Two or more races | 6,894 | 12,189 | +77% |
| White | 124,118 | 129,996 | +5% |
| **Total** | **161,606** | **188,331** | **+17%** |

Notes: AIAN=American Indian and Alaska Native; NHOPI=Native Hawaiian and Other Pacific Islander. Hispanic or Latine is an ethnicity. The Hispanic or Latine category includes Hispanic and Latine people of all races. All other categories show non-Hispanic races.
Source: US Decennial Census 2010; American Community Survey 5-year estimates 2017-2021

The Hispanic or Latine category is an ethnic identity drawn from shared culture and history that intersects with race. The population identifying as Hispanic or Latine of any race has increased by 78% between 2011 and 2021, significantly more than the overall population growth of 17%.



The US Census Bureau first started asking about sexual orientation and gender identity in 2021 with the Household Pulse Survey, a probability survey with a much smaller sample size, and only available at the state level. However, these are the best available data on the size of the LGBTQ+ population in Washington State. Data from the March 2023 pulse shows that an estimated 3.5% of identify as lesbian or gay and 5.5% as bisexual. Another 4.6% responded with a sexual orientation of either "I don't know" or "something else." Two percent (2.1%) of Washingtonians are estimated to be transgender and another 1.5% as something other than cisgender or transgender.

### Household Composition

Just over half of the estimated 75,663 households in Vancouver are comprised of couples, either married or cohabiting. Twenty-eight percent of households are female-headed without a spouse or partner and another 20% are male-headed without a spouse or partner. Most single-headed households are persons living alone, without children under 18 or household members over 65-years old. Compared to the State of Washington overall, Vancouver residents are less likely to be in married couple households, and more likely to be single female householders with no spouse or partner.

**Nearly half (48%) of Vancouver households are single-headed.**

Exhibit 8 Household Composition

Source: American Community Survey 5-year estimates 2017-2021

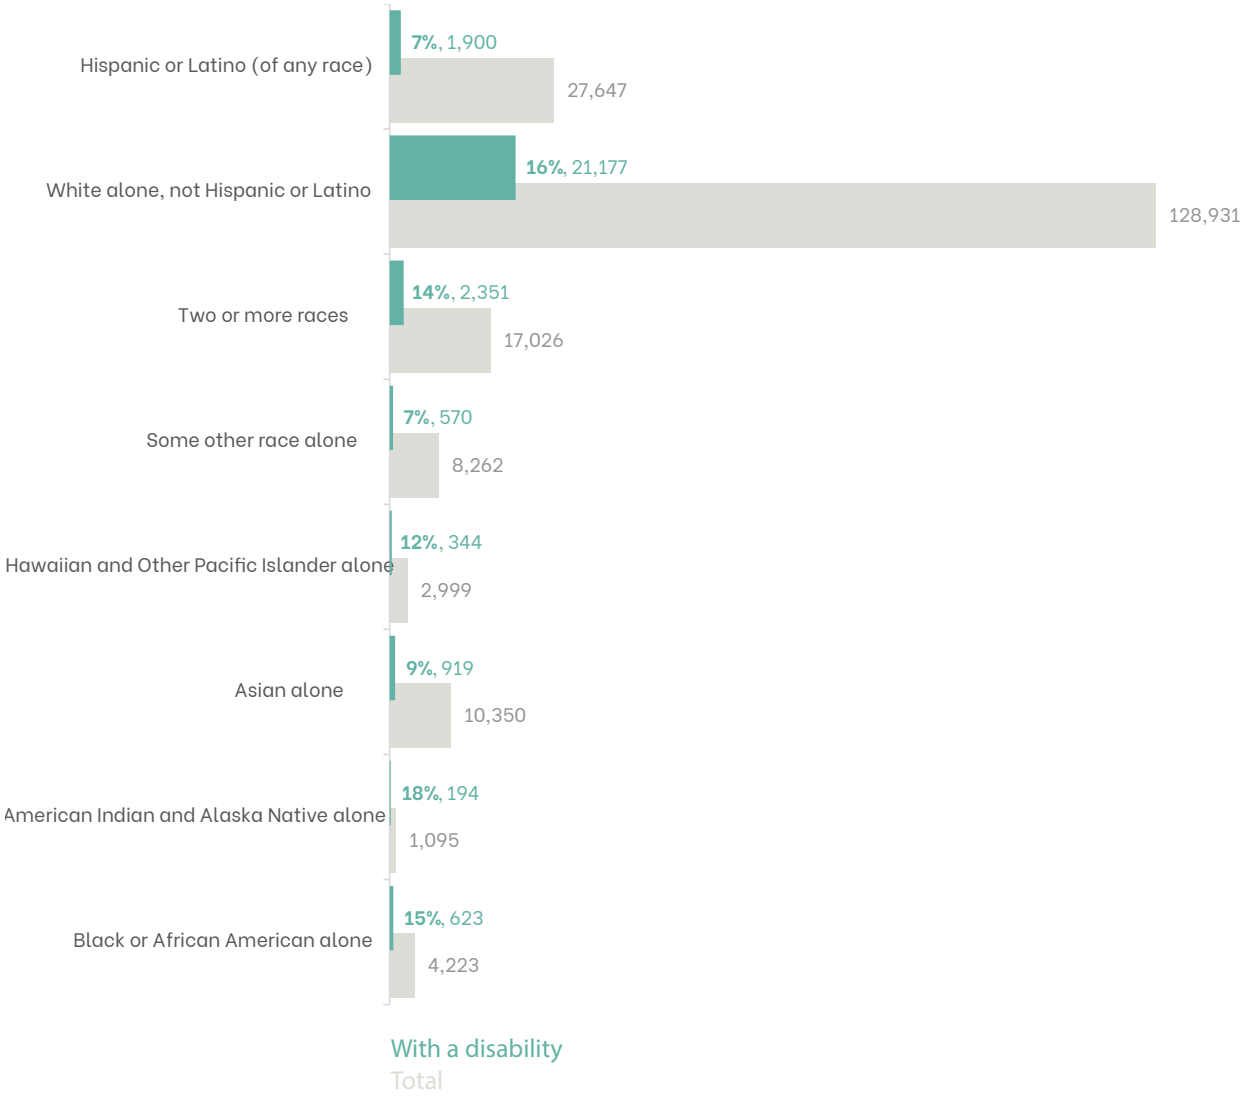
**Compared to Washington State, Vancouver has fewer married couple households, and more single-female headed households.**

Exhibit 9 Household Composition Comparison

| | City of Vancouver | | Washington State | | Difference in Percent Share of Households |
|---|---|---|---|---|---|
| Married-couple household | 32,172 | 43% | 1,467,589 | 50% | -7.6% |
| with children of householder(s) under 18 years | 13,017 | 17% | 584,510 | 20% | -2.7% |
| Cohabiting couple household | 7,442 | 10% | 241,242 | 8% | 1.6% |
| with children of householder(s) under 18 years | 2,299 | 3% | 73,286 | 3% | 0.5% |
| Male householder, no spouse/partner present | 14,823 | 20% | 530,227 | 18% | 1.5% |
| with children of the householder under 18 years | 1,237 | 2% | 37,057 | 1% | 0.3% |
| Householder living alone | 9,982 | 13% | 369,143 | 13% | 0.6% |
| 65-years and over | 3,364 | 4% | 102,638 | 4% | 0.9% |
| Female householder, no spouse/partner present | 21,226 | 28% | 692,783 | 24% | 4.5% |
| with children of the householder under 18 years | 3,642 | 5% | 114,897 | 4% | 0.9% |
| Householder living alone | 12,624 | 17% | 411,623 | 14% | 2.7% |
| 65-years and over | 6,569 | 9% | 197,530 | 7% | 2.0% |

Source: American Community Survey 5-year estimates 2017-2021

US Census Bureau data products provide a very limited understanding of the LGBTQ+ population. The measurement "unmarried same-sex couples" was the only identifier consistently available since the 1990's until 2018. Same sex marriage has been legal in Washington State in 2012 likely creating significant miscounts of even this basic measure. The 2018 data, the most recent year for which estimates are available for the City of Vancouver, indicate only 230 same-sex households (0.3% of all households) in Vancouver (90 male-male and 140 female-female). However, more recent and robust data at the state level indicate that the share of households that are of same sex couples, married or unmarried, is likely closer to 1.1%.



### Age and Disability

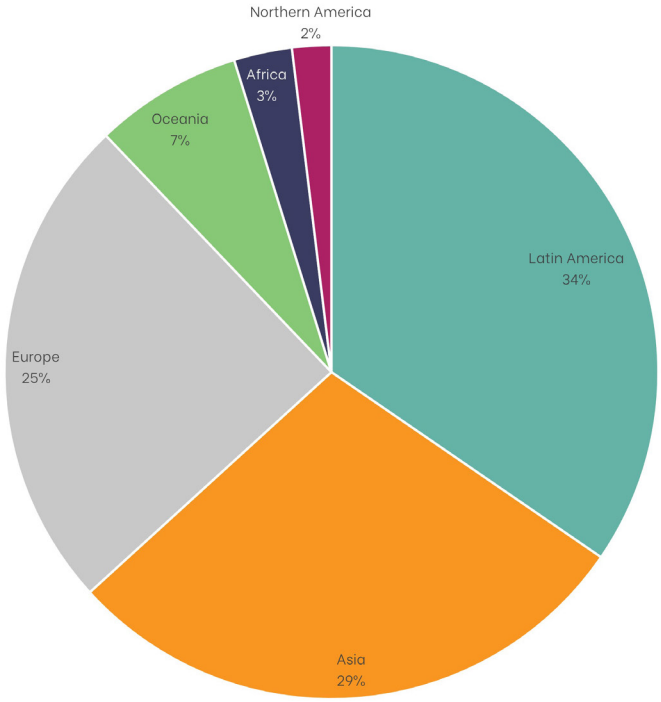
Twenty-nine percent (29%) of households have at least one person 18 years of age or younger. Twenty-nine percent of households (29%) also have one or more people over the age of 65-years.

27,055 people or about 15% of the population in Vancouver are living with a disability. Cognitive, ambulatory, and independent living difficulties are the most common types of disability.

**Vancouver residents of all ages and races experience disabilities.**

Exhibit 10 Percent of Population Living with a Disability by Age Group

Source: American Community Survey 5-year estimates 2017-2021
Note: The US Census Bureau measures the prevalence of disability for the civilian population living outside of institutions.



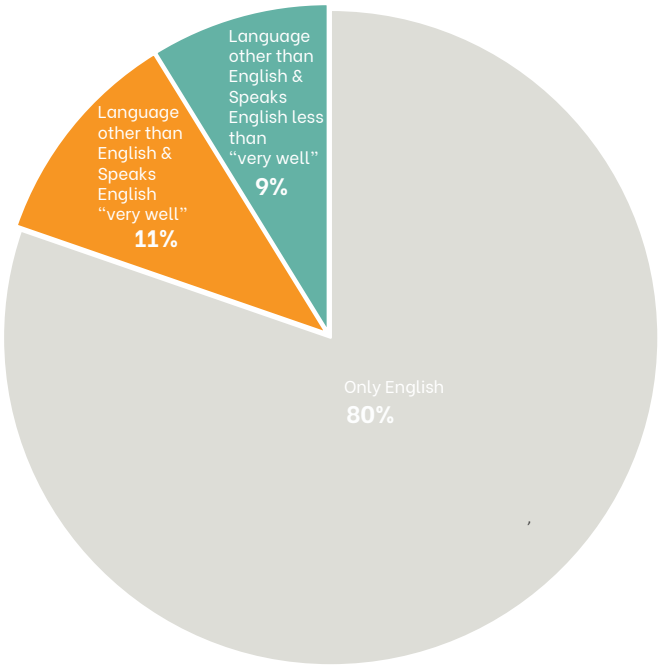
The Asian population (9%), those identifying as some other race alone (7%), and those identifying as Hispanic or Latine of any race (7%) report incidence of disability at lower rates than the population overall. American Indian and Alaskan Natives report the highest prevalence of disability (18%).

### Place of Birth and Language

In 2021, 13.7% of the Vancouver population (25,773 people) was foreign-born. Over one-third of the foreign born population originates from Latin America, and another 29% from Asia, and 25% from Europe. Compared to the place of birth distribution of the foreign-born population in Washington State overall, Vancouver is much more likely to be home to immigrants and refugees from Europe and Oceania. In fact, according to data from the Migration Policy Institute, Clark County, Washington has the third largest Micronesian immigrant population of all counties in the United States, behind two counties in Hawaii.

**Compared to Washington overall, Vancouver's foreign-born population is more likely to originate from Europe and Oceania.**

Exhibit 11 Foreign-born Population by Place of Birth



Source: American Community Survey 5-year estimates 2017-2021

The foreign-born population in Vancouver is distributed relatively evenly in terms of time of entry to the United States, though it does skew slightly toward newer arrivals as compared to Washington State overall. About one-quarter of the foreign-born population arrived in 2010 or later. Another 28% arrived between 2000 and 2009. The remaining 45% have been in the United States for over twenty years (entered 1999 or earlier). Ongoing climate change impacts in the Pacific Islands, and political and economic instability in the Russian/Ukranian and Afghan regions is likely to drive further migration towards places like Vancouver where there is an established population and services

Twenty percent (20%) of the Vancouver population age 5 and older speaks a language other than English at home, roughly equivalent to the prevailing rate in Washington State. More than half of the residents who speak a language other than English at home, also speak English very well (11% of the population over 5). The remaining 9% speak English less than very well. Compared to the State of Washington overall, Vancouver residents who speak another language are slightly less likely to have English ability.

**Nine percent of the population speaks English less than "very well."**

Exhibit 12 Language Spoken at Home for Population Age 5 and older

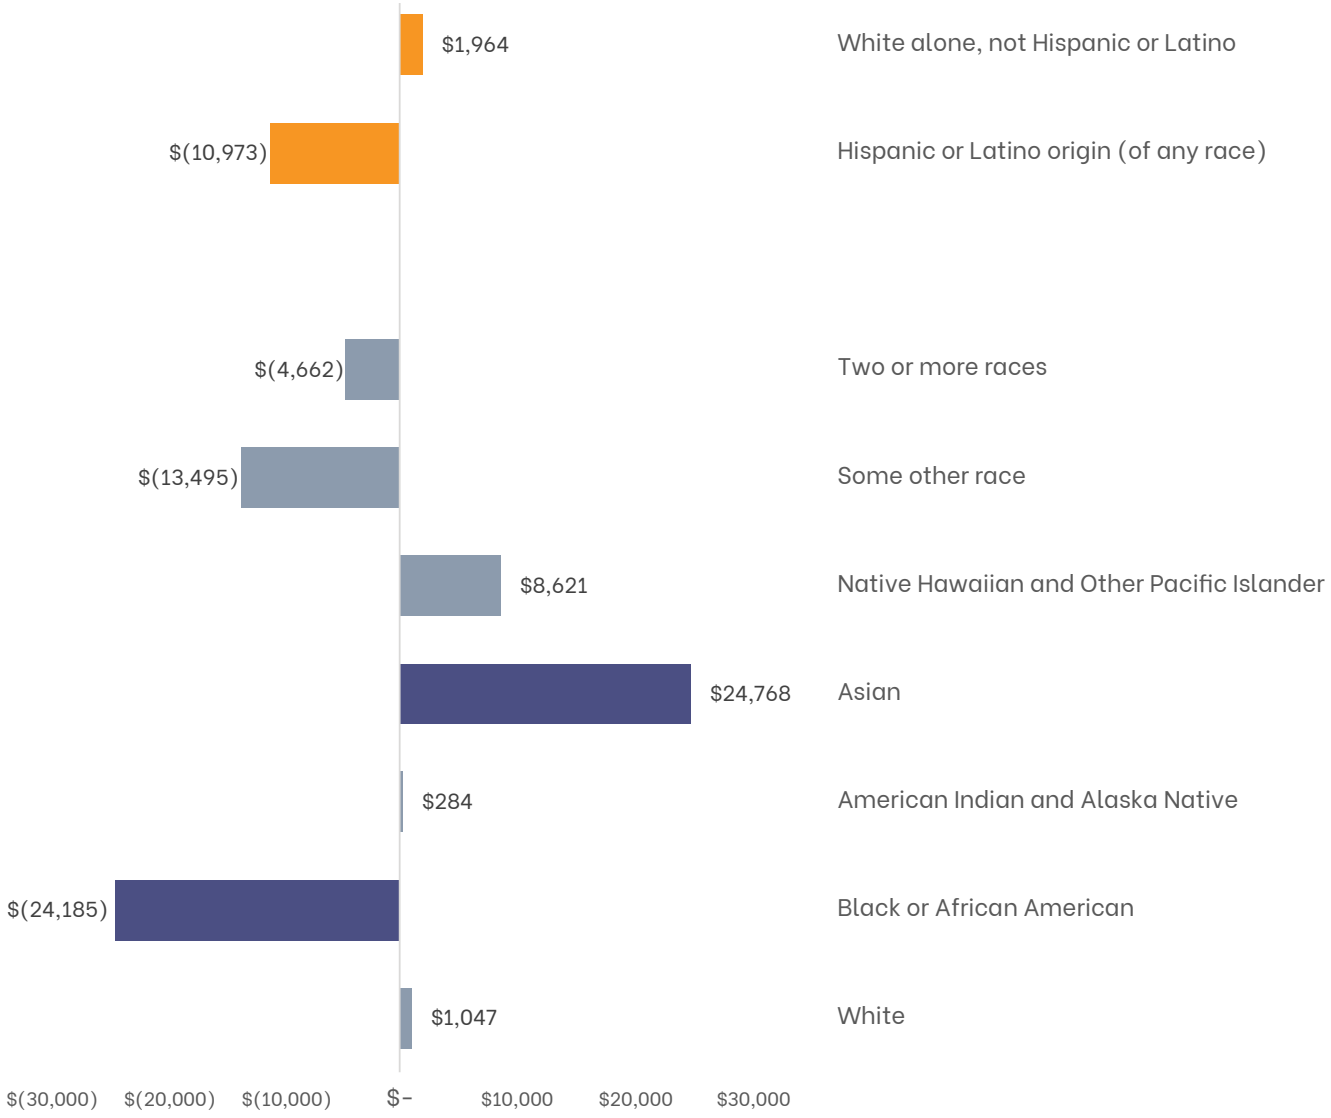
Source: American Community Survey 5-year estimates 2017-2021

A “limited English speaking household” is one in which no member 14 years old and over speaks English at least “very well.” In previous US Census products these households were referred to as “linguistically isolated.” In Vancouver, speakers of Russian, Polish, or other Slavic languages make up the largest number of households with limited English ability, estimated at 1,196 households. Spanish speaking households add another 1,071 households with limited English ability. Smaller groups with limited English households include Other Indo-European languages with 413, Chinese (including Mandarin and Cantonese) with 374, Vietnamese with 65, Tagalog with 93 and other Asian and Pacific Island languages with 267 households. These are likely to include Chuukese speaking communities from Micronesia. Note that the category of “Indo-European languages” contains all languages of the Indian subcontinent as well as Greek, Swedish, and Italian.

## Community Outcomes

This section presents data on some key community outcomes. At the June 12, 2023 meeting of the Equity Team, the following community outcomes were identified as Vancouver's top priorities:

1. As Vancouver grows, anyone who wants to can afford to live in the city in safe, stable housing.
2. Public transportation is a viable alternative to owning a personal vehicle and offers connectivity across destinations in Vancouver.
3. Create reparative policies that account for the ongoing harm caused by past racist policies, including those related to land use, housing, and the criminal legal system.



In an equitable society, demographic characteristics would not predict these outcomes. As we can see in the following data however, there are often disparities according to race, ethnicity, and other demographic factors. The following analysis relies on the best available public data, from sources such as the US Census Bureau. However, they still are limited by lags in data collection and processing, bias, and statistical error. Local observation is needed to complement these data and provide a more current and complete understanding of conditions. Where possible, we have included relevant quotes and comments from Equity Team members and community engagement.

### Income and Poverty

Income is one half of the equation that determines whether a family can afford to live in the City of Vancouver, the top desired community outcome. The median household income estimated in 2021 for Vancouver was $67,462. The median income varies considerably by race and Hispanic or Latine origin. The median household income where the householder is Black or African American, for example is over $24,000 less than the overall median. On the other hand, households with an Asian head of household have a median income that is over $24,000 more than the overall median.

**The median income in Vancouver varies greatly according to race of the householder.**

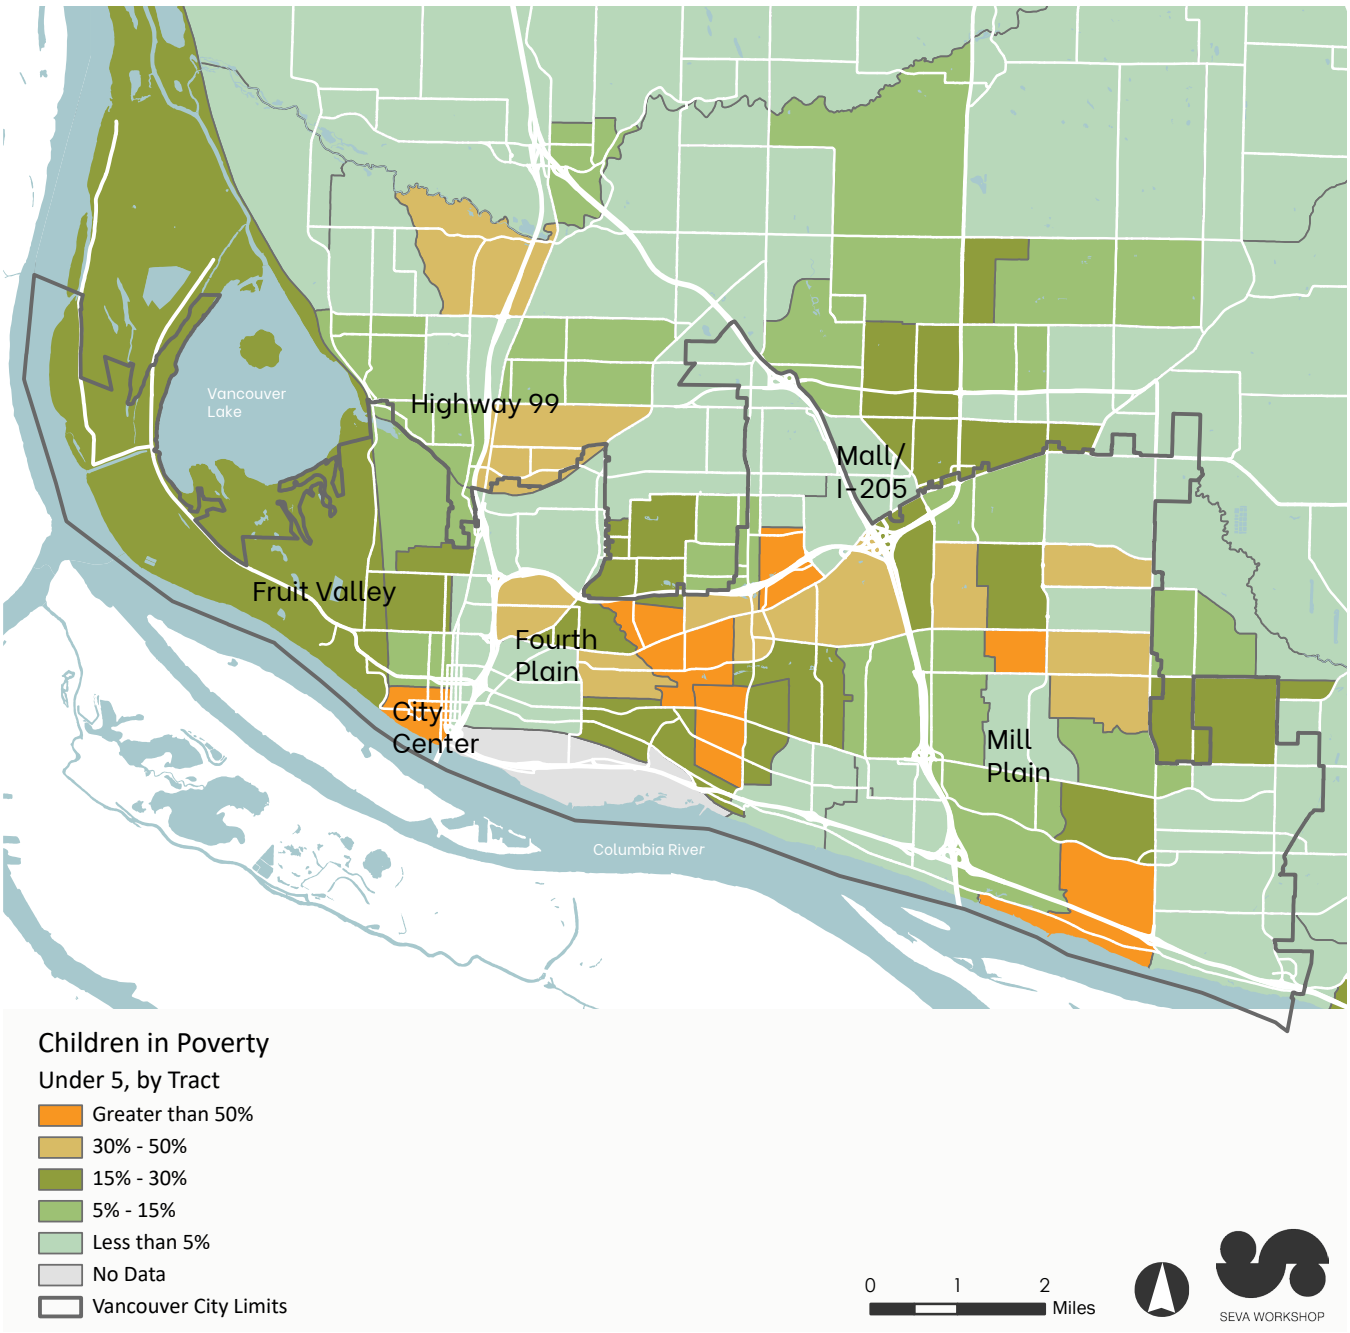


Exhibit 13 Household income, by race and Hispanic/Latine origin of householder compared to overall median.

Source: American Community Survey 5-year estimates 2017-2021
Note: A value of 0 indicates the median value for that group equals the median value for all of Vancouver.

**Extreme rates (over 50%) of early childhood poverty are found in a few neighborhoods within city boundaries, including Bagley Downs and Meadow Homes and southeast.**

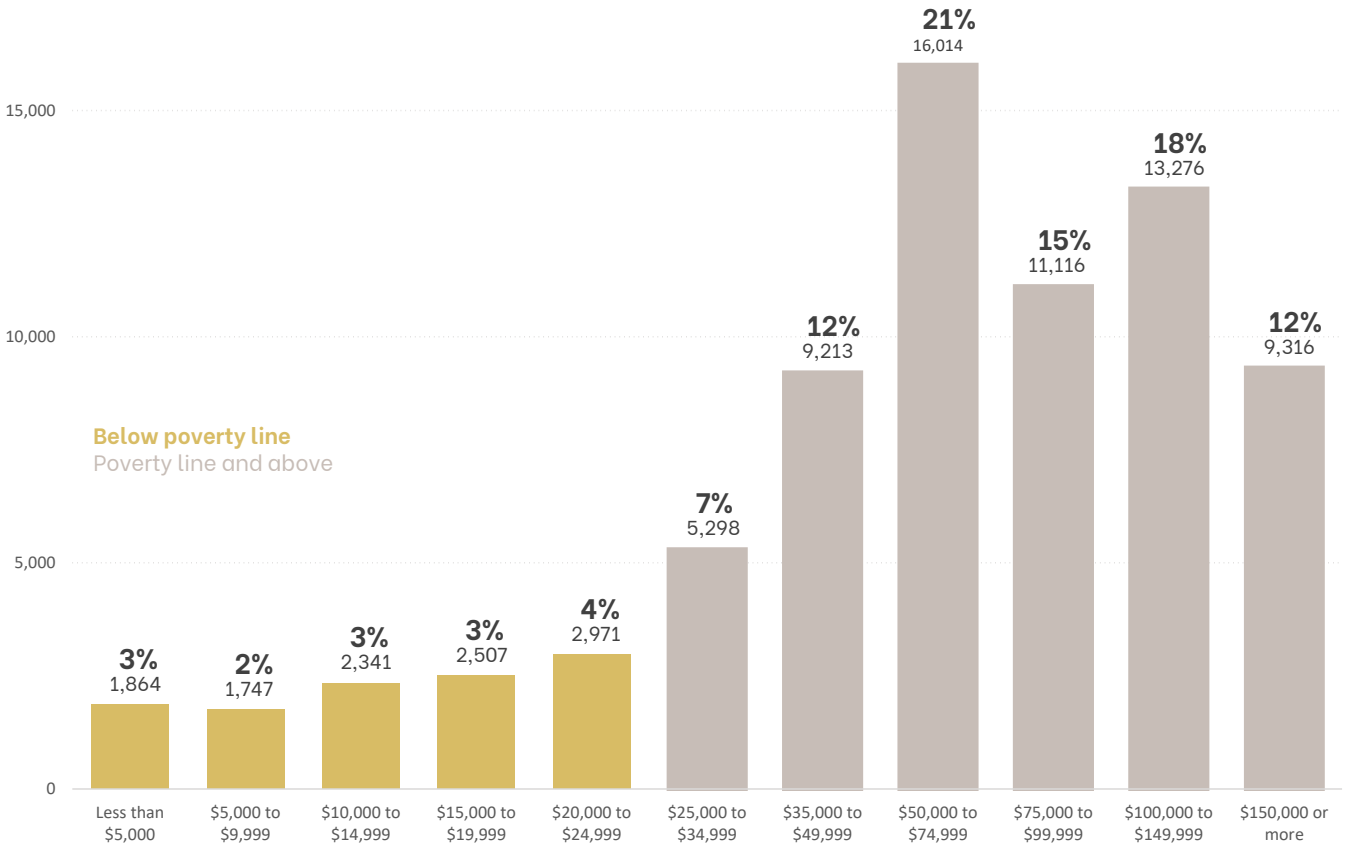

Exhibit 14 Children under 5 in poverty, by tract

Source: American Community Survey 5 year estimates 2017-2021

**Over fifteen percent of resident households are living below the federal poverty line.**

Exhibit 15 Household income

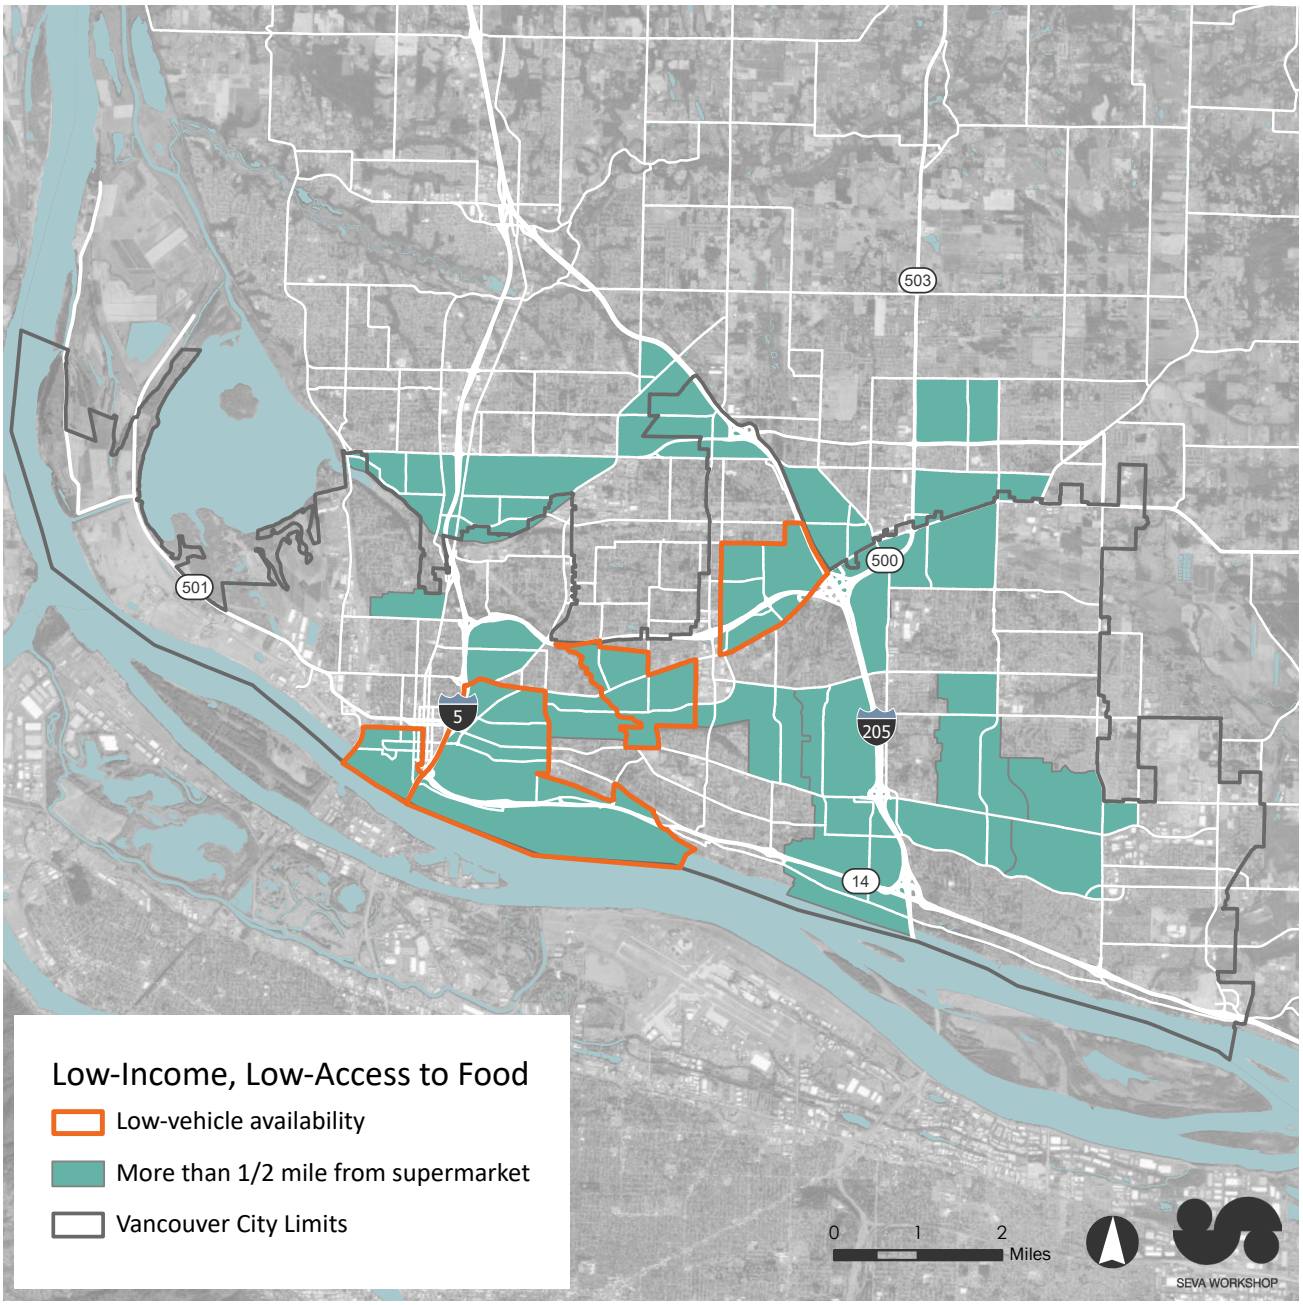
Source: American Community Survey 5 year estimates 2017-2021

## Food Access

Income is also linked with food access. Over 11,000 households in Vancouver are accessing food stamps/SNAP benefits. Roughly half of these households have a member living with a disability. One-third of these households are comprised of a female householder with no spouse present. 46.8% of these households have a child under 18 years of age. Relative to their share of the overall population, households receiving SNAP benefits are disproportionately likely to be Black or African American, American Indian and Alaska Native, Native Hawaiian and Other Pacific Islander, and/or Hispanic or Latine in origin. The majority (over 80%) of these households have at least one worker in the past 12 months.

Across both Evergreen and Vancouver School Districts, 65% of enrolled students are eligible for free lunch through the National School Lunch Program, the federal nutrition program for low-

income students as of October 2022. However, this rate varies greatly among individual school buildings. The school with the lowest eligibility rate was Felida Elementary with 19.1%. Six other schools, with combined enrollment of 2,445 students, are 100% eligible for free lunch. In the Vancouver School District, these are Eleanor Roosevelt Elementary, Fruit Valley Elementary, Martin Luther King Elementary, McLoughlin Middle, and Washington Elementary. In the Evergreen District, Hollingsworth Academy (K-12) is 100% eligible for free meals.



The USDA Economic Research Service uses the term low-income and low-access to designate areas with limited access to healthy food. These areas are sometimes referred to as "food deserts."

> ***"I'm surprised that Fruit Valley is not considered a low-income, low-access to food area. One of the main issues in the area is that residents have to drive about 20 minutes to the closest grocery store, and those without a car have more challenges due to limited public transit service in the area." Equity Team July 18, 2023***

> ***"The Fourth Plain area is a low-income area, but I wouldn't say it's a food desert area. There is a WinCo, a Grocery Outlet, a Walmart, and several ethnic supermarkets in the area." Equity Team July 18, 2023***

**City Center and Fourth Plain areas are food deserts according to indicators used by the USDA.**

Exhibit 16 Census Tracts Identified as Low-Income, Low-Access to Food

Source: USDA Economic Research Service, Food Access Research Atlas, 2022.

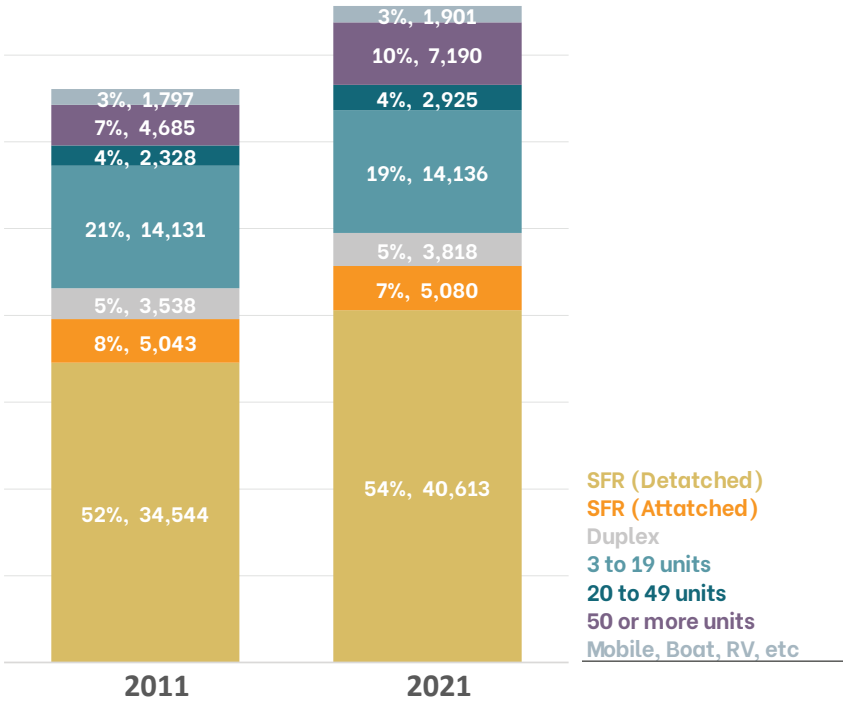
For most families, food is second only to housing in terms of household spending. Families that live in food deserts need to spend more time and resources than other families to access healthy food.

In this way, basic food and nutrition is more costly for low-income residents. (It is expensive to be poor.)

For urban areas, a census tract with a high proportion of low-income residents who are one half mile or more from a grocery store (excluding convenience stores and mini-marts) would be considered low-income, low-access (shown in orange outline). These are importantly the types of stores where the majority of SNAP benefits are used. However, many more tracts (shaded in blue) have a high proportion of residents living more than one-half mile from a grocery store. The especially impacts households with no vehicle access (7.3% of households in Vancouver). Tracts in Vancouver with higher proportions of POC are more likely to meet these food desert criteria.

### Housing and Mobility

The availability of affordable housing is the other key component to achieving the top desired community outcome. The current conditions, however demonstrate a market where communities are threatened by displacement and housing is growing farther out of reach for middle and low-income families. First-time homebuyers and even first time renters are encountering more challenges finding housing opportunities in Vancouver than previous generations.



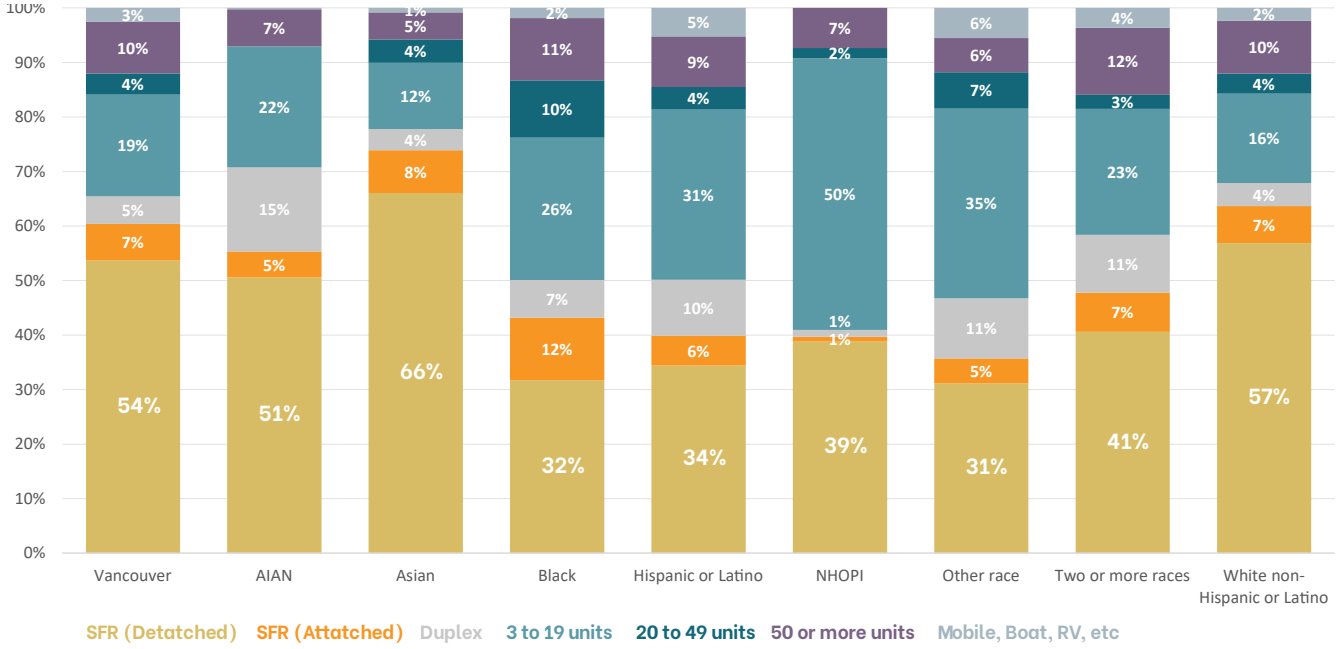
> ***"A lot of younger adults who just graduate high schools students. A lot of people have expressed their difficulty finding the first apartment. Often they have to find a partnership or stay on in one just because of housing." Equity Team July 18, 2023***

> ***"There are a lot of ways in which housing is difficult. I have lived in Lincoln for a long time. I couldn't buy the house I live in. I bought it for 130 K and now it is 650K." Equity Team July 18, 2023***

Vancouver's housing stock increased by 15% between 2011 and 2021, slightly lagging population growth of about 17% over the same period. The mix of housing types remained similar over the years, though there has been some shift within multifamily from smaller (3 to 19 units) towards larger developments of 50 or more units.

**Housing stock increased by 15% between 2011 and 2021, slightly lagging population growth of about 17% over the same period.**

Exhibit 17 Housing units by type, 2011 to 2021



Source: American Community Survey 5 year estimates 2007-2011 and 2017-2021

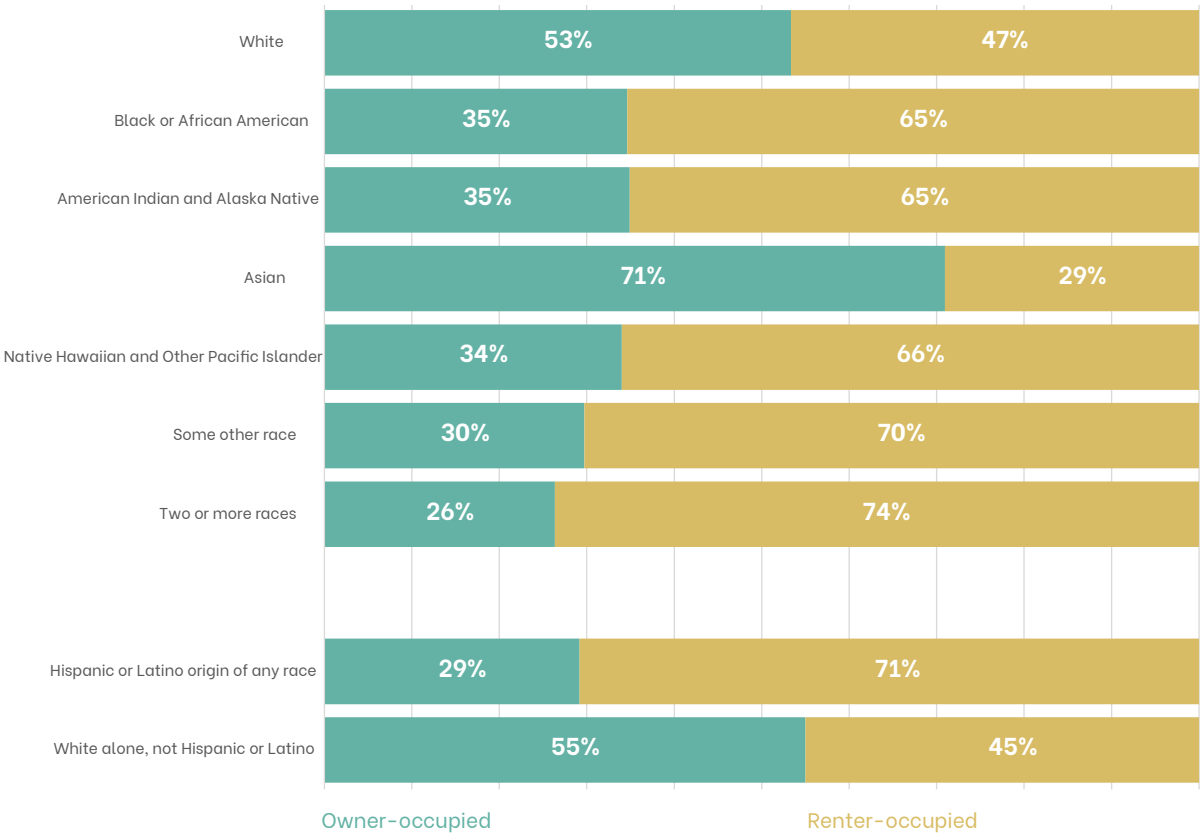
The occupants of housing by type varies by race. These race-based distinctions also likely reflect intersecting patterns in income, home ownership, and neighborhood-level differences in housing mix. Asian residents are disproportionately likely to live in detached single family housing. Black, Hispanic and Latine, and Native Hawaiian and Other Pacific Islander, and those of other or two or more races are more likely to live in multifamily. These patterns have been relatively stable since 2011.

**Asian residents are disproportionately likely to live in detached single family housing. Black, Hispanic and Latine, and Native Hawaiian and Other Pacific Islander, and those of other or two or more races are more likely to live in multifamily.**

Exhibit 18 Housing units by race, 2011 to 2021

Source: American Community Survey 5-year estimates 2017-2021

The limited definitions of single family and multifamily obscure important nuance in preferences for housing. Priority groups such as people living with disabilities, Native Americans, Pasifika, Black and Latine households may prefer units that are appropriate for multi-generational living or housing that can accommodate extended family members and/or caregivers. These types of units may be found in SFR or multifamily, and data is lacking on the true current stock of multi-generational appropriate housing.



> ***"Revisiting building codes is an important thing to consider. For example. if you are part of the Chuukese community you might need some intergenerational housing. Many get constantly evicted. How do we account for these cultural differences?" Equity Team July 18, 2023***

> ***"A lot of black communities and Latine often have family members come to live with them. It is because of housing challenges or sometimes people with disabilities want to live with others for support. Housing types should accommodate this." Equity Team July 18, 2023***

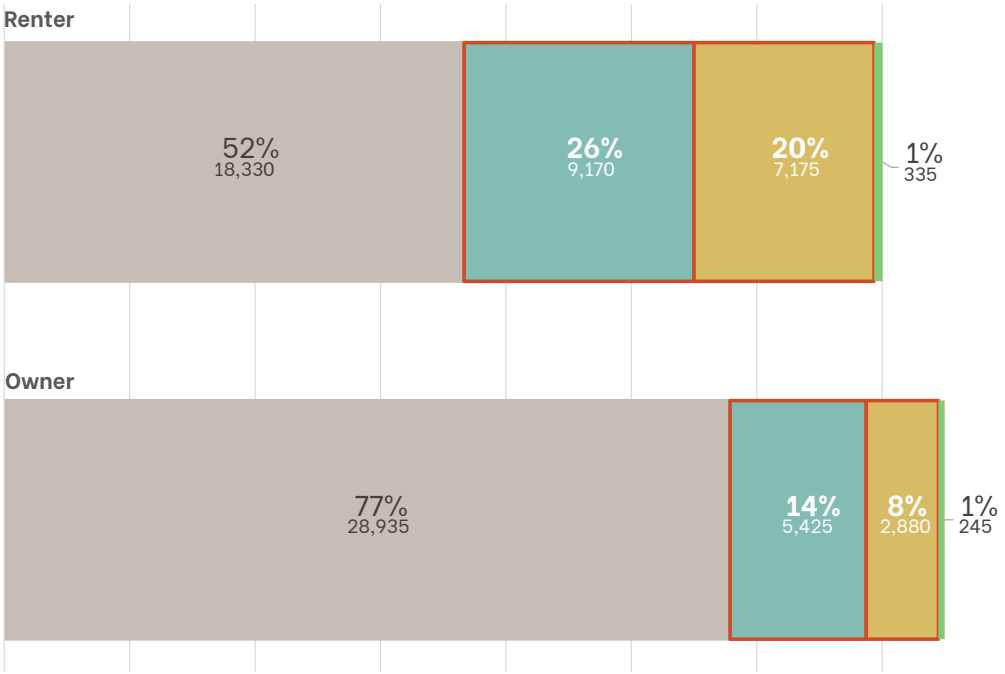
Housing ownership is historically an important means to wealth-creation. Of the estimated 75,663 households in Vancouver, about 51% reside in owner-occupied housing and 49% in renter-occupied housing. As a point of comparison, the owner-occupied housing rate across the State of Washington is approximately 64%. The predominance of the rental market in Vancouver in part reflects the relatively large number of young single-person households. Racial patterns in occupancy status largely reflect state-wide patterns with Asian and white households accessing housing ownership opportunities at much higher rates than other groups. However, these rates can vary greatly within white and Asian depending on country of origin, ethnicity, and time in the country. About 29% of Hispanic and Latine households of any race live in owner-occupied housing. These disparities are in part due to years of discrimination across sectors, such as education, labor markets, and housing, that has limited the earning power of households of color.

**Asian residents are the most likely to live in owner-occupied housing, roughly twice as likely as other POC groups.**

Exhibit 19 Owner-occupied and renter-occupied housing by race

Source: American Community Survey 5-year estimates 2017-2021

The average Vancouver home value is $474,617. Under the assumptions of a 20% down payment, 6.6% interest rate, and 30 year fixed mortgage, a household would have to earn over $110,000 annually to afford the average Vancouver home. The median household income estimated in 2021 for Vancouver was $67,462. The median gross rent reported in the 2021 ACS was $1,396, considered affordable to households earning $55,840 or more. Still, relative to Portland and other urban areas in Washington State, Vancouver housing is more affordable.



The number of households that are "cost-burdened" or spending an out-sized proportion of their monthly income on housing is an indicator of housing needs. HUD defines a household as cost burdened if they pay between 30% and 50% of their gross household income for housing, and severely cost burdened if

they pay more than 50% of their gross household income on housing. Overall, in Vancouver, 34% of households are considered rent burdened at the 30% threshold. Fourteen percent (14%) are burdened at the 50% threshold, or severely cost-burdened. These households are at a greater risk for displacement.

Renting households are more likely to be housing cost burdened than owner households. Forty-six percent (46%) of renter households pay more than 30% of household income on housing. Of those a large portion are paying more than 50% of income on housing. Initial deposit requirements can be a barrier for renters looking to access housing for the first time or moving between rentals. Equity team members have also reported that short-term rentals may be constructing the supply of available affordable long-term rentals.

**Nearly half (46%) of Vancouver's renting households are cost burdened, and 20% severely so.**

Exhibit 20 Owner-occupied and renter-occupied housing cost burden

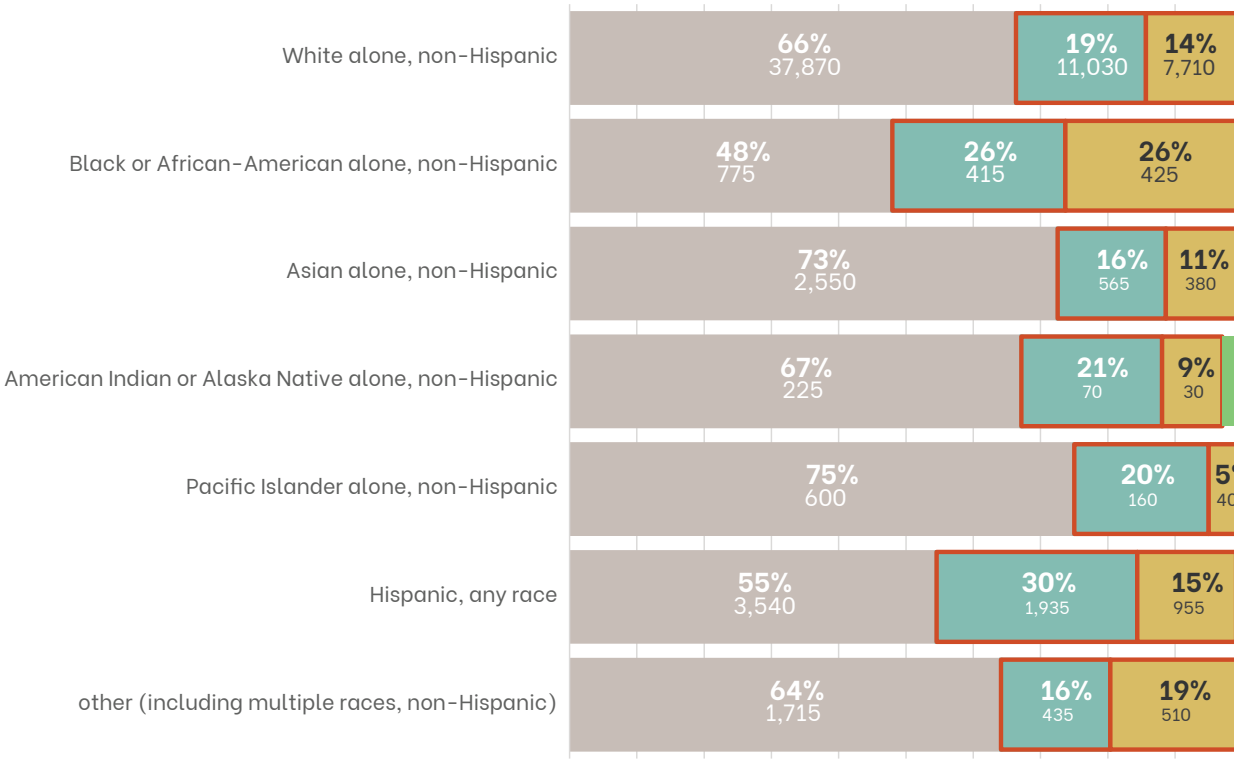
Source: CHAS (Comprehensive Housing Affordability Strategy) dataset based on the American Community Survey 5-year estimates 2015-2019

The likelihood of experiencing severe housing cost burden is much higher for low-income households. Sixty-seven (67%) of households earning 30% of the area median income or less are paying more than half their income for housing.

**Over two-thirds of the lowest income households are paying more than half their income for housing.**

Exhibit 21 Housing cost burden by income

| | Cost burden >30% | Cost burden >50% |
|---|---|---|
| Household Income <= 30% HAMFI | 79% | 67% |
| Household Income >30% to <=50% HAMFI | 72% | 25% |
| Household Income >50% to <=80% HAMFI | 42% | 3% |
| Household Income >80% to <=100% HAMFI | 14% | 2% |
| Household Income >100% HAMFI | 4% | 0% |
| **Total** | **34%** | **14%** |



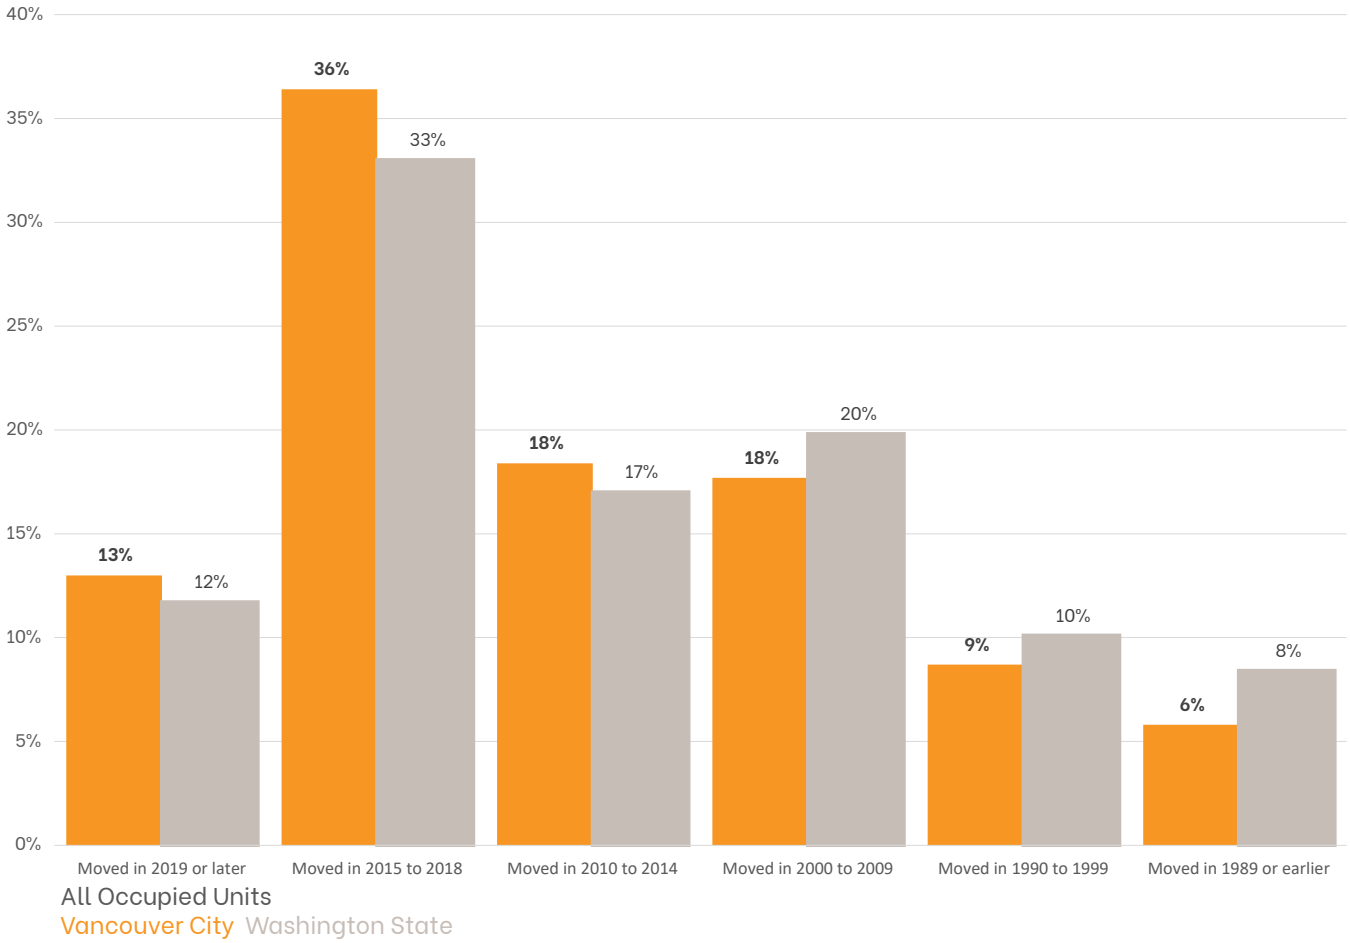
Source: CHAS (Comprehensive Housing Affordability Strategy) dataset based on the American Community Survey 5-year estimates 2015-2019

The experience of living under a high housing cost burden also displays patterns according to race and ethnicity. Fifty-two percent of Black and African Americans in Vancouver are paying more than 30% of their income for housing costs. Forty-five percent of Hispanic residents of any race are also cost-burdened at the 30% threshold. Non-Hispanic Asians and non-Hispanic Pacific Islanders are among the groups least likely to be cost burdened.

Black and Hispanic/Latine headed households are the most likely to be experiencing housing cost burden and therefore displacement risk. Exhibit 7 Population by Race, 2010 to 2021 on page 23 shows that the Black population has been on the decline. However, as the quote below and Exhibit 5 suggest, the Black population may be moving to areas just outside City limits that are annexation possibilities.

> ***"The decline of the Black population may be attributed to people moving to more affordable housing outside city limits. Areas currently being considered for annexation include higher than average BIPOC populations. The data reveal the number of Black residents is declining, but experience suggests otherwise." Equity Team July 18, 2023***

Exhibit 22 Housing cost burden by race

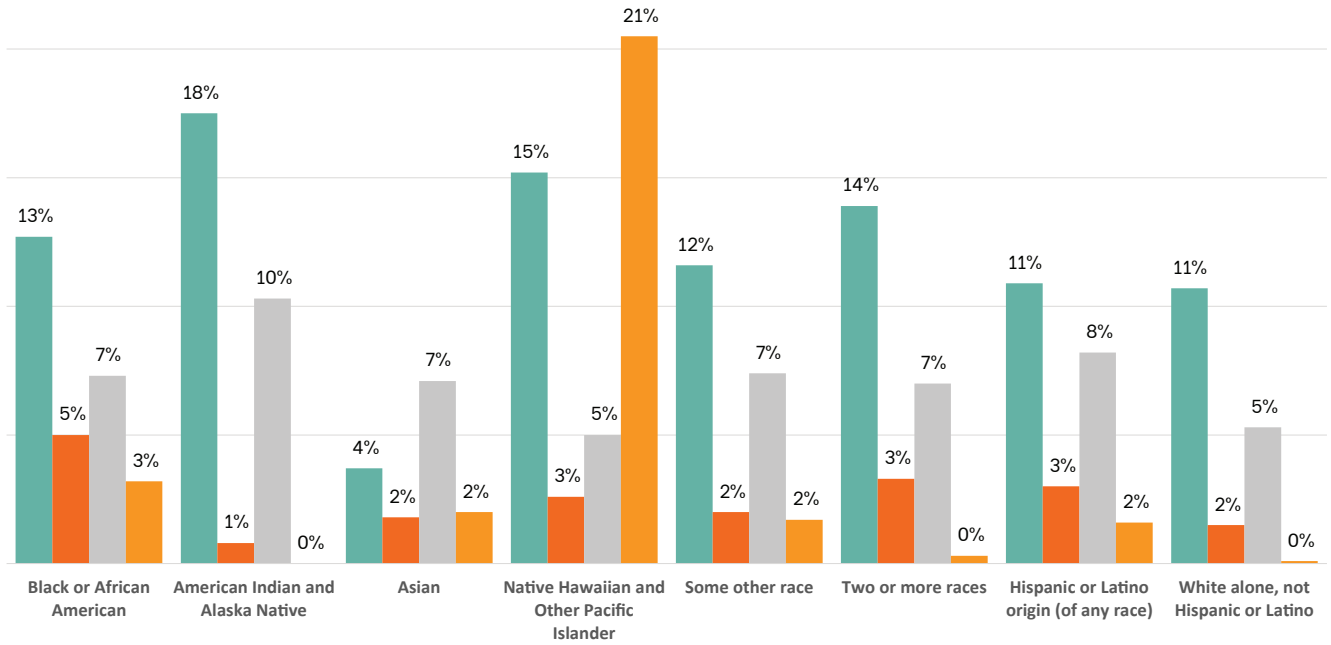


Source: CHAS (Comprehensive Housing Affordability Strategy) dataset based on the American Community Survey 5-year estimates 2015-2019

Compared to Washington State overall, Vancouver residents tend to be more recently moved into their current residence, whether owner- or renter-occupied. The years 2015 to 2018 in particular saw a relatively high number of move-ins to Vancouver, much of it owner-occupied. This three year period alone accounts for over one-quarter of owner-occupied housing in Vancouver.

**Compared to the State, Vancouver residents are slightly more likely to have moved recently.**

Exhibit 23 Year householder moved into current residence, Vancouver and Washington State (all tenure types)



Source: American Community Survey 5-year estimates 2017-2021

Asian and White residents are the most likely to reside in the same place in Vancouver they did in the past year. Other racial groups have higher geographic mobility, through the place of origin varies. For example, American Indian and Alaska Native residents are the most likely to have moved from another place in the same county and the most likely to have moved from another state. Twenty-one percent of Native Hawaiian or Pacific Islander residents have moved from abroad in the past year.

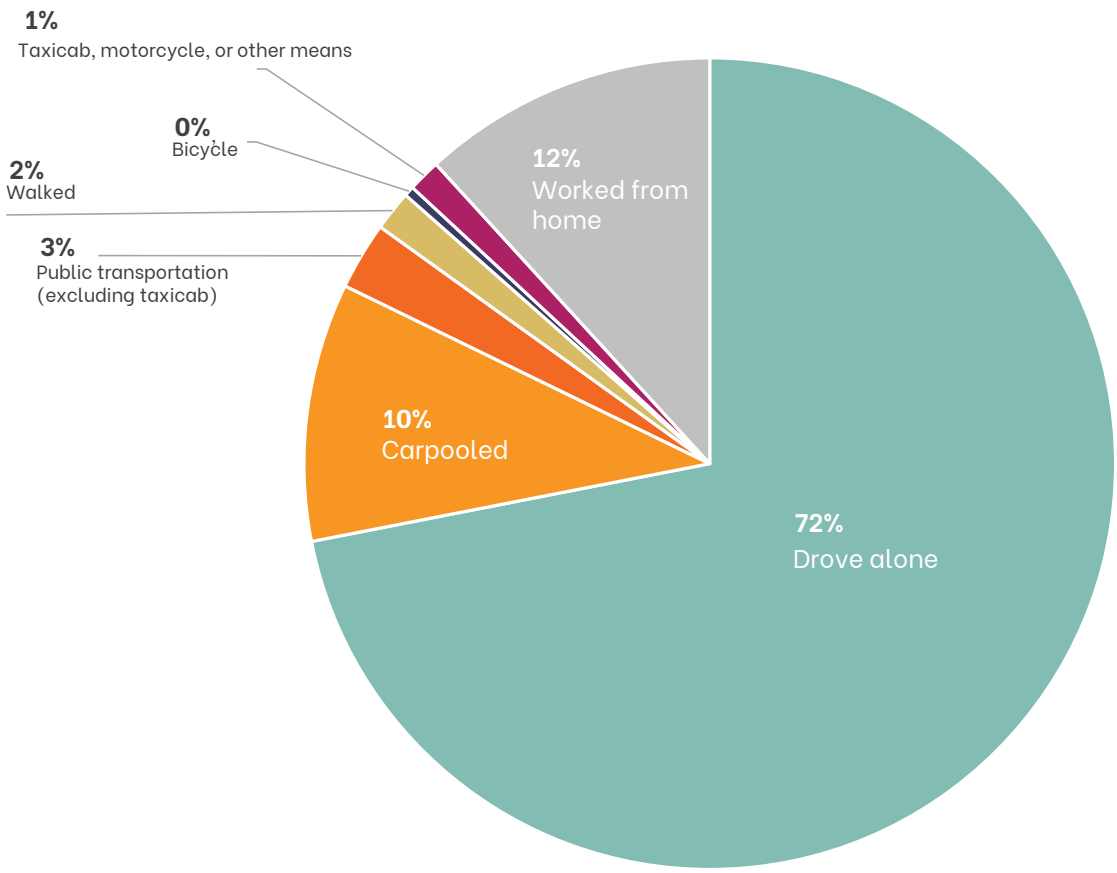
**Native Hawaiian and Other Pacific Islanders in Vancouver are one of the fastest growing populations and likely to have moved from abroad.**

Exhibit 24 Geographic Mobility, residence one year ago by race

Source: American Community Survey 5-year estimates 2017-2021

## Employment and Transportation to Work

Of the population of Vancouver aged 16 and older, 65% are in the labor force, and 61% are employed. The city had an estimated unemployment rate of 5.5% in 2021, roughly the same as statewide figures. People identifying as Native American and Alaska Native (8.5%); of two or more races (8.3%); and Black or African American (8.0%), experience higher rates of unemployment. Women with children under 6 years old only (9.6%) and children under 6 and children between 6 and 17 years (21.4%) also experience higher rates of unemployment. It is important to note that the data source covers a five-year span 2017-2021 which contains the employment impacts of the COVID-19 pandemic which disproportionately affected women workers and workers of color. Emerging data and evidence also indicate that recovery and access to jobs in the post-pandemic workplace has been biased against Black and Indigenous workers.



Educational services (21%), and health care and social assistance; Retail trade (12%); Manufacturing (10%); Arts, entertainment, and recreation, and accommodation and food services (10%), are the top four industries by employment.

According to 2019 LEHD Origin Destination Employment Statistics (LODES), only 35% of working Vancouver residents also work in Vancouver. Twenty-two percent (22%) have their place of employment in Portland, OR. The remaining 43% have places of employment nearby such as Camas (3%) and as far away as Seattle, WA (2%). It is important to note the LEHD data is based on administrative records such as unemployment insurance reporting connecting place of residence and place of employment. These numbers reflect both commuters and those who are working remotely. They also do not include self-employed workers who are more likely to work from home.

Unlike the LEHD, the American Community Survey is based on self-reported respondent experiences. Based on 2021 ACS data, the Vancouver workforce largely commutes by car, 72% driving alone and another 10% carpooling. Twelve percent of the workforce works from home.

**83% of workers take a motorized vehicle to work, alone or using a taxi or carpool.**

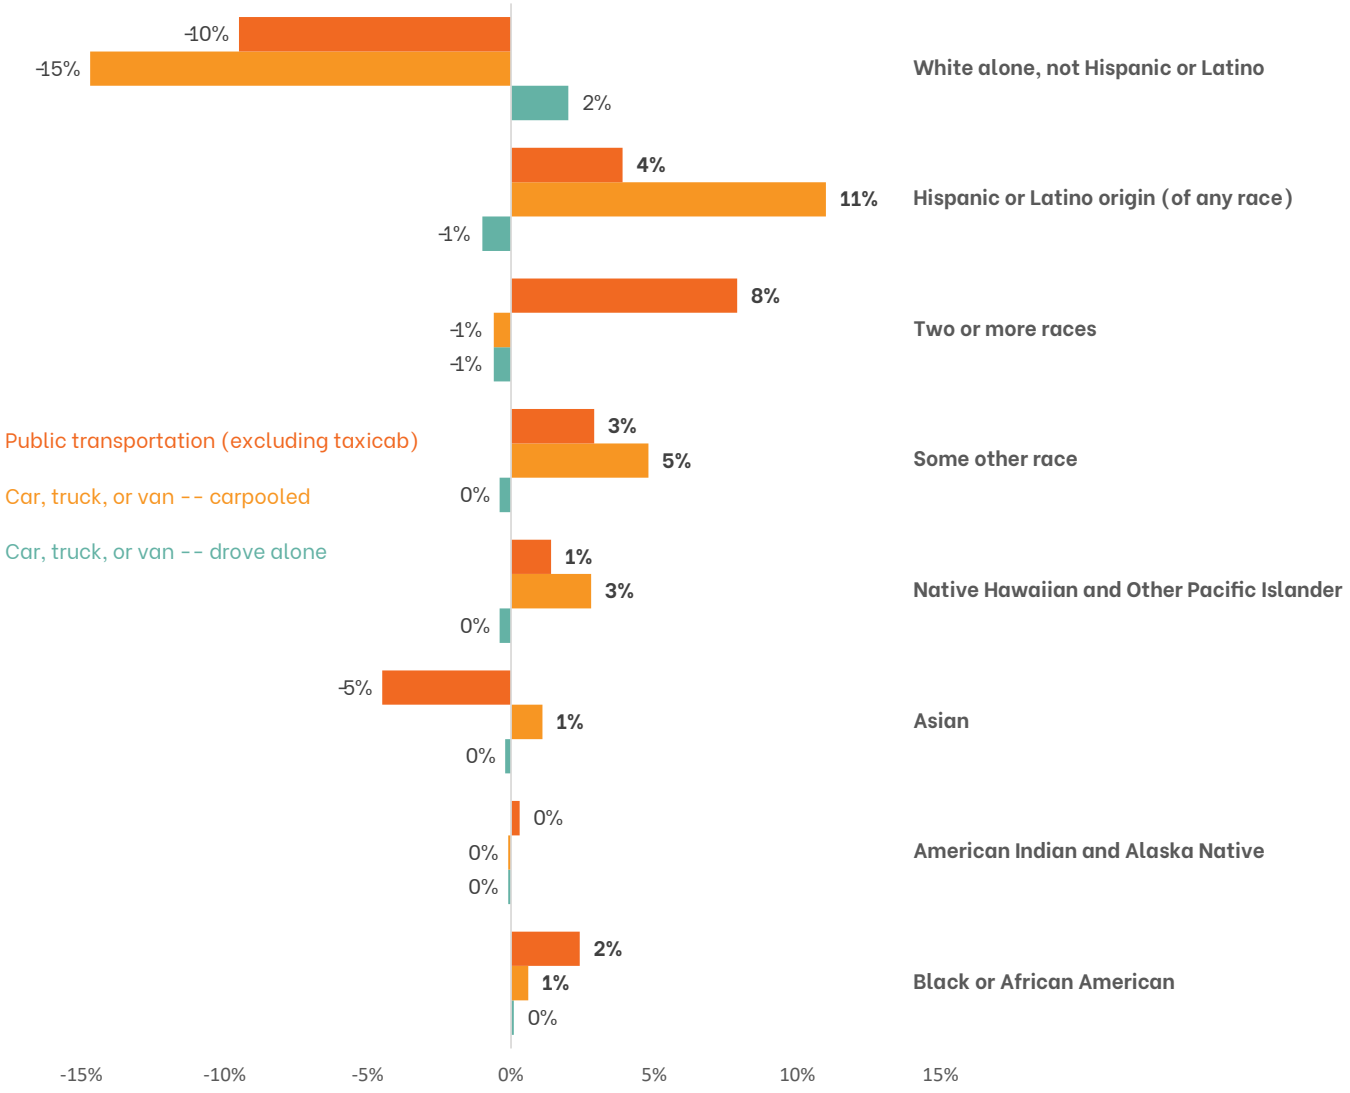
Exhibit 25 Means of transportation to work for workers aged 16 and over

Source: American Community Survey 5 year estimates 2017-2021

Relative to their share of the overall population of workers, white workers are the least likely to take public transportation or to carpool, and the most likely to drive alone. Asian workers are also unlikely to take public transportation relative to their share of the total population, but slightly more likely to carpool. The groups most likely to use public transportation are those of two or more races, some other race or Black or African American. There is also a pattern by earnings. Workers earning $24,999 a year or less are more likely to take public transportation than would be expected by their share of the population, and higher income workers are less likely. Carpooling is also relatively more common for workers in the lower earning tiers. Workers around the middle income tiers are the most likely to drive alone to work.

**The likelihood of using public transportation to go to work decreases as income increases.**

Exhibit 26 Indexed means of transportation to work for workers aged 16 and over, by earnings in the last 12 months



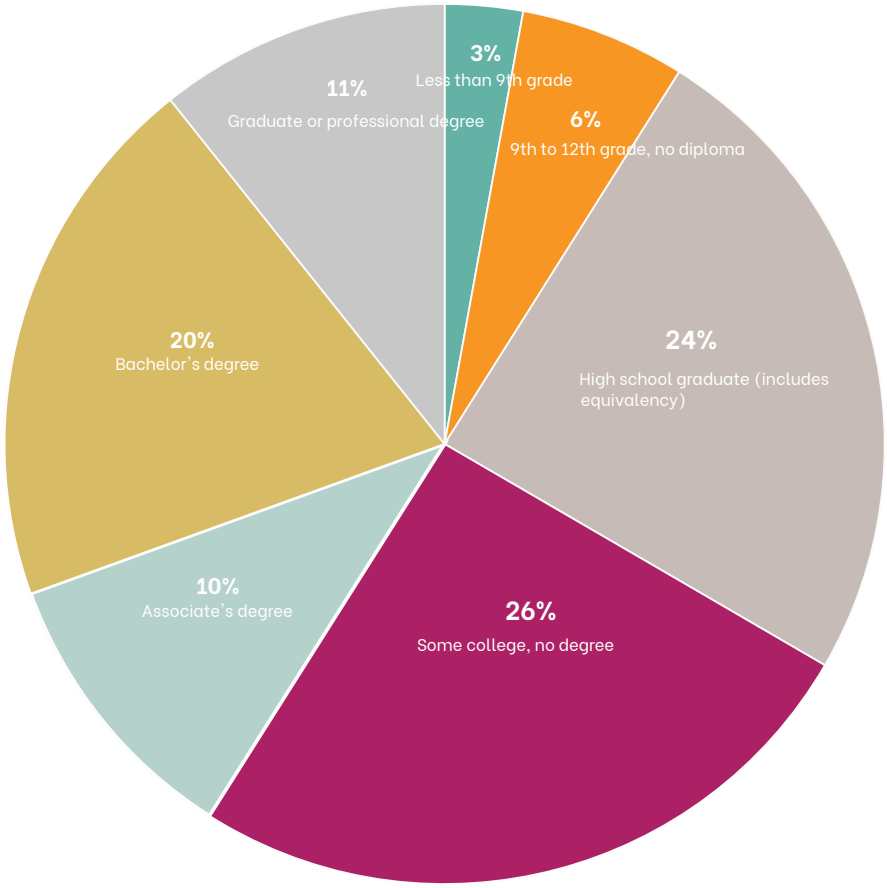
Note: A value of 0 indicates the share of that group using that means of transportation is equal to their share in the overall population)

Source: American Community Survey 5 year estimates 2017-2021

**The likelihood of using public transportation to go to work is higher among people of color.**

Exhibit 27 Indexed means of transportation to work for workers aged 16 and over, by race and ethnicity in the last 12 months

Note: A value of 0 indicates the share of that group using that means of transportation is equal to their share in the overall population)



Source: American Community Survey 5 year estimates 2017-2021

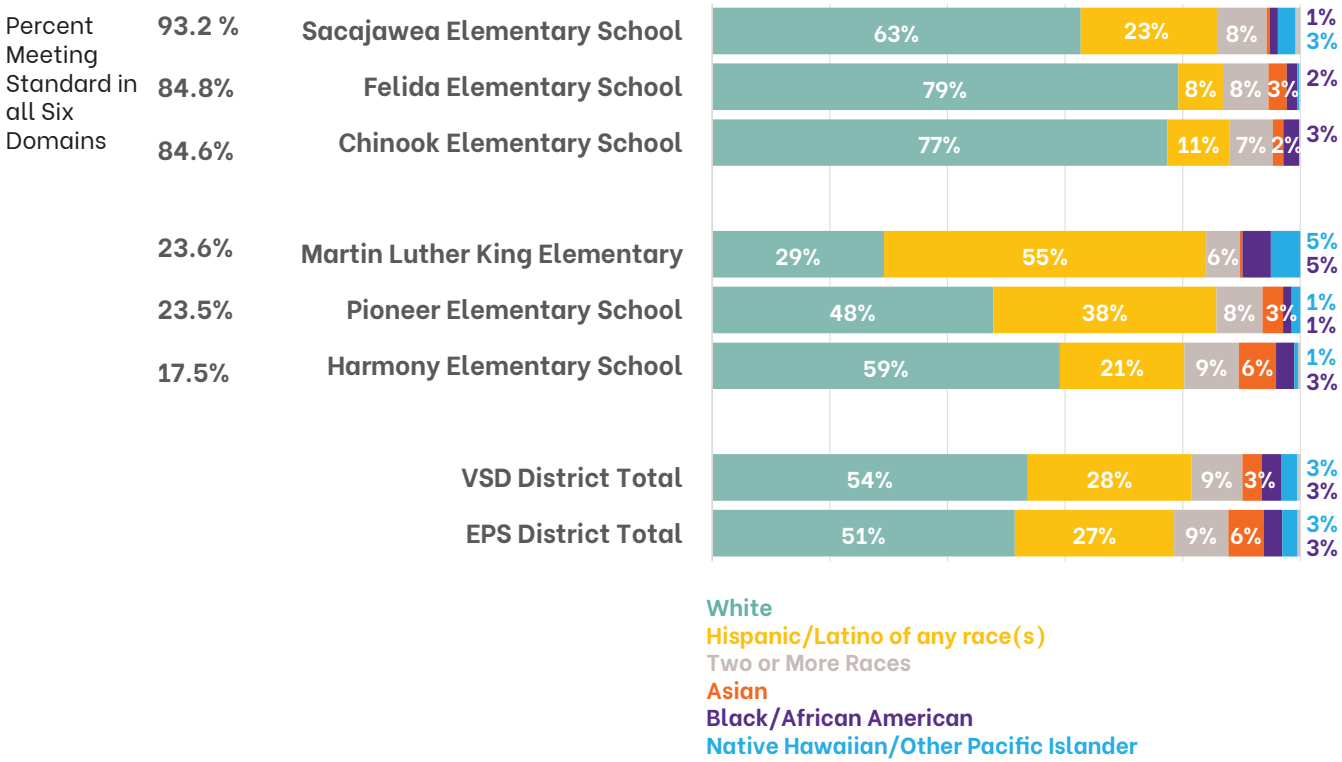
## Education Access

Ninety-one percent (91%) of Vancouver residents aged 25 or older have a high school diploma or higher level of education. Thirty-one percent (31%) have a Bachelor's degree or higher. One-quarter of the population age 25 or older has some college but no degree and another quarter terminated their education at high school completion or earlier.

**More than one-quarter of residents terminated their education at high school graduation or earlier. Another quarter have some college, but no degree.**

Exhibit 28 Educational Attainment Among Residents aged 25-years and older

Source: American Community Survey 5-year estimates 2017-2021



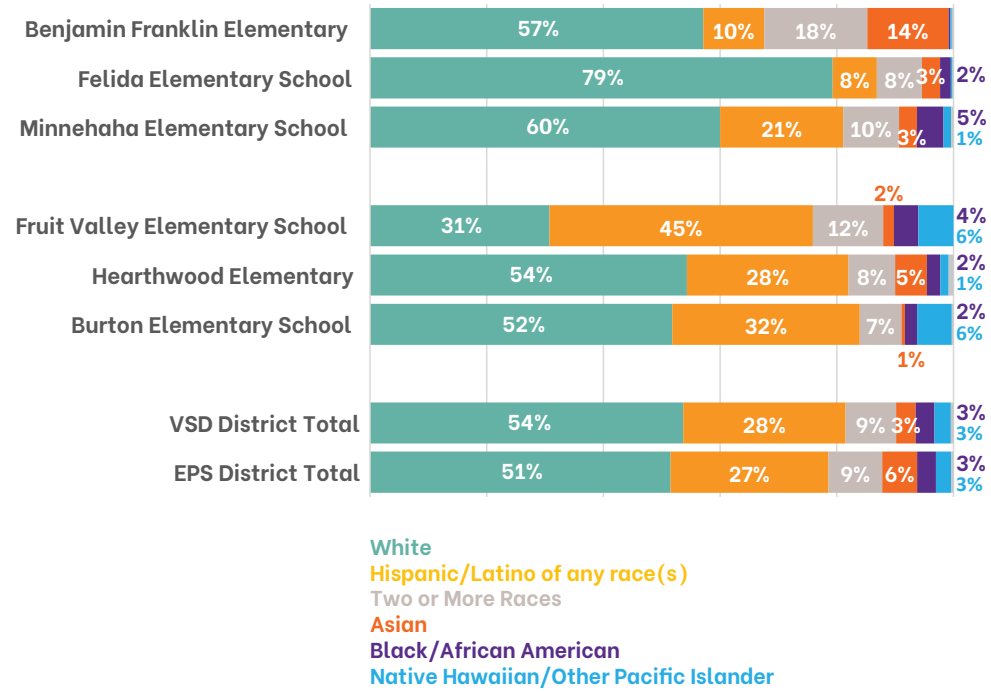
The City of Vancouver is served by two school districts, Vancouver School District and Evergreen Public Schools, both of which also serve portions of Clark County outside of city boundaries. Access to high-quality education within the city and early learning and

childcare system can vary by location within the city and race and ethnicity. The Washington State Office of the Superintendent of Instruction uses an observational whole child assessment to document kindergarten readiness. Six areas of development are assessed: social-emotional, physical, cognitive, language, literacy, and mathematics. Exhibit 29 shows the race and ethnicity composition of the elementary schools with the highest and lowest rates of kindergarten readiness, as measured by the proportion of students observed to be at standard in all six domains. As these assessments are performed early in the school year, they largely reflect a student's experiences and learning before entering public school (rather than school performance per se). At the primary level, school assignments are neighborhood-based in both districts unless a specific exception is granted. Vancouver School District will begin offering two elementary-level school choice programs beginning in the 2023-24 school year. District-wide demographics for Vancouver and Evergreen provide reference points.

The rate of students entering kindergarten fully ready in the top performing school is over five times that of the lowest performing school. White students are much more likely to be in the schools with the highest readiness levels where they comprise about two-thirds to three-quarters of the student population. Hispanic and Latine students are much more likely to be accessing schools in the bottom tiers of kindergarten readiness rates.

**There is great disparity in rates of kindergarten readiness among Vancouver elementary schools which are largely neighborhood based.**

Exhibit 29 Demographics of Top and Bottom Three Schools by Kindergarten Readiness, 2021-22



Source: OSPI, 2023

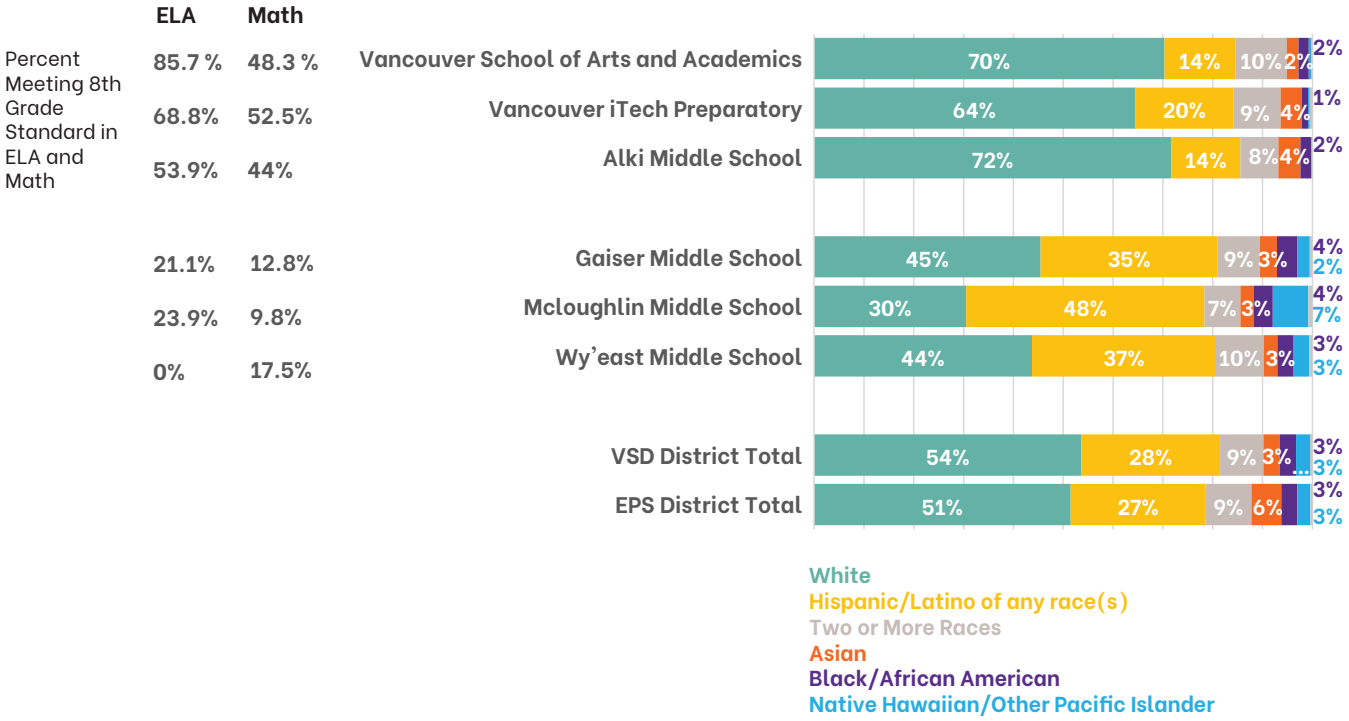
These demographic trends are slightly more pronounced by third grade as shown by proportions of students meeting standard in English Language Arts and Math in Exhibit 30. These assessments are likely to reflect the experiences and resources available to students in the school environment as well as in homes and neighborhoods.

**Demographic trends in school performance tend to persist through 3rd grade.**

Exhibit 30 Demographics of Top and Bottom Elementary Schools by 3rd Grade Assessment, 2021-22

| | ELA | Math |
|---|---|---|
| Percent Meeting 3rd Grade Standard in ELA and Math | 65.5 % | 65.5 % |
| | 67.9% | 59.8% |
| | 56.3% | 65.3% |
| | 12.9% | 12.9% |
| | 24.5% | 0% |
| | 0% | 19.6% |

Source: OSPI, 2023



Hispanic/Latine and Native Hawaiian/Other Pacific Islander students continue to be disproportionately attending lower performing schools according to 3rd grade reading and math standards.

School choice, or the ability to attend schools without neighborhood boundaries, is more prevalent in upper levers of education, beginning in the middle school years. The top two performing schools by state 8th grade English Language Arts and Math standards are choice schools with a application processes that prioritize residents in the Vancouver School District, but also admit students from neighboring school districts. While admissions processes are often intended to select students based on merit and demonstrated interest in more specialized education in STEM or Arts, for example, they can unintentionally end up reflecting privilege based on race, income, and other factors outside of student merit and interest. Even in Vancouver's iTech program where the admissions process includes a lottery, white students

are overrepresented compared to district demographics, while Hispanic/Latine, Black, and Native Hawaiian/Other Pacific Islander students are underrepresented.

**White students are overrepresented in the highest performing schools by 8th grade standards.**

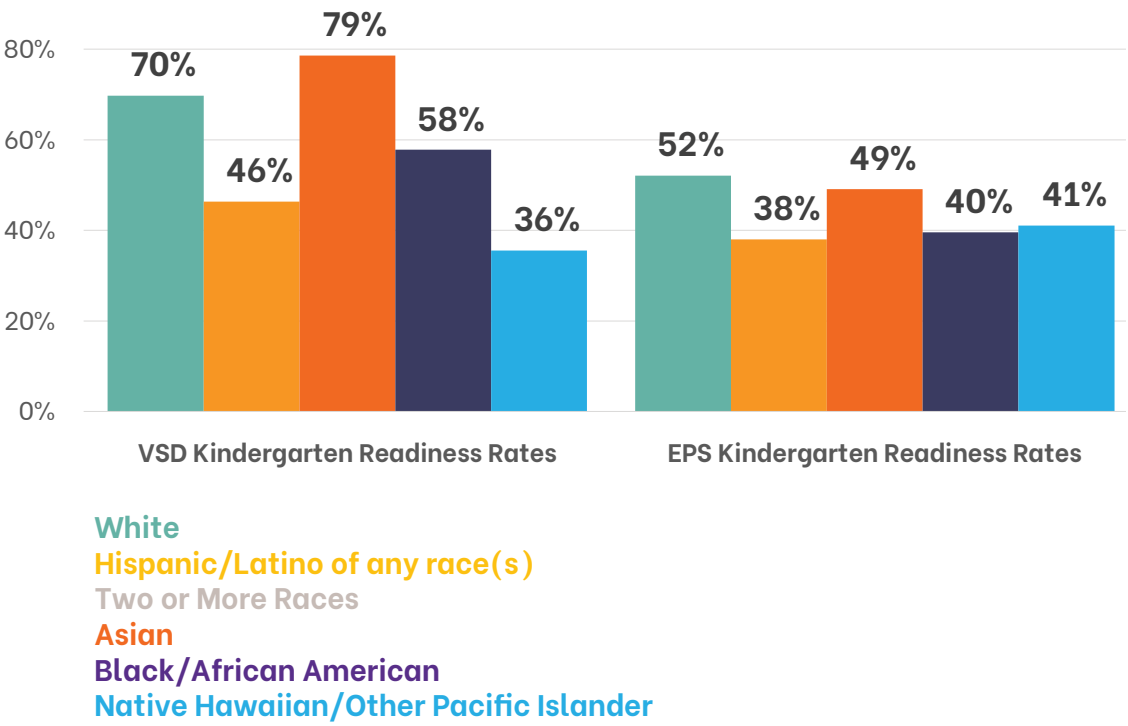


Exhibit 31 Demographics of Top and Bottom Middle Schools by 8th Grade Assessment, 2021-22

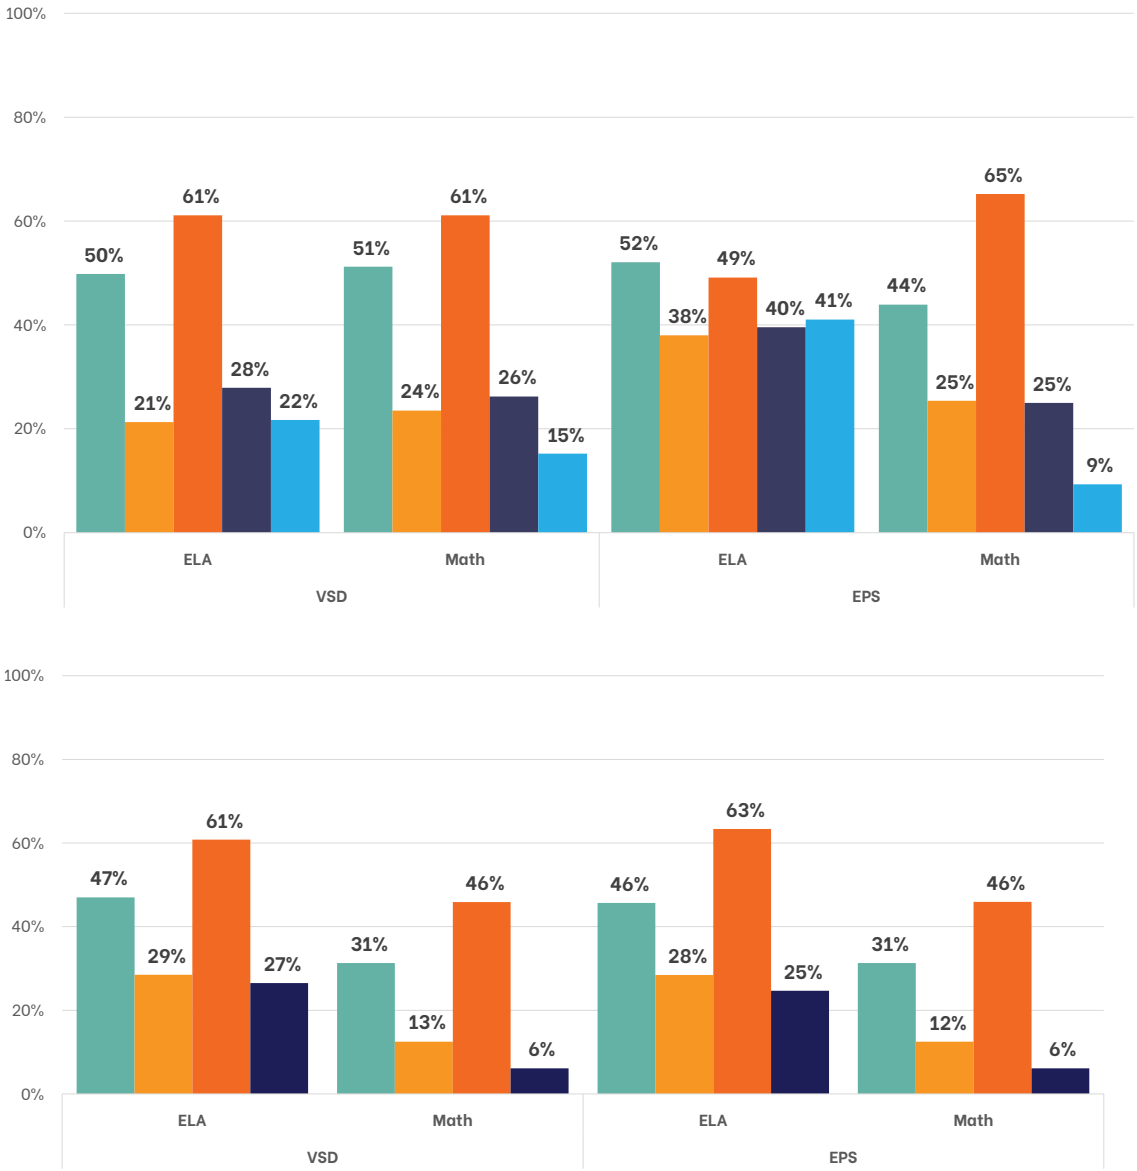
Source: OSPI, 2023

## Race-based gaps in kindergarten readiness are not as stark as school/neighborhood based gaps

Exhibit 32 Demographics of Students Meeting all Six Domains of Kindergarten Readiness, 2021-22



Note: Scores for American Indian/ Alaskan Native students and students of Two or More Races in both grades, and Native Hawaiian and Other Pacific Islanders in 8th grade are suppressed by OSPI due to small numbers and not shown here.
Source: OSPI, 2023

Though some slight variation in school readiness according to race and ethnicity are present upon entry to kindergarten (Exhibit 32), a much greater gap is apparent by third and eighth grades (Exhibit 33).

**Asian and white students in the Vancouver and Evergreen School Districts are the most likely to meet 3rd and 8th grade standards.**

Exhibit 33 Demographics of Students Meeting Standard by 3rd Grade and 8th Grade Assessments, 2021–22

Note: Scores for American Indian/ Alaskan Native students and students of Two or More Races in both grades, and Native Hawaiian and Other Pacific Islanders in 8th grade are suppressed by OSPI due to small numbers and not shown here.
Source: OSPI, 2023

### Parks and Open Space Access

There are gaps in park access, defined as a 10-minute walkshed, throughout the City of Vancouver. Existing parks are smaller and access gaps are more common in the eastern parts of the City including East Mill Plain. The far western reach of the City between the Columbia River and Vancouver Lake also shows a significant gap in park access.

**There are significant pockets of Vancouver outside of 10-minute walk to parks.**

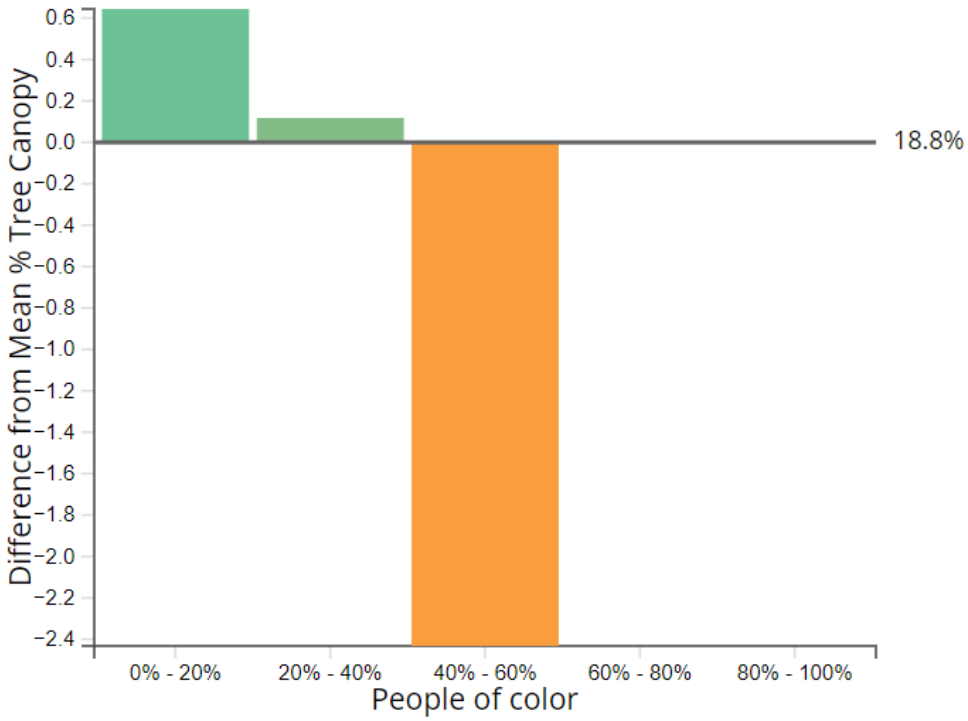
Exhibit 34 Areas within walkable access of parks

Source: OSPI, 2023; City of Vancouver, 2023.

Vancouver's urban tree canopy coverage is estimated at about 19%. Other cities in Washington that have assessed their urban tree canopy have an average coverage of 32%, while the recommended canopy for maximum benefits is 40%. Urban tree canopies help regulate temperatures, reduce air pollutants, and preserve property values among many other social, economic, and aesthetic benefits. Tree canopy is unevenly distributed in the City, with some neighborhoods enjoying 40% coverage or more (Dubois Park, South Cliff) and others 12% or lower (Bennington, Columbia Way, Esther Short).

**Vancouver's tree canopy coverage is about 19%. However, coverage in individual neighborhoods ranges from 9% to 47%.**

Exhibit 35 Percent tree canopy coverage by neighborhood



| Neighborhoods | Tree Canopy % | Neighborhoods | Tree Canopy % |

Analysis from the Tree Equity Score project demonstrates that block groups housing higher percentages of POC have mean tree canopy 2.2% lower than the citywide average.

**Block groups with higher proportions of people of color have 2.4% less tree canopy than the average for the city.**

Exhibit 36 Tree canopy coverage in block groups with higher proportions of people of color

Note: Each bar represents the mean tree canopy % for block groups within the specified range of people of color. The amount above or below the thick horizontal line indicates the difference from the area-wide mean canopy %.
Source: Tree Equity Score, 2023. treeequityscore.org/reports/place/vancouver-wa/#13.43/45.61567/-122.63495

Tree cover is densest in park areas, in central neighborhoods with high cover like Dubois and South Cliff, and along public rights of way. Tree canopy is very sparse along the waterfront in Columbia Way and stretching through Fruit Valley to the westernmost parts of the city. To the east and northeast, pockets around East Mill Plain and Bennington and North Image have very low tree cover.

**Parks, rights of way, and certain residential neighborhoods in central Vancouver have the most dense tree canopy.**

Exhibit 37 Tree canopy coverage

### Criminal Legal System Outcomes

The Equity Team has prioritized reparative policies for a racist history in land use, housing, and the criminal legal system. A few key statistics from recent analysis in the City of Vancouver and Clark County highlight race-based disparities, though a full accounting of the criminal legal system is beyond the scope of this analysis.

The 2021 Report to the Washington Supreme Court, Race and Washington's Criminal Justice System examined disproportionate use of force outcomes in the City of Vancouver as a case study. The report found that "For uses of force in 2020, relative to Vancouver City demographics, a Black person is 10.6 times more likely than a White person to be the subject of police use of force; a Pacific Islander is 2.7 times more likely. A Latina/o person is about as likely to be the recipient of force as a White person, and an Asian person and an Indigenous person was 0.7 times as likely as a White person to be subjected to force" Vancouver had the highest disproportionality in use of force on Black people among the four case study cities of Seattle, Spokane, Tacoma, and Vancouver.

The report also demonstrates race and ethnicity-based biases in the criminal legal system at the state and county level from policing, prosecution, sentencing, incarceration and re-entry. Counties with lower proportions of Black residents are found to have higher disproportionalities. For example, "Clark County, where 86.1 percent of the population is White and 2.4 percent is Black, the percentage of Black drivers charged with DWLS3 (Driving with License Suspended) between 2010-2020 comprised roughly five to six times their percentage in the county's population and showed an upward trend during the decade. In comparison, the percentage of charges brought against White drivers reflected well below the 86.1 percent of White residents living in Clark County and showed a downward trend over the same ten-year period."

# Engagement Themes

As part of Our Vancouver, the City of Vancouver's comprehensive plan update process, the City began conducting outreach and engagement to the community in early 2023 to gain a better understanding of planning priorities among community members. Outreach was primarily conducted as part of existing City events from the spring through fall of 2023. More information about this outreach can be found on the project's website: www.beheardvancouver.org/plan2045. Common themes that emerged during outreach include housing, transportation, accessibility of services, and parks and green space.

## Housing

Housing-related comments were one of the most common comment themes that emerged during engagement. Community members expressed the need for more housing, more options for different types of housing, and the need to provide housing for those experiencing homelessness and supportive services for those who are at risk of losing housing. Community members also expressed concerns about the affordability of housing and the increasing cost of housing, especially compared to the cost of living.

### Relevant Equity Analysis Findings

- Housing and Mobility (pg 36)

## Transportation

Many community members commented on transportation issues, including the state of repair of roadways, the need for better and more efficient transportation options, and safety improvements for pedestrians and bicyclists. Suggestions for improved transportation options included improving the viability and efficiency of bus

transit compared to driving, expanding C-Tran routes (including to new developments, Battle Ground, and to Portland via light-rail). Community members also pointed to the lack of bicycle safety in various parts of the City as reasons why they feel compelled to drive to frequent destinations like the grocery store or school. Lack of pedestrian safety and ADA accessibility on sidewalks was cited as a barrier to using local bus stops. Some community members also cited speeding as a pedestrian and bicycle safety issue.

Community members also expressed interest in increased micro-mobility options like scooters and e-bike hubs.

**Relevant Equity Analysis Findings**

- Employment and Transportation to Work (pg 45)

## Accessibility of Services

Community members expressed support for walkable neighborhoods with more amenities. Community members frequently identified large or unused parking lots as opportunities to add valuable retail, housing, or green space. Desire for locally-owned, affordable small businesses was also a common theme in responses. Community members also expressed a desire for more third spaces in their communities (i.e., spaces to meet others outside of where they work or live).

**Relevant Equity Analysis Findings**

- Food Access (pg 33)
- Education Access (pg 50)

## Parks and Green Space

Community members frequently commented that they feel a sense of belonging and connection to the various public spaces and amenities in Vancouver. Participants mentioned city parks, community centers, the downtown library, farmers markets, downtown businesses, and the waterfront as their favorite places to find and build community. People also expressed desire for more paths and trails, facilities and activities for youth (including indoor activity spaces), and gardens and green spaces. A few people identified specific parks like Chelea Anderson Memorial Park as

great examples of what they would like to see in other parts of the City, including East Vancouver. Comments about increasing the tree canopy across the city were also common, citing heat and lack of shade as concerns.

**Relevant Equity Analysis Findings**

- Parks and Open Space Access (pg 57)

## ENDNOTES

1 As noted in HNA, 2022 data updates the owner-occuped housing rate to 52%.

# Memorandum

**To:** City of Vancouver

**From:** Tyler Bump, Mike Wilkerson, Jennifer Cannon, Kaitlin La Bonte, Justin Sherrill, Mackenzie Visser, Jamil Ditter; ECOnorthwest

**CC:** Nicole McDermott, Brian Carrico; WSP

**Subject:** FINAL Housing Needs Assessment, City of Vancouver Comprehensive Plan Update

**Date:** April 2024

## Acknowledgements

ECOnorthwest prepared this report in partnership with WSP and City staff for the City of Vancouver. ECOnorthwest and the City of Vancouver thank everyone who helped provide input on housing challenges and helped our team develop the Housing Needs Assessment for the Vancouver Comprehensive Plan Update project.

# Executive summary

## Community demographic and household trends

**Vancouver and the region have grown substantially over the last two decades and are projected to continue to grow over the 20-year planning period (2025–2045).** From 2000 to 2023, Vancouver's population even with annexation grew by just over 56,000 residents, or 39%, which is higher than Washington state (35%) but lower than Clark County as a whole (53%). The pandemic may have shifted or accelerated migration patterns and housing preferences permanently, and Portland outmigration has contributed to Clark County's rapid growth.

**Vancouver's population is getting older.** The share of Vancouver residents aged 65 years and older increased from 13% in 2011 to 19% in 2021, a higher share than in Clark County overall. At the same time, the share of residents under 20 years fell from 25% to 20% of the population.

**Vancouver became more racially and ethnically diverse over the last decade.** From 2011 to 2021, the Hispanic and Latino population increased by two percentage points (from 9% to 11%), the Asian population rose by two percentage points (from 6% to 8%), and the Black population grew by two percentage points (from 3% to 5%).

**Vancouver households tend to have lower incomes compared to Clark County.** The city's median household income is around $70,000 per year, roughly $14,000 less than the countywide median of $84,000. In addition, a larger share of Vancouver households earns less than $75,000 per year, and a smaller share earning more than $100,000 annually than the County overall. As of 2023, the area median income (AMI) determined by the US Department of Housing and Urban Development (HUD) for the Portland-Vancouver-Hillsboro Metropolitan Statistical Area (MSA) was $114,400 for a family of four.

**Vancouver's average household size decreased slightly from 2.4 persons in 2011 to 2.3 in 2021 and the overall share of households with children declined.** The share of one- and two-person households increased, while three- and four-person households decreased. In addition, the percent of households with children dropped by seven percentage points in Vancouver between 2011 and 2021.

**About a third of Vancouver workers live in Vancouver. The most common workplace destination for Vancouver residents is Portland while the most common area Vancouver workers reside (besides Vancouver) is unincorporated Clark County.** As of 2021 the City of Vancouver had a higher jobs-to-housing ratio than the County's goal of 1:1, with 1.18 jobs for every household compared to 0.82 jobs for every household in Clark County (see Vancouver Economic Opportunity Analysis for additional detail). This trend is reflective of Vancouver's role as an employment hub but could also indicate a shortage of housing options available for Vancouver workers.

## Housing conditions and trends

**Housing costs have rapidly increased.** Both rental and ownership costs have far outpaced income growth in the city, with median home prices nearly tripling and average rents increasing 60% from 2012 to 2023. The widening gap between housing costs and incomes indicates declining affordability in Vancouver's ownership and rental market. Likewise, rents in Vancouver are rising faster than income, increasing 60 percent since 2011 while income has not increased proportionately (rising only 43 percent from 2011–2021 in nominal dollars or 19 percent when adjusted for inflation). Average rents have also increased in the city with a 56% change from $1,070 in 2012 to $1,673 in 2023, surpassing rents in Portland.

**Just under half of Vancouver households rent their homes (48%)** and over half (52%) own their homes, which is a lower homeownership rate than Clark County (65%) and the state but similar to other nearby cities.

**Similar to other communities, cost burdening tends to be higher for renters compared to homeowners.** For these renters, cost-burden rates increased slightly from 2011 to 2021 and now sit at 57% overall, with 27% severely cost-burdened. With over one-quarter of renters spending more than half of their income on housing (severely cost-burdened), this highlights the need for more affordable rental units and homeownership opportunities, particularly for lower-income households in Vancouver.

**Vancouver had the lowest share of remote workers[1] overall, at just 17%, compared with Hillsboro, at 25%, and Portland, at 29%. However, this share is substantial enough to monitor and track to help understand how this might affect housing needs.**

**Vancouver's dominant type of housing is single-detached housing, which comprises more than half of the of the total number of housing units in the city.** However, Vancouver has a lower share of single-detached housing (at 56%) compared to the County (at 72%). The remaining housing stock in Vancouver includes an estimated 27% multifamily housing and 18% "plex housing" which is attached units up to fourplexes (according to U.S. Census data, 2021).

**Vancouver has a higher share of multi-unit housing than the county overall, with slightly under half (around 44%) of total housing units in structures including more than one housing unit (such as a single-family detached housing). Permit data analysis shows a steady increase in multifamily development in recent years.** Nearly 80% of new multifamily housing developments permitted from 2019–2021 had greater than five units. This points to opportunities to diversify the housing mix, especially expanding middle housing options like duplexes, triplexes, and townhomes.

**Racial disparities exist in Vancouver's housing access.** White households have higher rates of homeownership than Hispanic and Black households; at the same time, Hispanic and Black households have the highest cost-burden rates.

**Vancouver provides a substantial number of affordable housing units in the county, with 1,243 rent restricted affordable units sponsored by the City's Affordable Housing Fund that are either existing or currently in progress for development.** Of these units, 26% are set aside for seniors, 43% are reserved for households earning less than 60% of AMI, and 9% of the units are set aside specifically for populations with disabilities or mental health issues.

---

[1] Remote workers are calculated using data from the American Community Survey. This data is derived from a question in the 2022 ACS form about means of transportation to work that asks respondents 'How did you usually get to work last week?' While this variable does not specifically separate between fully remote and hybrid workers, it is at minimum representative of individuals that worked from home more frequently than commuting to a workplace.

## Housing need

**The City of Vancouver believes Clark County will continue to see strong growth in population.** The Office of Financial Management's (OFM) middle range forecast, the most accurate forecast provided by the state, estimates that Clark County's population is most likely to increase to 698,416 by 2045, indicating the need for an additional 107,193 housing units for the whole county. The City believes it will continue to attract the same share of the likely county growth it has seen in the recent decade (42%). To estimate the housing need in Vancouver from 2023 to 2045, additional adjustments were made to the Washington State Department of Commerce Housing for All Planning Tool to account for smaller household sizes, higher vacancy rates due to the higher share of multifamily units, providing for the loss of units to second/vacation homes, accounting for the demolition of some existing units, and accounting for recent housing construction built from 2020 to 2023.

**The results of this analysis indicate a total of 38,129 housing units are needed by 2045 in the City of Vancouver. Overall, this means an estimated 1,733 housing units need to be built or created per year from 2023 to 2045 to meet the housing need in the City of Vancouver. Since the existing City of Vancouver housing stock has increased by around 1,466 housing units per year over the last decade from 2012 to 2022 (per OFM data), this means that housing production will need to increase by around 267 housing units per year.**

**The housing needed for the city should be inclusively provided for different income levels and abilities. The 2045 housing target the following types of units in the above total:**

- **Around 2,651 Permanent Supportive Housing (PSH) units;**
- **Estimated 4,371 units for households below 30% AMI (extremely low income);**
- **Around 5,890 units between 30 to 50% AMI and 5,788 housing units between 50 and 80% AMI (low income);**
- **Around 3,351 units between 80 to 100% AMI (moderate income);**
- **Estimated 3,175 housing units between 100 to 120% AMI (moderate to middle income);**
- **Around 12,902 housing units over 120% AMI (high income); and**
- **Approximately 1,374 emergency shelter beds.**

The 1,733 is an equal distribution of needed units across the 20-year time horizon of the Comprehensive Plan and is intended to guide land use actions that accommodate the total number over that time frame. The city also has a 10-Year Housing Action Plan that front loads needed production and calls for 2,500 units per year. This is because the City doesn't not want to wait the full 20-years to meet community housing needs, and our existing policy calls on us to pull every lever to increase housing production across the city. It's important to be clear that the land use designations put in place to accommodate the 20-year need will also support the shorter timeline identified in the Housing Action Plan.

## Policy implications

Given Vancouver's current and future housing needs, the City should consider the following policy approaches:

- **Support increased housing production in the City of Vancouver to help meet the housing target set for 2045.** Since the existing City of Vancouver housing stock has increased by around 1,466 housing units per year over the last decade from 2012 to 2022 (per OFM data), this means that housing production will need to increase by around 267 housing units per year. The City will need to identify policies and program to help support increased production of housing targets for the different income brackets and for permanent supportive housing units and emergency shelter beds.
- **Encourage more diverse housing types, scales, and densities to meet the needs of different household sizes, ages, and incomes**. With an aging population, smaller households, and lower incomes, the city would benefit from additional housing diversity. To encourage this, the City should prioritize development of affordable and middle housing options, such as townhomes, duplexes, triplexes, courtyard apartments, and more. These can provide attainable options for varying household sizes and incomes.
- **Examine zoning and regulations to identify barriers to achieving greater density in appropriate areas.** Achieving greater density, especially through a diverse array of housing types, will help make Vancouver housing more affordable for both homeowners and renters.
- **Support accessible design and visitability in new housing to accommodate seniors aging in place.** With more older residents, accessibility is increasingly important.

- **Grow programs and incentives that support affordable housing development, including partnerships with nonprofit housing developers.** In addition, the City should leverage opportunities for affordable housing in transit-served locations.
- **Strengthen tenant protections and support programs to minimize displacement of lower income households and communities of color.** Rising prices often increase displacement risk for more vulnerable communities, and renters and communities of color are more likely to experience cost burdening.

# Section 1. Introduction

## Introduction and project approach

The City of Vancouver is updating its Comprehensive Plan and development regulations. This will include an updated 20-year vision statement for 2025 to 2045 and associated policies and implementation measures. The updated plan must be responsive to the changing community dynamics and the strategic vision established by the City and include focused goals to address social inequities and climate change.

The Comprehensive Plan is a foundational document that provides an overall vision and policy direction for managing growth and development while considering effects on the built and natural environment and public facilities. The Plan will build from the City's 2023-2029 Strategic Plan and is informed by other policy and plan documents, including the Climate Action Framework and Climate Adaptation Strategy, Housing Action Plan, Transportation System Plan, Parks Recreation and Cultural Services Comprehensive Plan, Urban Forestry Management Plan, and Reside Vancouver Anti-Displacement Plan.

### Housing Element Purpose

**The Housing Element will include recalibrated goals and policies to help correct for persistent underproduction, and better accommodate the diverse household needs of the whole community across the income spectrum for the next 20 years from 2025 to 2045.**

The current Plan was originally adopted in 1994 in response to the enactment of the Washington State (State) Growth Management Act (GMA). In 2004, a comprehensive update to the Plan was completed and a minor update was done in 2011, as required by the GMA. The city has changed substantially in the 20 years since 2004, particularly since the last update in 2011. The city is transitioning from a primarily suburban community to an active urban center with an increasingly diverse community, and this plan will reflect these changing dynamics.

ECOnorthwest is assisting the City with updating the Housing Element and Economic Development Element chapters of the plan. The Housing Element will

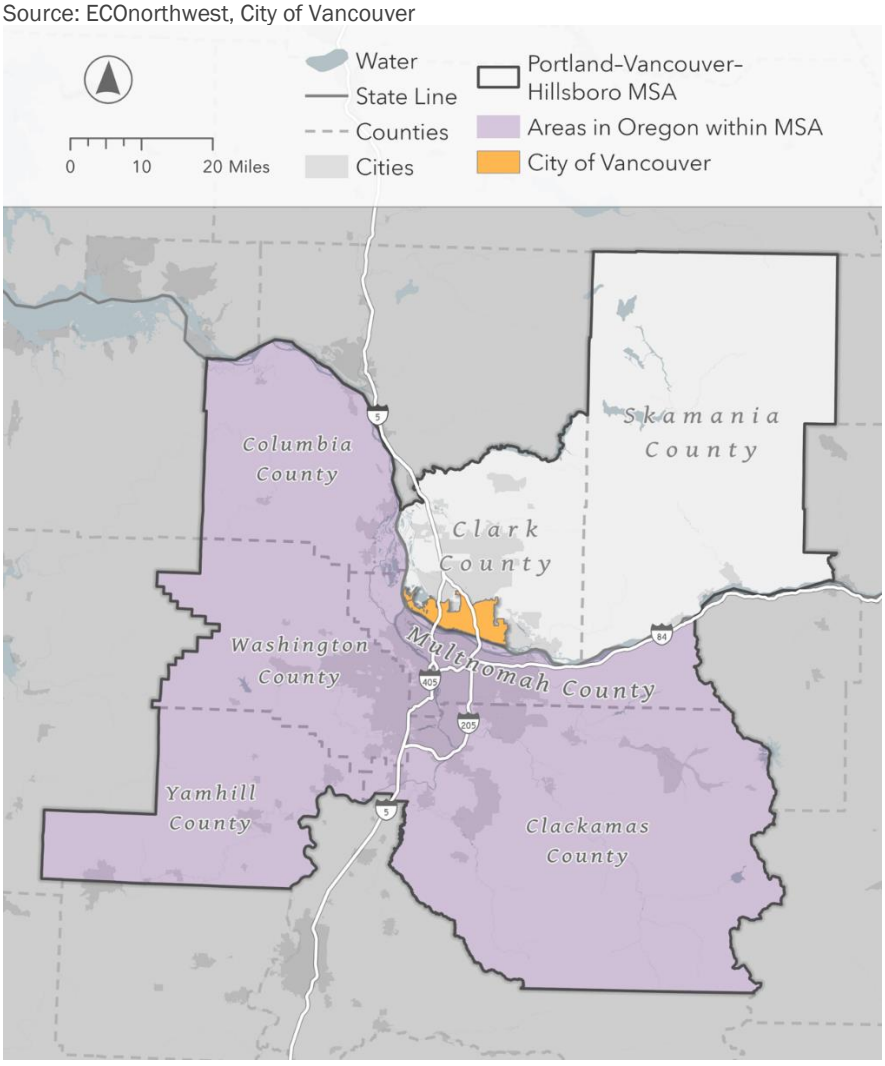
include recalibrated goals and policies to help correct for persistent underproduction and better accommodate the diverse household needs of the whole community across the income spectrum for the next 20 years from 2025 to 2045. The city is facing serious housing challenges, including increased homelessness and a lack of affordability, which will benefit from improved access to more housing options, innovative housing types, and low barrier housing, all while supporting equitable outcomes and minimizing displacement pressures. The housing policy approach will focus on effectively bridging the gap in housing needs, customized to Vancouver's unique community conditions. This plan will also build off of recent findings from the City of Vancouver Housing Action Plan (updated in 2023).

The approach for updating the Housing Element begins with a Housing Needs Assessment (HNA). The HNA evaluates current housing stock and supply, existing conditions and housing needs across the income spectrum, and the current and projected future demand for housing to help inform policy updates. The HNA identifies and defines the range of housing needs by analyzing the best available data describing Vancouver's housing stock, workforce, household demographics, housing market dynamics, and expected housing demand. The insights from this analysis will build a factual basis for the housing policy updates. This housing analysis answers questions about the current availability of different housing types, who lives and works in the Vancouver area, and what range of housing is needed to meet current and future housing needs. The housing policy updates, to be developed in the next stage of this project, will guide changes to housing policies, programmatic investments and related decisions over the 2025–2045 planning period. Housing needs are not one-size-fits-all and instead should be thought as a menu of different options with sufficient variety for different household incomes and sizes, life stages of people, location needs, and culturally-specific housing. The lack of housing diversity meeting different needs has a compounding effect on the housing problem.

Housing analysis is an important exercise as a community's housing needs tend to continually evolve based on changes in the broader economy, local demographics, and the regulatory environment. The City of Vancouver, like other communities in the region, has changed over the years and housing needs have not always been successfully met. The affordability of housing has changed, and access to housing has never been equal, especially for low-income families and communities of color. A major component of the Comprehensive Plan update is

analyzing and planning for housing that reflects current community trends in household formation, demographic shifts, and an increasingly diverse population that have culturally-specific housing needs.

Analyzing housing needs is complex because it represents a bundle of services that people are willing or able to pay for, including shelter and proximity to other essential places and public services (e.g., jobs, education, healthcare, public transit options, shopping, recreation, etc.) and amenities (e.g., type and quality of home fixtures and appliances, landscaping, views). Since it is difficult to maximize all these services while minimizing costs, households must make decisions about trade-offs and sacrifices between needed services and what they can afford. Residents contemplate a variety of factors to choose where they live, such as the proximity to jobs, childcare, schools, transportation options, amenities, community support networks, and distinct neighborhoods. In addition, a household's needs are often driven by the affordability level, size, conditions, tenancy type, and other considerations associated with the housing (such as ADA accessibility, lower maintenance costs, etc.).



In addition, housing markets function at a regional scale, which makes it challenging for individual jurisdictions to adequately address issues without regional partnerships. Vancouver is part of Clark County, the fastest growing county within the broader Portland-Vancouver metropolitan area.[2] Vancouver is highly accessible to communities to the south, including the City of Portland, and to other fast-growing Clark County cities, such as Ridgefield, La Center, Battle Ground and Camas, as well as unincorporated areas that are increasingly developing at urban densities. As the region grows, Vancouver will need to plan for local impacts and guide growth to align with statewide requirements in Washington's GMA to encourage development in urban areas and ensure access to housing and economic opportunities. The housing market dynamics in the broader region directly affect Vancouver; thus, the full Portland-Vancouver Metropolitan Statistical Area (MSA) was analyzed in addition to Vancouver's local market. The following assessment offers insights on influential national and regional trends to help build a more comprehensive understanding of the housing landscape.

[2] Throughout this report the City of Vancouver is referred to as Vancouver.

## Study area: City of Vancouver and surrounding region

The City of Vancouver is a highly desirable place to live, offering a high quality of life, a prime location, access to a bustling pedestrian friendly downtown, and various natural, cultural, and public amenities. Vancouver is the fourth largest city in Washington State, the second largest city in the Portland-Vancouver metropolitan region, and the largest city in Clark County. The City of Portland is located directly south of the City of Vancouver and easily accessible from Interstate (I) 5 and (I) 205 across the Columbia River (see Exhibit 1 below). This housing needs analysis includes many comparisons to the City of Vancouver and to Clark County as a whole, including both incorporated and unincorporated areas in the county, and in some cases, other cities, including the City of Portland, to provide helpful comparisons.

**Exhibit 1: Study area map**
Source: ECOnorthwest, City of Vancouver

Due to relatively low property taxes, high quality public schools and housing prices that were comparatively more affordable than Portland until the last few years, Vancouver has absorbed much of the Portland metropolitan region's population growth over the past decade. The increased demand for housing associated with this growth as well as decades of exclusionary housing policy and underproduction have led to stark housing price increases in Vancouver. Median housing sales prices doubled over the past decade and the cost of average market rent for a one-bedroom apartment was roughly $1,752 in 2023, (2023) surpassing the cost in Portland of $1,566.

Vancouver's housing market is struggling to keep pace with growth and increased demand. Housing costs and rental rates have increased, making it challenging for many renters, first-time homeowners and low-to-moderate income households to find or stay in housing in the city This issue is occurring in neighborhoods across Vancouver and the city will continue to face affordability challenges in the coming years as it continues to grow. Vancouver's vibrant downtown, great neighborhoods and schools, and various natural and cultural amenities will likely continue to attract new people and lead to continued growth.

# Section 2. Community and household demographics

Population and housing characteristics are useful for developing a better understanding of Vancouver and its residents. Characteristics such as population growth, age of residents, household size and composition, homeownership, and ethnicity provide useful context about the Vancouver community the trends and forces affecting housing demand, and who the housing market is and is not serving.

**Vancouver Population Growth**

**At almost 200,000 persons, the City of Vancouver is the fourth largest city, based on population, in the State of Washington (below the cities of Seattle, Spokane, and Tacoma but above the City of Bellevue).**

This assessment relied on published data primarily from the U.S. Census Bureau, CoStar, Washington Office of Financial Management, U.S. Department of Housing and Urban Development, Clark County, and the City of Vancouver (see the HNA Appendix for more detail on the main data sources used).

## Population growth

The Washington State Office of Financial Management (OFM) provides official state and local population estimates and projections for use in the allocation of funds, growth management, and other planning functions. This section utilizes official population estimates from 2000-2023 to understand Vancouver's population growth over the last few decades. Population growth and household formation are the primary drivers of demand for housing. The rate of population growth and household characteristics heavily influence the demand for specific housing types.

### Population growth from 2000 to 2023

Vancouver and the broader Clark County region have grown substantially over the last two decades and are projected to continue to grow over the 20-year planning period. From 2000 to 2023, Vancouver's population grew by just over 56,000 residents, or 39%, an annualized compounded growth rate of 1.4% growth per year. At almost 200,000 people, the City of Vancouver is the fourth

largest city, based on population, in the State of Washington (below the cities of Seattle, Spokane, and Tacoma but above the City of Bellevue).[3] Clark County has experienced higher population growth than the City of Vancouver largely due to suburban housing development in greenfield areas outside of the city, particularly in unincorporated areas to the north, east and west.

**Exhibit 2: Population growth, Vancouver, Clark County, and Washington, 2000-2023**
Source: ECOnorthwest, Office of Financial Management Population Estimates.[4]

| Area | 2000 | 2010 | 2023 | Change, 2000-2023 | Percent Change, 2000-2023 | Annualized Compounded Growth Rate |
|---|---|---|---|---|---|---|
| City of Vancouver | 143,560 | 161,791 | 199,600 | 56,040 | 39% | 1.4% |
| Clark County | 345,238 | 425,363 | 527,400 | 182,162 | 53% | 1.9% |
| State of Washington | 5,894,143 | 6,724,540 | 7,951,150 | 2,057,007 | 35% | 1.3% |

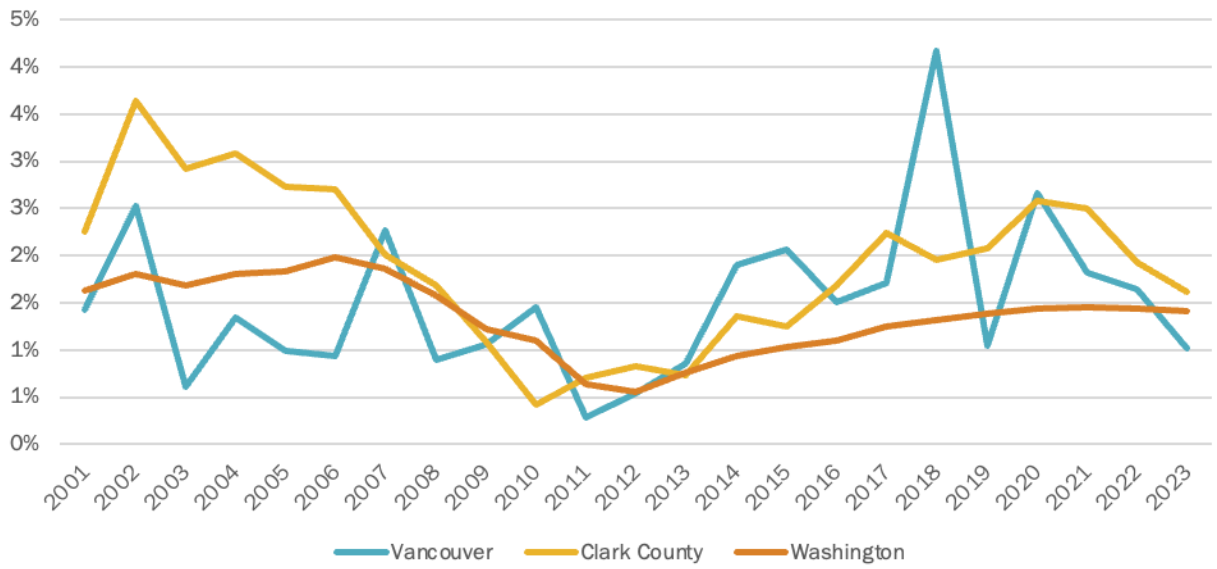


Exhibit 3 below shows the change in population growth year-over-year since 2000 in Vancouver, Park County, and Washington. Vancouver has experienced several years with spikes in population growth which may align with city annexations from the UGA.

[3] Washington State Office of Financial Management analysis of U.S. Census data, 2021: https://ofm.wa.gov/washington-data-research/population-demographics/population-estimates/population-density

[4] Between 2010 to 2020, several areas were annexed into the City of Vancouver which increased the population by approximately 6,126 persons. If the annexation was deducted from the 2023 population estimate, the percent change would be 35% rather than 39%.

**Exhibit 3: Population growth change year-over-year, Vancouver, Clark County, and Washington, 2000-2023**

Source: ECOnorthwest, Office of Financial Management Population Estimates.[5]

## Demographic information

Demographic information can be an indicator of a city's overall population trends. For demographic data, ECOnorthwest primarily used the 2021 American Community Survey (ACS) 1-year Estimates, which is the most current data set available. Key findings include:

- Vancouver's median age is 39 years, similar to Clark County but slightly higher than Hillsboro, Portland, and Washington State.
- Vancouver's largest age group is residents aged 20 to 34 years, representing roughly a quarter of the population (24%). From 2011 to 2021, the share of residents under 20 years decreased from 25% to 20%, while the share older than 65 increased from 13% to 19%.
- Both Vancouver and Clark County became more racially and ethnically diverse between 2011 and 2021. Communities of color increased from 24% to 33% of the total Vancouver population over the last decade from 2011 to 2021, encompassing one-third of the total population. Vancouver saw increases by two percentage points in its Hispanic/Latino population (from 9

[5] Between 2010 to 2020, several areas were annexed into the City of Vancouver which increased the population by approximately 6,126 persons. If the annexation was deducted from the 2023 population estimate, the percent change would be 35% rather than 39%.

to 11%), Asian population (from 6 to 8%), multiracial population (from 5 to 7%), and Black population (3 to 5%).

## Age

Households make different housing choices at different stages of life to fit their changing needs; for example, the type of housing needed for a 20-year-old college student or young worker differs from that of a 40-year-old parent with children, or an 80-year-old single adult. Exhibit 4 shows the median age for Vancouver and comparison geographies. Vancouver has the highest median age of 39.4, just slightly older than the county overall.

**Exhibit 4: Median age, Vancouver and comparison geographies, 2021**
Source: ACS 1-Year Data Tables, Table S0101, 2021

| 39.4 years | 39.2 years | 34.8 years | 38.3 years | 38.2 years |
|---|---|---|---|---|
| City of Vancouver | Clark County | City of Hillsboro | City of Portland | State of Washington |

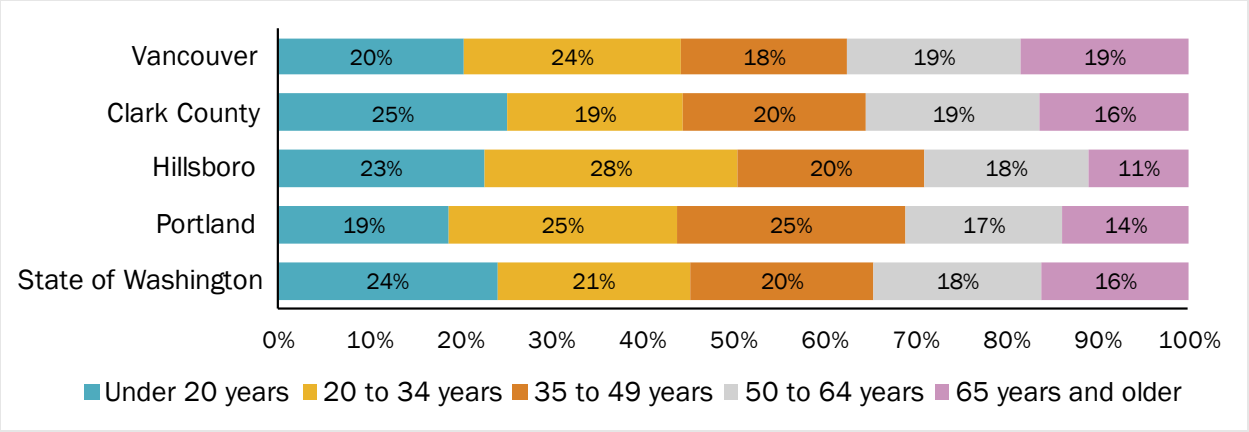
Exhibit 5 shows the change in median age from 2011 to 2021. All jurisdictions increased in age over the time period, with Vancouver's median age increasing by 1.4 years, a slightly lower change than the Clark County.

**Exhibit 5: Change in median age, Vancouver and comparison geographies, 2011–2021**
Source: ACS 1-Year Data Tables, Table S0101, 2011, 2021

| | 2011 | 2021 | Change |
|---|---|---|---|
| City of Vancouver | 38.0 | 39.4 | 1.4 years |
| Clark County | 37.0 | 39.2 | 2.2 years |
| City of Hillsboro | 32.2 | 34.8 | 2.6 years |
| City of Portland | 35.7 | 38.3 | 2.6 years |
| State of Washington | 37.3 | 38.2 | 0.9 years |

Exhibit 6 shows the distribution of different age groups. In the City of Vancouver, the largest age group is residents aged 20 to 34 years (24%). Compared to Clark County, Vancouver has a similar share of residents between the ages of 35 and 64, and a slightly higher share of residents older than 65 years (19%). While the county's largest age group is residents under 20 years (25%), only 20 percent of Vancouver's population is under 20 years of age.

**Exhibit 6: Age distribution, Vancouver and comparison geographies, 2021**
Source: ACS 1-Year Data Tables, Table B01001, 2021



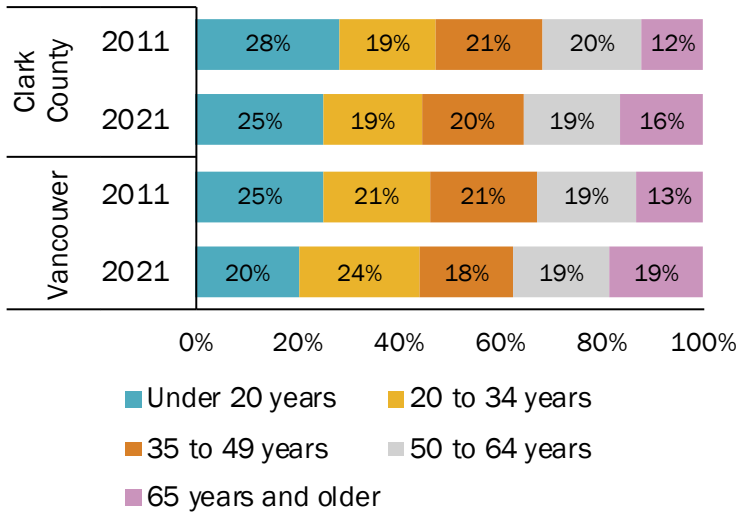


Exhibit 7 shows the change in age distribution for Vancouver and Clark County. In both jurisdictions, the share of residents under 20 years decreased (5% in Vancouver). On the other end of the spectrum, the share of residents over 65 years increased in both jurisdictions, specifically by six percentage points from 13% to 19% in the City of Vancouver from 2011 to 2021. In the county overall, the share of residents between 20 and 65 years remained relatively stable, while in Vancouver the share of residents aged 20 to 34 years increased by 3%, and the share of residents aged 35 to 49 years decreased 3%.

**Exhibit 7: Change in age distribution, Vancouver and Clark County, 2011–2021**
Source: ACS 1-Year Data Tables, Table B01001, 2011, 2021

Prime working age is generally defined as workers aged between 25 to 54 years. Vancouver's share of prime working population (20 to 49 years) is similar to Clark County and only slightly decreased from 2011 to 2021.

## Race and ethnicity

Exhibit 8 shows the change in the distribution of residents by race and ethnicity from 2011 to 2021. In both Vancouver and Clark County, much of the population is White, with 67% of residents identifying as White in Vancouver and 74% in the county overall.[6] However, Vancouver has a higher share of Black or African American residents as well as Asian residents than the county overall. Both jurisdictions became more racially and ethnically diverse over the last decade. Notably, Vancouver saw increases by two percentage points in its Hispanic and Latino population (from 9 to 11%), Asian population (from 6 to 8%), multiracial population (from 5 to 7%), and Black population (from 3 to 5%).

**Exhibit 8: Change in race and ethnicity distribution, Vancouver and Clark County, 2011–2021**
Source: ACS 1-Year Data Tables, Table B03002, 2011, 2021

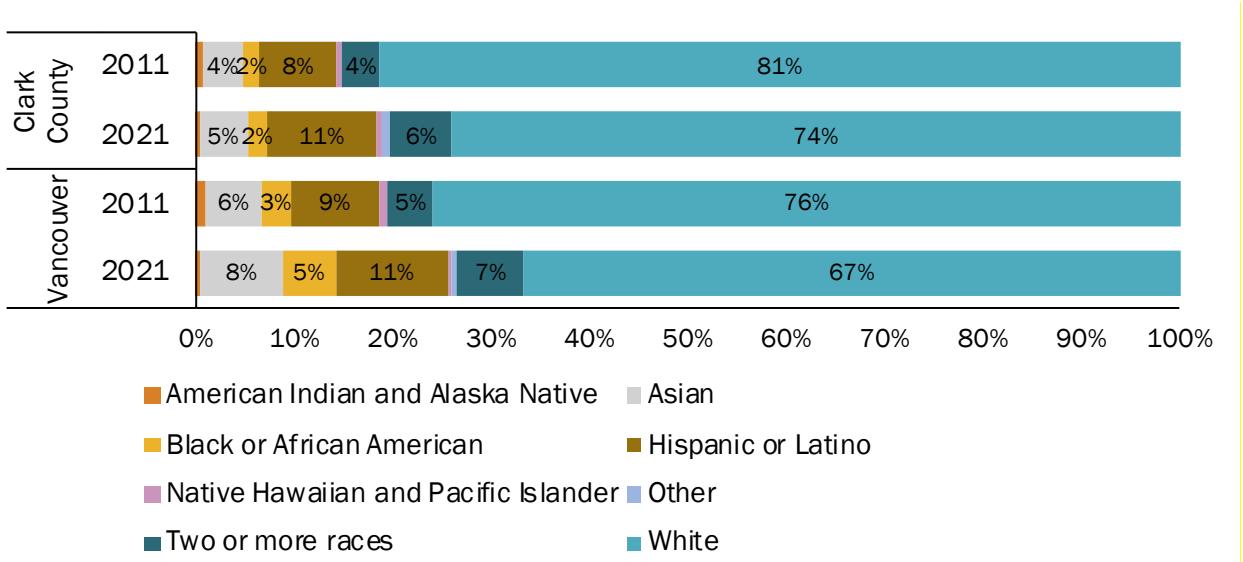

Exhibit 9 below shows the change in the distribution of students by race and ethnicity from the 2012–13 and 2022–23 school years in the Evergreen and

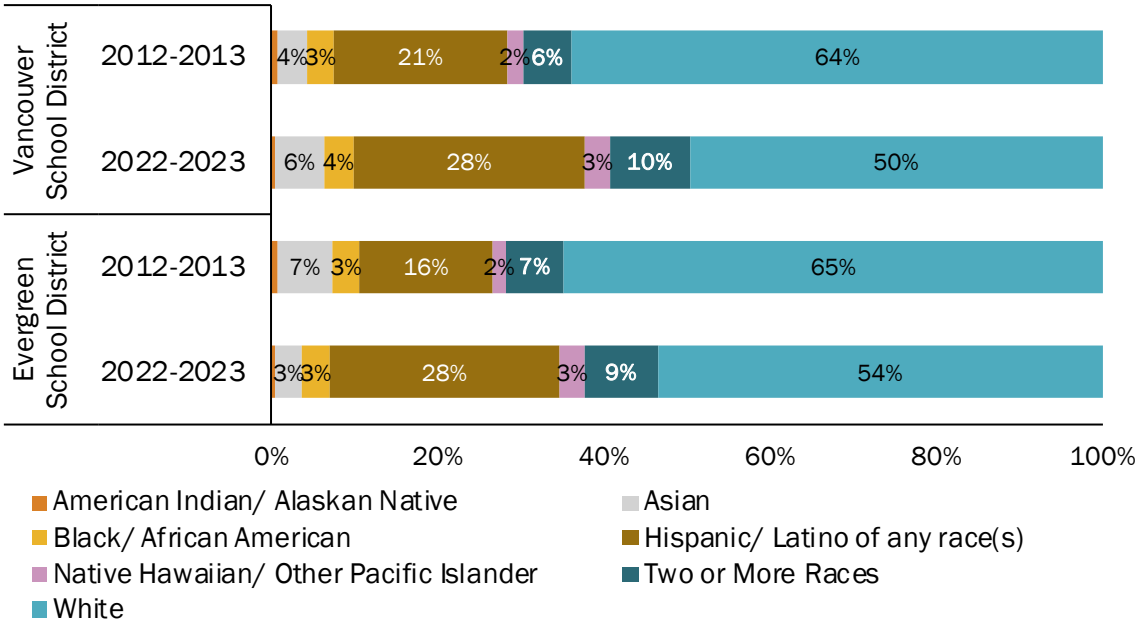
[6] The US Census Bureau collects race data based on self-identification. The racial categories included in the census questionnaire generally reflect a social definition of race recognized in this country, recognizing racial and national origin or sociocultural groups. People may choose to report more than one race to indicate their racial mixture. People who identify their origin as Hispanic, Latino, or Spanish may be of any race and the concept of race is separate from the concept of Hispanic origin. The race categories include White; Black or African American; American Indian or Alaska Native; Asian; Native Hawaiian or Other Pacific Islander; some other race. Source.

Vancouver School Districts. While White students continue to make up the majority of students in both school districts, the share of students who are Black, Indigenous, and people of color (BIPOC) has increased. This change mirrors that of the overall Vancouver population, which also showed a decrease in the White population alongside an increase in communities of color.

**Exhibit 9: Change in race and ethnicity distribution, Evergreen and Vancouver School District, 2012–13 and 2022–23**

Source: Washington Office of Superintendent Public Instruction (OSPI), 2012–13, 2022–23



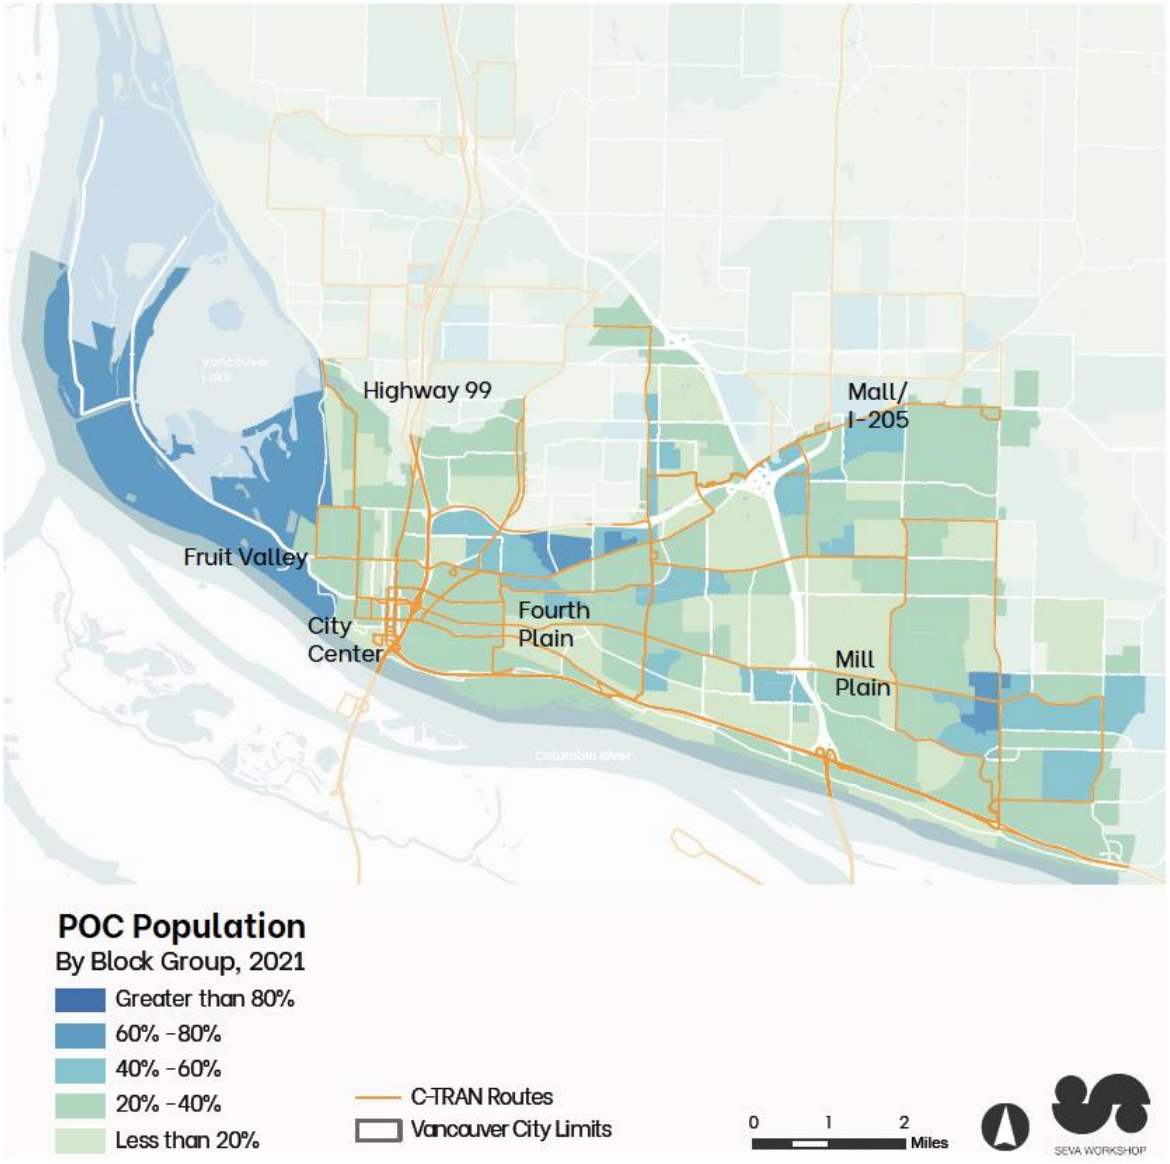


Exhibit 10 shows a map of where communities of color live throughout Vancouver. Larger shares of communities of color, with at least 40% of communities of color, are located in the Fruit Valley area, in the Fourth Plain area (northern edge), near the Vancouver Mall/I-205 area, a small area near Mill Plain, and in areas located on the eastern edge of the city.

**Exhibit 10: Map of persons of color (POC) population by block group in Vancouver, 2021**
Source: SEVA, ACS 5-Year estimates 2017–2021.

Source: American Community Survey 5 year estimates 2017-2021

## Income distribution

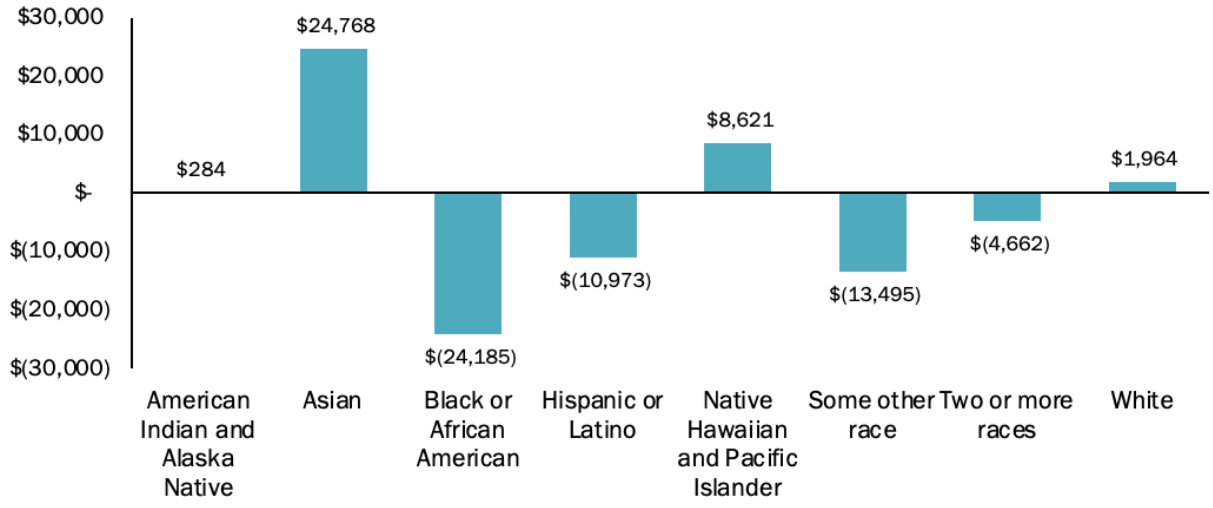
Income is an important determinant of housing choice, influencing both the type of housing a household chooses (e.g., single-family detached, duplex, or a larger multifamily property) and whether a household rents or owns their housing. Key findings include:

- Vancouver has a median household income of $70,000, which is lower than Clark County. Comparatively, Vancouver has a higher share of households earning less than $75,000 and a lower share of households earning more than $100,000 annually.
- Vancouver median household incomes are lower than the Portland-Vancouver-Hillsboro MSA HUD area median income (AMI) levels for both 2021 and 2023 (family of four). Compared to the larger region, Vancouver has a higher share of households earning below 60% of the AMI.

### Median household income

As of 2021, the median household income in the City of Vancouver was nearly $70,000 per year. The city's median household income is roughly $14,000 lower than that of both Clark County and the state. Exhibit 12 shows the change in median household incomes from 2011 to 2021. Both Vancouver and the County saw increases in median household income, with Vancouver's median household income increasing roughly by around $11,000 per year.

**Exhibit 11: Median household incomes, Vancouver and Clark County, 2021**
Source: ACS 1-Year Data Tables, Table S1901, 2021



| $70,000 | $84,000 | $97,000 | $79,000 | $84,000 |
|---|---|---|---|---|
| City of Vancouver | Clark County | City of Hillsboro | City of Portland | State of Washington |

**Exhibit 12: Change in median household incomes, Vancouver and Clark County, 2011–2021**
Source: ACS 1-Year Data Tables, Table S1901, 2011, 2021

| | 2011 | 2021 | Change | Percent Change |
|---|---|---|---|---|
| City of Vancouver | $58,918 | $69,993 | $11,075 | 19% |
| Clark County | $68,250 | $83,837 | $15,587 | 23% |
| City of Hillsboro | $79,219 | $97,436 | $18,217 | 23% |
| City of Portland | $56,658 | $79,057 | $22,399 | 40% |
| State of Washington | $68,466 | $84,247 | $15,781 | 23% |

Exhibit 13 shows differences in median income by race/ethnicity when compared with Vancouver's overall median. Asian and Native Hawaiian and Pacific Islander households, on average, earn above the median income. White households and American Indian and Alaskan Native households, on average, earn close to the overall city median. Black or African American, Hispanic/Latino, multiracial, and other race households all earn, on average, below the city median.

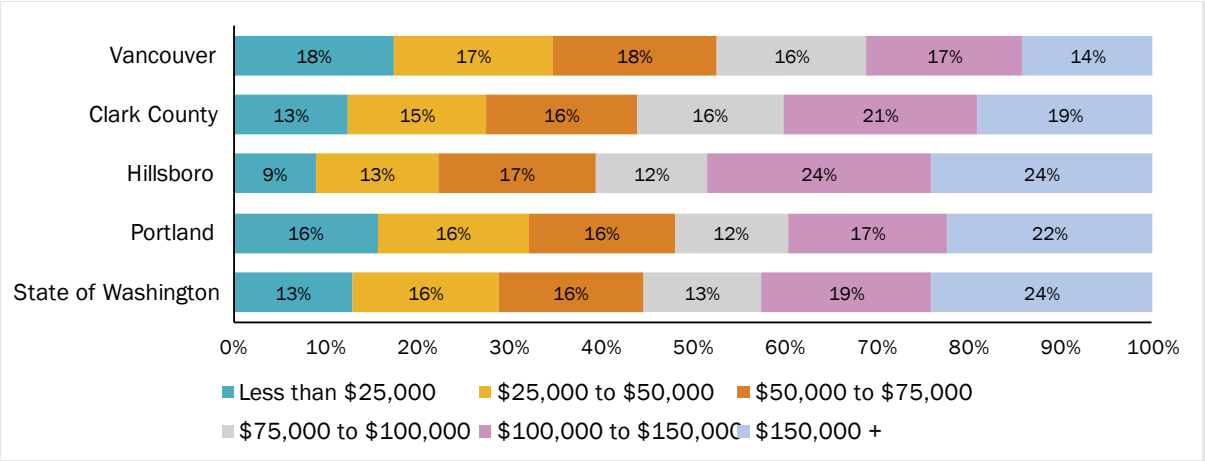
**Exhibit 13: Median income by race compared to overall median**
Source: SEVA, ACS 5-year estimates 2017–2021

## Household income distribution

Exhibit 14 shows the distribution of different income brackets in Vancouver and comparison geographies. Of these jurisdictions, Vancouver has the highest share

of households earning below $25,000 (18%) annually, as well as the highest share earning below $75,000 per year (53%). Looking at the higher income brackets, fewer Vancouver households earn more than $100,000 annually than any of the comparison jurisdictions.

**Exhibit 14: Median household income distribution, Vancouver and comparison geographies, 2021**
Source: ACS 1-Year Data Tables, Table S1901, 2021



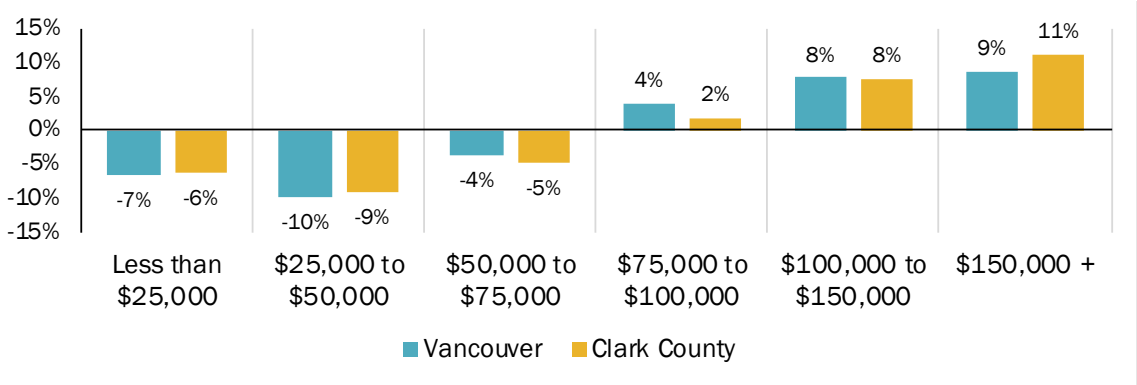


Exhibit 15 shows the change in the *share* of each income bracket from 2011 to 2021. The share of households earning more than $150,000 annually increased from 5% to 14% in Vancouver over that time period, an increase of nine percentage points (although slightly lower than the county's share). **In both Vancouver and Clark County, the share of households earning less than $75,000 annually decreased.** This could indicate that the city is gaining more people with household incomes earning above $75,000 per year or that existing households are experiencing increases in their incomes, or a combination of the two. In both the county and the city, the share of households earning between $25,000 and $50,000 decreased the most, while households earning more than $150,000 increased the most.

**Exhibit 15: Change in median household income distribution, Vancouver and Clark County, 2011–2021**

Source: ACS 1-Year Data Tables, Table S1901, 2011, 2021

## Area median income (AMI)

Another aspect of analyzing household incomes is area median income. AMI is defined as the midpoint of a specific area's income distribution and is defined each year by the Department of Housing and Urban Development (HUD).[7] HUD includes Vancouver as part of the Portland-Vancouver-Hillsboro Metropolitan Statistical Area (MSA). In 2021, HUD determined the AMI to be $96,900 for a family of four in the area.

HUD uses AMI calculations to set income limits for affordable housing in different income categories, such as extremely low income (earning less than 30% of the AMI), low income (earning between 30% and 50% of the AMI), and moderate income (earning between 50% and 80% of the AMI). Income limits for a family of four in the region for 2011 are shown in

**Exhibit 17, for 2021 in Exhibit 17, and for 2023 in** Exhibit 18.

**Exhibit 16: Income limits by HUD area median income, family of four, Portland-Vancouver-Hillsboro MSA, 2011**

Source: HUD

| $21,600 | $36,000 | $57,600 | $72,000 | $86,400 |
|---|---|---|---|---|
| Extremely Low | Low | Moderate | Median | 120% AMI |

[7] AMI/ Median Family Income (MFI) looks at how much each income level can afford in housing costs which is helpful for understanding housing affordability. Each year, the HUD uses data from the U.S. Census to define an area's MFI based on family size. The MFI benchmark helps determine eligibility for HUD housing programs (often including rent-restricted housing) and supports the tracking of different housing needs for a range of household incomes. If the term AMI is used in an unqualified manor, this reference is synonymous with HUD's MFI.

| | | | | |
|---|---|---|---|---|
| (30% AMI) | (50% AMI) | (80% AMI) | (100% AMI) | |

**Exhibit 17: Income limits by HUD area median income, family of four, Portland-Vancouver-Hillsboro MSA, 2021**
Source: HUD

| $29,000 | $48,350 | $77,350 | $96,900 | $116,280 |
|---|---|---|---|---|
| Extremely Low (30% AMI) | Low (50% AMI) | Moderate (80% AMI) | Median (100% AMI) | 120% AMI |

**Exhibit 18: Income limits by HUD area median income, family of four, Portland-Vancouver-Hillsboro MSA, 2023**
Source: HUD

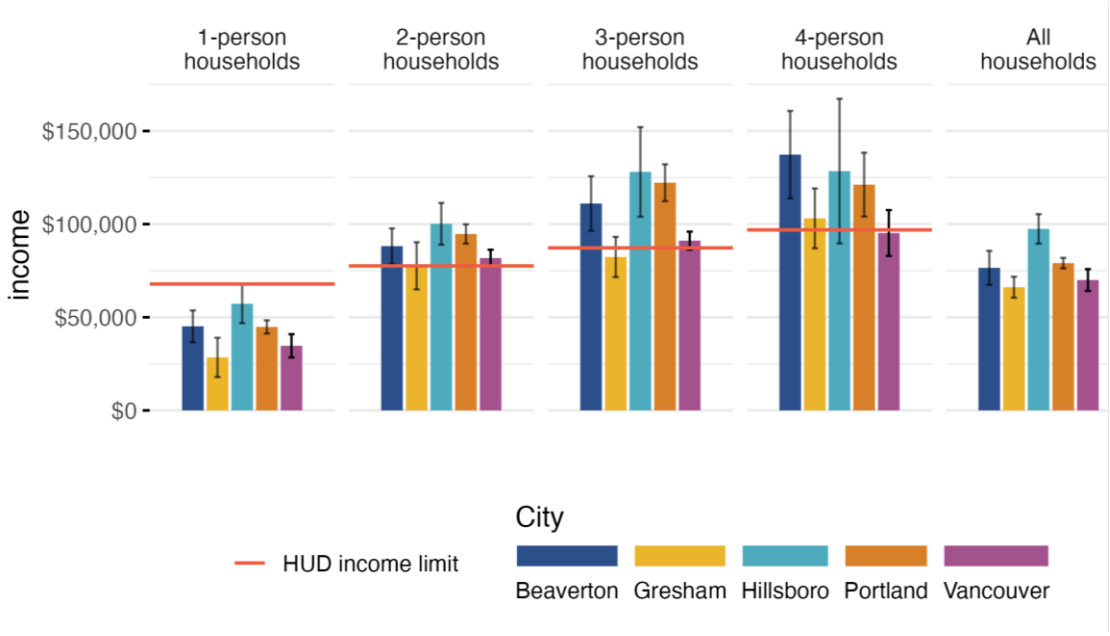
| $33,850 | $56,400 | $90,200 | $114,400 | $137,280 |
|---|---|---|---|---|
| Extremely Low (30% AMI) | Low (50% AMI) | Moderate (80% AMI) | Median (100% AMI) | 120% AMI |

Exhibit 19 (below) shows how the Portland-Vancouver-Hillsboro AMI compares to the median household income for Vancouver and other nearby cities. Vancouver's annual median household income was $69,993 in 2021 which is almost $27,000 less than the 2021 HUD 100% AMI of $96,900.

The AMI for four and one-person households is higher than actual median income in the City of Vancouver. This could have implications for housing affordability for households with four or fewer people. If affordability thresholds are set higher than actual incomes in Vancouver, lower to moderate income households may not be able to find suitably affordable housing.

**Exhibit 19: Area median incomes compared to median household incomes by family size, Vancouver and nearby cities, 2021**

Source: HUD, ACS 1-Year Data Tables, Table S901, 2021.



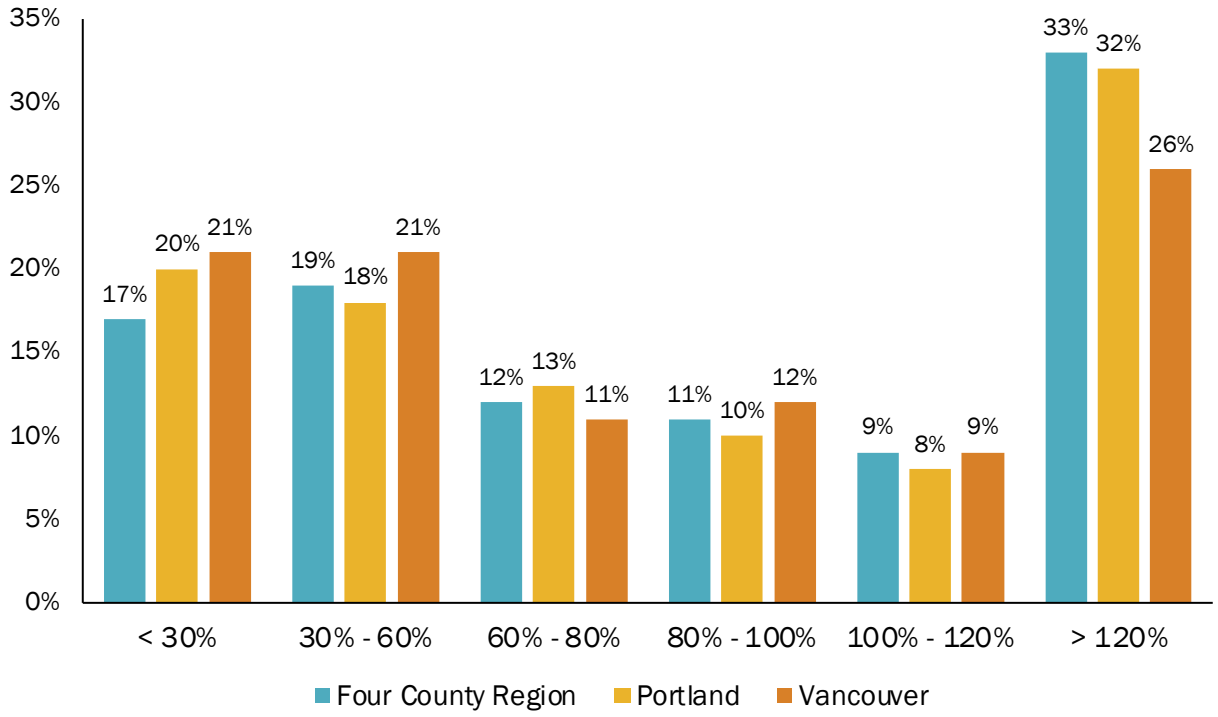


Exhibit 20 shows where households in Vancouver, Portland, and the four-county region (including Multnomah, Clackamas, Washington, and Clark counties) fall within these income limits. While the largest income bracket for each region is households earning more than 120% of the AMI, Vancouver has a smaller share of these households (6 percentage points lower than Portland and seven percentage points lower than the four-county region).

For all three areas, the second and third largest income brackets are extremely low-income households earning less than 30% and low-income households earning between 30 and 60% of the AMI. For both lower income brackets, Vancouver has a slightly higher share of households than Portland or the four-county region.

**Exhibit 20: Household income as a percent of area median income, Vancouver, Portland, and four-county region, 2021**
Source: HUD

## Household characteristics

Household characteristics, such as whether a household owns their home, average household size, and household living arrangement trends, can highlight a city's changing housing needs. Key findings include:

- Roughly half (52%) of Vancouver households own their homes, a lower rate than the county overall (65%). In comparison, the United States average is 65%, and Washington's state average is 64%. In contrast, larger cities like Hillsboro, OR, Portland, OR, and Seattle, WA, all have lower homeownership rates (50%, 53%, and 44%, respectively). Additionally, the average age of Vancouver homeowners has increased in the past decade, which could indicate barriers to homeownership for younger residents.
- Factors like household size can impact preferences for unit types and tenure as larger households typically need larger units. In general, single-family homes (either detached or attached) tend to offer more square footage compared with multifamily units. In Vancouver, 88% of owner households lived in single-family detached homes in 2021, as well as 93% in Clark County overall. In comparison, the largest share (51%) of renter households in

Vancouver lived in larger multifamily buildings with five or more units and an additional 18% in 'plex' units (including duplexes, triplexes, and quadplexes). The same trend was true in Clark County with 44% of renters living in multifamily buildings and 16% in 'plex' units.

- The average size of Vancouver households decreased slightly from 2011 to 2021, corresponding with an increase in the share of one- and two-person households and a decrease in the share of three- and four-person households. At the same time, the number of households with children in Vancouver decreased by 7%.
- White and Asian households tend to be smaller than other households for both renters and homeowners in the City of Vancouver. Of homeowner households, Hispanic households had the largest households with 3.7 members and for renters, "other" race households are the largest with 3.5 members.
- Asian and White households had the highest homeownership rates and were the only households with an ownership rate higher than the renter rate (71% and 53%, respectively). Hispanic and multiracial households had the lowest homeownership rates (29% and 26%, respectively).
- There has been an increase in the share of households with unrelated individuals and couples without children. Unrelated households include individual householders, unmarried partners, roommates, seniors living alone or with a roommate, or other shared living arrangements. In contrast, the share of households with children are on the decline, which is further reflected in the change in average household size, which has also been decreasing.

### Household tenure

Household tenure refers to whether a household rents or owns their home. Just over half (52%) of Vancouver households own their homes, which is a lower homeownership rate than Clark County (65%) and the state but similar to other nearby cities. From 2011 to 2021, the homeownership rate rose by roughly one percentage point in Vancouver. The homeownership rate remained stable in Clark County overall.

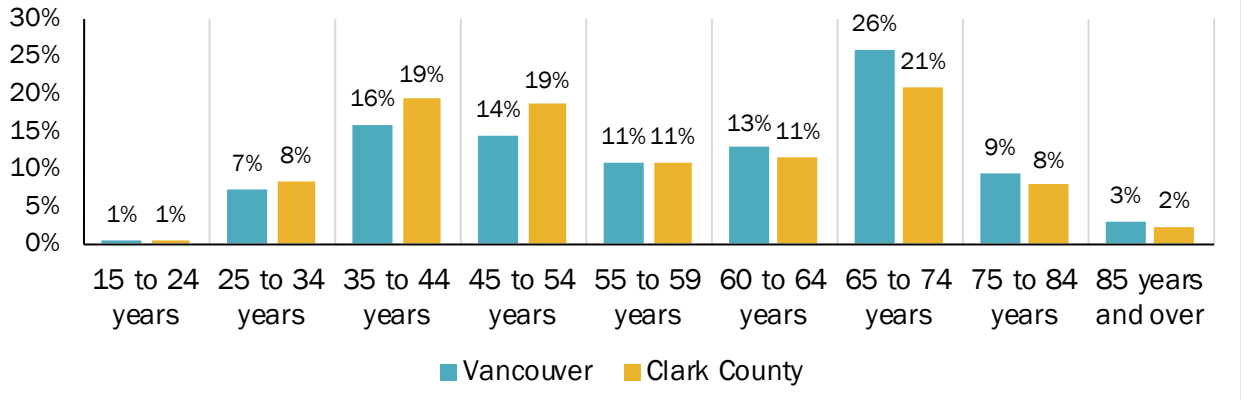
**Exhibit 21: Homeownership rate, Vancouver and comparison geographies, 2011–2021**
Source: ACS 1-Year Data Tables, Table B25003, 2021

| | 2011 | 2021 | Change in Percentage Points |
|---|---|---|---|
| City of Vancouver | 51% | 52% | 1% |
| Clark County | 65% | 65% | 0% |
| City of Hillsboro | 53% | 50% | -3% |
| City of Portland | 51% | 53% | 2% |
| State of Washington | 63% | 64% | 1% |

## Tenure by age

Exhibit 22 shows the distribution of homeowners by age in Vancouver and Clark County. In general, Vancouver has a higher share of older homeowners than the county overall, with 51% of homeowners over 60 years (compared to 42% of county homeowners). In addition, only 30% of Vancouver homeowners are between the ages of 35 and 54, compared to 38% of county homeowners. This could indicate that there is a lower share of the prime working age population living in the city compared to elsewhere in the county.

**Exhibit 22: Distribution of homeowners by age, Vancouver and Clark County, 2021**
Source: ACS 1-Year Data Tables, Table B25007, 2021



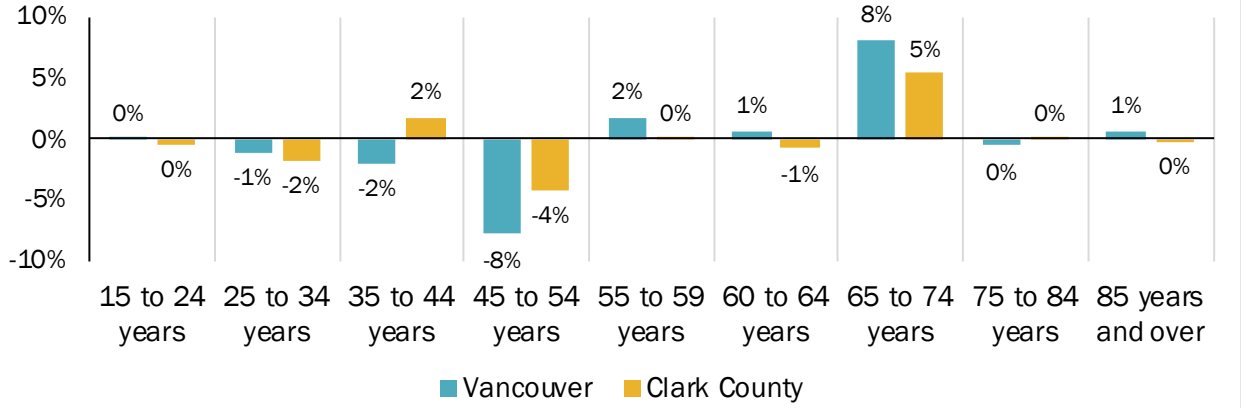


Exhibit 23 shows the change in the *share* of each homeowner age group from 2011 to 2021. Over that time period, the share of Vancouver homeowners aged 45 to 54 years dropped 8%, while the share of Vancouver homeowners aged 65 to 74 years increased 8%. While these trends are similarly reflected at the county level, the county experienced smaller levels of change over the same time period

compared to the City of Vancouver. This could indicate that homeownership is increasingly becoming out of reach for younger homeowners. Homeownership opportunities have become more limited, particularly for younger households, possibly due to the need for higher incomes and more equity to keep pace with increasing housing costs.

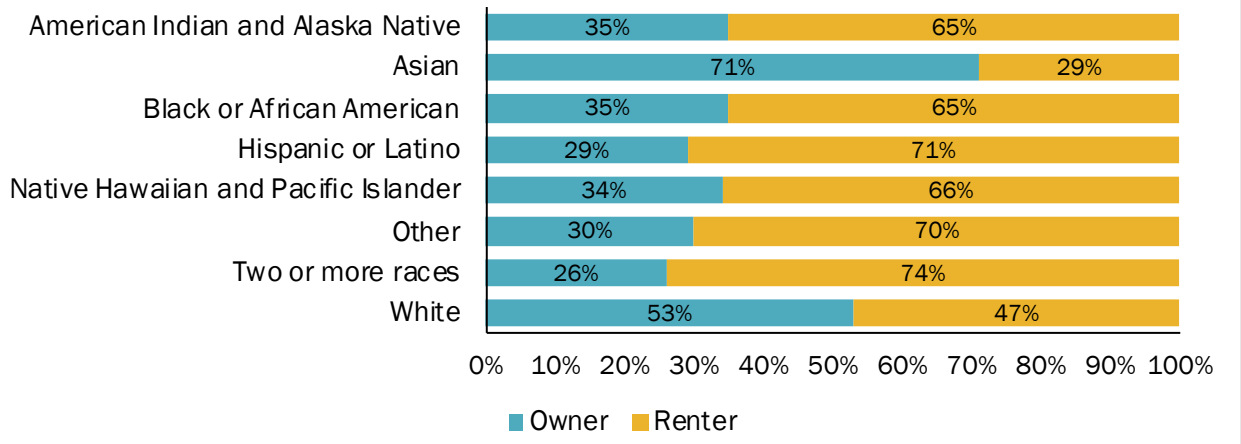

**Exhibit 23: Change in distribution of homeowners by age, Vancouver and Clark County, 2011–2021**
Source: ACS 1-Year Data Tables, Table B25007, 2011, 2021

## Tenure by race

Exhibit 24 shows household tenure by race in Vancouver. Asian and White households have the highest homeownership rate, with 71% and 53% of households respectively. Multiracial and Hispanic or Latino households have the lowest homeownership rate, at 26% and 29% of households respectively.

**Exhibit 24: Household tenure by race and ethnicity, Vancouver, 2021**
Source: SEVA, ACS 5-Year Estimates, 2017–2021

## Household size

Household size is an important indicator for the types of housing needed in a region. Smaller households, such as younger or older adults, may prefer living in middle or multifamily housing types given their smaller size and relative affordability, while larger households with children or extended families cohabitating may be more comfortable in larger single-family dwellings or multifamily residences with multiple bedrooms. Vancouver's average household size is roughly 2.3 members, slightly lower than the county overall (2.6 persons).

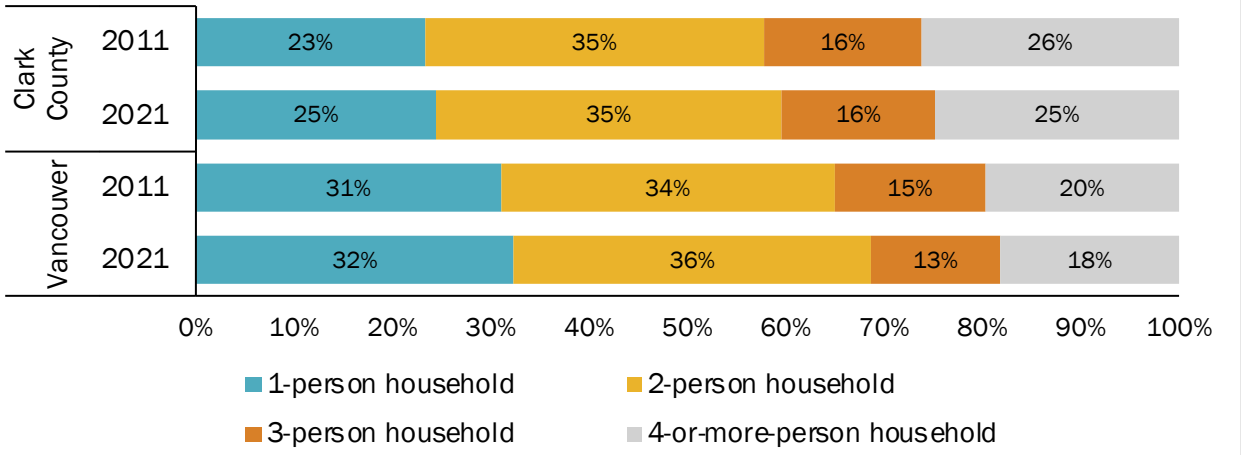

Exhibit 27 shows the change in average household size from 2011 to 2021. For both jurisdictions, the average household size decreased by roughly 0.1 household members. Given the decrease in residents under 20 years during the same time period in both areas, the decrease in household size could be due to an increase in the share of households without children.

**Exhibit 25: Change in average household size, Vancouver and Clark County, 2011–2021**
Source: ACS 1-Year Data Tables, Table S2501, 2011, 2021

| | 2011 | 2021 | Percent Change |
|---|---|---|---|
| City of Vancouver | 2.4 persons | 2.3 persons | -3.0% |
| Clark County | 2.7 persons | 2.6 persons | -2.3% |

Household size distribution has remained relatively consistent in the county from 2011 to 2021. In Vancouver, the share of three- and four-person households each decreased by two percentage points; at the same time, the share of two-person households increased by two percentage points and the share of one-person households increased by one percentage point. Given this information, it is possible that the shift in household sizes in the city reflects older couples becoming empty nesters, an influx of younger households without children, or (most likely) both.

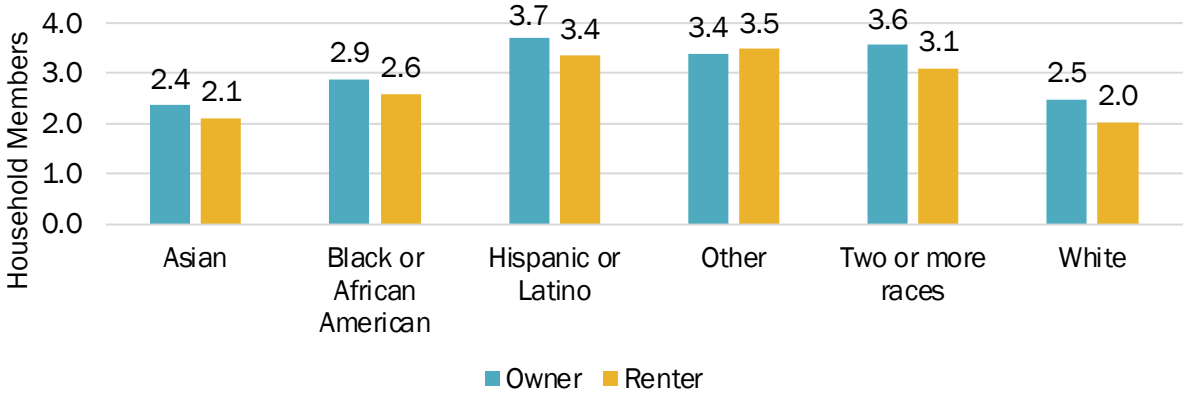

**Exhibit 26: Change in household size distribution, Vancouver and Clark County, 2011–2021**
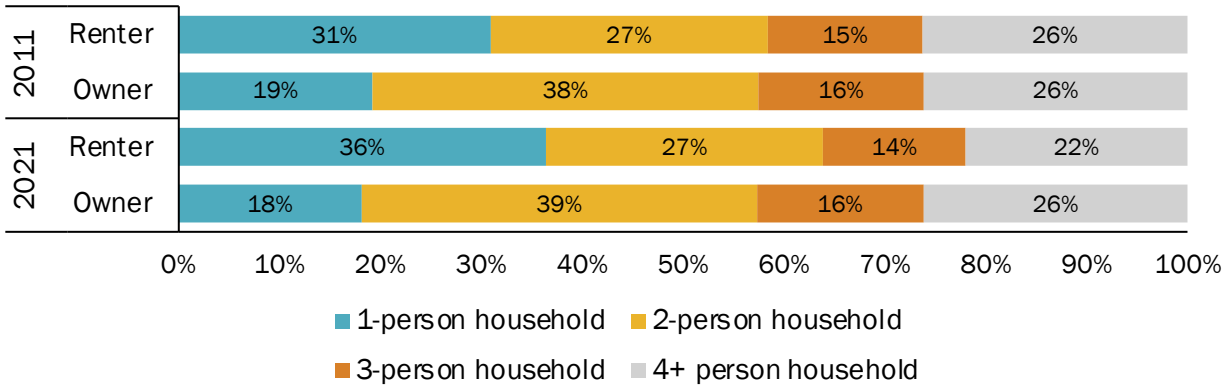
Source: ACS 1-Year Data Tables, Table S2501, 2011, 2021

## Household size by race

Exhibit 27 shows average household sizes by race and ethnicity in Vancouver. Of homeowner households, Hispanic households had the largest average household size with 3.7 members. On average, Asian and White homeowner households are the smallest, with roughly 2.4 and 2.5 members, respectively. Of renter households, Asian and White households are again the smallest on average, with 2.1 and 2.0 members respectively, and "other" race households are the largest on average with 3.5 members.

**Exhibit 27: Average household size by race and ethnicity, Vancouver, 2022**
Source: ACS 1-Year Data Tables, Table B25010A-H, 2022. Note: Data not available for American Indian and Alaska Native households or Native Hawaiian and Other Pacific Islander households.

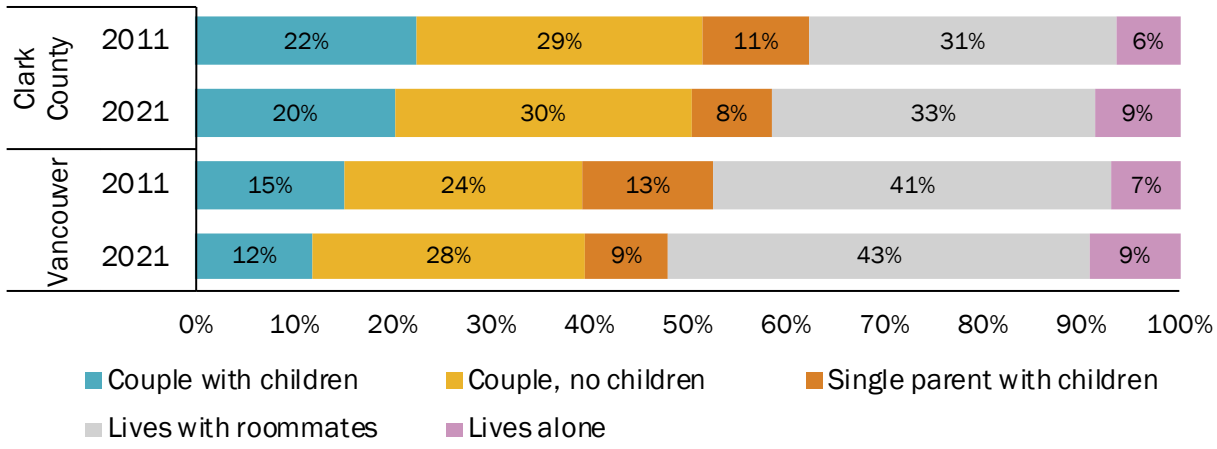


## Household size by tenure

Exhibit 28 shows household size by tenure. As of 2021, renter households tend to be slightly smaller than owner households. Roughly twice as many renters live in

one-person households than homeowners (36% to 18%, respectively). On the other hand, 39% of homeowners live in two-person households compared to 27% of renters. From 2011 to 2021, the distribution of household sizes for owner households remained relatively stable. For renter households, the share of one person households increased by five percentage points, and the share of households with more than four members decreased by four percentage points. This could indicate an increasing size gap between ownership households, which tend to be larger, and renter households, which have decreased in average size.

**Exhibit 28: Household size by tenure, Vancouver, 2011–2021**
Source: ACS 1-Year Data Tables, Table B25009, 2011-2021



## Living arrangement

As of 2021, Vancouver has a higher share of residents living with roommates than the county (43 to 33%, respectively). In both jurisdictions, the share of residents living with roommates (non-family households) increased by two percentage points.

Compared to the county, Vancouver has an eight-percentage-point lower share of couples with children, and a two-percentage-point lower share of couples without children. Overall, 21% of Vancouver households have children, compared to 28% of Clark County households. From 2011, the share of households with children decreased by seven percentage points in the city and five percentage points in the county.

**Exhibit 29: Change in living arrangement, Vancouver and Clark County, 2011–2021**
Source: ACS 1-Year Data Tables, Table S1101, 2011, 2021

# Section 3. Housing market conditions and trends

## Current housing stock

Key findings include:

### Housing Mix

**Vancouver has a higher share of multi-unit housing than the county overall, with slightly under half (around 44%) of Vancouver housing units having multiple units. However, the dominant type of housing is still single-detached housing (at 56%).**

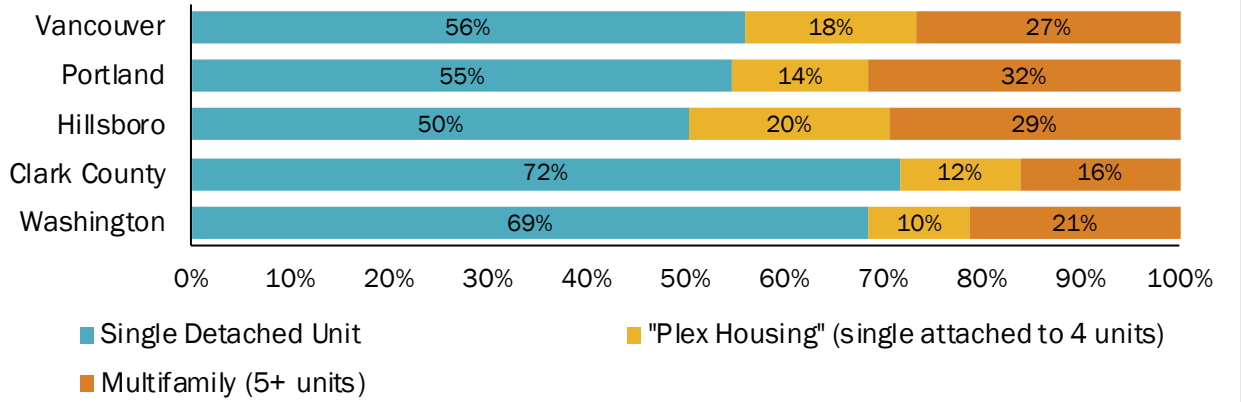
- **The dominant type of housing is single-detached housing comprising over half the housing stock both in Vancouver and Clark County as a whole (in terms of the total number of housing units).** However, Vancouver has a lower share of single-detached housing (at 56%) compared to the county's 72%. The remaining housing stock in Vancouver includes an estimated 27% multifamily housing, 8% single family attached (including townhomes or row homes), and 18% "plex housing" which is attached units up to fourplexes (according to U.S. Census data, 2021).
- **Vancouver has a higher share of multifamily housing than the county overall, with over a third (around 37%) of Vancouver residences having more than one unit.** Permit data analysis shows a steady increase in multifamily development in recent years. However, this percentage remains lower than that of the City of Portland (40%). Larger cities typically have higher percentages of multifamily housing units to try and keep up with the demand for housing that is less present in smaller or more rural areas.
- **Vancouver has seen a recent spike in vacancy rates among two-bedroom units in multifamily housing, jumping from just under 4% in 2022 to almost double that at 7% in 2023 that likely is related to recent housing construction.** Housing market assessments often use a 5% standard vacancy rate that implies a balance between housing supply and demand. Vancouver multifamily vacancy rates closely follow those of Clark County, only slightly falling behind as of 2023, ending at 7% to Clark County's 8%.

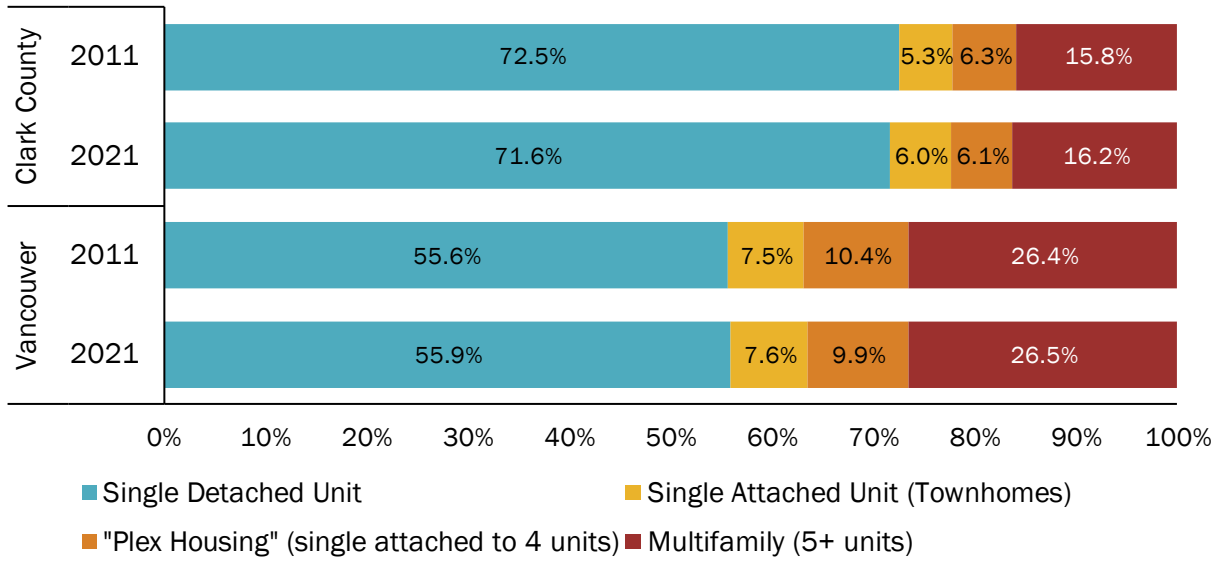
### Housing mix

The U.S. Census provides generalized survey-based information describing the main categories of housing units, including single-family detached, single-family

attached ("plex housing" (includes up to four units including duplex/triplex/quadplex housing, townhomes and row homes), "plex housing" (including duplexes, triplexes, and quadplexes), and multifamily (indicating larger buildings of five or more units). As shown in Exhibit 30, just over half (56%) of Vancouver housing units are single detached homes and just over a quarter (27%) of units are in a multifamily development with five or more units. Roughly 18% of units are either single-family attached units or "plex housing." Vancouver generally has a similar housing mix as Portland and Hillsboro; compared to the county overall, Vancouver has a higher share of single-family attached, "plex", and larger multifamily housing.

**Exhibit 30: Housing mix, Vancouver and comparison geographies, 2021**
Source: ACS 1-Year Data Tables, Table B25024, 2021





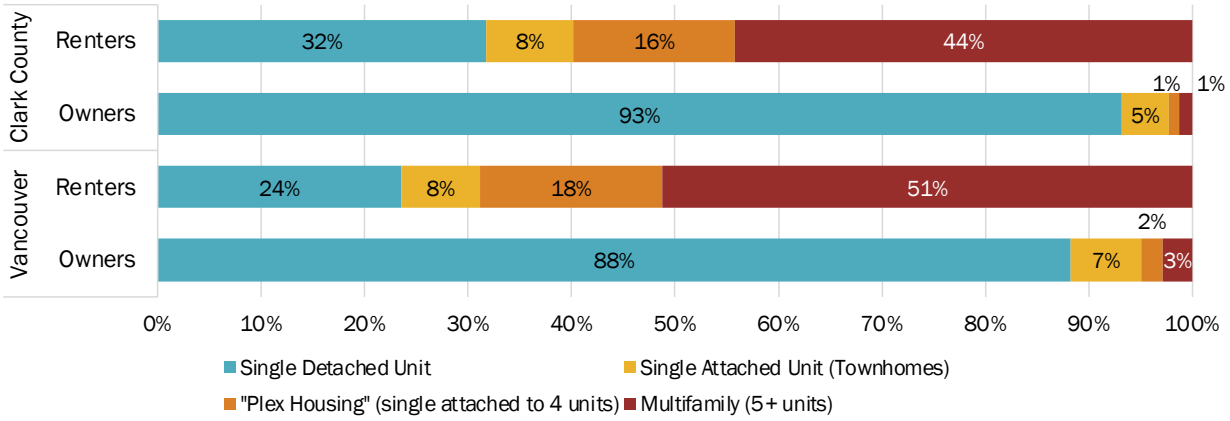


Exhibit 31 shows the change in the share of each housing type for Vancouver and the county from 2011 to 2021. According to the U.S. Census Bureau, there was only a slight change in the distribution of housing types over that time period. This general estimate provides the share of housing unit types based on information obtained from a survey sample obtained over one year (2011, 2021) including a subset of residents in the respective areas.

**Exhibit 31: Housing mix, Vancouver and Clark County, 2011–2021**
Source: ACS 1-Year Data Tables, Table B25024, 2011, 2021

Housing tenure varies for some housing types in both Vancouver and Clark County. In 2021, the majority of owner households in both Vancouver and Clark County lived in single-family homes (88% and 93% respectively). Likewise, the largest share of renter households lived in multifamily buildings with five units or more in Vancouver (51%) and Clark County (44%).

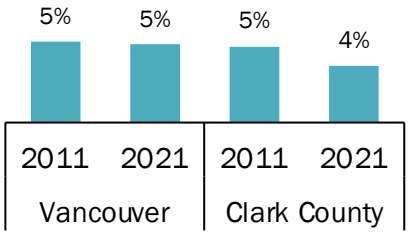
**Exhibit 32: Housing mix by tenure, Vancouver and Clark County, 2021**
Source: ACS 1-Year Data Tables, Table B25024, 2011, 2021

## Vacancy

The Census defines vacancy as "unoccupied housing units considered vacant." Vacancy status is determined by how the unit would likely be occupied (e.g., for rent, for sale, or for seasonal use only). Vacancy rates are cyclical and represent

the lag between demand and the market's response to demand for additional dwelling units. Vacancy rates for rental and multifamily units are typically higher than those for owner-occupied and single-family dwelling units. In Vancouver, the vacancy rate for all units reported by ACS data was 5%, slightly higher than Clark County (4%). The city's overall vacancy rate has remained stable since 2011.

**Exhibit 33: Vacancy rate, all units, Vancouver and Clark County, 2011 and 2021**
Source: ACS 1-Year Data Tables, Table B25002, 2011, 2021



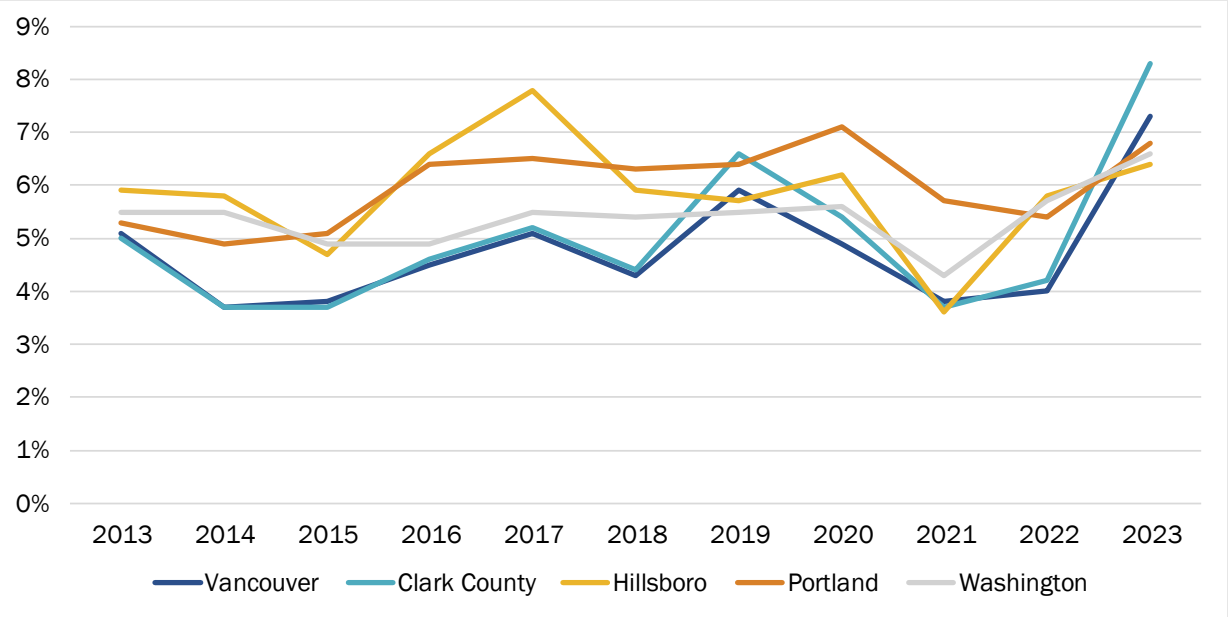


Exhibit 34 shows the two-bedroom multifamily vacancy rate for Vancouver, Clark County, Hillsboro, Portland, and Washington State according to CoStar. Clark County and Vancouver's vacancy rates closely follow each other for two-bedroom units, and until recently have been below the state average. As of 2023, Vancouver and Clark County's vacancy rates for two-bedroom multifamily units have almost doubled, from 4 to 7 and 8%, respectively (higher than the overall vacancy rate for all units reported in ACS data). In comparison, the state of Washington's vacancy rates for two-bedroom multifamily units increased by less than one percentage point in the last year. A low vacancy rate can indicate limited housing supply with inadequate production to satisfy need, while a high vacancy rate can indicate that housing costs are too high. Housing market assessments often use a 5% standard vacancy rate that implies a balance between housing supply and demand.

**Exhibit 34: Two-bedroom multifamily units vacancy rate, Vancouver, Clark County, Hillsboro, Portland, and Washington State, 2013-2023**

Source: CoStar

## Housing development trends

Key findings include:

- **Historic and current housing underproduction has limited housing supply in both the City of Vancouver and Clark County.** Housing underproduction occurs when communities fall short in providing sufficiently available housing that meets the community's demand for housing. Essentially, there is a housing supply and demand imbalance that can persist over time to exacerbate housing access issues.
- **From 2012 to 2022, Vancouver increased its housing stock by roughly 14,700 units, or by 21% (a small portion of this increase was due to annexations). Annually, the City of Vancouver housing stock increased by around 1,466 housing units per year from 2012 to 2022. Rising housing costs and low vacancy rates suggest current housing stock and development is not adequately meeting the needs of Vancouver residents.**
- **Among the multifamily buildings permitted since 2015, the majority of units (73%) are in buildings with more than 20 units.** Alternatively, 23% are within buildings that have between five and 19 units, and only 4% are within buildings that have two to four units, suggesting an opportunity to build more middle housing and lower density multifamily housing in the city.

## Housing unit supply changes

Exhibit 35 shows the housing growth for Vancouver and Clark County from 2012 to 2022. For this analysis a few other comparable cities in Washington State similar in size and scale are included to provide comparisons to the City of Vancouver. Both the City of Vancouver and Clark County showed a high growth rate, exceeding the growth rate of both the Cities of Spokane and Tacoma, which both grew at less than half the rate of Vancouver within the same time period. This helps demonstrate how rapid Vancouver's growth has been over the last decade.

**Exhibit 35: Total housing units, Vancouver and Clark County, 2012–2022**
Source: WA Office of Financial Management

| | 2012 | 2022 | Change | Percent Change |
|---|---|---|---|---|
| City of Vancouver | 70,853 | 85,511 | 14,658 | 21% |
| Clark County | 169,992 | 203,749 | 33,757 | 20% |
| City of Spokane | 94,911 | 101,222 | 6,311 | 7% |
| City of Tacoma | 86,434 | 93,323 | 6,889 | 8% |

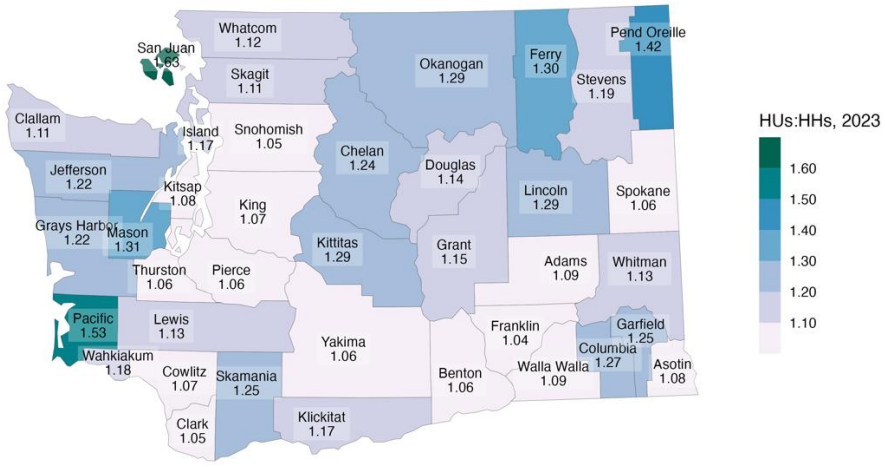
## Housing production

Since the 1960s, the U.S. has created about 1.10 housing units for every household that has formed. Households form when people move into a new area, when children leave their parents' homes, or when roommates come together or split up. A functioning housing market needs to produce at least one new housing unit for each new household formed. However, this should be higher due to the need to factor in demolition, second homes, vacation homes, changing consumer preferences, the need for a natural amount of vacancy rate that allows for movement within the market and accounts for the deterioration of existing housing stock. A ratio higher than 1:1, allows for a rate to account for a natural amount of vacancy, as well as for second homes and obsolescence. In

2022, Washington State had only 1.07 housing units for every household, which is lower than the national ratio of 1.11 housing units per household.[8]

Exhibit 36 shows the ratio of housing units to households by county in Washington State in 2023. The ratio in Clark County was only 1.05 in 2023.[9] This rate is much lower than the target rate of 1.11 housing units for every household.

**Exhibit 36: Ratio of housing units to households, 2023**
Source: Office of Financial Management, ECOnorthwest



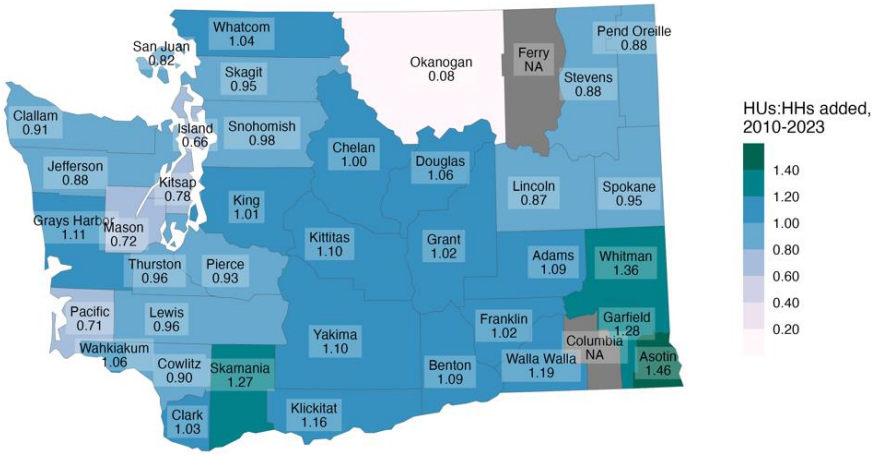


Exhibit 37 shows the ratio of housing units to households from 2010 to 2020. Over this time period, Clark County produced less housing compared to household growth than most counties in the State, contributing to rising housing costs in the city and county.

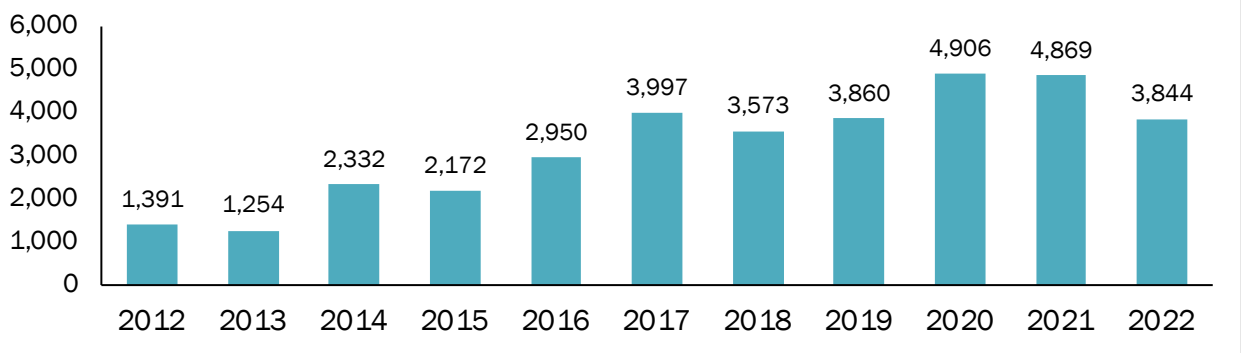
**Exhibit 37: Ratio of housing units to households from 2010 to 2023**
Source: Office of Financial Management, ECOnorthwest



[8] Up for Growth. (2022). Housing Underproduction in Washington State. Source: https://upforgrowth.org/wp-content/uploads/2022/12/Housing-Underproduction-in-Washington-State.pdf

[9] Up for Growth Research on Housing Underproduction in Washington State, ECOnorthwest analysis of data was based on U.S. Census Bureau, Washington Office of Financial Management (OFM) and Moody's Analytics data sources.

Exhibit 38 shows the number of all types of housing units added to Clark County's housing stock each year from 2012 to 2022. Until 2021, the number of units added generally increased each year. However, this trend reversed in 2022 when roughly 1,000 fewer units were built in Clark County than in 2021.

**Exhibit 38: Annual housing production, Clark County, 2012–2022**
Source: Washington Office of Financial Management

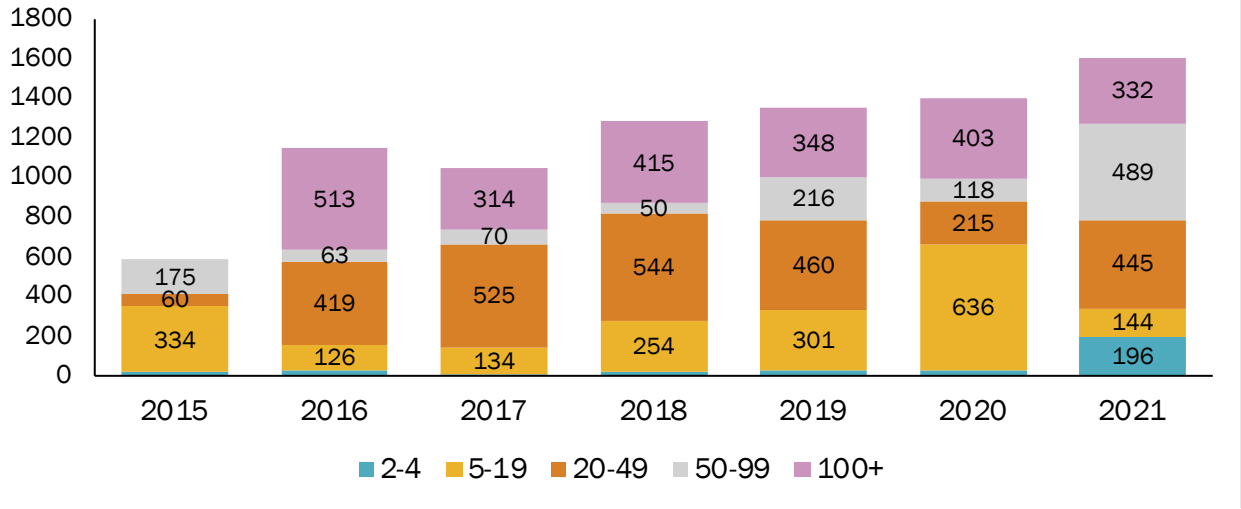
## Housing permit data

The project team also examined the City's building permit data from 2015 to 2021 to better understand emerging housing development trends providing more information on housing being permitted (not necessarily built already) and greater detail than available in the U.S. Census Bureau data. Below, Exhibit 39 shows multifamily permitting trends by building scale. Vancouver is seeing a steady increase in the annual rate of new units permitted in multifamily development across all scales of buildings. Approximately 79% of new unit construction in the city has been in multifamily developments over the last three years. This information differs from the general estimate provided above since the U.S. Census Bureau data shown above does not provide information on permitted housing construction and is based on a survey sample obtained over one year from a subset of residents.

In 2015, only 585 multifamily units were permitted, whereas 1,606 were permitted in 2021. Over that time period, the most commonly permitted multifamily building scale was 20- to 49-unit buildings (32% of permitted units), followed closely by 100+ unit buildings (28%), then five- to 19-unit buildings (23%). Only 4% of the permitted units were in two- to four-unit buildings, which could suggest an opportunity to expand middle housing development in the city.

**Exhibit 39: Vancouver multifamily permit data by building scale, 2015–2021**

Source: City of Vancouver. Number of units is shown below in the key.



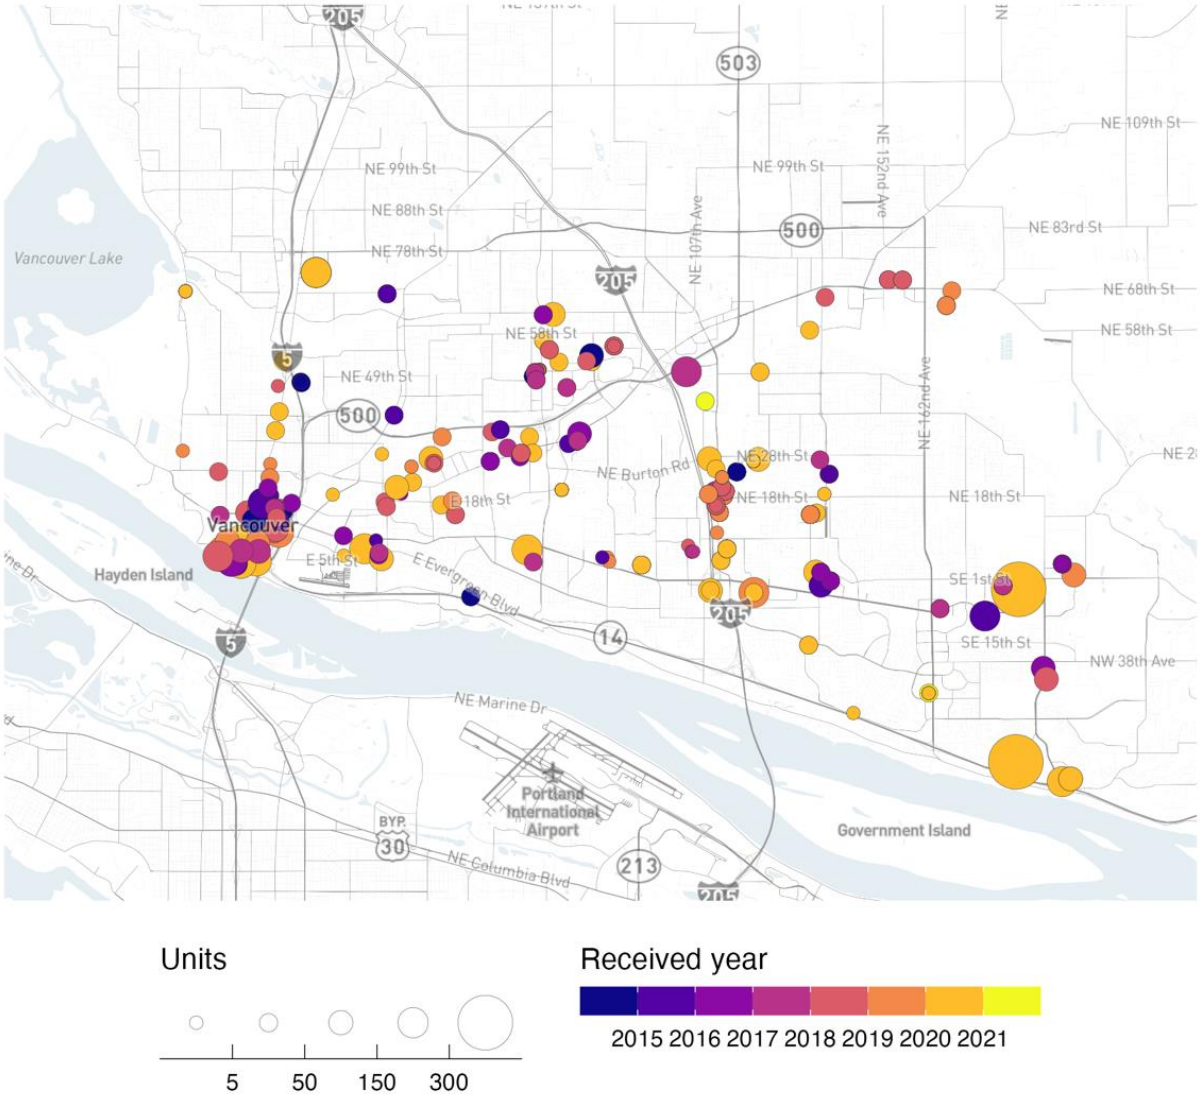


Exhibit 40 (below) provides the geographic location of the permits described above in Exhibit 39 by year received and the number of units in the building. Most apartment construction has been concentrated in the downtown area, with some clusters of multifamily development along the Fourth Plain Boulevard and near I-205.

**Exhibit 40: Map of Vancouver multifamily permitting activity, 2015–2021**
Source: City of Vancouver, ECOnorthwest

## Housing market trends

Housing market cost data can provide insights into the attainability of existing housing stock in a city. Key findings include:

- As of 2023, the average rent in both Vancouver and Clark County is roughly $1,700. Rents in Vancouver have increased 60% over the past decade.
- As of 2023, the average home price in Vancouver is roughly $447,000. Home prices have nearly tripled over the past decade, increasing by 174%.

- Median household income in the City of Vancouver increased by 19% from 2011 and 2021 (when adjusted for inflation) which is far less than the increases in median home sales prices and average. In comparison, area median income calculated by the United States Department of Housing and Urban Development (HUD) for the Portland-Vancouver-Hillsboro metropolitan statistical area (MSA) for a four-person household rose from $72,000 in 2011 to $96,900 in 2021. Adjusted to 2021 dollars, this equates to a 12% increase in the same period for the Portland-Vancouver-Hillsboro MSA (indicating comparatively faster growth in the City of Vancouver).

## Rental housing

Exhibit 41 shows the average rents across all housing unit sizes in Vancouver and comparison geographies for 2012 and 2023. Rents in the City of Vancouver are very similar to the county overall.

As of 2023, the average rent in Vancouver was $1,673 which was similar to the average rent of $1,671 in Clark County. From 2012 to 2023, Vancouver rents increased $603, or 56%, surpassing rents in Portland.

**Exhibit 41: Average rents, Vancouver and comparison geographies, 2012–2023**
Source: CoStar

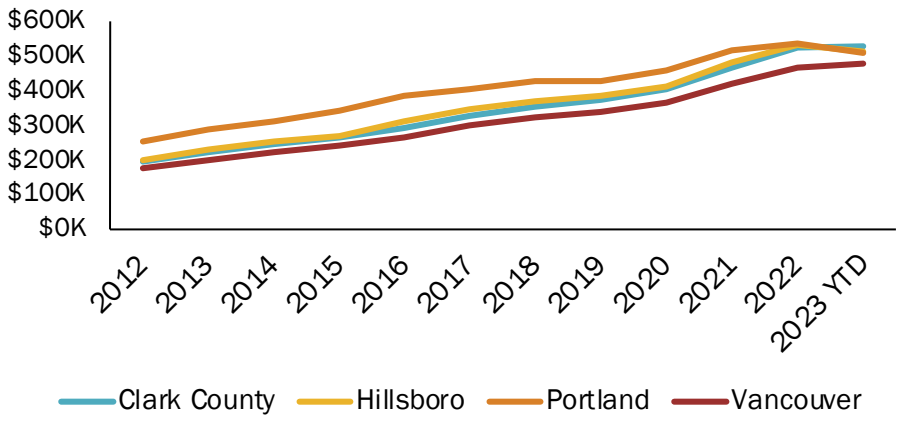
| Geography | 2012 | 2023 | $ Change | % Change |
|---|---|---|---|---|
| City of Vancouver | $1,070 | $1,673 | $603 | 56% |
| Clark County | $1,086 | $1,671 | $585 | 54% |
| City of Hillsboro | $1,104 | $1,782 | $678 | 61% |
| City of Portland | $1,198 | $1,490 | $292 | 24% |

## Ownership housing

As of June 2023, the median home sale price in Vancouver is roughly $477,000. The city's home prices are roughly $50,000 lower than the county overall.

**Exhibit 42: Median home sales prices, Vancouver and Clark County, June 2023**
Source: Redfin

| $477,000 | $527,000 | $514,000 | $511,000 |
|---|---|---|---|
| City of Vancouver | Clark County | City of Hillsboro | City of Portland |



While Vancouver home prices are lower than the county, its home prices increased at a similar rate since 2012, nearly tripling (a 174% increase) over the decade from 2012 to 2023. Additionally, while Vancouver home prices are currently lower than both Hillsboro and Portland, Vancouver prices have increased at a faster rate than both cities.

**Exhibit 43: Median home sales prices, Vancouver and Clark County, 2012–June 2023**
Source: Redfin

| Geography | 2012 | June 2023 | $ Change | % Change |
|---|---|---|---|---|
| City of Vancouver | $174,000 | $477,000 | $303,000 | 174% |
| Clark County | $193,000 | $527,000 | $334,000 | 172% |
| City of Hillsboro | $198,000 | $514,000 | $316,000 | 159% |
| City of Portland | $253,000 | $511,000 | $258,000 | 101% |

Additionally, while home prices in other jurisdictions dropped from 2022 to 2023, the City of Vancouver and Clark County home prices continued to grow, indicating a strong demand relative to other areas in the region.

**Exhibit 44: Median home sales price, Vancouver and Clark County, 2019–June 2023**
Source: Redfin

# Section 4. Housing affordability

## Cost burdened households

Housing costs are typically the largest portion of a household budget, and typically include mortgage or rent payment, utilities, interest, and insurance. HUD guidelines indicate that households paying more than 30% of their income on housing experience "cost burden" and households paying more than 50% experience "severe cost burden." Using cost burden as an indicator is one method of determining how well a city is meeting its need to provide housing that is affordable to all households in a community.

### Cost Burden

**Cost burdening tends to disproportionately impact renters in comparison to homeowners. Rates of cost burden for renters have increased since 2011 (by three percentage points) but dropped substantially for homeowners (12%).**

Cost burdening for owner-occupied housing is less common because mortgage lenders typically ensure that a household can pay its debt obligations before providing a loan. However, cost burdening can occur when a household secures a mortgage and then sees its income decline. In addition, retired persons subsisting on a fixed income can experience cost burden associated with increased property taxes rising above their financial limitations.10

Key findings for Vancouver include:

- Cost burdening tends to disproportionately impact renters in comparison to homeowners and this tendency holds true for the City of Vancouver and Clark County as a whole. In the City of Vancouver, renters are nearly three times more likely to be cost burdened than homeowners. In 2021, 57% of renters in the city were cost burdened (spending more than 30% of their income on

[10] Also, it is important to note that households with incomes over 100 percent of the AMI are less burdened overall since their larger income, minus housing costs, will go farther to cover non-housing expenses such as transportation, childcare, and food. While cost burden is a common measure of housing affordability, it does have limitations. The measure does not consider the actual income and the possibility of higher incomes being able to easily pay for necessary nondiscretionary expenses with the remaining income, and it does not account for accumulated wealth and assets (such as profits from selling another house) that allow a household to purchase a house that would be considered unaffordable to them based on the cost-burden indicator.

rent), including over a quarter of all renters (27%) who were severely cost burdened, spending more than 50% of their income on rent and with around.

- **Rates of cost burden for renters have increased since 2011 (by three percentage points) but dropped substantially for homeowners (12%).**

Housing cost burden can put households with low incomes in vulnerable situations and force them to make trade-offs between housing costs and other essentials like food, medicine, or transportation. This unstable condition can also lead to rental evictions, job instability, school instability for children, and homelessness.

**Exhibit 45: Overall cost burden, Vancouver and Clark County, 2021**
Source: ACS 1-Year Data Tables, Table B25091, 2021

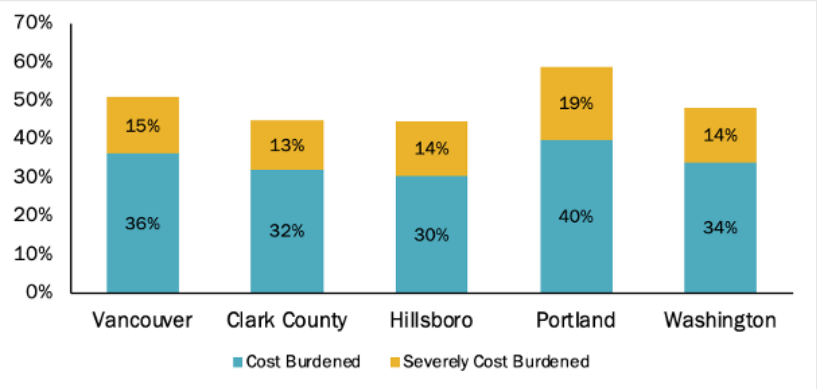


Exhibit 45 shows overall rates of cost burden for the City of Vancouver compared to Clark County, Hillsboro, Portland, and the State of Washington as a whole. In Vancouver, roughly 51% of all households experienced cost burdened, with 36% of households paying between 30-50% of their income towards housing and an additional 15% who experienced severe cost burdening (paying 50% or more of their income towards housing costs). These numbers are higher than Clark County, Hillsboro, and the State of Washington. The only area which showed higher rates of cost burdening was the City of Portland.

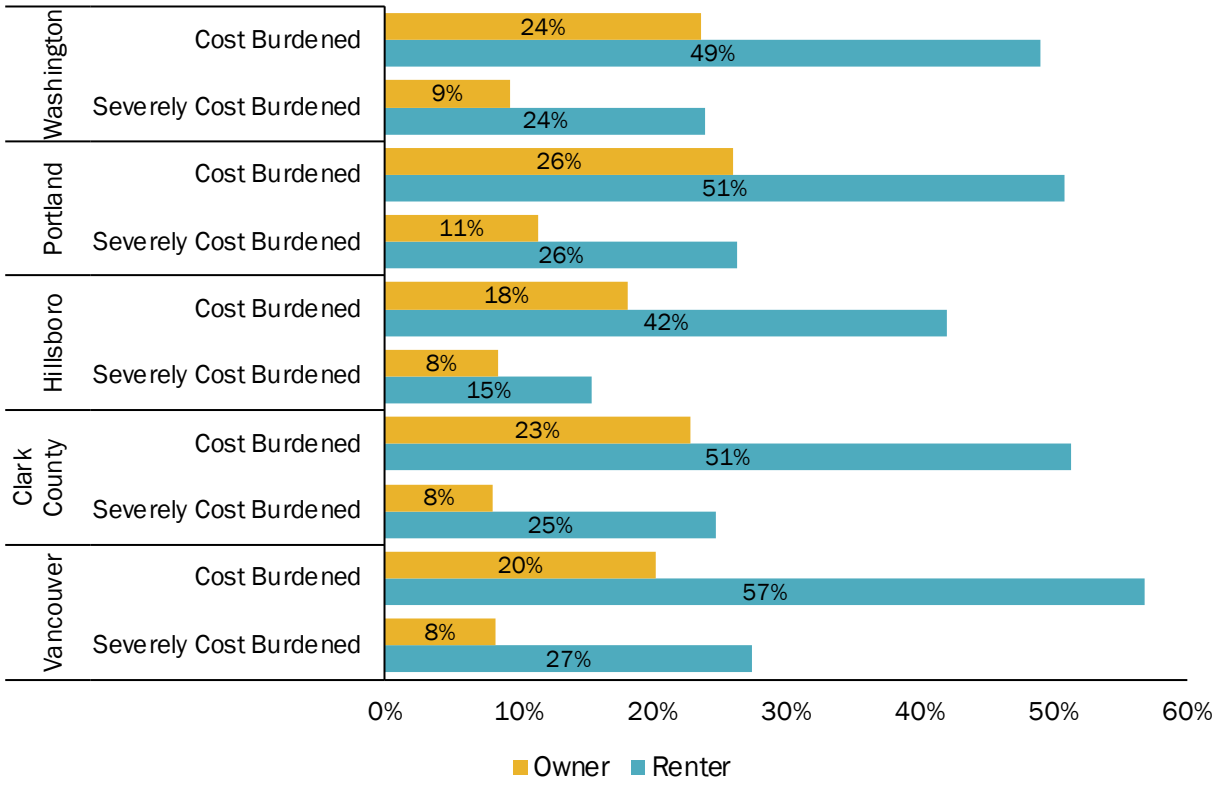
Exhibit 46 shows rates of cost burden trends by tenure, showing rates for homeowners and for renters, for the City of Vancouver, Clark County, Hillsboro, Portland, and the State of Washington in 2021. In all areas except for Portland, severely cost burdened owner households are under 10%. In addition, all areas show cost burdened owner households to be under 30%, with Vancouver having a rate of 20%.

In contrast, overall cost burden rates for renters are around 57% in the City of Vancouver, the highest among all comparison geographies, with Hillsboro and the state of Washington being the only geographies with cost burden rates under 50%. In all geographies, renters are significantly more likely to be cost burdened than homeowners, with the smallest gap being that of Hillsboro, where there was a 24 percentage point gap between renters and owners. In contrast, Vancouver has a 37 percentage point gap.

**Exhibit 46: Cost burden by tenure, Vancouver and Clark County, 2021**

Source: ACS 1-Year Data Tables, Table B25091, 2021

Note: 'Cost Burdened' indicates households paying 30-50% of income towards housing costs. 'Severely Cost Burdened' indicates households paying 50% or more of income towards housing costs.



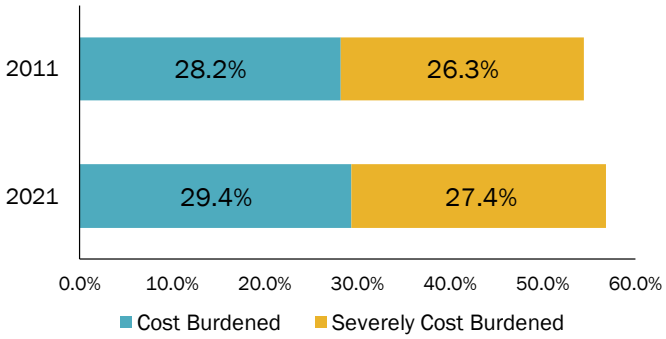


Exhibit 47 shows the increases in cost burdening for renters over the last decade in the City of Vancouver. As of 2021, 57% of renters spent over 30% of their household income on rent, and just over a quarter (27%) of renters spent more

than 50%. From 2011 to 2021, the rate of cost burdening increased by roughly three percentage points, while the rate of severe cost burdening increased by roughly one percentage point.

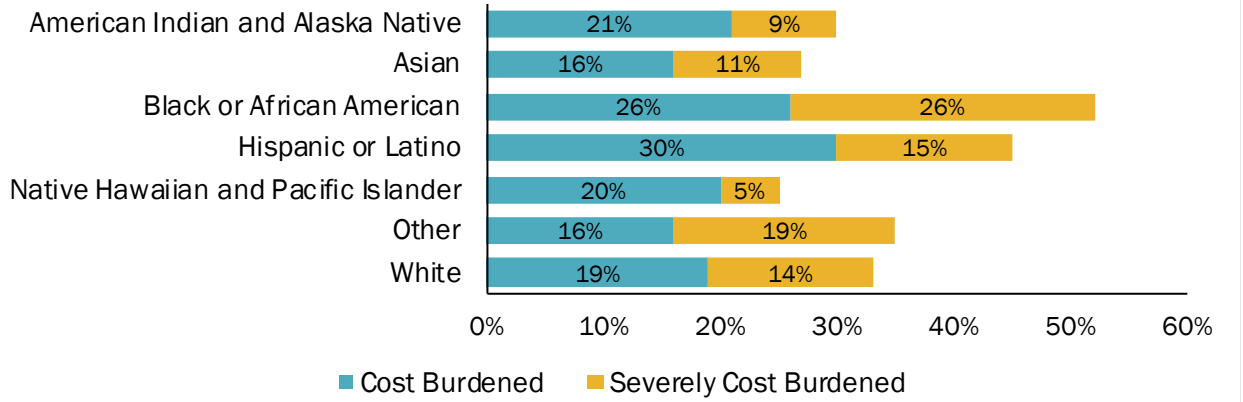

**Exhibit 47: Cost burden rates for renters, Vancouver, 2011–2021**
Source: ACS 1-Year Data Tables, Table B25091, 2011, 2021

## Cost burden by race

Exhibit 48 shows the rates of cost burdening and severe cost burdening by race in Vancouver. In the city, Black or African American households and Hispanic or Latino households experience the highest rates of cost burden (where households pay 30% or more of their income towards housing costs). Households who identified as another race not listed ('Other') and Black or African American households had the highest rates of severe cost burden (paying 50% or more of income for housing).

**Exhibit 48: Cost Burden by Race, Vancouver, 2021**
Source: SEVA, American Community Survey 5-Year Data Tables, 2017–2021

## Senior and affordable housing inventories

Exhibit 49 lists income restricted, project-based affordable housing sponsored by the City's Affordable Housing Fund. There are 1,243 units designated for various populations as specified below.

**Exhibit 49: Affordable rental units in Vancouver, WA**
Source: ECOnorthwest, Vancouver Affordable Housing Fund Units.
The "In Progress" status was added for units under construction.

| Project | Units | Eligibility | Project Status |
|---|---|---|---|
| Meriwether Place | 30 | <30% AMI, homeless and referred by behavioral health services | Completed |
| The Meadows | 22 | Units for <30% AMI, <50% AMI | Completed |
| Isabella Court I | 46 | Seniors earning <60% AMI | Completed |
| Isabella Court II | 49 | Seniors earning <60% AMI | Completed |

| Lainie's Crossing Acquisition | 40 | Families | Completed |
| Miles Terrace | 69 | Seniors | Completed |
| Namuqas | 30 | Homeless/Foster Youth | Completed |
| Northcrest Apartments Acquisition | 26 | Families | Completed |

One of the major funding sources for affordable housing in Vancouver comes from the Affordable Housing Fund (AHF). This fund "supports people experiencing very low-income in Vancouver through providing affordable housing and services."[11] Established in 2016, this fund has produced 701 affordable housing units, awarding funds of almost $20 million to these projects between 2017 and 2023. This levy was recently renewed to provide $100 million in AHF funding from 2024 through 2033.[12]

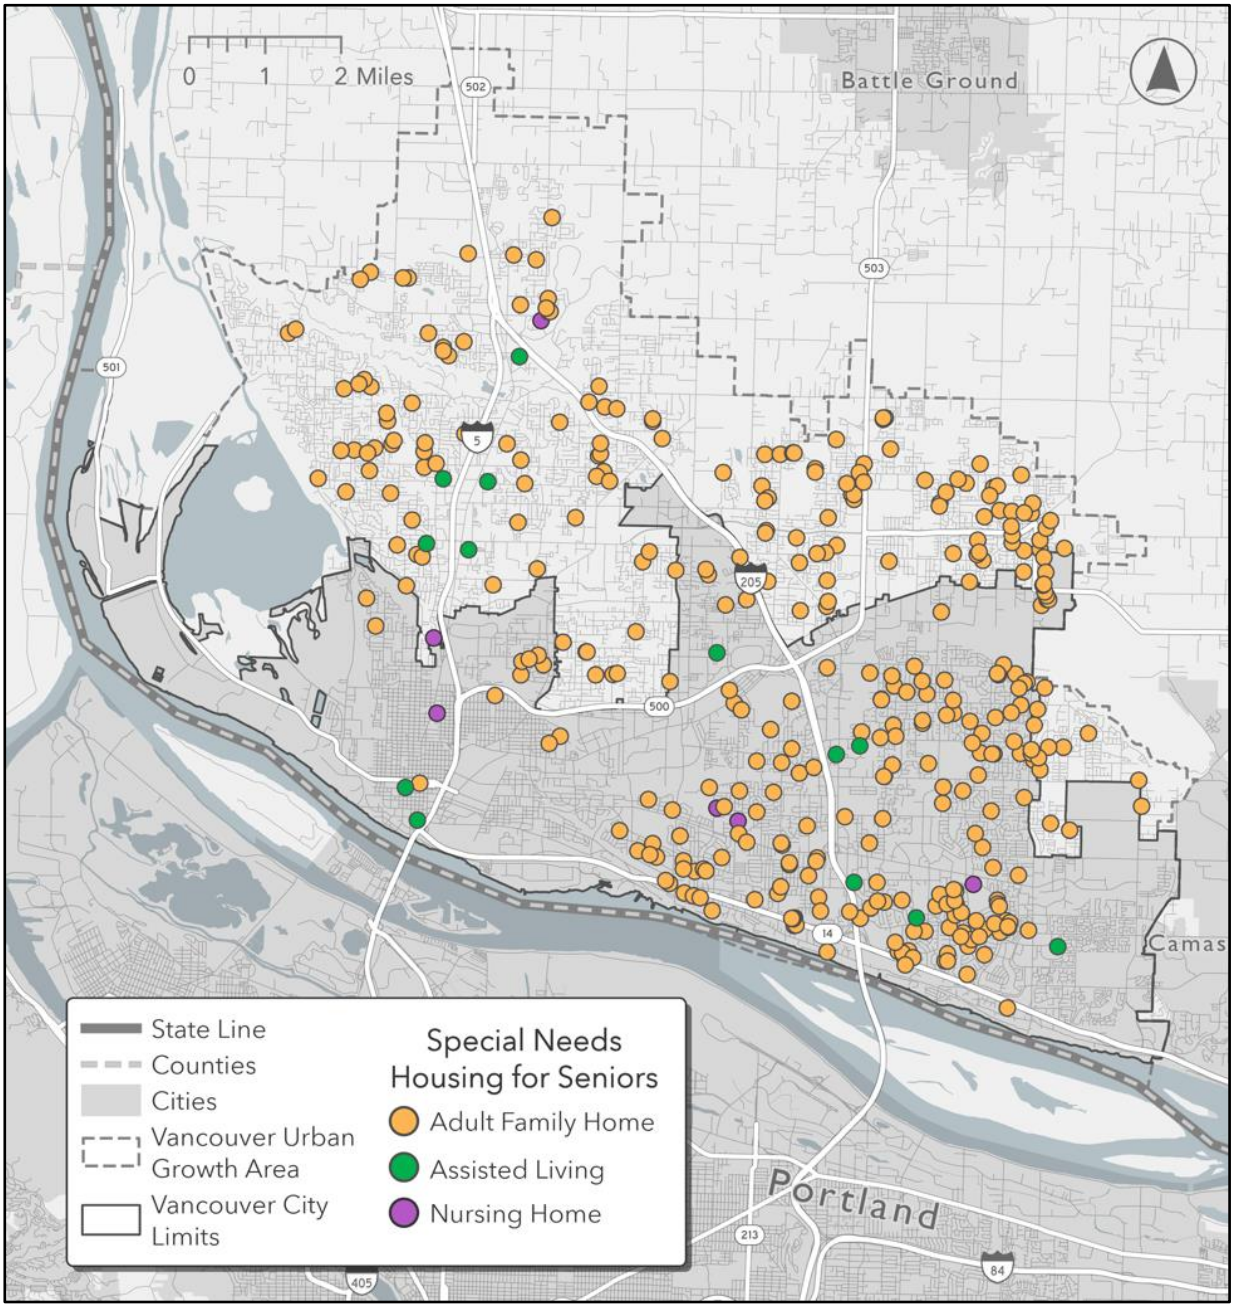
[11] https://city-of-vancouver-wa-geo-hub-cityofvancouver.hub.arcgis.com/documents/CityOfVancouver::affordable-housing-fund-investment/explore

[12] https://www.cityofvancouver.us/economic-prosperity-and-housing/affordable-housing-fund/

The availability of housing for seniors (65 years or older) is important to track and assess to ensure the city has sufficient housing for the growing senior population. Exhibit 50 maps out different types of senior housing located in the City of Vancouver including adult family homes, assisted living facilities, and nursing homes.[13] Over the last decade, the share of the senior population (aged 65 years or older) has increased by six percentage points from 13% to 19% in the City of Vancouver. This likely will increase the demand for senior housing facilities.

Addressing housing needs for those aged above 60 will require a range of housing opportunities. For example, "the 82-to-86-year-old cohort dominates the assisted living and more intensive care sector" while new or near-retirees may prefer aging in place or active, age-targeted communities.[14] Characteristics like immigration and ethnicity play a role too as "older Asians and Hispanics are more likely than whites or blacks to live in multigenerational households."[15] Households for adults 65 years or older earn different incomes, thus they have to make distinctive housing choices. For instance, low-income households may not have the financial resources to live out their years in a nursing home and may instead choose to downsize to smaller, more affordable units. Others living nearby relatives may also choose to live in multigenerational households. The aging of the Baby Boomer generation could increase the demand for smaller "downsized" housing and greater demand for housing with assistance and age-in-place amenities.

---



[13] An assisted living facility (ALF) provides room and board and help with activities of daily living. Some ALFs provide limited nursing services; others may specialize in serving people with mental health problems, developmental disabilities, or dementia (Alzheimer's disease). RCW 18-20-020(2). Some Assisted Living Facilities provide Assisted Living through a contract with the Department of Social and Health Services. Specific services are provided in a contracted assisted living facility. Adult family homes are regular neighborhood homes where staff assumes responsibility for the safety and well-being of an adult. A room, meals, laundry, supervision and varying levels of assistance with care are provided. Some provide occasional nursing care and/or specialized care for people with mental health issues, developmental disabilities or dementia. The home can have two to six residents and is licensed by the state. ## Section 5. Current and future housing needs

Observed population growth in Vancouver has continued to exceed prior population forecasts. The 2011–2030 Vancouver Comprehensive Plan forecast an annual average population growth of 1.17% within city limits at that time[16] However, partially because of annexation, observed population growth over this period of time indicates that the average annual population growth since 2010 has actually been 1.68%, a large increase above planned growth.[17] This population growth has led to an increasingly strong demand for housing in the Vancouver market that shows no signs of slowing down in the near term, as Vancouver continues to capture a larger share of the Portland-Vancouver region population growth and residential development.

### Housing Need

**The City of Vancouver believes Clark County will continue to see strong growth in population. In total, an estimated 38,129 housing units are needed by 2045 in the City of Vancouver. Overall, this means an estimated 1,733 housing units need to be built or created per year from 2023 to 2045 to meet the housing need in the City of Vancouver.**

Given that observed changes in population and household growth have exceeded the adopted forecast from the 2011–2030 Vancouver Comprehensive Plan, and that Clark County should make their decisions on population allocations in late 2024, this analysis uses a draft estimate of a potential refined housing need forecast based on current population estimates from the Washington Office of Financial Management (OFM).[18] Recently, the Clark County Council approved a 1.4% annual growth rate

---

[16] https://www.cityofvancouver.us/sites/default/files/fileattachments/community_and_economic_development/page/874/vancouver_comprehensive_plan_2011-2030_august_2021_update.pdf. Between 2010 to 2020

[17] Although between 2010 to 2020, several areas were annexed into the City of Vancouver which increased the population by approximately 6,126 persons.

[18] The Washington State Department of Commerce (via HB 1220) has been developing method guidance for estimating housing need targets in total and by income level for counties that has been released recently in 2023. This new state requirement is a part of House Bill 1220 (2021) which amended the Growth Management Act to instruct local governments to "plan for and accommodate" housing affordable to all income levels. Clark County will have to

with a 20-year projected countywide population of 718,154 through 2045 which is nearly 20,000 more people than OFM's middle range projection (the OFM middle projection is 698,416 persons).[19]

**The City of Vancouver believes Clark County will continue to see strong growth in population.** The City determined that the associated demand for housing should be in line with the OFM middle forecast, which has historically been the most accurate forecast provided by the State. **The middle range OFM forecast estimates Clark County population increasing to 698,416 in 2045, indicating the need for an additional 107,193 housing units.**

**Exhibit 51. City of Vancouver interim population and household forecast, 2023–2045**

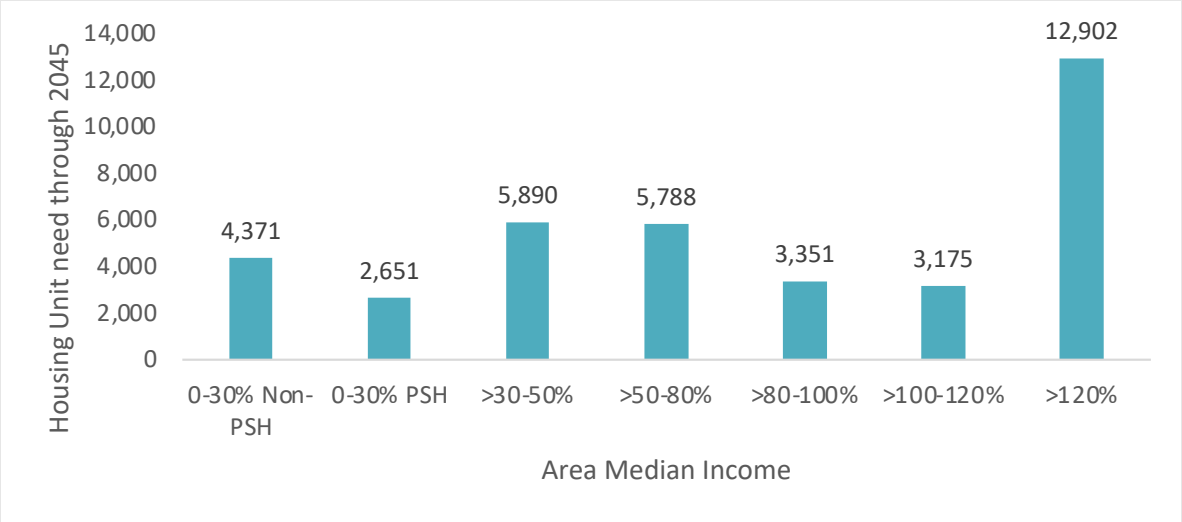
| Year | Population | Housing Units |
|---|---|---|
| 2023 | 199,600 | 86,878 |
| 2045 | 281,544 | 125,007 |
| **Change 2024 to 2045** | | |
| Number | 81,944 | 38,129 |
| Percent | 41% | 44% |
| AAGR | 1.87% | 1.99% |

The City believes it will continue to attract roughly the same share of county growth it has seen in the recent decade (42%). To estimate the City's housing

determine the allocation method for dividing up units for each jurisdiction and the method they will use to identify how much housing units by household income bracket should be allocated to each local jurisdiction in Clark County including the City of Vancouver. This analysis relies on the use of population projections over a period time such as 20 years or 30 years. The county must add the housing targets to their countywide planning policies. The county's allocation of housing needs to each local jurisdiction and the sum of housing needs to all jurisdictions should be documented in a public-facing summary document before the periodic Comprehensive Plan update. Vancouver's allocation of projected housing needs by income level, permanent supportive housing (PSH), and emergency housing (EH) must be documented in their comprehensive plan housing element. Definitions for PSH and EH are provided below. Additional information: https://www.commerce.wa.gov/serving-communities/growth-management/growth-management-topics/planning-for-housing/updating-gma-housing-elements/ and https://deptofcommerce.app.box.com/s/chqj8wk1esnnranyb3ewzgd4w0e5ve3a.

[19] Clark County Resolution No. 2023-05-03 adopted on May 2, 2023: https://clark.wa.gov/sites/default/files/media/document/2023-05/2023-05-03.pdf. The OFM 2045 population projections ranges from low 576,151 persons, middle 698,416 persons, and high 791,809 persons. Clark County's April 2022 population estimated by OFM is at 520,900 persons.

need through 2045, additional adjustments were made to account for smaller household sizes, higher vacancy rates due to the higher share of multifamily units, providing for the loss of units to second/vacation homes, and accounting for the demolition of some existing units.



**These adjustments indicate a total need of 43,198 housing units from 2020 to 2045 in the City of Vancouver.** The Washington State Department of Commerce Housing for All Planning Tool (HAPT) is calibrated to 2020, therefore the project team subtracted 5,069 housing units built from 2020 to 2023 in the City. Overall, this indicates a total need of 38,129 housing units from 2023 to 2045 (the planning horizon is 2025 to 2045).[20] As shown in Exhibit 52 below, a total of 2,651 Permanent Supportive Housing (PSH) units and 4,371 non-PSH units for households below 30% AMI (extremely low income) may be needed by 2045 along with 5,890 units between 30 to 50% AMI and 5,788 housing units between 50 and 80% AMI (low income). In addition, around 3,351 units between 80 to 100% AMI (moderate income); 3,175 housing units between 100 to 120% AMI (moderate to middle income); and 12,902 housing units over 120% AMI (high income) may be needed by 2045. The precise number of housing units in the income bands needed in the City of Vancouver has not yet been determined. The HAPT estimate also shows 406 emergency living units (in the form of beds providing temporary housing) available and 1,374 beds needed by 2045.

**Overall, an estimated 1,733 housing units should be built or created per year from 2023 to 2045 to meet the housing need in the City of Vancouver. Since the existing City of Vancouver housing stock has increased by around 1,466 housing units per year over the last decade from 2012 to 2022 (per OFM data), this means that housing production will need to increase by around 267 housing units per year.** About one third new housing units with the interim future housing needs shown below (calculated with the Washington Department of Commerce's HAPT projections) would need to be affordable to households at or below 50% of area median income. Development of regulated affordable housing can face a

[20] Washington State Department of Commerce. (March 1, 2023). This analysis relied on Allocation Method A.

number of challenges and typically requires sizable gap financing to make projects feasible.[21]

[22] Washington State Department of Commerce, "Updating GMA Housing Elements," February 2023, www.commerce.wa.gov/serving-communities/growth-management/growth-management-topics/planning-for-housing/updating-gma-housing-elements/. *"Permanent supportive housing" (PSH) is subsidized, leased housing with no limit on length of stay that prioritizes people who need comprehensive support services to retain tenancy and utilizes admissions practices designed to use lower barriers to entry than would be typical for other subsidized or unsubsidized rental housing, especially related to rental history, criminal history, and personal behaviors. Permanent supportive housing is paired with on-site or off-site voluntary services designed to support a person living with a complex and disabling behavioral health or physical health condition who was experiencing homelessness or was at imminent risk of homelessness prior to moving into housing to retain their housing and be a successful tenant in a housing arrangement, improve the residents health status, and connect the resident of the housing with community-based health care, treatment, or employment services. Permanent supportive housing is subject to all the rights and responsibilities defined in chapter 59.18 RCW. "Emergency housing" means temporary indoor accommodations for individuals or families who are homeless or at imminent risk of becoming homeless that is intended to address the basic health, food, clothing, and personal hygiene needs of individuals or families. Emergency housing may or may not require occupants to enter into a lease or an occupancy agreement. Source: RCW 36.70A.030.*

## Section 6. Local workforce and commuting trends

Regional commuting patterns and workforce trends are interconnected and changing. Employment trends and commuting patterns can provide insight on the needs of workers today and into the future. Employment plays an important role in where people live, and it can influence where people move. If the data shows that many people are commuting into the city for work, it could indicate that the city does not have enough housing to accommodate its workforce or enough housing that meets their needs and affordability levels.

Prior to the COVID-19 pandemic, many workers traveled to in-person jobs located in central business districts five days a week. Although current trends allow for greater locational flexibility and a variety of hybrid schedules, commute distances can still impact where residents seek employment opportunities. As such, jobs that require some level of in-person work may be more or less accessible to potential workers depending on the distance from residential areas.

This section describes the commute patterns of Vancouver residents and workers. The neighboring jurisdictions and unincorporated areas included in these data are those where people made the most trips to and from Vancouver. These areas, referred to in this section as "comparison geographies," include Portland, Hillsboro, Gresham, Camas, Battle Ground, Wilsonville, Milwaukie, Camas, Hazel Dell, Salmon Creek, and Beaverton. This analysis is limited to jurisdictions and unincorporated areas in Clark County and adjacent counties to control for primarily in-person commuting and avoids capturing fully remote workers who may live a further distance from Vancouver.

Key findings for commuting patterns include:

- **About a third of Vancouver workers live in Vancouver.** The fact that two thirds of Vancouver workers live outside the city could reflect a shortage of housing options suitable for Vancouver workers but could also be indicative of the growing appeal of neighboring Clark County jurisdictions as bedrooms communities for the Vancouver economy.
- **Vancouver had the lowest share of remote workers overall, at just 17%, compared with Hillsboro, at 25%, and Portland, at 29%. However, this share is substantial enough to monitor and track to help understand how this might affect housing needs.** Vancouver had the smallest percentage of remote

workers earning $65,000 or more per year when compared to Portland, Hillsboro and Clark County (at 52%). In comparison, Hillsboro and Portland had almost the same percentage, with Hillsboro having a slightly higher concentration of remote workers earning more than $65,000 per year (63 and 62%, respectively).

- **Vancouver has a higher share of workers who both live and work in the city (34%) than all nearby jurisdictions except Portland.** Vancouver residents are more likely to work in Vancouver than surrounding geographies. Vancouver workers are also more likely to be residents of Vancouver than any other single location in the area.[23]
- **Since 2010, the size of Vancouver's workforce and population has grown overall, while the share of people who commute to and from the city has stayed about the same, indicating that Vancouver has proportionately attracted both residents and workers**. In 2020, Vancouver had the second largest workforce among comparison geographies, after Portland. This grew 26% since 2010, with a slight dip from 2019 to 2020 in total workers and residents. This may indicate larger economic and population trends during the onset of the COVID-19 pandemic.
- **The second largest workplace destination for Vancouver residents is Portland and the second largest home destination for Vancouver workers is unincorporated Clark County.** The share of workers commuting from Vancouver to other destinations in Clark County increased since 2010.
- **Vancouver workers and residents had relatively short commutes in 2020 compared with other regional cities**. Of comparison geographies, workers commuting to Vancouver had the second shortest commute in 2020 (after Beaverton), and residents commuting from Vancouver had the fourth shortest distance in 2020 (with Beaverton, Milwaukee, and Portland residents all having shorter commutes). The average commute distance for Vancouver residents was 10.8 miles in 2020, while the average distance for workers at jobs in Vancouver was just over 11 miles–the second shortest among comparison cities.
- **Vancouver workers commuting for work tend to live in areas further north of the City. In contrast, Vancouver residents commuting to work tend to**

[23] In comparison, the City of Seattle has around 64%, the City of Spokane has nearly 55%, the City of Bellevue has almost 24%, and the City of Tacoma has almost 30% of persons living and working in the same city in 2020.

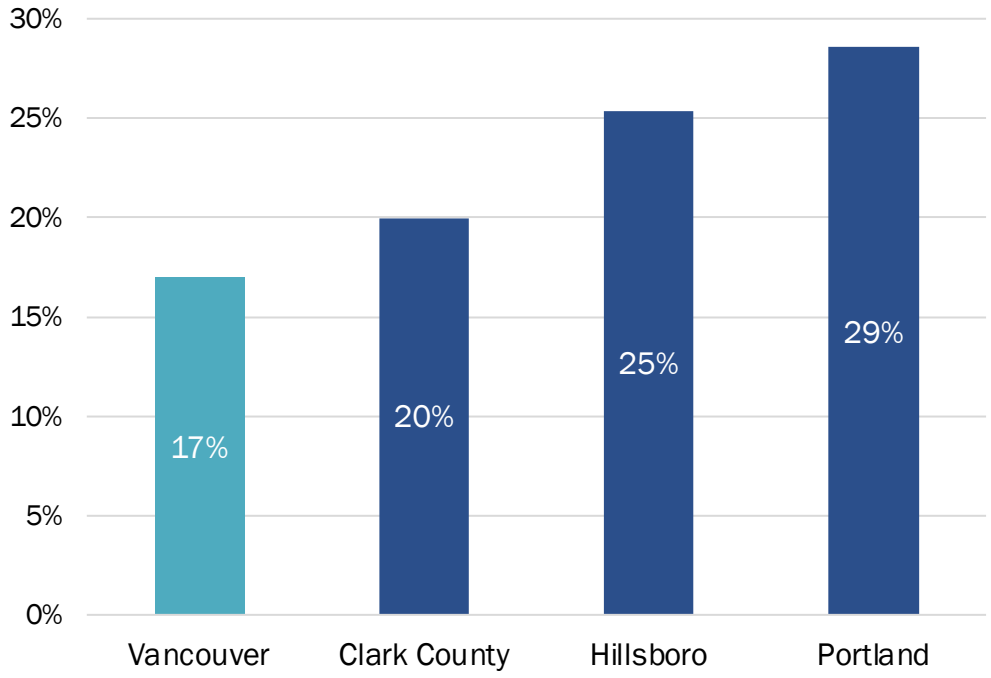
**commute to destinations south of Vancouver such as to Portland, Gresham, and Tigard.**

Vancouver is part of a connected regional economy, with residents of the city working in different locations across Clark and surrounding counties (particularly the City of Portland). Vancouver is also an important contributor to this regional economy through its major institutions and employment hubs. The City draws in workers from across the area, with commuters traveling from suburban areas of Clark County and beyond.

Since the onset of the COVID-19 pandemic in 2020, remote work trends have accelerated in many places, particularly for certain job types like professional services that are less likely to require in-person work. The United States Census Bureau is still adapting to the nuances of changes in the way that people work in remote and hybrid settings. Exhibit 53 shows the percentage of remote workers by area in the region. This data is derived from a question in the 2022 American Community Survey about means of transportation to work that asks respondents 'How did you usually get to work last week?'[24] While this variable does not separate between fully remote and hybrid workers, it is at minimum representative of individuals that worked from home more frequently than commuting to a workplace. Vancouver had the smallest percentage of remote workers among all geographies, a little over half the percentage that Portland has.

[24] US Census Bureau, 'American Community Survey and Puerto Rico Community Survey 2022 Subject Definitions.'

**Exhibit 53: Percentage of remote workers by region, 2022**
Source: ACS 1-Year Data Tables, Table B08006, 2022.



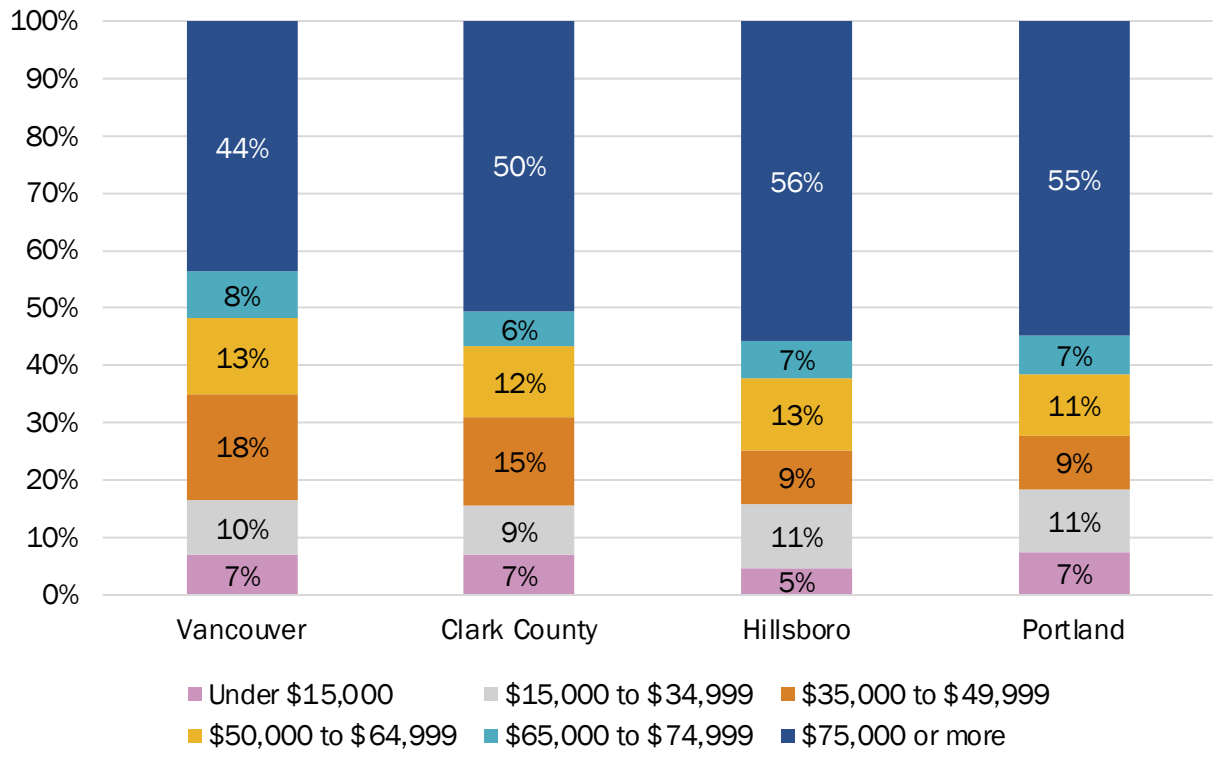


Exhibit 54 shows the breakdown of remote workers incomes by region. The US Census Bureau assigns income brackets for this data with the largest group in the data capturing those earning $75,000 or more. Due to these bin levels there is not a more accurate breakdown of income levels above this number at the City level. Vancouver has the smallest share of remote workers earning over $65,000, at 52%. In comparison, Portland and Hillsboro had shares of remote workers earning over $65,000, at 62 and 63%, respectively.

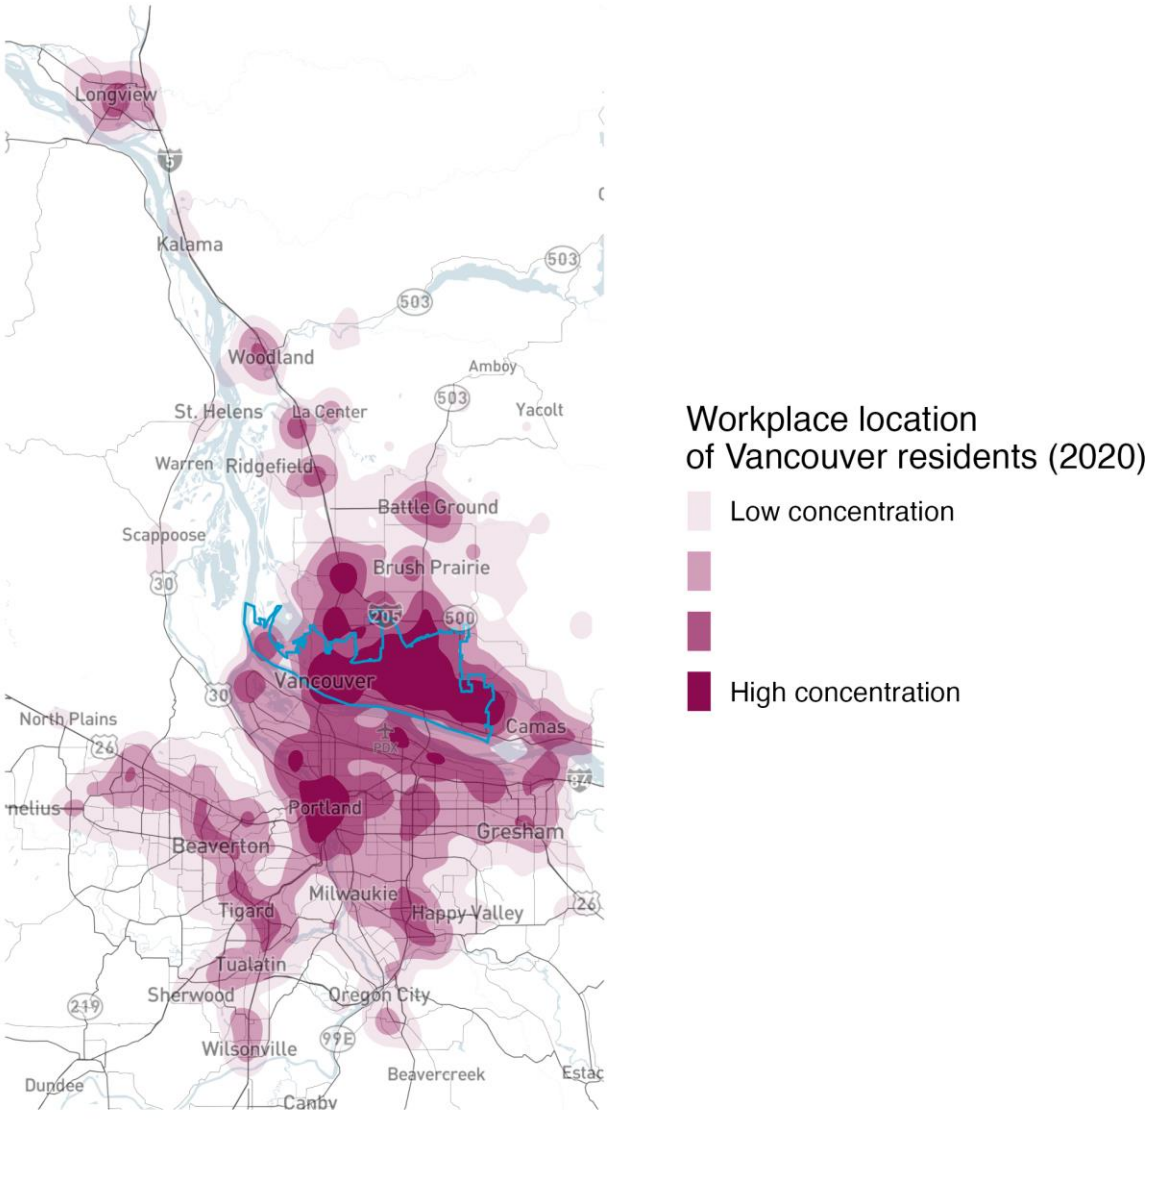
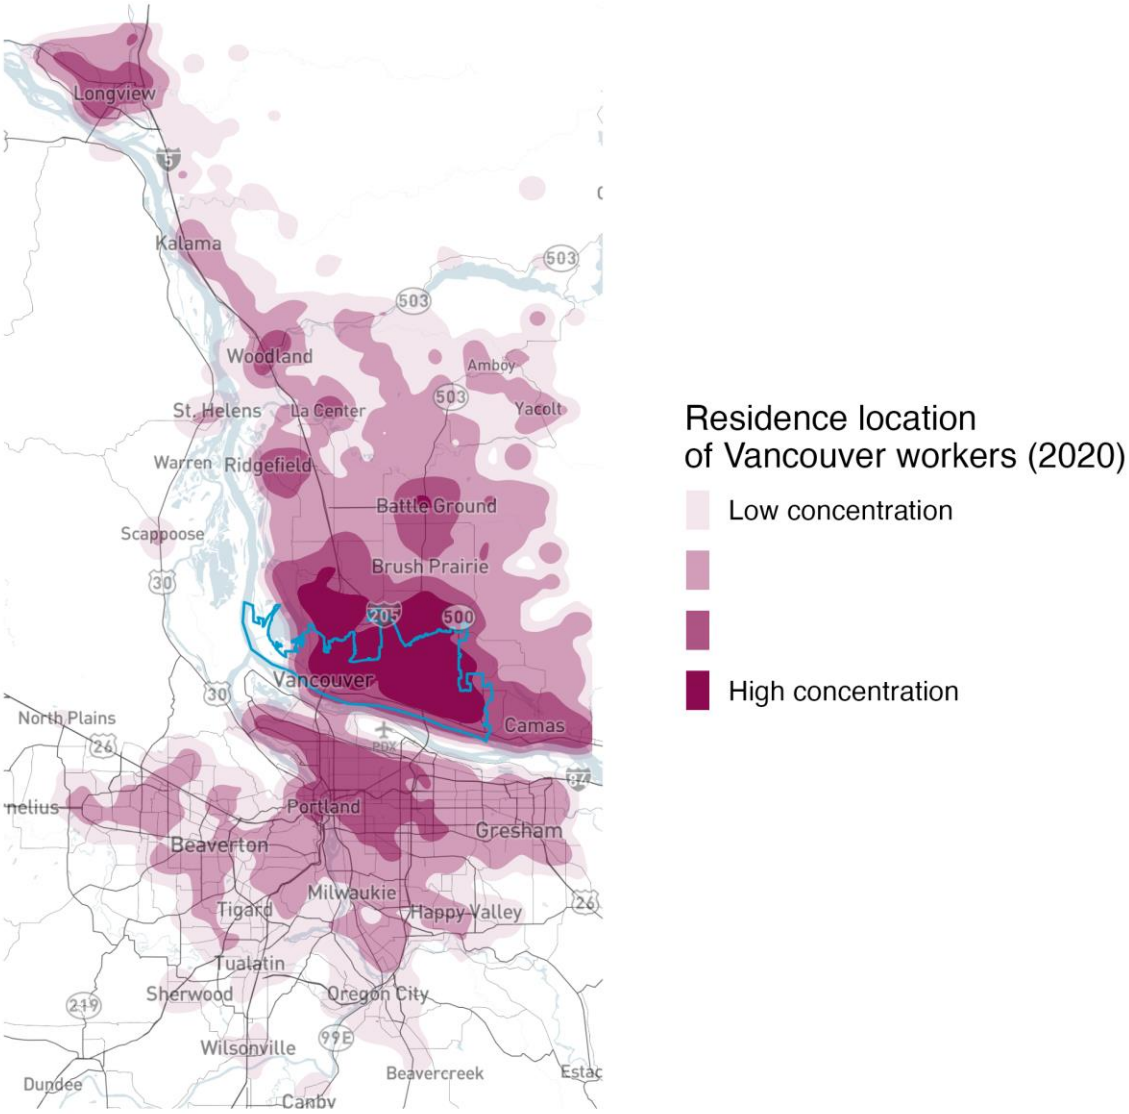
**Exhibit 54: Remote workers' incomes by region, 2022**
Source: ACS 1-Year Data Tables, Table B08119, 2022.

The maps below depict two-dimensional density regions, which are broken out into four tiers. These can be best described as representing the smallest area that can contain 99%, 95%, 80%, and 50% of all commutes to or from Vancouver. These types of cartographic representations are best used as generalizations of spatial concentrations of points, and since these percentage values can often be confusing or abstract for the general reader, we have re-labeled them to "High" and "Low" at the 99% and 50% tiers.

**Exhibit 55: Workplace location of Vancouver residents, 2020**
Source: LODES, 2010-2020





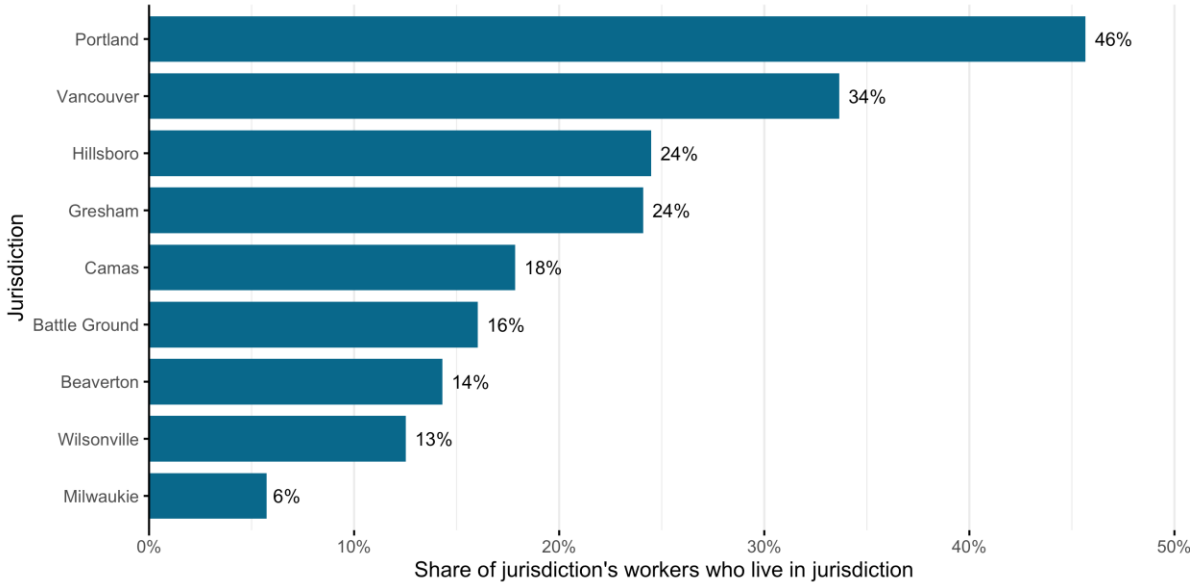


**Exhibit 56: Residence location of Vancouver workers, 2020**
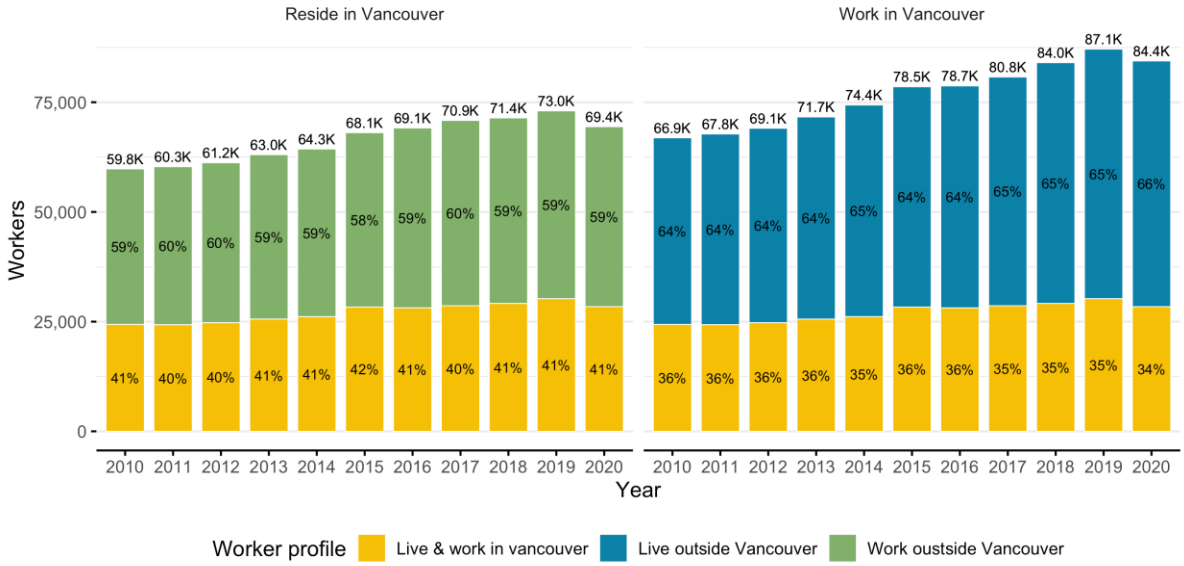
Source: LODES, 2010-2020



Of comparison geographies in the region, Vancouver had the second largest share of workers who both live and work in the city (34%) after Portland in 2020 (see Exhibit 57 below). Other cities and towns in the area saw much lower shares of workers who lived within the same location, particularly smaller jurisdictions to the south of Portland like Milwaukie and Wilsonville.

**Exhibit 57: Share of workers living and working in Vancouver and surrounding cities, 2020**
Source: LODES, 2010-2020

In Vancouver, the total number of residents and workers grew overall between 2010 and 2020 (with a slight decline in 2020 from previous years), as shown in Exhibit 58. The share of the population both living and working in the city remained about the same from 2010 to 2020, indicating that Vancouver has proportionately attracted both groups. In 2020, Vancouver had 84,413 workers, the second largest workforce among comparison geographies in this analysis, after Portland (with 396,692 workers in 2020) growing by 26% since 2010 from 66,898 to 84,413 workers (by 17,515 workers). However, in 2020 the city saw a slight decline in both residents and workers for the first time in the ten-year period. This may indicate larger economic and population trends during the onset of the COVID-19 pandemic, including a national spike in unemployment, an increase in early retirements, and relocation in response to greater locational flexibility.

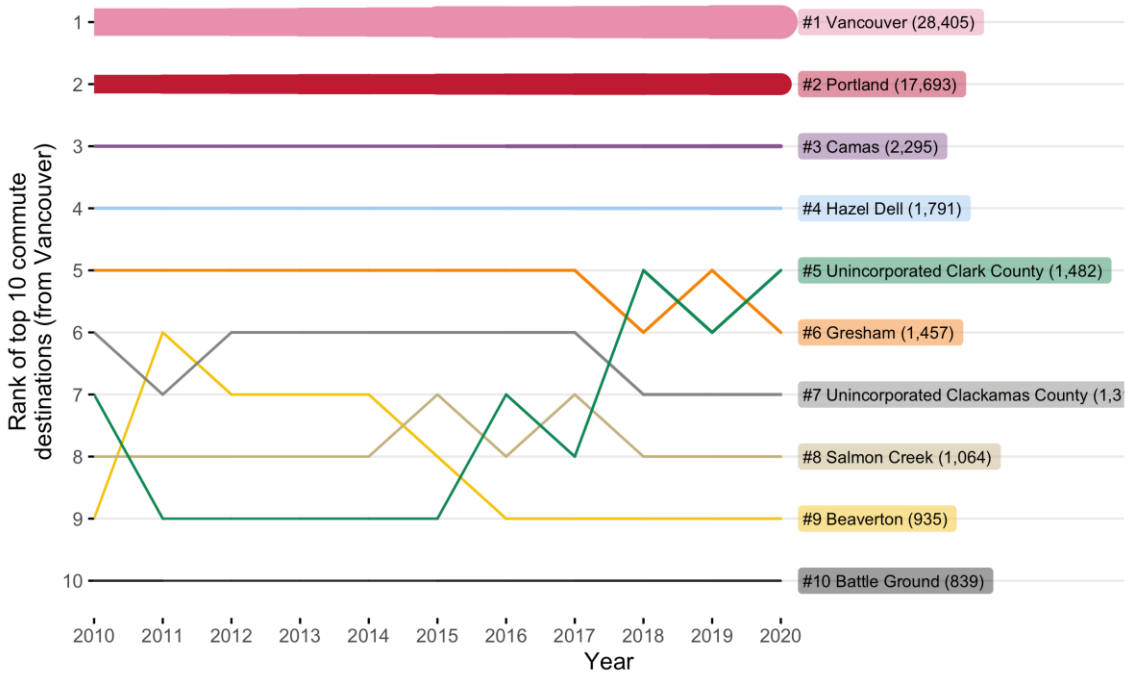


**Exhibit 58: Share of residents and workers living and working in Vancouver, 2010-2020**
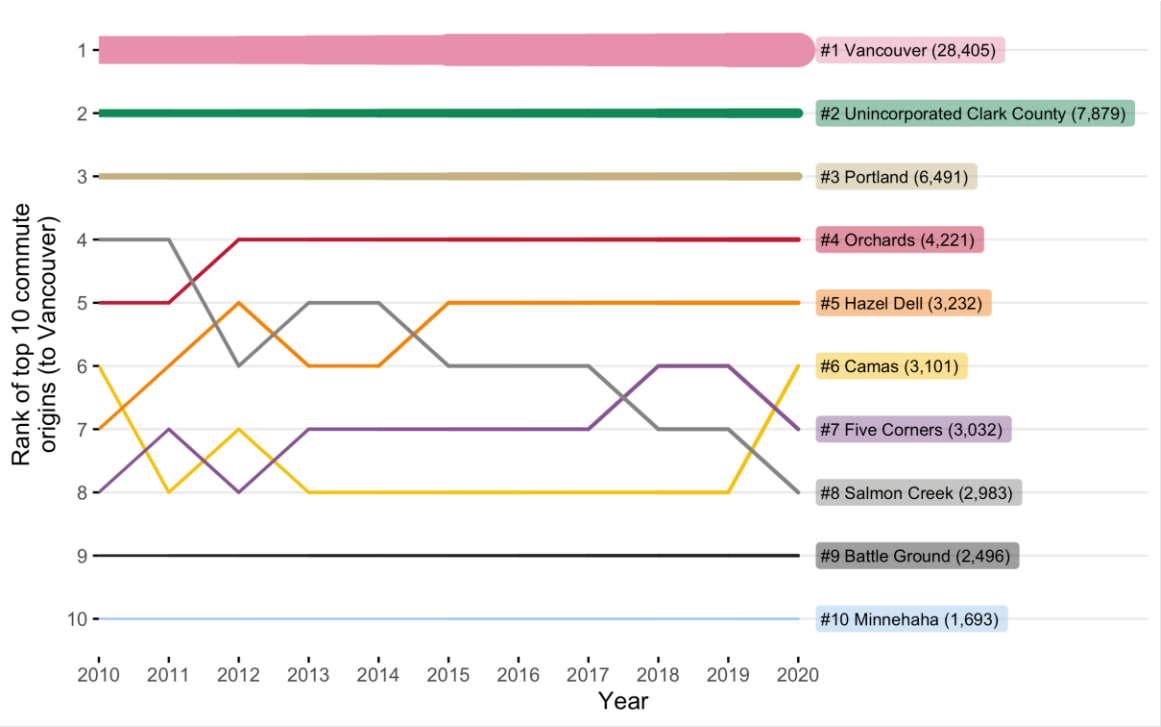
Source: LODES, 2010-2020

Vancouver's residents are more likely to work in Vancouver than surrounding geographies. The second largest *destination* for Vancouver residents is Portland, followed to a lesser extent by Camas, Hazel Dell, and unincorporated Clark County (see Exhibit 59). Top destinations have remained steady since 2010, although the share of workers commuting to destinations in Clark County increased.

**Exhibit 59: Top commute destinations from Vancouver, 2010-2020**



Source: LODES, 2010-2020. Note: Heavier line weights indicate the larger number of commuters shown in parentheses on the right of each destination.

Vancouver workers are also more likely to be residents of Vancouver than any other single location in the area. Residents of unincorporated Clark County are the largest group of workers *commuting into* the city of Vancouver, followed closely by workers from Portland. To a lesser extent, workers also commuted from smaller cities in Clark County and surrounding counties.

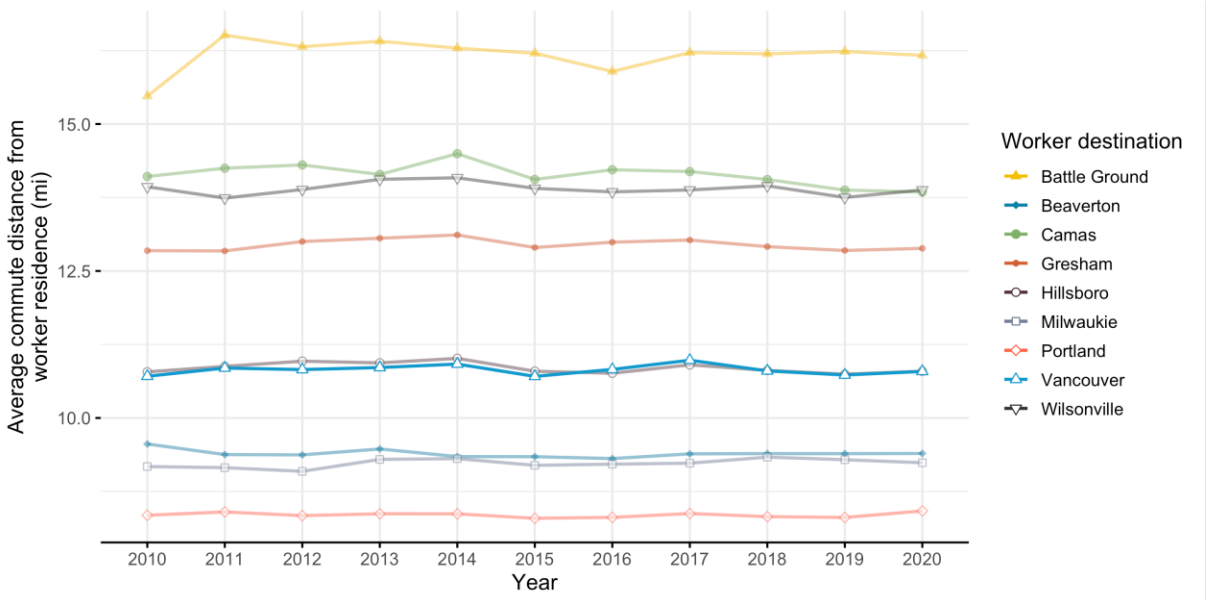


**Exhibit 60: Top commute origins to Vancouver, 2010-2020**

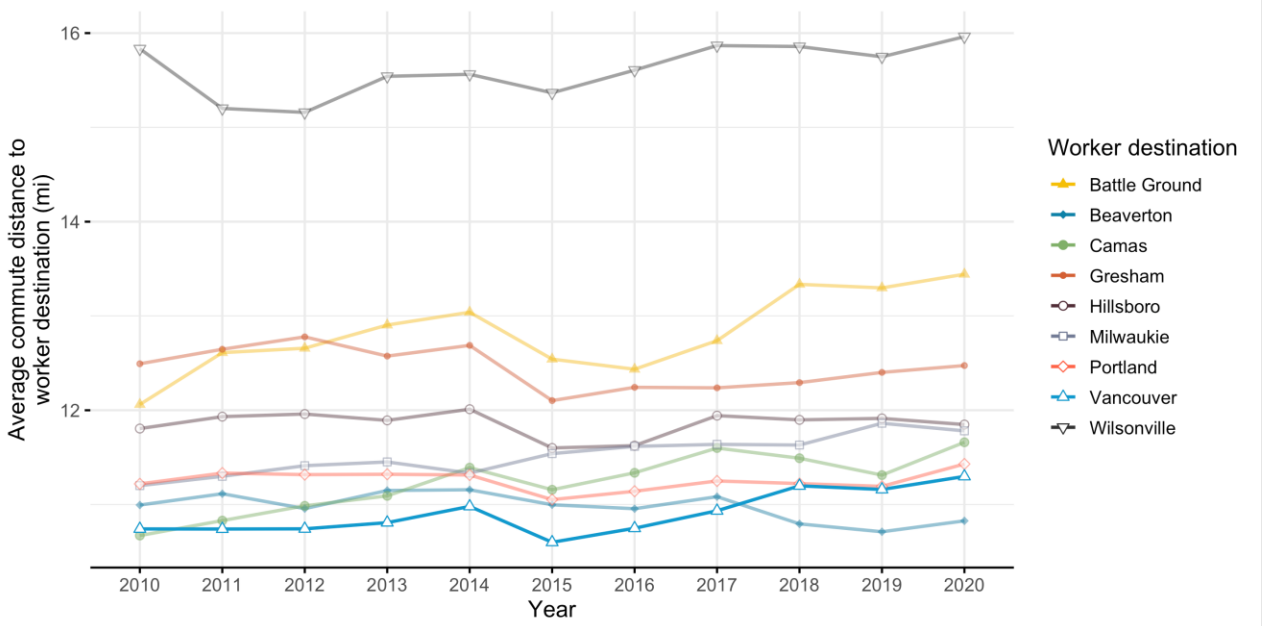
Source: LODES, 2010-2020. Note: Heavier line weights indicate the larger number of commuters shown in parentheses on the right of each origin.



Residents commuting *from* Vancouver had the fourth shortest distance in 2020 (with Beaverton, Milwaukee, and Portland residents all having shorter commutes), at about 10.8 miles on average. This fluctuated only slightly between 2010 and 2020.

**Exhibit 61: Average commute distance from worker residence, Vancouver, and surrounding cities (residents), 2010-2020**
Source: LODES, 2010-2020

Of comparison geographies, workers commuting *to* Vancouver for work had the second shortest commute in 2020 (commuters to Beaverton had the shortest), at just over 11 miles on average. The average commute for Vancouver workers grew slightly since 2010 by about 0.5 miles.

**Exhibit 62: Average commute distance to worker destination, Vancouver, and surrounding cities (workers), 2010-2020**
Source: LODES, 2010-2020

# Section 7. Equity and displacement considerations

## Displacement risk analysis

As Vancouver grows and sees increasing demand for housing, the city faces new challenges around displacement and gentrification for its existing households. The combination of housing underproduction and a competitive regional housing market put upward pressures on the market that can have implications for local communities, particularly those with higher shares of vulnerable populations. Displacement risk describes when these pressures in the real estate market may force households to relocate due to rising costs for housing or increased interest from outside development. Addressing displacement in areas facing the highest risk through intentional strategies can help to prevent negative externalities of new development and growth.

In 2022, the City of Vancouver created a Displacement Risk Map to facilitate conversations among decision-makers and community partners working to prevent displacement of existing residents. This section summarizes the methodology and discusses the implications for neighborhoods found to have the greatest displacement risk.

### Who is at risk of displacement?

Residential displacement can affect a wide range of households with different characteristics but is more likely to impact people experiencing low income, who already face disproportionate housing-related challenges. While displacement can happen to both renter and owner households, tenure is a key factor alongside a number of social factors that come into play when considering who is at risk. Householders who face disadvantages or discrimination in the real estate market are often more vulnerable due to the inability to absorb price increases. This covers a range of characteristics, with some of the most critical including:

- **Low-income households and particularly those who rent, are at greatest risk of being forced to move due to rising rents,** since they have limited ability to pay higher prices that come with rent increases and may already be facing tradeoffs between paying rent and covering other basic needs for their household. While Washington state regulations offer some protection for renters, private property owners have no limit on rent increases aside from

buildings under public-private agreements to provide regulated affordable housing.[25]

  - Low-income households are measured by census tracts with a share of households below 80% of MFI (or AMI) that is higher than the City average.
  - Renters are measured by census tracts with a share of renter households higher than the City average.

- Adults without college degrees have less ability to increase their income to cover higher housing costs and may have to work multiple low-wage jobs to make ends meet. Educational attainment (as well as income) is not protected under federal housing legislation, also leaving these households more vulnerable to discrimination.

  - Education levels are measured by census tracts with a share of adults 25 years or older without a four-year degree higher than the City average.

- Black, Indigenous, and People of Color (BIPOC)—particularly people who are Black, Indigenous, and/or Latinx—tend to face greater housing discrimination and may have a harder time finding other housing if they are forced to move. Race, color, and national origin are all protected by the Fair Housing Act, but the long history of racist housing policies in the United States continues to impact household wealth and housing options for many people of color. The legacy of these practices contributes to ongoing disparities in homeownership and housing cost burden nationwide. Past policies barring people of color from homeownership have played a role in systemically preventing accumulation of generational wealth to the extent of White families whose homes have appreciated in value over time, contributing to persistent unequal barriers that create more vulnerability to displacement.

  - BIPOC households are measured by census tracts where the share of the population that are communities of color is higher than the City average (including all groups except for white non-Hispanic residents).

[25] RCW 36.01.130 pre-empts jurisdictions from adopting local rent control ordinances, but other state regulations provide some protections around notice to vacate.

### What market factors indicate displacement risk?

Real estate market trends are also critical for understanding displacement risk and gentrification. Appreciating property values and rents indicate upward pressures on the market where the cost to buy or rent a home is becoming more expensive. When these market factors occur in areas with higher shares of vulnerable populations (described above) who may be less able to absorb price increases, there is heightened risk that households will be displaced.

Changes to rental and home sale prices do not always track together and may be more or less sensitive depending on the makeup of an area's housing stock. In Vancouver, accurate, point-level, and up-to-date information about rental rates was not consistently available for the City's analysis, though home sale prices are available through Regional Multiple Listings Service (RMLS). While this makes a full assessment of real estate market pressure more difficult, it indicates general appreciation rates at the tract level and in comparison, with neighboring tracts.[26] The appreciation rate is the percentage change in median sale values or rental indices.

### How is displacement risk assessed?

The City of Vancouver created its Displacement Risk Map to better understand displacement pressures citywide and further the city's equity goals by pairing investments with anti-displacement strategies in areas shown to have greater displacement risk, using the methodology of the City of Portland's 2018 Gentrification and Displacement Neighborhood Typology Assessment and Dr. Lisa Bates' previous work at the University of Portland. This assessment uses the demographic factors described above to measure socioeconomic vulnerability[27] to displacement as well as housing market data based on changes between 2010 to 2020. 2007 is the base market year used for home prices, to capture prices when the market was at its peak before the 2008 crash.

This methodology includes seven different categories for describing displacement risk based on the combination of socioeconomic vulnerability

---

[26] Vancouver's analysis uses 'rook adjacency' that focuses on comparison with tracts that share an edge to focus on "spillover" effects of rising home values.

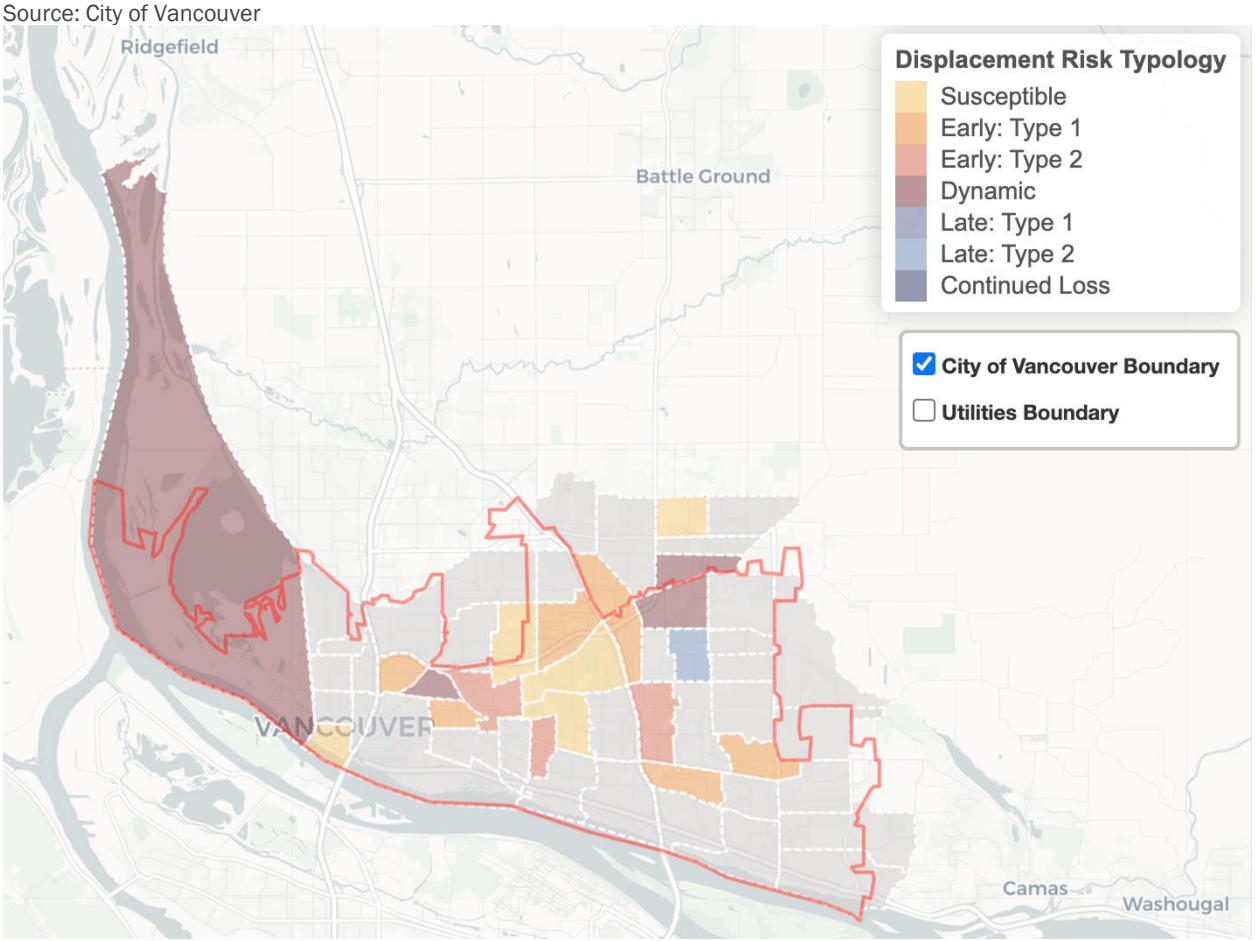
[27] The City's study defined vulnerable tracts by analyzing the distribution of quintile scores, and then set the threshold at approximately the 75th percentile.

factors and real estate market trends by tract, grouped into **early-stage, mid-stage, or late-stage gentrification** as defined in Exhibit 63.[28]

**Exhibit 63: Description of displacement risk typologies**
Source: City of Portland

<table>
<tr><th>Early-Stage Gentrification</th><th>Mid-Stage Gentrification</th><th>Late-Stage Gentrification</th></tr>
<tr><td>Susceptible<br>Area has a higher share of vulnerable populations but has not yet experienced demographic change; housing market is low to moderate, but adjacent to tracts with high or increasingly values</td><td rowspan="3">Dynamic<br>Currently undergoing gentrification: there are higher shares of vulnerable populations, and the area is experiencing demographic changes and losing vulnerable populations proportionally; housing market is still low or moderate but has experienced high appreciation since base year for rents and sales prices</td><td>Late: Type 1<br>Area has a higher share of vulnerable populations but has lost a proportionate share; housing market was low at the base year but is now high</td></tr>
<tr><td>Early: Type 1<br>Area has a higher share of vulnerable populations but has not yet experienced demographic change; housing market is low to moderate, but seeing high appreciation since base year</td><td>Late: Type 2<br>Area has lost a previously high share of vulnerable populations; housing market remains low or moderate but has appreciated since base year</td></tr>
<tr><td>Early: Type 2<br>Area has a higher share of vulnerable population and is experiencing demographic changes and losing vulnerable populations proportionally; housing market is low to moderate, but adjacent to tracts with high or increasing values</td><td>Continued Loss<br>Area has lost a previously high share of vulnerable populations; housing market was low or moderate at the base year but is now high</td></tr>
</table>

[28] City of Portland Bureau of Planning and Sustainability, "Gentrification and Displacement Neighborhood Typology Assessment," October 2018.



## Where is there displacement risk in Vancouver?

Exhibit 64 displays the results of this analysis for the City of Vancouver, using the base housing year of 2007 and demographic and housing market year range of 2010 to 2020.[29] The map below shows tracts that meet the criteria for different displacement typologies based on their change over this time period. The City's analysis finds that as of 2020, the city had only one tract showing late-stage gentrification, but a concentration of tracts experiencing various levels of early- to mid-stage gentrification, including:

- **Sixteen early-stage census tracts**, including six Susceptible, seven Early Type 1, and three Early Type 2 primarily in central Vancouver
- **Four mid-stage Dynamic** tracts
- **One late-stage** tract (Late Type 2)

[29] All dollar amounts were adjusted for inflation using the Consumer Price Index.

**Exhibit 64: Displacement risk map, Vancouver, 2010-2020**
Source: City of Vancouver

The analysis had to be generalized at the tract level scale and some of the sub-sections in tracts might include nonresidential uses (such as open space zoning) without residential populations.

## What does this mean for Vancouver?

**Communities in Vancouver are facing displacement risk, but few areas have reached late-stage gentrification.** Fourth Plain Village and North Image represent the two neighborhoods which fall into the Dynamic typology, with Image (just south of North Image) being the only tract which has reached Late-Stage gentrification based on the methodology. These 'Dynamic' neighborhoods are areas where focusing new anti-displacement actions can still help to prevent loss of vulnerable populations and before they reach late-stage trends.

**Early gentrification and susceptible neighborhoods are concentrated in Central Vancouver.** While few tracts along the waterfront and eastern edges of the city

are showing gentrification trends, tracts located in central Vancouver which fall into Early Type 1 and 2 or Dynamic typologies are where there is a larger share of existing residents facing growing displacement risk along Fourth Plain Boulevard, I-205, and WA-500. In these areas, preserving low-cost housing and preventing loss of vulnerable populations can help keep neighborhoods from advancing further into mid- or late-stage gentrification.

**In terms of public intervention, the most effective anti-displacement strategies vary by what stage a neighborhood is currently experiencing.** The City's 2019 Reside Vancouver plan presents a package of recommended strategies for preventing displacement, which include citywide and geographically specific strategies for the Fourth Plain Corridor.[30] Strategies to prevent displacement can include actions that preserve existing low-cost housing, create new affordable housing options, increased economic opportunities for residents, and support homeownership to stabilize households depending on how much low-cost housing is still available and how many vulnerable residents are still located in the area.

[30] City of Vancouver, "Reside Vancouver: An Anti-Displacement Plan," 2019 https://www.cityofvancouver.us/business/planning-development-and-zoning/long-range-planning/aging-in-place/anti-displacement-strategy/.

# HNA appendix

## Main data sources used

This analysis uses data from multiple sources, focusing on those that are well-recognized, reliable, verifiable, and of higher accuracy.

### National data

One of the key sources for housing and household data is the U.S. Census Bureau. This report primarily uses data from the following Census sources:

- The **Decennial Census**, completed every ten years, is a survey of all households in the U.S. The Decennial Census is considered the best available data for information such as demographics (e.g., number of people, age distribution, or ethnic or racial composition), household characteristics (e.g., household size and composition), and housing occupancy characteristics. As of 2010, the Decennial Census does not collect more detailed household information, such as income, housing costs, housing characteristics, and other important household information. Decennial Census data is available for 2000 and 2010.

- The **American Community Survey (ACS)** is an ongoing nationwide survey completed every year or every five years by the U.S. Census Bureau. This data surveyed a sample of households in the U.S. The ACS sampled an average of 3.5 million households per year, or about 2.9 percent of the households in the nation. The ACS collects detailed information about households, including demographics (e.g., number of people, age distribution, ethnic or racial composition, country of origin, language spoken at home, and educational attainment), household characteristics (e.g., household size and composition), housing characteristics (e.g., type of housing unit, year unit built, or number of bedrooms), housing costs (e.g., rent, mortgage, utility, and insurance), housing value, income, and other characteristics. The survey is designed to provide communities with current data about how they are changing.

    - The ACS 5-year sample is available for smaller towns/cities with fewer than 65,000 residents. The ACS 5-year estimate includes data collected over a 60-month period or five calendar years (e.g., 2011–2015 ACS estimates). The ACS 5-Year data is offered at different scales/geographies including Census Tract and Census Place. The main advantage for the 5-year estimates is the increased statistical reliability for smaller geographic areas and small population groups. It is not recommended to compare two 5-year estimates over two time periods back-to-back since it is difficult to determine whether the values are applicable for the beginning or the end of the time frame.

- **Comprehensive Housing Affordability Strategy (CHAS)**. The U.S. Department of Housing and Urban Development (HUD) receives custom tabulations of American Community Survey data annually which provides surveyed information collected over a five-year period which is averaged (such as 2012 to 2016). The CHAS data are used by local governments to plan how to spend HUD funds and may also be used by HUD to distribute grant funds. Another purpose is to estimate housing assistance by estimating the number of households that have certain housing problems and have income low enough to qualify for HUD's programs (primarily 30, 50, and 80 percent of the median income). The CHAS data provide counts of the numbers of households that fit these HUD-specified characteristics in HUD-specified geographic areas. The HUD CHAS data is a common source of data for describing cost-burdened households.

- The **Longitudinal Employer-Household Dynamics (LEHD)** program is part of the Center for Economic Studies at the US Census Bureau. This program provides publicly available data including federal, state and Census Bureau data on employers and employees. The LEHD program combines Unemployment Insurance earnings data and the Quarterly Census of Employment and Wages (QCEW) data from the states with other administrative data, and information derived from censuses and surveys. This data includes statistics on employment, earnings, and job flows. LEHD Origin-Destination Employment Statistics (LODES) provides GIS/map information on commuting trends at the census block scale. Data files are organized into three types: Origin-Destination, Residence Area Characteristics, and Workplace Area Characteristics, all at census block geographic detail. Source: https://lehd.ces.census.gov/data/#lodes.

- **CoStar** provides data on multi-family pricing and vacancy rates over time. Market data comes from CoStar, a proprietary data source commonly used for market analysis in the real estate industry. While CoStar is one of the best available sources of rent and vacancy data overall, the data has gaps and limitations that make it less reliable in areas with few existing buildings. Newer buildings and those that are professionally managed are more likely to have reliable rent and vacancy information, while smaller, older buildings may have incomplete data or be missing from the system entirely.

### State data

- The **Washington State Office of Finance and Management (OFM)**. OFM researches a variety of issues related to the state budget, public policy, and demographics and releases the official state and local population estimates and projections for use in the allocation of certain state revenues, growth management, and other planning functions. They provide mostly tabular data describing current demographics, housing (median home prices), and population densities and population forecasts and projections. As the

official partner of the U. S. Census Bureau for Washington state, the Population unit helps disseminate information about the characteristics of Washington's population, housing, and economy and provide guidance to a variety of stakeholders in accessing and using demographic information. https://www.ofm.wa.gov/washington-data-research/population-demographics

# Memorandum

**To:** City of Vancouver

**From:** Tyler Bump, Mike Wilkerson, Kaitlin La Bonte, Mary Chase, Jennifer Cannon; ECOnorthwest

**CC:** Nicole McDermott, Brian Carrico; WSP

**Subject:** Economic Conditions and Opportunities Analysis, City of Vancouver Comprehensive Plan Update

**Date:** June 21, 2024

# Section 1. Introduction, Background, and Summary of Findings

## Introduction

The City of Vancouver is embarking on an update to its Comprehensive Growth Management Plan and implementing regulations to establish an updated vision, policies, and implementation measures for the next 20 years. The updated plan and process are called Our Vancouver. The updated plan must be responsive to changing community dynamics, the strategic vision established by the City Council and include focused goals to address social inequities and climate change. The City will need to update their plan as a part of the periodic update process currently due in 2025.

The Comprehensive Growth Management Plan is a foundational document that provides the overall vision and policy direction for managing growth and development while considering effects on the built and natural environment and on public facilities. This will build from the City's Vision and Strategic Plan and is informed by other policy and plan documents. The current Growth Management Plan was originally adopted in 1994 in response to the enactment of the Washington State (State) Growth Management Act (GMA). In 2004, a comprehensive update to the plan was completed and a minor update was done in 2011, as required by the GMA. The city has changed significantly in the 18 years since 2004, particularly since the last update in 2011. The city is a dynamic and growing community that requires a plan that reflects its diversity, honors the past and provides a clear direction for the future.

As part of the City's consulting team led by WSP, ECONorthwest provided this Economic Conditions and Opportunities Analysis using the best available information from public and private data sources to assess the city and region's economic trajectory. This memorandum includes the findings from analyzing economic conditions and competitiveness, including measures of employment, growth and productivity, business creation and retention, entrepreneurship, investment flows, access to capital, distribution of wealth and income, and racial and geographic inclusion. Our analysis centers racial equity and geographic inclusion by focusing attention on data sources that we can disaggregate[1] and by integrating analysis helpful for promoting equitable outcomes. Key information from this memorandum will be incorporated into the Economic Opportunity Element to provide context and inform the direction the City's economic development should take over the next 20 years, from 2025 to 2045.

## Executive Summary

Vancouver's economy is undergoing a transformative shift. The city is attracting and increasing the number of professional and creative class amenities[2] and, as these sectors grow, the City is becoming less dependent on traditional manufacturing industries to drive economic growth. Vancouver has experienced rapid population growth over the past two decades, attracting educated, higher-income workers and employment opportunities in targeted sectors like healthcare, technology, and manufacturing. A combination of factors including the City's lack of income tax, recent investments in public infrastructure, and relatively lower cost of housing compared with Clark County and the City of Portland. These cost advantages have made Vancouver a desirable place for many in the region to live, resulting in in-migration to the City of Vancouver. In particular, white-collar workers gaining greater locational flexibility due to remote work during the COVID-19 pandemic may have shifted or accelerated migration patterns and housing preferences permanently. Overall,

[1] Data that can be disaggregated by specific characteristics (like race and ethnicity) helps to reveal disparities between groups that may be obscured in aggregated data. Understanding how factors like income or homeownership vary across groups informs how to target interventions to address inequities and promote equitable outcomes over time.

[2] Creative class professions can be defined as people in science and engineering, architecture and design, education, arts, music, and entertainment whose economic function is to create new ideas, new technology, and new creative content, as well as professionals in business and finance, law, health care, and related fields.

outmigration of workers from Portland has contributed to Clark County's rapid growth, as well as more families and peak earning workers leaving Oregon in recent years.[3]

With rising demand for housing, Vancouver has seen increasing housing costs, rising displacement pressures, and economic disparities among communities. In particular, some people of color in Vancouver face higher levels of cost burdening, lower median incomes, lower rates of homeownership, and lower rates of educational attainment. In 2021, the median incomes of multiracial households, Black or African American households, Hispanic or Latino households, or households identifying as another race not listed were below the median income in Vancouver; in addition, a smaller share of residents over the age of 25 who were Black or African American, Hispanic or Latino, or another race alone had bachelor's degrees. Housing cost burden was also most prevalent for Black or African American and Hispanic or Latino households, indicating additional economic burdens. In recent years, commercial developers have gravitated to the city's larger buildable parcels, creating questions for how Vancouver should most strategically use its remaining buildable lands. As the city continues to grow, intentionally managing these changes will be critical to avoid negative impacts (like inefficient land use resulting in future land constraints), produce equitable outcomes, and ensure that Vancouver's land and resources are used efficiently.

As Vancouver updates its Comprehensive Plan, the findings point to several policy priorities:

- The City should pursue strategies to support equitable economic opportunities for all residents, especially those vulnerable to displacement.
- The City should consider inclusive economic development strategies that prioritize both the growth of the creative class and the retention of industries that provide employment opportunities for those without advanced degrees or specialized skills, such as traditional manufacturing jobs, construction related jobs, or labor in skilled trades.
- Supporting economic mobility is also critical, including workforce development initiatives and small business assistance programs targeted at disadvantaged groups.

[3] Josh Lehner, "2022 Migration: Who Left?," Oregon Office of Economic Analysis, September 14, 2023, https://oregoneconomicanalysis.com/2023/09/14/2022-migration-who-left/.

- Balancing economic development to meet the needs of a diverse workforce can contribute to a more equitable and sustainable local economy.
- Coordinated housing and economic development strategies should also be implemented to ensure there is an adequate housing supply for a growing workforce, avoid displacement of existing residents, seek place-based strategies in key areas, and catalyze mixed-use development through partnerships.

## Planning Context

### Growth Management Act Requirements

Comprehensive planning in Washington is guided by the Growth Management Act (GMA), a series of statutes first adopted in 1990 which requires cities and towns within eighteen of the state's most populous counties to fully plan for future growth (RCW 36.70A). Given Clark County and Vancouver's population size, both jurisdictions must address all of the mandatory comprehensive plan elements, including land use, housing, capital facilities, utilities, and transportation.[4] Economic development (as well as parks and recreation) are included as mandatory elements (RCW 36.70A.070(7-8)), but since no state funds have been allocated to assist jurisdictions in creating these plans, they are currently optional.

### Economic Development Planning in Washington

The City of Vancouver has elected to include an economic development element as part of the current comprehensive plan update process, building on its current plan which was last updated in 2011 and following the GMA Goal 5 to:

> *"Encourage economic development throughout the state that is consistent with adopted comprehensive plans, promote economic opportunity for all citizens of this state, especially for unemployed and for disadvantaged persons, promote the retention and expansion of existing businesses and recruitment of new businesses, recognize regional differences impacting economic development opportunities, and encourage growth in areas experiencing insufficient economic growth, all within the*

[4] Since Vancouver also meets the criteria of annual maritime port revenues exceeding $60 million, it must also include a ports element.

*capacities of the state's natural resources, public services, and public facilities*[5]." *(RCW.36.70A.070(7))*

In Washington, state provisions set limits on what actions cities and counties can take to support economic development, which often guides the strategies, goals, objectives, and policies that jurisdictions establish in economic development comprehensive plan elements. Article 8, Section 7 of the state constitution specifies that "No county, city, town or other municipal corporation shall hereafter give any money, property, or loan its money, or credit to or in aid of any individual, association, company or corporation, except for the necessary support of the poor and infirm."[6] Given this limitation, cities generally cannot directly use public funds to attract private development, but can implement incentives and programs to promote the economic welfare of residents and create new opportunities. Many cities target policies that facilitate economic growth through land use, infrastructure, tourism, marketing, and partnerships with nonprofit community-based organizations.

## Regional Economic Development Planning

Cities in Washington also coordinate with county-level Associate Development Organizations (ADOs) that represent each of Washington's counties, funded in part by the state Department of Commerce. The Columbia River Economic Development Council (CREDC) represents Clark County and presents a baseline of goals and objectives for the region. Their current 2018-2023 Comprehensive Economic Development Plan outlines goals and actions based on a vision and set of values and guiding principles identified through extensive engagement with local partners.

[5] In 2023, E2SHB 1181 updated the language of Comprehensive Plan goals (including economic development) to reflect climate change and resiliency goals.

[6] RCW 35.21.703 does allow cities to contract with nonprofit corporations to advance economic development.

**Exhibit 1. Goals and Objectives from 2018-2023 CREDC Comprehensive Economic Development Plan**
Source: CREDC

| 1. Expand the Existing Base | 2. Support People | 3. Create Place |
|---|---|---|
| • Become Industry Experts<br>• Strategically Market Industry Clusters (Computers and Electronics, Software, Clean Tech, Metals and Machinery and Life Sciences),<br>• Build a Startup Ecosystem | • Foster Skills Development<br>• Prepare Youth for Economic Opportunity<br>• Launch a Brain Gain Initiative<br>• Promote an Ethical and Socially Just Society through an Intentional Commitment to Inclusion, Equity, and Diversity | • Each Community Creates a Placemaking Strategy<br>• Embrace Economic Opportunity in our Urban Center<br>• CREDC Tells the Story of Place<br>• Make Employment Areas Desired by Industry Clusters Shovel Ready<br>• Determine all Transportation Needs on a Regional Level Specifically to Support Economic Development |

CREDC is now in the process of updating its 2018-2023 priorities and identifying new strategic actions to respond to Clark County's quickly changing demographic and economic profile, with a new plan anticipated to provide further guidance in 2024.

## Implications for Growth Management

While economic development elements are currently optional under the GMA, aspects of the required land use and housing elements are linked with economic development and current conditions within jurisdictions. Cities fully planning for adequate land capacity to meet the needs of the community must understand their current employment base, development trends, workforce housing availability, income segments of the population, and future projections.

State statute requires that land use elements must "[designate] the proposed general distribution and general location and extent of the uses of land, where appropriate, for agriculture, timber production, housing, commerce, industry, recreation, open spaces and green spaces, urban and community forests within the urban growth area." (36.70A.070(1)) This includes population densities, building intensities, and estimates of future population growth. RCW 36.70A.070(2)(d) requires that a housing element "Makes adequate provisions

for existing and projected needs of all economic segments of the community, including…consideration of housing locations in relation to employment location."

To fully plan for growth and meet community needs in compliance with state provisions, cities like Vancouver, with sizable workforces, must understand the dynamics of the local and regional economy, consider where employment is concentrated and how residents and workers access employment opportunities, what industries are growing or declining, and whether there is sufficient space to fulfill anticipated employment land needs alongside other uses.

### Buildable Land Capacity and Employment Capacity

In 1997, Washington's Review and Evaluation Program, also known as the "Buildable Lands Program," was added to the GMA (RCW 36.70A.215). It requires some counties and cities within them to establish their own buildable lands programs (including Clark County and the City of Vancouver) and produce a report every eight years. In 2017, the Washington legislature passed E2SSB 5254 which amended the buildable lands statute and required counties to "determine whether [its] cities are achieving urban densities within urban growth areas by comparing growth and development assumptions, targets, and objectives contained in the countywide planning policies and the county and city comprehensive plans with actual growth and development that has occurred" (RCW 36.70A.215).

RCW 36.70A.215 extends to providing sufficient land for employment by identifying the "amount of land developed for commercial and industrial uses within the urban growth area since the adoption of a comprehensive plan… [and] the amount of land needed for commercial, industrial, and housing for the remaining portion of the twenty-year planning period."[7] There are several recent and interim County documents that have implications for managing growth in the City of Vancouver covered in this section.

[7] The state's methodology used to evaluate employment land does not differentiate land by any market criteria such as size, infrastructure presence, cost, ownership, or availability.

### Clark County Comprehensive Plan (2016)

Clark County in its last Comprehensive Plan update in 2016 adopted two planning assumptions (Resolution 2016-03-01), anticipating 100,200 new jobs and a jobs-to-housing ratio of 1:1. The County's 2015-2035 Comprehensive Plan projected that based on the VBLM (vacant buildable lands model) this would include:

- 75,847 new jobs from vacant buildable lands;
- 16,775 jobs accommodated through redevelopment; and
- 7,400 public sector jobs on publicly owned parcels not included in the VBLM.

The County is currently in the process of updating its Comprehensive Plan, which is required to be completed by December 31, 2025.

### Clark County Buildable Lands Report (2022)

Pursuant to RCW 36.70A.215, in advance of its 2025 Comprehensive Plan update, Clark County produced a Buildable Lands Report in 2022 estimating remaining population and employment capacity, based on recent development trends, in local cities and Urban Growth Areas (UGAs). For Vancouver, the findings of the 2022 Buildable Lands Report indicated that the city and its unincorporated urban area (U) were anticipated to fulfill the largest share of Clark County's new employment land capacity needs through 2035 based on development trends in 2016-2020 (48% or 36,779 jobs). The largest share of total net buildable employment land in Vancouver to help meet this capacity was zoned Industrial (Exhibit 2).

The land and employment capacity analysis in the buildable lands report shown below in Exhibit 2 provides estimates based on data from the Washington Office of Financial Management, Washington Employment Security Department, Clark County, and individual municipalities. While these do not reflect the actual total number of jobs located in the county or its individual jurisdictions, they provide an approximate estimate for planning purposes to help measure how to achieve the County's economic goals. As the City updates its comprehensive plan economic development element, it will need to consider this regional role as well as any potential impacts of office redevelopment, remote work trends in the city's key industries, and patterns of mixed-use development that could have new implications for meeting employment capacity.

Clark County's Buildable Lands Report (2022) Key Findings

**Based on employment growth through 2020, redevelopment, and public sector job assumptions, the Clark County Buildable Lands Report indicated sufficient employment capacity for employment growth in the county through 2035.**

Clark County added 12,700 jobs in 2016-2020 out of its target from the 2015-2035 Plan of adding 100,200 jobs by 2035. **Therefore, the Buildable Lands Report forecasted that the County would add 87,500 more jobs by 2035.**[8] Of this total, 72,878 jobs were expected to be accommodated on vacant buildable lands and the remainder through redevelopment or public sector employment.

**Half of Clark County's employment capacity from the 2022 report was in the City of Vancouver and the Vancouver Unincorporated Urban Area (U).** These areas combined were expected to accommodate 36,779 total jobs through 2035, with 59% of new employment on industrial land. Vancouver (U) accounted for 47% of this capacity.

There were 5,792 total net buildable acres of employment lands in Clark County UGAs reported in the Buildable Lands Report; 33% (1,888 net acres) of commercial land, and 67% (3,904 net acres) of industrial land. **The largest share of total net buildable employment land reported was the 2,423 net acres (62%) of industrial capacity in the City of Vancouver and the Vancouver Unincorporated Urban Area.**[9]

[8] Clark County Community Development, "Clark County Buildable Lands Report," June 2022. The Buildable Lands Report must meet the Washington State requirements described under RCW 36.70A.215.

[9] The 2022 VBLM model assumes a 5% residential redevelopment rate on built Vancouver City Center commercial land and a 1% rate on built commercial land in Vancouver outside the City Center; and that 30% of commercial land in the Vancouver City Center will be residential development and 15% of Vancouver commercial land outside the City Center will be residential development.

B – Urban Total includes capacity in incorporated cities/towns and their unincorporated urban areas.
C – Unincorporated urban area is designated with a (U).

## Vacant Buildable Land Model Update and initial growth allocations (2024)

Clark County made several updates to its VBLM in February 2024. Pursuant to GMA, the revised version of the VBLM estimated capacity by zoning rather than Comprehensive Plan designations, and used projected future rather than past densities. **Error! Reference source not found.** shows updated capacity estimates for jurisdictions in Clark County.[10] **In Vancouver and the City's Urban Growth Area (UGA), the changes to the VBLM indicate a slightly lower jobs assumption than the 2022 model**. The City is still expected to account for roughly half

[10] Clark County Community Planning, 'County releases 2023 vacant buildable lands model capacity report for public review,' https://clark.wa.gov/community-planning/county-releases-2023-vacant-buildable-lands-model-capacity-report-public-review, February 20, 2024.

(51%) of jobs in the County, with capacity for 33,193 total jobs through 20235, across 2,414 buildable acres in the City and 3,503 buildable acres in the UGA.

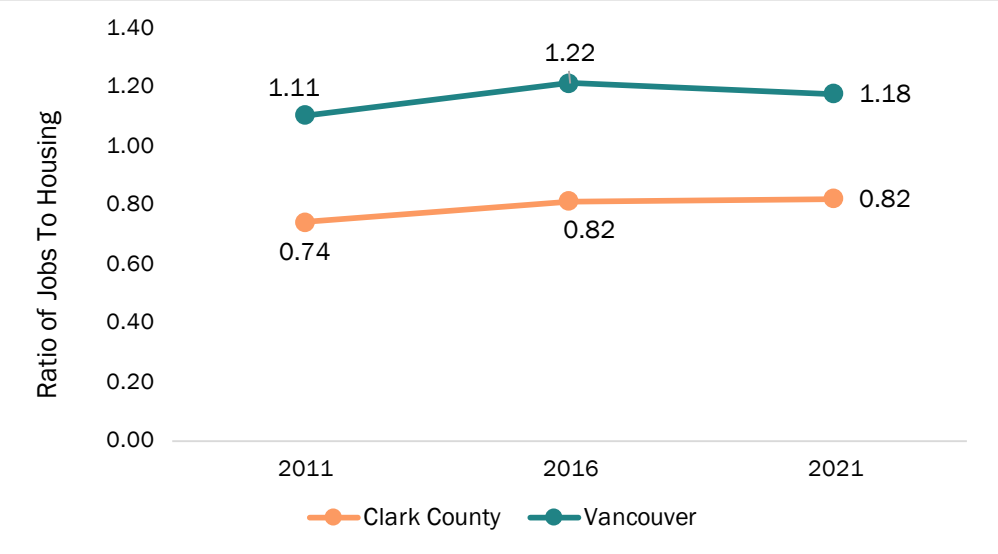
| UGA Total | 65,091 | | 1,463 | 66,534 | 3,524 | 5,038 | 8,600 | 83,695 | Urban |
| Rural | | | | | | | | 4,405 | Rural |
| | | | | | | | | 88,100 | Countywide |

Clark County has recently adopted a 2045 countywide employment projection of 269,000 total jobs to be used with the County's 2025 Comprehensive Plan Update.[11]

### Intersection with Housing Needs



The County's interim population projection maintains the 1:1 jobs-to-housing ratio in the County's current 2015-2035 Comprehensive Plan. However, the City of Vancouver has had a consistently high jobs-to-housing ratio over the last 10 years compared to Clark County as a whole (Exhibit 5). As recently as 2021, the City of Vancouver had 1.18 jobs for every household compared to 0.82 jobs for every household in Clark County.[12]

The Housing Needs Assessment conducted for the Vancouver 2045 Comprehensive Plan Update identified a need for 43,198 new housing units through 2045 across Vancouver. **If the City of Vancouver continued to maintain an average of 1.17 jobs-to-housing units that has been observed between 2011-2021 through 2045, it would be on track to anticipate planning for 50,541 new jobs through 2045 (far above the County's interim allocation).** If the City of Vancouver applied the same 1:1 jobs-to-housing target as adopted by Clark County, the City would be on track for 43,198 new jobs (also above the interim allocation).

[11] https://clark.wa.gov/sites/default/files/media/document/2023-08/2023-08-01.pdf

[12] The jobs-to-housing ratio is another metric useful for describing the balance between a city providing available housing for local workers and adequate jobs for those living in a city. The City of Vancouver recognizes the need to balance jobs to housing as a way to ensure the attainment of an appropriate supply and mix of housing and affordability levels to meet the needs of people who work and desire to live in Vancouver. The city established a Comprehensive Plan policy calling for an increase in the ratio of jobs to residents in the City of Vancouver and the region. Vancouver's jobs to housing ratio is trending upwards with a slight increase from 2011 to 2021, as the city has transitioned from a suburban bedroom community to a city offering more employment opportunities.

**Exhibit 5. Vancouver and Clark County Jobs to Housing Ratio 2011, 2016, 2021**
Source: Office of Financial Management, LODES, 2011-2021,

## Regional Position

Vancouver is one of the fast-growing cities in Washington, located in Clark County on the state's southwestern border with Oregon, along the north shore of the Columbia River. Vancouver is of growing importance within the greater Portland metropolitan area's interconnected economy. Within the region, Vancouver is home to several large institutions including Clark College, Washington State University's Vancouver campus, and PeaceHealth Southwest Medical Center, with access to a broader selection of 25 colleges and universities in the Portland metro area. Clark County is also home to major regional employers in computers and technology within the broader network of science and technology industry clusters in the Portland area, offering Vancouver residents access to a variety of jobs in growing sectors.

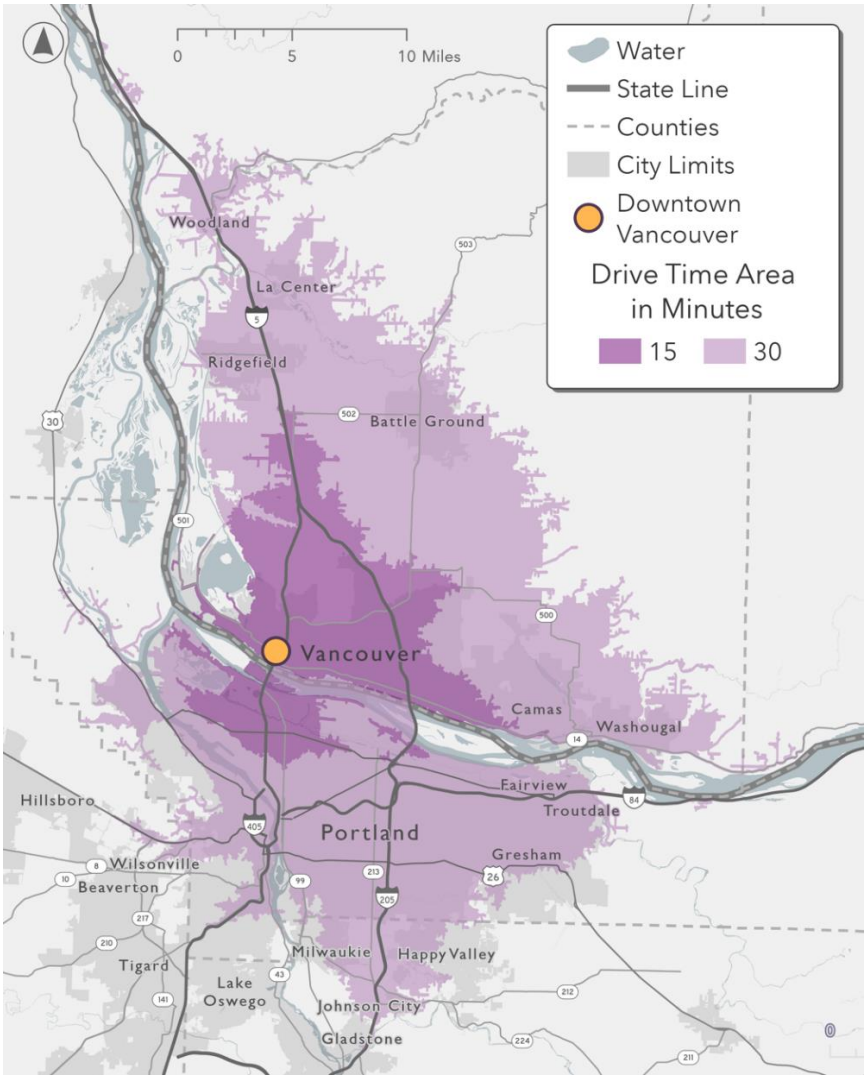
Given the interconnected nature of Portland and Vancouver's economies and different state and local tax structures, the two cities often compete for residents and jobs within the region. A number of factors can influence household and employer decisions about location, including these tax structures as well as other considerations like the cost of living, land availability, quality of life amenities, infrastructure, and others. Over the past decade, Clark County has consistently seen positive net in-migration of residents from other counties in the region (Multnomah, Clackamas, and Washington Counties) according to data by the U.S.

Internal Revenue Service (IRS).[13] The U.S. Census Bureau's populations estimates for 2021 also indicated that Clark County has had the largest population increase largely due to in-migration, while other counties in the region have all seen outmigration trends. Multnomah and Washington Counties both saw a net loss from outmigration in 2021, while Clackamas County also saw their lowest levels of in-migration for the last decade and low levels of natural population growth.[14]

## Regional Transportation Access

Vancouver is well connected to major local and regional transportation corridors, including two interstate bridges that connect the city with Portland. Interstate Highways (I-) 5, 205, and 84 offer commuters' quick access by car or bus between Vancouver and the greater area, as well as a regional travel connection north to the Puget Sound and east along the Columbia River. While the bicycle and pedestrian networks may offer less direct options between cities, the I-5 and I-205 bridges provide protected pedestrian pathways over the river.

**Exhibit 6. Map of Key Clark County Regional Infrastructure**
Source: CREDC Business Guide
Note: This map from CREDC illustrates infrastructure in the broader region



[13] Portland Business Alliance, "State of the Economy" (Value of Jobs Coalition, 2023).

[14] Ibid.

## Surrounding Land Uses

Located at a nexus of two interstate highways, national rail lines, and ocean-bound and river shipping lanes, with proximity to the Portland International Airport, the city is well positioned to access major markets within the United States and around the world (see Exhibit 6)

**Exhibit 7. Vancouver and Surrounding Jurisdictions, 15- and 30-Minute Drive Times from Downtown Vancouver**
Source: ESRI
Drive times reflect an average outbound weekday morning commute

The city's access to deep water anchorages at the Port of Vancouver and Port of Portland, Union Pacific and BNSF railroad lines, and Portland International Airport (PDX) are among the city's strongest economic advantages for a number of industries. Regional markets accessible within a 30-minute drive include Downtown Portland, Gresham, Beaverton, Salmon Creek, Ridgefield, and Camas/Washougal (see Exhibit 7).

## Summary of Key Findings

### Demographic Trends

**Vancouver, Clark County, and the State of Washington have grown substantially over the last two decades and are projected to continue to grow over the 20-year planning period.** From 2000 to 2023, Vancouver's population grew by just over 56,000 residents, or 39%, which is higher than Washington state (35%) but lower than Clark County as a whole (53%). The pandemic may have shifted or accelerated migration patterns and housing preferences permanently, and Portland outmigration has contributed to Clark County's rapid growth.

**The region's growth includes more educated and early working age adults, and higher income households to Vancouver.** An increasingly educated and skilled workforce can help attract and retain employers, including those in CREDC's current target industry clusters for the County (Computers and Electronics, Software, Clean Tech, Metals and Machinery, Life Sciences). The community development needs associated with the growth of this skilled workforce will depend on employer workspace needs and existing office vacancy rates. A portion of this skilled workforce in occupations allowing for locational flexibility (such as tech-intensive industries) could work remotely at least part of the time or in co-working spaces rather than working fulltime at a centralized office space. As of 2022, approximately 17% of Vancouver's workers worked remotely (US Census data) and 52% of these workers earn over $65,000 per year (see the Vancouver Housing Needs Assessment for more information).

**However, the city's increasing median household income can also be a sign of displacement of lower-income households.** As higher-income households move into the city, it is likely to increase housing costs and displacement pressures for lower-income households. Cost burden has impacted renters more than homeowners. Renters are nearly three times as likely to be cost burdened than homeowners, with over a quarter of renters severely cost burdened, spending more than 50% of income on rent. In Vancouver, Black or African American households and Hispanic or Latino households experience the highest rates of cost burden and severe cost burden.

**As the city continues to grow, managing negative externalities for groups who are already at a disadvantage will be critical to ensuring equitable opportunities.** Anti-displacement strategies in vulnerable areas, targeted workforce development, culturally-specific and accessible small business support, and other intentional strategies should be developed and reinforced to avoid creating deeper disparities for communities of color and low-income residents.

## Real Estate Trends

**Billions of dollars in public realm improvements, transportation enhancements, and public private partnerships has catalyzed a cycle of private investment that has delivered new housing units and employment space across the city.** Over the last fifteen years, Vancouver has added over 1 million square feet each of new office and retail space, and roughly 4 million square feet of industrial capacity. Developers have gravitated towards some of the city's large open sites, but created important questions for how Vancouver should seek to use its remaining buildable employment lands. Although the City has added 1,466 new housing units per year on average from 2012 to 2022 (many as part of large, mixed-use developments with 79% of new permits in multifamily developments over the last three years), the City still has a need to deliver more housing to meet demand (see the Housing Needs Assessment). Given finite amounts of land, which are expected to accommodate a large share of Clark County's employment growth in coming years, policy decisions around efficient land use are becoming more critical.

**In recent years, Vancouver's commercial real estate trends have closely tracked Clark County and the broader Portland metro area, with several gaps closing for the city in the three years since the onset of the COVID-19 pandemic.** Since 2020, office, retail, and industrial vacancies have climbed in the four-county area, while Vancouver's commercial vacancies remained lower in all categories. In 2023 year-to-date the region has over 11 percent of its office space vacant, compared to only 5 percent in Vancouver. While this rate has continued to increase from 2020 in the region, Vancouver and Clark County's office markets have recovered quickly. Retail and industrial vacancies do not show as sharp of a contrast but are maintaining lower vacancy rates and showed a quicker recovery from fluctuations in 2020.

**Office market data indicates that Vancouver has established itself as the prime location for affordable office space within Clark County and the Portland metro area.** While the city has lower office rents in comparison to the regional average, Vancouver's ability to attract tenants seeking lower cost options presents an opportunity for the city to strategically position itself as an attractive hub for new and expanding businesses, especially cost-conscious startups. Targeted initiatives to develop more modern office amenities, coworking spaces, small business incubators, "third places" (or social hubs facilitating social interaction outside of home or work such as cafes, parks, community centers), mixed-use development, and incentives for targeted office development could help the city capitalize on this competitive advantage in office real estate for service-based industries that continue to

grow in Vancouver. However, as post-COVID trends emerge, needs for startups and small businesses in particular may change as remote work offers a cost-effective alternative.[15]

**Vancouver has an opportunity to develop mixed-use retail centers that could boost access to shopping, dining, and entertainment.** While Vancouver's new retail construction (also referred to as 'deliveries') slowed in recent years, the city has also maintained growth in retail and service industry jobs. Areas of the city that saw falling employment include older suburban-style malls and plazas along highway corridors, while the city's downtown employment increased. Retail growth presents avenues to partner with developers on revitalization projects and initiatives to support local small businesses that are positioned to new post-pandemic trends that prioritize mixed-use commercial development.

## Employment Trends

**Service-based industries are concentrated in Vancouver and make up a large and growing share of the city's workforce.** Healthcare, retail, and educational services represent the largest shares of employment in the city, with all service sectors as a whole accounting for more than half of jobs in the City. These represent areas where Vancouver can build on opportunities, although wages in many service-oriented careers are not on par with the County average. Developing industries that offer living-wage jobs should be a part of the City's strategy to provide economic opportunities for Vancouver residents, with pathways to these opportunities through upskilling or reskilling existing workers and fostering low-barrier educational programs.

**Many of the largest employers in Clark County are based in Vancouver and represent key industry clusters in healthcare, technology, and education.** Major employers like health centers, tech companies, and educational institutions represent key partners for developing

[15] The recently released Urban Land Institute's real estate trends report highlights emerging office space sector changes affected by remote work and other impacts (such as artificial intelligence). These changes have led to a reevaluation of the traditional office model and casted doubt on a complete return to pre-pandemic office conditions. ULI describes reduced tenant demand, particularly in downtown areas, resulting in a split market, with premium modern properties gaining favor. (ULI, 2024, Emerging Trends in Real Estate United States and Canada, https://knowledge.uli.org/reports/emerging-trends/2024/emerging-trends-in-real-estate-united-states-and-canada-2024?_gl=1*tyvb9f*_ga*ODQxOTExMjQ4LjE3MDAwNjk0NDM.*_ga_68JJQP7N7N*MTcwMDYxMTM3MS45LjEuMTcwMDYxMTM4Ni4wLjAuMAl).

career pathways and opportunities for residents of Vancouver and other parts of Clark County. Universities, hospitals, and technology parks are becoming increasingly important locations where people both work and develop skills for some of these major industries.

**Jobs are moving in towards local employment hubs like Downtown Vancouver, the Vancouver Innovation Center, and large institutions.** Employment trends at the census tract level show that employment is growing in these locations, while declining along older, suburban-style commercial areas like Fourth Plain Boulevard. While many cities (including Portland) have struggled to maintain Downtown areas post-pandemic, Vancouver is showing a stronger rebound than the region.

## Policy Implications

The findings from this analysis can inform and guide the City as it develops its economic development strategies for the next twenty years. Some of the key policy implications from this work that the City may consider in the Comprehensive Plan update include:

**Supporting employment and wealth creation opportunities for residents across all income levels.** Demographic trends show an increase in younger, educated workers and high-income households, as well as a high-share of cost-burdened households. The City should evaluate strategies to continue supporting and attracting skilled workers to fill key roles in target industries, along with strategies to promote stability and opportunity for residents vulnerable to displacement and poverty.

**Including housing as a focus of the City's economic development strategy.** Access to talent is a primary driver of growth for many companies. A limited availability of housing and lack of affordable housing are issues not just for Vancouver residents but, increasingly, for employers who have difficulty attracting and retaining talent to fill roles. Historic and current housing underproduction has limited local supply (see Housing Needs Assessment), creating new pressures for residents including proximity to employment. The City should evaluate the dynamic between the industries they prioritize and the likelihood that the workers in those industries can afford to live in Vancouver. The City's housing and economic development efforts should be strategically coordinated to ensure the city has sufficient housing options to meet the needs of Vancouver workers and employers.

**Coordinating with partners to support regional goals and target industries.** The City should coordinate and align efforts with CREDC to support key industry clusters in Computer and Electronics, Clean Tech, Software, Metals & Machinery, and Life Sciences. The City should

coordinate with regional partners on key infrastructure projects and transportation improvements.

**Pursuing place-based development strategies.** The City's public realm investments will continue to catalyze private development in areas across the city. The City should continue to strengthen downtown as a residential, cultural, civic, retail and entertainment center. The City should develop targeted economic development and equitable development strategies, (e.g., culturally specific entrepreneurship business assistance programs) in neighborhood centers, in alignment with the future land use map and where the City is planning infrastructure investments.

# Section 2. Demographic Profile

Population growth, demographic composition, and income distribution can all have important implications for a city's economic development. Key characteristics such as population growth over time, age of residents, median income, and disparities by race and ethnicity provide useful context about Vancouver's current households and recent trends. The purpose of this analysis is to evaluate the socioeconomic conditions that will influence demand for different land uses and shape the economic opportunities in the city over the current comprehensive plan horizon. This information can also help to identify which communities in Vancouver are not benefiting from current efforts and inform the City's work to address current gaps for equitable economic development as part of the comprehensive plan update.

This section provides an overview of key socioeconomic conditions in Vancouver that are useful for evaluating economic opportunities and challenges. To better understand the City's standing within the region, the analysis also includes comparisons to Clark County and other geographies such as Washington State and the greater Portland area as needed to contextualize conditions in Vancouver.

## Data and Geographies

This assessment relies on published data primarily from the U.S. Census Bureau, CoStar, Washington Office of Financial Management, U.S. Department of Housing and Urban Development, Clark County, and the City of Vancouver (see the Our Vancouver Housing Needs Assessment for detail on the main data sources used). For demographic data, ECOnorthwest primarily used the 2021 American Community Survey (ACS) 1-year Estimates, which is the most current data set available. This report uses the City of Vancouver as its primary geography, with comparisons to Clark County and Washington State, as well as some targeted comparisons to other cities in the region, including Portland and Hillsboro. In some cases, the analysis uses a four-county area including Clark County (WA), Multnomah County (OR), Washington County (OR), and Clackamas County (OR) when necessary to understand regionwide economic trends.

### Equity Priority Communities

The City has identified Equity Priority Communities, comprised of historically marginalized and/or vulnerable communities, that should be centered in Vancouver's planning and policy processes. These Equity Priority Communities are defined as those who experience or have experienced discrimination and exclusion based on identity. A history of housing discrimination and other exclusionary policies have deprived people in these communities of opportunities for wealth creation, access to capital, and access to quality affordable

housing in areas near essential amenities. For the purposes of this project, Equity Priority Communities include:

- Black, indigenous, people of color (BIPOC) communities
- People with low incomes
- People with disabilities, including neurodivergent
- Youth and children
- LGBTQ+ individuals
- Renters
- People without an address/ people experiencing homelessness
- Small business owners
- Refugees
- Undocumented population

Understanding disparities between these groups help the City make decisions on investments that meaningfully reverse the disparities in access to jobs, housing, transportation, and other community services. Where possible, this study disaggregates data by race to help understand disparities and inform future policy decisions.

## Population Growth and Forecast

### Population Growth

The Washington State Office of Financial Management provides official state and local population estimates and projections for use in the allocation of funds, growth management, and other planning functions. This section utilizes official population estimates from 2000-2022 and official projections for 2050 to understand Vancouver's past and future population growth.

Population growth and household formation are critical indicators for the available workforce and economic base of the city. Although Vancouver is part of an economically interconnected region, the rate of population growth in the city and county heavily influences future employment trends, local demand, and business competitiveness.

Vancouver and the region have grown substantially over the last two decades and are projected to continue to grow over the 20-year planning period. From 2000 to 2023, Vancouver's population grew by just over 56,000 residents, or 39%, which equals an annualized compounded growth rate of 1.4% growth per year (see Exhibit 8 below). At almost

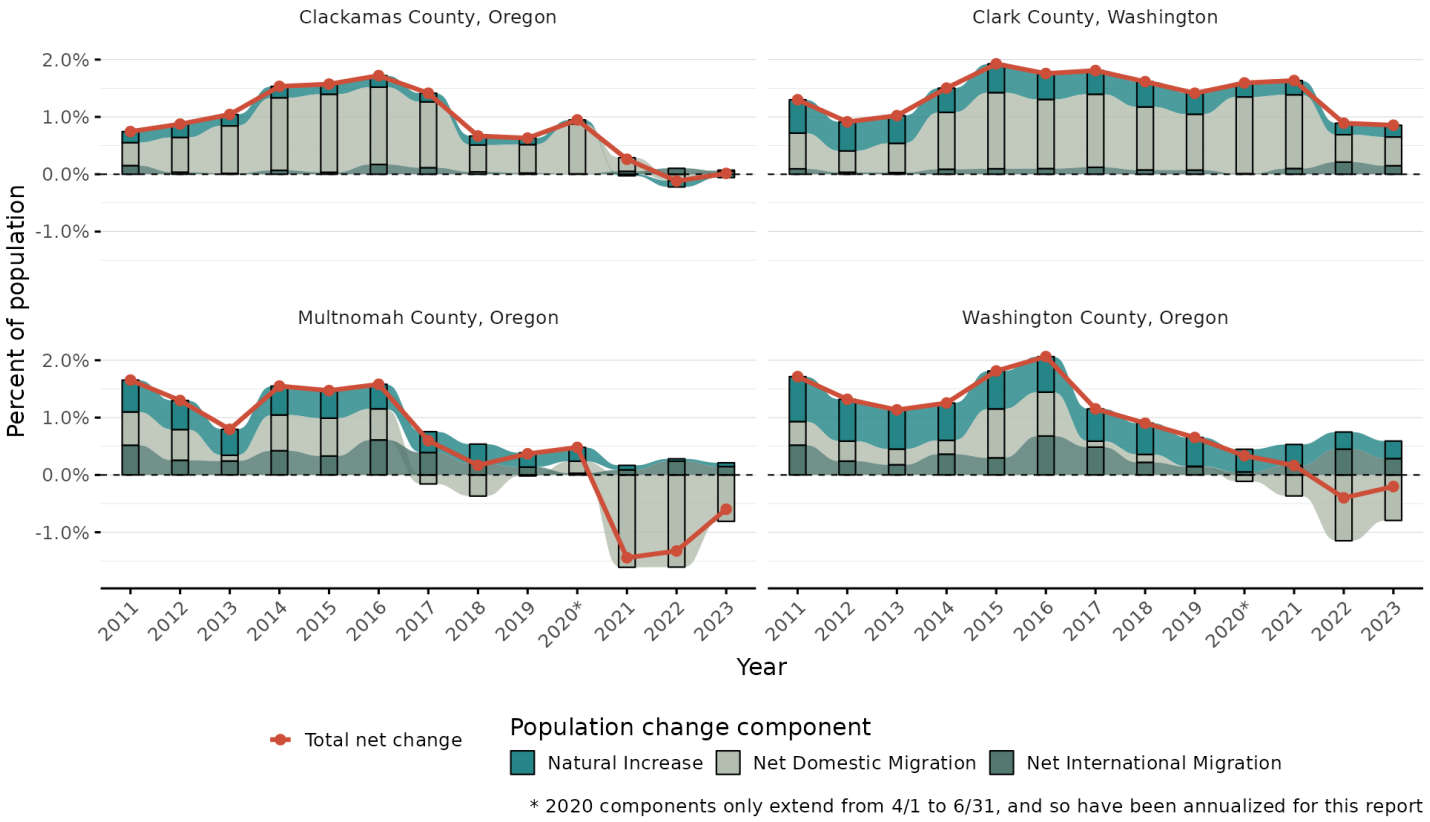
200,000 persons, Vancouver is the fourth largest city, based on population, in the State of Washington (below the cities of Seattle, Spokane, and Tacoma but above Bellevue).[16]

Clark County has experienced a higher rate of population growth than Vancouver, though both are growing at a faster rate than the state overall. Despite Vancouver's slightly slower growth than the county, the city is likely to draw from a labor pool that includes commuters from unincorporated suburban areas and towns to the north, west, and east.

**Exhibit 8. Population Growth, Vancouver, Clark County, and Washington, 2000-2023**
Source: ECONorthwest, Office of Financial Management Population Estimates.[17]

| | 2000 | 2010 | 2023 | Change, 2000-2023 | % Change, 2000-2023 | Annualized Compounded Growth Rate |
|---|---|---|---|---|---|---|
| City of Vancouver | 143,560 | 161,791 | 199,600 | 56,040 | 39% | 1.4% |
| Clark County | 345,238 | 425,363 | 527,400 | 182,162 | 53% | 1.9% |
| State of Washington | 5,894,143 | 6,724,540 | 7,951,150 | 2,057,007 | 35% | 1.3% |

## In-Migration



A portion of Vancouver's recent growth can be linked to migration from Multnomah County and other counties in the Portland Metropolitan region. From 2011 to 2021, Clark County has seen consistent rates of positive in-migration, with an average of approximately 5,000 people per year moving into the County. Meanwhile Oregon Metro Counties have all seen decreasing rates of in-migration since 2016, with a particularly high number of people moving out of Multnomah County in 2021. In 2021, nearly 13,000 people moved out of Multnomah county and approximately 5,800 people moved into Clark County. These findings suggest that the greater locational flexibility allowed post-COVID 19 is a contributing factor,

[16] Washington State Office of Financial Management analysis of U.S. Census data, 2021: https://ofm.wa.gov/washington-data-research/population-demographics/population-estimates/population-density

[17] Between 2010 to 2020, several areas were annexed into the City of Vancouver which increased the population by approximately 6,126 persons. If the annexation was deducted from the 2023 population estimate, the percent change would be 35% rather than 39%.

though not the singular cause, of migration trends from the Portland Metro region to Clark County.

**Exhibit 9. Annual Population Change by County across the Portland Metro Region, 2011-2021**
Source: U.S. Census

## Demographic Composition

Demographic information describing the age and race and ethnicity trends of the community, can help inform both economic conditions today and key considerations for future economic development. ECONorthwest primarily used 2021 one-year American Community Survey (ACS) data (the most current data available) for this analysis.

### Key Findings

- **The share of early and mid-career age residents and older adults in Vancouver is growing.** Vancouver's median age in 2021 was 39 years, similar to Clark County and increasing slightly since 2011. Vancouver's largest age group in 2021 was residents aged 20 to 34 years, representing roughly a quarter of the population (24%). Residents in this group are likely to include more early-career workers and students. From 2011 to 2021, the share of residents under 20 years decreased from 25% to 20%, while the share of residents older than 65 increased from 13% to 19%, indicating a decreased share of families with children and a greater share of

residents entering retirement (the Housing Needs Assessment also indicates that Vancouver's median household size has decreased slightly since 2011). Demographic trends will drive consumer preferences, housing needs and workforce composition. Specifically, more working-age young adults without children and more seniors are likely to drive demand for more compact housing types near amenities, services, and entertainment and recreational opportunities.

- **The share of residents over 25 with a bachelor's degree or higher increased in Vancouver and Clark County from 2011 to 2021.** An increasingly educated workforce may help the city in attracting and retaining employers that require workers with specific skill sets or educational backgrounds.
- **Both Vancouver and Clark County have become more racially and ethnically diverse.** From 2011 to 2021, Vancouver saw increases by two percentage points in its Hispanic and Latino population (from 9 to 11%), Asian population (from 6 to 8%), multiracial population (from 5 to 7%), and Black population (from 3 to 5%).
- **Disparities in median income, educational attainment, housing cost burden, and homeownership rates by race and ethnicity indicate ongoing economic inequality for people of color in Vancouver and Clark County.** In 2021, the median incomes of multiracial households, Black or African American households, Hispanic or Latino households, or households identifying as another group not listed by the ACS were below the median income in Vancouver; in addition, a smaller share of residents over the age of 25 who were Black or African American, Hispanic or Latino, or another race alone had bachelor's degrees. Housing cost burden was also most prevalent for Black or African American and Hispanic or Latino households, indicating additional economic burdens.

## Age

Individuals often have different economic prospects and challenges at different stages of life. For example, young workers, students, and recent college graduates who are in the early stages of their careers may have greater locational flexibility, while mid- to late-career workers may be less likely to change careers, and retirees and older adults exiting the workforce may have changing needs for housing, amenities, and services.

Compared to Clark County overall, Vancouver has a greater share of working-age young adults and seniors, and a lower share of residents under 20 years of age. Exhibit 10 shows the median age for Vancouver and Clark County. Vancouver has a marginally higher median age, 39.4 years, than the county overall.

**Exhibit 10. Median Age, Vancouver and Comparison Geographies, 2021**
Source: ACS 1-Year Data Tables, 2021

| Jurisdiction | Median Age |
|---|---|
| City of Vancouver | 39.4 |
| Clark County | 39.2 |
| Hillsboro | 34.8 |
| Portland | 38.3 |
| State of Washington | 38.2 |

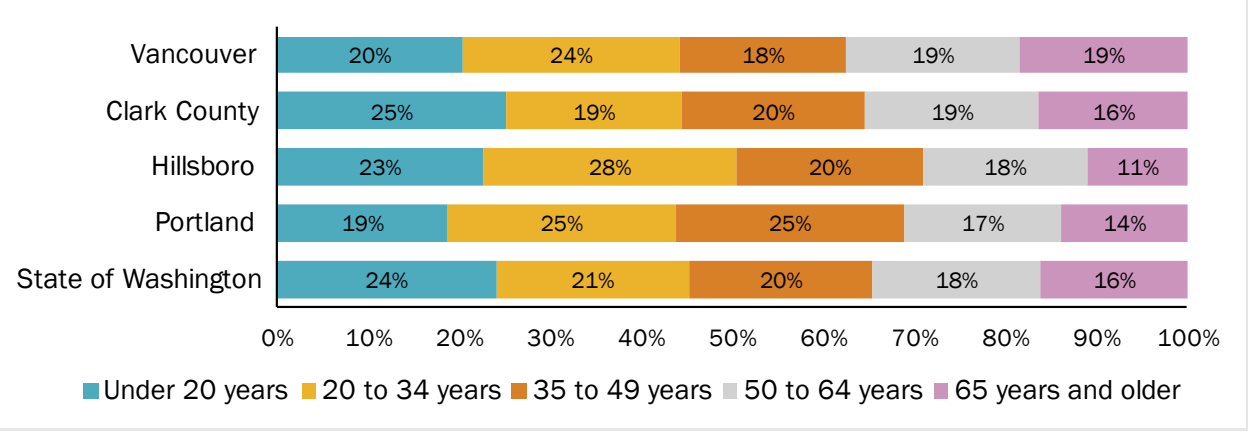
**Exhibit 11. Change in Median Age, Vancouver and Comparison Geographies, 2011-2021**
Source: ACS 1-Year Data Tables, 2011, 2021

| Jurisdiction | 2011 | 2021 | Change |
|---|---|---|---|
| City of Vancouver | 38.0 | 39.4 | 1.4 |
| Clark County | 37.0 | 39.2 | 2.2 |
| Hillsboro | 32.2 | 34.8 | 2.6 |
| Portland | 35.7 | 38.3 | 2.6 |
| State of Washington | 37.3 | 38.2 | 0.9 |

Exhibit 11 shows the change in median age from 2011 to 2021. Vancouver's median age increased by 1.4 years from 2011 to 2021, a slightly lower change than the county.

Exhibit 12 shows the distribution of different age groups. In Vancouver, the largest age group is residents aged 20 to 34 years (24%). Compared to the county, Vancouver has a similar share of residents between the ages of 35 and 64, but a 3-percentage-point higher share of residents 65 years and older (or nearly 19% share higher than the County). In addition, while the county's largest age group is residents under 20 years (25%), Vancouver has a 5-percentage-point lower share (or 20% lower share than that of the County).

**Exhibit 12. Age Distribution, Vancouver and Comparison Geographies, 2021**
Source: ACS 1-Year Data Tables, 2021



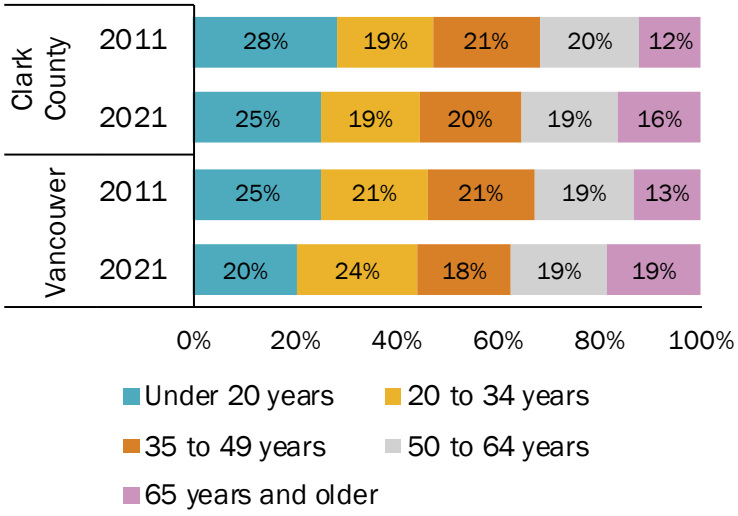


Exhibit 13 shows the change in age distribution for Vancouver and Clark County. In both jurisdictions, the share of residents under 20 years decreased (by 5 percentage points in Vancouver). On the other end of the spectrum, the share of residents 65 years and older increased in both jurisdictions (by 6 percentage points in Vancouver). In the county overall,

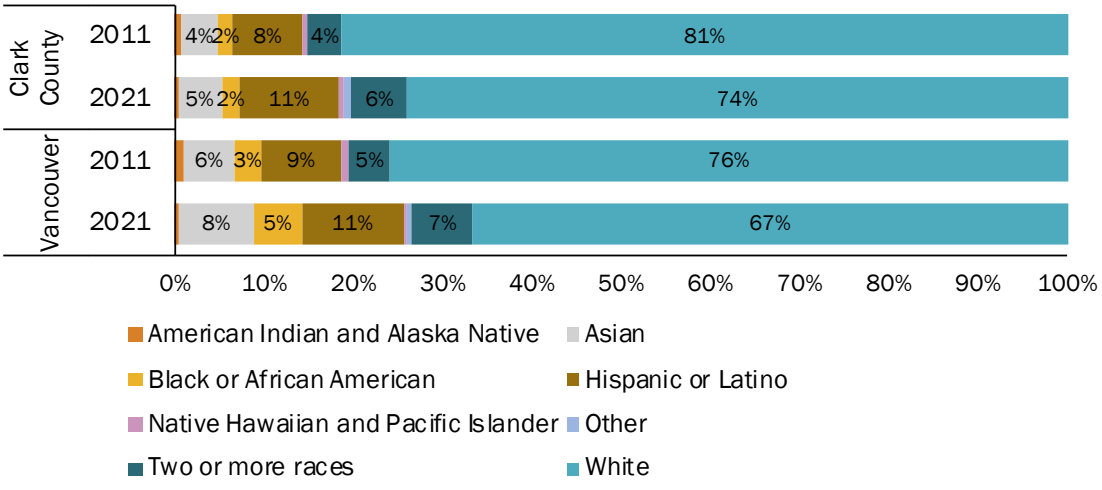
the share of residents between 20 and 65 years remained relatively stable, while in Vancouver the share of residents aged 20 to 34 years increased by 3 percentage points, and the share of residents aged 35 to 49 years decreased 3 percentage points.

**Exhibit 13. Change in Age Distribution, Vancouver and Clark County, 2011-2021**
Source: ACS 1-Year Data Tables, 2011, 2021

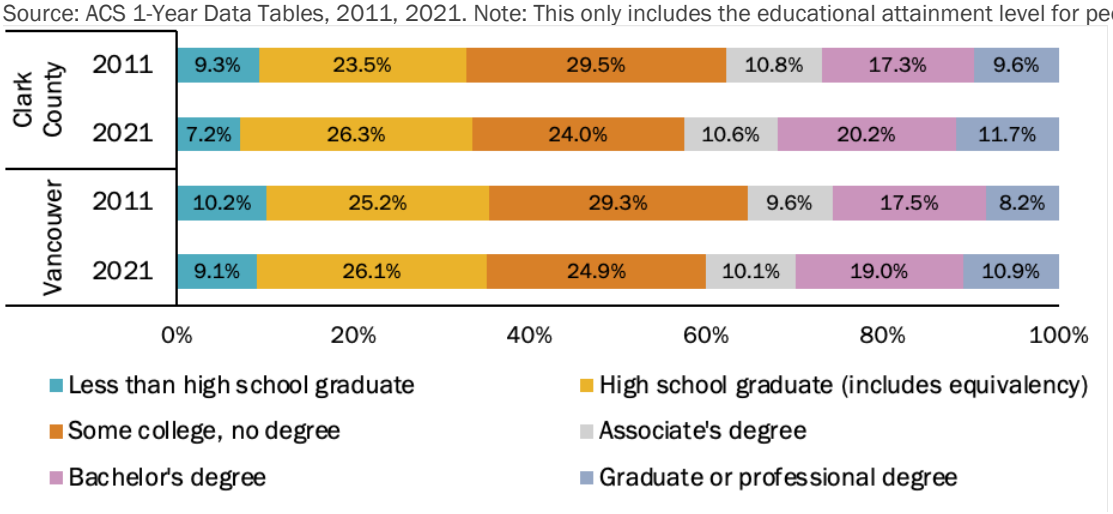


In addition, prime working age is generally defined as workers aged between 25 to 54 years. Vancouver's share of prime working population (20 to 49 years) is similar to Clark County and has slightly decreased from 2011 to 2021.

## Race and Ethnicity

In both Vancouver and Clark County, the majority of the population is White, with 67% of residents identifying as White in Vancouver and 74% in the county. However, Vancouver has a 3-percentage-point higher share of Black or African American residents, and a 3-percentage-point higher share of Asian residents than the county overall. **Both jurisdictions became more racially and ethnically diverse over the last decade from 2011 to 2021.** Vancouver saw increases by two percentage points for its Hispanic and Latino population (from 9 to 11%), Asian population (from 6 to 8%), multiracial population (from 5 to 7%), and Black or African American population (from 3 to 5%). Exhibit 14 shows the change in the distribution of residents by race and ethnicity from 2011 to 2021.

**Exhibit 14. Change in Race and Ethnicity Distribution, Vancouver and Clark County, 2011-2021**
Source: ACS 1-Year Data Tables, 2011, 2021

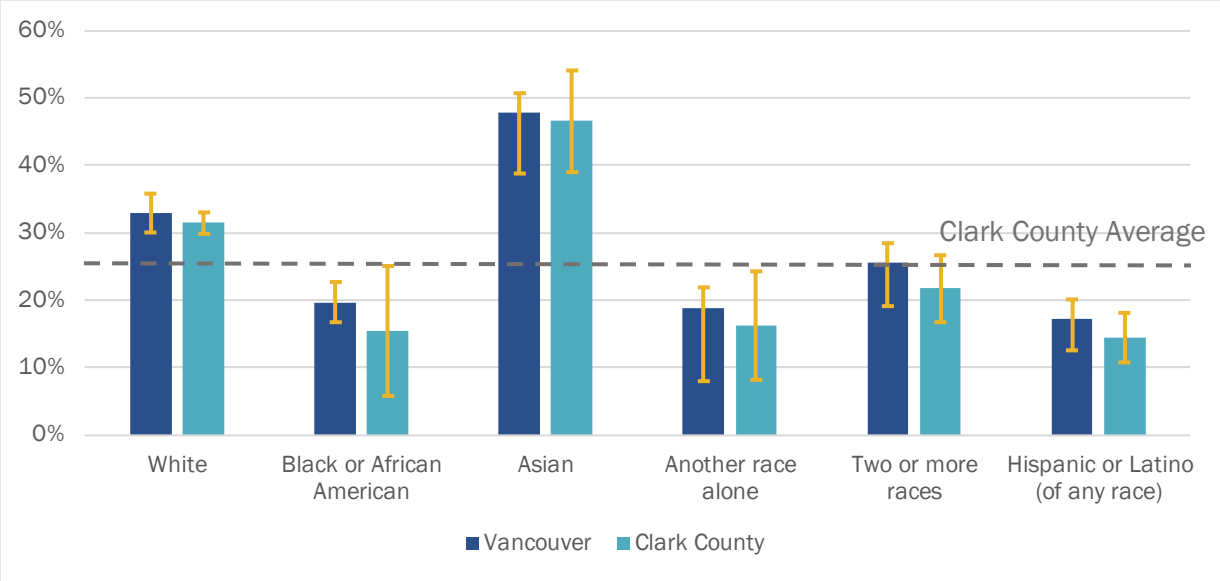


## Educational Attainment

Educational attainment is an important indicator for economic opportunities and the type of available workforce in an area. Economic development strategies may target different types of skill development, industry pipelines, or training programs depending on the existing level of education among residents.

**From 2011 to 2021, Vancouver and Clark County both saw growth in the share of residents over 25 with a bachelor's degree or higher**. The share of residents with some college but no degree and those with no high school degree also decreased across both geographies in this timeframe. An increasingly educated workforce may help the city in attracting and retaining employers that require workers with specific skill sets or educational backgrounds. As professional services industries grow in Vancouver, the city will see increasing opportunities for skilled workers in industries like financial services. Industries like specialized manufacturing, life sciences, and healthcare also present opportunities for those with associate degrees or graduates from Career and Technical Education programs to access higher wage jobs.

**Exhibit 15. Change in Educational Attainment, Vancouver and Clark County, 2011-2021**
Source: ACS 1-Year Data Tables, 2011, 2021. Note: This only includes the educational attainment level for people 25 years and over.



Educational attainment is not the same between different groups by race and ethnicity in Vancouver or Clark County. For the population age 25 and over, a larger share of white and Asian residents held at least a bachelor's degree, which often indicates different types of employment opportunities in the workforce. In comparison, a lower share of residents who

were Black or African American, Hispanic or Latino, or another race alone had bachelor's degrees both in Vancouver and Clark County.

**Exhibit 16. Share of Population Age 25 and Over with a Bachelor's Degree or Higher by Race and Ethnicity, Vancouver and Clark County, 2021**

Source: ACS 1-Year Data Tables, 2021. Note: Due to low sample size, accurate data is not available for American Indian and Alaska Native and Native Hawaiian and Other Pacific Islander groups. Yellow bars represent the range of margin of error (MOE).

## Income Distribution

Income and income distribution are critical indicators of economic prosperity. Income levels directly reflect the purchasing power and standard of living of individuals and households; higher incomes generally enable people to afford better education, healthcare, and access to essential goods and services, contributing to overall well-being and productivity. The distribution of income and disparities between demographic groups are also critical considerations for addressing economic inequality and reducing concentrations of poverty. Key findings for income distribution in Vancouver include:

- **Median household income in Vancouver is increasing.** In Vancouver and Clark County, the share of all income brackets above $75,000 increased between 2011 and 2021, while the share of households earning less than $75,000 annually decreased. While an increase in median household income can have positive compounding effects throughout the regional economy, it can also be a sign of displacement of lower-income households and compounding economic burdens on populations who have been historically disadvantaged.
- **However, incomes in Vancouver are still lower than elsewhere in Clark County.** Vancouver had a median household income of $70,000 in 2021, which is lower than the median household income in Clark County. Comparatively, Vancouver had a

higher share of households earning less than $75,000 and a lower share of households earning more than $100,000 annually.

- **Vancouver median household incomes generally align with the Portland region Area Median Income (AMI).** However, compared to the larger region, Vancouver has a higher share of households earning below 60% of the AMI.

## Median Household Income

As of 2021, the median household income in Vancouver was roughly $70,000 per year. The city's median household income was approximately $14,000 lower than that of Clark County as a whole, which includes cities like Ridgefield, Camas, and Washougal that have seen substantial population growth and corresponding increases in median household income in recent years. A variety of socioeconomic factors may contribute to this disparity between the City of Vancouver and other geographies in the region such as educational attainment levels, employment trends, and disparities for groups who have been historically disadvantaged. For instance, incomes in Hillsboro are likely higher due to high concentrations of high-wage tech industry jobs in the Hillsboro Industrial Area.

**Exhibit 17. Median Household Incomes, Vancouver and Comparison Geographies, 2021**
Source: ACS 1-Year Data Tables, 2021

| Jurisdiction | Median Household Income |
|---|---|
| City of Vancouver | $70,000 |
| Clark County | $84,000 |
| City of Hillsboro | $97,000 |
| City of Portland | $79,000 |
| State of Washington | $84,000 |

Even after adjusting for inflation, the City of Vancouver and Clark County both saw increases in median household income from 2011 to 2021 (as shown in Exhibit 18). Vancouver's median household income increased roughly $15,500 over this time period increasing by 28% which is slightly lower than Clark County (at 33%). The areas surrounding Vancouver tend to include a larger share of higher income households and lower share of people of color.

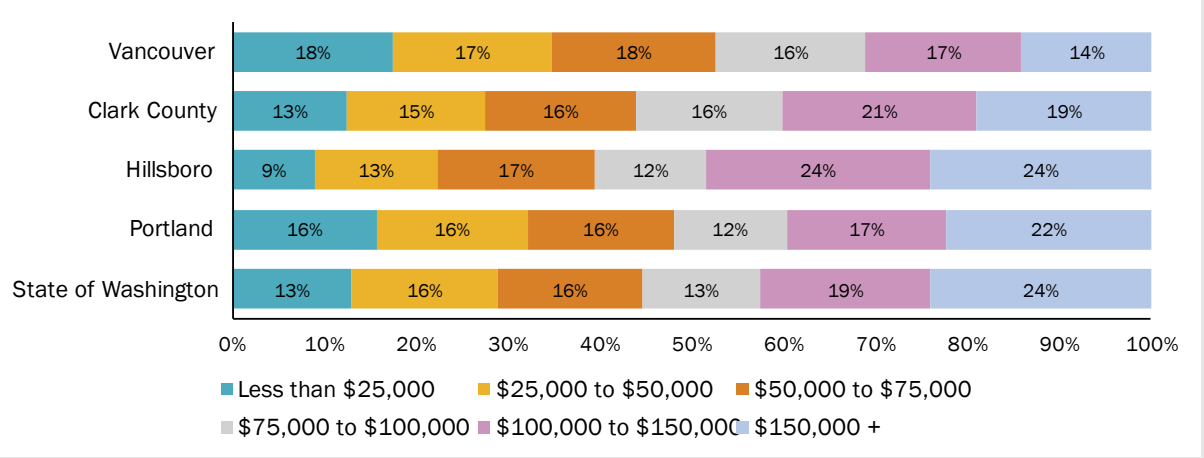
## Household Income Distribution

Exhibit 19 shows the distribution of different income brackets in Vancouver and Clark County. Of these jurisdictions, **Vancouver has a higher share of residents in income brackets below $75,000 annually**. Vancouver's share of households earning below $75,000 per year is even higher than the State of Washington and the City of Portland. In Vancouver, 53% of all households earn $75,000 or less, compared to 44% in Clark County (9 percentage points higher). Compared to Clark County, Vancouver's share of households earning less than $25,000 is five percentage points higher than the county. Looking at the higher income brackets, Vancouver has a lower total share of households earning above $75,000 per year (47% compared to 56%). In particular, the city has a smaller share of households earning between $100,000 and $150,000 than the county (17% compared to 21%), and a smaller share by 5 percentage points of households earning more than $150,000 compared to the county overall.

**Exhibit 18. Change in Median Household Incomes, Vancouver and Comparison Geographies, 2011-2021 (2021$)**
Source: ACS 1-Year Data Tables, 2011, 202. Note: 2011 incomes are adjusted for inflation to 2021 dollars.

| | 2011 | 2021 | Change | % Change |
|---|---|---|---|---|
| City of Vancouver | $58,918 | $69,993 | $11,075 | 28% |
| Clark County | $68,250 | $83,837 | $15,587 | 33% |
| City of Hillsboro | $79,219 | $97,436 | $15,781 | 20% |
| City of Portland | $56,658 | $79,057 | $18,217 | 32% |
| State of Washington | $68,466 | $84,247 | $15,587 | 23% |

**Exhibit 19. Median Household Income Distribution, Vancouver and Comparison Geographies, 2021**
Source: ACS 1-Year Data Tables, 2021



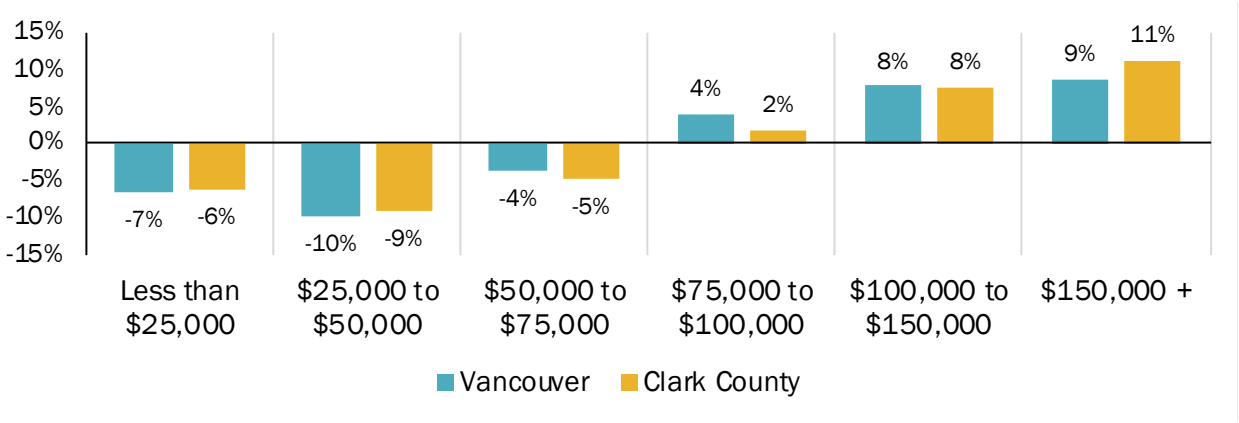


Exhibit 20 shows the change in the *share* of each income bracket from 2011 to 2021; for example, the share of households earning more than $150,000 annually increased from 5% to 14% in Vancouver over this time period, an increase of 9 percentage points. **In both Vancouver and Clark County, the share of households earning less than $75,000 annually decreased, while the share of all income brackets earning above $75,000 increased.** This could indicate that the City of Vancouver is gaining more people with household incomes earning above $75,000 per year or that existing households are experiencing increases in their incomes. Also in both jurisdictions, the share of households earning between $25,000 and $50,000 decreased the most, while households earning more than $150,000 increased the most. While changes were similar between the city and the county, the county had a slightly higher change in the share of households earning greater than $150,000.

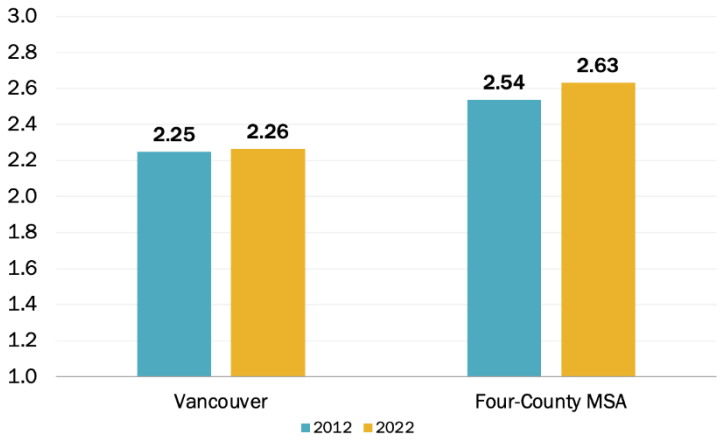
**Exhibit 20. Change in Median Household Income Distribution, Vancouver and Clark County, 2011-2021**
Source: ACS 1-Year Data Tables, 2011, 2021

An increase in median household income can have positive compounding effects throughout the regional economy. Greater spending power for households can result in more revenue for local businesses, and more local government tax revenue for public services and programs. However, an increasing median household income can also be a sign of displacement of lower-income households. As higher income households move into the city, it is likely to increase housing costs and displacement pressures for lower-income households.

## Income Inequality

Inequality between individuals and households with high incomes and those with low incomes in a community is helpful to understand how to best target economic development strategies to reduce disparities. Tracking income inequality allows decisionmakers to identify trends and emerging areas of concern so they can take steps to address root causes and create more equitable opportunities for residents. As Vancouver sees an influx of high-income households and rising median income, it is critical to track this variance between new high-earning and lower income residents. There are several ways that income inequality can be measured, including the Palma Ratio included in this section.



## Palma Ratio

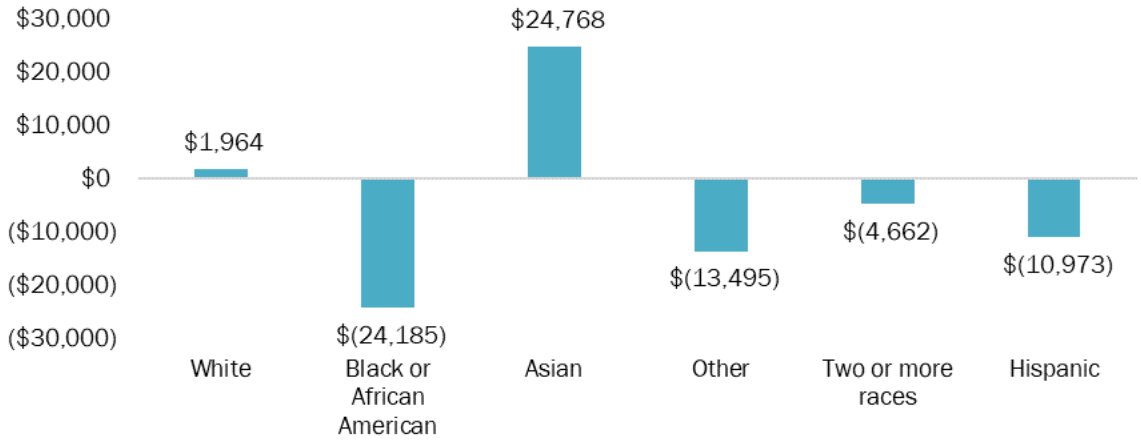
The Palma Ratio is one method of measuring income inequality that is defined as the ratio of income at the top 10 percent of households relative to that of the bottom 40 percent. This ratio is calculated by comparing the total income of households in both groups.[18] A higher score indicates greater income inequality between the top 10 percent and bottom 40 percent of households. A Palma Ratio greater than 1.0 indicates that the top 10% of the population being measured holds a larger share of income compared to the bottom 40% of the population while a ratio less than 1.0 implies the opposite (that the bottom 40% holds more income or wealth than the top 10%).

The Palma Ratio has consistently been higher in Clark County compared to the City of Vancouver for a decade from 2012 to 2022 (in 2022, it was 2.26 in the city and 2.63 in the county) (Exhibit 21). Vancouver saw a minor increase in its Palma Ratio score between 2012 and 2022, while the four-county area (including Clark, Multnomah, Clackamas, and Washington Counties) saw a larger increase than the city from 2.54 to 2.63 (by 0.09).[19] This indicates that Vancouver did not see a sizable change in inequality between its highest and lowest income levels, while disparities grew more in the four-county area overall. This could indicate a combination of stagnant or shrinking wages for the area's bottom 40 percent of households or disproportionately higher growth for the top 10 percent.

**Exhibit 21. Palma Ratio, Vancouver and Four-County Area (Clark County, WA; Multnomah County, OR; Clackamas County, OR; Washington County, OR), 2012-2022**

Source: ACS PUMS 1-Year Estimates, 2012, 2022.

[18] Alex Cobham, "The Palma," The Uncounted, December 8, 2014, https://uncounted.org/palma/.

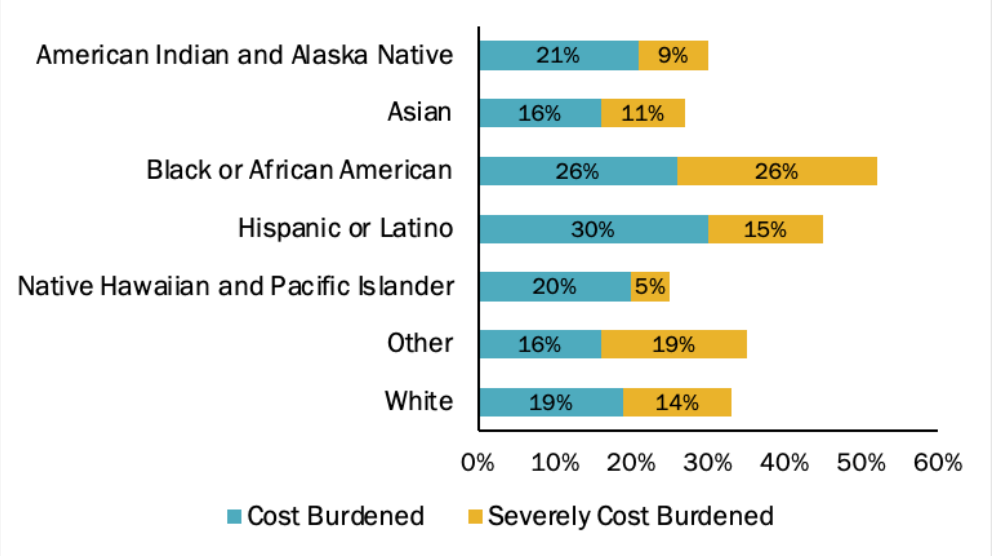


[19] Calculating the Palma Ratio requires analysis of PUMS data, which provides more detail about income brackets than the American Community Survey (ACS). PUMS data uses of Public Use Microdata Area (PUMA) geographies, which do not have the same geographic alignment as the ACS. Given the overlap of PUMAs in Clark County, this analysis compares Vancouver with the four-county area.

## Income and Race

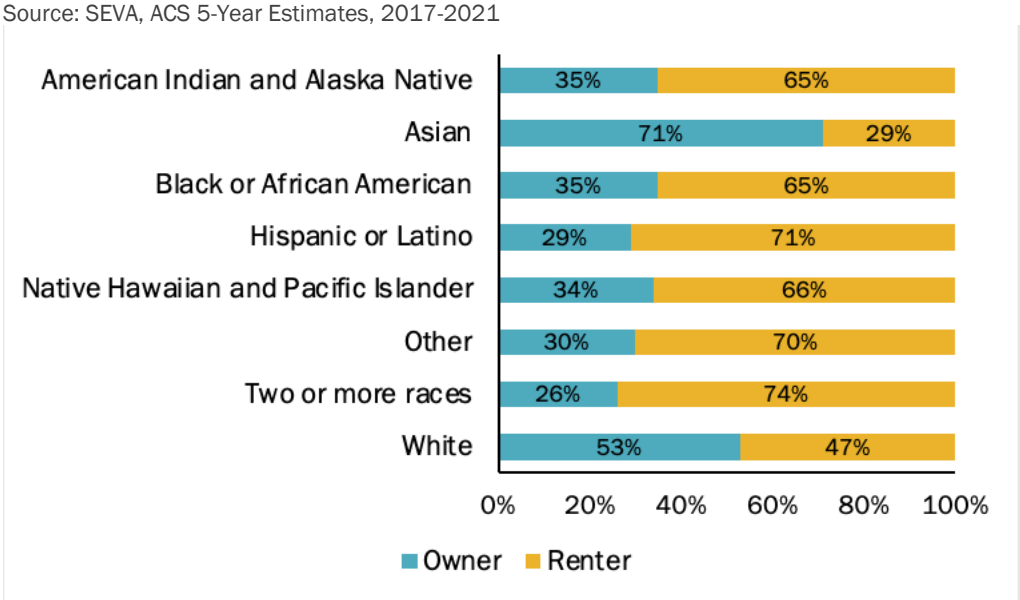
Exhibit 22 shows the difference for median incomes from the overall median income by race for Vancouver. Disparities were highest for Black or African American households, Hispanic households, Multiracial households, and households in the Other race category, whose median incomes were below the median household income for the City, while the median incomes of White and Asian households were above the median income of the city. These disparities highlight the importance of targeted, culturally-specific economic development strategies aimed at serving those communities where there is the greatest need for economic mobility and wealth creation opportunities.

**Exhibit 22. Difference between Median Income by Race and Overall Median, Vancouver**



Source: ACS 5-year estimates 2017-2021. Note: Due to low sample size, accurate data is not available for American Indian and Alaska Native and Native Hawaiian and Other Pacific Islander groups.

## Housing Characteristics and Race



Disparities in housing cost burden can also indicate economic inequality The US Department of Housing and Urban Development guidelines describe 'cost burden' as a household spending 30 percent or more of their monthly income towards a mortgage, rent, utilities, and other housing costs, while 'severe cost burden' describes households paying 50 percent or more of monthly income towards those expenses. In Vancouver, cost burden was most severe for Black or African American and Hispanic or Latino households, indicating additional economic burdens on these households.

**Exhibit 23. Cost Burden by Race, Vancouver, 2021**
Source: SEVA, American Community Survey 5-Year Data Tables, 2017-2021
Note: 'Cost burdened' here refers to households spending between 30-49% of household income for housing costs. 'Severely cost burdened' refers to households spending 50% or more of household income for housing costs.

In the City, White and Asian households are also more likely to own their homes compared to householders who are Black or African American, Hispanic or Latino, American Indian and Alaska Native, Native Hawaiian and Pacific Islander, two or more races, or another race. Higher rates of homeownership can indicate greater stability for households.

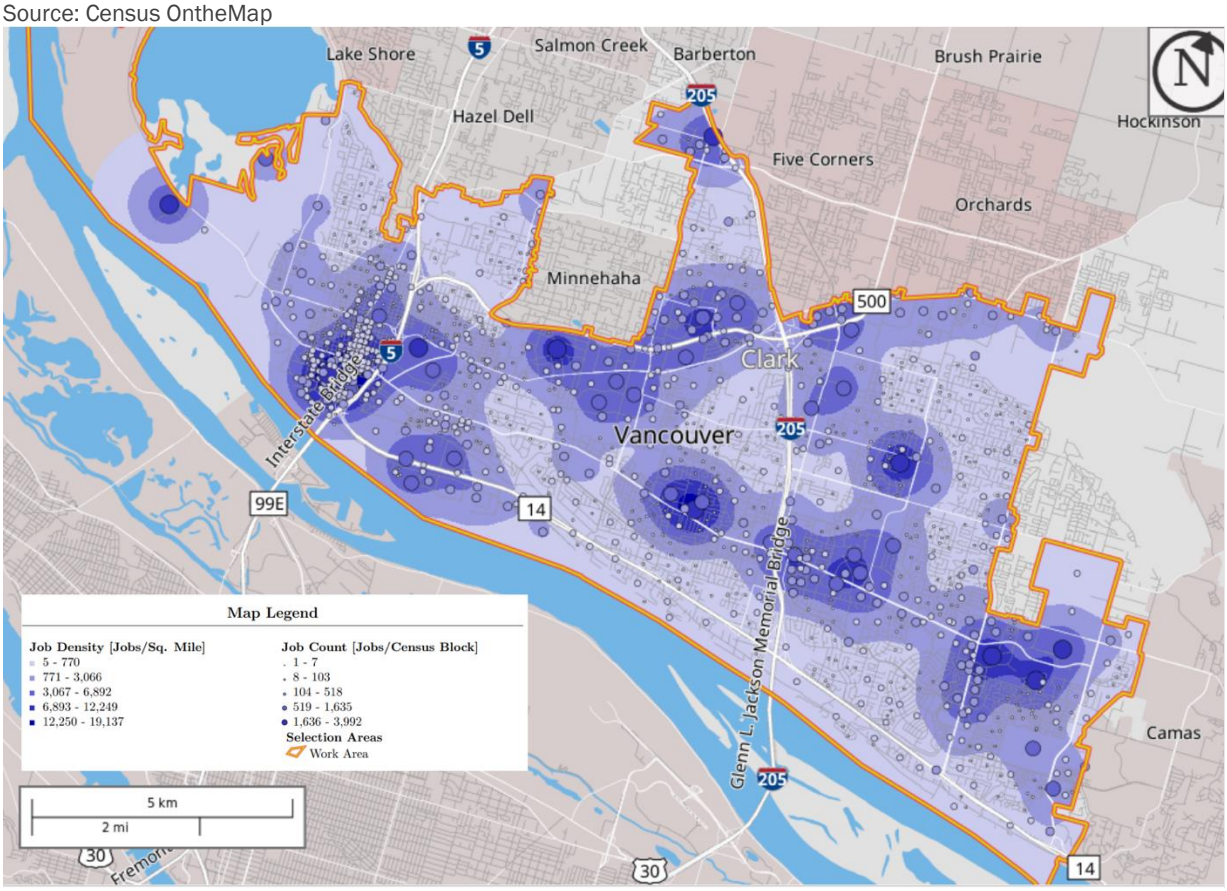
# Section 3. Economic Profile

## Employment Growth

In 2021, Vancouver was home to nearly 100,00 jobs. The number of jobs in Vancouver has increased rapidly between 2011 and 2021, growing from 77,846 jobs in 2011 to 99,057 jobs in 2021. This increase of 21,211 jobs means that Vancouver has gained an average of 2,121 jobs per year from 2011 to 2021.

### Employment Density



The City of Vancouver has several employment centers dispersed throughout the city supporting a higher concentration of jobs (see Exhibit 25 below). Vancouver's downtown area located near I-5 has the most intensive concentration of employment, with other centers around major employers like Clark College, the Port of Vancouver on the waterfront, PeaceHealth medical facilities along Mill Plain Boulevard, the Vancouver Mall and other strip shopping centers along WA-500, and technology and innovation hubs such as Vancouver Innovation Center (VIC) on the east side.

Understanding where employment is clustered and where job densities are growing can help inform employment capacity planning, where to target infrastructure investment and transit service, and can shape land use policy decisions. Public transit becomes more efficient and cost-effective as density levels in transit corridors increase and become more optimal to support transit service ridership. In addition, it is most efficient to coordinate job clusters to be located near housing that would best serve working age population needs.

LEHD Origin-Destination Employment Statistics (LODES) data used to analyze employment density does not fully account for remote workers, since it registers the location of an employer by address but "does not have information to determine whether a job is remote work or whether the worker physically travels to this location for the worker's regular duties. Some workers may never physically attend the employment location while others may go irregularly, and a worker's travel situation may change from year to year."[20] In many cases, employers may have full or partially remote workers whose jobs are counted at their physical location.

## Commute Patterns

Regional commuting patterns and workforce trends are interconnected and changing. Employment trends and commuting patterns can provide insight on the needs of workers today and into the future. Employment plays an important role in where people live, and it can influence where people move. If the data show that many people are commuting into the city for work, it could indicate that the city does not have enough housing to accommodate its workforce or enough housing that meets their needs and affordability levels.

Prior to the COVID-19 pandemic, many workers traveled to in-person jobs located in central business districts five days a week. Current trends allow for greater locational flexibility and a variety of hybrid schedules, although commute distances can still impact where residents can seek employment opportunities. As such, jobs that require some level of in-person work may be more or less accessible to potential workers depending on the distance from residential areas.

This section describes the commute patterns of Vancouver residents and workers. The neighboring jurisdictions and unincorporated areas included in these data are those where people made the most trips to and from Vancouver. These areas, referred to in this section as

"comparison geographies", include Portland, Hillsboro, Gresham, Camas, Battle Ground, Wilsonville, Milwaukie, Camas, Hazel Dell, Salmon Creek, and Beaverton. This analysis is limited to jurisdictions and unincorporated areas in Clark County and adjacent counties to control for primarily in-person commuting and to avoid capturing fully remote workers who may live a farther distance from Vancouver.

Key findings for commuting patterns include:

- **About a third of Vancouver workers live in Vancouver –a higher share of workers who both live and work in the city (34%) than all nearby jurisdictions except Portland.** Vancouver's residents are more likely to work in Vancouver than surrounding geographies. Vancouver workers are also more likely to be residents of Vancouver than any other single location in the area.[21]

- **Since 2010, the size of Vancouver's workforce and population has grown overall, while the share of people who commute to and from the city has stayed about the same, indicating that Vancouver has proportionately attracted both residents and workers** (see Exhibit 28 and Exhibit 29 below). In 2020, Vancouver had the second largest workforce among comparison geographies, after Portland. This grew 26% since 2010, with a slight dip from 2019 to 2020 in total workers and residents. This may indicate larger economic and population trends during the onset of the COVID-19 pandemic.
- **The second largest workplace destination for Vancouver residents is Portland and the second largest home destination for Vancouver workers is unincorporated Clark County.** The share of workers commuting from Vancouver to other destinations in Clark County increased since 2010.
- **Vancouver workers and residents had relatively short commutes in 2020 compared with other regional cities**. Of comparison geographies, workers commuting to Vancouver had the second shortest commute in 2020 (after Beaverton), and residents commuting from Vancouver had the fourth shortest distance in 2020 (with Beaverton, Milwaukee, and Portland residents all having shorter commutes). The average commute distance for Vancouver residents was 10.8 miles in 2020, while

[21] In comparison, the City of Seattle has around 64%, the City of Spokane has nearly 55%, the City of Bellevue has almost 24%, and the City of Tacoma has almost 30% of persons living and working in the same city in 2020.

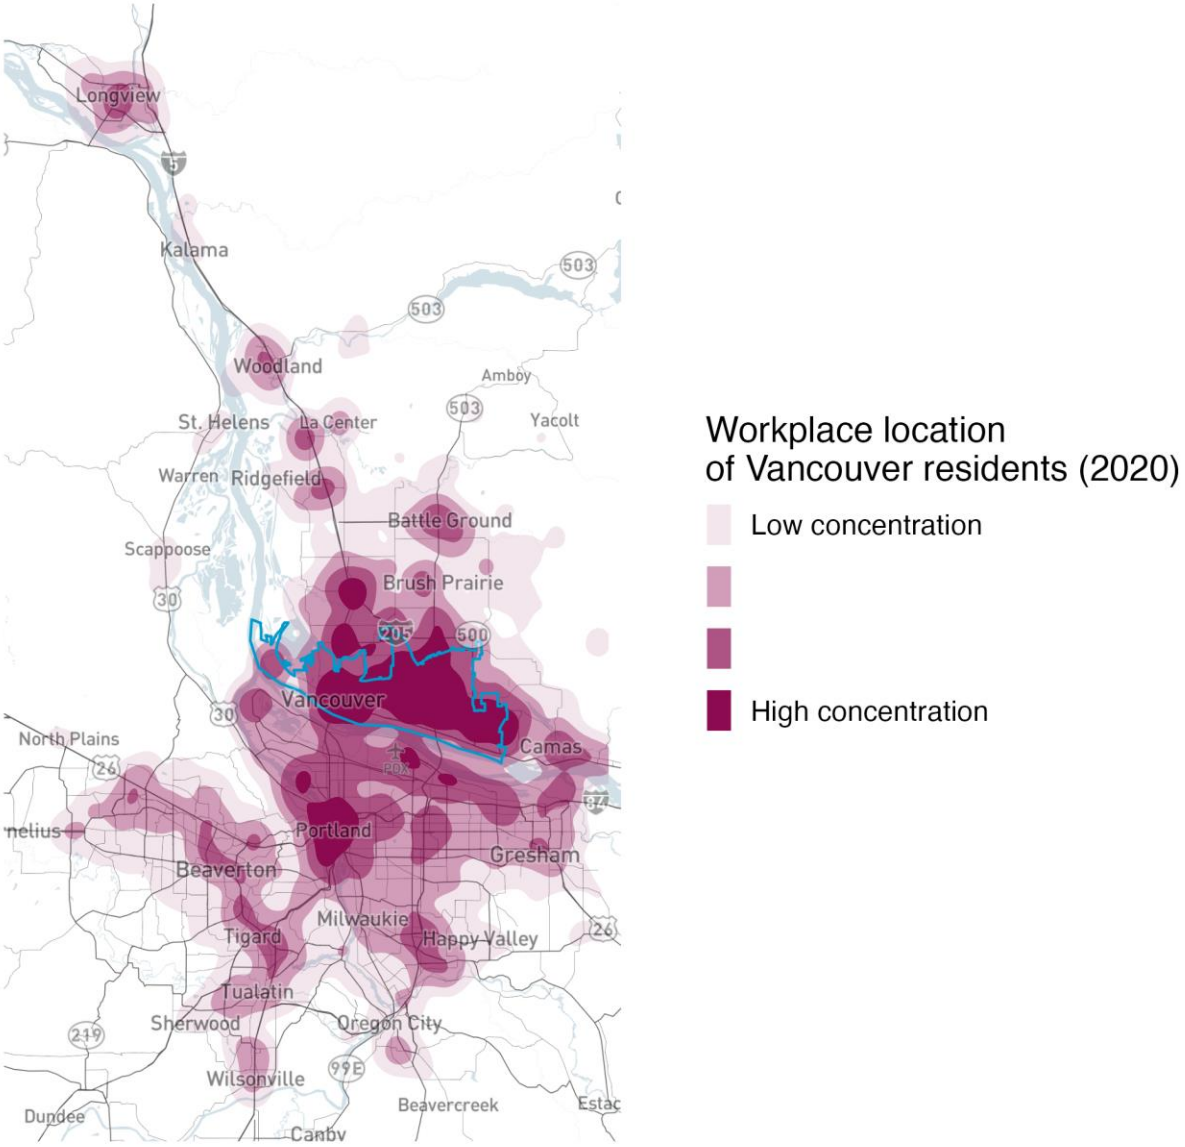
the average distance for workers at jobs in Vancouver was just over 11 miles – the second shortest among comparison cities.

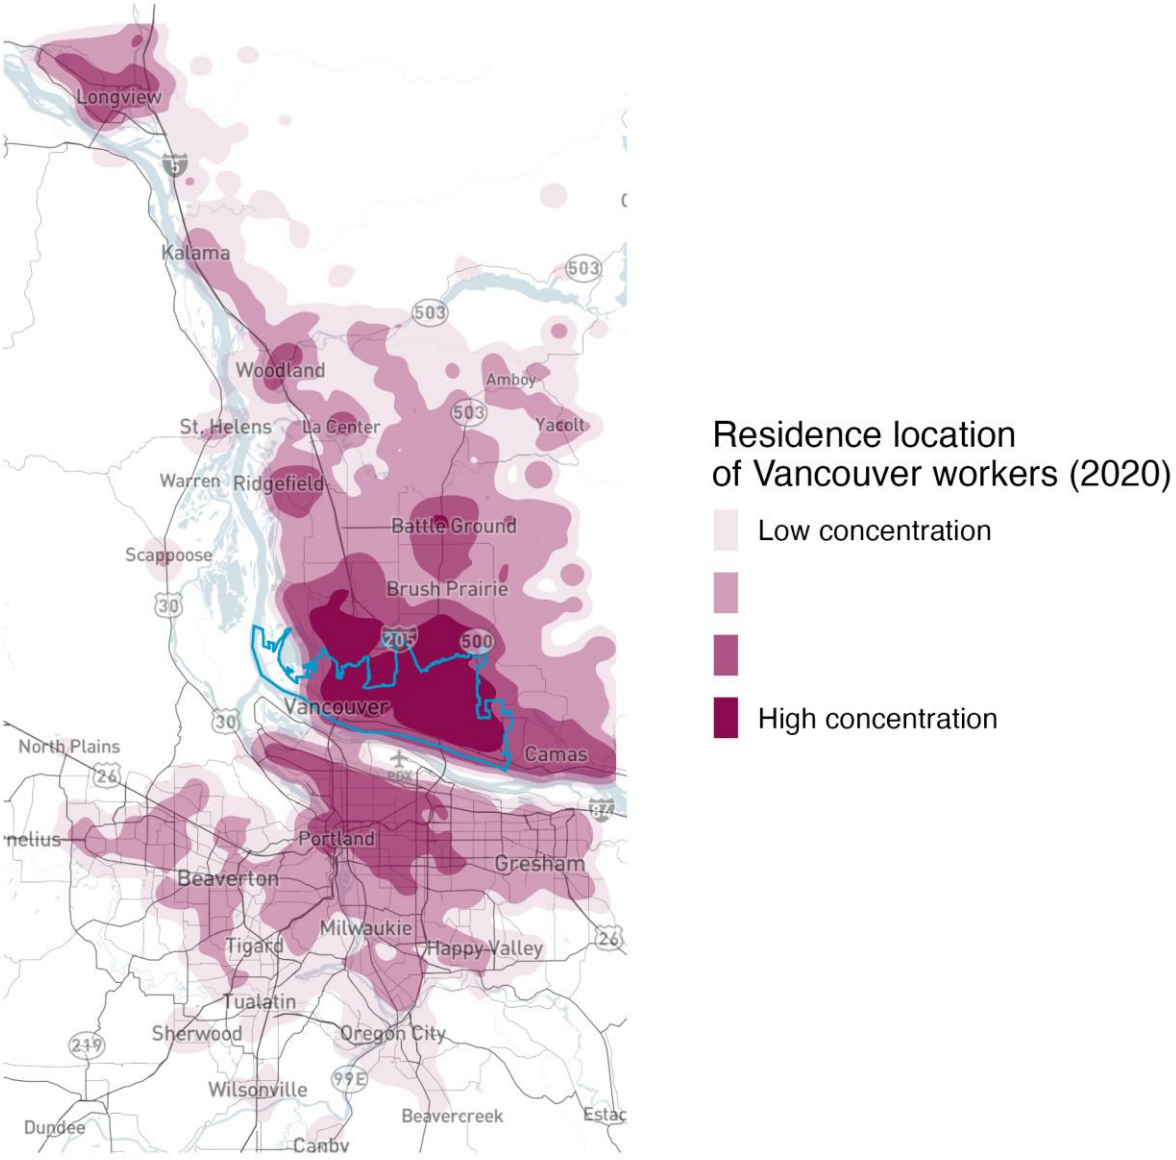
- **Vancouver workers commuting for work tend to live in areas further north of the City**. In contrast, Vancouver residents commuting to work tend to commute to destinations south of Vancouver such as to Portland, Gresham, and Tigard (see Exhibit 26 and Exhibit 27 below).

Vancouver is part of a connected regional economy, with residents of the city working in different locations across Clark and surrounding counties (particularly in Portland). Vancouver is also an important contributor to this regional economy through its major institutions and employment hubs. The city draws in workers from across the area, with commuters traveling from suburban areas of Clark County and beyond.

The maps below depict two-dimensional density regions, which are broken out into four tiers. These can be best described as representing the smallest area that can contain 99%, 95%, 80%, and 50% of all commutes to or from Vancouver. These types of cartographic representations are best used as generalizations of spatial concentrations of points, and since these percentage values can often be confusing or abstract for the general reader, we have re-labelled them to "High" and "Low" at the 99% and 50% tiers.

**Exhibit 26. Workplace Location of Vancouver Residents, 2020**
Source: LODES, 2010-2020





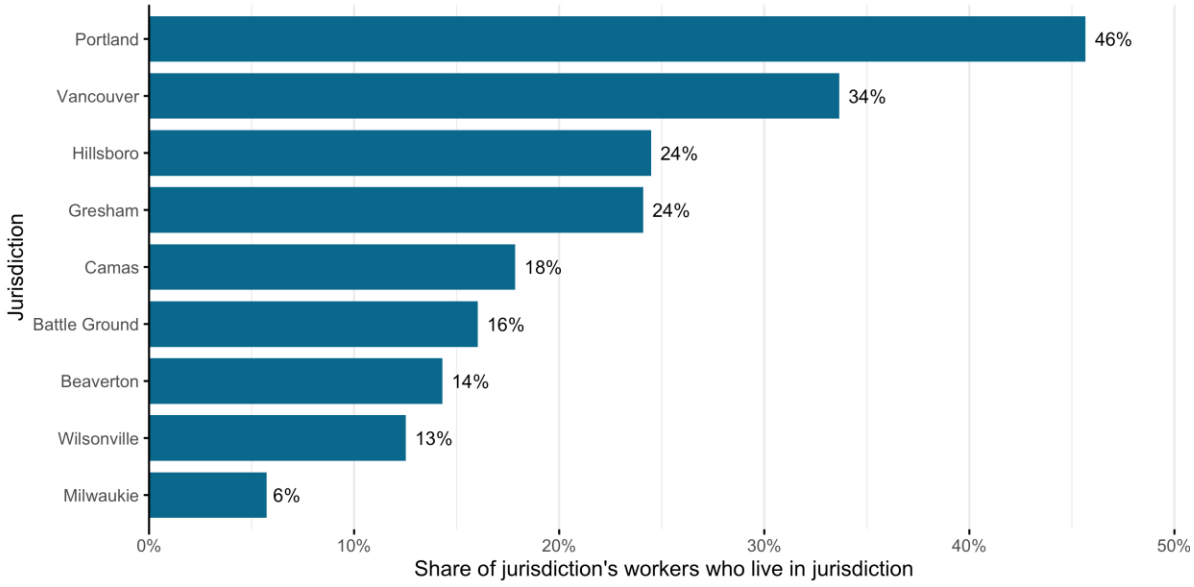


**Exhibit 27. Residence Location of Vancouver Workers, 2020**
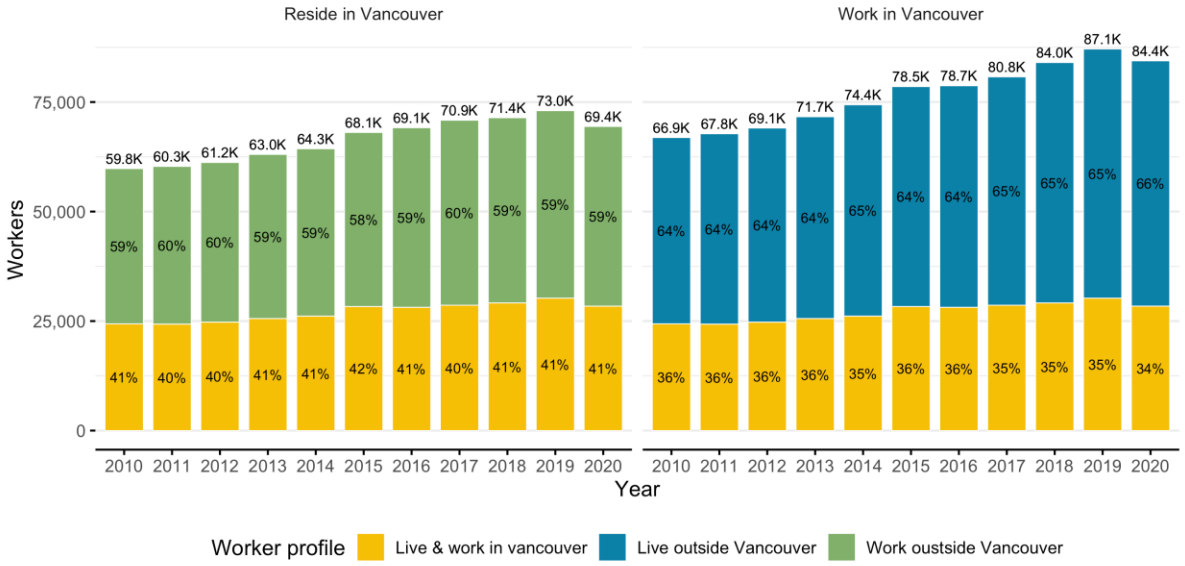
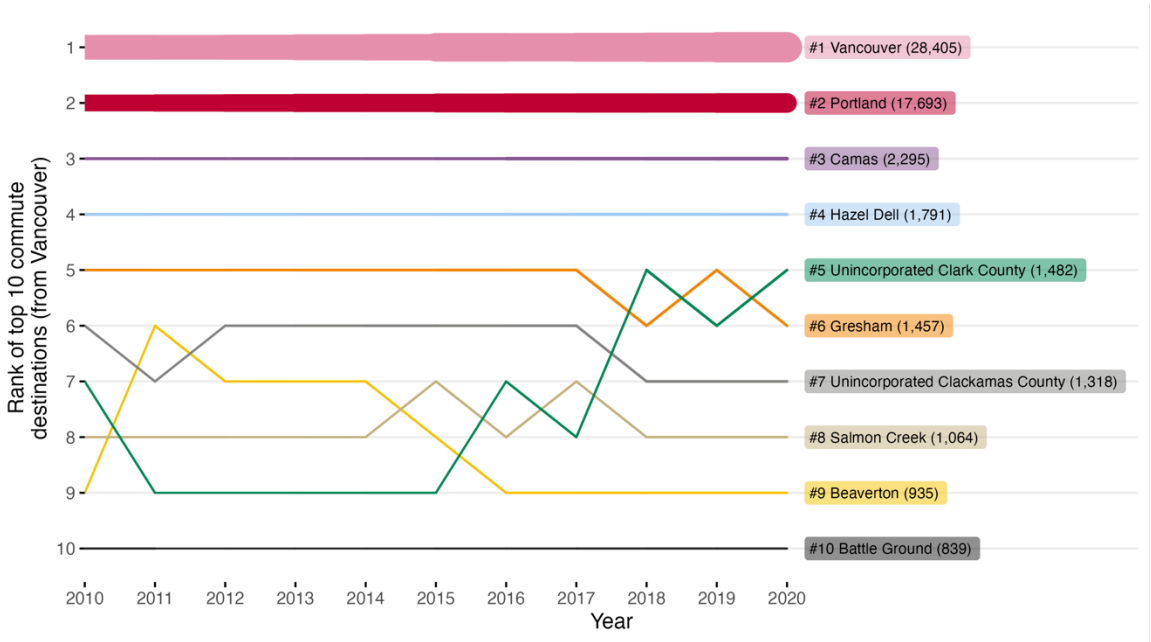
Source: LODES, 2010-2020



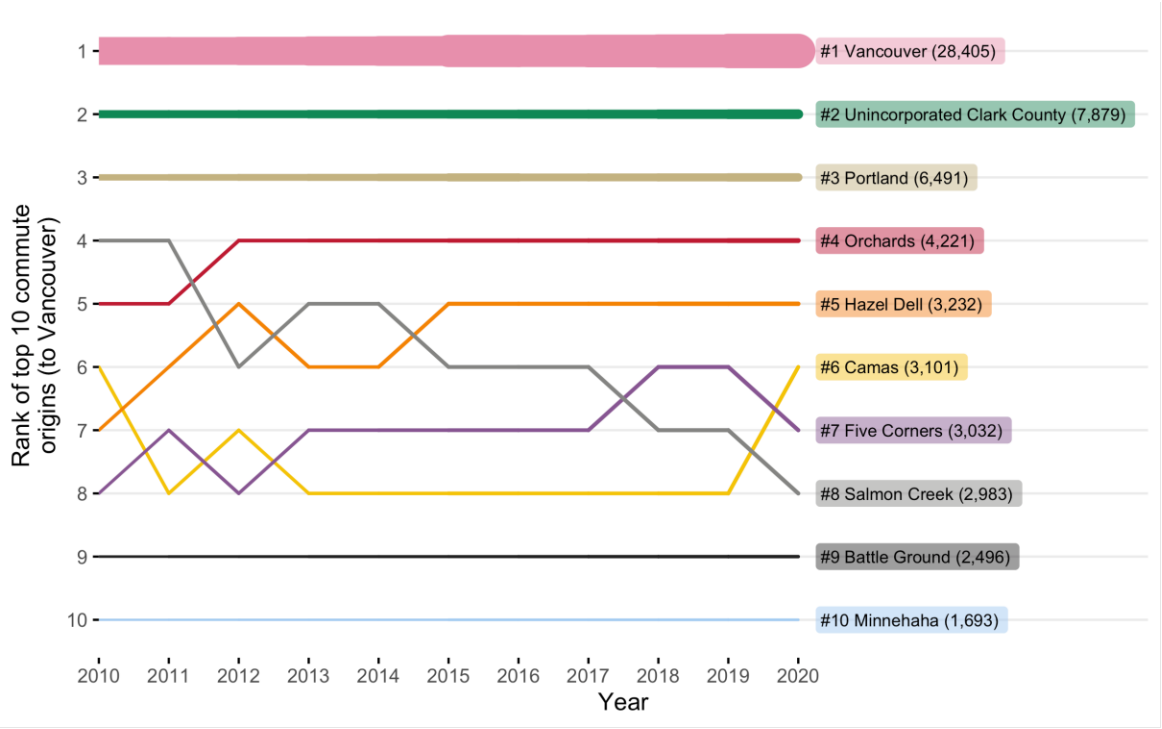
Of comparison geographies in the region, Vancouver had the second largest share of workers who both live and work in the city (34%) after Portland in 2020 (see Exhibit 28 below). Other cities and towns in the area saw much lower shares of workers who lived within the same location, particularly smaller jurisdictions to the south of Portland like Milwaukie and Wilsonville.

**Exhibit 28. Share of Workers Living and Working in the Same Jurisdiction, Vancouver and Surrounding Cities, 2020**
Source: LODES, 2010-2020



In Vancouver, the total number of both residents and workers grew overall between 2010 and 2020 (with a slight decline in 2020 from previous years), as shown in Exhibit 29. The share of the population both living and working in the city remained about the same from 2010 to 2020, indicating that Vancouver has proportionately attracted both groups. In 2020, Vancouver had 84,413 workers, the second largest workforce among comparison geographies in this analysis, after Portland (with 396,692 workers in 2020). This grew 26% since 2010, from 66,898 to 84,413 workers (by 17,515 workers). However, in 2020 the city saw a slight decline in both residents and workers for the first time in the ten-year period. This may indicate larger economic and population trends during the onset of the COVID-19 pandemic, including a national spike in unemployment, an increase in early retirements, and relocation in response to greater locational flexibility.

**Exhibit 29. Share of Residents and Workers Living and Working in Vancouver, 2010-2020**
Source: LODES, 2010-2020



Vancouver's residents are more likely to work in Vancouver than any other single location in the area. The second largest *destination* for Vancouver residents is Portland, followed to a lesser extent by Camas, Hazel Dell, and unincorporated Clark County (Exhibit 30). Top destinations have remained steady since 2010, although the share of workers commuting to destinations in Clark County increased.

**Exhibit 30. Top Commute Destinations from Vancouver, 2010-2020**
Source: LODES, 2010-2020
Note: Heavier line weights indicate the larger number of commuters shown in parentheses on the right of each destination.

Vancouver workers are also more likely to be residents of Vancouver than any other single location in the area. Residents of unincorporated Clark County are the largest group of workers *commuting into* Vancouver, followed closely by those working in Portland (Exhibit 31). To a lesser extent, workers also commuted from smaller cities in Clark County and surrounding counties.

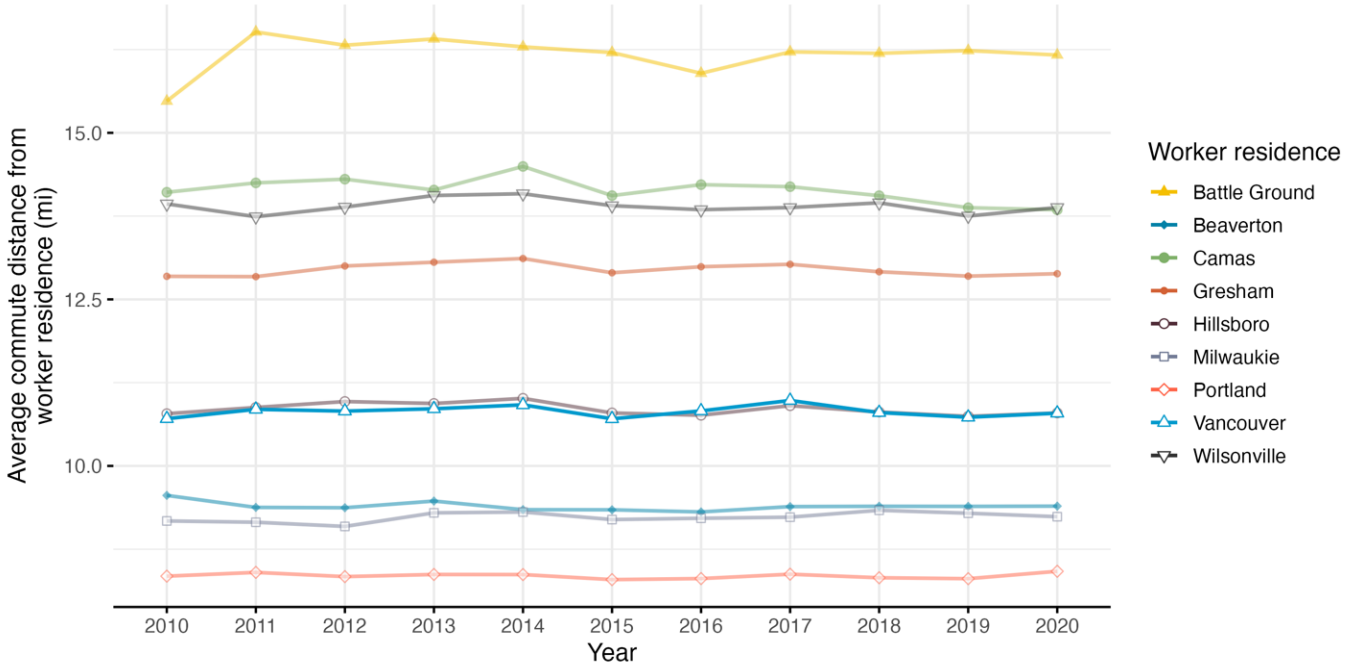


**Exhibit 31. Top Commute Origins to Vancouver, 2010-2020**
Source: LODES, 2010-2020
Note: Heavier line weights indicate the larger number of commuters shown in parentheses on the right of each origin

Residents commuting *from* Vancouver had the fourth shortest distance in 2020 (with Beaverton, Milwaukee, and Portland residents all having shorter commutes), at about 10.8 miles on average (Exhibit 32). This fluctuated only slightly between 2010 and 2020.

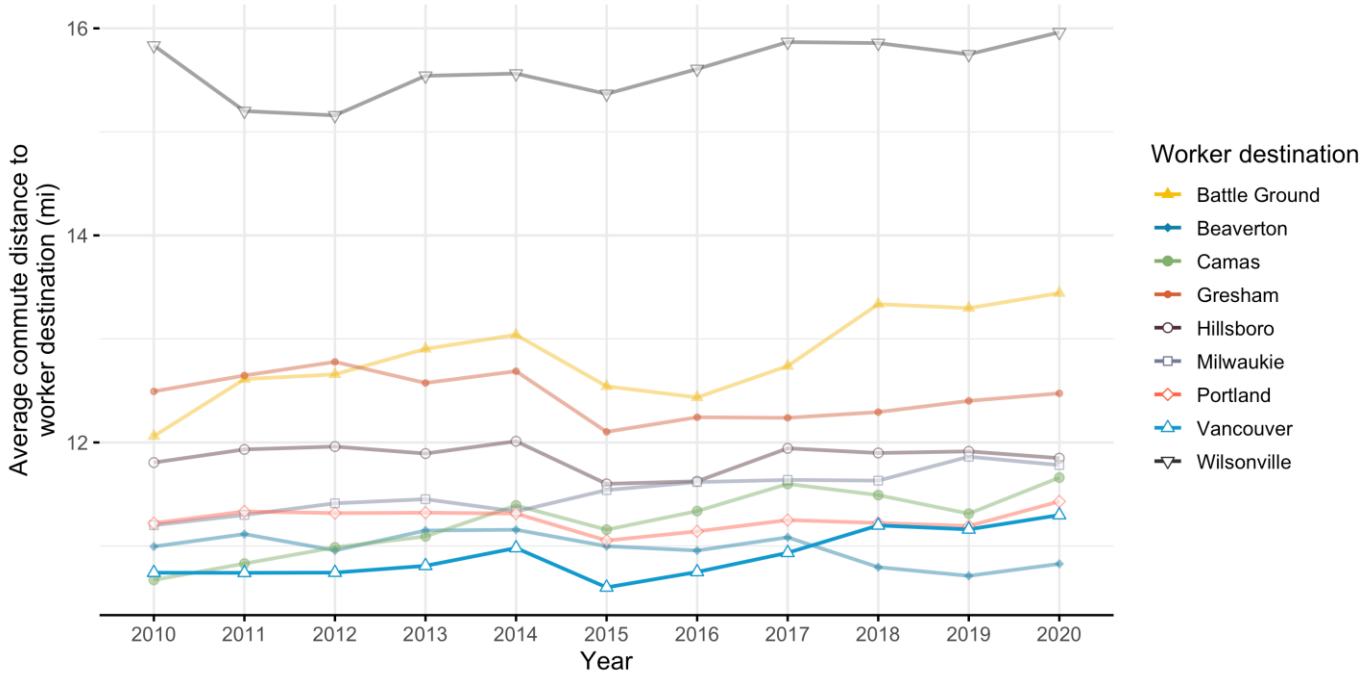

**Exhibit 32. Average Commute Distance from Worker Residence, Vancouver and Surrounding Cities (Residents), 2010-2020**

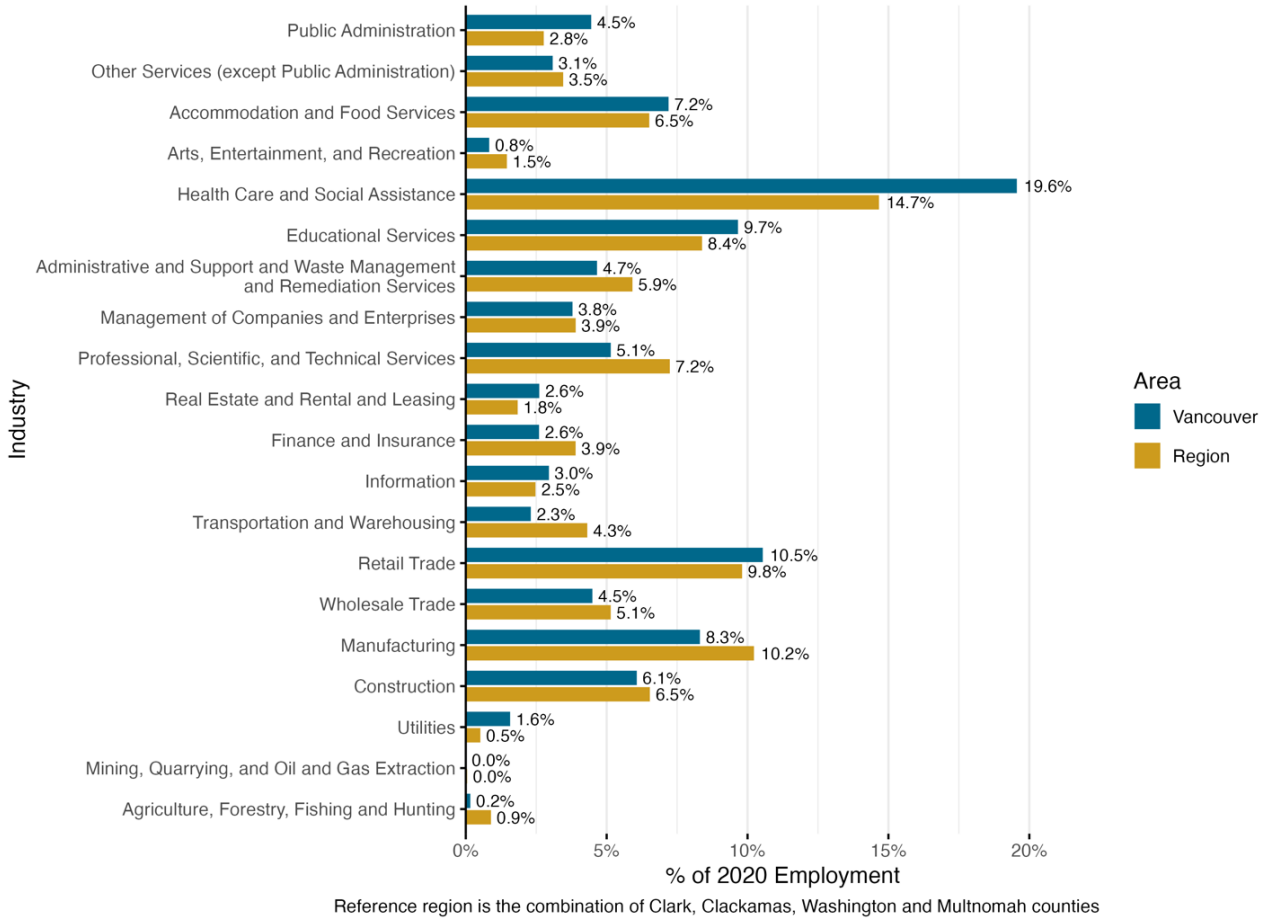
Source: LODES, 2010-2020

Of comparison geographies, workers commuting *to* Vancouver for work had the second shortest commute in 2020 (commuters to Beaverton had the shortest), at just over 11 miles on average (Exhibit 33). The average commute for Vancouver workers grew slightly since 2010 by about 0.5 miles.

**Exhibit 33. Average Commute Distance to Worker Destination, Vancouver and Surrounding Cities (Workers), 2010-2020**
Source: LODES, 2010-2020

## Regional Employment



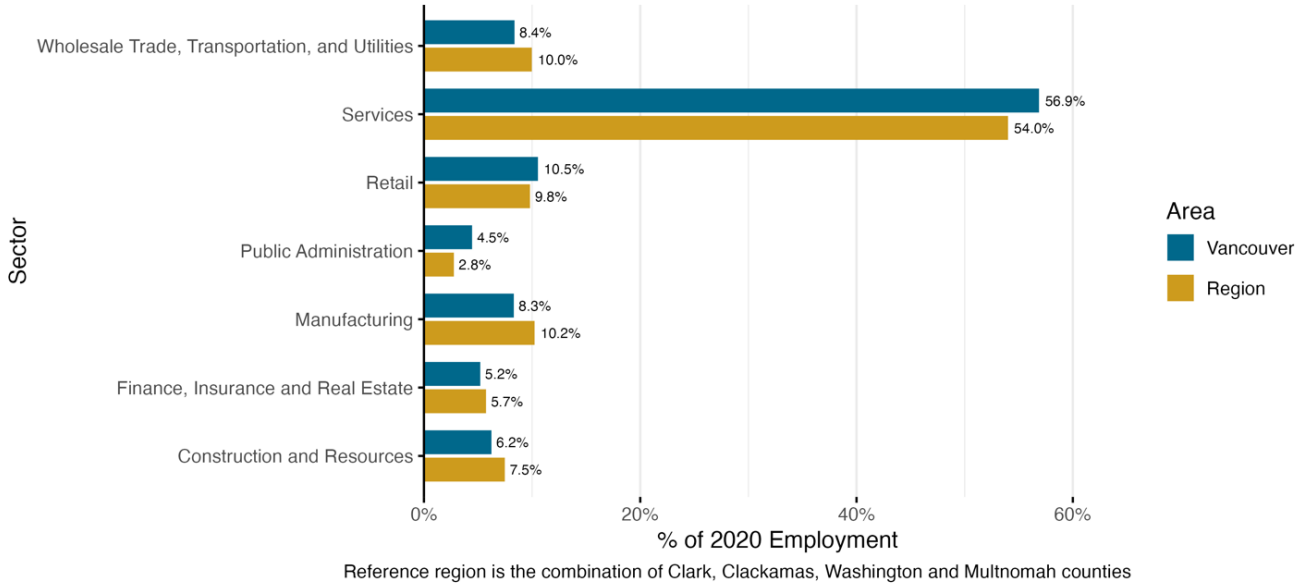
As the largest city in Clark County and the second largest in the Portland metropolitan region, regional trends are an important factor for Vancouver. Because employment data often includes confidentiality requirements to protect identifiable information about businesses and workers, many data points related to industry employment and wages are only publicly available at the County level. This section provides a connection between available County and regional data to provide context to the employment landscape in Vancouver.

### Employment Composition

Exhibit 34 shows the share of employment by industry in both Vancouver and the Portland region. Service-based industries were particularly strong in Vancouver in 2020. In both the city and the region, healthcare and social assistance were clear standouts in employment, with the industry offering nearly one in five jobs in the city. Other industries that represented some of the largest shares of employment for the city and at a greater extent than the metro overall included retail trade, educational services, and accommodation and food services.

Many of the residents employed in retail trade and accommodation and food services industries receive low or moderate wages and require housing affordable at 50 to 80 percent Median Income,[22] which is typically not developable without some level of subsidy or incentives. Nearly 18 percent of Vancouver residents are employed in these service industry jobs, which gives a sense of the amount of affordable housing needed in the city.

**Exhibit 34. Share of Employment by Industry, Vancouver and the Portland 4-County Metro Area (Region)**
Source: LODES 2020



Reference region is the combination of Clark, Clackamas, Washington and Multnomah counties

Exhibit 35 further emphasizes the divide in Vancouver and the region between service industries and all other groups, with over half of jobs in both geographies falling into one of

[22] https://clark.wa.gov/sites/default/files/media/document/2022-06/Apr%2022%20Income%20Mar%2022%20FMR%20%20Jun%2022%20HOME%20Limits.pdf

these sectors. Manufacturing and construction had relatively highly employment in the city but are below the regional average in their share of employment.

**Exhibit 35. Share of Employment by Industry Group, Vancouver and Portland 4-County Metro Area (Region)**
Source: LODES 2020

## Key Regional Industries

In Clark County, the industries with the largest employment in 2022 were Healthcare and Social Assistance; Government; Retail Trade; Construction; and Accommodation and Food Services. Of these industries, Government and Construction had average wages per employee above the average wage for all covered employment across the county, while Retail and Accommodation and Food Services paid below average wages. Healthcare and Social Assistance paid roughly equivalent wages with the county average.

**Exhibit 36. Covered Employment Change, Clark County, 2012-2022**

Source: Washington Employment Security Division

Note: The top five industries with the highest share of covered employment in 2022 are shown in **bold** and those paying above the county average wage in 2022 are highlighted in green

| Sector | 2012 | 2022 | Share of Total Jobs (2022) | Average Wage (2022) | Change 2012 to 2022 | | |
|---|---|---|---|---|---|---|---|
| | | | | | Difference | Percent | AAGR |
| Management of companies and enterprises | 1,193 | 3,576 | 2.0% | $111,725 | 2,383 | 200% | 11.6% |

## Largest Employers

Local leaders and economic development organizations benefit from having a detailed understanding of the top employers in their county, where those employers' facilities are located, and the industries they represent. This knowledge enables strategic decisions about policies, infrastructure investments, workforce development initiatives, and business attraction efforts that will support the county's economic health. For example, knowing the largest private sector industries and companies can inform technical training programs at local colleges and high schools. Understanding employer geography can also guide transportation infrastructure enhancements to improve access to job centers.

**Regional Target Industry Clusters**

In 2018, Clark County's economic development corporation CREDC established five target industry clusters in its 5-year action plan, including:

**Computers and Electronics**
**Software**
**Clean Tech**
**Metals and Machinery**
**Life Sciences**

As CREDC updates is strategic plan (concurrently with the Vancouver Comprehensive Plan), these sectors may evolve based on post-pandemic trends and other macroeconomic changes.

Many of the largest employers in Clark County are based in Vancouver and represent key industries like healthcare, technology, and education, including PeaceHealth, Vancouver Public Schools, the Vancouver Clinic, Bonneville Power Administration, and HP. Some employers have locations both in Vancouver and elsewhere in the region but maintain the majority of their facilities in the city. These large employers indicate clusters in line with those

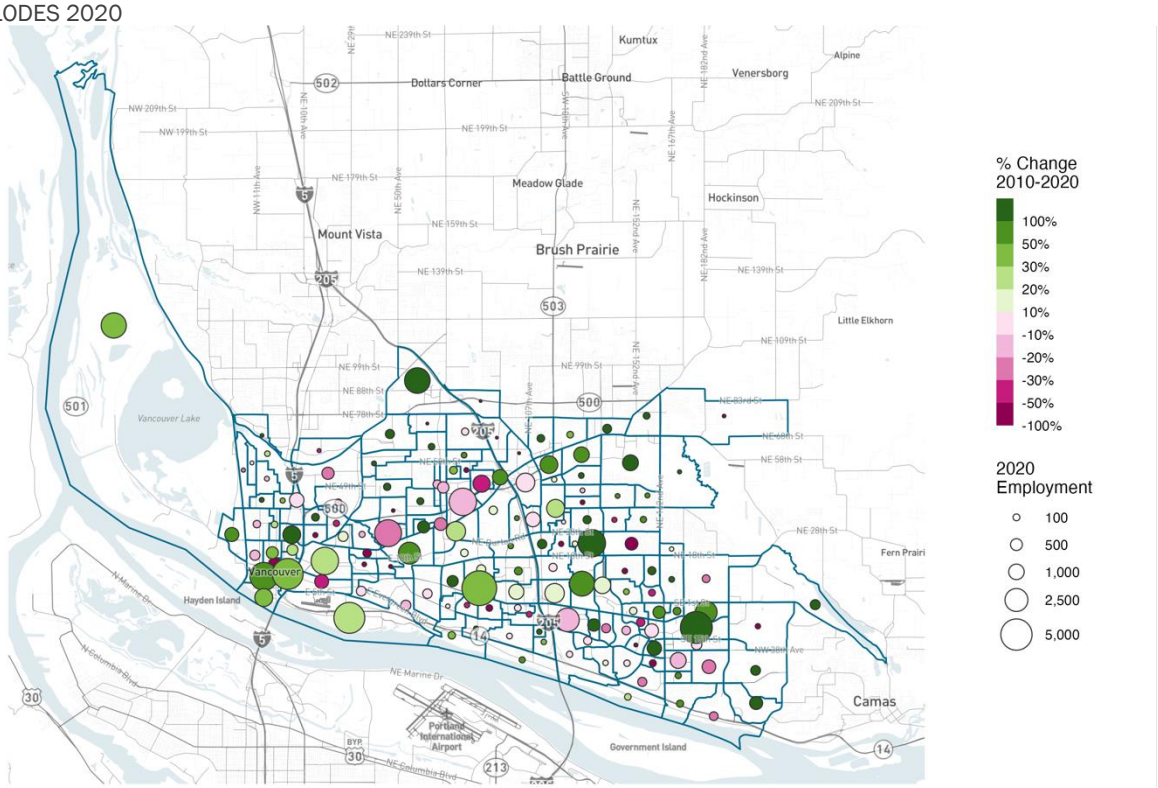
identified by CREDC's strategic sectors identified through industry analysis, including computers and electronics, and life sciences.[23]

**Exhibit 37. Top 10 Employers in Clark County, WA, 2020**
Source: Columbia River Economic Development Council

| Employer | Total Employees | Industry | Location |
|---|---|---|---|
| PeaceHealth | 4,415 | Healthcare | Multiple (based in Vancouver) |
| Vancouver Public Schools | 3,178 | Education | Vancouver |
| Evergreen Public Schools | 2,698 | Education | Vancouver |
| The Vancouver Clinic | 1,526 | Healthcare | Multiple (based in Vancouver) |
| Bonneville Power Administration | 1,124 | Energy | Vancouver |
| Kaiser Permanente | 1,088 | Healthcare | Multiple (based in Vancouver) |
| Hewlett-Packard | 1,050 | Technology | Vancouver |
| Clark College | 1,023 | Education | Vancouver |
| WaferTech | 1,000 | Technology | Camas |
| Fisher Investments | 905 | Finance | Camas |

## Analysis of Business Changes

The geographic distribution of employment has important implications for understanding how changing trends can have an impact on neighborhoods within Vancouver, as well as more localized commuting and transportation needs. Exhibit 38 identifies the change in employment between 2010 and 2020 for individual census tracts in the city, as well as the number of employees in 2020. Darker green circles indicate the highest level of growth in these tracts, while darker pink circles indicate stronger levels of decline in employment.



The areas with the strongest growth and total employment include tracts around Downtown Vancouver (near the intersection of the Columbia River and I-5), the Vancouver Innovation Center (on the city's east side), and tracts near I-205 which are home to major employers like PeaceHealth, Evergreen High School, and retail plazas. The large tract on the west side of Vancouver also saw growth, which is home to a large industrially zoned parcels and the Bonneville Power Administration (another major regional employer).

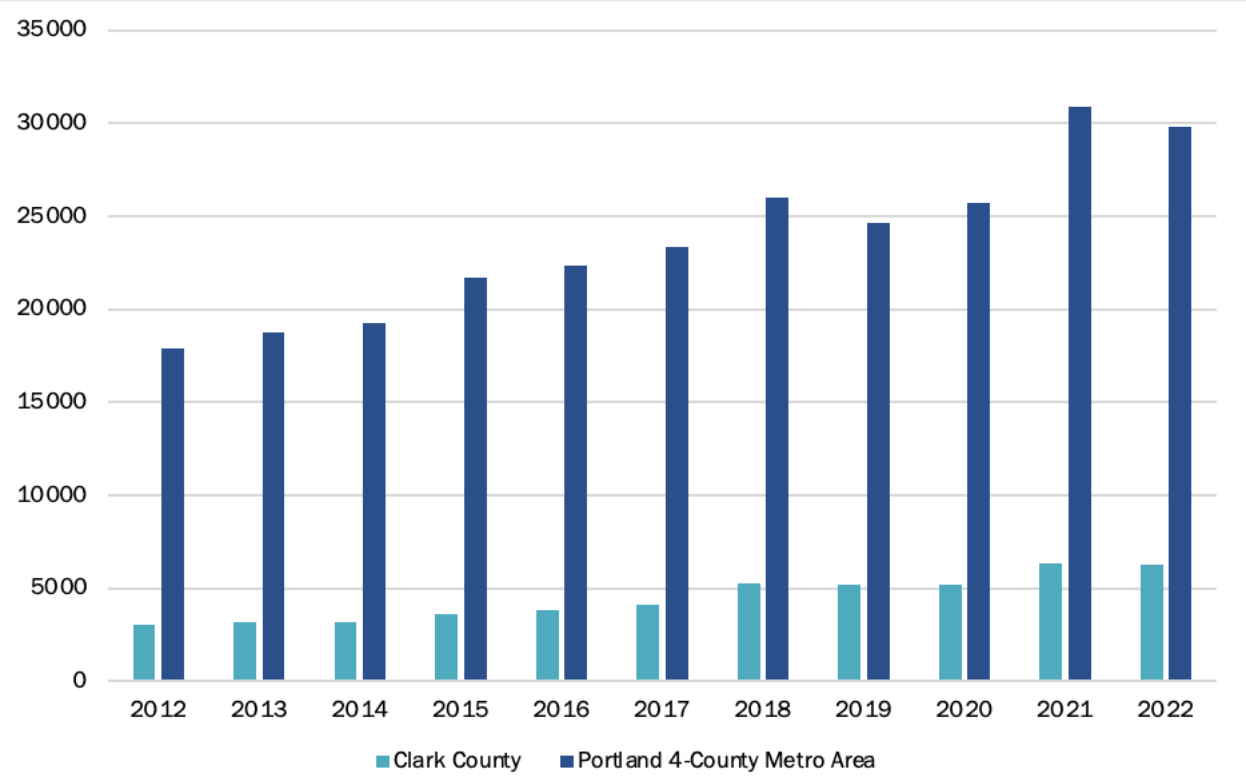
Areas that saw the most decline in employment are dispersed throughout Vancouver, and particularly those along Fourth Plain Boulevard and WA-500 which runs diagonally between I-5 and I-205. The areas are home to the Vancouver Mall and other traditional suburban-

[23] CREDC, "Industry Analysis," https://credc.org/industry-analysis/.

style retail centers which did not fare well nationwide at the onset of the COVID-19 pandemic.

**Exhibit 38. Change in Employment by Census Tract, Vancouver, 2010-2020**
Source: LODES 2020

## Business Formation

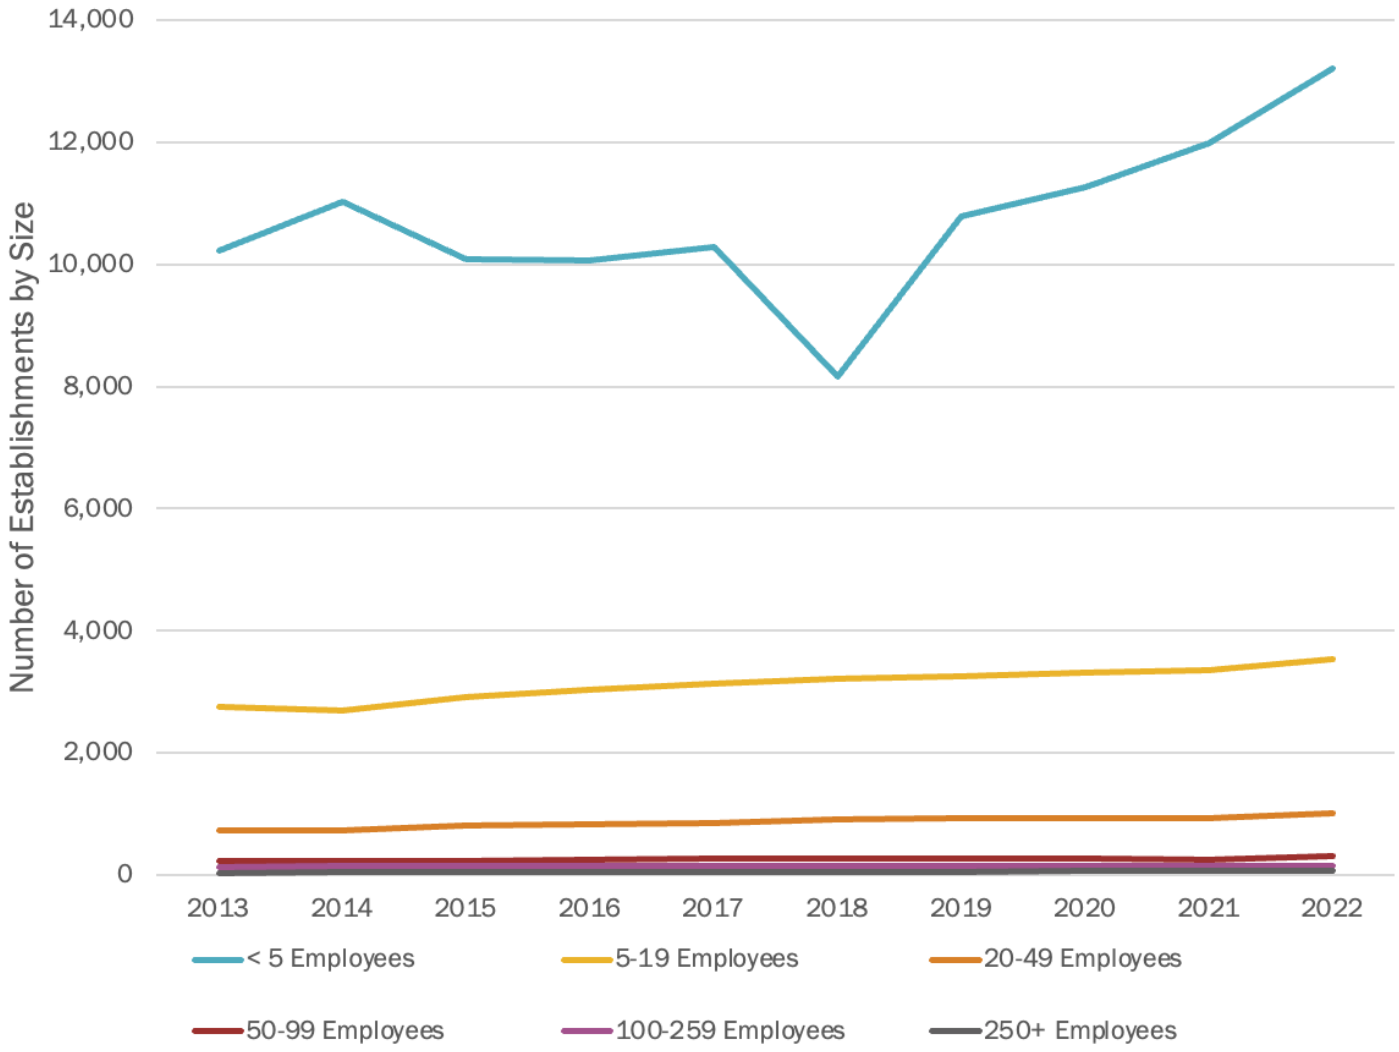


In 2022, 6,241 new business applications were filed in Clark County, growing steadily by more than double (106 percent) from the 3,031 business applications filed in 2012. The growth rate for the four-county area over this time period was only 58 percent, potentially indicating that Clark County has been successfully growing in their ability to attract new firms relative to the region. This could also point to a growth in small businesses and startups rather than the relocation of large employers, following national trends seen in entrepreneurship since 2020.[24] Applications in Clark County accounted for approximately 26 percent of all new

[24] Ryan A. Decker and John Haltiwanger, "Surging Business Formation in the Pandemic: Causes and Consequences?," Brookings, September 27, 2023, https://www.brookings.edu/articles/surging-business-formation-in-the-pandemic-causes-and-consequences/.

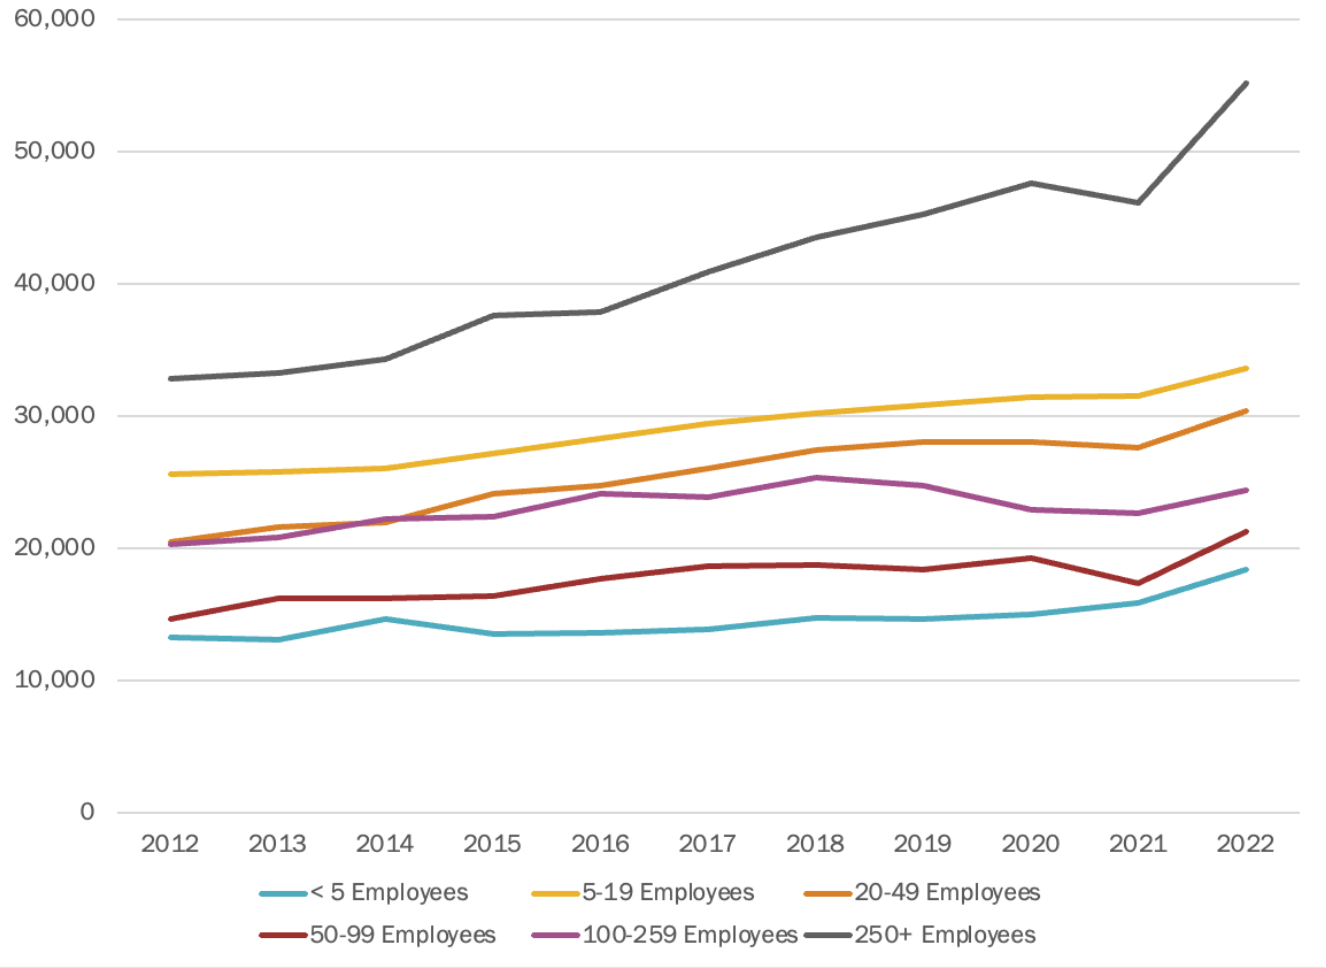
firms started within the four-county metro area (including Clark, Clackamas, Multnomah, and Washington Counties) in 2022.

**Exhibit 39. Annual Business Applications, Clark County and 4-County Portland Metro (Clark, Multnomah, Washington, and Clackamas Counties), 2012–2022**



Source: US Census Bureau, Business Formation Statistics. Note: This data is only available at the county level.

Clark County has seen a notable growth in the number of small firms (those with less than five employees) since 2018 (Exhibit 40), representing a resurgence after the number of small firms declined in the early 2010's. Between 2020 and 2022 alone, the number of establishments in this category grew by 17 percent (1,939 new firms), indicating a post-pandemic continuation of the upward trend for startups and small businesses located in the County. The number of larger firms (with over 250 employees) also grew in this time period by 24 percent, increasing from 67 to 83 establishments. These large firms consistently comprised the greatest share of employees overall in Clark County since 2012, followed by a steady share of employment for smaller firms with between 5 and 19 workers (Exhibit 41). It is likely that the success of Clark County seen in new business formation is linked to this growth in small businesses, following



national trends seen in entrepreneurship since 2020,[25] while the largest firms continue to account for a larger share of total jobs.

## Taxable Retail Sales

The City of Vancouver's taxable retail sales were higher than those in other Clark County jurisdictions over the past decade, climbing up to $6.3 billion in 2022 across all NAICS categories. The unincorporated areas of Clark County saw about half of Vancouver's taxable retail sales, totaling $3.3 billion in 2022. All other Clark County jurisdictions were well below $1 billion each, with Battle Ground being the highest among smaller cities at $602 million in 2022. Despite their low total amounts compared with Vancouver and Unincorporated Clark County, the Cities of Ridgefield and La Center saw the greatest rate of change over this period. Adjusted for inflation, Ridgefield saw its taxable retail sales increase to over four times its revenue in 2012, and La Center saw its sales more than double. On a per capita basis, unincorporated areas of the county saw the greatest change in taxable retail sales proportionate to changes in population.

## Regional Industries and Employment

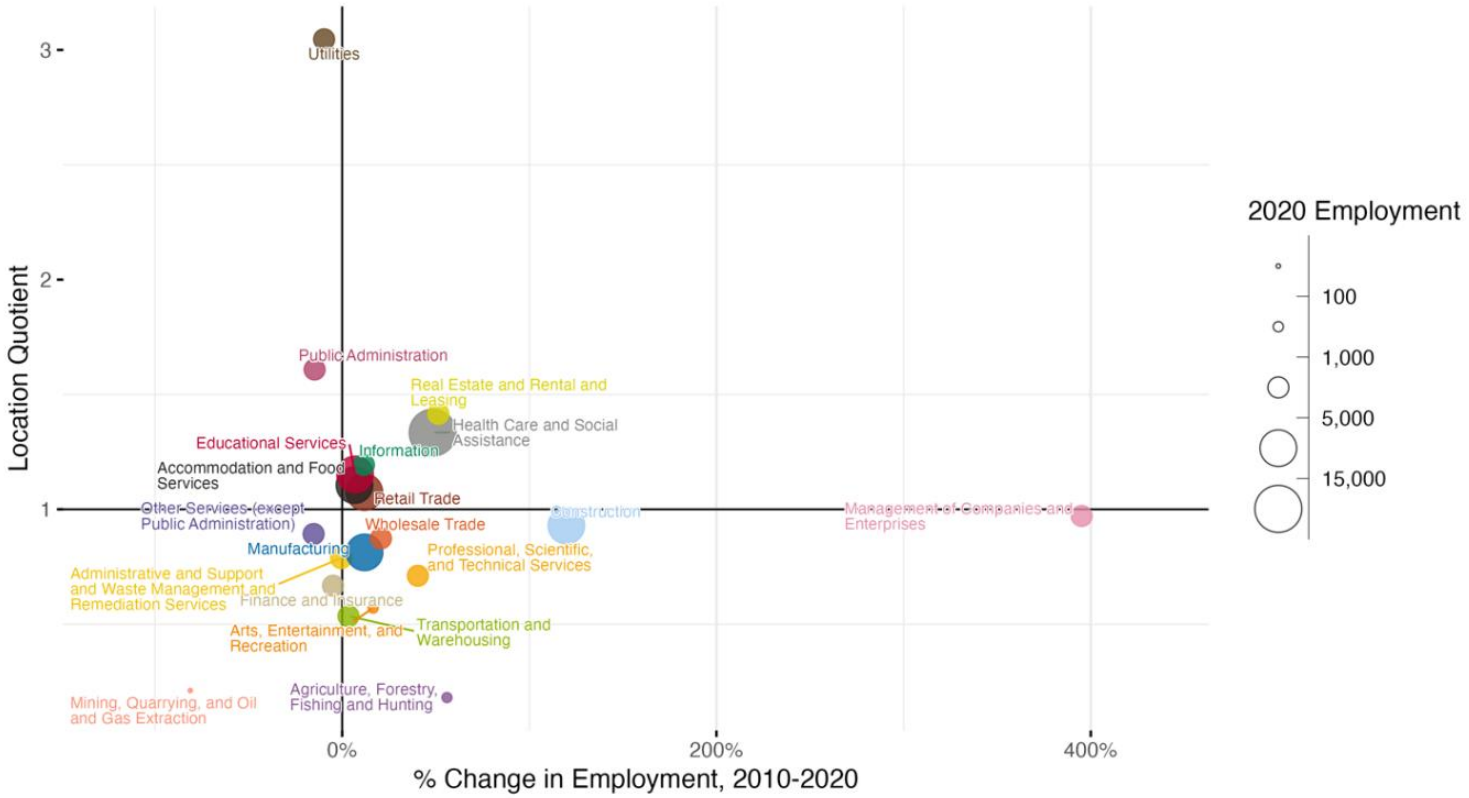
Tracking changes in Vancouver's location quotient (LQ) and employment growth provides valuable insights into the trajectory of the local economy. Monitoring shifts in these metrics over time shows how a city's economic makeup is evolving and whether certain sectors are growing or declining compared to broader trends. The data in this section highlights Vancouver's competitive economic advantages and identifies high-potential clusters which can be helpful to inform the City's strategies for attracting investment and talent. Exhibit 45 and Exhibit 46 provide analysis describing the location quotient, by major employment sector, for Vancouver as it relates to changes in employment for 2-digit NAICS codes which represent broad industries.

In Exhibit 45 the location quotient (y-axis) is a value that describes how concentrated an employment sector is locally relative to the four-county region. A value of 1.0 for a sector means the county is on par with the four-county region (i.e., has the same share of jobs as the state and is considered not concentrated). Values exceeding 1.0 (above the x-axis intersection) suggest industry concentration in the area. The higher the location quotient, the more concentrated the sector in the analysis areas. Employment sectors with bigger location quotients typically indicate a competitive advantage and, in turn, a higher likelihood of attracting new firms in that sector to the region. The average annual percent change in employment over the 2010 to 2020 period is denoted on the x-axis. Each major employment sector is also shown with a circle, relatively sized to indicate the number of covered jobs in each sector in 2020.

Industries in the top right quadrant (particularly those with larger levels of employment) show strong industry clusters which are both concentrated in Vancouver and growing in employment. **Most of the high-level industry clusters in this group in Vancouver are service-based industries, including retail, accommodation and food services, educational services, information, real estate, and healthcare and social assistance.** While public administration and utilities both remained concentrated in Vancouver in 2020, these two sectors saw a slight decline in employment, falling in the upper left quadrant of the chart. However, these losses were relatively low and indicate relative stability for both industries.

Sectors that fall in the lower right corner can show emerging industries, which are growing in employment but are not yet at a critical mass for concentration in Vancouver. **Management of companies and enterprises dominated employment growth despite only accounting for a modest share of employment overall. However, the industry's quick rise in employment indicate that it will likely continue to grow in Vancouver. Construction, wholesale trade, manufacturing, administrative services, and professional, scientific and technical services all showed high potential as well, increasing their employment while nearing an LQ of 1.0.**

**Exhibit 45. Sector Analysis by Change in Employment, Vancouver, 2010-2020**
Source: LODES 2010-2020



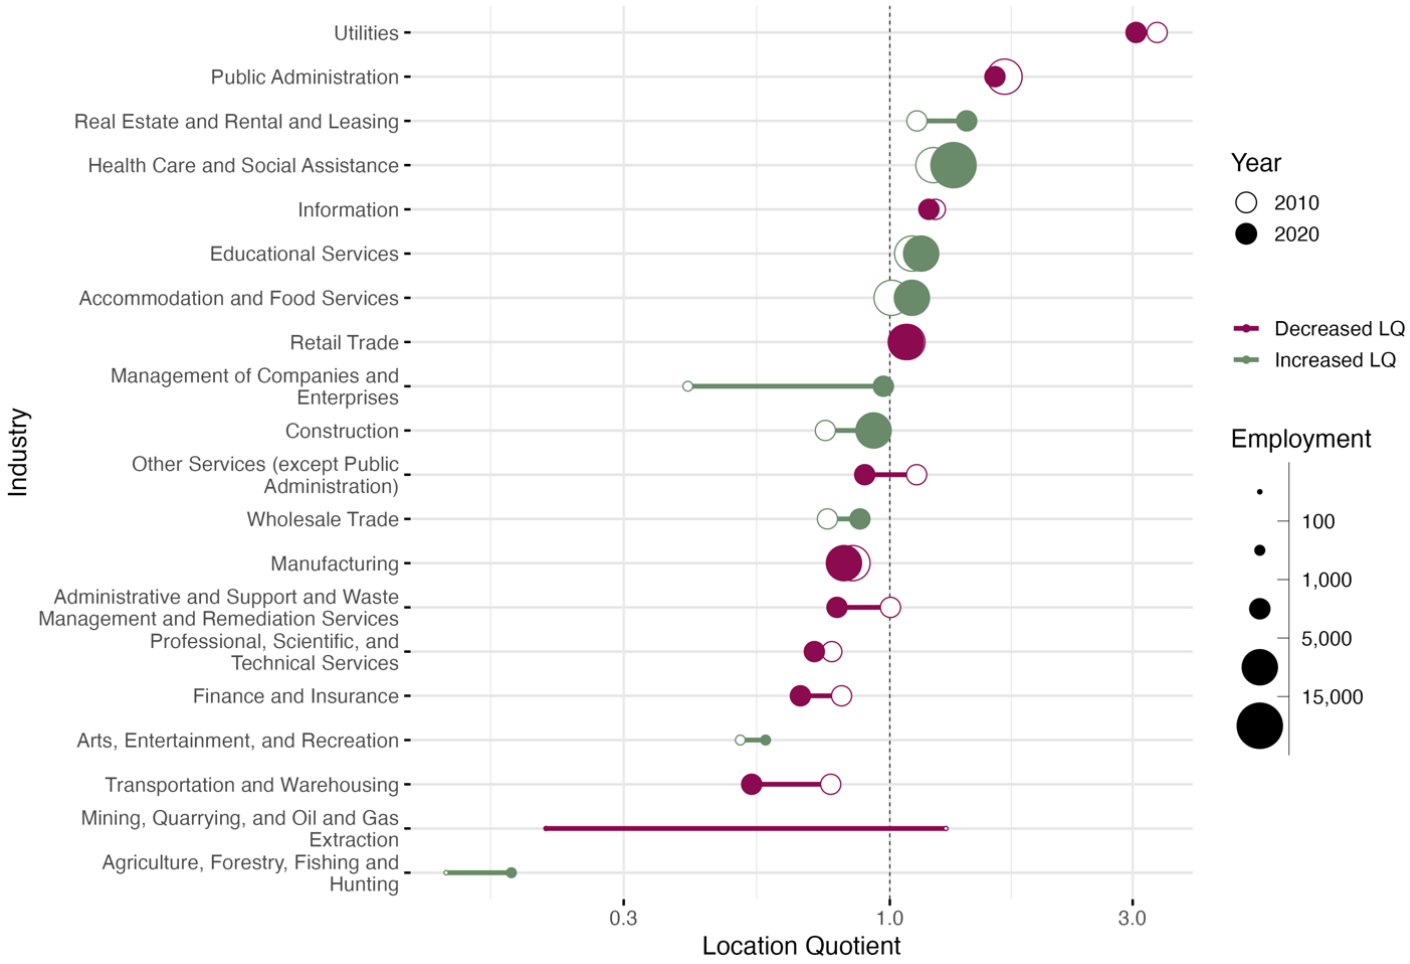


Exhibit 46 shows the change in location quotient for sectors in Vancouver between 2010 and 2020, with green colored circles showing those which increased (became more locally concentrated) and maroon circles showing those that decreased (became less concentrated). Since location quotient is calculated as a comparison of Vancouver employment and the four-county region, it can change both due to above-average employment growth locally, or a decline in employment on a larger scale that did not have as strong of an impact on a jurisdiction.

The industries that have a high concentration in Vancouver relative to the four-county region are utilities, public administration, real estate, health care and social assistance, information, educational services, and accommodation and food services. Industries that saw the greatest increase in concentration in Vancouver between 2010 and 2020 include management of companies and enterprises, healthcare and social assistance, real estate, construction, and wholesale trade. Like those industries seeing positive growth of these industries are service-based, with the exception of construction and wholesale trade (which have benefited from Vancouver's availability of large opportunity sites and industrial land). Several of these industries also account for some of the highest shares of employment in Vancouver, with healthcare and social assistance being the largest single industry in the city in 2020 and construction and wholesale trade both falling within the top ten.

Some industries also saw a notable decline in this period, including mining, quarrying, oil and gas, transportation and warehousing, finance and insurance, administrative and support services, and other services. Their slow or negative employment change seen in Exhibit 46 indicates that opportunities to grow these sectors are slowing down or decreasing.

**Exhibit 46. Sector Analysis by Change in Location Quotient, Vancouver, 2010-2020**
Source: LODES 2010-2020

## Subsectors

Data at the 3-digit NAICS code level provides a more detailed look at trends for specific subsectors in Clark County. Subsectors with the highest employment and location quotients within Clark County provide more specific details on economic trends and opportunities.

In 2022, the top twenty subsectors by employment were spread across larger sectors, with five falling under the Retail Trade (44-45) industry, three within Construction (23), two respectively in Health Care and Social Assistance (62) and Real Estate and Rentals and Leasing (52), and the remainder among other larger industries. Overall, these top subsectors accounted for 59 percent of all covered jobs in Clark County in 2022 and saw more rapid growth than all jobs in the County (increasing by 56 percent since 2012 compared to 35 percent across all industries). All top subsectors in 2022 saw positive growth in employment since 2012.

The subsectors which saw the highest growth between 2012-2022 include Specialty trade contractors; Social assistance, nursing, and residential care; Management of companies and enterprises; Construction of buildings; and Securities, commodity contracts, and other financial investments and related activities. All of these subsectors more than doubled in employment since 2012 and maintained a location quotient (LQ) above 1.0, indicating a comparative advantage (Exhibit 48). Computer and electronic product manufacturing was had the highest LQ among all subsectors (of any employment size) in the County.

Of the 20 subsectors with the highest employment in Clark County, half (10) offered higher wages compared to the Clark County average, with the highest wages in professional sectors: Securities, commodity contracts, and other financial investments and related activities, Management of companies and enterprises, and Professional, scientific, and technical. However, the subsector with the greatest total employment (Food service and drinking places) paid less than half of the County average. Likewise, four of the five Retail Trade subsectors paid lower wages than the County average, with only one (Motor vehicle and parts dealers) offering higher wage opportunities.

**Exhibit 47. Top Twenty Subsectors by Covered Employment, Clark County, 2012-2022**

Source: Bureau of Labor Statistics

Note: The top five industries with the highest % of growth in covered employment in 2022 are shown in **bold** and those paying above the county average wage in 2022 are highlighted in green. Due to changes in the NAICS codes classification system in 2017 and 2022, some numeric designations of sectors have changed or aggregated since 2012.

| Sector | Subsector (3-Digit NAICS) | 2012 | 2022 | Share of Total Jobs (2022) | Average Wage (2022) | Change 2012 to 2022 | | |
|---|---|---|---|---|---|---|---|---|
| | | | | | | Difference | Percent | AAGR |
| 722 | Food services and drinking places | 9,305 | 13,646 | 7.8% | $26,689 | 4,341 | 47% | 3.9% |
| 238 | **Specialty trade contractors** | **4,954** | **11,182** | **6.4%** | **$65,695** | **6,228** | **126%** | **8.5%** |
| 621 | Ambulatory health care services | 8,069 | 10,485 | 6.0% | $83,086 | 2,416 | 30% | 2.7% |
| 541 | Professional, scientific, and technical | 6,692 | 10,157 | 5.8% | $100,293 | 3,465 | 52% | 4.3% |
| 561 | Administrative and support services | 6,299 | 9,110 | 5.2% | $58,074 | 2,811 | 45% | 3.8% |
| 623 | **Social assistance, nursing and residential care** | **3,409** | **7,583** | **4.3%** | **$29,823** | **4,174** | **122%** | **8.3%** |
| 455 | General merchandise retailers | 4,517 | 5,479 | 3.1% | $35,143 | 962 | 21% | 1.9% |
| 423 | Merchant wholesalers, durable goods | 2,932 | 4,195 | 2.4% | $93,009 | 1,263 | 43% | 3.6% |
| 445 | Food and beverage retailers | 2,987 | 3,862 | 2.2% | $34,369 | 875 | 29% | 2.6% |
| 551 | **Management of companies and enterprises** | **1,194** | **3,576** | **2.0%** | **$111,732** | **2,382** | **199%** | **11.6%** |
| 236 | **Construction of buildings** | **1,546** | **3,542** | **2.0%** | **$73,141** | **1,996** | **129%** | **8.6%** |
| 334 | Computer and electronic product manufacturing | 2,926 | 3,464 | 2.0% | $88,052 | 538 | 18% | 1.7% |
| 531 | Real estate | 1,863 | 2,657 | 1.5% | $59,823 | 794 | 43% | 3.6% |
| 522 | Credit intermediation and related activities | 2,218 | 2,518 | 1.4% | **$96,626** | 300 | 14% | 1.3% |
| 459 | Sporting goods, hobby, musical instrument, book, and miscellaneous retailers | 1,631 | 2,504 | 1.4% | $33,638 | 873 | 54% | 4.4% |
| 523 | **Securities, commodity contracts, and other financial investments and related activities** | **637** | **2,341** | **1.3%** | **$153,402** | **1,704** | **268%** | **13.9%** |
| 237 | Heavy and civil engineering construction | 1,465 | 2,229 | 1.3% | $98,775 | 764 | 52% | 4.3% |
| 444 | Building material and garden equipment and supplies dealers | 1,258 | 2,155 | 1.2% | $53,553 | 897 | 71% | 5.5% |
| 441 | Motor vehicle and parts dealers | 1,194 | 1,959 | 1.1% | $79,142 | 765 | 64% | 5.1% |
| 811 | Repair and maintenance | 1,898 | 1,954 | 1.1% | $60,164 | 56 | 3% | 0.3% |
| | **Total (Top 20 Subsectors)** | **66,994** | **104,598** | **59%** | | **37,604** | **56%** | **4.6%** |
| | *Total (All County Jobs)* | *129,842* | *175,852* | *100%* | *$66,824* | *46,010* | *35.4%* | *3.1%* |

Exhibit 48 and Exhibit 49 show location quotient and change in employment for the 20 subsectors with the largest shares of employment in Clark County. Of the top subsectors, the majority (16) had a location quotient greater than 1.0, indicating a greater concentration of jobs in those subsectors in Clark County compared to the United States overall. The subsectors with the greatest concentration in Clark County were Computer and electronic product manufacturing, Specialty trade contractors, and Securities, commodity contracts, and other financial investments and related activities.

## Post-Covid Employment Recovery

Like most places in the region and across the nation, Clark County experienced a sharp drop in employment in early 2020, following the onset of the COVID-19 pandemic. In March of 2020, employment in Clark County dropped to 85 percent of the number of jobs in January of that same year. The rest of the Portland Metropolitan region experienced a similar drop in employment during that time. Employment has been steadily increasing across the region since, and Clark County has had a particularly strong recovery. Clark County was back to a pre-pandemic (January 2020) level of employment by April 2021, where Washington and Clackamas Counties were by December 2022. As of January 2024, Clark County was at 110 percent of January 2020 employment level.

**Exhibit 50. Annual Employment Change Compared to Pre-pandemic by County**

## Section 4. Real Estate Market Conditions

This section details Vancouver's commercial real estate conditions and identifies market drivers and trends that will influence the market appeal and viability of commercial uses in the area. This report primarily covers nonresidential commercial real estate including office, industrial, and retail building types in the city, as well as a comparison with Clark County and the four-county Portland Metro Area (including Clark, Multnomah, Clackamas, and Washington Counites). The Housing Needs Assessment portion of this Comprehensive Plan Update covers the residential real estate market in greater depth. The exhibits in the section below show historical trends in the average effective rent rates and average annual vacancy rates for the analysis. In general, the analysis shows trends in Triple-Net (NNN) rents, vacancy rates, and deliveries (these are described below). This section also looks back to trends in the past fifteen years, capturing a longer cycle of real estate trends including the 2008 recession and the COVID 19 pandemic.

- Triple-Net (NNN): Represents annual rents on a per-square-foot (psf) basis, not including any pass-through expenses such as taxes, insurance, and utilities or maintenance costs.
- Vacancy Rates: Represents how much space per-square-foot (psf) is vacant in a submarket.
- Deliveries: Represent the total amount of new square feet of each product type that has been added to the market on an annual basis.
- Net Absorption: Represent annual net square feet of new occupancy or vacancy of space accounting for deliveries.

### Key Commercial Real Estate Market Findings

- Office: The Vancouver office market is small but appears stable in the years since the COVID-19 pandemic. Steadily increasing rents and low vacancy rates suggest a reasonably strong office market. While the region has struggled with office space absorption since 2020, Vancouver has seen positive absorption of new office space post-pandemic, despite minimal construction of new office space over the past five years. While the long-term impacts of the post-COVID hybrid work environment are unclear, recent feedback from stakeholder engagement across the region indicates that businesses renewing leases are typically occupying less space (30% on average) and seeing a relocation to higher class space. This indicates that Class-A office space will have more rapid absorption compared to Class-B and Class-C office spaces across the region.
- Industrial: Vancouver accounts for a lower share of Clark County's total industrial market compared with its clear influence in office and retail, and only about 64% of

new industrial space over the past fifteen years. Within the region, Clark County accounted for only 12% of the total industrial inventory in 2023 YTD. Slightly lower rents, increasing vacancy rates, and negative absorption in Vancouver and Clark County compared with the region in 2023 YTD indicate a weaker market for industrial real estate. These data, combined with declining employment numbers in manufacturing and decreasing location quotients in Transportation and Warehousing and Manufacturing sectors (shown in Exhibit 45 and Exhibit 46 of Section 3) could indicate a shift in Vancouver's economy away from traditional industrial uses.

- **Retail:** Like office space trends, Vancouver's retail market dominates the total inventory in Clark County, with 85% of Clark County's total retail square footage located in the city. Rents for retail space in Vancouver were slightly higher compared to the four-county metro area as a whole in 2023, and new deliveries in Clark County accounted for about 29% of all new retail space in the four-county metro area. This indicates that there is growing demand for retail space in Vancouver and Clark County. However, as new construction (referred to below as 'deliveries') have slowed since 2007 and the city sees a decreasing amount of large format sites, the City may see more infill and neighborhood-scale retail development rather than larger establishments.

**E-Commerce Trends**

During the onset of the COVID-19 pandemic, demand for e-commerce (online sales of goods that are shipped to customers) rose sharply compared to brick-and-mortar retail as communities practiced social distancing.[26] This trend was partially driven by the availability of large platforms like Amazon, but also drove many small retails to adopt an online presence while competing with larger and more well-resourced firms. However, four years after the initial onset of the pandemic in 2020, vacant real estate space is historically low nationwide despite high interest rates and increasing customer preferences for 'experiential retail' that offers unique or engaging experiences.[27] Following this national trend, Vancouver, Clark County, and the 4-County Metro Area are all seeing comparatively low rates of retail vacancies than the early and mid 2010's.

[27] Boston Business Journal, 'Thriving in 2024: Brick-and-mortar retail is back in fashion,' https://www.bizjournals.com/boston/news/2024/01/18/thriving-in-2024-brick-and-mortar-retail-is-back.html.

# Commercial Real Estate Market Trends

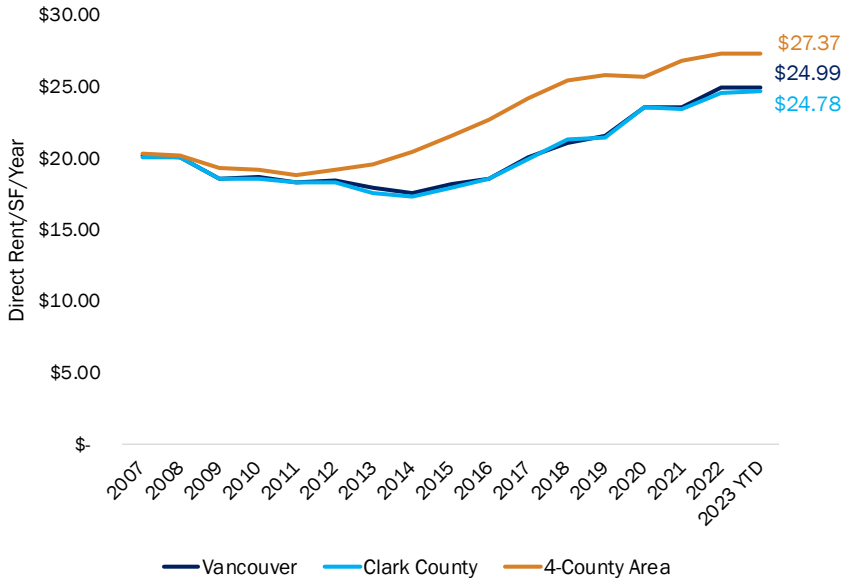
## Office Submarket

Office rents in Vancouver have steadily risen over the past decade, with the current rate of $24.99 psf. The city and Clark County have followed very similar trajectories over this time period, with the County overall tracking only slightly behind the city in rents. Both areas offer a lower cost per square foot than the average across the four-county Portland Metro Area (includes Clark, Multnomah, Clackamas, and Washington Counites).

The similarity between Vancouver and Clark County reflects the fact that most of the total County office inventory is located in Vancouver rather than outlying suburban areas. In 2023 YTD, 808 of Clark County's 946 office buildings were in the city, comprising 88 percent of the total square footage.

As rents have risen, office vacancy rates in Vancouver have trended downwards since 2008, alongside jurisdictions in the region. Despite a modest spike in vacancy in 2020 aligning with national trends at the onset of the COVID-19 pandemic, Vancouver now stands at a relatively low vacancy rate of 5.3% while vacancy rates stood at 11.1% across the greater region, continuing on an upward trend in 2023 YTD.

**Exhibit 51. Average Office Rent per Square Foot, City of Vancouver, Clark County, and 4-County Area, 2007 to 2023 YTD**
Source: CoStar



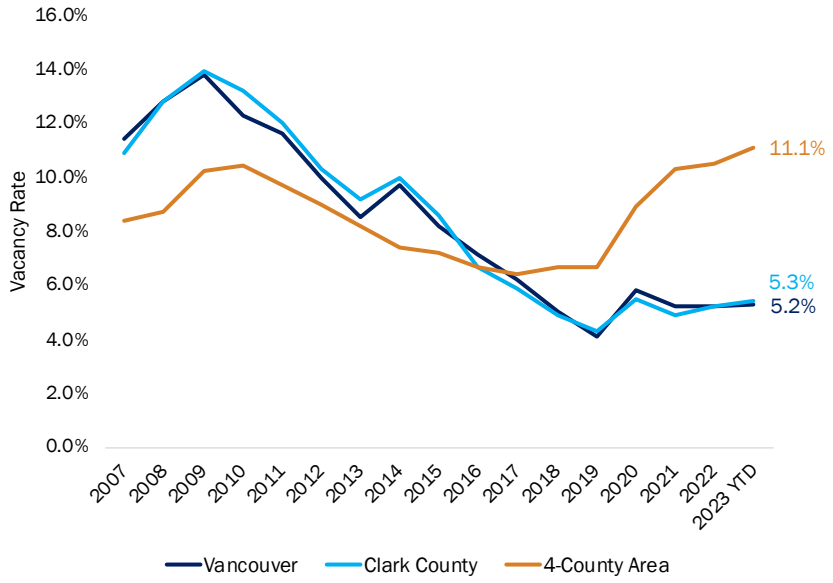


**Exhibit 52. Average Office Vacancy Rate, City of Vancouver, Clark County, and 4-County Area, 2007 to 2023 Year to Date (YTD)**
Source: CoStar

As with rents, Clark County and Vancouver have maintained similar vacancy rates over time since Vancouver has the majority of the County's office space.

In the greater region, office space has struggled with absorption in recent years, but net absorption of office space in the Vancouver market has generally been positive absorption since 2007. The greatest square footage was absorbed in 2016, 2007, and 2012, but managed to remain positive (contrary to regional trends) following the pandemic. Vancouver only saw negative absorption in 2020, as cities across the United States struggled with the impacts of the COVID-19 pandemic.

Similar absorption patterns in Clark County and Vancouver indicate that much of the new office space being absorbed into the market is within the city.

Vancouver's new office spaces are just one portion of the overall four-county area, with the majority of new office space delivered elsewhere in the four-county area. 2007 and 2008 saw the greatest square footage of office space delivered in Clark County, with the majority of new office space in Vancouver.

Over the past fifteen years, approximately three quarters of new office space delivered has been in Vancouver, with 1.9 million square feet added in this time period.

## Downtown Post-COVID Trends: Employment and Visitation in the Vancouver Center City Vision Subarea

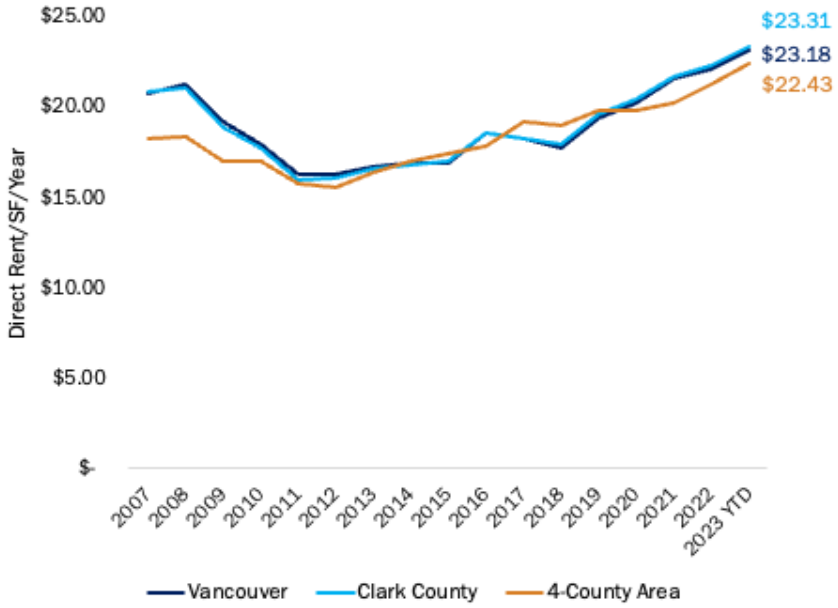
Within Vancouver, there are submarkets with distinct trends that have citywide implications. The Vancouver Center City Vision (VCCV) area is a 130-block area that encompasses Vancouver's downtown and surrounding areas. The VCCV is a central employment hub in Vancouver, and is home to a number of key employers, about 25% of the City's overall office stock, and 44% of Class A office space.[28] Measures of employment and visitation in the VCCV provide insight into how the city is rebounding after the COVID-19 pandemic, using Placer.ai's foot traffic analytics platform integrating proprietary artificial intelligence to estimate the number of visits based on GPS data.[29]

**Employment:** The number of employees working in the VCCV decreased in Q2 and Q3 of 2020 as a result of pandemic related work-from home restrictions and layoffs. The number of employees working downtown has gradually increased since the beginning of 2021 and appears to have stabilized at a number slightly lower than pre-pandemic levels. While still below pre-pandemic levels, the VCCV has seen more full recovery of employees who work downtown compared to other service-sector based urban employment centers throughout the Portland Region.

**Exhibit 55. Vancouver Center City Vision Area Employment and Visitation, 2017 Q4 – 2023 Q2**
Source: Placer.ai

**Visitation:** Like downtown areas around the country, VCCV saw a sharp decline in visitation at the onset of the COVID pandemic in 2020 Q1. Foot traffic in the VCCV has been on an upwards trajectory since the pandemic, as visitors returned to the area for shopping, recreation, or other purposes, but visitation has not quite rebounded to pre-pandemic levels. Visitor trends continue on an upward trajectory demonstrating the strength of the VCCV as a destination in the region.

[28] The office building classification system divides buildings into three categories: Class A, Class B and Class C. Definitions for Class A Office vary, but are generally based on higher quoted rents, and above average building systems and services, tenant and building finish, and location.



[29] Placer.ai uses anonymous mobile phone location data to estimate visitation. A "visit" is triggered in Placer.ai's database when a cell phone seeks two Wi-Fi signals five to fifteen minutes apart (this range differs by cell phone operating system; e.g., an Android phone

## Retail Submarket

Retail rents across the region have been slowly increasing since the Great Recession. In Vancouver and Clark County retail rents rose by 8% since 2010.

Since 2020, retail rents in the City of Vancouver and Clark County have been higher than the average for the 4-county Portland Metro Area (includes Clark, Multnomah, Clackamas, and Washington Counites). Like the office market, Vancouver and Clark County's rents for retail space have stayed closely aligned, with Clark County only $0.13 psf higher than the city in 2023 Year to Date.

**Exhibit 56. Average Retail Rent per Square Foot, City of Vancouver, Clark County, and 4-County Area, 2007 to 2023 YTD**
Source: CoStar

scans for Wi-Fi every three to seven minutes). While this means that visitors may be counted multiple times, this data is useful to provide a relative picture of trends over time.

As retail rents have risen, vacancies have also declined over the past decade, indicating a growing demand for retail in both the city and county.

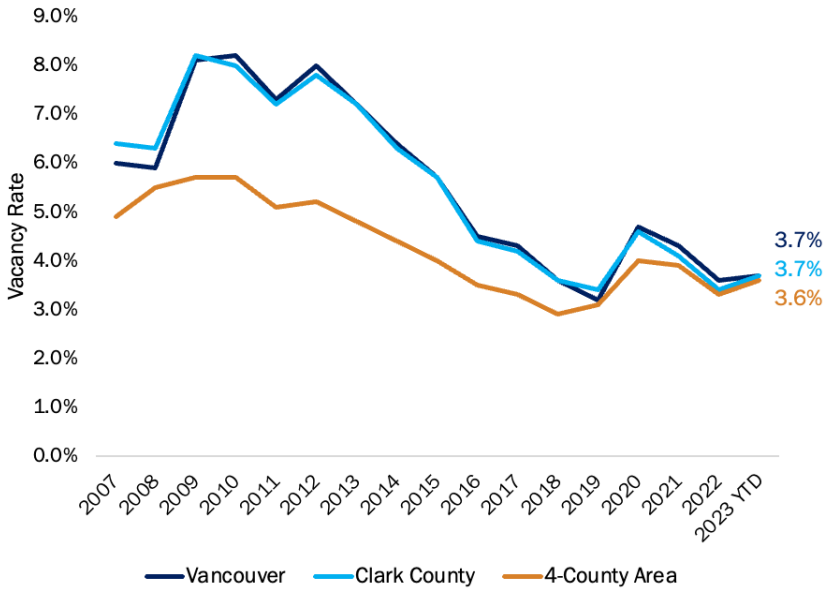
Despite a modest spike in 2020 where vacancies reached 4.7%, Vancouver and Clark County returned quickly to approximate pre-pandemic retail vacancy rates. These rates were slightly higher than the four-county area during the pandemic but were approximately on par in 2023 YTD.

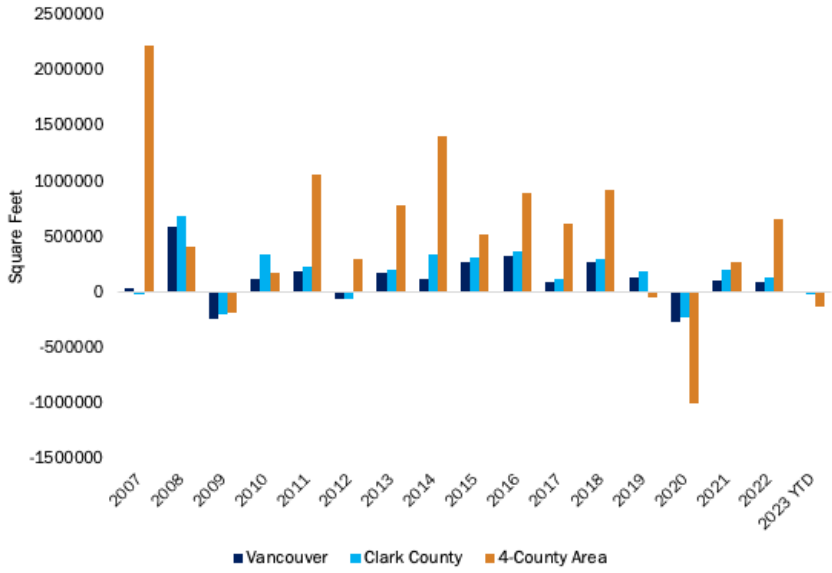
Generally, net absorption on retail space has been positive since 2007, with two years of negative absorption in 2009 in the wake of the Great Recession and 2020 at the onset of the COVID-19 pandemic.

For most years in this period, Clark County had slightly higher square feet of net absorption than the city. Trends in Vancouver and Clark County has generally followed the same patterns as the four-county area with a proportionately smaller square footage.

Vancouver saw an influx of retail space in the late 2000's and mid 2010's, trailing off over the past five years. The greatest amount of new retail space was delivered in 2008, with over 900,000 new square feet delivered.

**Exhibit 57. Average Retail Vacancy Rate, City of Vancouver, Clark County, and 4-County Area, 2007 to 2023 YTD**
Source: CoStar





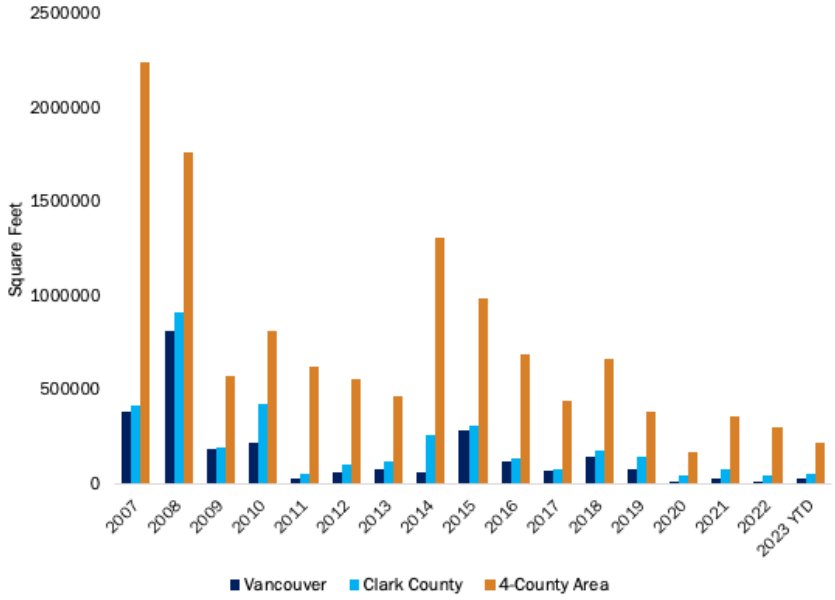


**Exhibit 58. Retail Net Absorption, City of Vancouver, Clark County, and 4-County Area, 2007 to 2023 YTD**
Source: CoStar

In general, Vancouver's retail deliveries have accounted for the majority of new retail space across Clark County (approximately 74% of new retail). Within the four-county area, Clark County accounts for about 29% of all new retail deliveries.

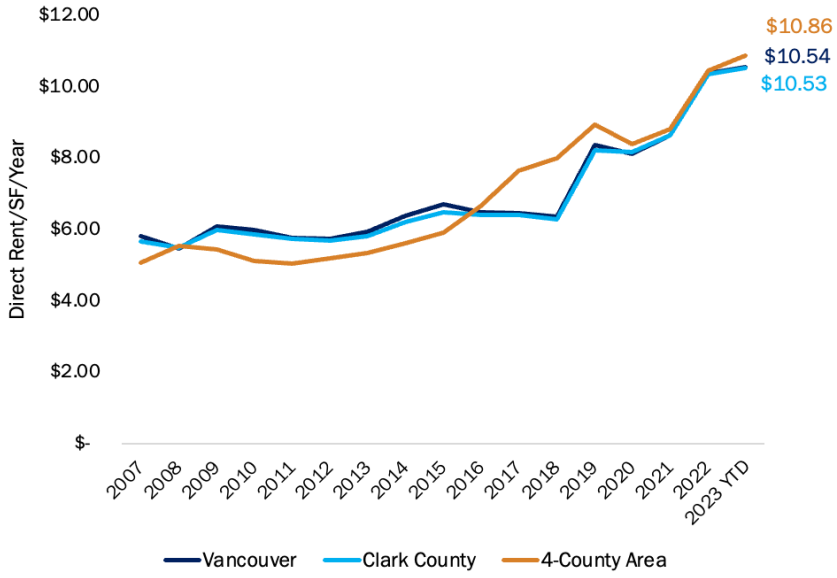

**Exhibit 59. Retail Deliveries (New Construction), City of Vancouver, Clark County, and 4-County Area 2007 to 2023 YTD**
Source: CoStar

## Industrial Submarket

Industrial rents per square foot have been increasing in both Clark County and Vancouver since 2007, sitting at approximately $10.5 psf in both areas (Exhibit 60). The four-county Portland Metro Region had slightly higher rents than Vancouver and Clark County, but generally tracked with the area over the past fifteen years.

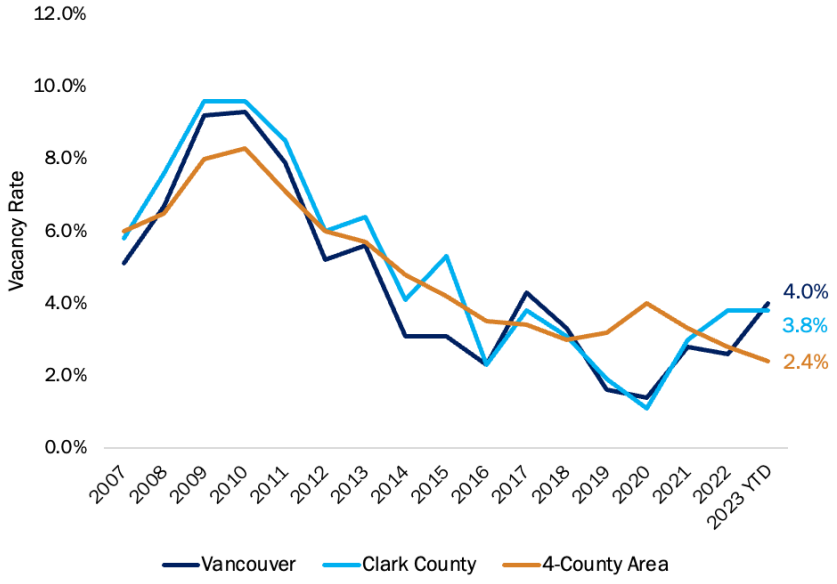

**Exhibit 60. Average Industrial Rent per Square Foot, City of Vancouver, Clark County, and 4-County Area 2007 to 2023 YTD**
Source: CoStar

Industrial vacancy rates have fluctuated since 2007, declining to their lowest rate in the period during 2020 (Exhibit 61). Both the city and the county currently have low rates of industrial vacancy, though vacancy rates in Vancouver and Clark County have been increasing over the past four years.

Despite lower rents in Vancouver and Clark County, vacancy rates were slightly higher than the four-county area in 2023 YTD.

**Exhibit 61. Average Industrial Vacancy Rate, City of Vancouver and Clark County, 2007 to 2023 YTD**
Source: CoStar

Industrial deliveries have generally had positive net absorption over the past decade, after struggling in the late 2000's during the recession (Exhibit 62).

Note that negative absorption in year-to-date does not necessarily indicate that a property will not be leased within the close of 2023 and is likely to change.

Unlike the retail and office markets, Clark County has seen a large volume of new industrial space delivered outside of Vancouver, particularly in the past five years (Exhibit 63).

Since 2017, 4.7 million square feet of new industrial space has been delivered in Clark County, with only about half in Vancouver. Throughout the four-county area, Clark County accounted for a proportionately smaller share of industrial deliveries; only about 17% between 2007 and 2023 YTD.

**Exhibit 63. Industrial Net Absorption, City of Vancouver, Clark County, and 4-County Area, 2007 to 2023 YTD**

## Key Residential Real Estate Market Findings

Housing is increasingly an economic development issue. Housing availability and affordability help determine the size and stability of the local workforce. Rising housing costs and decreasing vacancies, as seen in competitive regions like the Portland metro area, indicate upward pressure on the market. While beneficial for owners and the tax base, high costs and limited availability place a heavy cost burden on renters and homebuyers. Promoting housing options at price points affordable to households at all income levels can help ensure a diversified workforce, create opportunities for upward mobility, attract new talent to the region, and support broader economic development goals. The continuing impacts of historic racial inequities in housing and employment can also be expressed in levels of housing cost burden. These disparities stress the need for equitable economic development that intentionally provides opportunities for Black, Indigenous, and People of Color (BIPOC) residents who have been excluded from building generational wealth due to past discriminatory policies.

This section summarizes key findings for Vancouver from the 2023 Our Vancouver Housing Needs Assessment and identifies key implications for economic development and employment.

### Housing Availability

- The local availability of housing within a region can impact economic conditions as households make tradeoffs about where to live and work. Post-COVID remote work trends have provided greater locational flexibility for workers. In recent years the Portland Metro region has also increased transportation options that allow workers to commute more efficiently. The location of available housing and proximity to transit, services, and employment hubs can also influence where individuals seek jobs. Trends in Vancouver and Clark County show that housing underproduction has limited housing supply in both the City of Vancouver and Clark County (as well as the greater region).
- From 2011 to 2021, Vancouver increased its housing stock by roughly 14,700 units, or by 21%, while the total population grew by roughly 23%. Historic and current housing underproduction has limited housing supply in Clark County as well as the greater Portland metro area.
- The dominant type of housing is single-detached comprising over half the housing stock both in Vancouver and Clark County as a whole. However, Vancouver has a lower share of single-detached housing (at 56%) compared to the county's 72%. The remaining housing stock in Vancouver includes an estimated 27% multifamily

housing and 18% "plex housing" which is attached units up to fourplexes (according to U.S. Census data, 2021).

- Vancouver has a higher share of multifamily housing than the county overall, with slightly under half (44%) of Vancouver housing units having more than one unit. Permit data analysis shows a steady increase in multifamily development in the city in recent years.

### Multifamily Residential Market

- Vancouver is seeing a steady increase in the annual rate of new units permitted in multifamily development across all scales of buildings, opening up potential new workforce housing units. 79% of new unit construction in the city has been in multifamily developments over the last three years.
- Most apartment construction has been concentrated in the downtown area, with some clusters of multifamily development along Fourth Plain Boulevard and along I-205.
- Since 2015, the most common permitted multifamily building scale was 20- to 49-unit buildings (32% of permitted units), followed closely by 100+ unit buildings (28%). Only 4% of permitted units were in two- to four-unit buildings (or 'middle housing').

### Housing Prices and Vacancy

In general, rising housing prices and falling vacancy rates indicate upward pressure on the market for different types of real estate. If workers struggle to find attainable options for their income level near job centers, the lack of housing options can constrain the labor force in an area. The Our Vancouver Housing Needs Assessment highlighted the following trends.

- **While the City's housing costs remain lower than Clark County overall, vacancy rates have remained stable at about 5 percent since 2012.** Vacancy rates for rental and multifamily units are typically higher than those for owner-occupied and single-family dwelling units. In Vancouver, the vacancy rate fluctuates between 2% and 5%; it is currently 4% in Clark County. The city's vacancy rate has remained in this low range since 2011.
- **Rents are rising in Vancouver.** Rents in Vancouver are very similar to the county overall. As of June 2023, the average rent in Vancouver is $1,711, increasing 60% since 2012. The Vancouver Housing Needs Assessment shows that in Vancouver,

cost burden rates for renters tends to be higher and growing which could indicate a lack of affordable rental housing options.[30]

- **Home sale prices are also rising in Vancouver but remain lower than Clark County.** As of June 2023, the median home sale price in Vancouver is roughly $477,000. The city's home prices are roughly $50,000 lower than the county overall and lower than the national average. Vancouver's home prices increased at a similar rate since 2012, nearly tripling (a 174% increase) over the last decade. Home prices in Vancouver are lower than several competitor cities in the Portland metro area, including Portland, Beaverton, and Hillsboro. However, home prices in other jurisdictions dropped from 2022 to 2023, while Vancouver and Clark County home prices continued to grow, indicating a strong demand for homes at lower price points.
- **Cost burden has impacted renters more than homeowners.** Rates of cost burden for renters have increased slightly since 2011 (by 3 percentage points) but dropped significantly for homeowners (by 12 percentage points). Renters are nearly three times as likely to be cost burdened than homeowners, with over a quarter of renters severely cost burdened, spending more than 50% of income on rent. In Vancouver, Black or African American households and Hispanic or Latino households experience the highest rates of cost burden and severe cost burden. Lastly, Vancouver's median household income increased by 28% from 2011 and 2021 which is far less than the increases in median home sales prices and average rents.

[30] Housing cost burden can be an indicator of determining how well a city is meeting its need to provide housing that is affordable to all segments of its workforce and population. Housing costs are typically the largest portion of a household budget, and typically include mortgage or rent payment, utilities, interest, and insurance. Housing cost burden can put low-income households in vulnerable situations which can also lead job instability, among other negative outcomes. In a connected region like the Portland metro, households may make the decision to live and work in areas with lower housing costs relative to their income.

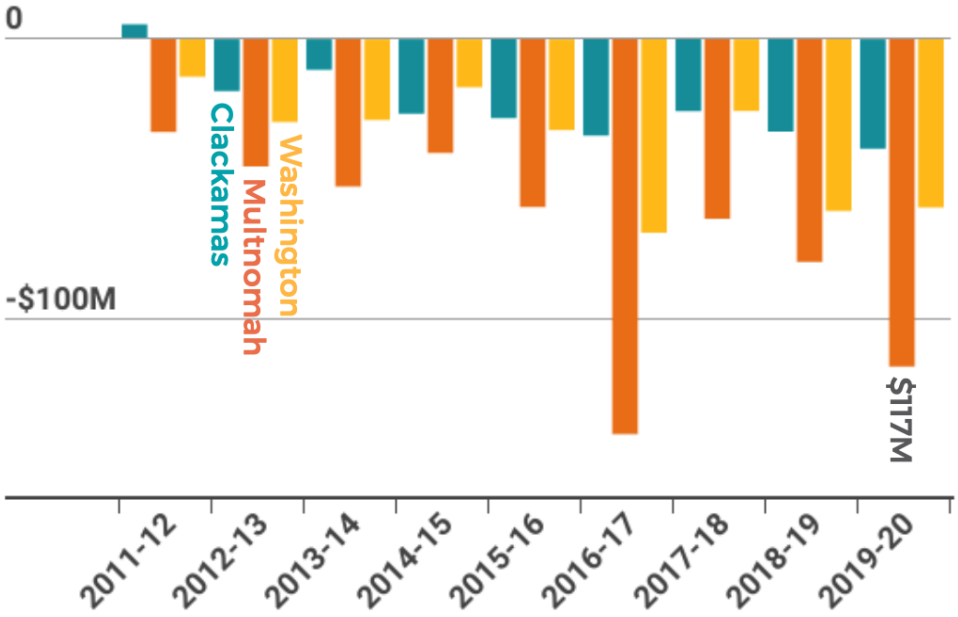
## Section 5. Competitive Advantages

Vancouver has a number of competitive advantages today that make it an attractive location for businesses and workers, including its high quality of life, tax advantages, and well-connected multimodal infrastructure. These primary factors contributing to Vancouver's growth should be considerations as the City plans for continued economic development work in the next 20 years with the Growth Management Update. Continuing progress like public realm investments, supporting workforce housing, and strategically planning for employment growth using the City's buildable lands will be critical to build on the City's current strengths.

### Vancouver Offers Access to Quality-of-Life Amenities at a Lower Price Point.

Vancouver's proximity to the Columbia River Gorge, Mount St. Helens, and national forests throughout southern Washington and northern Oregon offer access to abundant outdoor recreation activities. The city's downtown area has a vibrant and growing mix of food, beverage, and entertainment assets. The natural beauty and robust amenities in the region as well as farmland create a lifestyle draw for Vancouver.

Compared with other west coast areas that offer similar access to recreation, Clark County presents an option with a relatively lower cost of living, and more affordable prices for homes as well as industrial and office space.[31] As more workplaces become flexible or rethink locational decisions in the wake of the COVID-19 pandemic, many are choosing to move to places that offer lifestyle advantages for workers as well as lower cost commercial space and relatively affordable homes.



### Vancouver's Location on the Oregon-Washington Border Allows Tax Advantages to Attract Residents and Businesses.

For businesses and individuals deciding on a location within the Portland region, the different tax structures available in Oregon and Washington can be a critical decision point. Given the short distance between Portland and Vancouver, residents and businesses can continue enjoying many of the same regional amenities and destinations while decreasing the share of household income paid towards income taxes.

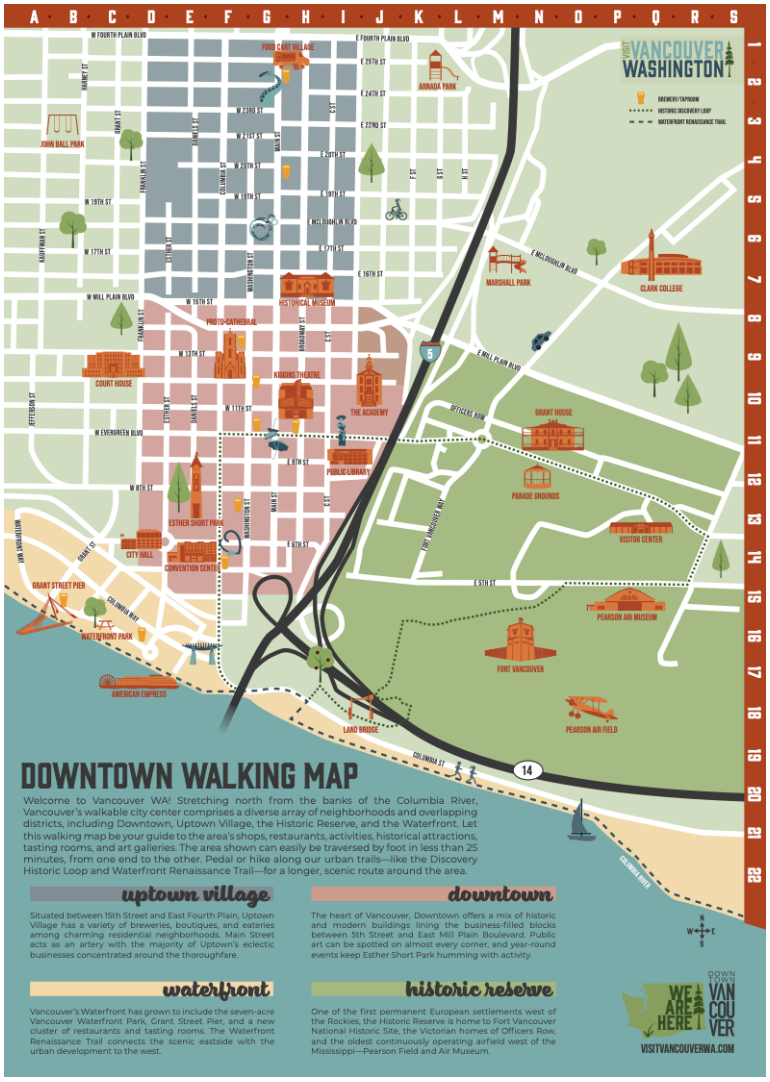
[31] Columbia River Economic Development Council, "Clark County Business Guide," 2022.

Washington's lack of corporate or personal income tax compared with Oregon's absence of sales tax presents two distinct options that can have different advantages for households and businesses. In recent years, Portland Business Alliance's analysis of data from the Internal Revenue Service (IRS) indicates that more firms and households are making the decision to relocate to Clark County from the Portland metro region counties in Oregon, with $117 million net migration of tax revenue to Clark County in FY 2019 to 2020 (Exhibit 64).

**Exhibit 64. Net Migration Flow of Tax Revenue to Clark County, WA by Adjusted Gross Income Between Tax Years (in Nominal Dollars)**
Source: Internal Revenue Service, Portland Business Alliance

## Vancouver is Part of a Well-Developed Higher Education and Workforce Development Ecosystem.

Vancouver is home to Clark College and Washington State University's Vancouver Campus, with regional connections to additional higher education institutions in Portland including Portland State University. Through partnerships with key industries, these institutions have partnered to build pipelines to job opportunities in well-paying careers like semiconductor manufacturing, software engineering, and others.



As educational attainment levels rise for the residents of Vancouver, more opportunities become unlocked to attract more employers in high-paying, high-opportunity careers. However, ensuring that these opportunities can equitably reach communities in Vancouver is a key consideration for leveraging the City's competitive advantages to benefit all residents. Career Technical Education (CTE) can help to fill gaps for many residents by providing technical training for a broad range of workers.

## The City's Public Realm Investments Have Expanded Access for Jobs and Residences in Vancouver, and There is More to Come.

In the past five years, the City of Vancouver has made large public realm investments in its Downtown area and other parts of the city, including transportation improvements, beautification, and public-private partnerships. Over $1.5 billion for downtown waterfront improvements have supported development of new public space as well as businesses and housing.

These investments have paid off with increasing private investment and quality public spaces for Vancouver, with well-developed sub areas like the Vancouver Waterfront. In the coming years as the city continues to build a stronger sense of place, investments in public realm improvements and partnerships can continue to build Vancouver's competitive advantages for attracting residents.

**Exhibit 65. Downtown Walking Map of Vancouver**
Source: Visit Vancouver

Planning efforts are also underway for replacing the I-5 bridge. Though this long-term project faces the challenges of updating major regional infrastructure, bridge replacement will be a transformative investment once completed, allowing for expedited passenger and freight travel across the Columbia River. ODOT and WSDOT are jointly leading these efforts in coordination with eight other bi-state partner agencies: TriMet, C-TRAN, Oregon Metro, the Southwest Washington Regional Transportation Council, the cities of Portland and Vancouver, and the Ports of Portland and Vancouver.

# KEY DEFINITIONS

## CONNECTED + ACCESSIBLE NEIGHBORHOOD

The connected and accessible neighborhood is a planning concept that focuses on access to services and amenities as a measure of equity. A 15-minute walk, roll, or bike ride is the threshold used to define reasonable access.

## AMENITIES

Urban services like public parks, libraries and grocery stores that should be accessible within a 15-minute walk or bike under the 15-minute neighborhood concept.

## BIPOC

Black, Indigenous, (and) people of color.

## BROWNFIELD SITE

Sites defined by the United States Environmental Protection Agency that are (potentially) contaminated by a hazardous substance or pollutant.

## CO-CREATIVE PROCESS

A planning process that is guided collaboratively by community members, experts, and a range of stakeholders.

## EQUITY

Applying an equity lens to planning processes to ensure "just and fair inclusion into a society in which all can participate, prosper, and reach their potential" (APA Planning for Equity Policy Guide).

## LIVABILITY

Factors that contribute to a community's quality of life, including its environmental, economic, and social wellbeing.

## PROTECTED HABITAT AREA

Locations that require particular consideration during the development process because of their ecological significance.

## SPECIES AREA

Areas with a particular concentration of species biodiversity.

## SUPERFUND SITE

Sites designated by the United States Environmental Protection Agency that require long-term remediation and monitoring due to contamination by a hazardous substance or pollutant. These sites include manufacturing facilities, processing plants, landfills and mining sites.

## SUSTAINABILITY

Practices that avoid the depletion of natural resources in order to maintain an ecological balance.

## URBAN GROWTH AREA (UGA)

Planning areas defined as part of a city's long-term planning effort where urban growth is encouraged. The UGA encourages development that preserves open space, promotes density, and reduces sprawl.

# INTRODUCTION

**Figure 2:** I-5 Sunset

# COMMUNITY ATLAS: EXISTING CONDITIONS REPORT

In 2022, the City of Vancouver initiated an update to its Comprehensive Plan and Title 20 Code Update. As part of this process, the City has embarked on a co-creative process with the community of Vancouver to ensure an equitable engagement and outreach process. The City strives to acknowledge past actions that have influenced historic development patterns and generate a collective vision for the future.

In order to accurately capture existing conditions within Vancouver, the planning team has conducted an analysis of current information pertaining to the natural environment, land use and zoning, community demographics, cultural resources, economy, the built environment, parks, recreation, trails and open spaces, public facilities, and a review and audit of the existing comprehensive plan and supplemental plans. This analysis constitutes the Community Atlas document.

## WHAT IS THE PURPOSE OF THE COMMUNITY ATLAS?

The Community Atlas is a document intended to support the City's planning efforts as it updates its Comprehensive Plan and Title 20 Code. This document contains information on the City's core values and existing conditions including statistics, data and mapping, and an assessment of Vancouver as a 15-minute neighborhood, in a user-friendly format, all meant to inform baseline analyses for the development of the Comprehensive Plan.

By capturing this information in one document, the City will be able to reference the Community Atlas at regular intervals during the horizon of the Comprehensive Plan to provide the community with updates on implementation progress.

## WHAT DOES IT INCLUDE?

Within each chapter of the Community Atlas there are narratives, maps, imagery and statistics that provide current community information available to support long-range planning efforts for the Comprehensive Plan and Title 20 Code Update. The Community Atlas chapters are:

1. Introduction
2. People
3. Natural Environment
4. Cultural Resources
5. Built Environment
6. Economy
7. Parks, Recreation, Open Spaces and Trails
8. Regulatory Framework Assessment

# WHY IS THE ATLAS IMPORTANT?

The City of Vancouver is expected to reach a population of 268,000 residents by the year 2042.[1] This is in part due to growth trends seen in the region, with an estimated increase of 18% in population between 2010 and 2020.[2] Vancouver is growing in response to several factors including increased immigration to the region, urbanization and increased development.

These trends are influenced by local, county and state policies that were created to sustainably manage growth over time - this includes policies like the City of Vancouver's Urban Annexation Blueprint Plan (2007), the County Comprehensive Growth Management Plan and the State of Washington Growth Management Act.

The City of Vancouver last updated their Comprehensive Plan in 2011 - which will require the chapters, or 'elements', to be updated to mirror not only the new requirements of the Growth Management Act but also reflect current City policies which include other guiding documents such as the Strategic Plan, the Transportation System Plan, and the Climate Action Framework.

### WASHINGTON GROWTH MANAGEMENT ACT

In 2023, the State of Washington Legislature updated its approach to how communities are required to plan for housing to meet more immediate needs and to prepare for long-term growth. House Bill 1220 (HB 1220) requires communities to plan for the creation of housing which is affordable to all community members at all income levels. This Bill also changed how municipalities have to plan for updates to the housing elements in comprehensive plans.

## WHAT INFORMS THE COMMUNITY ATLAS?

The Atlas is a document informed by others - it relies on current population projections from the 2020 Census and subsequent American Community Survey updates, ESRI GIS and analyst data, existing City of Vancouver policies and documents, Clark County policies and state legislative changes. While not an extensive list, the following documents were consulted during the creation of this document:

- City of Vancouver Strategic Plan: 2023-2029 Update
- 2011 Vancouver Comprehensive Plan and Zoning Code
- Subarea and Action Plans
- Vancouver Parks, Recreation and Cultural Services Comprehensive Plan 2022
- City of Vancouver Diversity, Equity and Inclusion Strategic Plan
- Reside Vancouver: An Anti-Displacement Strategy
- City of Vancouver Climate Action Framework
- Transportation System Plan
- City of Vancouver Consolidated Housing and Community Development Plan
- Urban Forestry Management Plan
- Main Street Promise
- City of Vancouver Shoreline Master Program
- Clark County Comprehensive Economic Development Plan 2018-2023
- Clark County Countywide Planning Policies
- An Ethnohistorical Overview of Groups with Ties to Fort Vancouver National Historic Site
- Washington Transportation Plan 2035
- State of Washington Growth Management Act

These documents provided a basis for capturing the existing conditions outlined in this Community Atlas and the initial 15-minute neighborhood analysis.

# CITY OF VANCOUVER'S STRATEGIC VISION

The City of Vancouver has a Strategic Plan that is updated every 6 years in order to define the City's vision and core values, and understand what the City needs to prioritize and invest in.

The City recently adopted the 2023 Strategic Plan - which outlines key priorities through 2029 - and takes into account existing and future City limits. Building on the previous 2016 Strategic Plan and robust engagement efforts, a series of core values and focus areas have been defined and serve as the foundation of the document.[3]

## LIVABILITY

Livability for Vancouver is about ensuring that residents have access to basic necessities, requirements and experiences, and a quality of life.

It also means that there should be a focus on ensuring that every resident and cultural group can live in Vancouver and feel a sense of pride and belonging all while maintaining individual and cultural identities, beliefs and values.

An emphasis on safety, access, opportunity, inclusivity, and equity will lead efforts to provide for a clean, safe City that welcomes and enables residents of all ages and abilities to feel nurtured and valued while comfortably accessing public spaces, programs, resources, economic opportunities, education, and affordable housing.

## SUSTAINABILITY AND RESILIENCY

The City is focused long-term solutions to sustainability and resiliency which include economic, environmental and social issue crisis management, in addition to a focus on environmental justice for all Vancouver communities. Additionally, the City seeks to build structures that take into account expanding and evolving green technologies.

The City is focused on a proactive and goal oriented approach to protecting natural resources, reducing greenhouse gas emissions, introducing forward-thinking nature-based solutions, and planning for crisis management.

## INNOVATION

The City of Vancouver wants to invite and encourage creative thinking in order to promote the well-being of residents. For Vancouver, innovation includes technology, infrastructure, programs, climate change, and business to ensure that the City attracts and retains businesses and jobs.

Creative problem solving, adapting to change, creating space for creative communities, collaborating, and adapting to changing trends will ensure that Vancouver continues to confront barriers to innovation and ensure that the City invests in its future.

**Figure 3:** Bike Lane

**Figure 4:** Farmers Market Day of the Dead

## EQUITY AND INCLUSION

Equity and inclusion focused policy will enable Vancouver to be a place where all people are able to express their beliefs and values freely and safely. The City celebrates different perspectives, cultures, activities and people, and wants to provide access to opportunities through investments and accounting for historical policies that have led to inequities across Vancouver communities. This includes breaking down and eliminating barriers that have affected communities of color, religious minorities, people with disabilities, LGBTQIA+ communities, and other disadvantaged communities.

Through nurturing and valuing all community members and ensuring equitable access to resources, and fair and transparent processes, the City will provide inclusive economic opportunities.

## TRUST AND RELATIONSHIPS

The City of Vancouver Strategic Plan emphasizes the importance of trust and relationships - specifically between the City government and the Vancouver community. Transparent processes and decision-making are integral to creating a community that is livable, equitable, and resilient and where community members, businesses, and residents are engaged and participate in City programs and initiatives.

The City understands how important trust is to effecting community safety, and that the relationship between the community and law enforcement will require building, repairing and maintaining relationships and ongoing collaboration and inclusion. Specifically, focusing on equity, accountability, respect, strong partnerships, representation, fairness, kindness, and honesty.

The City believes that investing in community relationships will benefit all people in the Vancouver community and will serve to create a place where officials and residents have trust in each other.

# PLANNING FOR CONNECTED AND ACCESSIBLE NEIGHBORHOODS

## WHY ARE CONNECTION AND ACCESSIBILITY IMPORTANT?

The connected and accessible neighborhood is a planning concept that aligns with the vision and goals of the 2023 Strategic Plan. It envisions neighborhoods where residents have access to basic needs, essential services and amenities, such as grocery stores and libraries, within in an easy 15-minute walk, bike or roll. It increases livability and equity-minded policies while supporting sustainability goals.

This type of development pattern represents an equitable distribution of amenities, services, and facilities due to their accessibility. Such services and amenities include grocery stores and markets, transit stops, parks and open space, trails, schools, libraries, hospitals and urgent care facilities.

In plans such as the Heights District, the City of Vancouver used a 20-minute walk to services and amenities as a metric. This was historically best practice, but this policy direction is more ambitious, adopting a 15-minute walk as the goal to equitably increase access to essential services across the city.

To define this concept for Vancouver, the Community Atlas identifies essential services and amenities within the City and analyzes their locations. The graphic below illustrates what should be accessible to residents within a 15-minute walk, bike or roll. The subsequent map identifies what areas in Vancouver are close to meeting connected and accessible neighborhood goals, and which areas need additional considerations.

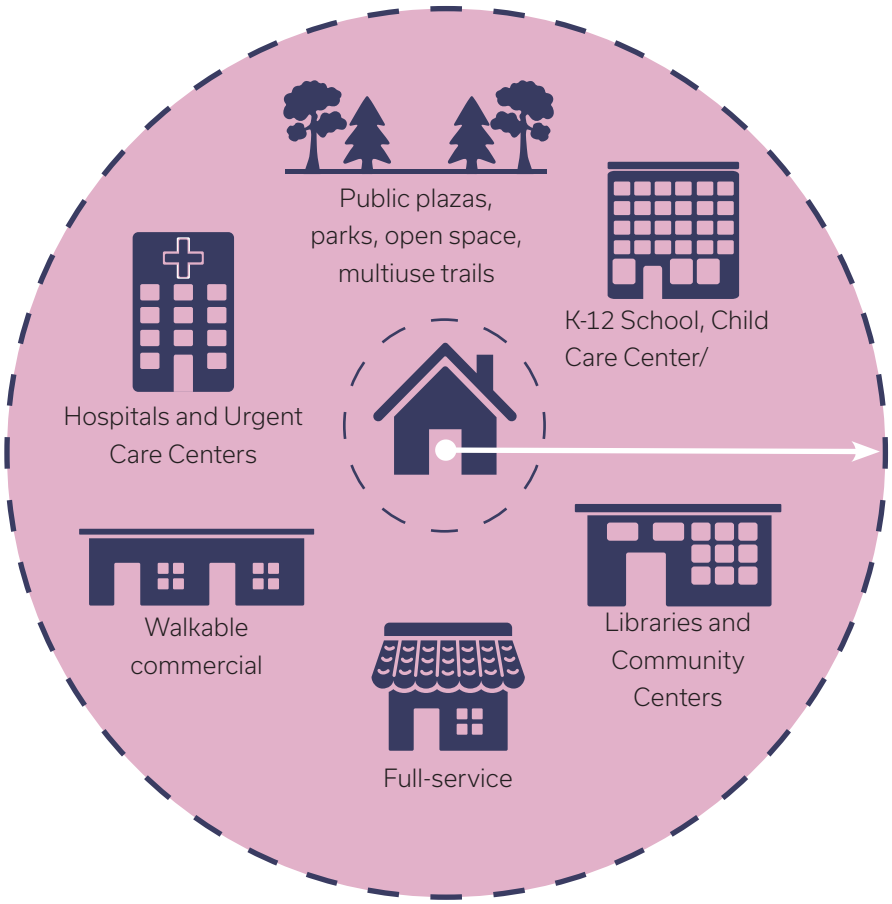

**Figure 5:** Connected and Accessible Neighborhood Illustrative Graphic

## MAPPING METHODOLOGY

A majority of essential services are located in central Vancouver. By identifying where essential services are currently located, decision-makers can plan for where additional services need to be developed into the future or where density could be added to take advantage of existing services. This framework has been used to develop an initial understanding of where development should be focused into the future to ensure services are accessible.

Over the past few decades, Vancouver has experienced a significant increase in diversity. This has also brought to light various socioeconomic challenges and the need for cultural awareness and inclusivity. Diversity, equity, and inclusion (DEI) efforts are vital, particularly for historically underrepresented groups and individuals. Vancouver aims to promote fair and full participation of all residents and community members regardless of race, gender, sexuality, identity, or disability.

Understanding current DEI concerns is crucial for developing an equity framework that addresses privilege imbalances and the interconnected issues faced by different communities. Vancouver utilizes equity principles and guidelines to create a more inclusive City and protect underrepresented community members. Communities at risk, including Black or Indigenous people, people of color, people with low incomes, people with disabilities, renters, LGBTQIA+ individuals, homeless individuals, and small business owners, will be prioritized in the City's efforts to ensure equity and inclusion for all.

The Community Atlas focuses on access to essential services as a means to inform equitable development.

To measure access to essential services, the Community Atlas uses a walkshed: the area within a particular walking distance (in this case 15 minutes) from a point of origin. The density of walksheds is determined by the number of paths or walksheds in a specific area. The more overlapping walksheds there are in an area, the higher the walkshed density. A higher walkshed density indicates a more accessible Vancouver, as it communicates the number of destinations reachable within a certain walking distance.

To establish an access to services map illustrating walkshed density, an individual walkshed analysis by essential service type was calculated, then synthesized to create the composite maps on the following pages.

For this analysis, the following walksheds were considered: full service groceries, transit stops, parks and open spaces, trails, libraries, ambulatory healthcare services, and schools. This is illustrated on the map on the next page.

**Figure 6:** Vancouver Public Library

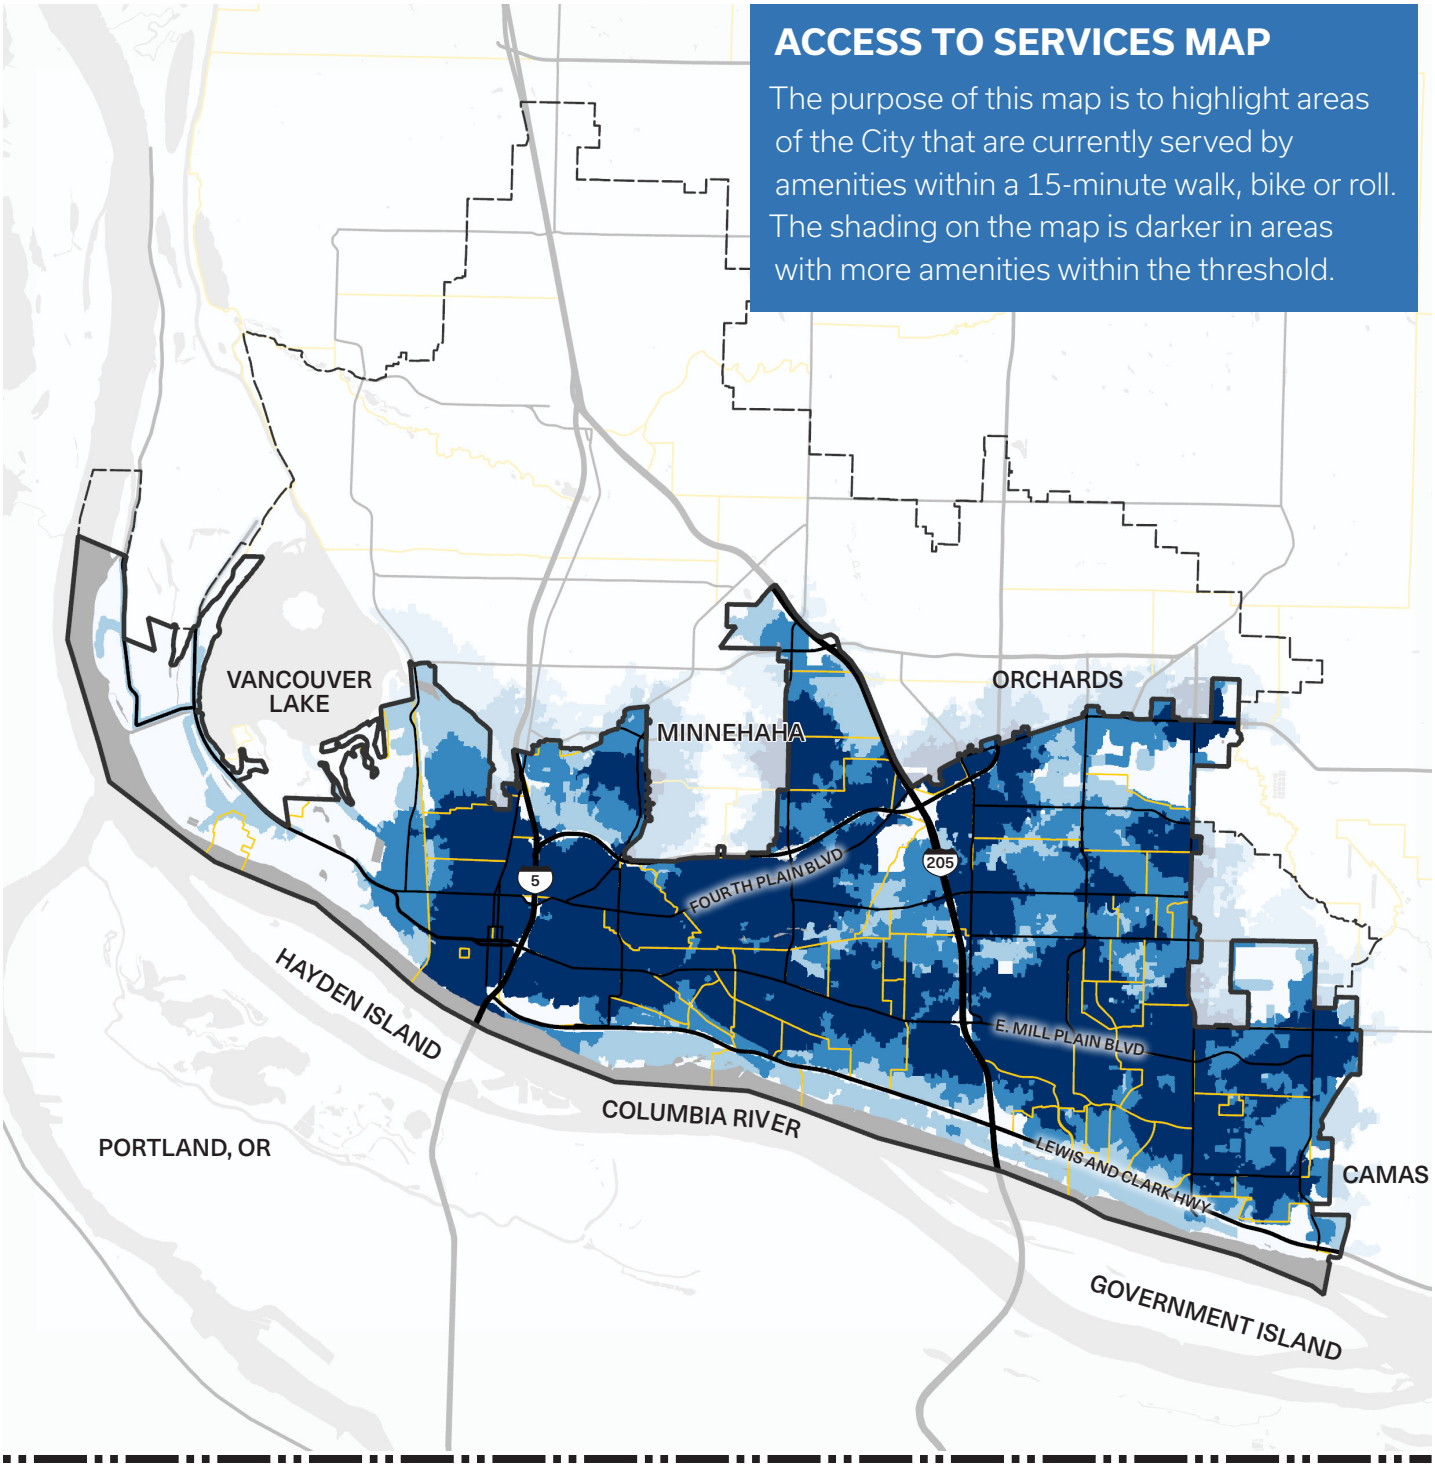

**Figure 7:** Connected and Accessible Neighborhood Map

# PEOPLE

# COMMUNITY OVERVIEW

As the City of Vancouver experiences rapid growth, it is prompting local leaders, designers, and the community to think critically when planning for the future of both its community members and unique neighborhoods. There are several factors influencing growth which include proximity to Portland, investments by the City of Vancouver into infrastructure and development, its location along the Columbia River and its thriving and diverse local community.

Understanding how Vancouver has grown since the 2011 Comprehensive Plan is crucial to defining how change has impacted its neighborhoods and development patterns. The following information reflects the research that was conducted as part of the City of Vancouver's Community-At-A-Glance (including source data references). The Community-At-A-Glance document can be found on the City's community engagement website Be Heard Vancouver (www.beheardvancouver.org).

## POPULATION TRENDS

Vancouver has witnessed significant population growth over the past decade. The population increased from 161,791 people in 2010 to 190,915 people in 2020.[4] This is a population increase of 29,124 people, an 18% increase in the span of just ten years.[5] This growth trend is projected to continue, with an estimated population of 268,000 by the year 2042.[6] Understanding growth patterns in both Vancouver and Clark County is imperative when it comes to planning and designing for the City's future.

## ECONOMY

Vancouver has experienced impressive employment rates in recent years. Employment in Vancouver is concentrated in the healthcare, education, food service, administrative, real estate, business, manufacturing, engineering, construction, transportation, and materials moving industries. The median income of Vancouver's residents increased by 34% between 2010 and 2020, from $47,307 to $63,617.[7] These trends may have changed dramatically due to the increase of population, jobs and opportunity, as well as inflation. However, despite this dramatic increase, Vancouver's median income is still lower than the median income in Clark County ($75,253) and the State of Washington ($73,775).[8]

Vancouver's employment rate is 96.5%, and the unemployment rate was 3.5% as of December 2021.[9] This is slightly lower than the national average unemployment rate of 3.9% noted in December 2020.[10] The average single family home value increased 129% since 2010, which has provided current and new homeowners great opportunities to invest and build wealth.[11]

### PROJECTED GROWTH

| | |
|---|---|
| 161,791 | POPULATION (2010) |
| 190,915 | POPULATION (2020) |
| 195,512 | POPULATION (2022) |
| 268,000 | POPULATION (2042) |

**Figure 8:** Vancouver Landing

**Figure 9:** Story Walk

However, the competitive real estate market has posed great difficulties for aspiring homeowners and living costs for the community.

Despite certain positive developments, not everyone has benefited equally and it is important to acknowledge persistent socioeconomic disparities. Approximately 12.7% of individuals in Vancouver have experienced poverty compared to 9.0% county-wide, highlighting the need for ongoing efforts to address income disparities and ensure economic stability for all members of Vancouver's community.[12]

## POVERTY

**12.7%** INDIVIDUALS HAVE EXPERIENCED POVERTY

**8.3%** FAMILIES HAVE EXPERIENCED POVERTY

In 2021, 20,955 Clark County residents received food stamps or SNAP benefits, indicating a significant number of individuals who rely on food assistance programs.[13]

## AGE, ETHNICITY, LANGUAGE, LGBTQIA+ ORIENTATION, RACE, VETERAN STATUS

The City of Vancouver experienced dramatic growth in terms of age, ethnicity, language, LGBTQ+ orientation, race, and veteran status over the past decade. As the population and opportunity have increased, the population of communities of color have also experienced substantial growth with an increase of 64% in the last decade.[14]

Within the City, 2.3% of residents identify as Black or African American, 13.9% as Hispanic and Non-White, 1.5% as Native Hawaiian and other Pacific Islander, 0.6% as Native American, 5.6% as Asian, 6% as Two or More Races, and 71.5% identify as White.[15]

# COMMUNITY OVERVIEW

The school-aged population in Vancouver follows a similar trend, with a breakdown of 52.6% students identifying as White, 27.45% as Hispanic and Non-White, 8.9% as Two or More Races, 4.65% as Asian, 3.15% as Black or African American, 2.7% as Native Hawaiian and other Pacific Islander, and 0.45% as Native American. With the increase of diverse families from different backgrounds, 19.7% or 34,723 people spoke a language other than English at home in 2021.[16]

The City's demographic profile reflects a relatively young population with a median age of 37 years old, slightly younger than the median age of Clark County (38.6 years old).[17] Approximately 22% of the population is under 18 years old, and 47% of the population under 35 years old. There is a small aging population with 6.3% of the population 75 years or older.[18]

While approximately 10.7% of adults in the City identify as LGBTQ+[19], data from the Vancouver and Evergreen School Districts reveals that a significant percentage (31-33%)[20] of students self-report as LGBTQ+ across 8th, 10th, and 12th grade levels.

## EDUCATION

There were 48,825 students in the City of Vancouver enrolled in school for the 2021-22 school year. Overall, 91% of Vancouver residents hold a high school diploma and 29.2% of Vancouver residents hold a bachelor's degree.[21]

The City of Vancouver strives to provide a conducive environment for students to thrive academically. Approximately 62% of ninth graders in Vancouver and Evergreen School Districts passed all their courses and 90% of the senior classes at Vancouver and Evergreen School districts graduated.[22]

**Figure 10:** Ogden Elementary School

### EDUCATION

**91%** RESIDENTS HAVE A HIGHSCHOOL DIPLOMA

**29.2%** RESIDENTS HOLD A BACHELOR'S DEGREE

## HOUSING

Vancouver's housing market has experienced significant changes over the past decade. The average value of a single-family home in Vancouver saw a dramatic increase of 129% between 2010 and 2020, from $213,400 to $490,494.[23]

The monthly mortgage payment averaged to $1,734[24] in March 2022 and the average market for a 1-bedroom unit in Vancouver was $1,411[25] in 2021. There is a relatively even split between renters and owners with 48% of Vancouver residents renting and 52% of Vancouver residents who own.[26]

Due to the high costs of housing, approximately 39.5% of residents are considered rent burdened, meaning more than 35% of their income is spent on rent. 21.9% of Vancouver residents are extremely rent burdened, meaning more than 50% of their income is spent on rent.[27]

Vancouver had an increase of housing units by 32% from 63,620 units in 2010 to 83,868 units in 2021.[28] However, Vancouver also suffers from a housing deficit of approximately 4,000 housing units - which is included in estimates of Clark County's deficit of

13,500 housing units. Between 2019-2021, approximately 80% of new construction in the City has been multifamily dwellings.[29]

## SAFETY & MOBILITY

The 2024-2044 Transportation System Plan (TSP) outlines goals for Vancouver's transportation network organized around the principles of safety, equity, climate, choice, connectivity, and maintenance. As Vancouver grows and changes, the City is focused on expanding transportation options to include walking, rolling, biking, small mobility, transit and freight.[30]

As of 2021, 82% of Vancouver workers drove to work. Participants in the TSP outreach process cited safety and comfort as key barriers to using alternate methods of travel. While over 47,000 Vancouver residents live within a quarter mile of the Vine and the Mill Plain Bus Rapid Transit system, TSP feedback suggested that ridership might increase through improved comfort, commute time, and connectivity.[31]

During the pandemic, transit ridership declined the least in census tracts that were identified as high-priority equity areas. Additionally, BIPOC residents reported being particularly impacted by safety concerns waiting for transit on nights and weekends. The improvements outlined in the TSP prioritize areas with higher demographic indicators of risk.[32]

### SAFETY & MOBILITY

**29%** INCREASE IN VEHICLE CRASHES (2010-2019)

**47,000** RESIDENTS LIVE WITHIN 1/4 MILE OF BUS RAPID TRANSIT

**82%** VANCOUVER WORKERS DRIVE TO WORK

**Figure 11:** Farmers Market

## HEALTH AND FOOD SYSTEMS

As of 2020, approximately 9.7% of Vancouver residents were living with a disability.[33] In 2018, heart disease accounted for 176 male deaths and 118 female deaths per 100,000.[34] Chronic lower respiratory diseases, which includes asthma and chronic obstructive disease, account for 210 deaths per 100,000.[35] Diabetes was another prevalent issue causing 507 deaths per 100,000.[36]

These statistics highlight the importance of addressing health issues, concerns for accessibility, and providing the necessary support systems for Vancouver residents. This includes assessing the local foodshed and identifying gaps in service to residents who may live more than a 1/4 mile from a grocery store and have limited means of transportation.

Clark County has seen an increase in the number of community-supported agricultural programs, farmers markets, and interest in locally sourced foods. Agricultural operations provide many benefits to the area including providing jobs, lowering barriers to accessing healthy foods, and enhancing the rural character and protecting open and green spaces.

**Figure 12:** Downtown Vancouver

## CLIMATE

As Vancouver looks to mitigate its environmental impact and promote sustainability, it is crucial to meet the goals outlined in the Climate Action Framework, including how to address the largest contributors to greenhouse gas (GHG) emissions. In Vancouver, transportation (36%), buildings (28%), aviation (25%), and industrial processes (8%) are the sectors with the largest contribution to GHG emissions.[37]

Efforts to transition to renewable energy sources are underway, with roughly 9% of energy used in Vancouver and greater Clark County coming from renewable energy sources.[38] The City also aims to achieve a tree canopy of 28% by 2030 from a tree canopy of 6,066 acres, covering only 19% of Vancouver land in 2020.[39]

## INCOME & EMPLOYMENT

The connection between income, employment, and diversity, equity and inclusion (DEI)

### INCOME & EMPLOYMENT

**$67,462** VANCOUVER MEDIAN HOUSEHOLD INCOME

**15%** RESIDENT HOUSEHOLDS LIVE BELOW THE FEDERAL POVERTY LINE

**75%** VANCOUVER WORKERS COMMUTE ALONE BY CAR

measures in Vancouver is significant, especially considering the income disparities among different racial populations.

The City's median household income stands at $67,462, but this figure varies by race: Black/African American households have a median income $24,000 lower than the overall median. Certain neighborhoods, like Bagley Downs and Meadow Homes, face alarming rates of childhood poverty, surpassing 50% for children under 5. Moreover, over 15% of resident households live below the federal poverty line.[40]

## PARKS AND OPEN SPACE ACCESS

The City of Vancouver faces disparities in park access, particularly in areas north of Burton Road and and east of I-205 where there is a significant need for park acquisition to serve existing and future residents. Existing parks on the west side of I-5 tend to be smaller with a low ratio of parkland accessible to high density residential neighborhoods. These disparities were identified during the development of the Vancouver Department of Parks, Recreation and Cultural Services (VPRCS) Comprehensive Plan.[41] The Equity Index completed by VPRCS will inform recommendations in the Comprehensive Plan.

While dense tree canopies are prevalent in specific residential neighborhoods in central Vancouver, Vancouver's tree canopy coverage is significantly lower than the recommended 40% or the Washington average of 32%, with only 19% coverage. Notably, communities of color experience less tree canopy coverage, falling below the City's average by 2.4%.[42]

As climate change progresses, it will be especially important to ensure equitable access to open space and tree canopy to protect the City's most vulnerable populations from the potential impacts of global warming. The City's network of natural areas will be increasingly essential to promote resiliency. These specific concerns are addressed in the City of Vancouver's Climate Action Framework.[43]

## DIVERSITY EQUITY AND INCLUSION (DEI)

Over the past few decades, Vancouver has experienced a significant increase in diversity, with a particular increase in Hispanic or Latine

**Figure 13:** Fourth Plain Public Art Mural

community members of any race. While the City is still 70% white, this is still a significant decrease from 1970, when 99% of the population identified as white.[44] This demographic change has brought light to various socioeconomic challenges and the need for cultural awareness and inclusivity. DEI policies and programs are vital, particularly for historically marginalized groups and individuals. Vancouver aims to promote fair and full participation regardless of race, gender, sexuality, identity, or disability which is reflected in the co-creative process for the Comprehensive Plan and Title 20 Code Update To incorporate DEI principles into the City's built environment, a long-term vision and associated policy directions will need to be developed through discussions with the community during the planning process. These policies will support the work already accomplished by the City in Reside Vancouver: An Anti-Displacement Plan which is focused on guiding equitable development in central Vancouver. Understanding current DEI concerns is crucial for developing an equity framework that addresses privilege imbalances and interconnected issues faced by different communities. (More information about the City's Equity Framework and Equity Analysis, which are considered companion documents to the Community Atlas and upcoming Comprehensive Plan and Title 20 Code Update can be found on the BeHeardVancouver.com website).

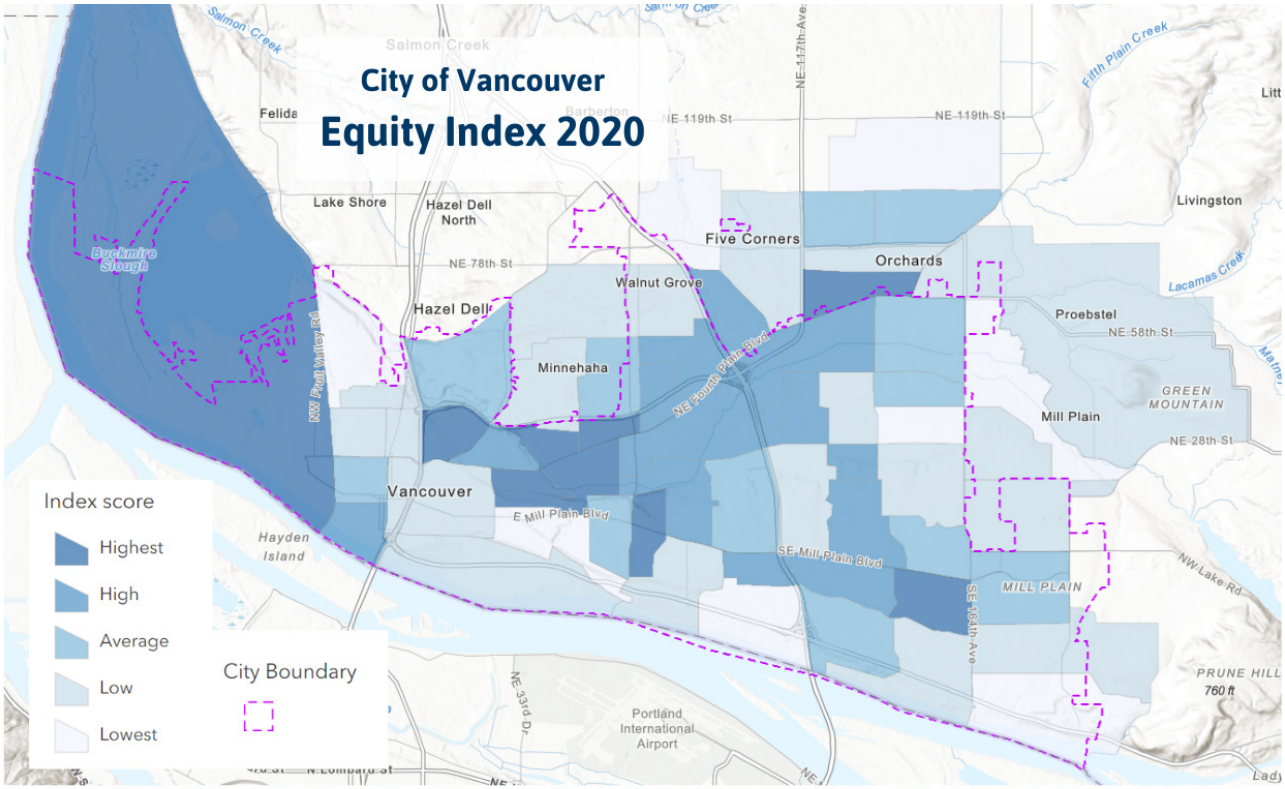
The City of Vancouver utilizes equity principles and guidelines throughout many of its adopted documents and plans to create a more inclusive City and protect marginalized community members, especially communities considered to be at risk - Black or Indigenous residents, people of color, people with low incomes, people with disabilities, renters, LGBTQ+ individuals, homeless individuals, immigrants, and small business owners. All of these communities will be prioritized in the City's efforts to ensure future Comprehensive Plan policies promote equity and inclusion for all.

## EQUITY INDEX

In order to put the Community Overview into context for the City of Vancouver it is important to understand that there have been historical patterns of development that have influenced the built form across different areas of the city. Generally speaking, there are three loosely defined geographies, west (areas west of I-5), central (areas between I-5 and I-205) and east (areas east of I-205). These geographies within the city developed over time, generally west to east, and are reflective of different settlement patterns, regulations, and periods of growth.[45] A map of these geographies and their historical development can be found in the Cultural Resources chapter.

**Figure 14:** East Fourth Plain Boulevard

Looking at the City of Vancouver and its communities through these three distinct geographies brings light to some of the disparities being experienced currently and helps to identify areas that need additional investment and attention through the Comprehensive Plan and Title 20 Update to ensure that future policies support a more equitable approach to the growth that is anticipated for Vancouver over the horizon of the Comprehensive Plan. The Equity Index focuses on a set of metrics that include:



1. People of color (non-white and/ or Hispanic/Latinx)
2. People below 200% of the poverty level
3. Renters
4. Adults without a 4-year degree
5. Households with limited English proficiency
6. People with disabilities
7. Youth under age 17
8. Older adults 65 and up

These metrics were assessed by Census Tract Level, the findings of which are illustrated in Figure 16: Equity Index Map, below. A higher risk equals a high equity index. High risk areas are those that are identified for prioritized investment

## SOCIAL VULNERABILITY INDEX

The Social Vulnerability Index (SVI) is a crucial tool used to assess populations most at risk during high-stakes situations like natural disasters and disease outbreaks. The Center for Disease Control (CDC) and The Agency for Toxic Substance and Disease Registry (ASTDR) utilize U.S. Census data to gauge social vulnerability on local and regional scales across the United States, identifying communities in need of assistance.[46]

To determine social vulnerability, the CDC/ATSDR employs 16 factors, such as poverty, lack of vehicle access, and crowded housing, which are categorized into four themes: Socioeconomic Status, Household Characteristics, Racial

Esri, NASA, NGA, USGS | County of Clark, WA, Oregon Metro, Oregon State Parks, State of Oregon GEO, WA State Parks GIS, Esri, TomTom, Garmin, SafeGraph, GeoTechnologies, Inc, METI/NASA, USGS, Bureau of Land Management, EPA, NPS, USDA, USFWS

**Figure 15:** Equity Index Map

and Ethnic Minority Status, and Housing Type/Vehicular Transportation Access.[47]

Understanding SVI is critical for emergency planners, city officials, public health authorities, state and local health departments, and non-profit organizations. Together, they analyze municipalities at risk and provide support to the most vulnerable populations in the event of a disaster. This involves estimating the required supplies like food, water, medicine, and bedding, as well as the number of emergency personnel and shelters needed to assist people effectively.[48]

According to the CDC/ATSDR census tracts, the City of Vancouver exhibits a high social vulnerability index. Areas with medium-high and high social vulnerability are concentrated along major interstates and arterial roads. The greater Vancouver areas, on the other hand, display a lower level of vulnerability, ranging from low to low-medium vulnerability.

The SVI map is intended to reflect existing conditions and does not indicate priority areas for investment. However, it can be used as a tool to identify areas that are especially susceptible to the impacts of public investment when considered alongside other factors like residential density and housing costs. Public investment and private development can bring numerous benefits, but if equity considerations are not prioritized, it can lead to severe consequences for vulnerable communities, including pressures on the housing market and involuntary displacement.

## SOCIAL VULNERABILITY MAP

The purpose of this map is to illustrate social vulnerability based upon information available from the CDC. The CDC assesses 16 factors, such as poverty, lack of vehicle access, and crowded housing, which are categorized into four themes: Socioeconomic Status, Household Characteristics, Racial and Ethnic Minority Status, and Housing Type/Vehicular Transportation Access.

# NATURAL ENVIRONMENT

# NATURAL ENVIRONMENT OVERVIEW

Vancouver is rich in natural beauty, with rivers, creeks and lakes, urban forests and views of Mt. St. Helens, Mt. Adams, and Mt. Hood. Its landscape offers innumerable benefits, ecological and otherwise.

The Columbia River, Burnt Bridge Creek, Vancouver Lake and other water resources provide fish and wildlife habitat, and opportunities for recreation.[49] Oak woodland and Douglas fir forest support sensitive native species, improve air and water quality and beautify the urban landscape.[50]

For thousands of years, humans have relied on Vancouver's abundant water, wildlife and forest. Ongoing urban development poses a threat to key natural resources and requires thoughtful and intentional management. In recent years, wildfires have become more prevalent during summer and early fall, which has caused damage to forested areas, and contributed to intermittent unhealthy air quality conditions due to smoke and particulate matter. Vancouver is also vulnerable to flooding, landslides and earthquakes.[51]

## EXISTING CONDITIONS

- Vancouver is 70 miles east of the Pacific Ocean and is bordered on the south and west by the Columbia River. The Lewis River is to the north and the Cascade Mountains lie to the east.
- Vancouver's climate is typical to the Pacific Northwest, which is characterized by wet, mild winters and hot, dry summers. The City receives approximately 42 inches of rainfall annually.[52]
- The City of Vancouver and the surrounding region have been shaped by a network of inland streams and wetlands that support a wide variety of vegetation and wildlife habitat, ranging from pasture and agricultural lands, riparian vegetation and woodlands. Historically, Vancouver's landscape was characterized by open meadows, conifer forests, mixed conifer-deciduous forests, and lowland riparian forests.[53]
- The alluvial floodplain contains mostly marshes and hardwoods, while the upland includes various substantial woodlands of 20 to 30 acres or more.[54]
- Critical Areas, which include 'wetlands, frequently flooded areas, fish and wildlife habitat and conservation areas, geologically hazardous areas, and areas with a critical recharging effect on aquifers used for potable water' are protected by the State of Washington Growth Management Act. In Vancouver, protections apply to areas including riparian buffers and special flood hazard zones.[55]
- Air quality is monitored in Clark County by the Southwest Clean Air Agency, which was created in response to the Washington Clean Air Act of 1967. The air quality in Clark County was good to moderate all but five days in 2022.[56]
- The City of Vancouver has multiple Superfund and Brownfield sites which includes the Alcoa, or Vancouver Smelter site, which is a property adjacent to the Columbia River. The City is actively working to inventory and assess brownfield sites within City limits which are targeted for clean-up through a partnership with the Clark County Public Health Department. Using a $600,000 Brownfields Coalition grant from the U.S. Environmental Protection Agency, the Brownfields Assessment Project will focus on the Fourth Plain area in central Vancouver and may include St. John's and/or St. James and Fruit Valley Areas.[57]

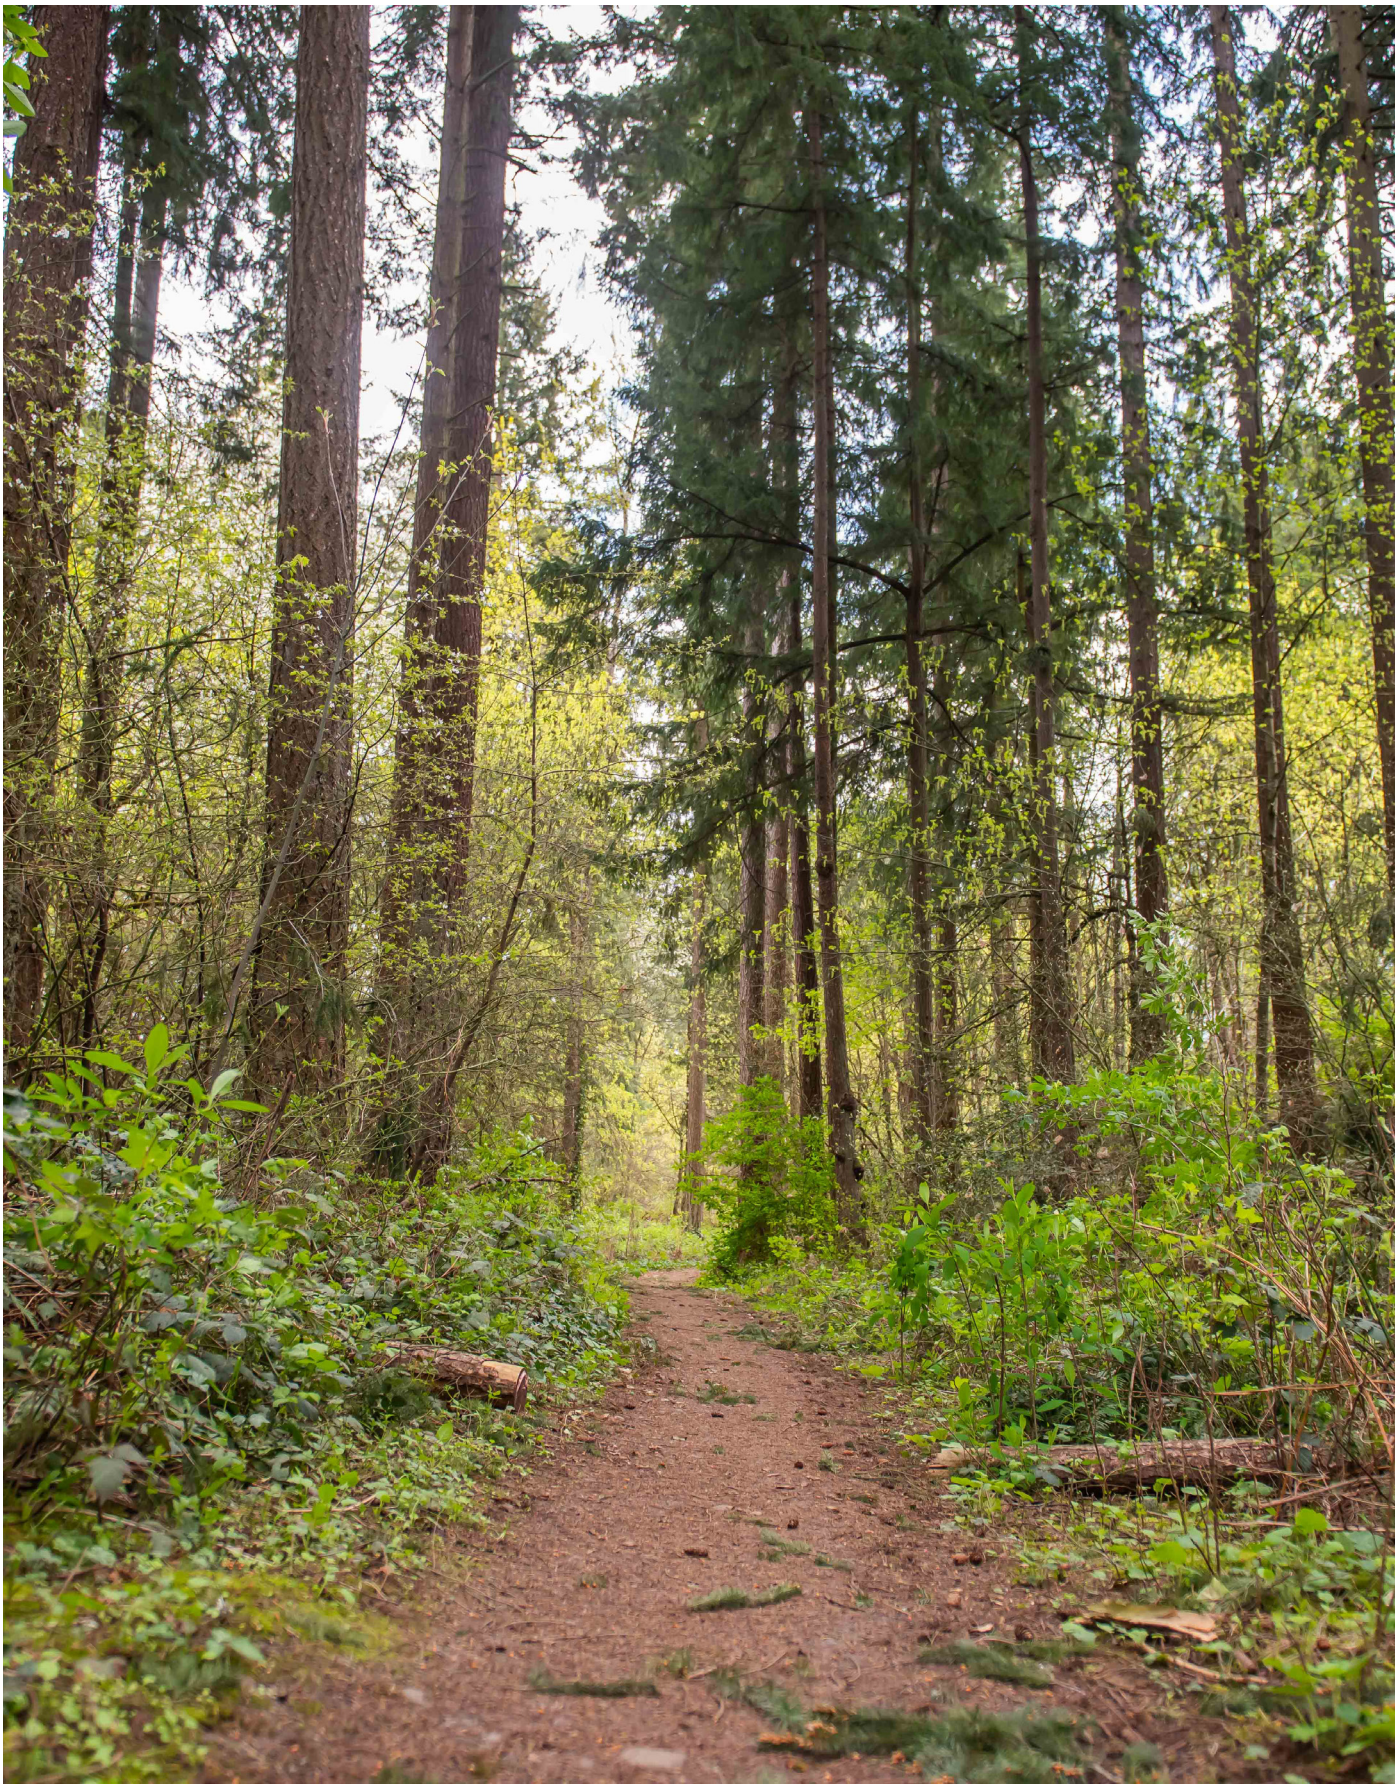

**Figure 18:** Tranquility Urban Natural Area

# ENVIRONMENTALLY SENSITIVE AREAS

The Growth Management Act requires that critical environmental areas are protected. Critical areas include wetlands, areas with a critical recharging effect on aquifers, fish and wildlife habitat, floodplains and geologically hazardous areas.

In addition to compliance with the Growth Management Act, Vancouver's municipal code includes a Critical Areas Protection Ordinance. The ordinance designates and protects ecologically sensitive and critical areas in Vancouver and describes reasonable use of those properties.[58]

Vancouver Lake is a vital regional resource that fulfils a variety of functions including wildlife habitat, flood control, wetlands, surface and groundwater hydrology and recreational amenities. However, the lake suffers from blue-green algae blooms that are toxic to humans and wildlife.[59]

The Clark County Conservation Areas Acquisition Plan, adopted in 2014, divides the County into watershed subareas to identify high value conservation lands. Within the City of Vancouver, the Plan identifies land in and around the Columbia South Slope, Vancouver Lake Lowlands and the Burnt Bridge Creek corridor.[60]

The Vancouver Parks, Recreation and Cultural Services Comprehensive Plan, adopted in 2022, recommends additional conservation lands along major riparian corridors, habitat areas and migration corridors, urban growth buffers, and areas with unique site qualities.[61]

## ENVIRONMENTAL PROTECTION FRAMEWORK

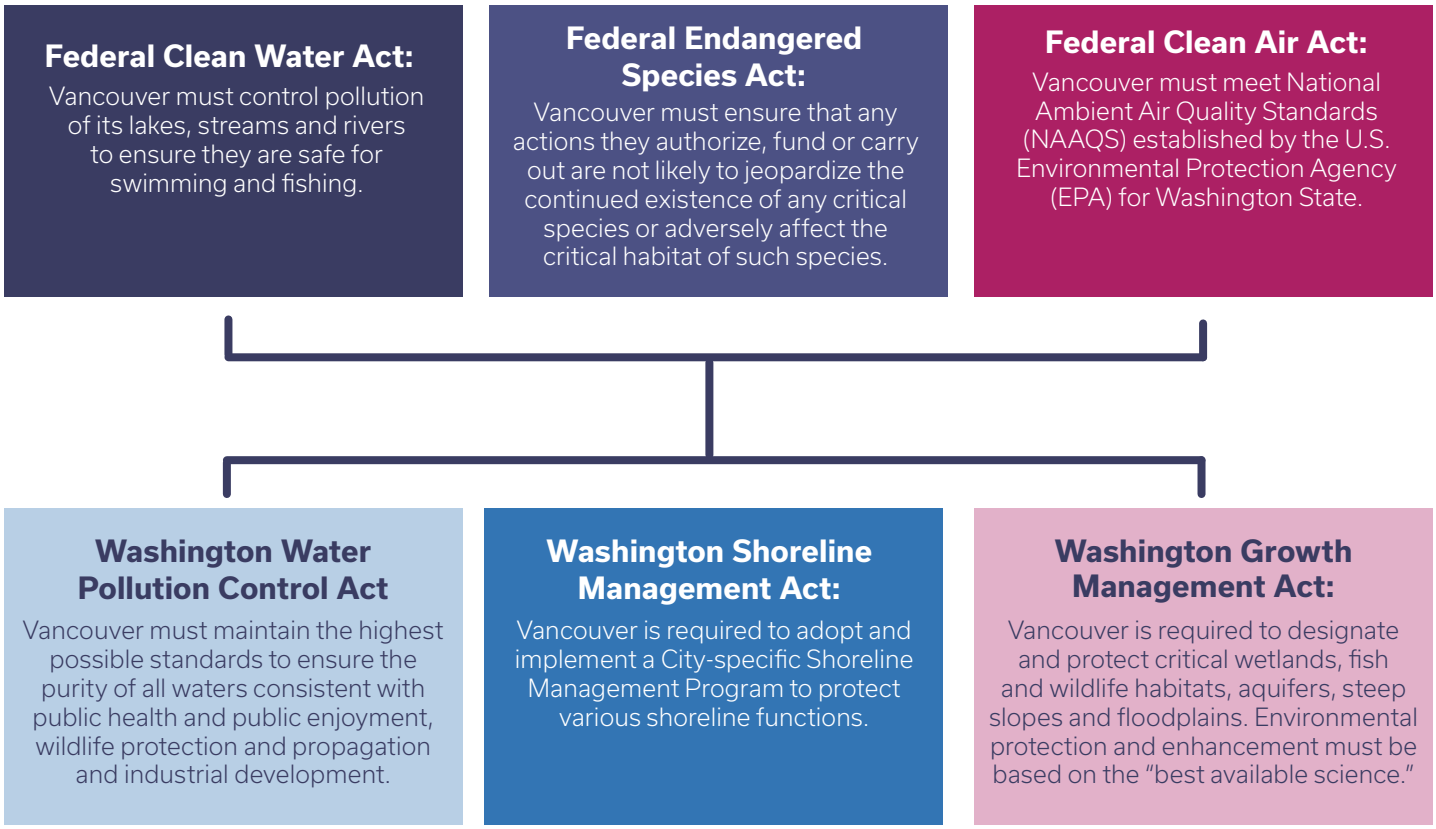

**Figure 19:** Environmental Protection Framework

## SUPERFUND + BROWNFIELD MAP

The purpose of this map is to highlight sites in the city that have actual or perceived contamination. This map depicts superfund and brownfield sites identified by the EPA (Environmental Protection Agency). There are four superfund sites throughout the City.

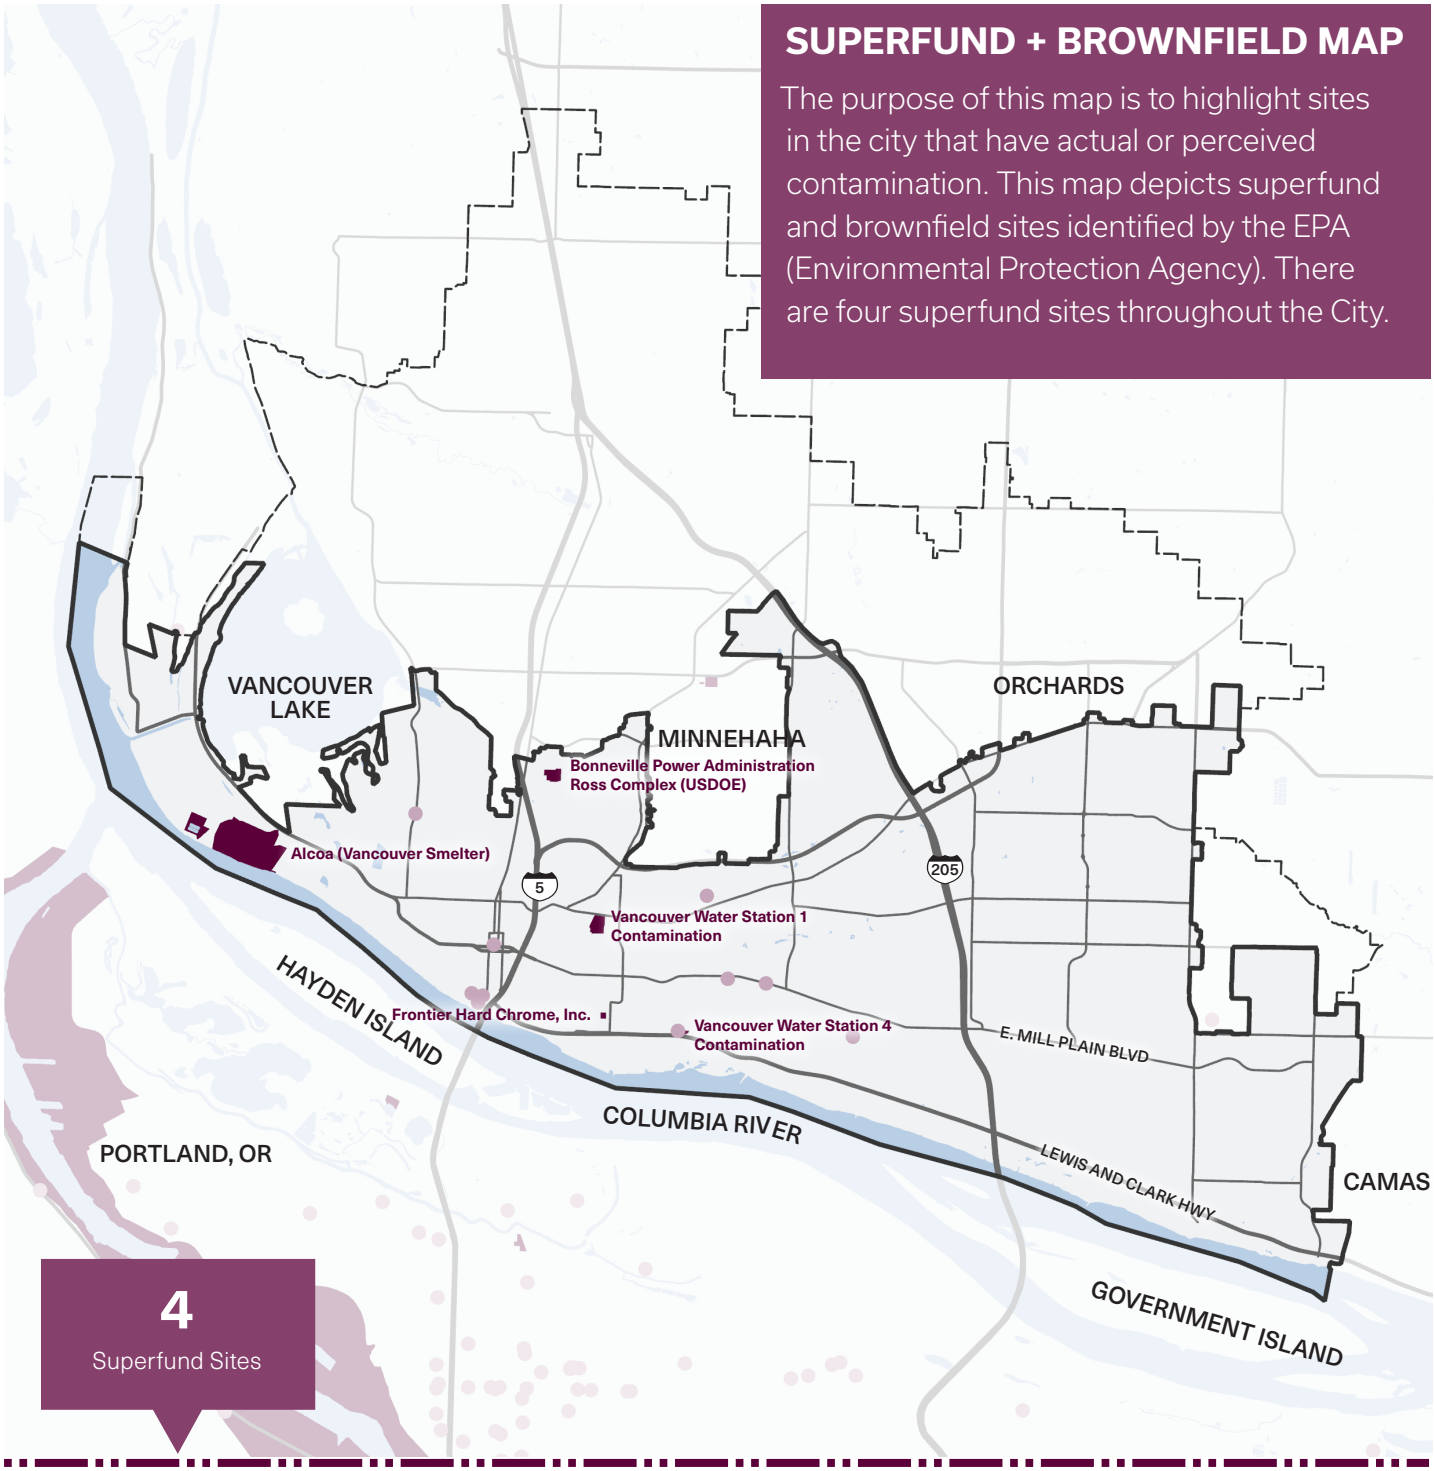

**Figure 20:** Superfund and Brownfields Map

miles

County of Clark, WA, Oregon Metro, Oregon state, State of Oregon GEO, WA State Parks GIS, Esri, HERE, Garmin, SafeGraph, GeoTechnologies, Inc, METI/NASA, USGS, Bureau of Land Management, EPA, NPS, USDA

# SUPERFUND + BROWNFIELD SITES

Superfund sites are set aside by the United States Environmental Protection Agency (EPA) as environmentally contaminated sites designated for clean up. Brownfield sites are sites whose redevelopment may be complicated by the presence of an environmental contaminant.[62]

There are several Superfund and brownfield sites throughout Vancouver, including the 300-acre Alcoa (Vancouver Smelter) site on the southwest side near the Columbia River. The Alcoa site was purchased by Port of Vancouver in 2009 and now hosts Terminal 5, a marine terminal for long-term storage and rail loading.[63]

The City of Vancouver is currently conducting a Brownfield Assessment Project which is a partnership with Clark County Public Health and the Vancouver Housing Authority. This project is utilizing a $600,000 Brownfields Coalition Grant from the U.S. Environmental Protection Agency. The Brownfield Assessment Project is focused primarily on assessments in the Fourth Plain area.[64]

The City has updated and expanded its inventory of Brownfields sites to include potential sites throughout Clark County and will work to complete at least 15 Phase I Environmental Site Assessments, complete at least 12 Phase II ESAs, prepare analyses - Analysis of Brownfield Cleanup Alternatives (ABCA) - for one hazardous substance site and one petroleum site. Additional clean up plans will be developed for up to two brownfield sites through Area-Wide Plans (AWP) or Final Clean Up Plans.[65]

The City has brought together a Brownfields Advisory Committee (BAC) which will provide guidance throughout the duration of the grant. Cataloguing ownership of these sites may be important for understanding what sites may be rehabilitated for parklands, housing, or other future development.[66]

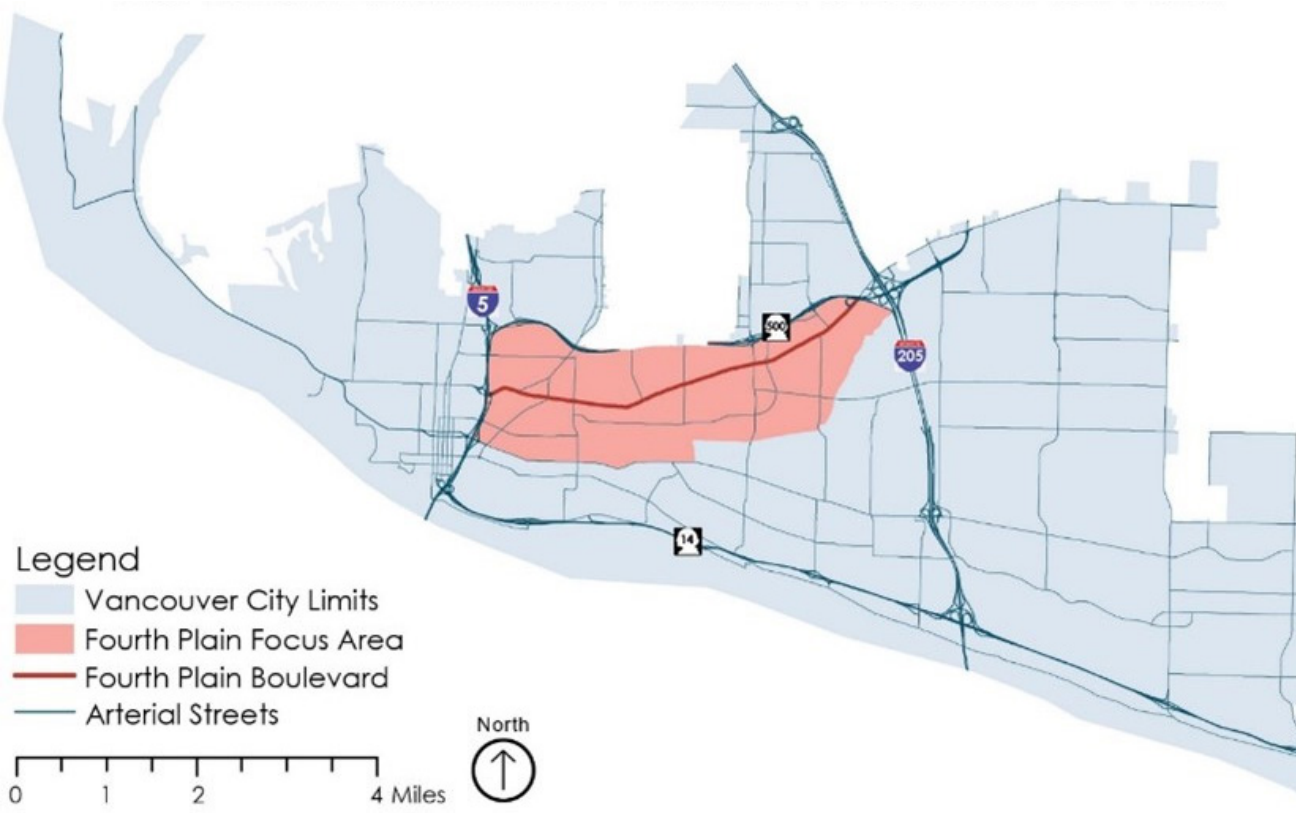

**Figure 21:** Brownfields Project Fourth Plain Focus Area Map

# WATER RESOURCES

Water is abundant in Vancouver – the City contains approximately 2,467 acres of wetland and 2,524 acres of water, which includes rivers, streams and lakes. All Vancouver drinking water comes from local groundwater.[67]

Vancouver's three main waterbodies (Columbia River, Burnt Bridge Creek, and Vancouver Lake) are all considered impaired by pollutants by the State of Washington Department of Ecology.[68]

Vancouver's floodplain is concentrated at the western edge of the city. Stormwater retention sites are distributed throughout the city.[69]

The Columbia River provides recreation opportunities, helps nurture wildlife, forests, agriculture, neighborhoods and businesses.[70]

The Burnt Bridge Creek Greenway links several green spaces across Vancouver through eight miles of paved trail alongside the Burnt Bridge Creek that pass through a variety of landscapes. Parts of the creek support fish species.[71]

Vancouver Lake serves as a haven for wildlife and migratory waterfowl. Visitors to the park can also enjoy views of Mount Hood, Mount St. Helens and Mount Adams on clear days.[72]

# TOPOGRAPHY

Ancient glacial flooding has molded Vancouver's landscape by depositing clay, silt, sand and gravel along the banks of the Columbia River.[73]

The City is relatively flat, but there are steep slopes along portions of the Columbia River, Burnt Bridge Creek and Vancouver Lake.

Approximately 20% of the City has a slope above 5%. Slopes of around 5% to 25% are highly prevalent on the southeast side of Vancouver touching Columbia River. Slopes of 25% or more are prevalent closer to the center of the city with around a two-mile radius.

It is important to understand where slopes are steep, as these sites may be more difficult to develop due to possible instability, erosion or drainage problems.[74]

Gravel pits are located sporadically throughout the City but are highly prevalent on the east side of Vancouver alongside high slopes (above 25%) and mines.

**Figure 27:** Old Evergreen Highway Aerial

# TREE CANOPY

Vancouver's 6,000 acres of tree canopy is composed primarily of Douglas fir, red cedar, hemlock, maple, and alder.[75]

Vancouver has continuously been recognized as a Tree City USA by the National Arbor Day Foundation, in partnership with the U.S. Forest Service and Washington State Department of Natural Resources Urban and Community Forestry Program. This recognition reflects Vancouver's commitment to effective management and care for its urban tree canopy.[76]

The 2011 Comprehensive Plan established a goal of 28% tree canopy cover by the year 2030.[77] As of October 2023, Vancouver reported 19% tree canopy cover (no change from 2010).[78]

Tree canopy ranges from 40% in the Dubois Park neighborhood to 9% in the Esther Short neighborhood.[79] The densest tree canopy is concentrated in the southeast near the banks of the Columbia River. There are significant gaps in tree canopy moving west along the river.

Tree canopy is more prevalent from the  center to the east of Vancouver. Dense tree canopy is concentrated along Lewis and Clark Highway and Burnt Bridge Creek. Tree canopy is more sparse in residential and industrialized neighborhoods.

The Urban Forestry Management Plan, published in October 2023, outlines a long-term framework to preserve Vancouver's urban forest, achieve tree canopy coverage goals and address environmental injustice.[80]

**EQUITY ANALYSIS FINDING**

Neighborhoods with higher proportions of people of color have 2.4% less tree canopy cover than the City average.

# WILDLIFE + HABITATS

Approximately 14% of Vancouver is considered Riparian Habitat, Habitat Area or Species Area based upon existing County, State and Federal data. Habitat Areas are located primarily in the center of the City along Burnt Bridge Creek as well as on the far East of Vancouver next to Camas, Washington. Most of the Species Areas are located along the west side of Vancouver. The Riparian Habitat is located along Burnt Bridge Creek and Columbia River. Additionally, Vancouver is an important stop for birds traveling along the Pacific Flyway and fish traveling along the larger Lower Columbia region fish migration route.[81]

The Washington Department of Fish and Wildlife (WDFW) identifies priority habitats and species to ensure protection and management. Priority habitats include riparian areas, freshwater wetlands and oak woodlands, while priority species include bald eagles, western grey squirrels and great blue herons.[82]

**Figure 31:** Fenton Park

**Figure 32:** Burnt Bridge Creek Regional Trail

# ONGOING CHALLENGES

Restoring and protecting Vancouver's natural areas requires ongoing maintenance, including hand work in shrub and native plant areas, removal of health and safety hazards, and the upkeep of natural areas impacted by human use.[83]

Air quality is an ongoing challenge for Vancouver, especially given the increasingly frequent wildfires. Despite its good to moderate air quality day-to-day, in 2023, Clark County received an "F" grade from the American Lung Association's State of the Air Report, which tracks ozone, particle pollution and populations at risk.[84]

Tree health management, species selection, and best practices in design and maintenance are essential to achieve Vancouver's tree canopy goals. The tree canopy goals established in the Urban Forestry Management Plan were developed to address discrepancies in tree cover between neighborhoods, particularly the 2.4% difference in tree canopy cover in neighborhoods with higher proportions of people of color.[85]

The Burnt Bridge Creek, Vancouver Lake, and the Columbia River are all considered impaired.[86] Vancouver must balance the recreation and economic functions of its waters while preserving their ecological function by enhancing water quality, improving drainage, protecting wetlands and other sensitive areas and preparing for flooding.

While Vancouver will not be uniquely affected by climate change, this is a major challenge the City must respond to in the coming years and which has been highlighted as a priority through the City of Vancouver Strategic Plan: 2023-2029 Update. In recent years the city has experienced heat waves, hazardous ice storms, and wilfire smoke - and has resolved to drastically cut greenhouse gases in order to achieve its adopted goal of carbon neutrality by 2040.[87]

# HISTORY AND CULTURAL RESOURCES

# HISTORY OVERVIEW

The City of Vancouver, situated on the north bank of the Columbia River, possesses a rich historic legacy that dates back thousands of years. At the time of European colonization, Vancouver was primarily occupied by the Chinook and Cowlitz tribes. Countless tribes from across the Pacific Northwest came to this area to trade with one another via the extensive network of waterways. Historically, the city was known for its prime location along the Columbia River, allowing access to abundant resources, trade, and shared goods.[88]

European settlement in Vancouver commenced in the late 18th century, when Captain George Vancouver of the British Royal Navy ventured into the area. In the early 19th century, the Lewis and Clark Expedition set foot on the site of Vancouver when exploring the west coast of North America, but it was not until 1825 that Fort Vancouver was established as a major trading post for the Hudson's Bay Company. This was a significant moment in history as this promoted the fur trading business and the economic development in the region.[89]

Around the mid-19th century, there were many settlers, primarily attracted by the Oregon Trail and promise of fertile lands. Vancouver was a major transportation hub enabling agricultural products to reach broader markets along the West Coast. This period of rapid growth led to the congressional approval of the formation of Vancouver as an official City in 1857.[90]

Throughout the 20th century, Vancouver experienced significant industrialization, urban development, and population growth. During this time it established numerous industries such as shipbuilding, lumber, and manufacturing.[91]

Many historic sites and buildings have been revitalized to preserve their unique architectural characteristics and embrace Vancouver's history. The City of Vancouver is popularly recognized for its historic site, Fort Vancouver. Fort Vancouver has a rich, long history from its establishment as a major trading post in the 19th century to its role as an Army post during the Second World War. Fort Vancouver and other historic sites are preserved to educate residents on Vancouver's history and how the city developed into what it is now.[92]

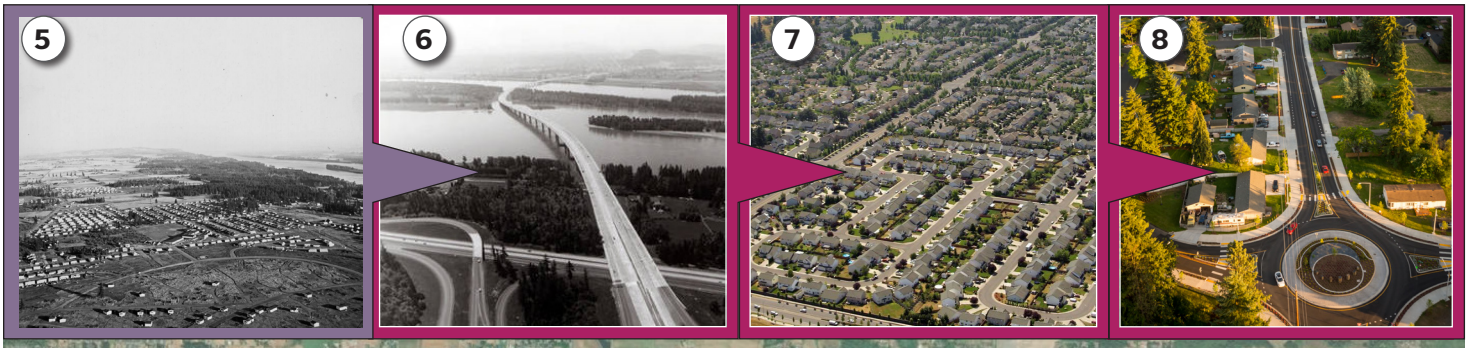
**10,000 years ago - 1825** The first people establish communities in the area that is now Vancouver and Clark County, including Chinook and Cowlitz tribe settlements.

**1825** Hudson's Bay Company arrives and establishes Fort Vancouver.

**1857** The City of Vancouver is incorporated with approximately 1,722 people.



**1909** Vancouver's first annexation, approximately 2,670 acres, quadruples the geographic size of the city.

**1917** The I-5 Bridge opens, providing access for motor vehicles and trolley service.

**1945** Vancouver Housing Authority adopts a plan for wartime housing projects to support the growing population.

# HISTORICAL DEVELOPMENT TIMELINE

The area that is now Vancouver was first inhabited more than 10,000 years ago by the Chinook and Cowlitz people. Since the establishment of Fort Vancouver in 1825, Vancouver has generally expanded eastward. While distinct planning efforts over time, such as the 1994 Visions for the Vancouver Urban Area, have aimed to focus Vancouver's growth into centers and corridors, additional suburban expansion has continued to occur through annexations.

**1957** City of Vancouver adopts its first comprehensive plan, establishing segregated land uses and residential street patterns.

**1973** Oregon adopts Senate Bill 100, which establishes limits on urban growth and pushes residential growth toward Vancouver.

**1982** Infrastructure-driven growth expands the population and city size; I-205 opens, increasing access between Portland and Vancouver.

**1997** Guided by the 1994 comprehensive plan, Vancouver annexes a large area of unincorporated Clark County, adding 58,000 new residents which nearly doubles the population.

**2010 - 2020** Job opportunities and relatively low cost of living continue to grow the city. The population increases by 30,000 new residents and BIPOC communities in Clark County grow by nearly 60%.

# CELEBRATING OUR COLLECTIVE HISTORY

Today, Vancouver is a spirited and vibrant community known for its natural beauty, cultural richness, and community-led efforts to preserve, educate, and celebrate its history through initiatives and organizations. The City of Vancouver plays a key role as an educational and cultural hub in the larger metropolitan region.

Historic preservation is crucial to the community and fabric of Vancouver. Multiple organizations and services in the City of Vancouver, including the Historic Trust, and the National Park Service, work to preserve the City's heritage and historic landmarks.

The Historic Trust is an organization that manages several City-owned historic properties and educates residents and visitors about Vancouver's community and history. The Historic Trust organizes a variety of engaging programs and events for visitors. These include military history talks on The Vancouver Barracks, interactive games, First Friday concerts features The NE Plus Ultra Jazz Orchestra, informative lectures, museum history talks, and guided tours.[93]

The Historic Trust signed a master lease with the City of Vancouver in 2006, which allowed the Trust to maintain and preserve historic structures such as Officers Row, the West Vancouver Barracks, and other associated residential and commercial leases consisting of the Artillery Barracks, the Evergreen Arboretum, the Marshall House, the O.O. Howard House, the Providence Academy Ballroom and Chapel, and the Red Cross Building.[94]

The National Park Service (NPS) provides a range of activities and programs, including the Vancouver National Historic Reserve. The National Historic Reserve includes 252 acres of protected land and was recognized congressionally in 1996. It is considered to be the foremost historic archaeological site in the Pacific Northwest and includes many recorded archaeological sites, most of which are also on the National Register.[95]

The NPS oversees the City's main historic landmark, Fort Vancouver. Fort Vancouver and its surrounding areas offer several fascinating places to explore and delve into the area's history, and is culturally significant to the greater region. The NPS aims to preserve and educate the public about both the evolved history of Fort Vancouver and its current conditions.[96]

The NPS provides many different services and opportunities for programming for all ages. These programs include opportunities for passive and active recreation, visiting the Fort Vancouver Garden or the Japanese Castaways' Memorial, and indoor activities including watching a blacksmith work or learning what it takes to be a Junior Ranger at the Fort Vancouver National Historic Site. Educational opportunities for students include field trips, youth volunteer programs, and other training programs to encourage learning and growth.[97]

The NPS also oversees several other fascinating historic places that preserve and educate Vancouver's dynamic cultural history, including the Pearson Air Museum, The Village, The Vancouver Barracks, and the McLoughlin House.[98] Additional historic programming in the City of Vancouver includes military history talks, lectures, Providence Academy tours, Marshall House tours, and Botanic Garden self-guided tours.[99]

## EQUITY FRAMEWORK

As part of the Comprehensive Plan and Title 20 Update Equity Framework, the City of Vancouver has documented historic actions that have informed present day Vancouver's built form. A summary of this information can be found in the historic timeline on Page 42, with full document available on the City's community engagement website Be Heard Vancouver (www.beheardvancouver.org).

**Figure 35:** Marshall House Vancouver Barracks

## HISTORIC SITES + DISTRICTS MAP

The purpose of this map is to identify areas of historic significance in the City. This map depicts historic sites in the city. The data is divided into 3 categories: the National Register of Historic Places, the Washington State Heritage Register, and the Clark County Heritage Register & Historic Resource Inventory.

# HISTORIC PRESERVATION PROGRAM

The Clark County Historic Preservation Commission coordinates historic preservation for Clark County, including the City of Vancouver. The Commission's responsibilities include maintaining the local Heritage Register and administering historic preservation incentive programs.[100]

The City's Historic Preservation Ordinance ensures the recognition, assessment, and safeguarding of cultural and historic assets within Vancouver. It actively promotes the preservation, restoration, and rehabilitation of these resources, ensuring their conservation for the benefit of current and future generations.[101]

The Vancouver Municipal Code 17.39 applies to properties in Vancouver and includes eligibility criteria for historic and cultural resources in Clark County, in addition to the National Register of Historic Places and Washington State Heritage Register.[102]

The City of Vancouver also requires an archaeological predetermination, or study, which is intended to assist staff and decision-makers in understanding whether the existence of an archaeological site within a development or disturbance site is likely. This study is linked to the Archaeological Probability Map. These regulations include requirements, exemptions and standards to assist development applicants and city staff in understanding site context and importance.[103]

The City also has a large number of mid-20th century buildings (approximately forty-three residential, commercial and institutional structures) that have been surveyed. This work intends to raise awareness around the significance of this architectural period and highlight the need for preservation of these properties.[104]

# SPOTLIGHT ON ARTS + CULTURE

The City of Vancouver boasts a vibrant cultural scene. The arts play a vital role in enhancing the unique character and identity of Vancouver.

The City is home to a variety of artists, arts, and cultural organizations. This rich artistic landscape not only provides vibrancy to the City but also contributes to its economic prosperity, health, and overall well-being through the provision of public art installations and murals throughout parks, open spaces and along sidewalks. The City currently owns over 20 pieces of outdoor art and has over 50 murals within city-limits.[105]

The City of Vancouver places a strong emphasis on its culture, arts and heritage. To support these efforts, the City adopted the Culture, Arts and Heritage Plan in 2018.[106]

The City defines culture as being conveyed through any of the following: language, customs, knowledge, cuisine, institutions, music, dance, theater, and those elements which embody the distinguishing characteristics of everyday existence. The City acknowledges and appreciates that art is considered to be a powerful medium to communicate, evoke emotion, and convey ideas. The City also understands the importance of heritage as an integral part of Vancouver's cultural fabric, encompassing traditions, languages, buildings, and other historical contexts that have been passed through generations.[107]

Through partnership with the Fourth Plain Forward, the City has seen almost 20 murals installed along Fourth Plain Boulevard through the Summer of Murals Program.[108]

Vancouver's Art, Culture, and Heritage initiative includes an inventory of the City's cultural assets and art community needs: Unique Neighborhoods, The Fort, Parks, Public Art, Downtown, Columbia River, Vancouver's Downtown Association, Leaders, Our Surrounding Natural Beauty, Leaders, National Park Service, Historical Museum, Local Artists, Arts, Dance, Theater and Music Organizations, Education System, The City Organization, Our Proximity to Portland, Art Donors, Arts and Cultural Events, Vancouver's History.[109]

# BUILT ENVIRONMENT

# BUILT ENVIRONMENT OVERVIEW

Development in the City of Vancouver is guided and allocated by zoning, codified in Vancouver Municipal Code (VMC) Title 20, Land Use and Development Code. The City of Vancouver designates various use types within each zoning category which includes residential, commercial, and industrial zone districts in addition to specialized zone districts for mixed uses and parks and open spaces.[110]

The City of Vancouver features a range of building typologies and land uses, including residential uses (single family, duplex, multi-family) essential services, retail, commercial, industrial, civic, amenity services, and parks and recreation.[111]

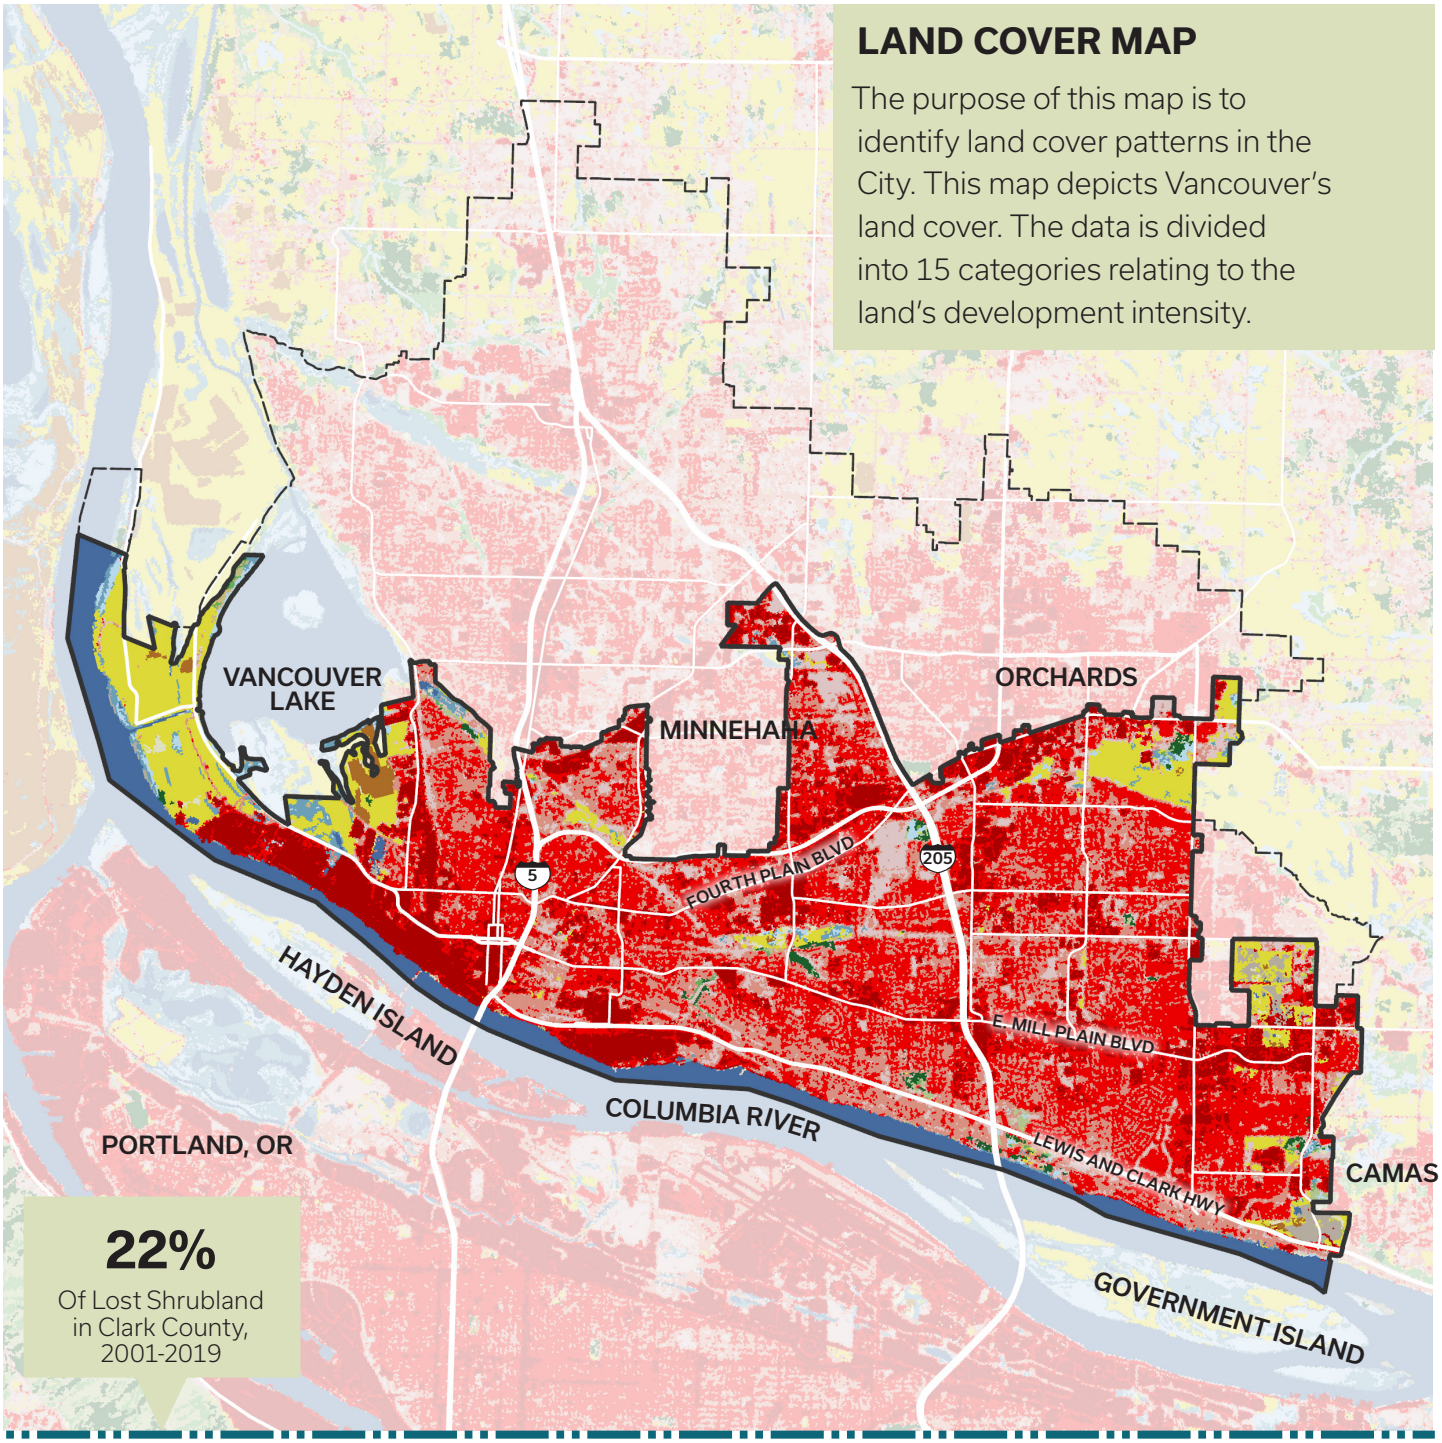
The City currently reports a housing unit deficit of 4,000 units, and the housing stock will need to accomodate a growing population.[112]

The City recently updated its Transportation System Plan (TSP) which, similar to a comprehensive plan, provides visionary guidance for the future based on existing conditions, trends, community engagement, and available funding mechanisms.[113]

## LAND COVER

Land cover data was obtained by the National Land Cover Database, created by the Earth Resources Observation and Science (EROS) Center. This database is updated every five years and provides historical data on landcover change taking into consideration urban imperviousness and tree canopy. Analyzing the City of Vancouver and surrounding areas reveal a high percentage of medium and high-intensity developed parcels, indicating an urbanizing environment. Between 2001 and 2019, the City of Vancouver lost approximately 22% of its shrubland cover.[114]

The analysis also indicates low levels of several land cover categories including developed open space, deciduous forest, evergreen forest, mixed forest, shrubland, grasslands, cultivated crops and woody wetlands.[115]



Based upon existing conditions and growth projections, the City of Vancouver can expect that trends captured in the land cover map will continue through the horizon of the Comprehensive Plan, Our Vancouver Our Future 2045. These trends align with the conditions of the Urban Growth Area.

**Figure 38:** Vancouver Aerial

## LAND COVER MAP

The purpose of this map is to identify land cover patterns in the City. This map depicts Vancouver's land cover. The data is divided into 15 categories relating to the land's development intensity.

# ZONING + OVERLAYS

Given Vancouver's significant cultural, demographic, and economic transformations, assessing the existing zoning designations within the City's communities is integral to fostering a prosperous and equitable future for all residents. As part of the Comprehensive Plan and Title 20 Code Update, the City of Vancouver will conduct a thorough and comprehensive assessment of existing policies and zoning districts in order to understand how future policies and zoning code updates may better serve the Vancouver community. Zoning is an essential tool to integrate the City's diversity, equity and inclusion (DEI) principles into the built environment.

The Washington State Growth Management Act mandates that Vancouver Municipal Code (VMC) Title 20 aligns with the comprehensive plan and local community objectives.[116] This requirement ensures a sustainable and comprehensive approach to administering land use, preserving natural resources, and promoting environmentally friendly design practices. The City emphasizes the integration of cultural diversity and heritage, while simultaneously supporting and fostering a wide range of employment opportunities and businesses. Additionally, the City prioritizes the provision of high-quality urban services to residents.

The City of Vancouver designates various use types within each zoning category. Residential zoning is broken into zones of single- and multi-family housing, with the numerical value denoting the minimum lot size allocated to each zone. For instance, R-9 would require a minimum lot size of 5,000 square feet (equivalent to 9 units per acre) with a maximum building height of 35 feet.[117]

The City also establishes specific zoning requirements for commercial use, denoted by codes such as CN, CC, CG. The CN designation is the Neighborhood Commercial Zone which permits a limited range of retail services to cater to nearby neighborhoods. Maximum building height in the CN zone is 35 feet. The Community Commercial, or CC zone, serves larger areas and allows for a maximum building height of 55 feet. The General Commercial, or CG zone, generally permits a broad range of services, including major facilities, without a height limit. Additional commercial designations include the City Center (CX), the Waterfront Mixed-Use (WX), the Central Park Mixed-Use (CPX), the Mixed-Use District (MX), the Riverview Gateway District (RGX) and the Heights District (HX) zones. These additional zoning districts allow for targeted commercial and mixed-use development types with varying dimensional allowances.[118]

Industrial zones include Light Industrial (IL), Heavy Industrial (IH), and Office Commercial Industrial (OCI) and the Employment Center Mixed-Use (ECX).[119]

The City also incorporates specific specialty zones tailored to meet the community's needs, such as those designated specifically for parks or open spaces. These include Natural Areas (NA), Greenway (GW), and Park.[120]

# BUILDING USES

Buildings in Vancouver include residential uses (single-family, duplex, multi-family) essential services, retail, commercial, industrial, civic, amenity services, and parks and recreation. As indicated in the building use map, the predominant portion of parcels are residential uses, either single-family or duplex residences. However, there are concentrations of multi-family units along the Fourth Plain corridor and to the north and south of the Mill Plain corridor.

Information from the City of Vancouver Development Dashboard indicates there are over 2,000 applications for residential development as of Q4 2023, which includes renovations, additions, and new construction in various stages of development. The City also has almost 550 multifamily residential applications, 883 building commercial use applications, and 47 mixed-use residential use applications. Commercial use permits are generally located along major thoroughfares while mixed-use residential permits have been concentrated in downtown Vancouver and along Fourth Plain Boulevard. Multi-family projects are dispersed across downtown Vancouver, Fruit Valley, and central Vancouver neighborhoods including Central Park, Bagley Downs, Harney Heights, Edgewood Park, Ogden, Marrion and Burton Ridge.[121]

**Figure 41:** Single Family Home

**Figure 42:** Multi-Family Housing

**Figure 43:** Subdivision

**Figure 44:** Commercial Corridor

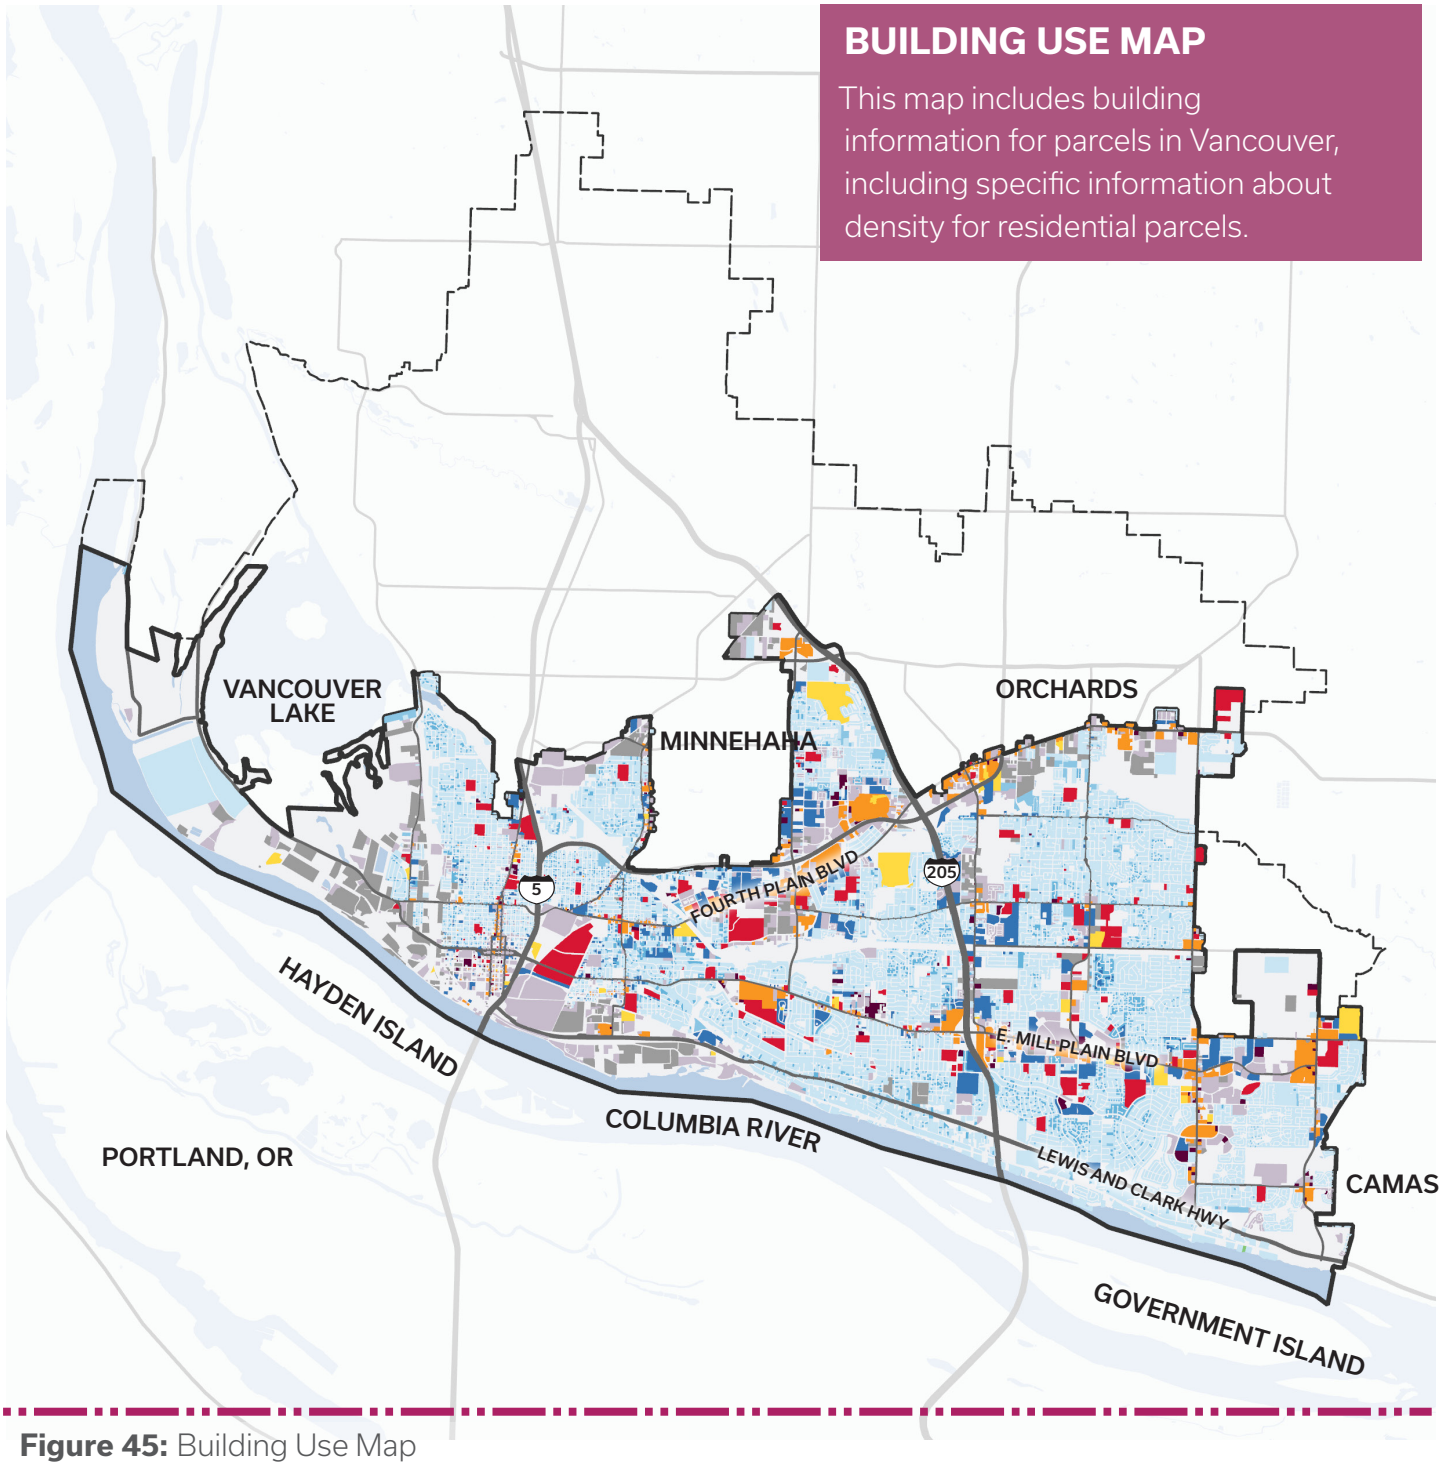

**Figure 45:** Building Use Map

# HOUSING

Vancouver's housing market has experienced significant changes and challenges over the past decade. This is especially true in recent years, as trends have shifted through the COVID-19 pandemic. The average value of a single-family home has grown significantly and while median income has also increased, it has not tracked with the 129% increase in home value.[122] In 2021, the median monthly mortgage payment was $1,734 and in March 2022, the average market rent for a 1-bedroom unit in Vancouver was $1,411.[123]

A large portion of Vancouver renters are cost-burdened, meaning more than 30% of their income is spent on rent. Over 20% of residents are considered extremely cost-burdened, spending more than 50% of their income rent.[124] Rental cost burden threatens other aspects of security and wellbeing for vulnerable populations, including important measures like food security. While there has been a significant uptick in the total number of housing units in Vancouver between 2010 and 2021, there is still a deficit both in Vancouver and at a County level. This shortage has contributed to rental affordability challenges for Vancouver community members.[125]

Approximately, 48% of Vancouver residents rent their home. This is a large renter population compared to Clark County (34%), Washington State (36%) and the United States (35%).[126]

In 2021 there were 83,868 housing units in Vancouver, a 32% increase from 63,620 in 2010. There is an estimated deficit of 13,500 housing units in greater Clark County (7% of the existing housing stock), including a 4,000-unit deficit within the City of Vancouver (5% of the existing housing stock).[127]

There has been significant public investment in the Waterfront and Downtown areas in recent years, and private investment has followed in the form of new multi-family housing, retail and commercial spaces. It is important to stabilize affordable housing options in neighborhoods targeted for public investment so that households of lower economic means can enjoy the benefits of infrastructure and amenity improvements.[128]

**Figure 46:** Multi-Family Housing Development

## HOUSING NEEDS ASSESSMENT

The City of Vancouver is currently creating an updated Housing Needs Assessment which provides in-depth detail on recent market trends. The full document can be found in the City's community engagement website Be Heard Vancouver (www.beheardvancouver.org).

## HOUSING STOCK

There is an estimated 4,000-unit housing deficit within the City of Vancouver. Of the 3,481 vacant housing units in Vancouver, only 31% are for rent.[129]

Vancouver's housing stock is fairly young, with most structures built between 1990 and 1999. The median year built is 1985.[130]

More than half of housing units in Vancouver are detached single-family structures. However, between 2019 and 2021, 80% of new construction in Vancouver was multifamily. Around 2,000 of Vancouver's 79,000 housing structures are mobile homes.[131]

## HOUSING VULNERABILITY

Based on an assessment conducted for the Reside Vancouver Plan, Central Vancouver is the most socioeconomically vulnerable area in the City, specifically the Meadow Homes and Maplewood neighborhoods.[132]

As of Q2 2023, Clark County's Housing Affordability Index (HAI) was 68.2, meaning that a family earning the median household income has 68.2% of the income necessary to qualify for a loan covering 80% of a median-priced home. This value indicates that there is an affordability gap in Clark County's housing market.[133]

## INCOME-BASED HOUSING

Vancouver Housing Authority (VHA) is the public housing authority for Vancouver. VHA currently administers approximately 200 public housing units, 3,350 Housing Choice Voucher units and 25 units of local, non-traditional housing.[134]

VHA is a participating agency in the Moving to Work (MTW) program under the U.S. Department of Housing and Urban Development (HUD). Under the MTW program, VHA is granted the flexibility to design and test innovative, locally designed strategies that use Federal dollars more efficiently and increase housing choices for low-income families.[135]

## CURRENT HOUSING POLICIES

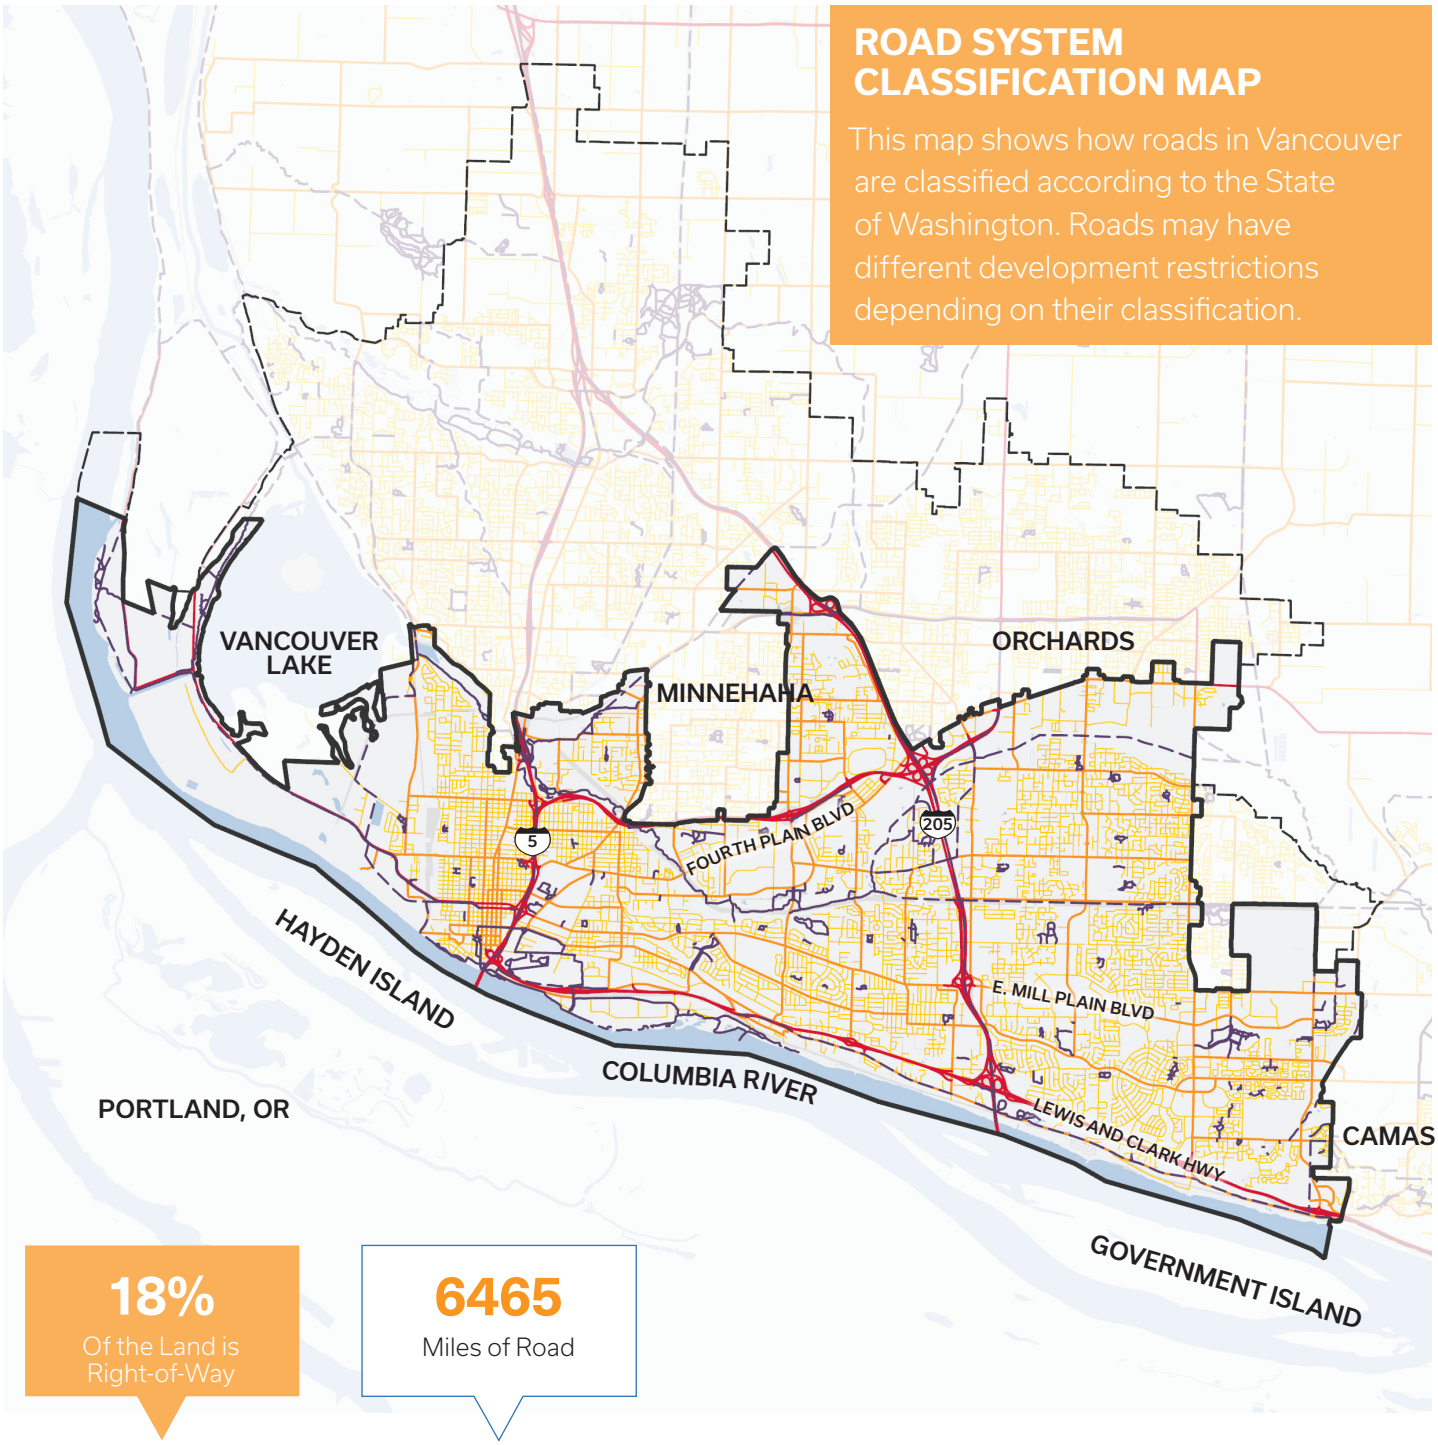
- **Affordable Housing Fund (AHF):** In 2016, Vancouver established a $42mm AHF. This fund can be used to build and preserve long-term affordable housing, provide shelters to people experiencing homelessness and provide rental assistance to households at risk of eviction. The AHF was set to expire in 2023 but should be renewed to protect residents experiencing housing insecurity.[136]
- **Emergency Rental Assistance (ERA) Program:** $1.25mm of the AHF is allocated annually to support the existing ERA Program, but given the impending expiration of the AHF, the ERA Program may need to secure alternate funding. Following the renewal of the AHF, the ERA Program should be expanded to keep pace with demand.[137]
- **Land Acquisition and Management Strategy:** Vancouver should develop a strategy to acquire and redevelop publicly owned land by transferring its properties to affordable housing developers.[138]
- **Community Land Trust (CLT):** A CLT acquires land to maintain housing affordability in perpetuity. Existing CLTs in Vancouver include Proud Ground and Evergreen Habitat for Humanity.[139]

## POLICIES TO CONSIDER

- **Right of First Refusal Program:** A Right of First Refusal allows CLTs the first option to purchase residential properties. This allows the CLT to purchase the property at full market value and maintain it at affordable levels in perpetuity to provide either rental or homeownership opportunities to low-income households.[140]
- **Amended Multifamily Tax Exemption (MFTE):** The Multifamily Tax Exemption could be restructured to require developers seeking the 8-year property tax exemption through the 'Development Agreements' route to instead form Community Benefits Agreements (CBAs). CBAs would allow community organizations and residents to have input in the outcomes and processes associated with new development.[141]

# TRANSPORTATION

Vancouver is home to the region's first bus rapid transit (BRT) system. The BRT is known as the Vine BRT and it runs along the Fourth Plain corridor. The Vine BRT opened in 2017 and has since decreased travel time for riders by 12%, with up to 10 minutes saved per trip. Bus ridership has increased by 45% while per-passenger cost decreased by 21%. Bus routes in Vancouver connect residents within the city and to Portland and neighboring municipalities. Approximately 25% (47,679) Vancouver residents live within a quarter mile of the Mill Plain BRT and the Vine BRT.[142]



As of 2021, 82% of Vancouver residents drove to work. Additionally, car crashes increased by 29% between 2010 and 2019. The 2024-2044 Transportation System Plan (TSP) proposes a framework for future transportation investment intended to reduce car dependency and improve mobility safety for all, regardless of ability, age, race, ethnicity or income.[143]

## TRANSPORTATION SYSTEM PLAN

- The City's transportation system is guided by the Transportation System Plan (TSP), which provides policy direction on transportation infrastructure investments in the City but also looks regionally to support transportation needs.
- The Plan covers all forms of mobility including travel by car, transit, bicycle and wheelchair.
- Similar to the Comprehensive Plan, the TSP captures existing conditions and trends and utilizes community input to guide the development of policies, programs and projects that reflect the needs of all community members and those who travel in, around, and through the City of Vancouver.
- In 2024, the City of Vancouver published its newest update to the TSP, which was last updated in 2004. Community engagement established a set of initial project goals, including safety, equity, climate, transportation choices, regional connectivity, and maintenance. An updated plan with existing condition findings and proposed policies and recommendations can be found on the City's website.
- The initial project goals for the TSP are related to those that will likely guide the development of the Comprehensive Plan Update, including how to create connected thriving neighborhoods, how to create complete corridors, how to connect community members to transit opportunities, how to promote and protect pedestrians and cyclists and how to evolve with changing transportation technologies.

## ROAD SYSTEM CLASSIFICATION MAP

This map shows how roads in Vancouver are classified according to the State of Washington. Roads may have different development restrictions depending on their classification.

## ONGOING PLANS + RECENTLY COMPLETED EFFORTS

- **Transportation System Plan:** Vancouver is on track to adopt a new Transportation System Plan in Spring 2024.
- **Fourth Plain Boulevard and Fort Vancouver Way:** The roadway will be reconfigured and repaved. The plan will evaluate the potential of repurposing a travel lane to improve safety, mobility and accessibility.
- **SE 34th Street:** The street will receive a microsurfacing treatment. The plan will evaluate the potential of adding bicycle facilities, slowing speeding vehicles and increasing transit access.
- **McGillivray Boulevard:** The plan will evaluate safety improvements to better meet the needs of pedestrians, bikers, people using mobility devices and drivers. Ahead of a planned pavement project, the plan will also explore opportunities to improve safety and comfort on the corridor.
- **Tech Center Drive:** The road received safety improvements, increased multimodal access to a major employment center and filled an important gap in Vancouver's bike network. Improvements were completed in 2021.
- **McLoughlin Boulevard:** Permanent speed cushions and flashing light intersection crossings were installed along the boulevard. The road included a pilot of buffered bike lanes and "sharrows" (shared lane markings). Improvements were completed in 2019.
- **Columbia Street Safety and Mobility Project:** The street will receive paving, microsurfacing and mobility improvements along with additional street trees.

# ECONOMY

# LOCAL ECONOMY OVERVIEW

Vancouver's strategic location along the confluence of several rivers has sustained human settlement for thousands of years.[144] As the City grows and changes, its geography and its connection to the river remains an important asset.

The Chinook people lived in what is now Vancouver for 10,000 years before European contact, and their proximity to the rivers allowed them to become prolific traders who lived in relative abundance. In 1825, the original Hudson's Bay Company (HBC) established Fort Vancouver and the City grew to become the regional center of commerce. After HBC relocated to Canada, and until the Second World War, Vancouver's economy was composed of logging and lumber mills, railroads and agriculture, primarily prune farming.[145]

World War II brought industry and population to Vancouver, but the decline in industrial jobs after the war led to unemployment, population loss and disinvestment, particularly in the African American community.[146] The construction of I-5 and later the I-205 bridge further disrupted the existing urban fabric, making downtown more difficult to access and drawing businesses away from the city.[147]

More recently, Vancouver has attracted a growing and diverse community, and it is poised to revitalize its historic industrial legacy. Situated in the heart of the Pacific Northwest, Clark County is exceptionally well-positioned to access major West Coast, Midwest and international markets through multimodal connections to I-5 and I-84, deep-water ports, rail and the Portland International Airport (PDX).[148]

## EQUITY ANALYSIS FINDING

Following World War II, Vancouver's Black community experienced 77% unemployment as job discrimination ran rampant.

Today, Vancouver is relatively affordable compared to nearby cities. Forbes reports that the cost of living in Vancouver is 15% less than in Portland.[149] It attracts young working people and has a strong and diverse small business community, mostly clustered on the west side. The City is already preparing its economy for future growth and an increasingly multicultural population, and is working to expand protections and opportunities for small business ownership and revitalize its commercial corridors.

**Figure 53:** Heights District

**Figure 54:** Vancouver Waterfront Park

# EXISTING ECONOMIC CONDITIONS

**Figure 55:** Industrial Area

## INDUSTRIES

There are approximately 7,840 businesses in Vancouver. In certain neighborhoods, including Fourth Plain, at least one-third of businesses are minority owned or cater to communities of color.[150]

The largest percentage of businesses in Vancouver are in the service sector, followed by retail, then finance, insurance and real estate.[151]

As of 2019, around a third of Vancouverites commuted across the Columbia River to work in Portland, Oregon,[152] suggesting that many residents do a portion of their day-to-day spending out of state. Updated data is needed to determine how the rise of remote work following COVID-19 has affected this trend.

Clark County is a driving force behind the greater Portland-Vancouver region's reputation as "Silicon Forest", with companies like Logitech, TSMC, Silicon Forest Electronics, SEH America and others calling Clark County home.[153]

Computer and electronics is a strong legacy cluster for the county. Computer and electrics, along with other emerging high-paid industries like clean tech, software, metals and machinery and life sciences have existing clusters in Vancouver.[154]

According to the 2017 Census of Agriculture (the most recent year for which data is available), there were 750 farms in Clark County totaling nearly half a million acres and $99 million in annual sales. Vancouver also has several local purveyors of locally sourced and/or made goods including a meat and food processing establishment.[155]

27% of all parcels in the City are zoned for commercial uses. 17% of all parcels in the City are zoned for industrial uses. There are 5,583 acres of vacant land across the city, 19% (1,059 acres) of which is publicly owned. Vacant lands are based on Clark County's vacant buildable lands model and additional growth truthing will be needed as part of the comprehensive planning update process.

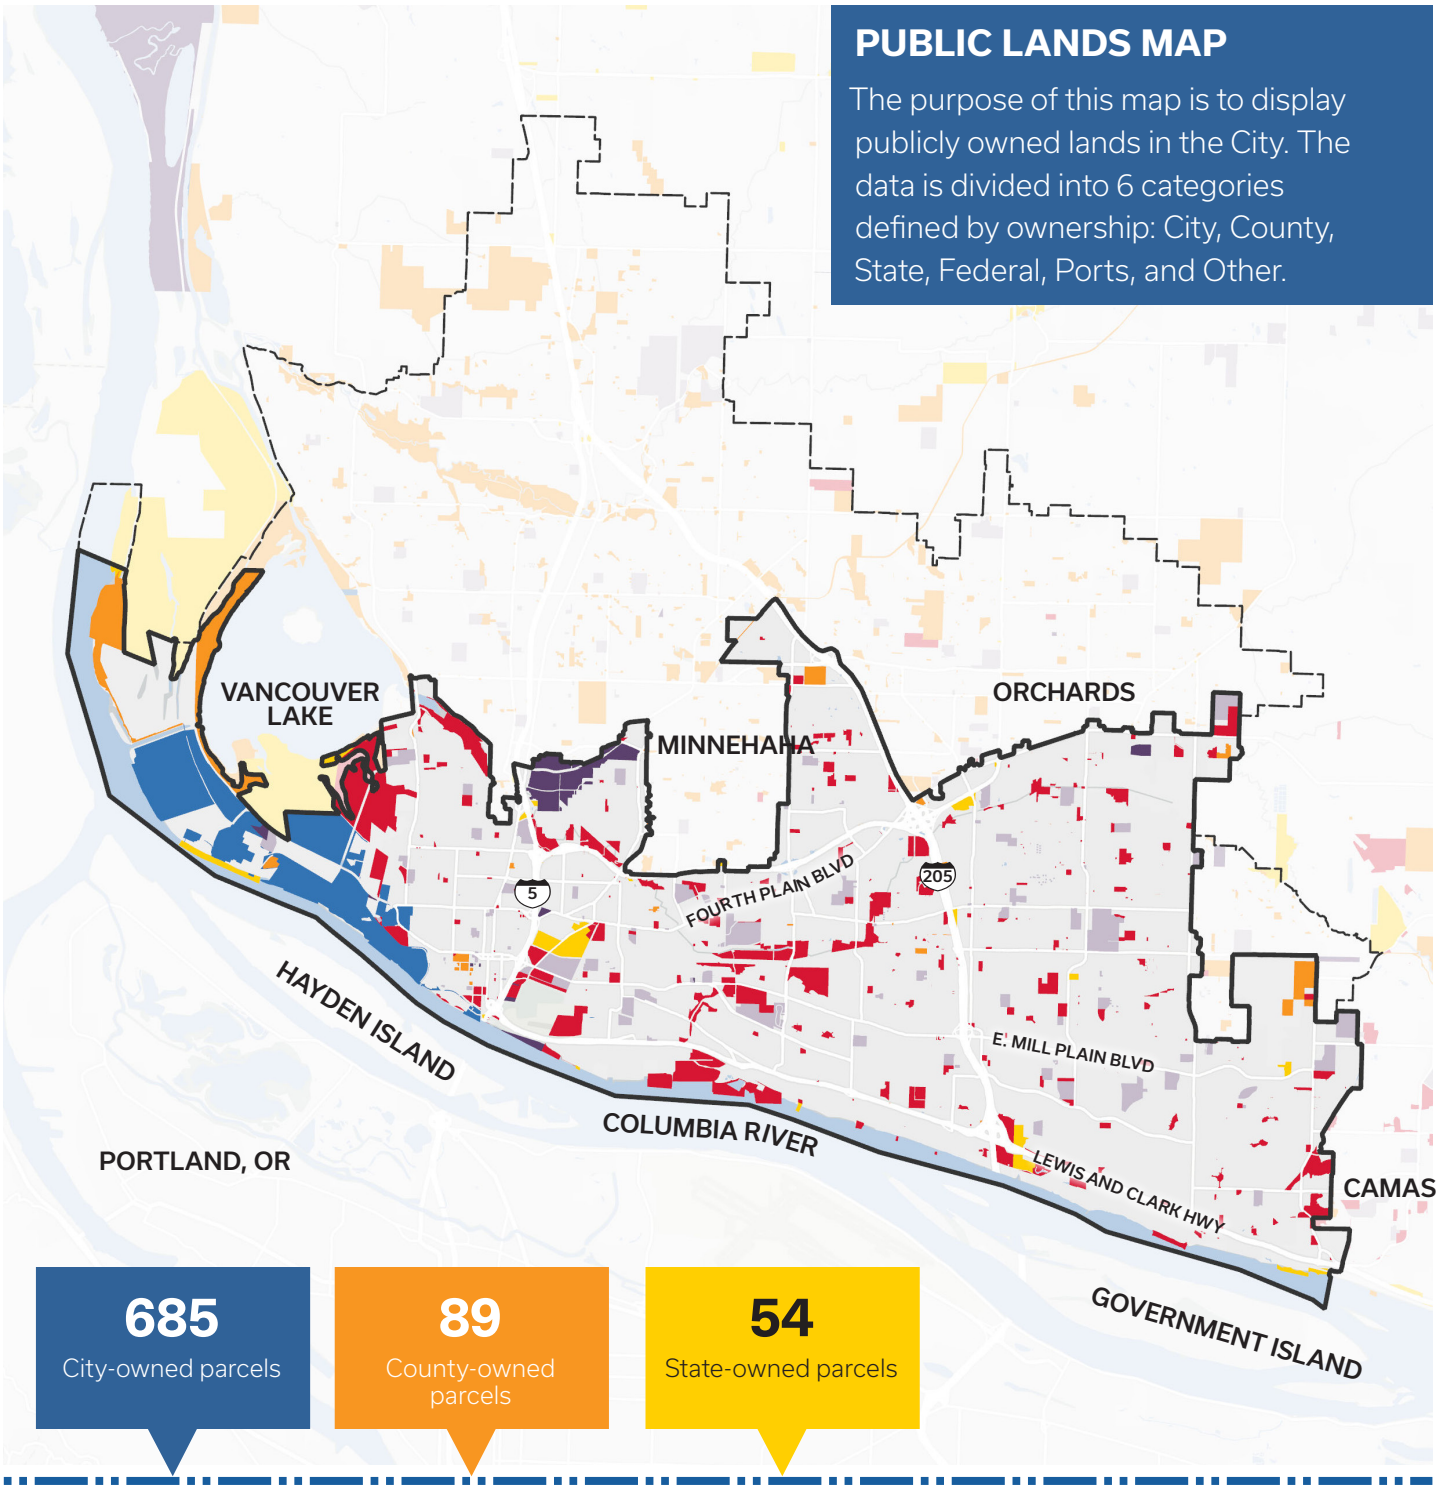

**Figure 57:** Public Lands Map

## WORKFORCE COMPOSITION

- In 2021, the unemployment rate in Vancouver was 3.5%.[156]
- Since February 2020, Clark County gained a net 13,200 jobs, an increase of 7.8%. Clark County outperformed the nation (+0.5%), the state (+1.5%), Oregon (+0.3%), Seattle metro (+0.5%) and the Portland metro area (+1.2%) in this period.[157]
- In the first two months of COVID-19, Clark County lost 11.1% of its employment base. The county fully recovered these jobs by July 2021, much more quickly than comparable areas. Employment in June 2022 was approximately 6.2% above pre-COVID-19 levels.[158]
- Compared to the United States, Vancouver has higher-than-average employment concentrations in the transportation and real estate sectors. 57.6% of the population is employed in white collar professions, followed by 24.8% in blue collar industries and 17.6% in the service sector. This is in contrast with the city's business composition, which primarily corresponds to jobs in the service sector.[159]
- An estimated 70% of people who ***work*** in Vancouver ***live*** outside the city, while approximately 66% of people who ***live*** in Vancouver ***work*** outside the city. This suggests a potential misalignment between available jobs and housing options.[160]
- While wages have increased in general, so has wage inequality. One measure of wage disparities, the 90/10 ratio, is calculated by comparing the top 10% to the bottom 10% of wages. This figure increased from 7.8 in 2019 to 8.7 in 2021, despite a notable increase in minimum wage in 2020.[161]

### WORKFORCE

| | |
|---|---|
| **3.5%** | **VANCOUVER UNEMPLOYMENT RATE IN 2021** |
| **13,200** | **NET JOB GAIN IN CLARK COUNTY SINCE FEBRUARY 2020** |
| **57.6%** | **POPULATION IS EMPLOYED IN WHITE COLLAR PROFESSIONS** |
| **24.8%** | **POPULATION IS EMPLOYED IN BLUE COLLAR PROFESSIONS** |
| **17.6%** | **POPULATION IS EMPLOYED IN SERVICE SECTOR** |
| **70%** | **VANCOUVER WORKERS LIVE OUTSIDE THE CITY** |
| **66%** | **VANCOUVER RESIDENTS WORK OUTSIDE VANCOUVER** |

### EQUITY ANALYSIS FINDING

Wages for Black, Indigenous, Pacific Islander, and Latine workers average around 80% or less of the average for all workers.

# CENTERS AND CORRIDORS

Over the past twenty years, Vancouver has embarked on numerous projects to prepare for growth and adapt to changing demographics. While several of these projects date back to the early 2000s and the last Comprehensive Plan update, there have been notable areas of growth and investment.

It will be important for the City to assess the successes and challenges faced during the implementation of policies related to the centers and corridors identified in the last Comprehensive Plan in order to identify how to update its policies to not only reflect the recently adopted Strategic Plan and focus on equity, inclusion, safety and climate change. Additional maps identifying equity analysis and 15-minute neighborhood analysis findings can be found in Appendix A: Maps.

There are several centers and corridors that have achieved a high-level of essential service provision including Fourth Plain, Vancouver City Center, Central Park, and Columbia Tech Center. Several areas need to be addressed through the Comprehensive Plan update to ensure investments counter historical inequities, including Fruit Valley, Upper Main, Minnehaha, Mill Plain (MacArthur and SWWMC) and Birtcher and N.E. Fourth Plain.

Through further analysis and the development of land use scenarios the City will be able to better understand how to balance policies to ensure that areas that have low scores on the hot spot analysis experience effective change through the horizon of the updated Comprehensive Plan.

Policy updates will take into consideration Growth Management requirements, including projected growth and demand for housing units, in addition to the priorities and goals outlined in the City of Vancouver Strategic Plan: 2023-2029 Update.

- **Fourth Plain:** The Fourth Plain neighborhood is home to many immigrants, with a thriving business community that reflects its racial and ethnic diversity. In 2007, Fourth Plain was the subject of a subarea plan that resulted in a zoning overlay and designation as a target area for Community Development Block Grant (CDBG) funds. Fourth Plain Forward, a local nonprofit, works in partnership with the City to ensure development in the area is community-led and benefits local residents and businesses. Over the next three years, the City will invest more than $25 million in American Recovery Plan (ARPA) money into the Fourth Plain area.[128]
- **112th Avenue Corridor:** 112th Avenue from NE 4th Street and NE 33rd Street was identified in the previous Comprehensive Plan as an area for concentrated growth. This area was also affected by the ongoing split diamond I-205 project. Pedestrian upgrades were ongoing as of 2020.[129]

**Figure 58:** Columbia Tech Center

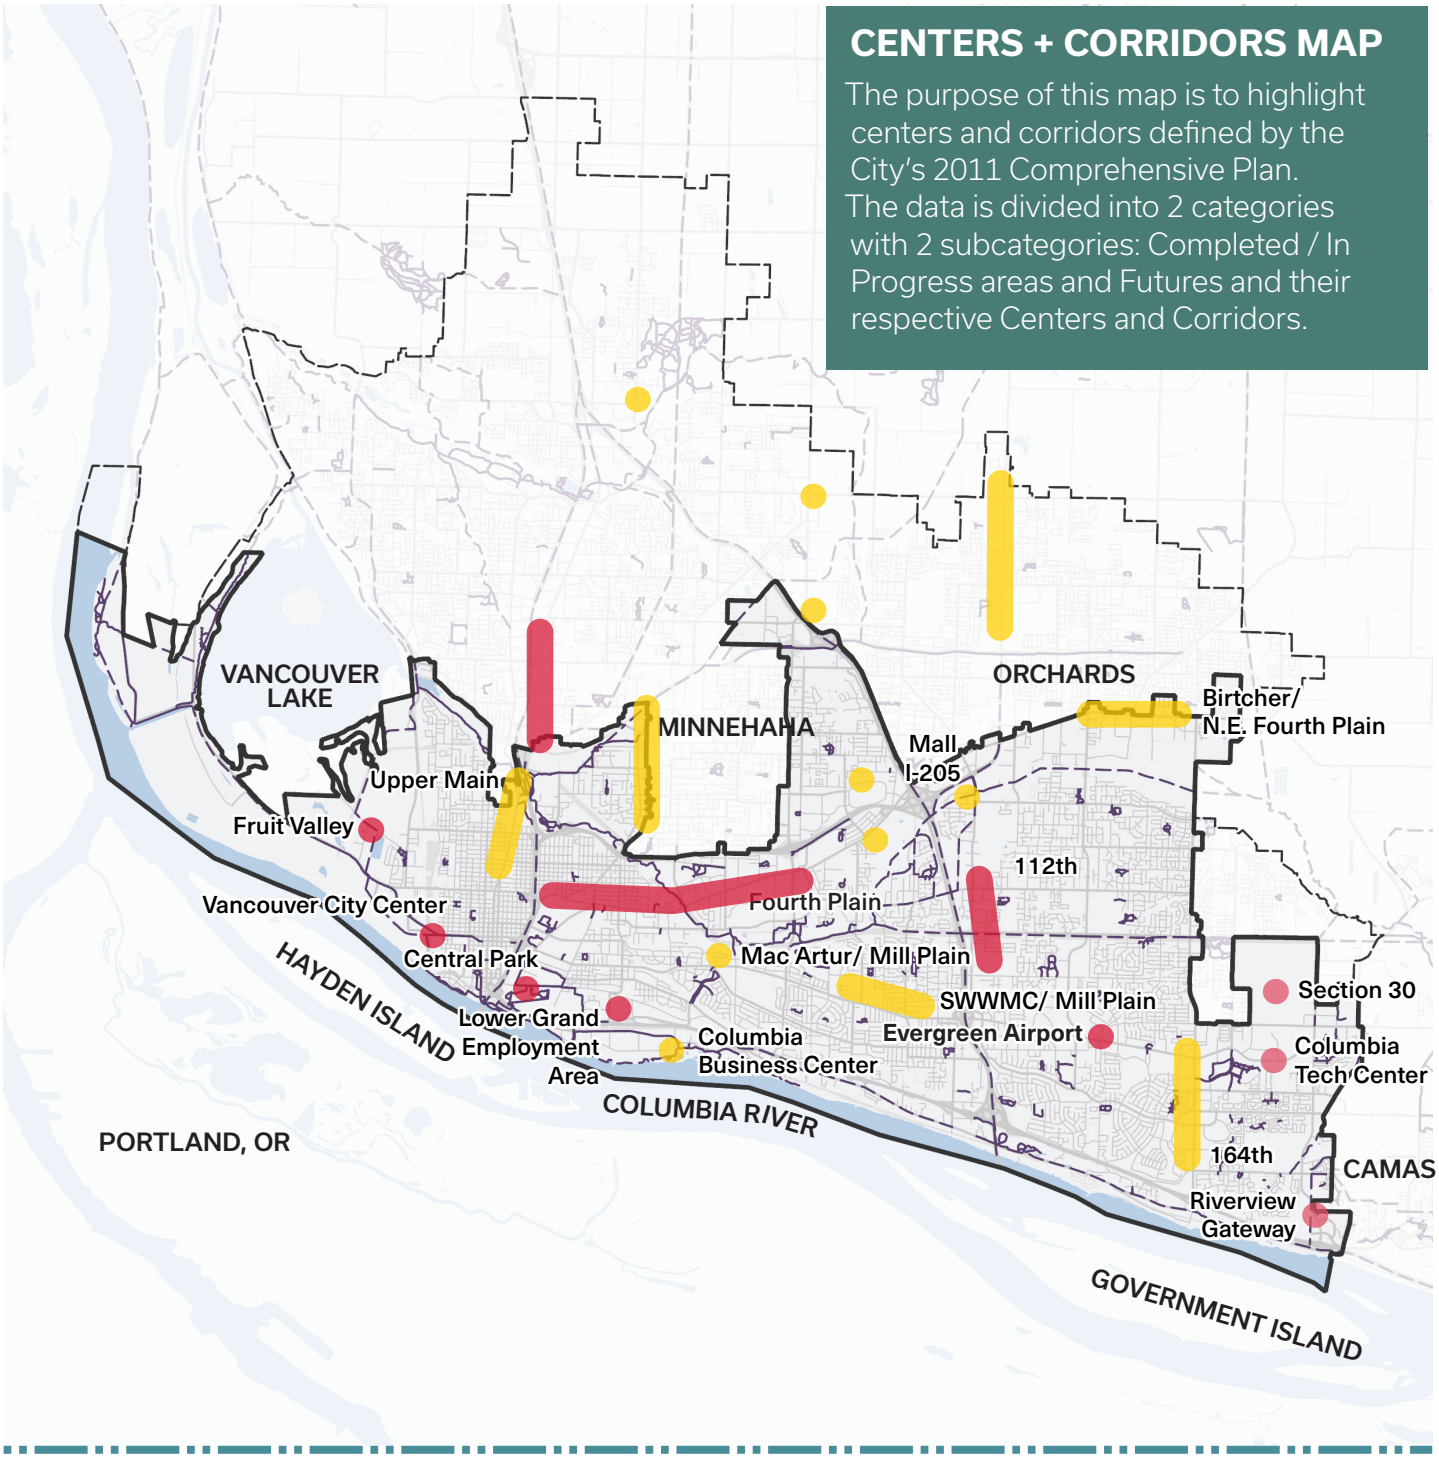

**Figure 59:** Centers + Corridors Map

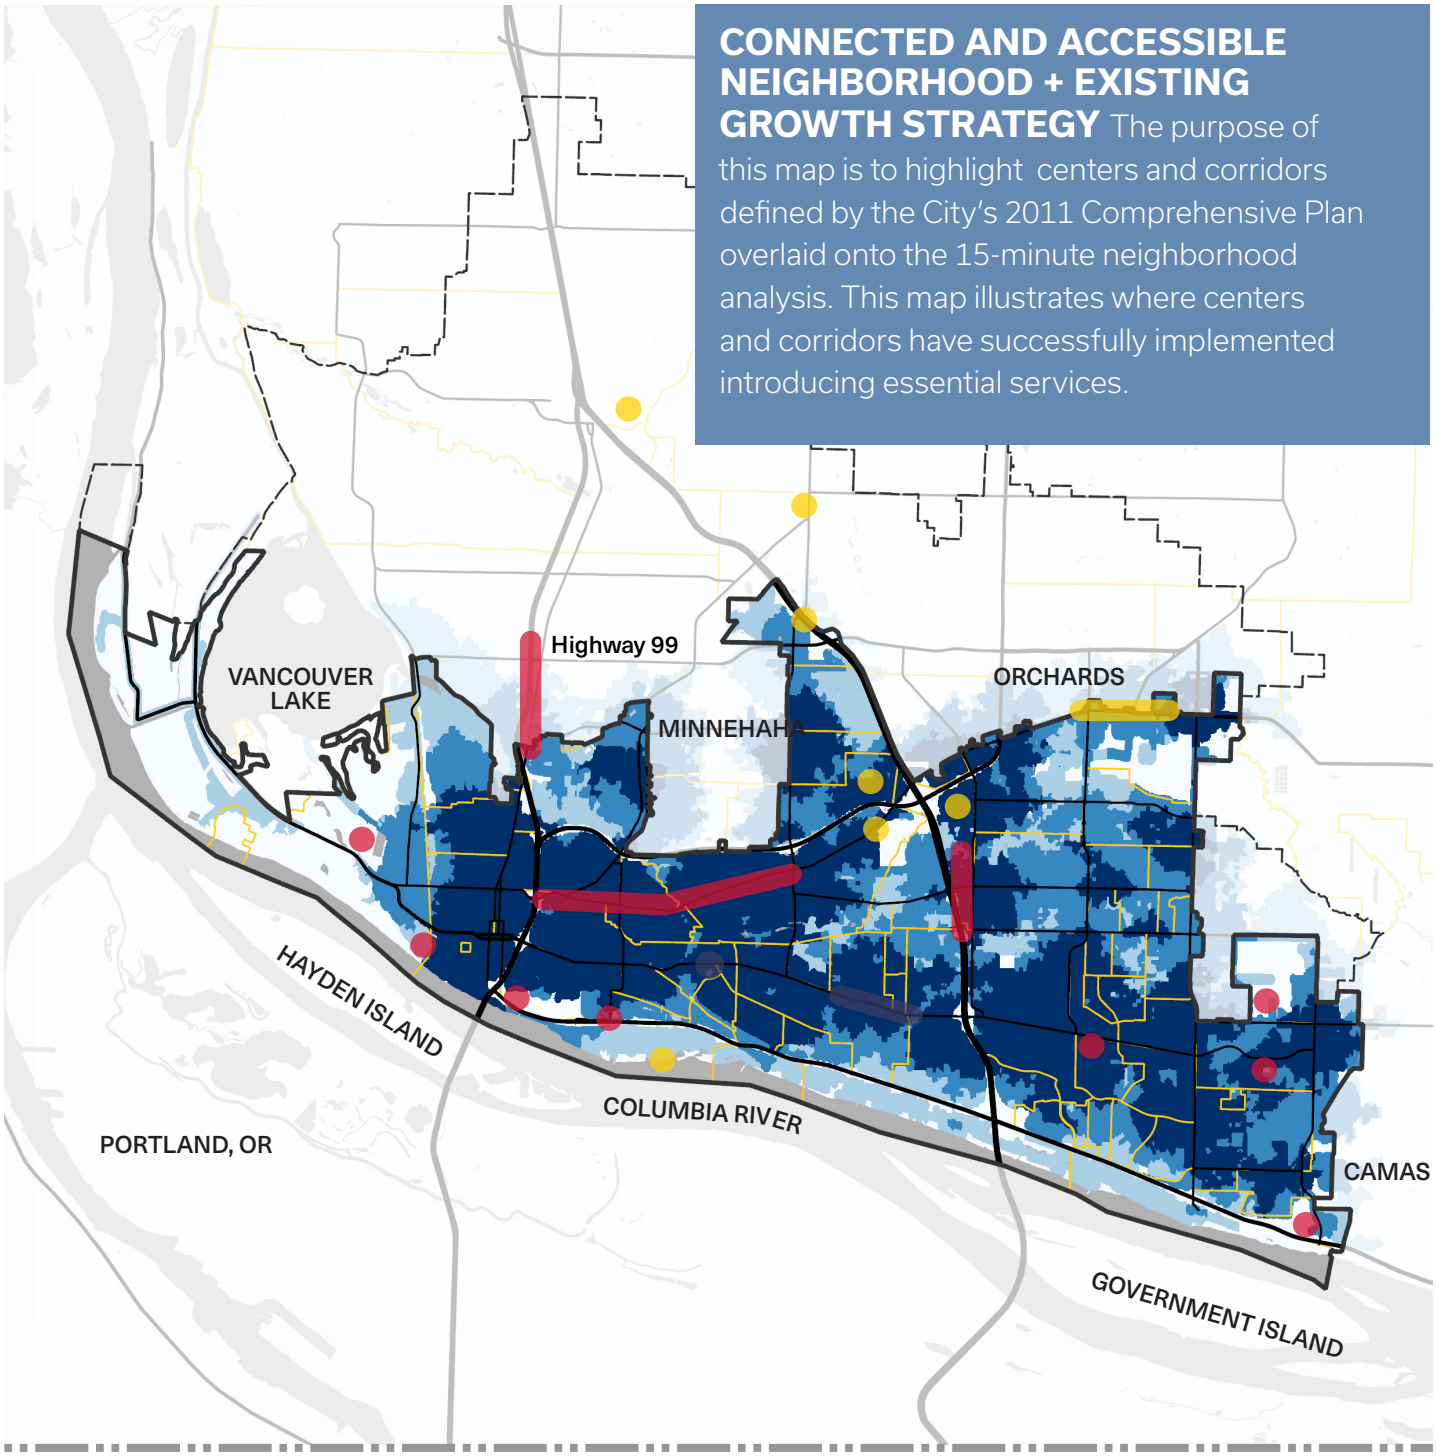

**Figure 60:** Connected and Accessible Neighborhood and Centers + Corridors Map

# CENTERS AND CORRIDORS CONT.

- **Central Park:** The Central Park planning area is bound by I-5 to the west, the Columbia River to the south and residential neighborhoods to the east and north. It includes sections of the Hudson's Bay, Central Park and Columbia Way neighborhoods. This area was originally identified as a priority in 1979 but formal redevelopment did not begin until 2008. The majority of property in this area is primarily educational, parklands and residential areas. Ongoing projects in the neighborhood include renovations to an existing multifamily residential property and the establishment of a new Washington State School for the Blind building.[130]
- **Fruit Valley:** The City of Vancouver adopted the Fruit Valley Neighborhood Action Plan in 2008. When the plan was written, Fruit Valley was home to 55 businesses, most of which were industrial, and 61% of the study area was zoned for industrial use. Fruit Valley's industrial legacy continues today, with several industrial buildings proposed or under construction.[131]
- **Evergreen and Grand Commercial Corridors:** The Evergreen and Grand Corridors are targeted for redevelopment as part of the City's Commercial Corridor Strategy (CCS). The Evergreen and Grand subarea is subject to restricted uses, regulatory standards and improvements to the pedestrian environment.[132]
- **Vancouver City Center:** Growth in Vancouver's approximately 130-block city center is guided by the Vancouver City Center Vision (VCCV), a plan adopted in 2007. Ongoing development includes a streetscape project targeting Main Street betwewen 5th and 15th Street. Approximately $10 million in American Rescue Plan (ARPA) funding has been allocated for the redevelopment of this downtown corridor, intended to improve safety, community cohesion and economic prosperity, in line with the overall vision for Vancouver City Center.[133]
- **The Heights District:** The Heights District is a new mixed-use neighborhood on the site of the former Tower Mall. It is an opportunity for private-public partnership that provides benefits and opportunities to a range of residents. The Heights District Plan proposes the following land use plan: 1,340 residential units, 56,000 sf commercial, 65,000 sf office, 83,000 sf hospitality, 20,0000 sf church/ multipurpose, 6.1 acres parks/open space.[134]
- **Riverview Gateway:** The Riverview Gateway Plan was adopted in 2009 to guide development in Riverview Gateway, an area which offers access to downtown Vancouver, Portland airport and other destinations in Clark County. Large swaths of industrial land were identified as opportunities to transition the area into a vibrant and well-connected mixed-use neighborhood. The plan to transform the Riverview Gateway site into a mixed-use and residential community was under review by City Council as of 2021.[135]
- **Lower Grand Employment Area:** The Lower Grand Employment Area (LGEA) in Southwest Vancouver was the subject of a 2016 area plan. The plan identifies strategies to preserve and develop industrial land within the LGEA so it can remain a valuable employment center and gateway.
- **Section 30:** Section 30 was annexed by the City of Vancouver in 2008. In 2021, City Council approved the development of a multi-building campus on the site that will house the offices of HP Inc. This project is expected to catalyze further development, while its proximity to the Columbia Tech Center (CTC) will solidify East Vancouver's growing niche as a tech hub.[136]

# ECONOMIC DEVELOPMENT OPPORTUNITIES

## LOCAL DRIVERS

Vancouver's historic geographic advantage remains relevant today. Its quality of life, unique landscape and mild climate make it an attractive place to live. This strength has the potential to attract business owners looking to move their companies or their back-office operations to a more attractive location.

The current (2018-2023) Clark County Economic Development Plan prioritizes downtown Vancouver in the county-wide economic development strategy. As a thriving urban center, Vancouver is poised to host jobs, housing and entertainment as the region grows and changes.[162]

Clustered office campuses in East Vancouver including Columbia Tech Center (CTC) and the future home of HP Inc. offer "live-work-play" communities attracting high-tech industries and workers.[163]

The market size of the Solar Power industry in the U.S. has grown 15% per year on average between 2017 and 2022, while sales of electric vehicles in the United States more than doubled in 2021. With a strong legacy in computer and electronics, industrial land, available employment and a skilled workforce, Clark County has a competitive foundation for supporting growth in clean technology.[164]

The Washington State University – Vancouver (WSU) is part of the Washington State University system and enrolls about 2,800 students, 43% of whom are first generation. As the only four-year research institution in Southwest Washington, WSU Vancouver boasts "big school resources in a small school environment." 95% of WSU Vancouver graduates stay and work in the Portland Metro Region.[165]

Clark College is a community college in Vancouver that offers degree programs including advanced manufacturing, business and entrepreneurship, and science, technology and engineering.[166]

As the Pacific Northwest becomes increasingly expensive, Vancouver's relative affordability is a draw for young workers. It is important to leverage this asset for growth while protecting the current renter population. Similarly, Vancouver must balance incentives to attract and retain high-tech industries with efforts that support the small business community. The Columbia River Economic Development Council (CREDC) supports businesses in Clark County and the surrounding region north of the Columbia River. They provide free services to qualifying businesses and leverage private-public partnerships to connect businesses with other key resources.[167]

### LOCAL ECONOMIC DRIVERS

| | |
|---|---|
| **2,800** | STUDENTS AT VANCOUVER WASHINGTON STATE UNIVERSITY (WSU) |
| **43%** | STUDENTS AT WSU ARE FIRST GENERATION |
| **95%** | WSU GRADUATES STAY IN REGIONAL WORKFORCE |
| **11,500** | STUDENTS AT CLARK COLLEGE |

## INCENTIVES

- **Income and Sales Tax:** Washington State does not have a personal or corporate income tax. Vancouver can leverage this feature to attract businesses and residents that might otherwise settle in Portland. In contrast, Washington does have a sales tax while Oregon does not.[168]
- **Main Street Tax Credit:** The Vancouver Downtown Association is a designated Washington Main Street Community. Under the Main Street tax credit incentive program, the Downtown Association is eligible to receive tax credits equal to 75% of private contributions received.[169]
- **Industry Tax Incentives:** Washington State offers tax incentives relevant to Vancouver's identified growth areas, including high tech industries and data centers.[170]
- **International Service District:** Vancouver falls within an International Service District defined by Washington State. Businesses offering specified services to an international market are eligible for a $3,000 annual tax credit per new job created. Eligible services include legal, architectural and financial services.[171]
- **New Market Tax Credits:** The Federal New Market Tax Credit is an often underutilized, but very powerful financing tool. Businesses can obtain benefits including lower interest rates (sometimes below market) on loans, interest-only payments for seven years, non-traditional financing not available in the marketplace, access to a reduced cost of capital, and more. The NMTC is a competitive program administered by the U.S. Department of the Treasury's Community Development Financial Institutions Fund.[172]

# PARKS, RECREATION, OPEN SPACES AND TRAILS

# PARKS, RECREATION, OPEN SPACES AND TRAILS OVERVIEW

The Vancouver Department of Parks, Recreation and Cultural Services (VPRCS) oversees and manages a total of 1,700 acres of parkland across 113 sites. The City provides a wide range of park offerings, including everything from competitive sports programs to natural areas.[172]

In 2022, VPRCS published a Park System Comprehensive Plan to analyze existing conditions and identify 10-year goals and metrics. The Comprehensive Plan envisions safe and equitable access to programs and public spaces that cultivate healthy connections between neighbors and nature. To achieve this goal, VPRCS must increase parkland citywide to address gaps in access, meet national standards, and keep pace with population growth.[173]

The quantity and quality of parks, recreational opportunities, open space, and trails have important implications for Vancouver's livability. The VPRCS Comprehensive Plan emphasizes the far-reaching impacts of urban green space on public health, economic development and ecological function by describing parks as "essential spaces."[174]

## EXISTING CONDITIONS

A Department of Parks and Recreation for the City of Vancouver was established in in 1955 to oversee about 100 acres of public parkland. Today, there are 3,800 acres of public land in Vancouver, comprising 12% of the City's total land area. The modern Department of Parks and Recreation, VPRCS, manages around 1,700 acres of this as parkland as well as 20 miles of trails. Since 2014, the City of Vancouver has acquired 48.6 acres of public land and developed 12 acres of parkland.[175]

Vancouver is divided into three Park Impact Fee (PIF) Districts, each of which establishes Level of Service (LOS) standards and assesses impact fees on new residential development to offset the cost of meeting the recreational needs of a growing population. The City of Vancouver adopted population-based standards for land acquisition based on park classification in 1994.[176]

Currently, VPRCS operates community gardens at Marshall Community Park, Haagen Community Park, and at Fruit Valley, Landover-Sharmel, First Place, and Bella Vista Neighborhood Parks. These gardens provide the opportunity for community members to rent plots for a season to grow fresh produce and flowers.[177]

Expansion and maintenance of the park system will be essential in the coming years. Residents living east of I-205 have expressed a desire for more parks, while residents living west of I-205 have expressed a need for updated park amenities including benches and trails.[178]

The park system elements that Vancouverites valued most in 2022 were trails and water access. The primary reasons why Vancouverites used parks in 2022 were for exercise and enjoying nature.[179]

# CHALLENGES + OPPORTUNITIES

## CHALLENGES

The City of Vancouver currently provides 4.46 acres of parkland per 1,000 residents, less than the City's goal of 6 acres and only half of the national median of 10.8 acres. To meet park demand for the projected 2031 population, Vancouver must acquire an additional 568 acres and develop 417 acres of parkland. As population increases it is harder to find land for parks, so the City must take care to ensure that growing high-density areas balance residential development with the required green space.[180]

A ½-mile, or 10-minute walking distance is nationally recognized as the reasonable walking distance to recreational facilities, a standard that was supported by Vancouver Parks Recreation and Cultural Services (VPRCS) Comprehensive Plan survey respondents. Using this standard to assess park LOS indicates service area gaps across the City.[181] The 10-minute walkshed aligns with and is even more ambitious than the 15-minute neighborhood ideal.

Vancouver's park impact fee (PIF) program was established in the mid-1990s to provide a joint funding source for the acquisition and development of urban parkland in the City of Vancouver and Vancouver Urban Growth Area. The current PIF process inherently puts park planning at the end of the development cycle, thus limiting the ability to negotiate the most suitable locations for future parks or to maximize the park service area by incorporating pedestrian interconnections in the project design.[182]

### EQUITY ANALYSIS FINDING

Many of the areas with the greatest park need are not experiencing the residential development that generates PIF revenue, and are therefore limited in their capacity to expand or revitalize the park system.

## OPPORTUNITIES

The City of Vancouver recognizes that the Columbia River is an essential asset that offers opportunities for recreation, nurtures wildlife, forests and agriculture and supports neighborhoods and businesses. The Vancouver Waterfront Development Project is currently underway, bringing additional housing, office and retail space, dining and entertainment options to the Waterfront. This project compliments other waterfront destinations like the recently completed Vancouver Waterfront Park and the Water Resources Education Center.[183]

Vancouver currently exceeds the standard LOS for urban natural areas. Given this asset, the VPRCS aims to ensure that these spaces are high-quality and distributed equitably as the city's population grows and changes.[184]

Vancouver's trails are an essential component of its park system. The VPRCS plans to pursue an acquisition and development program in cooperation with other concerned agencies to improve the trail network's connectivity.[185]

Parks within Vancouver, overlaid with habitat areas, floodplains and wetlands illustrate what can be considered a green infrastructure network, as illustrated in the Greenspace Map on Page 86.[186]

# EQUITABLE ACCESS

## ACCESSIBILITY

Universal design defines accessibility above and beyond the requirements of the Americans with Disabilities Act (ADA). Universal park design considers multidimensional barriers to accessibility, including the provision of restrooms, water fountains and parking for individuals with disabilities.[187]

The park system must tailor its communication to an increasingly diverse population. In addition to English, VPRCS Comprehensive Plan outreach was conducted in Spanish, Russian and Vietnamese, and these populations should be considered in future signage and programming. As Vancouver's senior and school-age populations grow, the park system can promote multigenerational play that engages Vancouver's youngest and oldest residents.[188]

Ensuring safe bike and pedestrian access to parks is essential for the 53% of Vancouver residents who walk to their local park. In a survey completed during the VPRCS planning process, 26% of residents note the lack of sidewalks as a safety concern.[189]

## WATER ACCESS

Vancouver is bordered by 18 miles of river, but only 5 miles are open for public access, including the Vancouver Waterfront Park and Frenchman's Bar Park. Given the popularity of waterfront amenities in Vancouver, the City should consider opportunities to expand access to the Columbia River in a way that balances human and ecological goals.

Vancouver Lake offers 2.5 miles of shore access, including 35 developed acres where residents can enjoy picnicking, windsurfing and beach volleyball, among other activities.[190]

## FUNDING SOURCES[191]

- **American Rescue Plan Act (ARPA):** ARPA funding could be used for community park development to provide an economic stimulus in vulnerable neighborhoods.
- **Conservation Futures:** This property tax, valued at $.0625/$1,000 assessed value, is levied for the purpose of acquiring park land, open space, critical habitat, farm, and timber lands.
- **PIF Rate Update:** As of the Parks, Recreation and Cultural Services Comprehensive Plan's publication, the most recent update to the PIF rate was in 2020. The Plan suggests that PIF rates should be updated based on current land values and park development costs to help Vancouver better reflect the actual costs of acquiring and developing parkland. This could also include funding for linear parks and civic plazas.
- **Regional Park and/or Regional Trail Impact Fee Program:** PIFs are only collected for new residential development within the Vancouver city limits. However, growth both inside and outside the Vancouver UGA affects the need for regional parks, trails and special facilities. Additional revenue could be collected for regional facilities by charging a regional PIF for all development in the County, including non-residenital development and development within the incorporated cities.
- **Stronger Vancouver Initiative:** As of March 2021, City Council had established their intention to revisit the Stronger Vancouver Initiative, which was initially proposed in 2017. Stronger Vancouver proposes adjustments to existing funding sources including PIFs, business licenses and utility taxes to prepare for the needs of a growing, urbanizing community.

## PARK / SIDEWALK INTERFACE MAP

This map overlays parks with the sidewalk network to identify parks that are well-served or not well-served by the City's pedestrian infrastructure. The City has existing sidewalk gaps spread across the three geographies, west, central and east which will need to be assessed through the update to the Comprehensive Plan and Title 20 Update.

# PUBLIC FACILITIES

# PUBLIC FACILITIES OVERVIEW

Essential services play a crucial role in maintaining the functionality and well-being of the City. These services are integral to employing policies that promote and support the 15-minute neighborhood concept. Today, the City's essential services are located primarily along the Mill Plain, Fourth Plain, and 164th Avenue corridors as well as in downtown. Vancouver has identified these essential services fall under the following categories (using The North American Industry Classification System (NAICS) 3-digit code, or subsector): ambulatory healthcare services, building material or garden equipment and supplies dealer, credit intermediation and related activities, educational services, food and beverage store, general merchandise store, health and personal care store, hospital, personal laundry service, religious, grantmaking, civic, professional or similar organization, and social assistance. These essential services are vital for the proper functioning of the City and ensuring the well-being of its residents.

The City of Vancouver itself is responsible for providing administration and support facilities to facilitate the smooth operation of essential services. Services managed by the City of Vancouver include the Fort Vancouver Regional Library System, which offers access to a wide range of books, resources, and community programming. Clark County contributes to essential services in Vancouver through the provision of law enforcement and emergency response support services.

These essential services, along with the support facilities and resources provided by the City of Vancouver and Clark County, are key components of the City's infrastructure. They ensure that residents have access to critical services, promote community well-being, and support the overall functionality and livability of Vancouver.

# HEALTHCARE

Vancouver's health system is robust, with healthcare and social assistance services located throughout the City. Health services are clustered around the 3 medical centers and the major corridors.

PeaceHealth Southwest Medical Center is the largest hospital in the City, with 450 beds as of 2012. The hospital serves the Columbia-Willamette area of Oregon and Washington, with Clark County being its primary service area. The Emergency Department had 76,244 visits between July 2021 and June 2022. The hospital also features major medical services such as advanced heart and vascular care, a level II trauma center, centers dedicated to the treatment of brain, spine, and other traumas, a certified stroke center, a Kearney Breast Center, advanced imaging services, 3D mammography, joint replacement, neurosciences, and cancer care.[191]

Administratively, PeaceHealth has been recognized as a leader in information technology integration in clinical care. Academically, the hospital has been operating a family medicine residency through the University of Washington since 1995. Environmentally, the hospital established an environmental sustainability program in 2020 and has since won the Practice GreenHealth Environmental Excellence award and Clark County Business of the Year.[192]

The Vancouver VA Medical Center is an integral part of of the Veterans Health Administration (VHA) in Southwest Washington. This center offers primary care, mental health and specialty health services however, they currently do not offer emergency services. Specialty health services offered included PTSD care, audiology, community living center (CLC), transitional lodging, and prosthetics.[193]

Legacy Salmon Creek Medical Center is located within the Vancouver Urban Growth Area (UGA). Legacy Salmon Creek is an acute care hospital with 147 beds, as part of Legacy Health, a nonprofit organization based in Portland, OR. It opened in 2005 and was the first hospital built in Washington state in 20 years. Notable services offered are the Legacy Cancer Institute, neonatal intensive care unit, birthing center, orthopedics, surgery center, breast health center, and surgical care.[194]

Vancouver's health system plays an integral role in the Southwestern Washington regional health system and the larger Portland Metropolitan Area. The presence of these medical facilities, and other facilities focused on serving low-income, uninsured populations such as Sea Mar and the Free Clinic, ensure that residents have access to comprehensive healthcare services and specialized treatments, contributing to the community's overall health and wellbeing.

**Figure 74:** PeaceHealth Southwest Hospital

# EMERGENCY SERVICES

Emergency services are organizations that ensure public safety and health by providing services that are fast and effective. The 3 primary forms of emergency services are Fire, Medical, and Police. Each is essential to the function of a city and is essential to the safety of the public.

## FIRE DEPARTMENT

The Vancouver Fire Department (VFD) provides fire protection and emergency medical services (EMS) to the City and Clark County (Fire District 5). They protect 288,000 people covering 89.2 square miles. In addition to fire and EMS, they provide marine response, fire prevention, and fire investigation. Regionally, they provide hazardous materials and technical rescue responses.[195]

Today the VFD has 11 stations, operated by 182 VFD and 142 American Medical Response (ARM) personnel. They have a diverse offering of vehicles including 10 fire engines, mobile water tenders, brush units, ladder trucks, command units, rescue units, medical rehab units, mobile air compressors, fire boats, heavy rescue units, hazardous material units, high-capacity pump and foam tender, and a fire investigation unit. Vancouver has a long history of being a highly trained and efficient, all-hazard firefighting force with 1,302 fire suppression responses in 2021. They also responded to 4 technical rescues and 193 hazmat situations.[196]

## POLICE DEPARTMENT

The Vancouver Police Department (VPD) and the Clark County Sheriff's Department provide police services in the City. The VPD has 2 precincts and employs 211 sworn members, 84% of whom have had 40 hours of Crisis Intervention Training (CIT). All officers receive the training required under the Washington Administrative Code and the Revised Code of Washington. The 720-hour basic law enforcement academy in Burien, WA covers topics such as criminal law and procedures, traffic enforcement, cultural awareness, communication skills, emergency vehicle use, firearms, crisis intervention, patrol procedures, criminal investigation, and defense tactics. Overall, Vancouver suffers from more property and violent crime than the national average. In 2018, Vancouver's crime rate was 461 per 100,000 people. This is more than the States average of 311, but less than its neighbor Portland, with 520. Notably, motor vehicle thefts reached 641.5 per 100,000 people compared to the national average of 284. From 2013 to 2021, 35,478 arrests were made, 59% of which were low-level, non-violent offenses. VPD's police budget per person falls within the 86th percentile of comparable cities. Their police presence is strong, falling in the 73rd percentile of comparable cities.[197]

## EMERGENCY MANAGEMENT PROGRAM

The City of Vancouver has an Emergency Management Program that serves as a framework for hazards experienced daily and for catastrophic events such as an earthquake along the Cascadia Subduction Zone. This program focuses on the distinct phases of emergency management which include mitigation, preparedness, response, and recovery. This, along with the VFD and VPD, form the emergency services system in Vancouver. This system is integral to Vancouver and the entire southwest region of Washington.[198]

# SCHOOL DISTRICTS

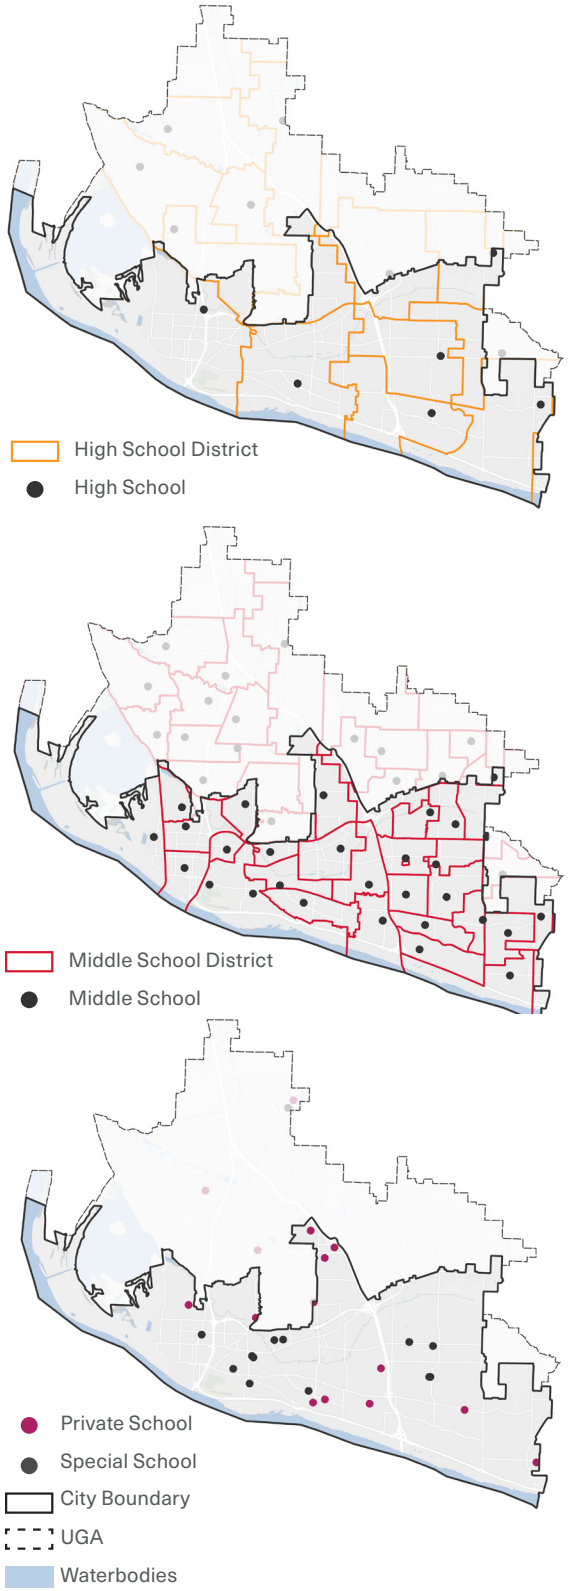

**Figure 77:** Schools Districts and Maps

County of Clark, WA, Oregon Metro, Oregon state, State of Oregon GEO, WA State Parks GIS, Esri, HERE, Garmin, SafeGraph, GeoTechnologies, Inc, METI/NASA, USGS, Bureau of Land Management, EPA, NPS, USDA

The Vancouver school system is a mix of public, charter, private, and special schools. There are 2 regional public school districts in Vancouver, WA: the Vancouver Public School (VPS)District and the Evergreen School District. The City also is home to the Washington School for the Deaf, and the Washing School for the Blind.

VPS is the primary provider of public education in the City. The school district consists of 21 elementary, 6 middle, and 5 high schools covering a district of 58 square miles. The average student-teacher ratio is 17:1, which is less than the state average of 19.7:1. The school district is above average in the state, with an 89% graduation rate. The Vancouver School of Arts and Academics, a public magnet school within the district, ranks as the 13th best high school in the state of Washington. Within the VPS District, 45.7% of the student population is a minority and the student body speaks 100 different languages. VPS has 3,300 employees, 1,404 of whom are classroom teachers. Teachers, on average, have 12.1 years of experience. The City has a 5-member elected school board serving a 4-year term.[199]

The Evergreen School District serves Clark County and the eastern part of Vancouver and consists of 22 elementary, 6 middle, and 6 high schools. It also includes 4 specialty schools.[200]

The educational system in Vancouver also includes Clark College, a community college offering over 100 options including bachelor, associate's, and certificates. Clark College's history in the community runs deep: founded in 1933, it is the oldest institution of higher education in southwest Washington. Their offerings include a "transitional studies program" which includes a high school diploma, English as a second language, and skills and training programs. They also host many annual events such as Jazz Fest and Sakura Festival, celebrating 100 Shirofugen cherry trees gifted and planted at Clark College 25 years ago.[201]

The Camas, Battle Ground, Ridgefield, and Hockinson School Districts are located within the surrounding unincorporated urban area. Overall, Vancouver boasts a robust school system with offerings from K-12 and beyond throughout the City.[202]

# UTILITIES

## POTABLE WATER

The potable water system in Vancouver, Washington is managed by the City of Vancouver and serves the City as well as the northern portion of the Vancouver UGA.

Water pressure requirements for the system are determined by the Washington Department of Health, which establishes pressure standards of 30 pounds per square inch (psi).[203] These standards ensure that adequate water flow is maintained during peak hours when there is high demand. Compliance with these pressure standards is crucial for providing a reliable water supply to the residents.

The National Fire Protection Association (NFPA) also plays a role in ensuring the effectiveness of the water system, particularly in the event of a fire. The NFPA sets guidelines and regulations for the supply, storage, and distribution of water to meet the firefighting needs of the community. Fire flow requirements often determine the minimum size of water lines to ensure an adequate water supply is available for firefighting purposes.[204]

One geographical challenge faced by the water system in Vancouver is the disconnect between the location of the water reservoirs in the southwest and the areas experiencing population growth in the northeast. To maintain the flow of water and meet the increasing demands, the City needs to continuously improve its transmission infrastructure and pumping systems.

**Figure 78:** Vancouver Lake

Considering the future, the City of Vancouver may need to explore alternative water sources. The Salmon-Washougal and Lewis Watershed Management Plan, published in 2006, recommended sourcing water from the Columbia River instead of relying on flow-limited streams and sensitive aquatic habitats. This suggests that water bodies such as the Vancouver Lake lowlands and the Steigerwald Wildlife Refuge should be protected to ensure their viability as potential water sources.[205]

Overall, the City of Vancouver is responsible for managing the potable water system and must comply with pressure standards set by the Washington Department of Health while also meeting the fire flow requirements outlined by the NFPA. Addressing the geographical challenges and considering alternative water sources are important factors in ensuring a sustainable and reliable water supply for the growing population in the City.

## SOLID WASTE + COMPOSTING

The City of Vancouver's Solid Waste Services fall under the purview of the Public Works Department which oversees garbage, recycling and organics collection. The City offers a variety of waste and recycling resources to residents including information on hazardous waste removal, recyclables, and composting. The City also offers organics pick up for residents and businesses to help reduce the amount of organic materials going to landfill. This is in alignment with the State of Washington's Organics Management Law which is intended to divert 75% of previously disposed organic materials from the landfill by 2030, and rescue 20% of previously disposed edible food for human consumption by 2025.[206]

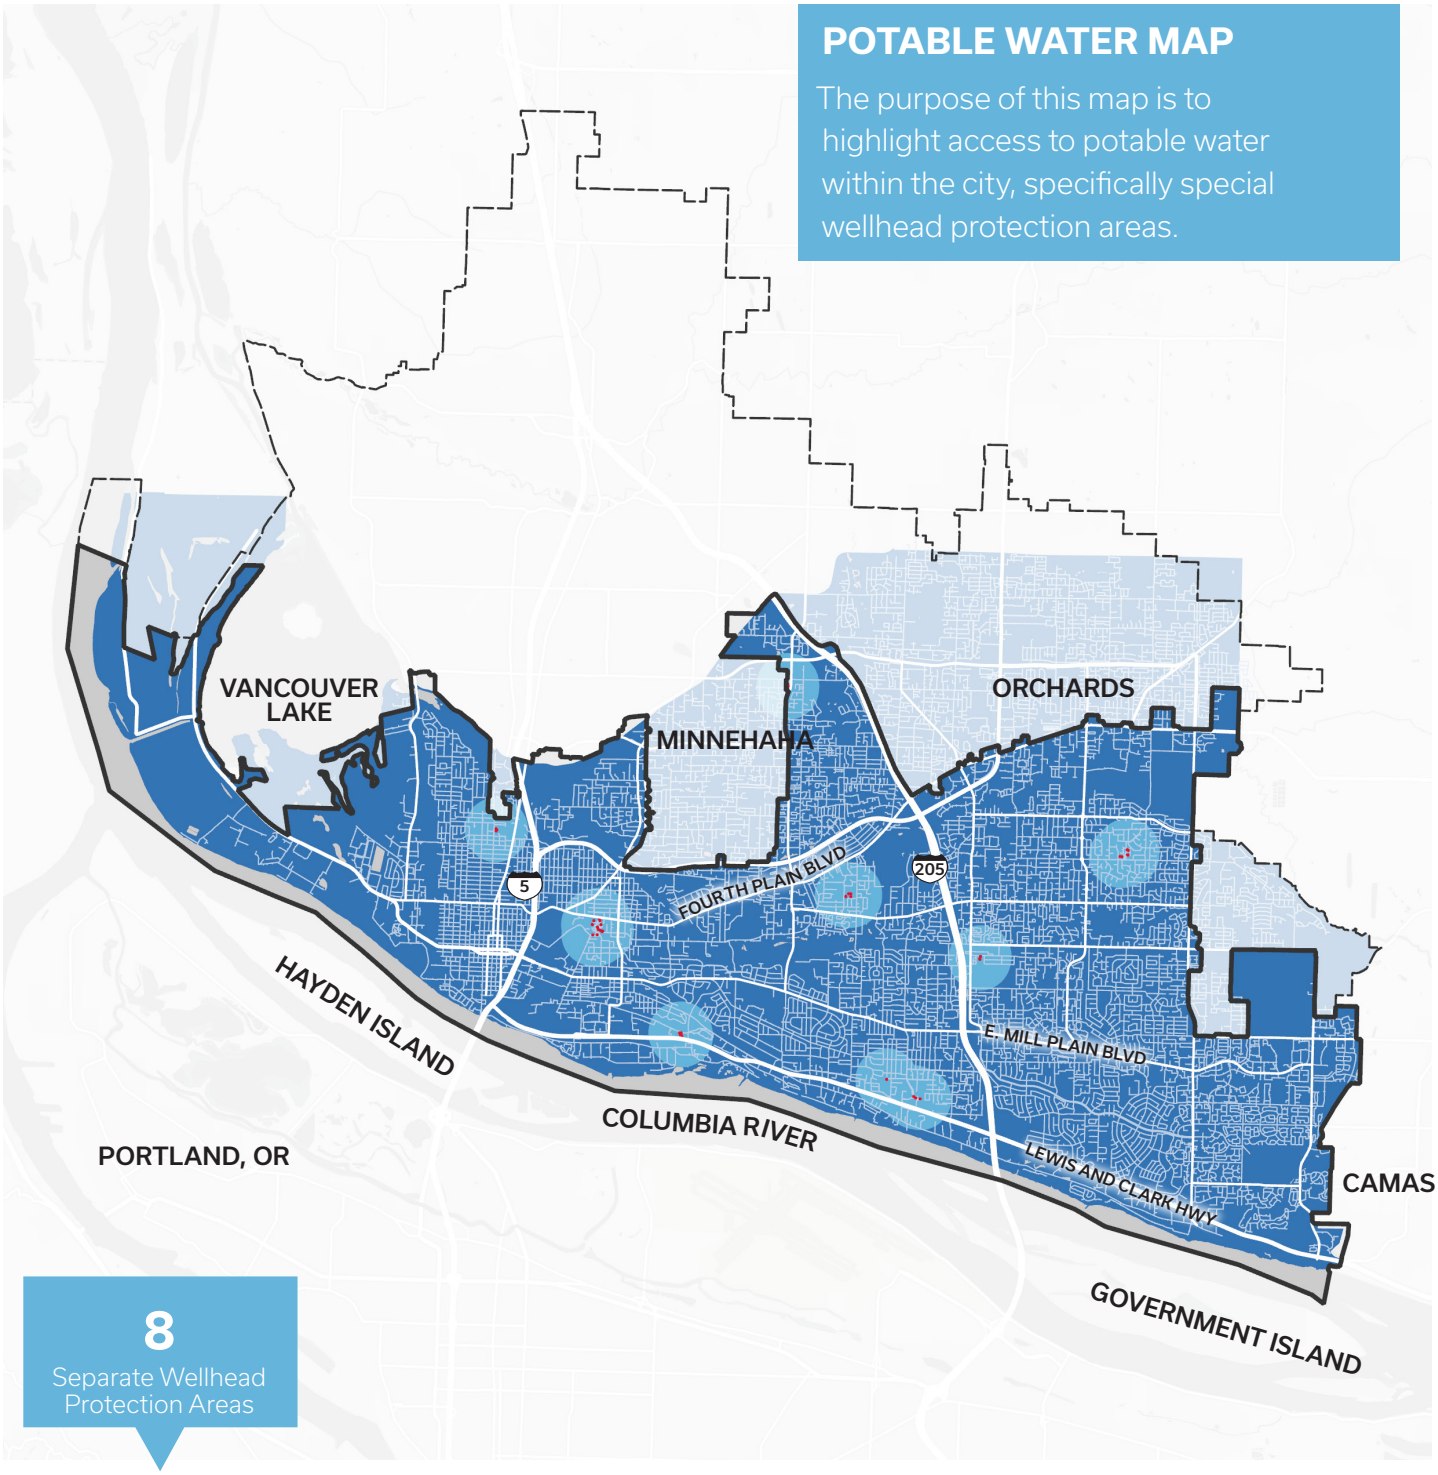

**Figure 79:** Potable Water Map

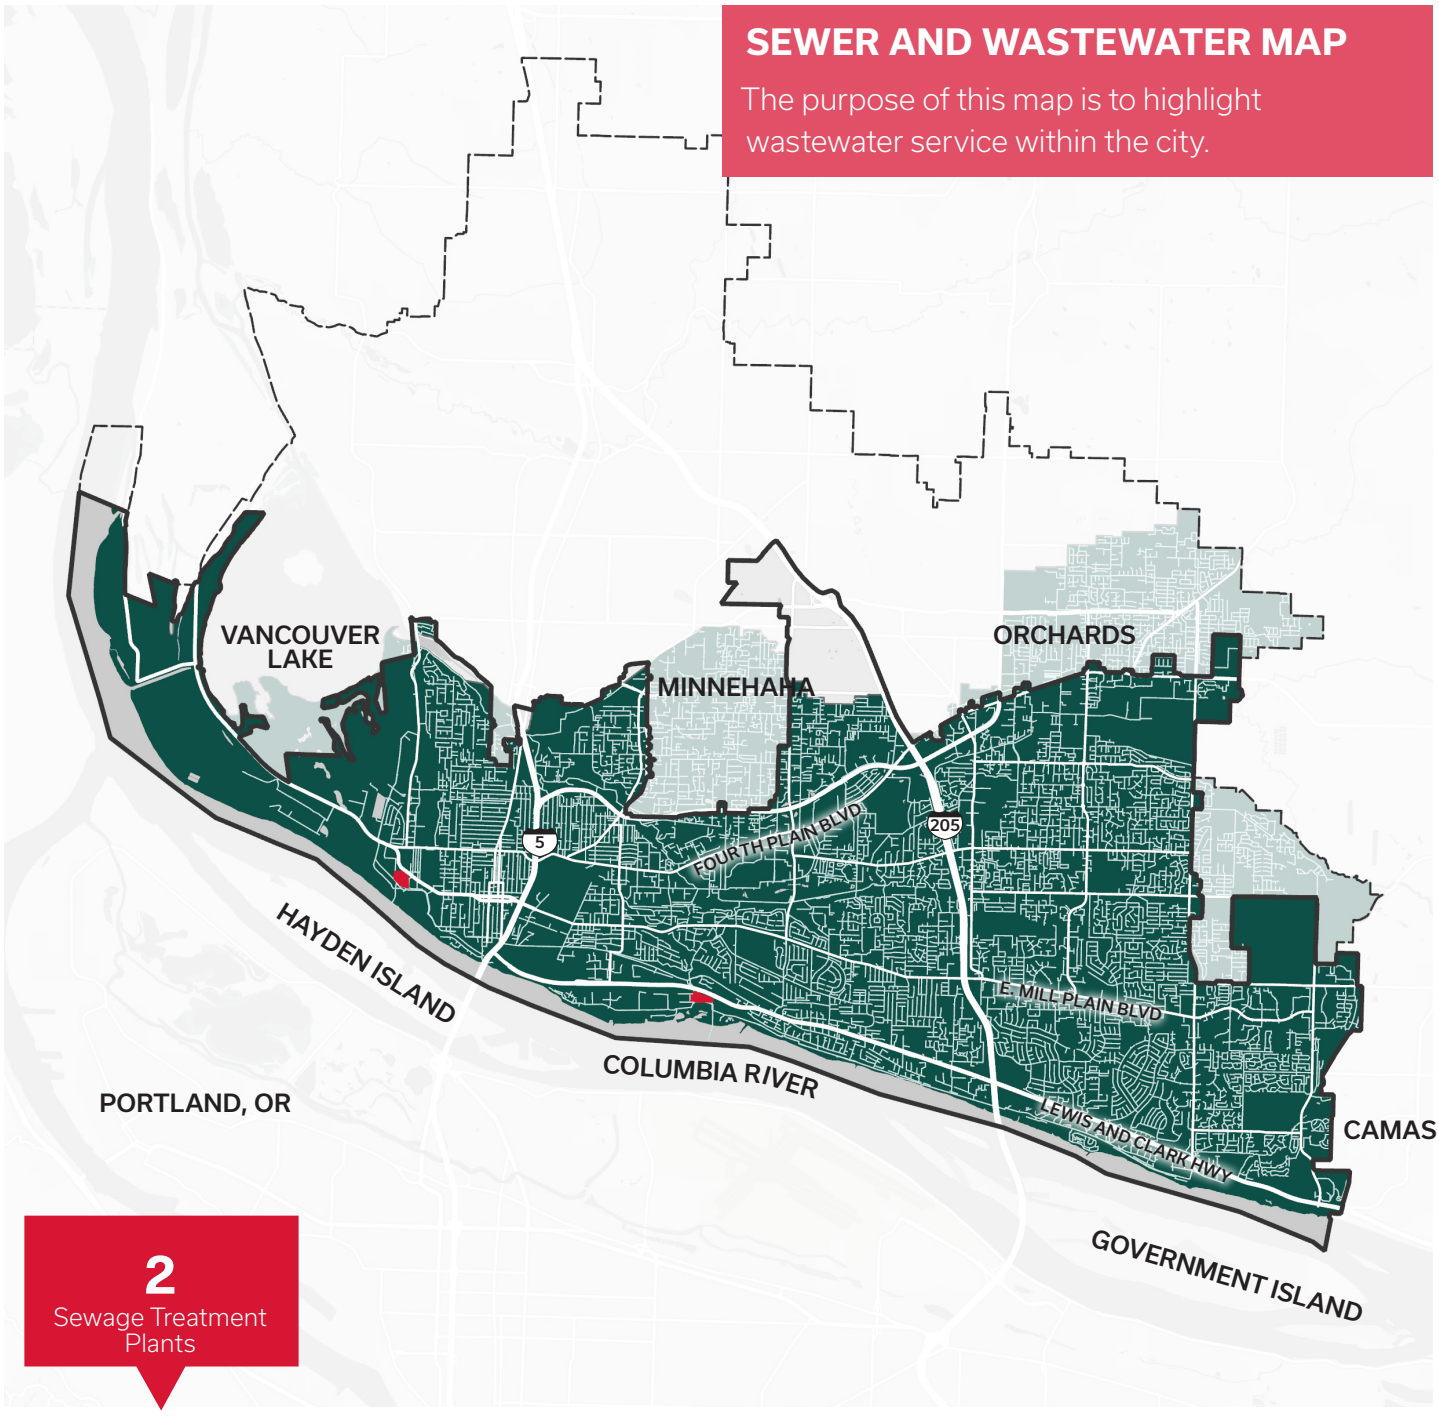

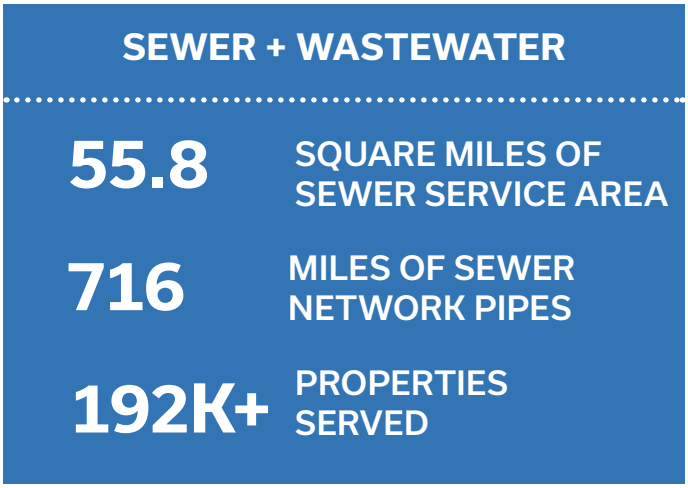

**Figure 80:** Sewer and Wastewater Map

## SEWER + WASTEWATER

Sanitary sewer is provided by the City of Vancouver within the City limits as well as the northern unincorporated area. As of 2011, they served 192,000 residents covering 55.8 sq. miles. The sewer system is an extensive network spanning 716 miles of pipe. These pipes transport residential, commercial, and industrial wastewater to two treatment plants: Westside Water Reclamation Facility (WWRF) and Marine Park Water Reclamation Facility (MPWRF).[207] Both of these have been recognized for environmental excellence employing advanced processes to treat wastewater and remove pollutants before releasing it into the Columbia River. From there, sterilized ash from incinerated solids is trucked to a landfill in Boardman, OR.

There are various federal and state standards to ensure the system meets former and future demands. These standards encompass factors such as water quality, environmental protection, and public health. The City of Vancouver adheres to these standards to ensure the proper functioning and compliance of the wastewater system.[208]

Overall, the wastewater system in Vancouver is a comprehensive and well-managed system that plays a crucial role in safeguarding public health, protecting the environment, and meeting the wastewater treatment needs of the community.

# REGULATORY FRAMEWORK

# REGULATIONS OVERVIEW

The Comprehensive Plan and Title 20 Code Update is an opportunity for the City of Vancouver to assess historical planning context, past actions, existing Comprehensive Plan policies, existing Clark County planning policies, State of Washington Growth Management Act policies, and other supporting guiding documents in order to not only understand how these documents have contributed to existing conditions but how they can inform the development of updated and new land use and built environment policies.

## HISTORICAL DEVELOPMENT CONTEXT AND PAST ACTIONS

The Equity Framework, as part of the Comprehensive Plan and Title 20 Code Update, defines what equity means for the Vancouver community and outlines a framework and guiding principles. It includes an analysis of the demographics profile of City residents focusing on vulnerable and historically marginalized communities.

The Equity Framework includes an expansive narrative on past actions that have led to communities in Vancouver being marginalized and vulnerable to displacement and policy changes. A full summary of these actions, including citations, can be found in the Equity Framework document available on the City's community engagement website Be Heard Vancouver (www.beheardvancouver.org). A condensed version can be found below:

### 1800S: EARLY SETTLEMENTS AND THE HUDSON'S BAY COMPANY

During the inception of The Hudson's Bay Company and the early non-native settlements, the trading operations comprised a diverse array of residents. Higher-ups often lived within the Fort, while lower level employees lived outside.

As the fur industry flourished in Fort Vancouver, numerous native Hawaiians migrated to Vancouver. They were brought by fur trading ships that voyaged from China and made a stop in Hawaii, seeking employment opportunities.

In 1844, the initial American settlers relocated their activities to the British territory further north, leading to significant changes in the region.

With the establishment of their own barracks, the United States brought in several new military officers who, in turn, brought along their "personal servants" who were essentially akin to slaves.

As the United States experienced growth and sought labor, various groups of Chinese immigrants were employed for work in and around Vancouver throughout the 1880s and 1890s.

In 1899, the U.S. 24th Infantry witnessed the arrival of 103 buffalo soldiers, segregated black cavalry troops. These troops were met with considerable animosity from the white community in Vancouver and the white troops replaced the black cavalry troops in leadership roles.

### LATE 19TH CENTURY - EARLY 20TH CENTURY

With significant advancements occurring prior to World War I and transformations in Vancouver's agricultural land, railroad, and logging sectors, the city experienced substantial growth. By around 1920, the white population comprised the majority, totaling approximately 12,600 residents. Nonetheless, census records indicate the presence of a small percentage of African American, Native American, Chinese, and Japanese individuals.

During the 1920's, the Ku Klux Klan held a prominent position throughout the country and made an appereance in Vancouver on March 11, 1921. The largest rally in the northwest, consisting of 500 Klansmen and 10,000 spectators, took place in Vancouver's Bagley Downs in 1924. This event engendered significant tensions and instilled fear among Vancouver's minority groups.

From the 1920s to the 1940s, numerous laws were enacted to restrict and discourage

communities of color based on their race, color, or religion. These laws primarily stemmed from urban development, as communities across Washington adopted deed restrictions to enforce racial segregation, preventing non-white families from selling, leasing, or renting properties in certain neighborhoods.

To date, no study has specifically examined the racial restrictive covenants in Vancouver. However, the University of Washington and Eastern Washington University have identified around 40,000 restricted properties within five Washington counties through their research efforts.

Developers in Vancouver implemented financial restrictions on plats to hinder the development of affordable housing. Advertisements explicitly prohibited housing costing less than $1,000, as it was deemed to "disfigure" the development

## JAPANESE-AMERICAN COMMUNITIES: CONTRIBUTIONS & DISPLACEMENTS

After the Chinese Exclusion Act halted Chinese immigration in 1882, American industrialists shifted their focus to the Japanese population as a source of inexpensive labor, particularly in the railroad industry. However, Japanese immigrants still faced exclusion under "Alien Land Laws."

In 1889, the Washington State Constitution prohibited non-citizens (aliens) from owning land. This restriction applied to Asian immigrants, even if they were seeking U.S. citizenship. The U.S. Congress also banned Asian immigrants from attaining citizenship under any circumstances.

In 1921, the Hood River Anti Alien Association successfully lobbied the state to pass an Alien Land Law. This law stripped non-citizens of their rights to rent or lease land. The Japanese immigrant community, known as the Nikkei community, played a significant role in Vancouver's truck farms, operations dedicated to growing produce for sale at local markets and restaurants, located in Clark County. President Roosevelt issued Executive Order 9066, which resulted in the forced relocation of 120,000 Japanese and Japanese Americans to concentration camps.

The Italian, German, and Japanese communities were prohibited from residing in southern and western Clark County and were forcibly removed from their homes and compelled to repurchase their land once the war concluded.

## 1939-1945: WORLD WAR II

In December 1943, the population increased to approximately 83,000, including a growth in the African American population to 8,825. Both white and black populations were recruited for labor in the shipyard due to operational needs. However, only a small portion of the 1.5 million African Americans who left the South in the 1940s migrated to the North and West for employment.

Moving to the Pacific Northwest brought significant cultural changes for many families, who also had to endure legally enforced segregation and racist systems in education, employment, and housing.

As Vancouver experienced rapid population growth and infrastructure development, the Vancouver Housing Authority (VHA) was established in 1942 to accommodate this expansion. It is believed that although the VHA did not have written policies promoting segregation, black and white populations ended up living separately within the housing developments based upon the states they came from.

Facing housing discrimination, the formation of NAACP Branch #1139 in Vancouver aimed to advocate for desegregation, equal employment opportunities, and education for black residents. The NAACP collaborated with local leaders on the issue of housing segregation to ensure permanent housing options were available for African Americans.

## 1945-1958: THE END OF WORLD WAR II

As World War 2 neared its conclusion, approximately 30,000 workers faced layoffs

as various industries scaled back. Discussions arose regarding the temporary housing projects undertaken by the Vancouver Housing Authority (VHA) and the potential impact on the city due to expanding public housing for white residents.

In 1958, the city of Vancouver decided to demolish the temporary housing designated for wartime efforts and transformed these developments into privately-owned subdivisions.

In 1952, the city established the Mayor's Commission on Open Housing, collaborating with the NAACP to create non-discriminatory housing opportunities that addressed concerns raised by city residents.

In January 1958, Vancouver became the first city to obtain special mortgage insurance to finance 150 units of affordable private housing.

Despite efforts to protect underprivileged communities, discrimination and segregation persisted in the housing market. Families of color were discouraged or outright prevented from renting or purchasing properties.

Recognizing the limited employment opportunities available to black families after World War 2, the NAACP actively lobbied major employers to hire black workers. These efforts eventually led to the passage of the 1949 Washington State Law prohibiting employment discrimination.

## 1955-1979: MODERNIZATION AND URBAN RENEWAL

The construction of Interstate 5 (I-5) in March 1955 had a significant impact on downtown Vancouver. The highway's development resulted in the separation of downtown Vancouver from other parts of the city and created accessibility issues due to the lack of exits. Major arterial roads were cut off, which affected the overall fabric of the city. This transformation also played a role in the emergence of shopping malls, which drew businesses away from the city center. During the 1960s and 1970s, Vancouver embarked on an urban renewal movement. The primary objective was to remove housing in neighborhoods that appeared underdeveloped, aiming to improve the city's appearance. This effort posed a threat to many historic buildings. However, community rallies and local activism assisted in the relocation of the Slocum House which was moved from an area west of downtown to the southwest corner of Esther Short Park.

In 1970, Clark County's population was approximately 128,500, with a significant majority identifying as white. At the time, demographic diversity was much lower with only a small percentage of the population identified as black, indigenous, Asian Pacific Islander, or Hispanic. Moreover, many of these residents resided in areas located south of the I-5 bridge.

## 1980S - PRESENT: PROGRESS & RENEWAL

Over the past 50 years, Vancouver has undergone significant growth, particularly through annexations that have brought diversity to its population and attracted newcomers due to the establishment of numerous high-tech businesses.

As of 2020, Vancouver's population reached 193,000, making it the fourth largest city in Washington State. The racial composition has changed considerably since 1970, with white residents now accounting for 70% of the population—a significant decrease from the 99% of the time.

The Vancouver housing authority continues to play a crucial role in the community by providing subsidized housing for families, the elderly, and individuals with disabilities. Since 1989, it has been guided by the Vancouver Downtown Association, ensuring its vital presence in the city.

After advocating for more than a century, the Chinook Indian Nation successfully petitioned the United States for federal recognition as a tribe in 2001. Unfortunately, this recognition was revoked by the George W. Bush administration only 18 months later. This revocation significantly impacts Native Americans, as they

lack the same legal protections and benefits enjoyed by federally recognized tribes, such as access to housing on reservation lands.

## GROWTH MANAGEMENT ACT REQUIREMENTS

### THE GROWTH MANAGEMENT ACT

The State of Washington Legislature passed the Growth Management Act (GMA) in 1990 to establish thresholds and guides for growth and development statewide and to require municipalities, or local governments, in urbanizing areas to adopt comprehensive plans. Growth Management is intended to help guide growth to areas where sustainable development can occur – i.e. is there available community infrastructure such as water and sewer service. It can also promote concurrent development of schools, parks, and affordable housing and create clear expectations or predictability for community and urban growth.

Since the advent of Growth Management practices in Washington State, there has been a concerted effort through established policies to promote healthy, walkable communities with access to nature in addition to preserving Washington's natural resources and conserving and maintaining both farmlands and forested areas.

### ANNEXATION

Annexation in the City of Vancouver has been guided by the Annexation Blueprint Plan, 2007, which served to identify areas within the Urban Growth Area that were urbanizing and to create a timeline for annexation. The Annexation Blueprint was initially adopted in 2003, and later updated in 2007 which included an interlocal agreement with Clark County for 10 years, and expired in 2017. This document includes a schedule for annexing lands within the Urban Growth Area which includes 18 annexation areas and 57 subareas. These annexation areas were structured into separate phases where each area is grouped into four distinct phases that span five-years. The Comprehensive Plan and Title 20 Update will include a review and update of the Annexation Blueprint Plan.

## INVENTORY OF PAST AND CURRENT PLANS AND STUDIES

The City of Vancouver has an extensive library of past plans and documents that guide current policy, goals, and investments. However, there are still some gaps related to guidance on public health, public safety, food systems and place-based economic strategies.

The table on the following pages provides a summary of the vision and goals of past and current plans and studies that have informed this Atlas and that will inform the development of the Comprehensive Plan:

- 2011 Vancouver Comprehensive Plan and Zoning Code
- Subarea and Action Plans
- Vancouver Strategic Plan: 2023-2029 Update
- Vancouver Parks, Recreation and Cultural Services Comprehensive Plan 2022
- City of Vancouver Diversity, Equity and Inclusion Strategic Plan
- Reside Vancouver: An Anti-Displacement Strategy
- City of Vancouver Climate Action Framework
- Transportation System Plan
- City of Vancouver Consolidated Housing and Community Development Plan
- Urban Forestry Management Plan
- Main Street Promise
- CIty of Vancouver Shoreline Master Program
- Clark County Comprehensive Economic Development Plan 2018-2023
- Clark County Countywide Planning Policies
- An Ethnohistorical Overview of Groups with Ties to Fort Vancouver National Historic Site
- Washington Transportation Plan 2035
- State of Washington Growth Management Act

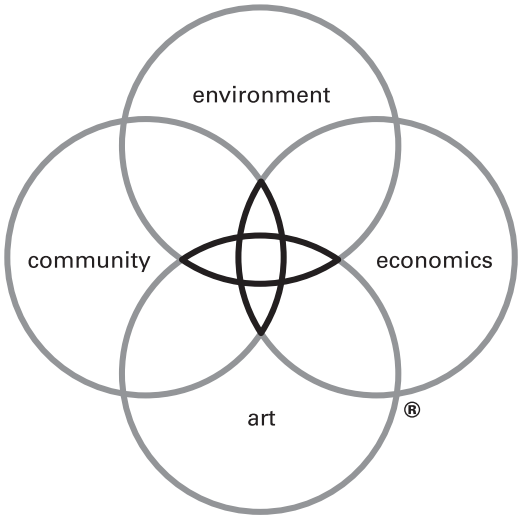
# INVENTORY OF PAST AND CURRENT PLANS

| PLAN | VISION | GOALS AND RECOMMENDATIONS | LAND USE CONSIDERATIONS | COMPREHENSIVE PLAN CONSIDERATIONS |
|---|---|---|---|---|
| **Fourth Plain Forward Action Plan** | The Fourth Plain is a culturally diverse and welcoming community with a distinct identity and sense of place. The Fourth Plain Forward Plan builds on the Fourth Plain Corridor Subarea Plan to envision how the neighborhood's multicultural business district can celebrate diversity, achieve safe streets, high-quality and accessible transit, and broadly shared economic security and opportunity. | • Cultivate a vibrant and welcoming business district<br>• Stabilize and grow small businesses<br>• Create a growth pipeline for food entrepreneurs<br>• Prioritize pedestrian safety and access<br>• Foster inclusive Transit-Oriented Development (TOD) | • Promote Transit Oriented Development (TOD) by developing density along major corridors and pedestrian safety and access | • Build on Vancouver's human capital and existing small business base<br>• Cultivate opportunities for multicultural small business districts through the built environment and community economic development<br>• Ensure that public works projects promote pedestrian safety and accessiblity |
| **Vancouver Strategic Plan (2023 - 2029)** | The Vancouver Strategic Plan serves to provide direction to the City for the next six years and beyond. The plan aims to make Vancouver more equitable, safe and climate friendly. As a city on the rise, this plan will ensure that the City's unique identity is preserved, while providing room for it to grow and evolve into the future. | • Enhance livability<br>• Create an inclusive and equitable community<br>• Encourage innovation and creative thinking<br>• Develop sustainable and resilient solutions to economic, environmental, and social issues<br>• Foster trust through a transparent process<br>• Plan for an aging population | • Provide community policies that will directly influence investments based upon the City's identified core values. | • Ensure vision and guidance for the City's core values - livability, equity and inclusion, innovation, sustainability and resiliency, and community trust and relationships. |
| **Vancouver Comprehensive Plan (2011)** | The Vancouver Comprehensive Plan (2011) served as an update to the City's first comprehensive plan, adopted in 1994 under Washington's Growth Management Act. This plan envisioned Vancouver's 20-year trajectory pertaining to community and economic development, housing, environment, public facilities and services and annexation, as well as strategies for implementation. | • Maintain and enhance liveability<br>• Plan for growth<br>• Enhance urban centers<br>• Facilitate connectivity<br>• Promote public health and sustainability<br>• Plan for an aging population | • The Vancouver Comprehensive Plan and Zoning Code (2011) offers a comprehensive land use map, zoning code and relevant policies to guide land use and development | • The Vancouver Comprehensive Plan and Zoning Code (2011) is the basis for the current Comprehensive Plan update. It includes relevant guidelines and recommendations for each area of the Comprehensive Plan |

| PLAN | VISION | GOALS AND RECOMMENDATIONS | LAND USE CONSIDERATIONS | COMPREHENSIVE PLAN CONSIDERATIONS |
|---|---|---|---|---|
| **Vancouver Parks, Recreation & Cultural Services Comprehensive Plan** | The City of Vancouver recently adopted the Vancouver Parks, Recreation & Cultural Services Comprehensive Plan, which envisioned a community with diverse recreational interests and a strong legacy of valuing parks, natural spaces and cultural services. | • Build community connections through arts and cultural programming<br>• Address inequities through inclusive access<br>• Provide hands-on educational experience<br>• Develop interconnected green infrastructure that will contribute to economic vitality<br>• Develop green spaces that conserve the natural ecosystem, provide transportation.alternatives and offer areas for stormwater retention<br>• Promote physical activity | • Ensure safe and equitable access to parks and cultural spaces,<br>• Ensure connectivity between parks and outdoor spaces | • Leverage and protect existing natural and cultural resources<br>• Ensure that Comprehensive Plan recommendations align with the vision and goals of the Parks Comprehensive Plan<br>• Promote green infrastructure and alternative modes of transportation |
| **Evergreen & Grand Commercial Corridors Strategy** | This Plan is part of the overarching Commercial Corridors Strategy (CCS), an effort by the City of Vancouver to enhance existing commercial corridors, increase transportation options, expand access to services and amenities, support job growth, and increase housing opportunities. | • Promote vibrancy, sustainability and mixed-use<br>• Recognize and build upon the neighborhood's unique setting, history and character | • Includes a land use framework for the study area<br>• Identifies three complementary land use areas with anchor development sites,<br>• Recommends short-term regulatory changes as well as longer-term policies, programs, and tools<br>• The overarching land use goal is to provide an appropriate mix of commercial and residential uses while strengthening current businesses | • Ensure balanced land uses on commercial corridors<br>• Promote a balanced, multi-modal mobility network<br>• Provide adequate parking<br>• Consider urban design of public spaces to promote vibrancy and inclusivity<br>• Prioritize small businesses in economic development strategy |
| **Reside Vancouver** | Reside Vancouver is an anti-displacement community and economic development strategy produced by the City of Vancouver. The Plan offers recommendations as to how the City can help to stabilize vulnerable communities and support them as they move towards financial self-sufficiency over time. | • Mitigate displacement and exclusion associated with population growth and investment<br>• Ensure that development projects protect vulnerable communities from displacement | • Anti-displacement strategies require careful stewardship of the existing affordable housing stock and intentional management of vacant / underutilized land. This includes expanding and supporting Community Land Trusts (CLTs). | • Preserve the existing stock of affordable housing<br>• Produce context-sensitive affordable housing<br>• Ensure that workforce and economic development programs are accessible to workers, small business owners and lower-income residents |

| PLAN | VISION | GOALS AND RECOMMENDATIONS | LAND USE CONSIDERATIONS | COMPREHENSIVE PLAN CONSIDERATIONS |
|---|---|---|---|---|
| **Vancouver City Center Vision** | The Vancouver City Center Vision was intended to foster and guide the continued growth of the approximately 130-block City Center to promote a vibrant, mixed-use downtown. | • Promote residential development, including affordable housing<br>• Support "messy vitality"<br>• Improve the Main Street Corridor<br>• Support the Vision with strategic investment in public infrastructure, especially transportation | • Encourage residential development, including affordable housing, in downtown<br>• Revitalize downtown uses along the Main Street Corridor<br>• Focus waterfront redevelopment on residential uses and public access<br>• Protect historic buildings and neighborhoods Encourage key support services like full-service grocery<br>• Encourage development within the western part of downtown<br>• Promote arts, cultural, and institutional uses in downtown | • Consider the Main Street Corridor redesign as a priority project<br>• Consider waterfront connections as a priority project<br>• Prioritize pedestrian safety, accessibility and connectivity<br>• Ensure that the I-5 redesign improves access to city center and consider the benefits and burdens associated with this project<br>• Address feelings of fragmentation in downtown |
| **Heights District Plan** | The Heights Plan is an opportunity for private-public partnership that provides benefits and opportunities to a range of residents. The Heights District is a new mixed-use neighborhood on the site of the former Tower Mall. It offers easy access to major commercial uses, cultural resources and open spaces. | • Residential units will increase from 232 to 1,800, a minimum of 10% will be family units and 25% will be income-based<br>• Collect $34 mm in tax revenue over 20 years<br>• Achieve green/wellness certification<br>• Increase jobs from 650 to 900-1,000,<br>• Retain 30% of local small businesses<br>• Ensure 30% tree canopy coverage<br>• Reduce driving alone trips and vehicle collisions | • The Heights District Plan proposes the following land use plan: 1,340 residential units, 56,000 sf commercial, 65,000 sf office, 83,000 sf hospitality, 20,0000 sf church/ multipurpose, 6.1 acres parks/open space | • Ensure appropriate tree canopy<br>• Promote pedestrian infrastructure<br>• Consider anti-displacement strategies and protective measures for vulnerable individuals and small business owners living in and around the proposed Heights District |
| **Climate Action Framework** | Under the Climate Action Framework, the City of Vancouver proposes to reduce its Greenhouse Gas emissions and build resiliency to climate change impacts. The Plan charts a path to carbon neutrality by 2040. | • Embed equity in climate action<br>• Develop a resilient, green economy<br>• Transition to 100% clean energy<br>• Significantly reduce per capita energy use<br>• Build walkable, mixed-use, and compact neighborhoods<br>• Create connected, carbon-rich natural systems<br>• Reduce per capita waste and water use | • To achieve the vision set forth in the Climate Action Framework, land must be set aside for accessible active transportation and green infrastructure | • The Comprehensive Plan can build on specific goals related to natural resources, the built environment, parks and open spaces and public facilities set forth in the Climate Action Framework. The Comprehensive Plan can also use the Climate Action Framework to develop metrics pertaining to emissions, the green economy and green infrastructure |

| PLAN | VISION | GOALS AND RECOMMENDATIONS | LAND USE CONSIDERATIONS | COMPREHENSIVE PLAN CONSIDERATIONS |
|---|---|---|---|---|
| **Transportation System Plan (DRAFT)** | The City of Vancouver's transportation system is guided by its Transportation System Plan, or TSP. This Plan envisions that Vancouver will be multimodal and safe - with integrated goals related to climate, equity and the economy. | • Offer multimodal transportation options<br>• Ensure safety<br>• Reduce impact on the climate and natural environment<br>• Support the needs of all and counteract historic and current inequities<br>• Advance regional prosperity<br>• Maintain existing infrastructure and invest strategically | • Increase transportation options across all of Vancouver's neighborhoods<br>• Build a well-connected bicycle network<br>• Establish greater separation between vehicular traffic, pedestrians and bikes<br>• Plan for efficient emergency response<br>• Install green infrastructure<br>• Increase urban tree canopy (UTC) in public right-of-way (ROW)<br>• Improve freight movement to industrial and commercial centers<br>• Promote development patterns that support transit, walking and biking | • Promote multi-modality<br>• Consider gaps in transit access<br>• Promote safe systems approach to streets<br>• Integrate climate considerations in transit planning<br>• Prioritize investment according to current and historic inequities<br>• Consider regional connectivity<br>• Assess the condition of existing infrastructure and assets |
| **City of Vancouver 2019-2023 Consolidated Housing and Community Development Plan** | The City of Vancouver hopes to use HUD funding to develop affordable housing, public services, public facilities and infrastructure and economic development. | • Create, maintain and support affordable housing<br>• Mitigate homelessness and related issues<br>• Revitalize neighborhoods and communities<br>• Increase economic and job development opportunities | • Consider the land use requirements for additional (affordable and supportive) housing | • Identify opportunities for creating new affordable housing and preserving existing affordable housing<br>• Describe resource allocation and policies related to homelessness<br>• Consider HUD funding sources for community and economic development projects |
| **Urban Forestry Management Plan (UFMP)** | Vancouver's UFMP envisions that Vancouver as an urban forest that is a healthy, dynamic, diverse and cohesive ecosystem that is valued and cared for through community stewardship. | • Manage trees as vital components of the community<br>• Apply best management practices to the urban forest<br>• Improve levels of service, sound policies, protocols and standards,<br>• Continue the process of long-range planning and management<br>• Engage and educate the community in matters of urban forestry | • The UFMP coordinates the management and administration of the urban forest | • Consider the urban forest as a vital component of the City<br>• Incorporate the urban forest in natural resource, park and open space planning<br>• Ensure that land use decisions consider existing trees and the urban forest |
| **Main Street Promise** | The Main Street Promise is an engineering project intended to move Downtown Vancouver towards a new era where Main Street will not only serve as the heart of the City but will be safe, accessible and connected. | • Increase safety for people and vehicles<br>• Welcome visitors and support Main Street businesses<br>• Improve infrastructure | • The roadway, sidewalks and adjacent outdoor spaces along Main Street will be reconfigured to improve safety, foster a sense of community and drive economic prosperity | • The Comprehensive Plan can consider how Main Street Promise might be catalytic to the surrounding downtown neighborhood, and how to ensure the goals of Main Street Promise align with those of the Comprehensive Plan |



| PLAN | VISION | GOALS AND RECOMMENDATIONS | LAND USE CONSIDERATIONS | COMPREHENSIVE PLAN CONSIDERATIONS |
|---|---|---|---|---|
| **City of Vancouver Shoreline Master Program** | The City of Vancouver SHoreline Master Program envisions that development along the Vancouver shoreline should promote public health, safety and community welfare and will ensure no net loss of shoreline ecological functions. | • Ensure consistency between Vancouver and state shoreline guidelines<br>• Preserve sites of historic and cultural significance<br>• Protect shoreline resources and vegetation<br>• Maintain an economic environment that is balanced with the natural and human environment<br>• Prepare for flood conditions,<br>• Increase public water access<br>• Rehabilitate impaired shorelines<br>• Minimize the need for shoreline armoring and develop best ecological practices in cases where it is necessary<br>• Provide transportation, utilities and institutional facilities in shoreline areas without adverse effects on shoreline function<br>• Promote the shoreline's aesthetic function<br>• Maintain and enhance the quality and quantity of the region's water resources | • The City of Vancouver Shoreline Master Program defines shoreline development and management practices that are in accordance with state practices and codes. Specific guidelines are provided regarding general requirements, exemptions and uses. The goal for shoreline use and development is to balance the preservation and development of shorelines with land use patterns that allow for mutually compatible uses | • Ensure that development proposals along Vancouver's shoreline adhere to the codes and guidelines set forth in the City of Vancouver Shoreline Master Program<br>• Assess the City of Vancouver Shoreline Master Program to determine its alignment with the goals and vision of the Comprehensive Plan<br>• Identify any needed updates to the existing code |
| **Regional Transportation Plan (RTP) for Clark County** | The RTP envisions that the Clark County region will be a vibrant region with centers of commerce, business, industrial activity and safe neighborhoods by 2040. | • Support economic development<br>• Ensure safety and security of the transportation system<br>• Develop an efficient multi-modal system that enhances regional accessibility and mobility<br>• Maximize efficient management and operations<br>• Protect natural resources and promote energy efficiency<br>• Ensure financial viability | • The RTP must be aligned with the region's long-range land use planning | •<br>• The Comprehensive Plan should place special consideration on the projects prioritized as part of the Transportation Improvement Program (TIP), as these are fast-tracked for funding and implementation<br>• The Regional Transportation Planning Organization (RTPO) coordinates transportation planning under Washington State's Growth Management Act (GMA) |

| PLAN | VISION | GOALS AND RECOMMENDATIONS | LAND USE CONSIDERATIONS | COMPREHENSIVE PLAN CONSIDERATIONS |
|---|---|---|---|---|
| **Clark County Comprehensive Economic Development Plan 2018-2023** | Clark County' Comprehensive Economic Development Plan spans the horizon from 2018-2023. The Plan envisions Clark County to be one of the most inclusive, healthy, and amenity-rich communities in the country. | • Advance sectors that offer opportunities for a variety of specializations<br>• Focus on retention and expansion of existing businesses<br>• Ensure that Clark County residents are the primary benefactors of all economic development activity<br>• Leverage the diversity of the Clark County community<br>• Capitalize on Clark County's strategic geographic location<br>• Position Clark County as a national business center | • Plan for commercial, industrial and office land uses<br>• Consider the possible impacts of globally-oriented economic development on Clark County residents and regional growth<br>• Promote urban design strategies that foster a marketable sense of place | • Ensure protections are in place for existing residents and business owners<br>• Consider strategic incentives to attract target industries<br>• Identify strategies for developing, attracting and maintaining talent |
| **Clark County 20-year Comprehensive Plan 2015-2035** | The Comprehensive Plan encourages growth in urban growth areas and rural centers, with each area center separate and distinct from the others. | • Preserve existing housing and add housing options<br>• Conserve natural resources<br>• Identify and protect critical environmental areas<br>• Shift towards non-vehicular modes of transportation<br>• Build capacity in public facilities to prepare for anticipated growth<br>• Ensure park planning considers anticipated growth<br>• Preserve historic structures<br>• Ensure that economic development anticipates future growth while protecting existing residents and businesses<br>• Develop an urban design strategy<br>• Prepare for annexation and incorporation | • The Land Use Element for 20-year Comprehensive Plan determines the general distribution and location and extent of the uses of land, where appropriate, for agriculture, timber production, housing, commerce, industry, recreation, open spaces, public utilities, public facilities and other uses. The Land Use Element includes population densities, building intensities and estimates of future population growth | • The Clark County 20-year Comprehensive Plan defines Vancouver as a major urban center with a full range of residential, commercial and industrial uses, highcapacity transit (HCT) corridors, schools, major cultural and public facilities. All aspects of the Vancouver Comprehensive Plan should consider the anticipated growth in population and density described in the Clark County Plan |

| PLAN | VISION | GOALS AND RECOMMENDATIONS | LAND USE CONSIDERATIONS | COMPREHENSIVE PLAN CONSIDERATIONS |
|---|---|---|---|---|
| **SR 503 Corridor Plan: Vancouver to Battle Ground** | The Washington State Department of Transportation envisions a future where the SR 503 corridor is a model of efficient and sustainable transportation while accommodating the needs of a diverse group of users while enhancing and promoting vibrant communities. | • Review vehicle access along the corridor to determine whether it is too restricted or too unrestricted<br>• Develop strategies for a connected and low-stress active transportation network<br>• Consider industrial, commercial and residential growth in the city of Battle Ground and north Clark County and its effects on congestion<br>• Explore Practical Solutions and Transportation Systems Management and Operations (TSMO) strategies to maximize use of existing infrastructure<br>• Determine Transportation Demand Management, transit and other TSMO strategies to provide mobility, access and congestion relief<br>• Improve corridor safety<br>• Identify any equity and environmental justice issues and determine strategies to address them | • Land use factors to be taken into account encompass existing deficiencies in active transportation options, including biking, walking, and rolling facilities, as well as the accessibility of transit and addressing issues with vehicle congestion. Safety enhancements and the development of strategies for freight mobility planning along the north-south highway in adjacent communities in north and central Clark County are also crucial for the well-being of local residents and businesses." | • The Comprehensive Plan should prioritize the examination of safety and accessibility concerns related to active transportation networks, specifically focusing on the SR 503 corridor due to its growing usage. It is essential to assess the potential effects on residents and businesses in specific communities and implement ongoing management strategies for this corridor |

| PLAN | VISION | GOALS AND RECOMMENDATIONS | LAND USE CONSIDERATIONS | COMPREHENSIVE PLAN CONSIDERATIONS |
|---|---|---|---|---|
| **C-TRAN 2021-2026 Transit Development Plan** | C-TRAN presents itself as one of the leading transit agencies that connects people to opportunities which support economic vitality, and enhance residents quality of life for the community. | • Based on the principals guided from the Washington Transportation Plan, C-TRAN key elements include<br>• Increase service by up to 10% in the next two (2) years<br>• Maintain the current target of service designed with 80% toward productivity and 20% toward coverage<br>• Identify/prioritize the next BRT corridors<br>• Look to innovative coverage – Mobility on Demand<br>• Consider additional Park and Rides<br>• Increase base capacity to accommodate more buses<br>• New Administration/Operations facility<br>• Stay on top of Paratransit needs. | • "Land use factors should encompass the City of Vancouver, various districts within Vancouver, neighboring communities, and towns, along with the provision of services in collaboration with neighboring partners. Ensuring accessibility to transportation networks like TriMet and Portland Streetcar, Lower Columbia Community Action Program, and Skamania County Public Transit is crucial to cater to the needs of Vancouver residents and the surrounding areas. Additionally, prioritizing services for resilient infrastructure and improvements is equally important." | • "The Comprehensive Plan should take into account the Transit Development Plan and its connections to residential, business, and industrial districts where communities experience inadequate access to quality transit options and connections. It is of utmost importance that development proposals and projects adhere to guidelines that prioritize the environment, safety, mobility, accessibility, and equity for Vancouver and its diverse transportation networks." |
| **Clark County Labor Market Information - Regional Economy Information** | N/A | • More Choices<br>• Unique Attributes<br>• Easy Walking Distance<br>• Open Spaces<br>• Public Spaces<br>• Conservation<br>• Economic Development<br>• Sustainability<br>• Commercial Buildings<br>• Economic Restructuring<br>• Public Services<br>• Regional Services<br>• Broad Support<br>• Participation<br>• Compact Development<br>• Balance Residential Projects | • Considerations should prioritize the unique needs of various communities and industries, taking into account the workforce composition. This includes giving special attention to healthcare workers, who form a significant portion of Vancouver's prominent workforce, as well as retail, leisure and hospitality, manufacturing, and government employment sectors. Additionally, it is essential to study the distribution of occupations and income in relation to job location and accessibility.= | • The Comprehensive Plan should undertake a thorough examination and evaluation of the labor force, unemployment rates, wages and income, as well as the geographic distribution in order to comprehend the disparities within the Clark County Labor Market and its regional context. Guided by the principles of environmental preservation, equity, opportunity, and accessibility, the comprehensive plan should address these factors to shape the values associated with the labor market in Clark County.= |

| PLAN | VISION | GOALS AND RECOMMENDATIONS | LAND USE CONSIDERATIONS | COMPREHENSIVE PLAN CONSIDERATIONS |
|---|---|---|---|---|
| **Washington Transportation Plan 2035** | By 2035, it is envisioned that Washington's transportation system should safely connect people and communities, fostering commerce, operating seamlessly across boundaries, and providing travel options to achieve an environmentally and financially sustainable system. | • Economic Vitality: To promote and develop transportation systems that stimulate, support, and enhance the movement of people and goods to ensure a prosperous economy<br>• Preservation: To maintain, preserve, and extend the life and utility of prior investments in transportation systems and services<br>• Safety: To provide for and improve the safety and security of transportation customers and the transportation system<br>• Mobility: To improve the predictable movement of goods and people throughout Washington State, including congestion relief and improved freight mobility<br>• Environment: To enhance Washington's quality of life through transportation investments that promote energy conservation, enhance healthy communities, and protect the environment<br>• To continuously improve the quality, effectiveness, and efficiency of the transportation system | • Land use factors should incorporate the establishment of a thriving and stable economic environment, the preservation of existing transportation systems, and the development of necessary infrastructure to meet transportation needs. Safety and accessibility for customers should be prioritized, while efforts to enhance the physical environment and improve the quality of life in the state of Washington, such as relieving congestion and fostering healthy communities, should also be pursued | • The Comprehensive Plan should be harmonized with the objectives and goals outlined in Washington's 2035 transportation plan, as well as future aspirations, in order to deliver quality transportation services that are both environmentally and financially sustainable and mindful. Recognizing the significance of community needs and goals in relation to transportation is crucial for effectively connecting people and communities |
| **Washington Transportation Plan 2040 and Beyond** | This policy plan provides the overarching framework for state and local transportation departments to deliver an integrated, multi-modal system that meets the travel needs for all residents and transportation system users. | • Washington Statewide Goals:<br>• Make the best use of existing infrastructure, services, and resources<br>• Increase safety and efficiency while keeping life cycle costs as low as possible 3<br>• Increase travel choices, system reliability, and person throughput<br>• Align transportation policies and investments to support statewide economic, societal, and environmental objectives | • Planning for community and regional growth requires careful considerations that support specific economic, social, and environmental initiatives. Enhancing programs such as intersection plans, paving programs, and congestion management tolling plans acknowledges the significance of mobility in accommodating the anticipated rapid changes in the state of Washington. In addition, land use recommendations underscore the importance of developing multi-modal transportation infrastructure to effectively address the community's needs while adhering to the guidelines established by the Washington Transportation Plan | • Transportation Plan System Policy Goals of Washington, encompassing Economic Vitality, Preservation, Safety, Mobility, Environment & Health, and Stewardship, should be emphasized and prioritized. Beyond transportation, it is essential to thoroughly consider economic opportunities, promote equitable commerce, and offer accessible travel options. These efforts aim to establish a financially stable system that effectively caters to the diverse needs of communities at the local, regional, and state-wide levels |

# DW LEGACY DESIGN®

Legacy Design is the defining element of our practice. It is our commitment to an elevated level of design inquiry to arrive at the optimal solutions for clients. The process ensures that our projects reflect the critical issues facing the built environment and that they deliver measurable benefit to clients and communities. It is the foundation of the firm's workshop culture and guides all projects.

**Racially Disparate Impacts Memorandum**

December 2024

# Introduction

The following memo provides recommendations for the City of Vancouver's approach to address the new requirements imposed by Washington State House Bill 1220 (HB 1220), specific to racially disparate impacts (RDI) in housing. This report was completed based on guidance from the Washington State Department of Commerce and examples from other jurisdictions in Washington. The specific requirements for the housing element of the comprehensive plan are discussed followed by explanatory text for meeting each requirement.

## Legislative Requirements

Washington State House Bill 1220, which passed in 2021, provided an updated set of requirements to the Growth Management Act (GMA) (RCW 36.70A.070) specific to the housing element. Any jurisdiction in Washington State compelled by the GMA to update their comprehensive plan in 2024 or after must adhere to these new requirements. In addition to the main focus of this bill- matching anticipated population growth with affordable housing- there is an additional component to ensure that new and existing housing policy works to address and mitigate racially disparate impacts (RDIs), displacement and exclusion.

*Sec 2. (2) A housing element ensuring the vitality and character of established residential neighborhoods that:*

*…*

*(e) Identifies local policies and regulations that result in racially disparate impacts, displacement, and exclusion in housing, including:*

*(i) Zoning that may have a discriminatory effect;*

*(ii) Disinvestment; and*

*(iii) Infrastructure availability;*

*(f) Identifies and implements policies and regulations to address and begin to undo racially disparate impacts, displacement, and exclusion in housing caused by local policies, plans, and actions;*

*(g) Identifies areas that may be at higher risk of displacement from market forces that occur with changes to zoning development regulations and capital investments; and*

*(h) Establishes antidisplacement policies, with consideration given to the preservation of historical and cultural communities as well as investments in low, very low, extremely low, and moderate income housing; equitable development initiatives; inclusionary zoning; community planning requirements; tenant protections; land disposition policies; and consideration of land that may be used for affordable housing.*

Source: RCW 36.70A.070 (2022)

## Definitions

It's important to create a common understanding for the key terms used in HB 1220. The WA State Dept. of Commerce released Racially Disparate Impacts Policy Review Process which included this set of definitions:

**Displacement:** The process by which a household is forced to move from its community because of conditions beyond their control.

- Physical displacement: Households are directly forced to move for reasons such as eviction, foreclosure, natural disaster or deterioration in housing quality.
- Economic displacement: Households are compelled to move by rising rents or costs of home ownership like property taxes.
- Cultural displacement: Residents are compelled to move because the people and institutions that make up their cultural community have left the area.

**Displacement risk:** The likelihood that a household, business or organization will be displaced from its community.

**Exclusion in housing:** The act or effect of shutting or keeping certain populations out of housing within a specified area, in a manner that may be intentional or unintentional, but which leads to non-inclusive impacts.

**Racially disparate impact (RDI):** When policies, practices, rules or other systems result in a disproportionate impact on one or more racial groups.

## Commerce Guidance for RDI in Housing Element

The Department of Commerce supplied a Housing Element Checklist to review for compliance with the newest requirements of HB1220 for both affordable housing and RDI presented as elements 1-4 of the following list. These represent the first four chapters of the following memo.

1. **Include a statement of whether data shows if there are disparate impacts.**
    a. This statement should indicate if housing data striated by racial groups and historic evidence demonstrates RDI.
    - Comprehensive plan should include an analysis of the data collected in the equity analysis, housing needs assessment, and any supplemental US Census demographic data (such as the indices included in the RDI Spatial Mapping Appendix).
2. **Review of housing element policies and regulations that have led to these impacts.**
    a. Conduct an audit on past policy and regulation, for form (language) and function (results), and present the results of this analysis.
    - Comprehensive plan should include the results from RDI Policy Audit for Title 20, 2011 Comprehensive Plan, and other applicable housing policy.
3. **Include policies to address these impacts, or that address development of more affordable housing, preservation of existing affordable housing, and protection of existing housing.**
    a. Based on the RDI data and previous RDI inducing policies (1 & 2) target new policies to mitigate for those impacts.
    - New housing policy that intends to undo identified RDI, should be denoted within the Comprehensive Plan Housing Element.
4. **Discussion and/or map of areas that may be at risk of displacement.**
    a. Identifying displacement risk by neighborhood so as to target policies by specific neighborhoods and groups.
    - Comprehensive plan should present displacement risk map, identified higher risk areas (RDI priority neighborhoods) and any supporting findings of displacement.

## Supporting Chapters

The City's response to addressing RDI is best informed if it examines policies that are best suited to the RDI concerns of individual neighborhoods. As such this memo includes two supplemental chapters that identify neighborhoods of particular concern, based on RDI indices or a history of racial segregation, and provide specific policy recommendations.

5. **Tailoring RDI Mitigation to the Most Impacted Neighborhoods**

a. Identifies the 5 neighborhoods with a high BIPOC population share and poor RDI outcomes.
b. For each neighborhood, based on their specific characteristics, provide recommendations to undo RDI and support growth without displacement.

**6. De-Segregating White Dominant Neighborhoods**

a. Identifies 4 neighborhoods in Vancouver with a history of racial deed restrictions (one removed due to a lack of present day racial segregation)
b. For each neighborhood, based on their specific characteristics, provide recommendations to create opportunities for BIPOC groups to move into the neighborhood.

# 1. Data & Historic Precedent Indicating RDI

**Include a statement of whether data shows if there are disparate impacts.**

## Racially Disparate Impacts

An analysis of RDI in housing involves looking at a community's breakdown of race and ethnicity and comparing it to the number of households that rent as opposed to own, their housing costs (rent/mortgage). The City has already reviewed both of these factors individually through the Equity Analysis (EA) and Housing Needs Analysis (HNA).

Upon a review of the EA and HNA a few statistical findings stand out:

- Population Share
  - Between 2011 and 2021 the population of American Indian and Alaskan Native (AIAN) and Black fell 22 and 20% respectively (EA)
  - Vancouver's Pacific Islander population is rapidly growing, increasing 21% from 2020 to 2021. (EA)
  - In comparison to their distribution in the county overall, POC are more likely to live in urban areas. (EA)
- Housing Type
  - BIPOC residents (excluding Asian) are more likely to live in multifamily and less likely to live in single family. (EA)
  - BIPOC residents (excluding Asian) are more likely to rent instead of own their housing with homeownership rates from 26-35% compared to the city's 51% (EA)
- Economic / Housing Cost-burden
  - Median household income was lower for Black and Hispanic than any other racial group and $24,185 and $10,973 respectively, below Vancouver's median. (HNA)
  - Housing cost-burden and severely cost-burden by race is higher for Black or African American (52%), and Hispanic or Latino (45%). (HNA)
- Transportation
  - BIPOC residents (excluding Asian) are more likely to rely on public transit or carpooling for their commutes compared to county. (EA)
- Educational Attainment
  - Hispanic/Latine and Native Hawaiian/Other Pacific Islander students continue to be disproportionately attending lower performing schools according to 3rd grade reading and math standards. (EA)
  - BIPOC (excluding Asian) students perform worse on kindergarten readiness, 3$^{rd}$ and 8$^{th}$ grade standardized tests than their white or Asian peers. (EA)
- Green Space
  - Block groups with higher proportions of people of color have 2.4% less tree canopy than the average for the city. (EA)

These data points demonstrate a Racially Disparate Impact exists between different racial groups and their ability to afford housing, rates of homeownership, and other factors indicating wealth and attainment.

## Historic Context

Nearly all racially disparate or equity analyses in housing look at a similar set of known policies or events that have caused inequalities in housing particular to specific racial groups. These include Redlining; VA Homeownership loans; Covenants, Conditions, and Restrictions (CC&R). In addition, Vancouver specifically saw public housing segregation through the Vancouver Housing Authority war-time housing. I will discuss each of these below.

### Redlining

The Home Owners' Loan Corporation (HOLC) was a federal agency created under New Deal legislation focused on buying and refinancing loans where borrowers were behind on repayment and issuing lower cost terms. In addition, it was notoriously the entity behind redlining, which graded the "residential security" or riskiness of different neighborhoods of many cities across the US, in a practice later colloquially known as Redlining. These mapped boundaries were defined by racial demographic data with areas having a higher POC percentage given a riskier rating. Banks and lenders would use these maps to determine which areas would be given loans to build and buy homes.

Emerging evidence is continuing to find present-day health disparities and crime for residents in formerly redlined communities. For example, there have been identified higher rates of heart disease, diabetes, pre-term death, COVID-19 outcomes, mental health, and gunshot ER visits. (Egede, 2023) These neighborhoods also experience increase housing instability and eviction. (Gerken, 2023)

Fortunately, Clark County doesn't have any recognized historic redlining maps, however its larger neighbors Portland, Tacoma, Seattle, and Spokane all have officially recognized redlining maps. (University of Richmond)

## Covenants, Conditions, and Restrictions

CCRs were another widespread method to restrict POC homeownership through writing requirements into a property's deed, plat, home owners association, or other property documents. Unfortunately, a fairly common practice during the 1930-50s was to restrict the sale or occupation of the property non-white individuals and families. These requirements "run with the land" to restrict any subsequent property buyer from being a POC. While the earliest so far reported CCR in Washington State was from 1907 the practice became much more common after 1926 after the Supreme Court ruling of Corrigan v. Buckley. These deed restrictions were commonplace even after the Shelley v. Kramer decision of 1948 which ruled them to be unenforceable, until they were finally made illegal in the 1968 Fair Housing Act.

The University of Washington Civil Rights and Labor Consortium has an ongoing project to identify and record CCRs across the state. They recently published their findings for Vancouver and Clark County. They found that within Clark County there were 1,367 parcels and 34 subdivisions with racially restrictive covenants. Typical restrictions included language banning sale of the property to "anyone other than the white (or Caucasian) race." However, some spelled out individual races that were restricted from purchase, particularly Black and Asian.

- "and that they shall never sell, give, convey, or lease any interest therein to any person of the **African or Mongolian races**." (Home Addition Plat, 1926)
- "be in any manor used or occupied by **Chinese, Japanese, or Negroes**, except that persons of said races may be employed as servants by residents" (Telocaset Plat I & 2, 1940; Slerat Highlands Repeat Blocks B & C, 1947)
- "that no **oriental or negroes** may occupy any building except as servants of the owners" (Lincola Park, 1938)

While the earliest reported CCR in Washington State was from 1907 the practice became much more common after 1926 after the Supreme Court ruling of Corrigan v. Buckley. These deed restrictions were commonplace even after the Shelley v. Kramer decision of 1948 which ruled them to be unenforceable, until they were finally made illegal in the 1968 Fair Housing Act. Vancouver's neighborhoods still exhibit residual segregation as a product of CCRs in its past.

The map shown below portrays the distribution of identified racial CCRs in Clark County overlayed on a map of BIPOC as a share of the total population. Broadly, the "white only" neighborhoods with historic CCRs are still some of the least racially diverse, with BIPOC share of the population ranging between 11 and 30 percent. Historic segregation has left its mark on the demographic background of the city as a whole, impacting AAPI, Native American, and all other BIPOC groups.

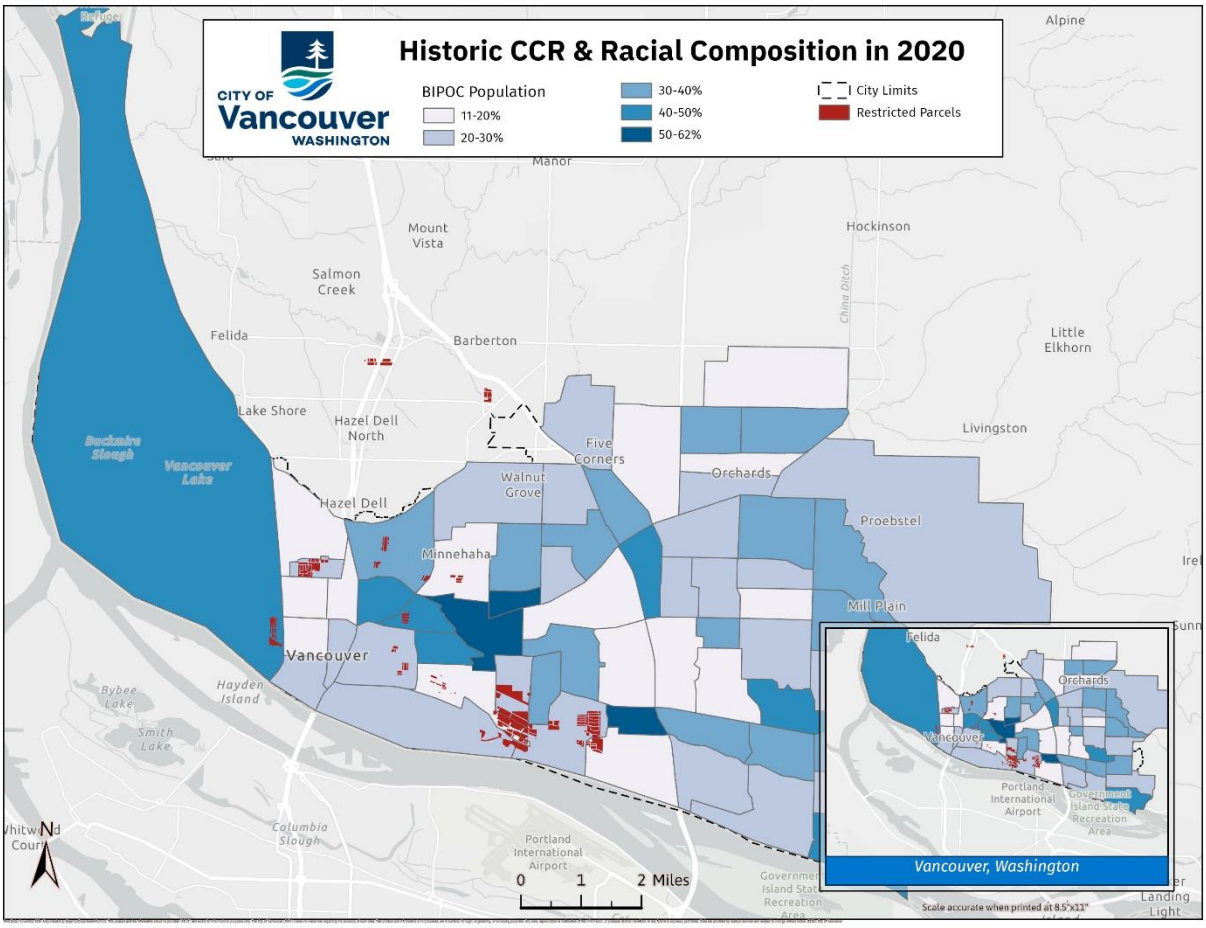

*Figure 1. Historic CCR and Racial Composition in 2020 (Source: Washington State, University of Washington)*

Within Vancouver, higher prevalence of CCRs is found in Heights and Evergreen Highlands neighborhoods, broadly the area defined by Millplain to the river, and Andresen to 98th Ave. In addition, the Lincoln Neighborhood and Sampson Ave in East Fruit Valley and others scattered throughout Central Vancouver. The presence of historic CCRs within these communities likely contributed to racial inequities present within these neighborhoods.

## VHA Public Housing Segregation & Closure

The Vancouver Housing Authority was the city's public housing organization. During WW2, the VHA was responsible in creating 12,350 family units and 10,000 dormitory units for those moving into Vancouver to work in the Kaiser shipyards and the broader war-industry. (Vancouver Housing Authority, 1945) Many of the emigrants who moved into VHA public housing were black, with the 1945 city census reporting nearly 9,000 black people in 1945 up from just 18 in 1940. (HistoryLink) There is evidence of segregation within the projects, based on the demographics of the projects and in historic documents. (Fourth Plain Forward).

In addition, upon the end of the war and the wartime industries the VHA opted to demolish much of the public housing ending what many long-term residents described as a "foreign invasion." The Authority also feared that leaving the housing available could lead to a damaging drop in property values. "The great unbridled development would, inside of a generation, be a slum area that no small community in the country could tolerate." (Vancouver Housing Authority, 1945). Only one thousand or roughly 20% of the wartime homes were resold to "postwar stranded population, low-income families, and military personnel." (Fourth Plain Forward) Internal memos describe how these would not be used to house "colored families." The remaining nearly 80% of the housing units from the projects were demolished and the land used to create schools and carefully controlled subdivisions, benefitting the pre-war primarily white residents and returning Veterans. VHA's policies appear to have direct intentions to force out the POC temporary war workers, while creating more affordable housing and public resources for the existing white community.

### VA Homeownership Loans

Following WWII, the federal government provided home loan backing, a $2,000 guarantee of repayment, for any returning Veteran who served at least 90 days, which went a long way at the time for securing housing. (Veterans Association) Over time the program was adjusted to provided more financial support as home prices increased, however, because of historic unequal recruiting practices, these policies have disproportionately benefitted white families. This policy has been credited as one of the most damaging to long-term POC homeownership.

## 2. Existing Policy Audit

**Review of housing element policies and regulations that have led to these impacts.**

The City of Vancouver is required to complete an audit of past housing policies that have led (or have the potential to have led to identified RDI's. This policy audit should include a set of guiding questions, criteria (scoring system), and recommended changes. Then reviewing the historic and modern demographic context provides a way to understand the direct and indirect RDIs, displacement, and exclusion.

Specific lenses through which each policy was reviewed include:

1. **Language clarity and potential for bias**. Whether the policy includes use of coded or unclear language that can lead to inequitable application.
2. **Deficit-based language**. Whether the policy uses language that can lead to an under-appreciation of the needs and contributions of people in specific groups.
3. **Impact on housing stock**. Whether the policy introduces barriers, such as excessive regulation, or incentives to overall housing stock and affordable housing to meet Bellevue's goals.
4. **Impact on housing mix**. Whether the policy prioritizes certain residential uses, and which uses are prioritized.
5. **Distribution of impact by geography, income, and community**. Whether the policy creates benefits and burden or risks that will be unevenly distributed.

6. **Mitigation for anticipated impacts**. Whether the policy includes consideration of impacts and plans to mitigate them, including displacement risk.

These RDI analysis 'lenses' are from Bellevue's Racially Disparate Impact Analysis based on Washington Department of Commerce Guidance. Vancouver should review each policy through these lenses and subsequently the rubric below provided by WA Dept. of Commerce to score each policy.

Table 1: Equity Policy Analysis

| **Criteria** | **Evaluation** |
|---|---|
| The policy is valid and supports meeting the identified housing needs. The policy is needed and addresses identified racially disparate impacts, displacement, and exclusion in housing. | "S" Supportive |
| The policy can support meeting the identified housing needs but may be insufficient or does not address racially disparate impacts, displacement, and exclusion in housing. | "A" Approaching |
| The policy may challenge the jurisdictions' ability to meet the identified housing needs. The policy's benefits and burdens should be reviewed to optimize the ability to meet the policy's objectives while improving the equitable distribution of benefits and burdens imposed by the policy. | "C" Challenging |
| The policy does not impact the jurisdiction's ability to meet the identified housing needs and has no influence or impact on racially disparate impacts, displacement, or exclusion. | "NA" Not Applicable |

Source: Washington Department of Commerce HB1220 RDI in Housing

Following the discussion on policy evaluation criteria the city provided the results of their RDI analysis on both housing and non-housing policies. These could be useful in Vancouver's analysis, informing some potential areas of language obscurity, bias, or unintended consequences.

## Identified Concerning Policies for RDI in Housing

A preliminary audit of City of Vancouver Policies identified a few instances of potentially concerning policies from the existing 2011 Comprehensive Plan and Development Code.

Table 2: Potentially concerning policies identified in the 2011 Comprehensive Plan

| **Policy** | **Language** | **Comment** |
|---|---|---|
| H-4 Neighborhood Character | Encourage innovative housing policies that provide for affordable housing and maintain neighborhood character. | Maintain neighborhood character largely means SFR character in Vancouver as the predominant housing type. |
| CD-3 Infill and Redevelopment | Where compatible with surrounding uses, efficiently use urban land by facilitating infill of undeveloped properties, and redevelopment of | Compatibility with surrounding uses (largely SFR) could mean that the neighborhood is unable to redevelop with increased density. The policy |

| | | |
|---|---|---|
| | underutilized and developed properties. Allow for conversion of single to multi-family housing, where designed to be compatible with surrounding uses. | could better define compatibility as scale or design and/or which neighborhoods this applies to. |
| CD-9 Compatible Uses | Compatible uses<br>Facilitate development that minimizes adverse impacts to adjacent areas, particularly<br>neighborhoods. | Creating a cohesive, compatible neighborhood is good, but most of the time this means new development must be tailored to suit SFR instead of the neighborhood adapting to higher density. |
| Land Use Designation (Zoning) Map | The land-use map directs a majority of the city area to be exclusively zoned as SFR, which until recently only allowed one structure per parcel. | Restricting a majority of the city to this land-use type has established a precedent of sprawl, housing unaffordability, and exclusion for socially vulnerable groups including BIPOC. |

Table 3: Potentially concerning policies identified in the Development Code "Title 20"

| **Code Element** | **Language** | **Comment** |
|---|---|---|
| 20.110.010 – Administration – Intent and Purpose | B.5 "preserving the character of existing neighborhoods" | "Preserving the character of existing neighborhoods" can be coded nimby-ism |
| | B.1 "effectively meet citizens' needs" | "Citizens" can be exclusive to varied immigration statuses. i.e. If you're not a citizen the city isn't designed for you |
| 20.265.010 – Design Review – Purpose | A. 1 "Preserve the character and quality of the City's cultural, historic, and architectural heritage" | Vancouver's cultural heritage almost entirely based on white culture and history and doesn't reflect its present diversifying residents |
| 20.420.050 – Mixed Use Standards and District – Development Standards | A. "create safe, attractive and convenient environment."<br><br>*Note: There are many other chapters where "attractive" occurs, this one serves in place of listing all occurrences* | "Attractive" is subjective, and can lead to continuing existing design standards and styles that lend themselves to historic SFR (which are less attainable for BIPOC communities) |
| 20.515.010 – Hough Neighborhood Overlay District – Purpose | "Maintaining the residential character of the neighborhood, which is primarily zoned for low-density residential development (R-9)" | We need to examine if protecting the character of SFR is an important goal. Can be used to exclude other home types and density (which are more often attainable for BIPOC communities) |
| 20.810.010 – ADU – Purpose | "Does not cause unanticipated impacts on the character or stability of single-family neighborhoods" | This language implies that ADU's are likely to cause these kinds of negative impacts to SFR |
| 20.920.060 – Tier 2 Infill Standards | G.1 "ensure compatibility of infill development with the character of existing residential structures." | Compatibility with existing residential structures (especially SFR) can perpetuate lower-scale development and contribute to less opportunity for housing attainable to less affluent and BIPOC communities |
| | "To encourage new infill development that complements the existing | Similarly, complimenting the existing often SFR neighborhood can lead to |

| | | |
|---|---|---|
| | neighborhood character" | more of the same with less opportunities for BIPOC groups |

There is a common thread between the potential to cause RDI and low-density housing (Single Family Residential) due to historic and present inequities in BIPOC communities' ability to afford a single family detached home. Continuing to zone for and produce only low density housing or requiring that new or infill developments match the standards set by historic single-family neighborhoods perpetuates inaccessibility for affordable housing and homeownership for BIPOC communities and any downstream impacts those cause.

## 3. Policies to Mitigate for RDI

**Include policies to address these (RDI) impacts, or that address development of more affordable housing, preservation of existing affordable housing, and protection of existing housing**

### Equity Driven City-wide Policies

Not only does HB 1220 require reviewing the city's existing policies, but it asks cities to examine what new policies it can put in place to undo racially disparate impacts, displacement and exclusion associated with past policies. Broadly these policies are any that preserve and promote housing affordability, retain the existing community, support the local economy, and include community voices in planning.

Example policies and their categories:

- **preservation of historical and cultural communities**
    - Identifying neighborhoods at a higher risk of displacement then establish protective policies such as right to return, affordable housing requirements in new developments,
    - Promoting art celebrating cultural groups by artists from those groups
- **investments in low, very low, extremely low, and moderate-income "affordable" housing**
    - providing incentives for developments to maintain a number of housing units at a rate affordable to low-income households
    - Supporting the creation of a community land trust to purchase and manage properties at affordable rates
- **inclusionary zoning**
    - Removing zoning designations that require single family residential (SFR), and instead encouraging "middle housing including SF attached, ADU, Cluster Villages, etc.
- **community planning requirements**
    - Including underrepresented and underserved communities at all stages in planning efforts in a leadership capacity
- **tenant protections**
    - eviction protections;
    - notice of land-sale; and
    - right of first purchase
- **land disposition policies**;
    - right to return
    - right of first refusal
- **consideration of land that may be used for affordable housing.**

    - Including policies that require or encourage affordable housing especially in areas that support active transportation and connected neighborhoods (TOD, Mixed Use Neighborhoods)

There are a few more policy categories that lead to reductions in RDI including:

- **Community-led and community-owned housing and development including stewardship and land and home ownership.**
    - Limited Equity Cooperative (MFR and MHP Cooperatives)
    - Community Land Trust
    - Live-work land-use
- **Strategies to increase equitable access to opportunity and generational and community wealth building.**
    - Down-payment assistance
    - Community Investment Trust

The City should further examine policies within these categories that are specific to the local and historic context and encourage community participation in identifying what policies they value.

### Community Engagement

Community engagement and representation are crucial to all parts of city planning, and the RDI analysis is no different. While there was no direct mention to community engagement in HB 1220, the Washington Department of Commerce emphasizes how important involving community voices are in this process. It asks that the RDI Analysis include opportunities throughout for the process to hear and include the community's concerns including determining past and present inequities, measurement criteria, and policies they consider to be harmful. Following the RDI analysis, results should be presented to community representatives to determine any missed areas of concern.

**The City of Vancouver should provide opportunities for racial minority communities to comment on historic and present RDI, displacement, and exclusion in housing, and to identify existing policy changes and new policies to remove or reduce RDI, displacement, and exclusion in housing.** This can be done through targeted workshops, and focus sessions with equity and racial equity and community focused advocacy groups such as:

- City of Vancouver Equity Working Group
- School Affinity Groups
- CBO Working Group

## 4. Identify Displacement Risk

**Discussion and/or map of areas that may be at risk of displacement.**

### Equity Index & Displacement Risk Assessment Tools

The City of Vancouver has published an online mapping application that shows areas across the city categorized based on their equity and displacement index scores. These scores were created in 2022, based on the methodology used in the City of Portland's 2018 Gentrification and Displacement Neighborhood Typology Assessment and Dr. Lisa Bates' previous work at the University of Portland. The equity index compiles a weighted set of demographic factors including race/ethnicity, age, income, housing, education, English proficiency, and disability. These same indicators were then used alongside Regional Multiple Listing System (RMLS) home value data, from 2000-2020 and 2015-2020.

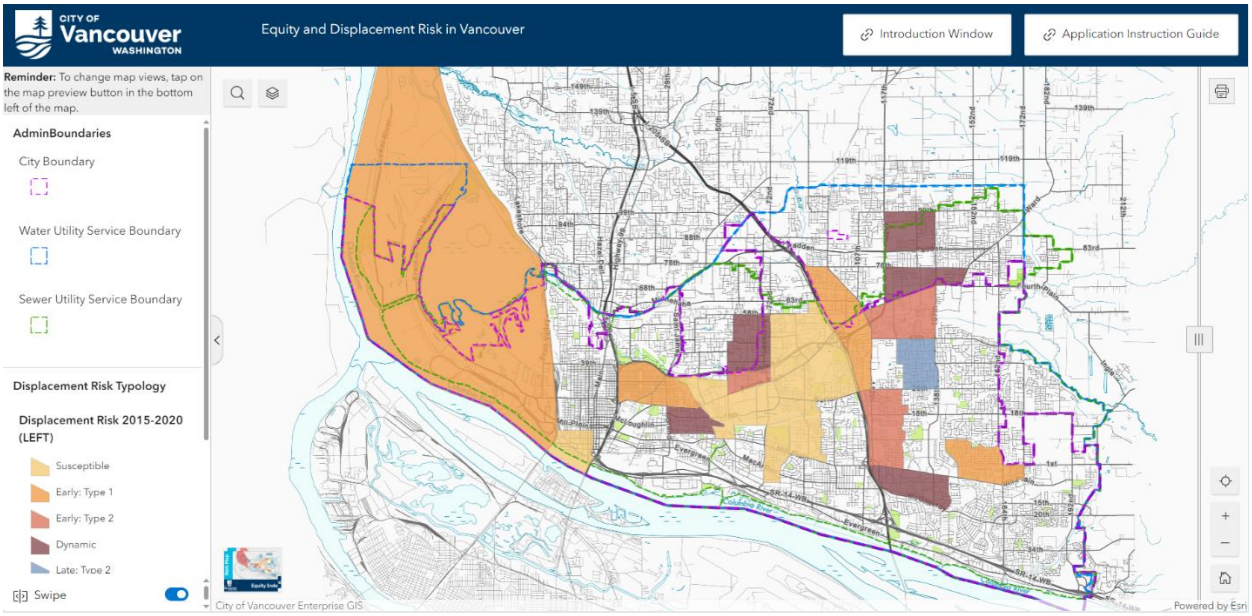

Table 3. Displacement Risk Categories

| Typology | Vulnerable population? | Demographic change? | Housing market condition |
|---|---|---|---|
| Susceptible | Yes | No | Adjacent |
| Early: Type 1 | Yes | No | Accelerating |
| Early: Type 2 | Yes | Yes | Adjacent |
| Dynamic | Yes | Yes | Accelerating |
| Late: Type 1 | Yes | Yes | Appreciating |
| Late: Type 2 | Used to be in 2000 | Yes | Accelerating |
| Continued loss | Used to be in 2000 | Increasing share of white people and adults with four-year degree | Appreciating |

Source: Displacement Risk Methodology, City of Vancouver, 2022

Vulnerable population includes social vulnerability indicators including median household income, race, housing tenure (renter/owner), educational attainment, and low-income. Demographic change examines if the census tract has become less racially diverse during the time examined, this separates early (may see displacement in the future) from late (has already experienced displacement) typologies. Lastly, housing market conditions examines if the census tract or an adjacent census tract is experiencing significant housing value changes.

This kind of analysis is very important because it not only identifies where displacement has been occurring but where it may be expected in the future. Using this map as reference can inform where new development could have a higher likelihood of causing displacement, indicating where development should be avoided, or more likely, where targeted displacement policies and careful review and planning are necessary.

Source: Equity and Displacement Risk Application

The analysis identified several census tracts just east of I-205, Andresen, and Hudson Bay neighborhoods as already experiencing demographic changes (displacement). Several other areas including fruit valley, downtown, and along fourth plain are in the early stages of displacement (at risk).

# 5. Tailoring RDI Mitigation to the Most Impacted Neighborhoods

## Key Takeaways:

**RDI Priority Communities**
**Tier 1:**

1. Fourth Plain
2. Fruit Valley
3. North Cascade Park (East Mill Plain)

**Tier 2:**

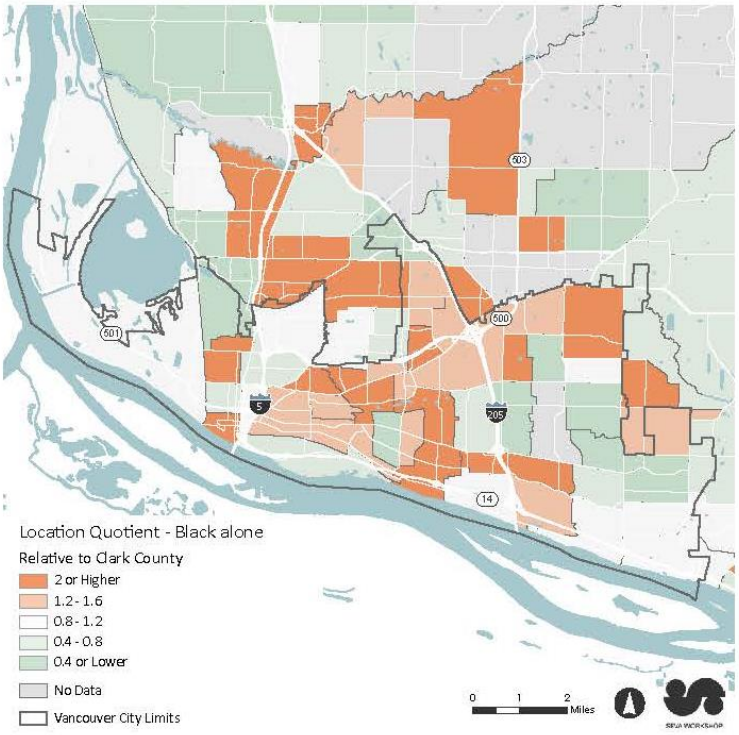
4. Rose Village
5. Central Vancouver Heights

### Introduction

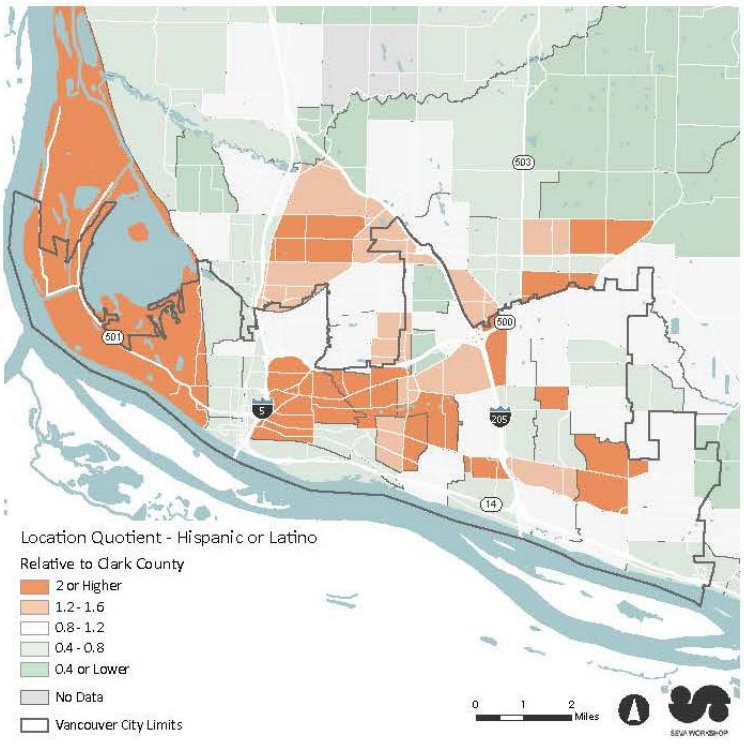
Blanket equity policies across the city will always be less effective than policies specific to the neighborhoods most in need. Therefore, establishing a set of neighborhoods most impacted by racial inequities can be especially useful. For RDI, those targeted neighborhoods should be those with larger populations of BIPOC and those who score poorly based on these measures.

The following chapter works to address RDI on a neighborhood specific basis.

1. Review of RDI and BIPOC population spatially to see trends in location.
2. Determining the neighborhoods with higher RDI concern.
3. Identifying policies that mitigate and undo the RDI felt in those neighborhoods.

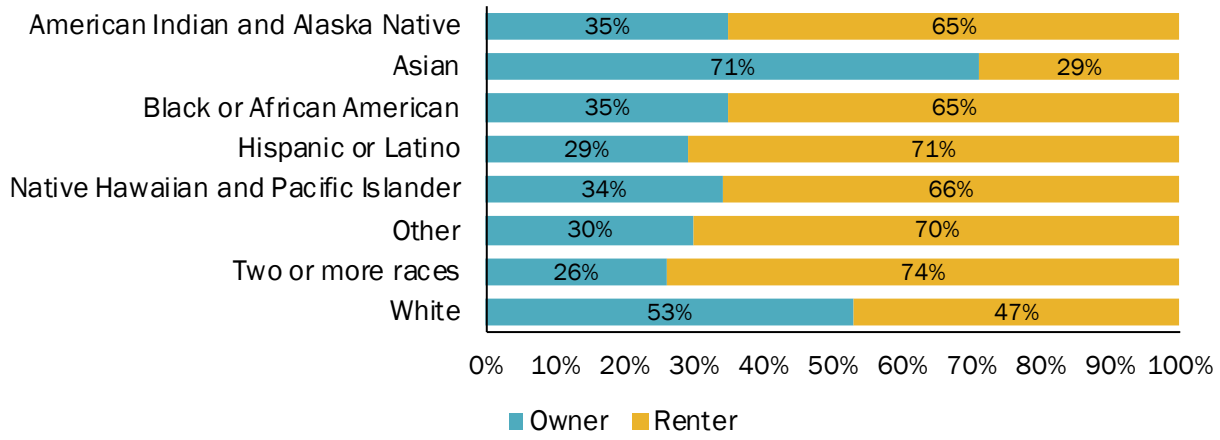


## Identifying RDI Priority Communities



**BIPOC Population**

People of color are more likely to live within City of Vancouver boundaries than in other parts of Clark County. The Equity Analysis identifies the three neighborhoods across the city with the highest BIPOC population to be Fruit Valley, Fourth Plain, and East Mill Plain. However, these pockets differ by race and ethnicity within POC.



The following maps show the distribution of race across the city and surrounding Clark County, created as part of the Equity Analysis. Planning efforts to address RDI should focus on where policies would mitigate inequalities for a significant number of BIPOC. Based on Vancouver's racial demographics, the areas of focus should be the census tracts with over 2% of the population in ethical groups other than white. As such, these identified areas include Fourth Plain, Fruit Valley, and North Cascade Park.

Image Source: City of Vancouver, Equity Analysis 2024

Although the Asian population is a racial minority included in BIPOC, it is not of particular concern for RDI, at least in Vancouver. For example, Asian populations in Vancouver have higher incomes, higher educational attainments, and higher homeownership rates than any other racial group, including Whites. The chart below finds the difference in homeownership rates by race, as presented in the Housing Needs Assessment.

Household Tenure by Race and Ethnicity, Vancouver, 2021 (From HNA)
Source: SEVA, ACS 5-Year Estimates, 2017-2021

**Priority Community Rationale**

Based on BIPOC population distribution results (2% or higher for Black and Latino) and a review of RDI concerns described in the RDI Spatial Data Appendix the following RDI Priority Communities are identified. Tier 1 priority communities had poor scores for all the RDI indices while Tier 2 scored poorly for only a subset (3 or more indices).

<u>Socioeconomic Vulnerability Indicators:</u>

High BIPOC Population (over 2% BIPOC share of population)

- High or Highest Equity Index Score
- Displacement Risk Index Geographies
- Higher Rates of Poverty (13.5 – 36.8%)
- High Rates of Cost Burden by Housing (> 30% Median Rent/Median HH Income)
- Low Median Household Incomes (< $70,000)
- Low Educational Attainment (<25% of 25-years-old or older population with a Bachelors Degree or Higher)

RDI Priority Communities

Tier 1:

1. Fourth Plain
2. Fruit Valley
3. North Cascade Park

Tier 2:

4. Rose Village
5. Central Vancouver Heights & Northwood

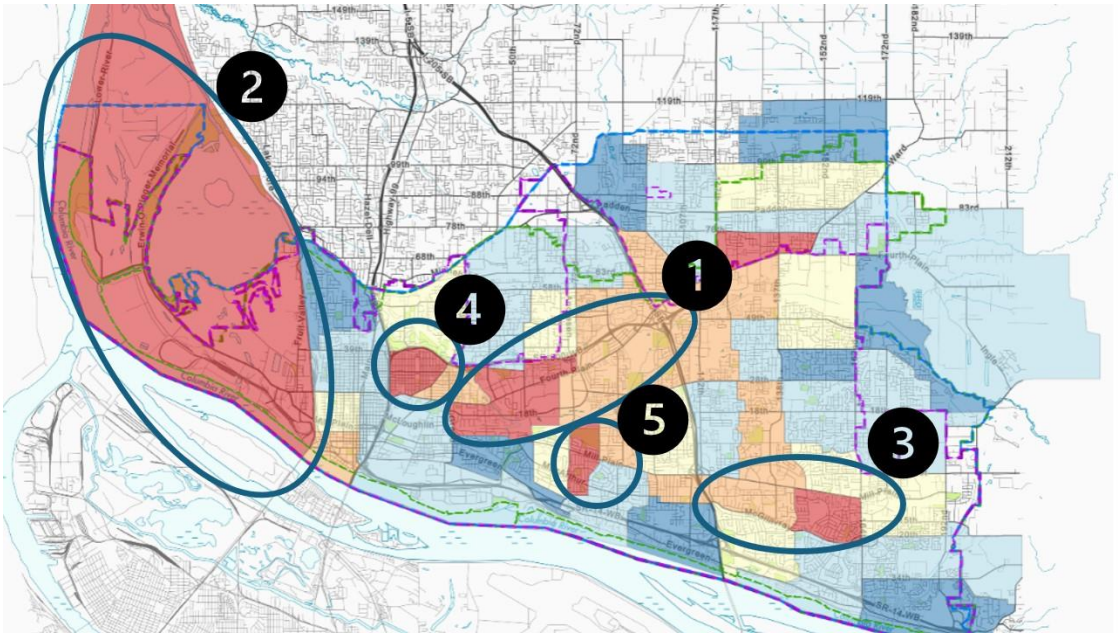


Image: Map shows RDI Priority Communities overlaid on the Equity Index Map, where Red indicates highest measures of inequity and blue for lowest measures of inequity

## Fourth Plain

Fourth Plain was developed through the Vancouver Housing Authority during WWII to house the incoming wartime workforce employed in the Kaiser shipyard. Although most of the thousands of black emigrants left the neighborhood following the war's end the neighborhood retained its character as a multicultural community. The Fourth Plain Neighborhood is spatially defined by the area surrounding Fourth Plain Corridor between I-5 and I-205, although subareas have been defined through the Fourth Plain for All (eastern), and Fourth Plain Forward (western). Both have high BIPOC percentages and experience similar concerns particularly low incomes, and low rates of homeownership (see Appendix). In addition, Fourth Plain was identified to have higher displacement risk than other areas of the city – a very critical concern for BIPOC residents.

We are likely to see the Fourth Plain neighborhood densify in the future, supported through the Comprehensive Plan. Much of the corridor will become either Mixed Use or Regional Activity and see significant growth and development. As such, policy should work to mitigate any RDI and any displacement pressures that could result from the new developments.

**Targeted Policies:**

- Community Investment Trusts – Work with Mercy Corps or another NPO to facilitate community buy-in for a CIT; a program that allows community members to invest in participating local small businesses a minimum of $10 per month and receive a dividend of profits. (Reside Vancouver)
  - *Why?* One of Fourth Plain's biggest strengths is its local economy, particularly its small businesses. These employ and are operated by neighborhood residents and cycle money back into the local economy. Supporting these small businesses supports that local economy and builds pride and stewardship.
- Down Payment Assistance Loan – Create a program that provides loans for qualified low-income households (in certain neighborhoods) with low-interest rates (and loan forgiveness for long-term tenure).
  - *Why?* Fourth Plain has very low rates of owner-occupied housing, with census tracts scoring as low as 4.2% (ACS 2022, Tract ID 411.11) and all within the lowest quintile for the county (36.9%). Homeownership allows for local wealth generation, improved housing security, and often improved affordability.
- Ensuring a Variety of Housing Types - Encourage new and innovative housing types that meet the evolving needs of our households and expand housing choices in all neighborhoods. These include: SFR; MFR; Middle housing; ADU; pre-fabricated homes such as manufactured, modular, and mobile homes; co-housing; and clustered housing/clustered services.
  - *Why?* Allowing for and encouraging the development of a breadth of housing types for all kinds of households, including multi-generational; and increasing opportunities for smaller, denser, and more affordable housing options.
- Affordable Housing Replacement – Redevelopment projects are required to, at a minimum, match the number of housing units lost with units maintained at an affordable level.

- *Why?* This neighborhood is likely to experience a great deal of redevelopment that may displace households. By ensuring that no affordable rate housing is lost helps prevent displacement and gentrification.

❖ Relocation Assistance (Right to Return) – When relocation is unavoidable determine who is the most likely harmed community and ensure that community is protected from further displacement. Support relocation assistance including the development of replacement housing and prioritize displaced households for new housing.
- *Why?* All the Fourth Plain Area appears on the Displacement Risk Index within the categories of Susceptible, Early: Type 2, and Dynamic. These categories indicate that it is at risk for or presently ongoing displacement.

❖ Mixed Use TOD – Encouraging Mixed-Use Development along transit corridors to encourage connected and accessible neighborhood design housing, employment, and amenities within easy access to transit.
- *Why?* Fourth Plain Neighborhood is already well supported through public transit; Fourth Plain Blvd is a key transit corridor for BRT and standard bus routes. By directing mixed-use development along transit creates a community that is connected, accessible, and car optional.

❖ Density in Multimodal Areas – Direct high-density development to areas with existing development where the terrain is conducive to walking, bicycling and transit use and where sensitive drainage basins will not be impacted.
- Why? Fourth Plain already represents a neighborhood well suited for walking, biking, and public transit with a variety of land uses and amenities. Promoting density in those areas promotes connectivity, accessibility, and healthy.

❖ Development Code for Air Quality – Recognizing that locating density and affordable housing along major transportation corridors incurs air quality health impacts; development code will be updated to conform to best practices for indoor air quality.
- *Why?* Transportation corridors are well suited for densifying and affordable housing due improved connectivity and accessibility. Locating affordable housing along these transportation corridors can put socioeconomically vulnerable communities including racial groups at higher exposures to poor air quality.

## Fruit Valley

The Fruit Valley Neighborhood is on the Western Edge of Vancouver and is characterized presently by a mixture of uses including Industrial, Agricultural, Residential, and Open Space. As its name suggests it was historically valued for prosperous fruit and nut orchards. Presently, however, it has become dominated by larger industrial operations including the Port of Vancouver or preserved as Open Space (Vancouver Lake). Its relatively small population of 2,732 has remained working class dominated, and increasingly Hispanic/Latino at 32% (2022 ACS Census).

The Fruit Valley Neighborhood is not likely to experience significant growth pressures, as it is relatively disconnected from the rest of the city and proximity to industrial land uses. This reduces displacement risk from redevelopment, but present RDI's should be mitigated for.

**Targeted Policies:**

- Affordable Housing – Retaining existing affordable housing by utilizing deed restrictions and density bonuses to incentivize and secure housing affordability and provide new homeownership opportunities for residents with low incomes.
  - *Why?* Fruit Valley presently has relatively affordable housing (median rent $914, median owner-occupied cost $1,322). (ACS 2022) Keeping the neighborhood's affordable housing help prevent displacement and RDI pressures.
- Limited Equity Cooperative – MFR and MHP can transition into a cooperative ownership structure where residents own shares of the community. Rents are restricted to affordable rates, and profits distributed among residents/shareholders. Example communities: Lakeside Mobile Estates, Fruit Valley Condos, Plum Meadows, and Fruit Valley Commons
  - *Why?* A limited equity cooperative would lock-in these communities as stable housing resistant to redevelopment, affordable, and returning profits to the residents as passive income. All of which would help bring down Fruit Valley's very high Cost-burden Ratio (Median Rent/Median HH Income) of 38.2.
- Streetscape Improvements for Developers – Require developers to make improvements to their street frontage or pay fees supporting toward local streetscape improvements in the neighborhood.
  - *Why?* The Fruit Valley Neighborhood scores poorly for walkability/bike-ability/public transit. Secondly, streetscape design can improve safety, and lead to future investment in this neighborhood.

Image shows Walkscores in Fruit Valley Neighborhood/ Walkscore: 18, Transit Score 27, Bike Score 53. *Source:*. *Walkscore*

- Public Transit Improvements – City should budget for improvements and new public transit routes in Fruit Valley.
  - *Why?* Fruit Valley scores very low (27) for transit access, according to Walkscore due to its limited transit service. Fruit Valley only has one bus route (Route 6) at a 30-minute service frequency along its border with Downtown.

## North Cascade Park

Mill Plain is Vancouver's other primary east-west arterial, and historically presenting the connection between the fort and lumber and grist mills upriver. Mill Plain in Central Vancouver is categorized by low density residential and institutional land use while east of I-205 transitions into more commercial and high density residential. This eastern segment is of higher equity and RDI concern, particularly the Cascade Park neighborhoods, census tracts 413.22 and 413.23. These have higher rates of BIPOC population alongside RDI concerns like housing cost-burden

(between .30 and .362), high rates of poverty, low median household income, and low homeownership rates (see Appendix).

The comprehensive plan will likely see this neighborhood experiencing a densification, with some properties redeveloping into much larger scale mixed use and multi-family housing. Crucially census tracts in this neighborhood were categorized as dynamic on the Displacement Risk Map, indicating they are actively ongoing displacement; with increasing home values and a decreasing BIPOC population. As redevelopment occurs, policy needs to ensure that housing remains affordable, and residents are not displaced.

**Targeted Policies:**

- Community Land Trust – Facilitate the creation of a Community Land Trust; a NPO to purchase and resell properties providing affordable housing to buyers who agree to retain as affordable housing or first-time home buyers as their primary residence at an affordable cost. (Reside Vancouver)
  - *Why?* This policy would allow the CLT to purchase the property and sell to developers who make some agreements to keep the created housing affordable.
- Right of First Refusal – When a property is listed for sale, provide opportunity for the tenant (if applicable) and Community Land Trust (if applicable) to purchase at market rate before the property is listed on the open market or sold private party. (Reside Vancouver)
  - *Why?* This policy would support the CLT and its ability to function, promoting affordability; and providing the opportunity for the tenant to remain in-place.
- Relocation Assistance (Right to Return) – When relocation is unavoidable determine who is the most likely harmed community and ensure that community is protected from further displacement. Support relocation assistance including the development of replacement housing and prioritize displaced households for new housing.
  - *Why?* North Cascade Park was categorized as Dynamic according to the Displacement Risk Analysis. This means that the area has a socially vulnerable population, has increasing home values, and has seen a shift toward less BIPOC population in the last few years. Displacement is ongoing; therefore this kind of policy can help keep socioeconomically vulnerable and BIPOC residents, within the neighborhood.
- Affordable Housing Replacement – Require developers to provide affordable housing for the number of housing units lost through the development.
  - *Why?* The neighborhood has relatively low household incomes and are cost-burdened by housing (>30%). Developing housing set to an affordable level will mitigate for high housing costs compared to income.
- Neighborhood Livability – Maintain and facilitate development of stable, multi-use neighborhoods that contain a compatible mix of housing, jobs, stores, and open and public spaces in a well-planned, safe pedestrian environment.
  - *Why?* Mixing land use, housing, and amenities help create a connected and accessible community, well suited for North Cascade Park's high development potential.

## Central Vancouver Heights & Northwood

The Vancouver Heights is a historic neighborhood in the city's core, it was developed through the Vancouver Housing Authority providing homes for wartime workers, then redeveloped after the war's end as single family residential neighborhoods. Neighborhoods created during the after war redevelopment were modest, relatively affordable, on smaller lots, and attracted predominantly white working-class residents. It remains single family residential, with much of the original housing stock remaining.

Vancouver Heights falls into three census tracts separated by Andresen, and again by North Garrison Rd/Morrison Rd. Each census tract performs very differently to one another on racial distribution and RDI measurements. Of the three only the middle- Tract 430, presents a concern for RDI. The central neighborhood is more racially diverse, is more cost-burdened by housing at .307, and broadly performs worse for RDI measurements. Importantly, this neighborhood, as discussed in the following chapter was surrounded by neighborhoods like East and West Vancouver Heights and Father Blanchet Park that utilized racially restrictive covenants during the 30s-50s, leading to this as the only neighborhood in the area, allowing BIPOC residents to buy.

- *Note: The Vancouver Heights District, located in the Westernmost edge of Vancouver Heights is undergoing a planned redevelopment project, focused on improving housing affordability and creating a mixed-use neighborhood center.*

**Targeted Policies:**

- Down Payment Assistance Loan – Create a program that provides loans for qualified low-income households (in certain neighborhoods) with low-interest rates (and loan forgiveness for long-term tenure).
  - *Why?* This creates opportunities for eligible socially vulnerable households including BIPOC to better buy a home without being cost-burdened.
- Ensuring a Variety of Housing Types - Encourage new and innovative housing types that meet the evolving needs of our households and expand housing choices in all neighborhoods. These include: SFR; MFR; Middle housing; ADU; pre-fabricated homes such as manufactured, modular, and mobile homes; co-housing; and clustered housing/clustered services.
  - *Why?* Presently the neighborhood is almost entirely single family residential, attracting only those who can afford to pay for those associated higher housing costs and utilize all the space SFR provides. By diversifying the kinds of housing available in this neighborhood diversifies its residents, allows for generational housing, and affordability.

## Rose Village

The Rose Village neighborhood is defined by the areas bounded by I-5, SR-500 and St Johns. Its close proximity to downtown, the oldest part of the city, meant that Rose Village was one of the first places to develop, along with Forth Plain the neighborhood experienced the levels of development of housing for wartime industries.

Today, the neighborhood is home to many older residents who have lived here for decades, as well as first time buyers who appreciate the quality craftsmanship of an older home, the affordability of a smaller lot and structure, and the proximity to downtown and I-5. Overtime, zoning changes have allowed the neighborhood to develop duplexes and apartments along Fourth Plain and St Johns corridors. It is racially diverse with 32% BIPOC excluding Asian, lower median household income and Highest Equity Risk and Early: Type 1 Displacement Risk.

**Targeted Policies:**

- Community Land Trust – Facilitate the creation of a Community Land Trust; a NPO to purchase and resell properties providing affordable housing to buyers who agree to retain as affordable housing or first-time home buyers as their primary residence at an affordable cost.
  - *Why?* Due to the neighborhoods displacement risk score, Early: Type 1, policies should work to ensure that any redevelopment pressures prioritize the existing residents
- Right of First Refusal – When a property is listed for sale, provide opportunity for the tenant (if applicable) and Community Land Trust (if applicable) to purchase at market rate before the property is listed on the open market or sold private party.
  - *Why?* This policy would support the CLT and its ability to function, promoting affordability; and providing the opportunity for the tenant to remain in-place.
- Multi-generational Housing – Encourage multi-generational housing through density increases and design culturally tailored to multi-generational households including, single-story (no-steps) design, flexible floorplans, ADU, and connected and accessible community guidelines.
  - Why? To better encourage a mixing in household types including variety of ages policies should facilitate housing styles that allow for aging in place, and all stages of life.

## 6. De-Segregating White Dominant Neighborhoods

**Historic Precedents**

These present racial disparities and racial distribution are influenced by historic racial housing inequities. BIPOC groups were excluded from buying housing in Vancouver directly through racial deed restrictions (CCRs), and indirectly through a lack of access to mortgage assistance offered through the Veterans Affairs (VA). The strongest indicators of racist housing policy leading to geographic disparities are from historic deed restrictions.

Presently, decades after racist housing policy were in-place in Vancouver, there are still patterns of racial segregation that line-up with racist housing policy geographically. Thankfully, unlike its larger neighbors, Seattle and Portland with a history of Redlining, Vancouver's only significant spatially disparate racial housing policy is Racial Covenants, Conditions, and Restrictions (CCRs).

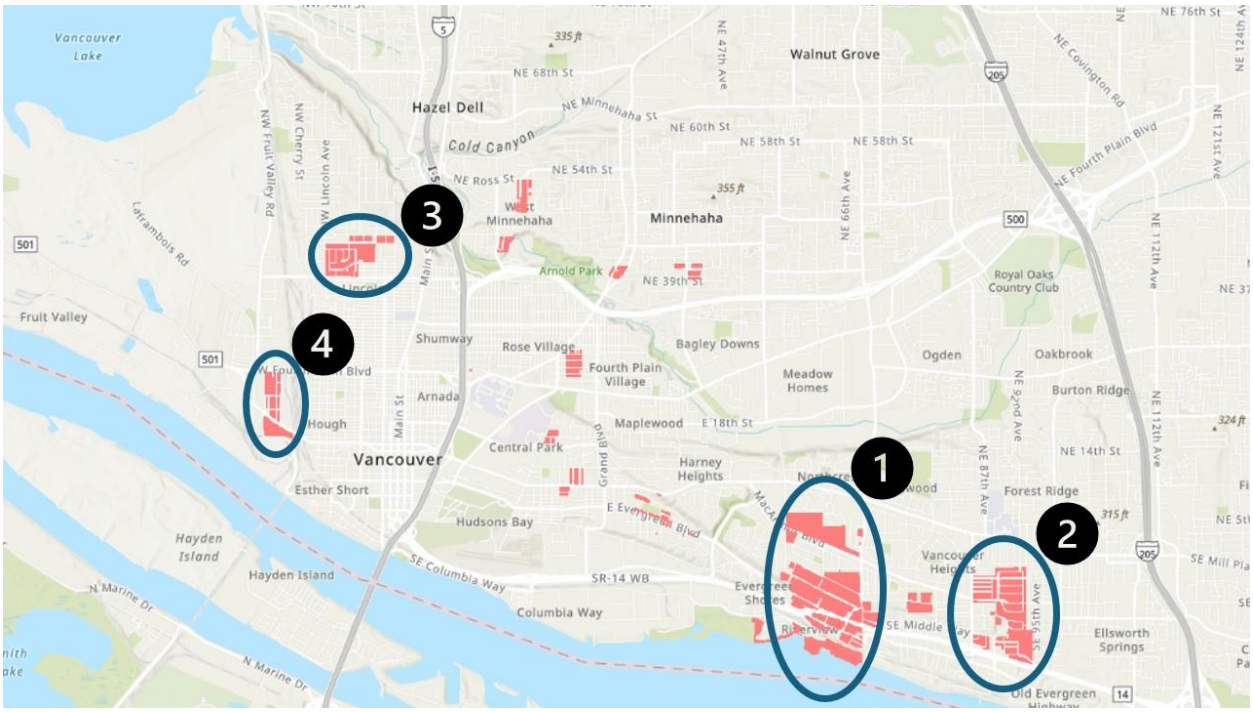

Image: Parcels with CCR's within Clark County identified through Racial Restrictive Covenants Project grouped into 4 categories. *Source: Washington State, University of Washington*

As previously discussed in Chapter 1: Data and Historic Precedent Indicating RDI, racially restrictive deeds, were legally binding rules restricting the sale of properties to only white or "non-colored" individuals and households, prevalent during the 1930-50s. Properties within Clark County that were subject to racial CCR's are shown in the above map image, most of which fall within City Boundaries. There are clear geographic trends resulting from large subdivisions with racial restrictions. Four neighborhoods across the city were identified to have a large number of parcels with a history of racial CCRs.

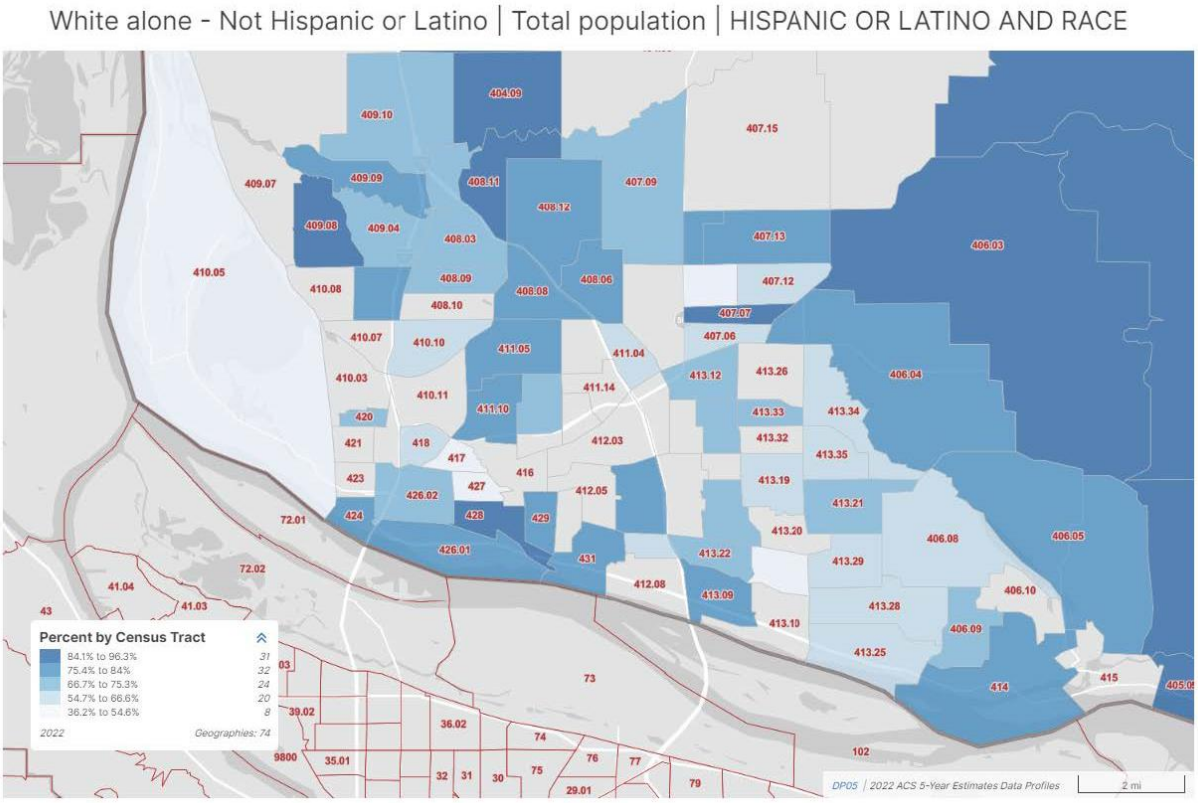
Racial Integration Neighborhoods

1. Evergreen Highlands & Northcrest (Tract 429)
2. Eastern Vancouver Heights (Tract 431)
3. Southern Lincoln (Tract 420)
4. Simpson Ave – Southeastern Fruit Valley (Tract 410.05) – Excluded

Racial segregation caused by racial CCR's has lasting impacts on race/ethnicity demographic distribution across the city. For instance, Evergreen Highlands Neighborhood and Eastern Vancouver Heights in the city's south-central area. Census Tracts in these neighborhoods have very low BIPOC (excluding Asian) population share at around 12 and 13%, much lower than the county average of 20%. The Simpson Avenue neighborhood presents an exception as the neighborhood has a high share of Hispanic/latino residents at 21%, as such it is excluded for further consideration for integration policy.

These neighborhoods generally score well on RDI and equity matrices, as demonstrated by mapping results shown in the Spatial Data Appendix. A summary of those results are as follows:

- Equity Index
  - All CCR neighborhoods had a **Low and Lowest Equity Index** score
- Displacement Risk
  - All CCR neighborhoods had a **low displacement risk** (didn't appear on Displacement Risk Index)
- Homeownership
  - All CCR neighborhoods have a **high 67-84% homeownership rate**
- Cost Burden (Housing Cost/Household Income)
  - The neighborhoods have a 25-30 ratio, which is **moderate cost-burden ratio** below the cost-burden threshold of 30
- Poverty
  - CCR Neighborhoods poverty ratios varied widely from **8.6 - 13.5% in Eastern Vancouver Heights, to Southern Lincoln at 13.5-20%***
    **Likely due to a proximity to downtown, which all score similarly*
- Median Household Income
  - CCR neighborhoods have **moderate median household income** ranging from $93,000 - 113,000, similar to the County's median of $97,700
- Education
  - CCR neighborhoods have **moderate-high educational attainment** of 34-43% of the population 25 and older receiving a bachelor's degree or higher



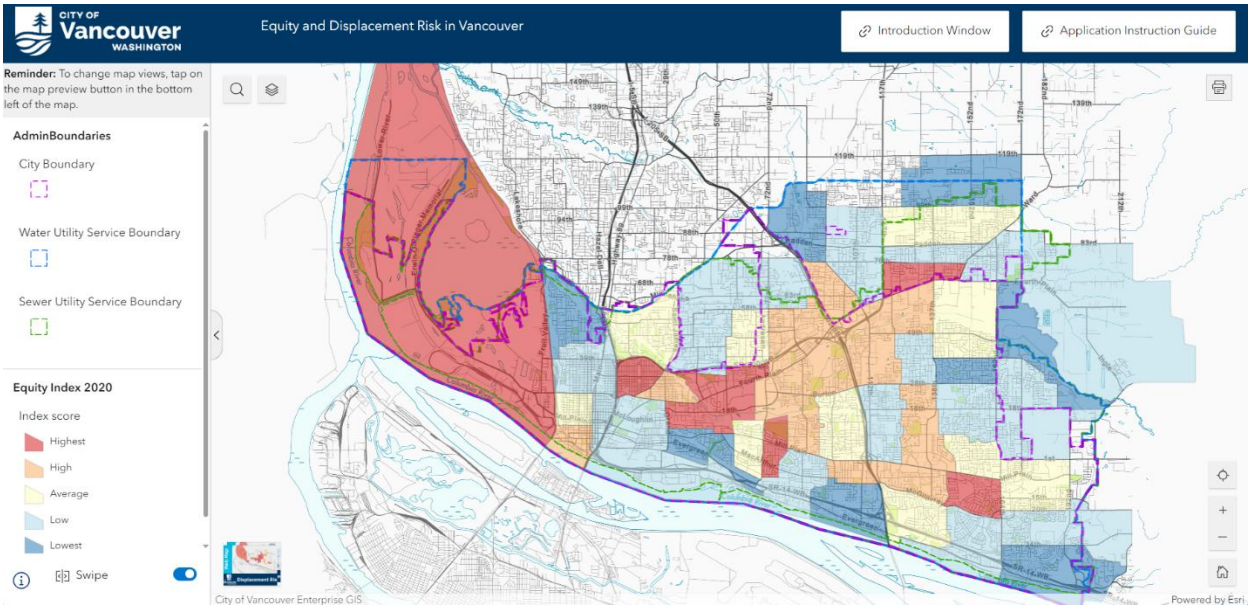
In general these CCR neighborhoods perform average to above average according to these indices. They have strong homeownership rates and educational attainment and score well in the equity index and displacement risk indeces. However, these neighborhoods still have housing security concerns with lower incomes and in some instances povery, both of which tie-into having a moderate-high housing cost burden. Certain policies supporting these concerns can help these neighborhoods reduce historic impacts for housing segregation.

Policies that can be effective at addressing these formerly racial CCR neighborhoods include many of the common policies used to improve housing affordability, choice, and land-use mixing and cohesion. These include:

1) **Housing Affordability** - requires or incentivizes developers to include affordable housing units within new market-rate housing developments.
2) **Housing Vouchers** - enable low-income families to move into higher-opportunity neighborhoods, breaking up concentrations of racial and economic segregation.
3) **Flexibility in Housing Type** - support the creation of a variety of housing types, with specific focus on increasing density, and providing for “missing middle housing” such as townhomes, duplex, triplex, etc., village clusters, and others.
4) **Land Use Mixing** - through multiple small zoning districts or mixed-use zoning can a neighborhood that is more connected and accessible and provides opportunities for employment.

**Non-Hispanic/Latino White as Percent of Population**

This map shows census tracts across Vancouver based on the share of the population that is White and Not Hispanic/Latino. Examining where the percentages are low shows the areas that are less racially diverse or have a larger BIPOC share of the population.

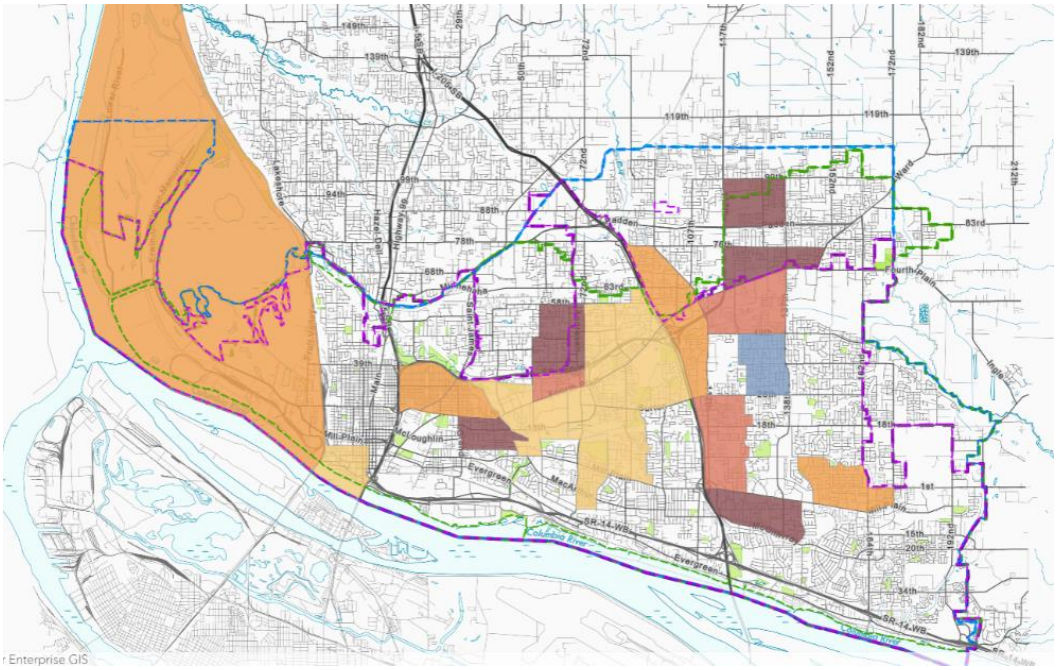


*Source: US Census, 5-year ACS, DP05 – Hispanic or Latino and Race*

The stand-out areas for having a high BIPOC population includes Fruit Valley, North Main, Fruit Valley, Fourth Plain Corridor, Central Vancouver Heights, East Cascade Park, and other areas. Although this may doesn't pull out specific racial groups, data indicates that East Vancouver has more Asian population, a BIPOC group that according to RDI indicator data, doesn't experience negative impacts in the same way as other racial groups.

**Equity Index**

The City of Vancouver has prepared an equity index that identifies equity priority communities based on a set of standard social vulnerability/equity indicators from the ACS Census. These indicators included renter/owner rates, race/ethnicity, English proficiency, education, income, disability, and age. This analysis indexed these together and compared to all census block group in the city. Many of these variables are common RDI categories when paired with a BIPOC dominant community.



Source: Equity and Displacement Risk in Vancouver (Equity Index Map), City of Vancouver, 2024

The areas of the city in the highest index category according to the equity index are Fruit Valley, Rose Village, Harney Heights, and Cascade Highlands (East Mill Plain), and the whole Fourth Plain Corridor has equity index scores high or highest.

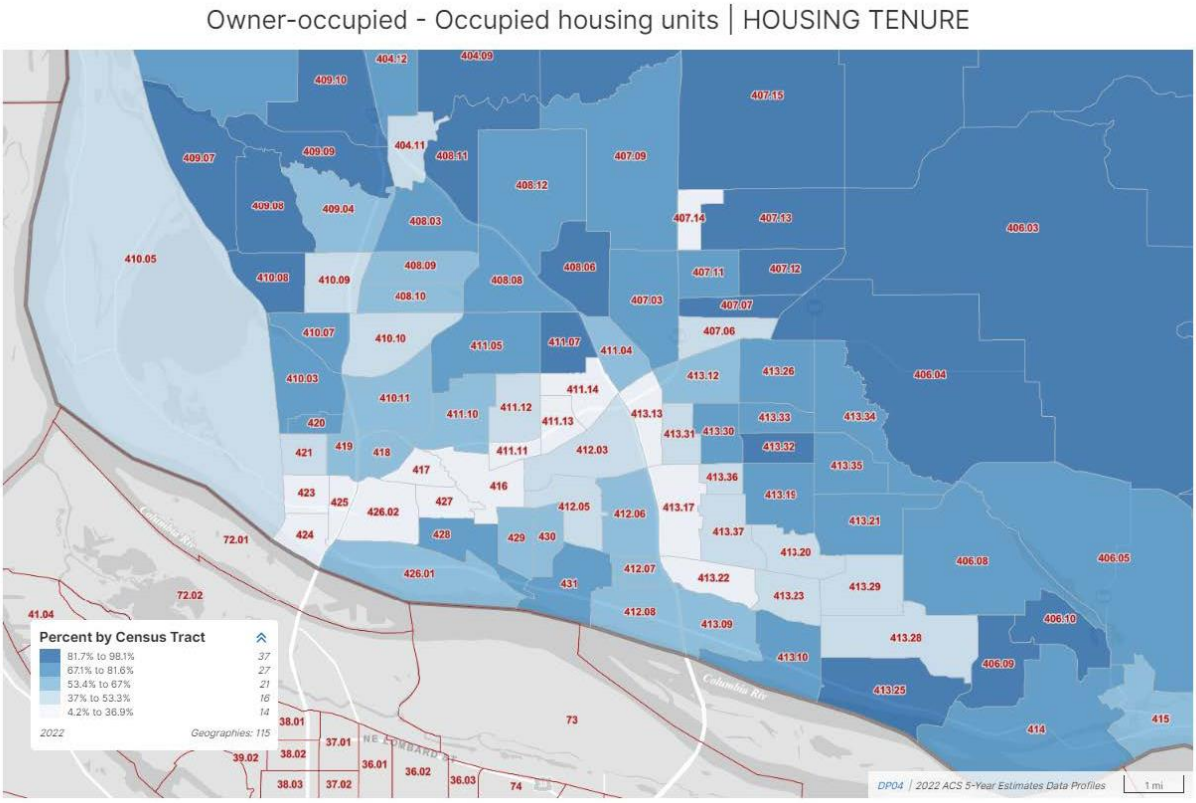
**Displacement Risk Index**

Alongside the Equity Index, the City prepared the Displacement Risk Index to identify which census tracts are at a higher risk or actively ongoing displacement. This was created through examining socioeconomic vulnerability, areas of increasing home values, and changing racial/ethnic compositions.

*Source: Displacement Risk Map (Equity and Displacement in Vancouver), City of Vancouver 2024*

Table 4. Displacement Risk Categories

| Typology | Vulnerable population? | Demographic change? | Housing market condition |
|---|---|---|---|
| Susceptible | Yes | No | Adjacent |
| Early: Type 1 | Yes | No | Accelerating |
| Early: Type 2 | Yes | Yes | Adjacent |
| Dynamic | Yes | Yes | Accelerating |
| Late: Type 1 | Yes | Yes | Appreciating |
| Late: Type 2 | Used to be in 2000 | Yes | Accelerating |
| Continued loss | Used to be in 2000 | Increasing share of white people and adults with four-year degree | Appreciating |



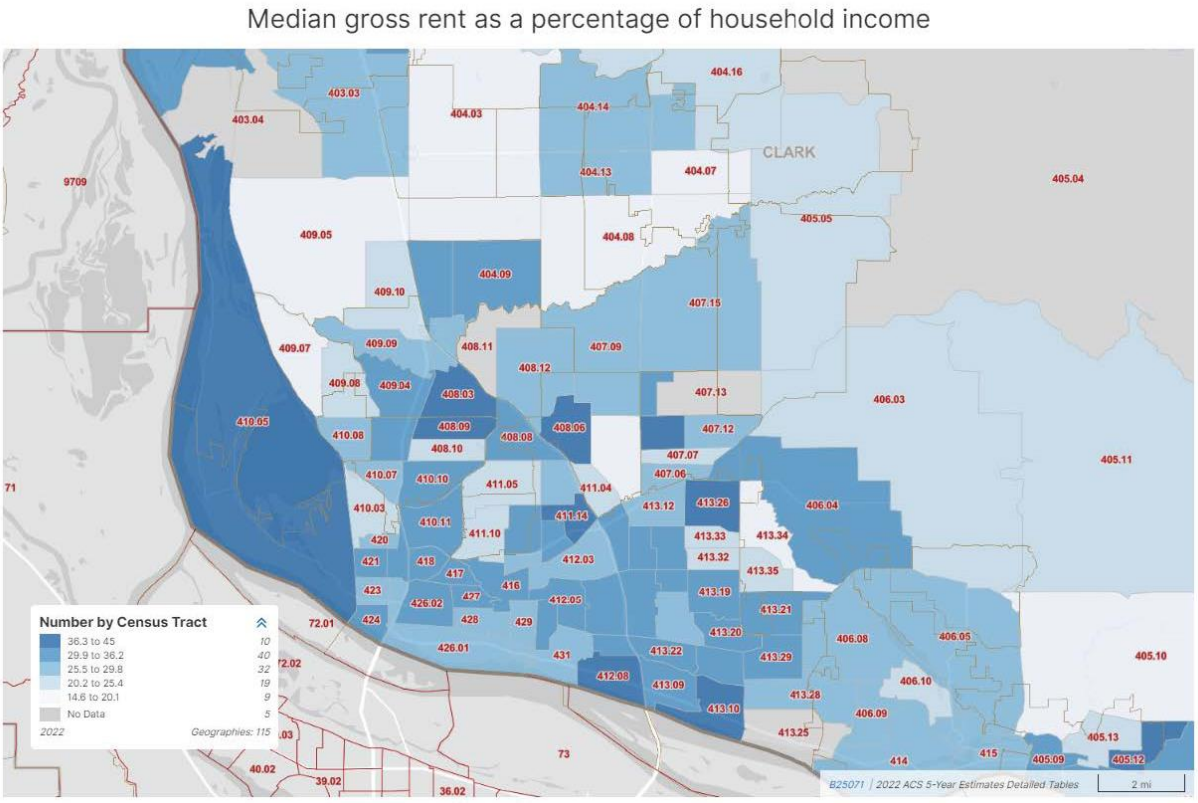
Source: Displacement Risk Methodology, City of Vancouver, 2022

There are a few key results from this analysis:

- Fruit Valley – Early: Type 2
- Fourth Plain (I-5 to 205)– Susceptible and Early: Type 1, Dynamic
- Fourth Plain (East of I-205): Early Type 1 or 2, Dynamic
- Mill Plain (East of I-205): Dynamic
- Hudson Bay: Dynamic
- North Andresen: Dynamic

**Homeownership**

One of the strongest observed differences between racial groups socioeconomic status' are their ability to own their housing. The Equity Analysis found that BIPOC (excluding Asian) city residents are more likely to rent instead of own their housing, with homeownership rates between 26-31%, compared to the city's average of 51%. (EA)



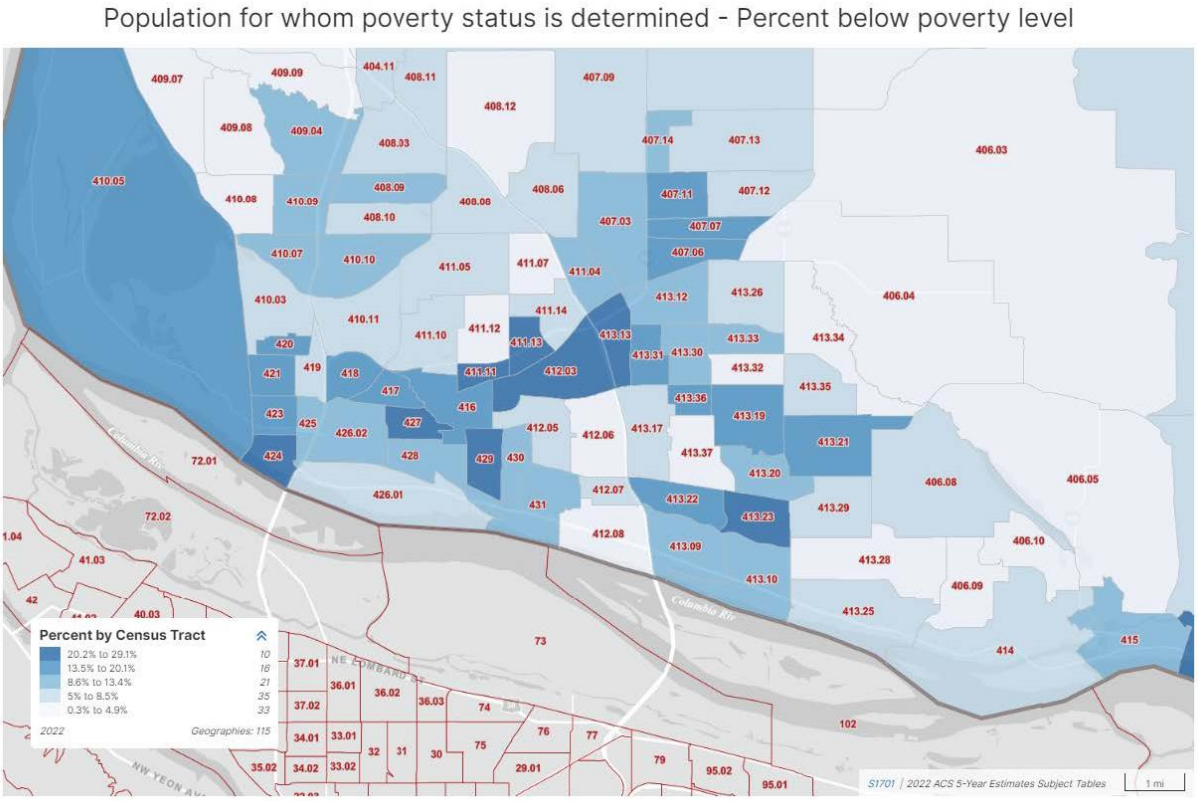
*Source: US Census, 5-year ACS, DP04 – Owner-occupied housing, 2022*

Spatially we see lower rates of homeownership along the Fourth Plain Corridor, East Mill Plain, Fruit Valley, and St John's Neighborhoods. There are also low rates of homeownership Downtown but those can be explained more by residents housing choice and land value and densities. This lack of homeownership observed is likely a result of present disparities in income and wealth, which in turn may be tied to differences in educational attainment and other factors examined in the Appendix.

**Housing Cost Burden**

One useful RDI consideration that captures components of both income and housing costs is Housing Cost Burden. Cost burdened by housing is defined as spending over 30% of the household income on housing. Households who are cost burdened by housing are more likely to experience displacement risk or housing insecurity.

On the following Census map the highest two categories both fall within that category (darkest two shades of blue).

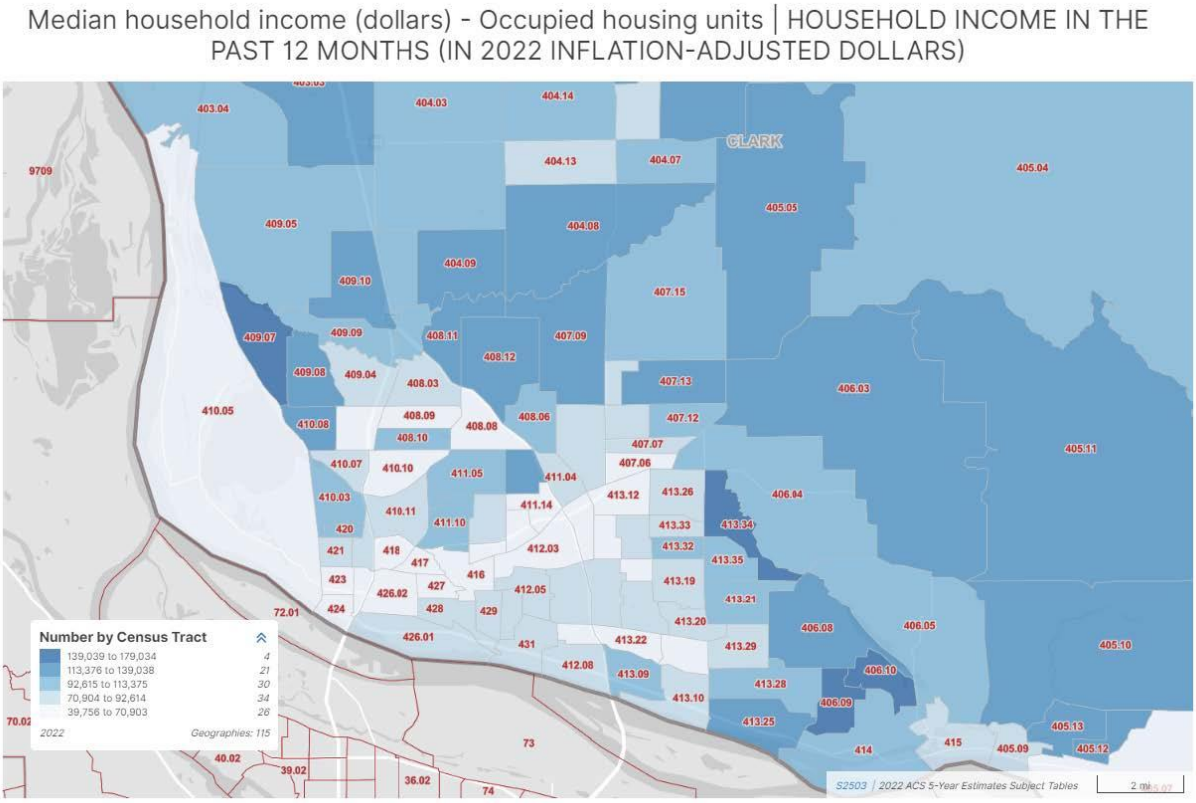


Source: US Census, 5-year ACS, B25071 – Median Gross Rent as a Percentage of Household income, 2022

The spread of median gross rent as a percentage of household income is distributed relatively evenly across the city, however there are a few trends identified through this map. Neighborhoods with the highest ration of median rent to median household income include:

1. Fruit Valley
2. Along the East side of i-5 (West Minnehaha and Central Park neighborhood)
3. East Millplain and SR-14 neighborhoods

**Poverty**

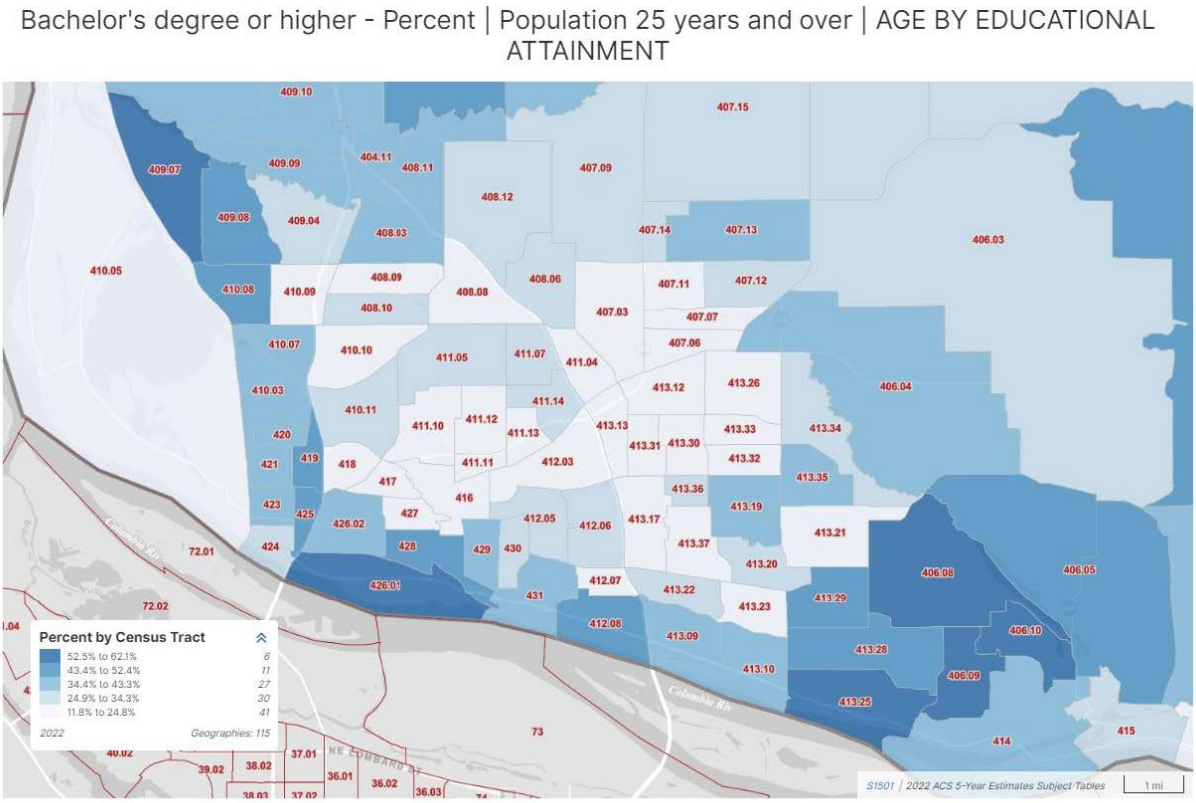


Source: US Census, 5-year ACS, S1701 – Poverty Status in the Past 12-months, 2022

Poverty in Vancouver demonstrates an unequal distribution, focusing on specific areas following these trends:

- Highest rates of poverty (20-30%) are along the Fourth Plain Corridor just west of I-205, Downtown, The Heights, and East Millplain.
- High poverty rates (13.5-20%) are in East Fourth Plain, Upper Main, and Fruit Valley.

**Median Household Income**



Source: US Census, 5-year ACS, S2503 – Household Income in the Past 12 Months, 2022

Median household income demonstrates a similar (but inverse) pattern to poverty. Income is another useful measure of RDI, as income often lines up with racial/ethnic populations.

There is a distinct band of census tracts with a low median household income following the Fourth Plain Corridor, Downtown, and Fruit Valley, and pockets of low-income in the Heights District, Rose Village, and West Minnehaha. For reference the county's median household income is $97,678.

**Educational Attainment**

Source: US Census, 5-year ACS, S1501 – Educational Attainment (Bachelors Degree of Higher for 25 years and older population), 2022

Populations with a low percentage of bachelor's degree or higher for age 25 or higher are more likely to have lower median income and insecure employment. There are obvious trends in the areas of the city with the lowest educational attainment. For instance, the areas in the city's core (fourth plain corridor, East Mill Plain, and St. Johns/St. James) and Fruit Valley have lower percentages of higher education attainment.

# 1. Summary and Introduction

## Purpose

The Pacific Northwest including Vancouver is experiencing extreme heat, drought, extreme precipitation, flooding, and exposure to wildfires, especially smoke. These climate impacts affect Vancouver's people, places, and infrastructure.

This Vancouver Climate Vulnerability Assessment report supports the **OUR VANCOUVER 2045 COMPREHENSIVE PLAN** periodic update. In particular, it informs the development of the resilience sub-element of the newly required climate change and resilience element under HB 1181. Vancouver anticipates an integrated element addressing "Climate, Environment, Community Health, Sustainability and Resiliency."

## Scope and Context

This vulnerability assessment considers the Washington Department of Commerce *Climate Element Planning Guidance*, December 2023, and evaluates the potential for climate exposure to community assets as well as potential health and environmental sensitivities to climate change impacts. The capacity of Vancouver's people, places, and infrastructure to adapt to climate change is also addressed, along with potential strategies to enhance Vancouver's adaptive capacity.

The chapters of the report include:

1. Summary and Introduction
2. Climate Change in Vancouver
3. Residents Vulnerable to Climate Change Impacts
4. Planning for Climate Change
5. Vulnerability & Risk Assessment

This Chapter 1 Summary and Introduction provides an overview of findings of the report. Chapter 2 describes climate change trends that affect Vancouver and Clark County. Chapter 3 describes residents with socioeconomic or health conditions or disparities that are potentially vulnerable to climate change impacts. Chapter 4 describes Vancouver's plans, strategies, and related initiatives addressing climate adaptation and mitigation. Chapter 5 evaluates vulnerability and risk through eleven sectors including:

- Agriculture and Food Systems
- Buildings & Energy
- Cultural Resources & Practices

- Economic Development
- Emergency Management
- Health & Well-being
- Ecosystems
- Transportation
- Waste Management
- Water Resources
- Zoning & Development

This report builds on Vancouver's extensive work to address climate change mitigation and adaptation, including, but not limited to:

- Vancouver Climate Action Framework (2022)
- Vancouver Climate Adaptation Strategy (2022)
- Vancouver 2023 Inventory of Community and Government Operations Greenhouse Gas (GHG) Emissions (2024)
- Vancouver Equity Index (2022)
- Reside Vancouver An Anti-Displacement Plan (2023)
- Clark Regional Natural Hazard Mitigation Plan: Volume 2—Planning Partner Annexes, Vancouver Annex (2023)

In addition to this vulnerability assessment, related work is underway to address other aspects of the pending "Climate, Environment, Community Health, Sustainability and Resiliency Element" including:

- **Climate Resilience Policy Evaluation**: Audits policies and

## DEFINITIONS

Adaptive Capacity: The ability of a person, asset, or system to adjust to a hazard, take advantage of new opportunities, or cope with change.

Assets: People, resources, ecosystems, infrastructure, and the services they provide. Assets are the tangible and intangible things people or communities value.

Climate Change: A change in the average weather patterns such as temperature and rainfall in a region over a long period of time.

Climate Resilience: The ongoing process of anticipating, preparing for, and adapting to changes in climate and minimizing negative impacts to our natural systems, infrastructure, and communities.

Exposure: The presence of people, assets, and ecosystems in places where they could be adversely affected by hazards.

Impacts: Effects on natural and human systems that result from hazards. Evaluating potential impacts is a critical step in assessing vulnerability.

Overburdened Community: A geographic area where vulnerable populations face combined, multiple environmental harms and health impacts, and includes, but is not limited to, highly impacted communities as defined in RCW 19.405.020.

Sensitivity: The degree to which a system, population, or resource is or might be affected by hazards.

Vulnerability: The propensity or predisposition of assets to be adversely affected by hazards. Vulnerability encompasses exposure, sensitivity, potential impacts, and adaptive capacity.

(Commerce, 2023) (US Climate Resilience Toolkit. 2021) (NASA. 2024)

provides recommendations to amend or add policies.

- **Climate Mitigation:** Implementing the City's Climate Action Framework, the City has inventoried GHG emissions and will use a similar approach to evaluate Vancouver's growth strategies called "land use possibilities." The City is also reviewing vehicle miles traveled (VMT) reduction through active trip potential.
- **Environment:** An Environmental Impact Statement is evaluating Vancouver 2045 Land Use Possibilities.
- **Health:** A Health Impact Assessment of the Vancouver 2045 land use possibilities has been developed to evaluate the Periodic Update land use possibilities and other policy issues.

## Climate Impacts in Vancouver

Vancouver is feeling the effects of climate change including the following Pacific Northwest trends (Chang, 2023):

- **Warming and Extreme Heat:** The annual number of extremely hot days and warm nights in the Northwest has been above the long-term average over the past decade, and the annual number of extremely cold nights over the same period has been below the long-term average. Future warming in the region is expected to exacerbate regional heatwave intensities. It is particularly magnified on impervious areas in urban areas like Vancouver.
- **Extreme Precipitation Events:** The frequency and intensity of extreme precipitation events are projected to increase across the region. A greater number of strong atmospheric events and fewer moderate and weak events are projected to occur and are projected to reach farther inland. In Vancouver, major flooding along rivers and streams is less likely due to flood control structures and greenways but there is a risk along the Port and other areas that are low lying, and there is a risk of urban flooding elsewhere.
- **Flooding and Infrastructure:** Riverine flooding as well as localized urban flooding is a growing concern in Vancouver due to aging stormwater infrastructure, particularly in older neighborhoods with combined sewer systems. These systems are increasingly overwhelmed by intense rainfall events, leading to surface flooding and sewer overflows.
- **Decreasing Summer Precipitation and Increasing Drought:** Summer precipitation is projected to decline. Observed lower stream flows in summer are expected to decrease. This could affect fish and other aquatic life in Vancouvers streams.
- **Increasing Wildfire Likelihood and Smoke:** An increase in wildfires in the Pacific Northwest could expose people in Vancouver and the broader region to more wildfire smoke. Increased wildfire smoke events are straining indoor air quality in public facilities. Many community centers and senior centers lack adequate HVAC systems or filtration, limiting their ability to serve as clean air shelters during smoke events.

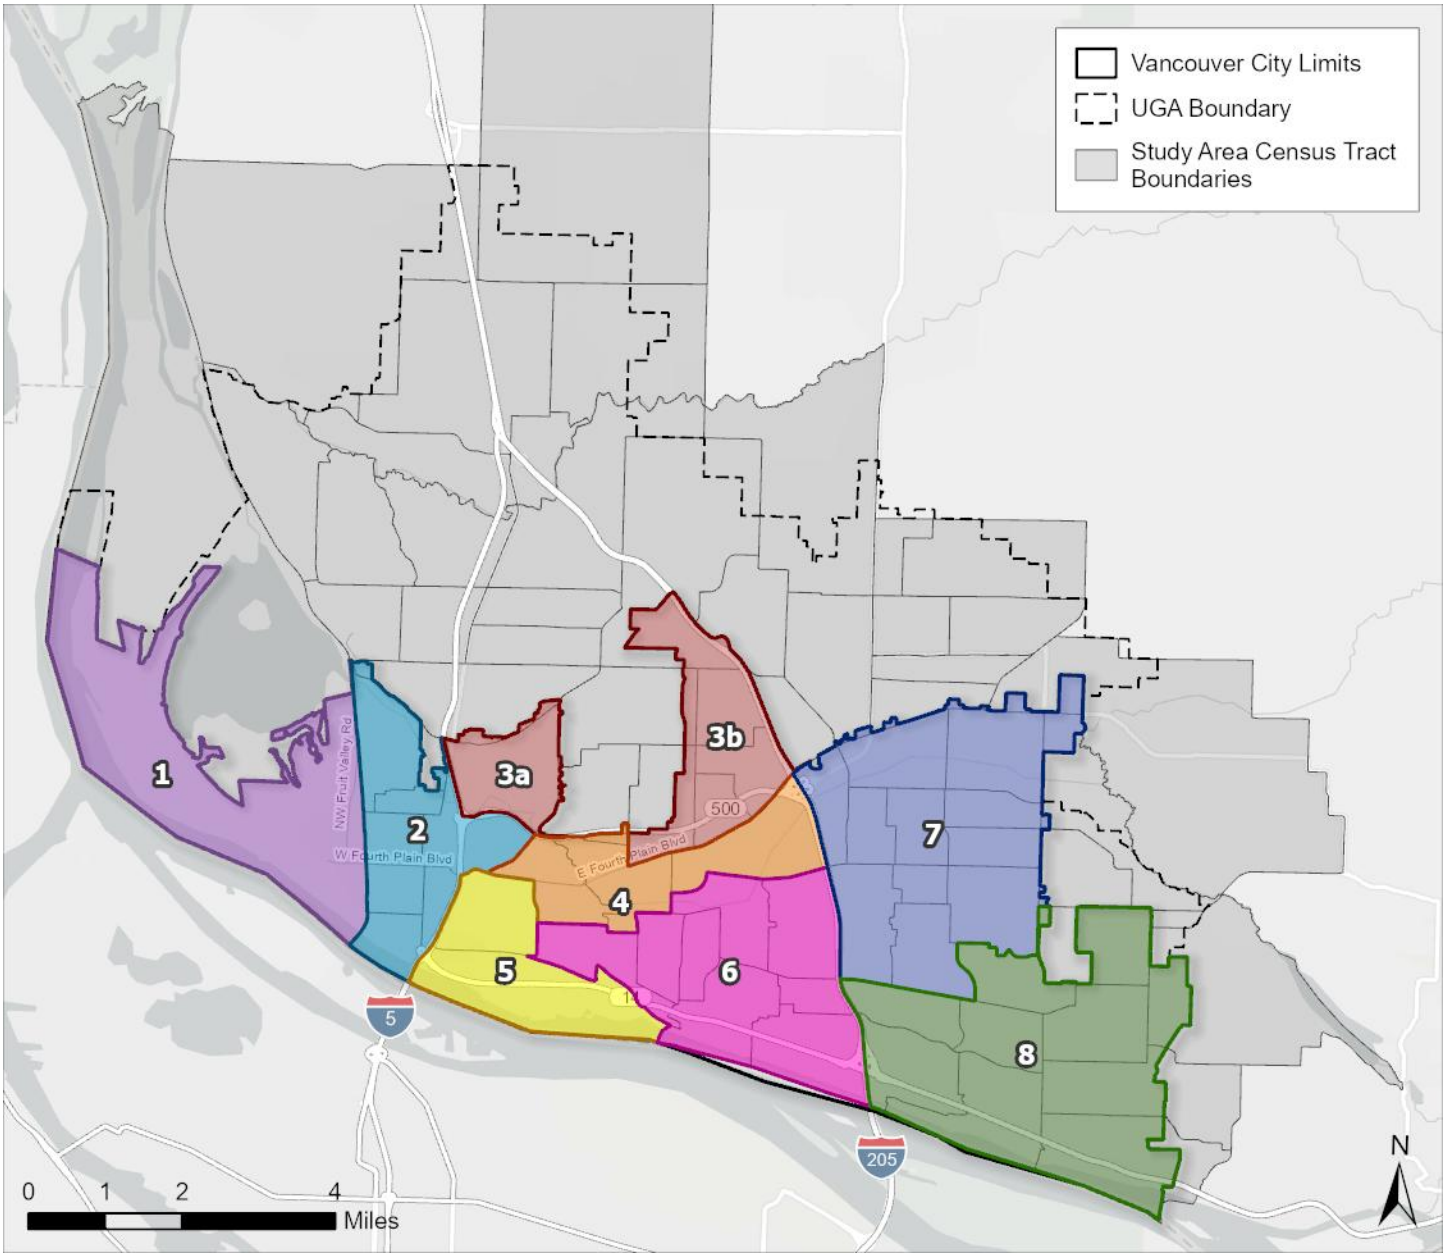
See Chapter 2 Climate Change in Vancouver for additional information about climate impacts in Vancouver.

## Climate Vulnerability Index

Vancouver also developed a Climate Vulnerability Index (CVI) in parallel with this assessment to evaluate over 30 indicators of climate vulnerability, scaled to US Census block groups, to identify areas and populations more vulnerable to extreme heat, flooding and extreme precipitation, and air quality/smoke. The CVI allows Vancouver to compare areas within the city to itself. The CVI does not compare Vancouver to other areas across the county or state.

Vulnerability is defined as the sum of exposure to climate shocks and stresses, the sensitivity of people or environment to the shock, and the capacity of the community and place to cope with consequences of the climate event. (UKAID, 2011) (US Climate Resilience Toolkit, 2021)

**Vulnerability = Exposure + Sensitivity - Capacity to Adapt**



The Vancouver CVI presents a series of indices and bivariate intersections including Vancouver's first index regarding Climate Exposure. The CVI includes a bivariate view of Exposure in relation to the City's Equity and Displacement indices which have elements of sensitivity and adaptive capacity. In addition, a Vancouver Health Index was prepared with components of population health sensitivity, and an Exposure x Health bivariate map was created.

## Vulnerable Places and Communities

Parts of Vancouver are more vulnerable to the impacts of climate change than others. For example, there are particular areas in the city – such as "heat islands" with more pavement and fewer trees, floodplain and landslide hazard areas, and areas with limited access to transit – that may experience larger effects from climate change. In addition, some communities and populations – including older adults, individuals living alone, and people with low incomes, disabilities, and/or limited English proficiency – may be more sensitive to climate impacts and require special consideration when planning for climate resiliency.

This study references areas in west, central, and east Vancouver in eight study areas, and identifies vulnerable places and communities. See Exhibit 1.

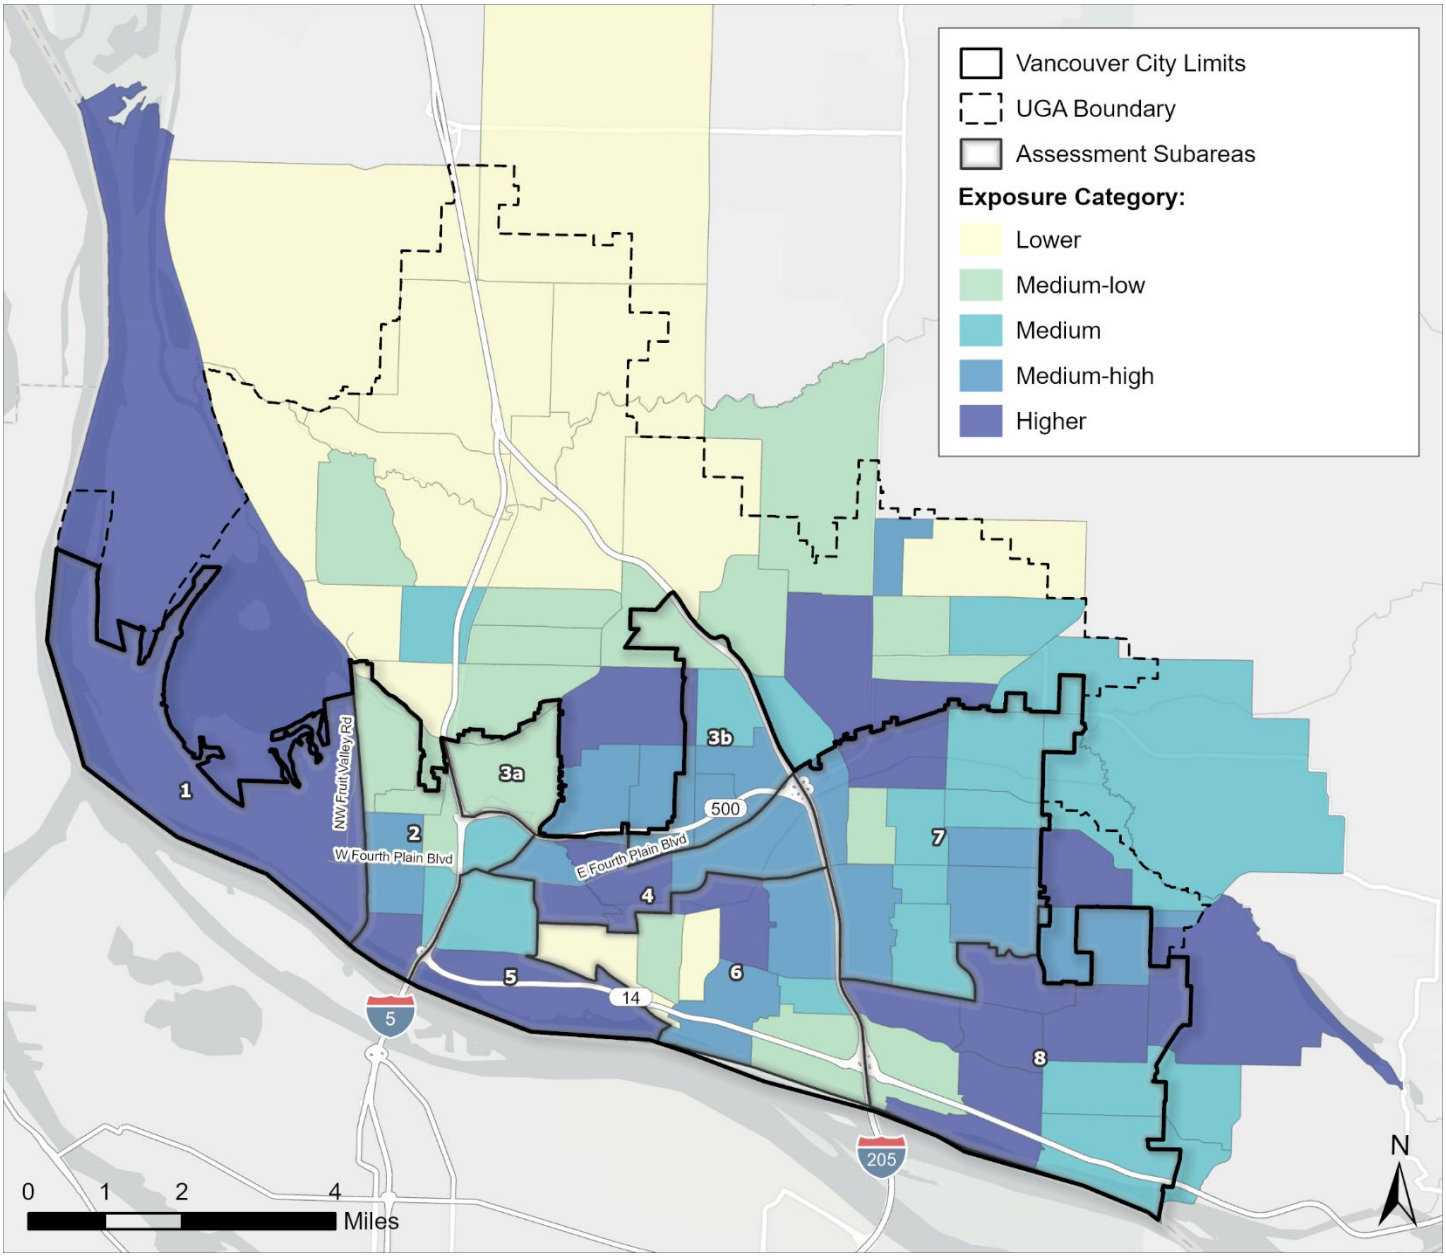


*Exhibit 1: Vancouver Areas of Focus*

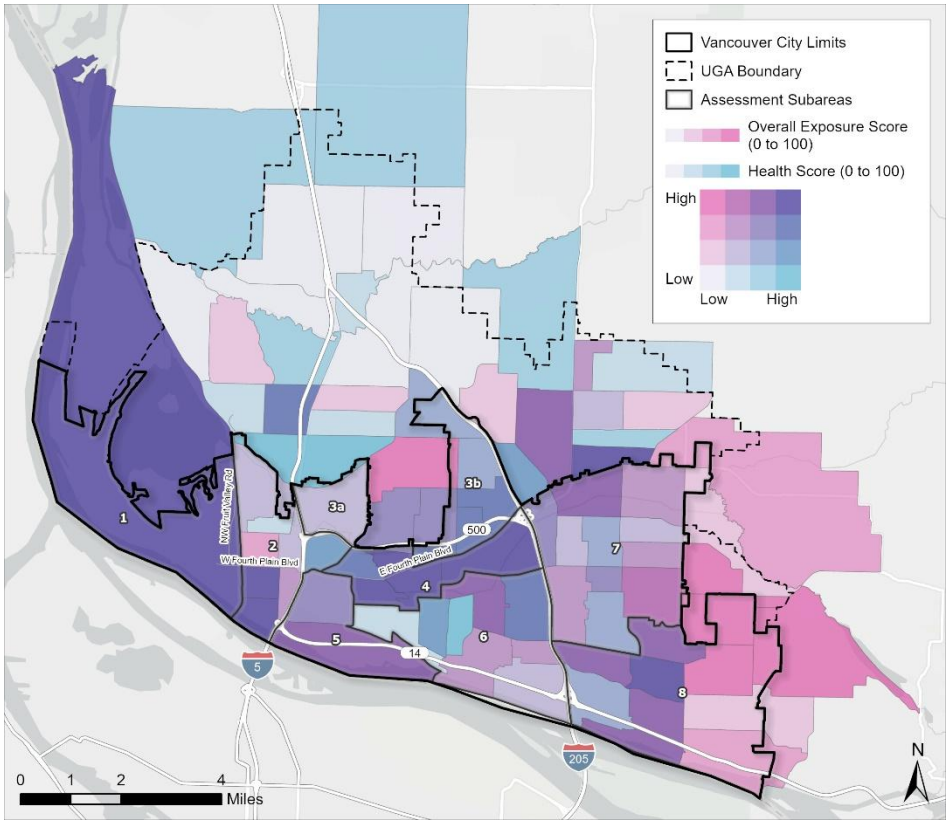
Source: City of Vancouver, BERK 2025.

The Vancouver CVI Exposure Index identifies the following areas at risk of exposure to climate impacts including extreme heat, flooding, or air quality/smoke: Area 1 west of NW Fruit Valley Road, southern edges of Areas 2 and 5 along the Colombia River, Areas 4 and 7 along E Fourth Plain Boulevard, and Area 8 in southeast Vancouver. See Exhibit 2.

*Exhibit 2: Exposure Index*



Source: BERK 2025.

Combining Vancouver's Climate Exposure Index plus its Health Index shows populations with vulnerabilities exposed to climate impacts in similar locations in Areas 1, 2, 4, and 8. Census block groups with higher Exposure and higher Equity disparities are found in Areas 1, 2, 4, 7, and 8. See Exhibit 3.

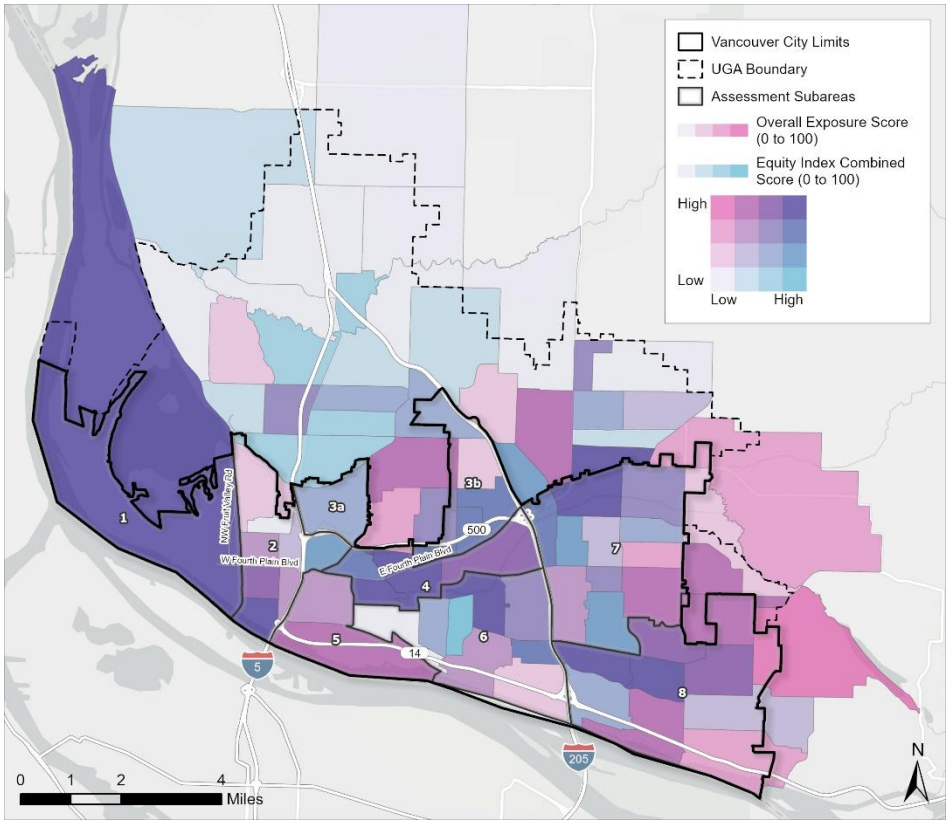


Exhibit 4 and Exhibit 5 provide a table and map with Census tracts having with higher exposure and higher equity or health disparities, and are priorities to address climate adaptation and improve areas that have low or moderate adaptive capacity.

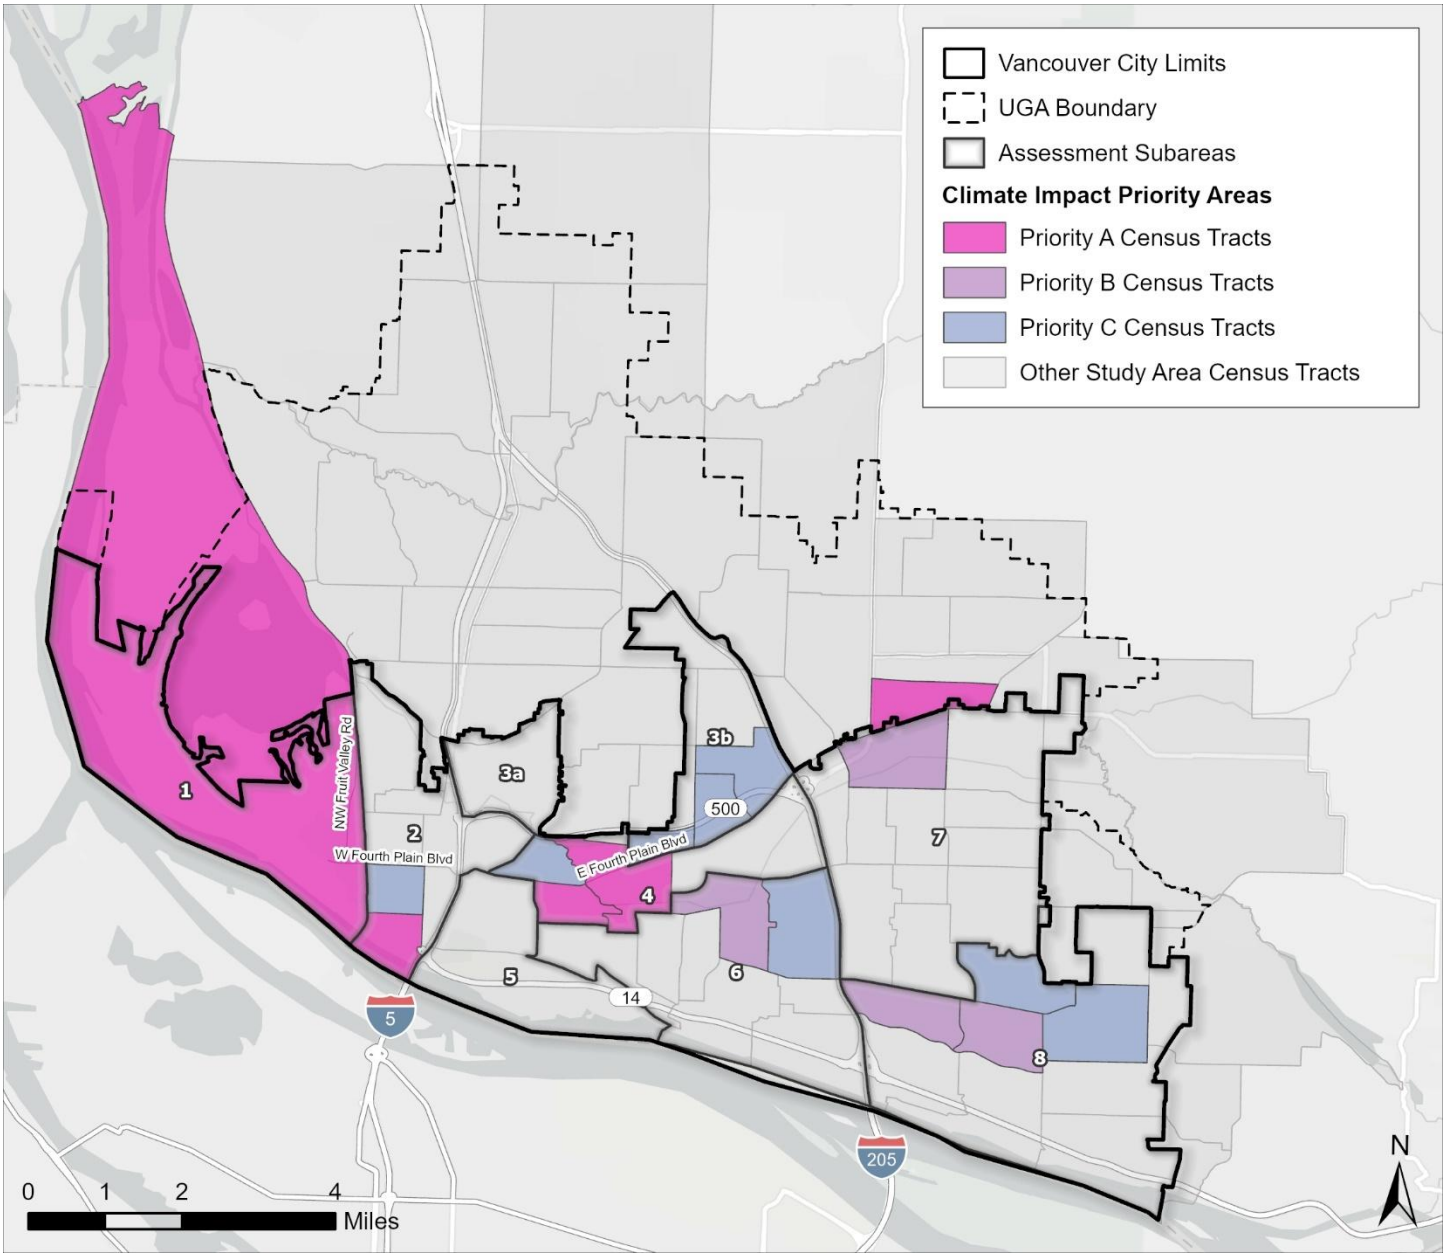
*Exhibit 3: Exposure with Health and Equity*

## Exposure x Health

Locations of higher exposure and health-sensitive populations: West and Central parts of Vancouver along East Fourth Plain Blvd.

## Exposure x Equity

Locations of higher exposure and overburdened communities: Vancouver Lake and NW Fruit Valley Road, blocks south of SR 500 and along Fourth Plain Blvd, and Mountain View and Cascade Highlands in East Vancouver.



Source: BERK 2025.

## Climate Planning Engagement

### Vancouver Climate Adaptation Strategy, 2022

In 2022, Vancouver engaged Hatch Planning and Toulan School of Urban Studies and Planning at Portland State University to prepare a *Vancouver Climate Adaptation Strategy*, which included a community engagement process. (Hatch Planning and City of Vancouver, 2022)

- a community-wide survey with 140 responses
- six pop-up events in different locations, and
- five small group conversations

The populations targeted for engagement are similar to those living in areas considered highly vulnerable in Exhibit 5, and included:

- Communities of color, particularly Hispanic or Latino
- High-poverty groups
- Linguistically isolated groups (Spanish, Russian or Eastern European language-speakers)
- Youth, particularly those in informal daycare
- Older adults, particularly those living alone
- Houseless people, including Safe Stay communities
- Manual or outside laborers, especially farmers, landscapers, and trades organizations
- People with disabilities
- Transit-dependent residents

Engagement findings are summarized below and throughout Chapter 5 Vulnerability & Risk Assessment. This 2025 Climate Vulnerability Assessment carries forward from this 2022 effort which recommended a comprehensive vulnerability assessment.

*Exhibit 6: Vancouver Climate Adaptation Strategy Engagement Findings*

| | |
|---|---|
| **1** Most community members had negative experiences during severe weather events - the wildfire smoke of 2020 and heat wave of 2021. Negative experiences were due to a loss of work time, discomfort and health issues, the canceling of events, and more. | **2** Aside from severe heat and wildfire smoke, participants also worried about snowy and icy weather events, and particularly the power outages and difficulty of travel that comes with those events. |
| **3** Participants identified several circumstances that made it more difficult to deal with severe weather events. These include:<br>• Lack of air conditioning or air purification<br>• Lack of access to a car | • Lack of communication regarding preparedness<br>• Need to work outside during severe weather events<br>• Lack of resources for people with disabilities |

| | |
|---|---|
| **4** While many residents do feel prepared for future heat waves and other events, they expressed serious concerns about the safety and well-being of their neighbors and community. | **5** Many participants had ideas for how the city can help them in the future, including providing resources to help households have alternative energy sources in the event of power outages, the creation of cooling and warming shelters, creating community-led disaster drills to help people understand how to stay safe and prepared, and prioritizing low-income or houseless people in city policy to ensure their safety. |
| **6** Some physical elements that community members would like to see include water features such as splash pads, urban gardens and fruit trees, more tree coverage, and community centers or public spaces for neighbors to connect with one another. | **7** Participants cited the need for community education on environmental issues and sustainability through programming and incentives, including conferences, talks, and videos that share the importance of sustainability as well as other educational materials. Participants, particularly those in small group conversations, also saw a need for increased public engagement about this issue. |

### Resilience Rising, 2025

As part of the City of Vancouver's ongoing climate resilience planning efforts, a series of *Resilience Rising* community events were hosted in late May and early June 2025 in partnership with Fourth Plain Forward, the Southwest Washington Equity Coalition (SWEC), and Washington Conservation Action. These events focused on elevating local voices and experiences around climate-related risks and responses in neighborhoods most impacted by extreme heat, wildfire smoke, and flooding.

The gatherings were designed to complement this 2025 Climate Vulnerability Assessment and a related Adaptive Capacity Assessment (see following section) by grounding technical recommendations in lived experience. A total of 76 residents participated across three events in **Fruit Valley, Fourth Plain, and Mountain View**, each selected due to their high climate risk scores and social vulnerability indicators.

At each event, there was an interactive mapping exercise which invited participants to identify local assets, risks, and resilience opportunities in their neighborhoods. Participants used stickers, markers, and post-it notes to annotate the maps in both English and Spanish, with bilingual facilitators on hand to support discussion. A common theme throughout was the desire for more equitable access to climate-resilient infrastructure—including safe gathering spaces, localized food and resource hubs, and culturally relevant emergency response strategies.

Engagement results are highlighted in Exhibit 7 and throughout this study.

*Exhibit 7: Resilience Rising Engagement Summary*

| | |
|---|---|
| **Climate Risks Are Experienced Unequally.** Participants noted that extreme heat, flooding, and wildfire smoke have disproportionate impacts across the city, especially for residents in East and Central Vancouver. Barriers include:<br>• Transportation limitations for seniors, youth, and people with disabilities<br>• Fear or mistrust of federal-linked spaces among undocumented communities<br>• Lack of signage or public awareness of available resources | **Schools, Religious Facilities, and Businesses as Anchors.** Participants were enthusiastic about repurposing underused or privately owned spaces to provide cooling, clean air, and resource distribution during future climate events. Specific suggestions included equipping schools with air filtration and backup power, training church volunteers, and leveraging local businesses to help spread emergency information. |
| **Food Security and Local Food Systems.** Several participants expressed interest in expanding community food forests, edible landscaping, and culturally relevant gardens to increase food access and resilience. Many attendees pointed to successful local examples—including fruit tree gleaning programs and community partnerships—that show potential for scaling. | **Community-Led Solutions and Trusted Messengers.** Residents expressed a strong interest in building neighbor-to-neighbor networks and empowering local leaders to help organize emergency response. Ideas included community phone trees, CERT team recruitment, and creating preparedness flyers with the contact information of trusted local point people. |
| **Gaps in Infrastructure and Communication.** Participants identified several physical and procedural gaps that hinder preparedness and resilience: limited cooling centers with adequate space and signage, public transit challenges during storm events, lack of emergency information in multiple languages, and difficulty navigating scattered resources. | **Desire for Action and Accountability.** While attendees appreciated the opportunity to provide input, some were skeptical about whether tangible changes would result. Still, most remained hopeful and urged the City and its partners to prioritize the ideas that came directly from community voices, especially those grounded in lived experience and local expertise. |

## Adaptive Capacity Assessment 2025

The City of Vancouver met with an interdepartmental team and with regional emergency management agencies to develop more specific asset mapping and adaptive capacity recommendations overlaying locations of critical facilities and places of assembly on top of maps of exposures such as extreme heat, flooding, and wildfire/smoke including:

- Fire and Police Stations
- Libraries, Senior Centers, and Community Centers, often serving as warming or cooling shelters
- Schools
- Parks and Trails
- Transit Stops
- Water, Sewer, and Stormwater

The asset maps help to pinpoint the most pressing areas for investment. Results are included in relevant sector evaluations in Chapter 5 Vulnerability & Risk Assessment, and in the Appendix.

## Vulnerability and Risk Summary by Sector

Across 11 sectors, Chapter 5 Vulnerability & Risk Assessment considers vulnerable places and communities and risk of impacts (probability and magnitude). A summary of the results for the 11 sectors is shared in Exhibit 6.

Sectors most at risk across multiple climate impacts, with the greatest potential for loss and affecting vulnerable communities include:

- Buildings & Energy
- Emergency Management
- Health and Wellbeing
- Transportation
- Water Resources

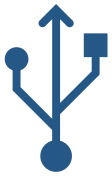

*Exhibit 8: Vulnerability and Risk Summary by Sector*

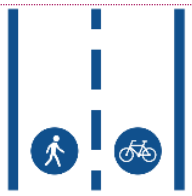

| Sector | Likely Climate Impacts in next 10+ years | | | | Magnitude of Loss | | | City Responsibility | | | Vulnerable Communities | | | Areas Most Affected | | | | | | | |

Sources: See Chapter 5. Compiled by BERK, 2025.

Vancouver has planned for climate action and hazard management planning. However, new or more extensive resilience strategies could be implemented to address gaps or opportunities. See Exhibit 7. These are further described in Chapter 5 Vulnerability & Risk Assessment.

*Exhibit 9: Sectors, Priorities, and Resilience Strategies*

| Sector | Potential Concerns/ Priorities | Who is Most Affected? | Highlighted Resilience Strategies |
|---|---|---|---|
| Agriculture & Food Systems | Urban agriculture and local food systems, community gardens, food banks | Residents in poverty or in food deserts<br>Community garden users | <br>Increase Food Resilience & Access |
| Buildings and Energy | Naturally occurring affordable housing<br>New housing development, new business spaces | Residents in older housing stock, particularly those who are cost burdened<br>New construction, commercial or residential | <br>Building Retrofits/Design<br>Renewable Energy |
| Cultural Resources | Historic and archaeological site protection<br>Critical areas protection<br>Food sovereignty | Tribes<br>Historic property owners | <br>Natural Infrastructure |
| Economic Development | Outdoor jobs<br>Recreation events<br>Transportation system interruption | Outdoor workers<br>Tourism/recreation oriented businesses<br>Health care providers<br>Commuters | <br>Green technology, circular economy, connected city<br>Complete/ Sustainable Communities<br>Local Businesses Support Emergency Response |

| Sector | Potential Concerns/ Priorities | Who is Most Affected? | Highlighted Resilience Strategies |
|---|---|---|---|
| Emergency Management | Cooling and clean air centers, storm management, redundant functions | Persons with health sensitivities<br>Emergency personnel | <br>Disaster Management and Service Continuity<br>Partner with Community Based Organizations |
| Health & Well-being | Tree canopy equity<br>Health services access<br>Access to cooling and clean air centers due to lack of transportation, lack of awareness, or mistrust | Persons with health sensitivities<br>Unsheltered persons | <br>Improve transportation access to facilities and services<br>CBOs as Essential Resilience Partners<br>Neighborhood specific community preparedness and pilot projects |
| Ecosystems | Trees, riparian areas, stream flows, water quality | Neighborhoods with high impervious areas, and limited green or blue infrastructure | <br>Urban Forest |
| Transportation | Regional and local commuting, acute stormwater flooding, heat and transit | Transit dependent populations such as those with disabilities or lower incomes | <br>Infrastructure Upgrades |

| Sector | Potential Concerns/ Priorities | Who is Most Affected? | Highlighted Resilience Strategies |
|---|---|---|---|
| Waste Management | Heat, smoke and outdoor workers; extreme weather and debris | Outdoor workers<br>Neighborhoods with extensive/older tree canopy | <br>Debris management plan, smoke protections<br>Planning to Reduce Exposure & Monitoring Risk |
| Water Resources | Demand on stormwater system<br>Water system resilience<br>Wastewater Plant fortification | Neighborhoods with high impervious areas, and limited green or blue infrastructure | <br>Natural Infrastructure |
| Zoning | Tree canopy, infill housing and business nodes with multimodal mobility | Households with cost burdens, areas with low connectivity, park gap areas, low active trip areas, communities with disparities in tree canopy | <br>Complete/ Sustainable Communities |

## Policy Recommendations

A **Climate Resilience Policy Evaluation** under separate cover is summarized by sector in Chapter 5. Strengthening policies in the new Climate, Environment, Community Health, Sustainability and Resiliency Element will give purpose and direction to climate actions and strategies.

## Use of Report

This Climate Vulnerability Assessment has provided a foundation for developing climate resilience policies and adaptive capacity strategies with city departments and the community.

This report, in conjunction with a related Climate Resilience Policy Evaluation, has helped the City prepare a Climate Element of the Comprehensive Plan Periodic Update.

# 2. Climate Change in Vancouver

## Regional Climate Trends

The Pacific Northwest including Vancouver are experiencing extreme heat, extreme precipitation, drought and reduced summer stream flows, and exposure to wildfires, especially smoke. Key findings of the Fifth National Climate Assessment, Northwest chapter, (Chang, 2023) include the following for Washington, Oregon, and Idaho:

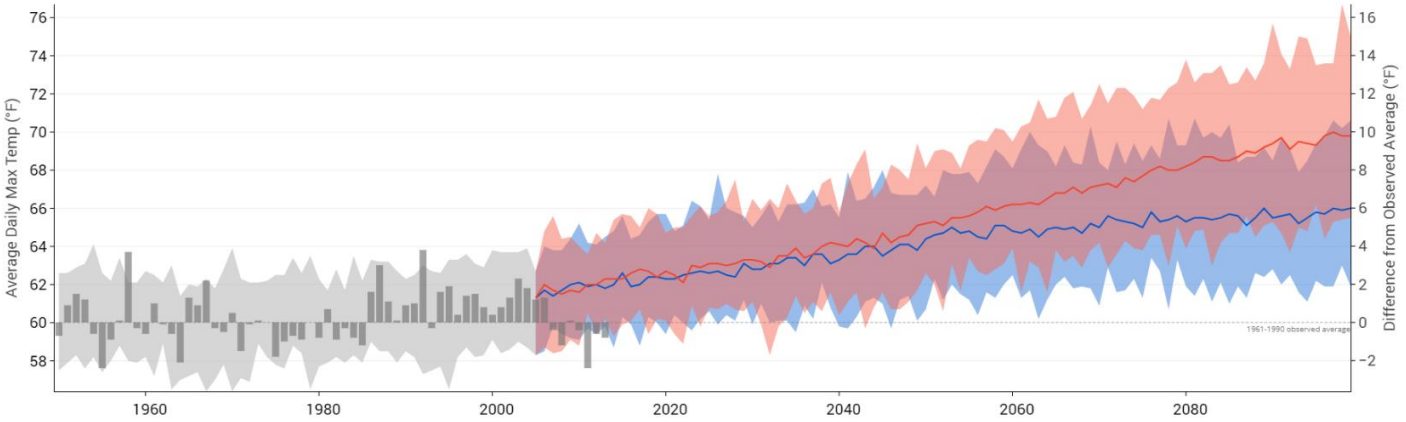
- **Warming and Extreme Heat:** Annual average air temperatures in the region have risen by almost 2°F since 1900. Washington and Idaho have warmed by nearly 2°F, and Oregon has warmed by 2.5°F. Relative to 1900–2020, the annual number of extremely hot days and warm nights in the Northwest has been above the long-term average over the past decade, and the annual number of extremely cold nights over the same period has been below the long-term average. Future warming in the region is expected to exacerbate regional heatwave intensities.
- **Extreme Precipitation:** The frequency and intensity of extreme precipitation events are projected to increase across the region. Long, narrow bands of atmospheric water vapor transport, commonly known as atmospheric rivers (ARs), are associated with extreme precipitation in the western United States, where they contribute an average of 30%–45% of total winter precipitation. A greater number of strong AR events and fewer moderate and weak events are projected to occur. ARs are projected to reach farther inland.
- **Summer Precipitation and Drought:** Summer precipitation is projected to decline under all scenarios, although it will be variable, contributing to more frequent, longer, and more severe regional drought conditions that increase wildfire risk and decrease water availability. Observed lower stream flows in summer are expected to decrease even further due to reduced snow storage, increased evapotranspiration, and longer lags between summer precipitation events.

> ...Some scientists have described the 2021 heat dome as a 1,000-year event made 150 times more likely by climate change. Instead of being a rare anomaly, events like the heat dome could occur every five to 10 years with 2 degrees C of global warming, they say.
>
> ... An estimated 1,400 deaths in the United States and Canada were attributed to the heat dome. Shellfish and other marine animals experienced mass die-offs. Crops were lost, sections of Interstate 5 buckled, and Portland's Max commuter train shut down when its attached power lines melted.
>
> ~ (Kramer, 2024)

The University of Washington Climate Impacts Group has developed a climate resilience mapping tool addressing climate hazards, indicators, and impacts for each county in the

state, including Clark County. Some of the data is available at a smaller scale than the county. Information from the tool has been gathered for the year 2050 using the Representative Concentration Pathway (RCP) 8.5 GHG concentration level, which is a very high GHG scenario. The GHG scenarios do not differ significantly prior to 2050. The year 2050 is similar to the 2045 Comprehensive Plan periodic update horizon. See Exhibit 9.

*Exhibit 10: Climate Change by Year 2050 (Change 2040-2069 compared to Historic 30 Years, Typically 1980-2009, RCP 8.5)*



| Climate Hazard | Potential Impacts | Climate Data for Clark County |
|---|---|---|
|  **Extreme Heat** | Warmer summers are expected to increase the potential for heat stress on plants and trees and ecosystems, and increase demand for irrigation.<br>Warmer summers are expected to increase concentrations of air pollutants, such as ozone and some vector-borne illnesses, such as West Nile virus.<br>Warmer stream temperatures have the potential to reduce water quality and habitat quality for fish and wildlife.<br>Extreme heat is anticipated to increase the demand for building cooling, increase concentrations of air pollutants, and increase health impacts for sensitive populations. | +6 °F change in average summer (June - August) maximum temperature<br>+ 39 days in annual 90°F maximum humidex days (heat + humidity)<br>Average August stream temperature:<br>• 20.9 °C Burnt Bridge Creek<br>• 18.4 °C Fisher Creek<br>• 23.1 to 23.6 °C Columbia River |
|  **Drought** | In freshwater ecosystems, less summer precipitation will contribute to lower stream flows, reduce water quality, and increase water temperatures. In terrestrial ecosystems, less summer precipitation will contribute to drought stress and reduce the growth and productivity of some plants.<br>More frequent and severe droughts due to low summer precipitation are expected to increase the need for emergency services to plan, prepare, and respond to water shortages.<br>Increases in annual precipitation have the potential to increase groundwater recharge. Changes in the timing and intensity of precipitation and increases in water demand and evaporation are expected to offset increases in groundwater recharge due to more annual precipitation. | 34% chance in 2050 that summer precipitation is at or below 75% of normal<br>-5%, Burnt Bridge Creek, and -21% on Columbia River, percent change in low streamflow in summer (June-September)<br>9.3% average percent change in total annual precipitation<br>-17.9% change in average July 15 - September 15 total precipitation |

| Climate Hazard | Potential Impacts | Climate Data for Clark County |
|---|---|---|
|  Wildfire & Smoke | More frequent wildfires have the potential to reduce forest habitat for some wildlife and increase establishment of invasive species. More frequent wildfires have the potential to increase runoff and sediment to streams.<br>More days with high wildfire danger are expected to affect businesses through more frequent closures of recreation areas and restrictions on outdoor activities during the wildfire season.<br>Poor air quality due to more wildfire smoke can cause adverse respiratory health effects. | In Vancouver 37% chance the average likelihood of climate and fuel conditions being conducive to wildfire (Countywide average is 9%).<br>Change in high fire danger days, 9 days in Vancouver (8 days for Clark County average. |
|  Extreme Precipitation | Heavier precipitation is expected to intensify flooding in low-lying areas and require higher capacity storm water drainage systems.<br>This could reduce the suitability of some areas for certain land uses and require relocation of some development.<br>More disruptions to business operations and damage to infrastructure including transportation. | 13% increase in the total precipitation of the 2-year storm.<br>14% change in the total precipitation of the 25-year storm. |
|   Flooding | Higher stream flows are expected to increase riverine flooding within existing floodplains and could expand flooding to new areas not currently in existing floodplains.<br>Higher stream flows reduce the availability of slow-water habitat and can increase sedimentation that affects habitat quality.<br>Higher stream flows are expected to increase riverine flooding, which can damage roads, bridges, and railways and overwhelm drainage structures, such as culverts. | 14% change, along Burnt Bridge Creek, in the annual maximum streamflow<br>-5% Columbia River in the annual maximum streamflow<br>Frequency in high streamflow Burnt Bridge Creek, 9.0 years; Columbia River 21.1 years; instead of every 25 years |

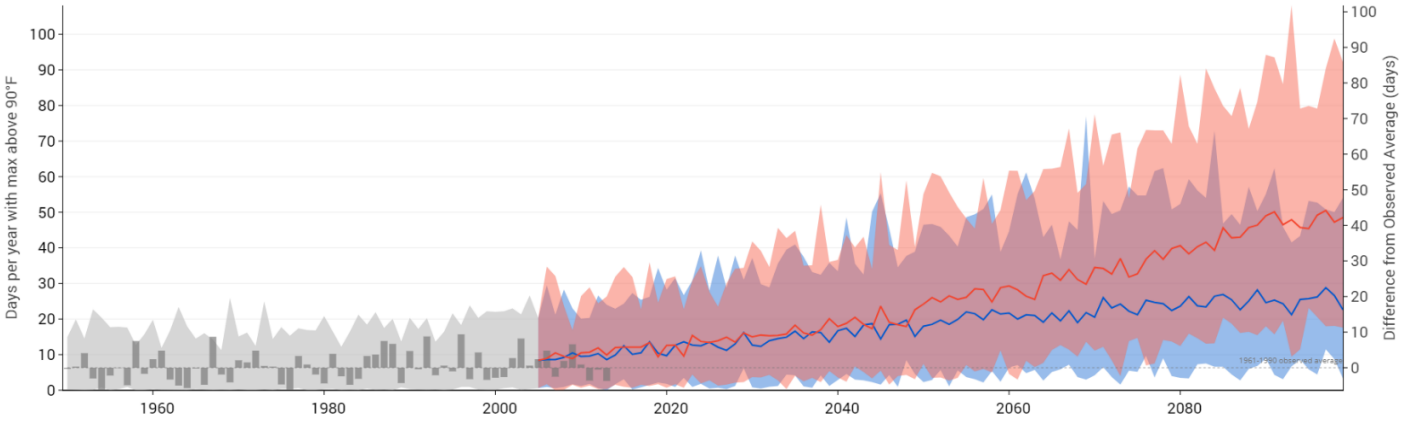
Other climate change trends available from the US Climate Toolkit Climate Explorer shows increases in extreme heat are clear at either RCP 4.5 or RCP 8.5. See Exhibit 10 and Exhibit 11.

*Exhibit 11: Average Daily Max. Temp. (°F) – Historic and Projected Trends – Clark County, WA*



Note: For the contiguous US, graphs and maps for 1950 - 2013 show averages of observations recorded at individual climate and weather stations. Data are available from NOAA's National Centers for Environmental Information. Graphs in Climate Explorer show results generated by global climate models for the Coupled Model Intercomparison Project Phase 5 (CMIP5). For the contiguous US, the climate model data were statistically downscaled using the Localized Constructed Analogs method (LOCA; Pierce et al. 2014).
Source: (US Climate Resilience Toolkit, 2024)

Average Daily Maximum Temperatures are projected to rise to over 64 °F by 2040.

- 1961–1990 observed average: 60 °F
- 2005 observed: 61.3 °F
- Projection Higher Emissions RCP 8.5: 2040 64.4 °F | 2050 65.6 °F
- Projection Lower Emissions RCP 4.5: 2040 63.8 °F | 2050 64.7 °F

*Exhibit 12: Days with Max. Temp. > 90°F – Historic and Projected Trends – Clark County, WA*

Note: For the contiguous US, graphs and maps for 1950 - 2013 show averages of observations recorded at individual climate and weather stations. Data are available from NOAA's National Centers for Environmental Information. Graphs in Climate Explorer show results generated by global climate models for the Coupled Model Intercomparison Project Phase 5 (CMIP5). For the contiguous US, the climate model data were statistically downscaled using the Localized Constructed Analogs method (LOCA; Pierce et al. 2014).
Source: (US Climate Resilience Toolkit, 2024)

Days w/ maximum temp > 90°F are projected to increase by at least 17 days by 2040 and 20 days by 2050.

- 1961–1990 observed average: 6.3 days with maximum above 90
- 2005 observed: 8.7 days
- Projection Higher Emissions RCP 8.5: 2040 19.5 days| 2050 26.4 days
- Projection Lower Emissions RCP 4.5: 2040 17.2 days| 2050 20.2 days

### CLIMATE MODELS

Climate models are mathematical representations of processes important in the Earth's climate system. The Representative Concentration Pathways (RCPs) describe four different 21st century pathways of GHG emissions and atmospheric concentrations, air pollutant emissions and land use; they include a stringent mitigation scenario (RCP2.6), a low scenario (RCP 4.5), an intermediate scenario (RCP4.5), and one scenario with very high GHG concentration (RCP8.5). Scenarios without additional efforts to constrain emissions lead to pathways ranging between RCP6.0 and RCP8.5. RCP2.6 is representative of a scenario that aims to keep global warming likely below 2°C above pre-industrial temperatures. See Intergovernmental Panel on Climate Change (IPCC), 2021: https://ar5-syr.ipcc.ch/topic_futurechanges.php.

Climate projections are typically based on historical trends (e.g., 1980-2009). The projections are mid-points of 30 year periods and the average of multiple global climate models. The higher GHG scenario (RCP 8.5) causes more warming by the end of the century compared to the moderate (A1B) and lower (RCP 4.5) scenario, but the scenarios do not differ significantly prior to 2050. For near-future applications, the choice of GHG scenario is less important than for late century applications. See: https://cig-wa-climate.nkn.uidaho.edu/.

## Climate Vulnerability Evaluation

Climate vulnerability is defined as the sum of exposure to a changing climate and the inherent sensitivity of people or environments to a changing climate, minus capacity of the community and place to cope with impacts of a changing climate. See Exhibit 12 and Exhibit 13. For example, there are areas that are more vulnerable due to extreme heat, such as "heat islands" with more pavement and less trees, or areas with a higher concentration of older residents (health sensitivity). There are areas that are vulnerable to extreme precipitation such as floodplains and landslide hazard areas, along with populations that live alone or have less access to a vehicle (low adaptive capacity). (US Climate Resilience Toolkit, 2021)

*Exhibit 13: Elements of Climate Vulnerability*

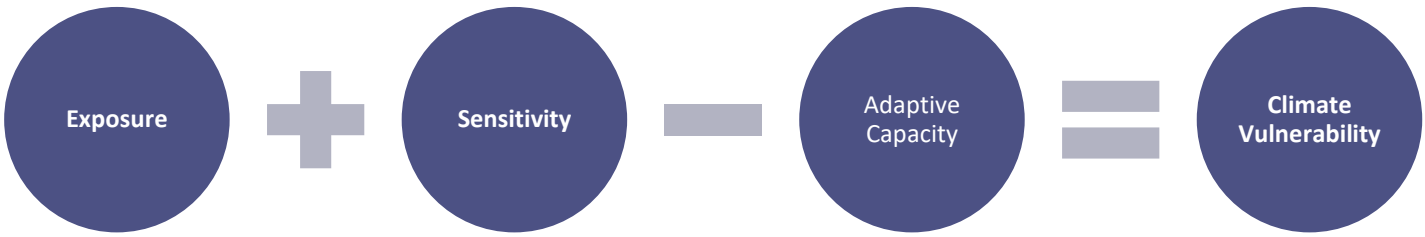


*Exhibit 14: Definitions of Climate Vulnerability and Indicators*

| Exposure | Sensitivity | Adaptive Capacity | Vulnerability |
|---|---|---|---|
| The presence of people, assets, and ecosystems in places where they could be adversely affected by hazards | The degree to which a system, population, or resource is or might be affected by hazards. | The ability of a person, asset, or system to adjust to a hazard, take advantage of new opportunities, or cope with change. | The propensity or predisposition of assets to be adversely affected by hazards. Vulnerability encompasses exposure, sensitivity, potential impacts, and adaptive capacity. |
| Common Indicators<br>Extreme Heat<br>Extreme Precipitation<br>Flooding<br>Wildfire Smoke and Danger<br>Air Pollution | Common Indicators<br>< 5 years old<br>> 65 years old<br>Steep slopes / geologic hazards<br>Waterbodies on 303d list<br>Diabetes<br>Asthma<br>Respiratory disease<br>Heart Disease | Common Indicators<br>People of Color<br>Poverty<br>Less than high school degree<br>Linguistic Isolation<br>Living Alone<br>Housing Cost Burden<br>Access to Vehicle<br>Housing Condition<br>Population Density<br>Urban Heat Island<br>Impervious Surface<br>Unemployment<br>Outdoor Professions<br>Population no health insurance<br>Tree canopy coverage<br>Access to Open Space | Common Indicators<br>Combination of exposure, sensitivity and adaptive capacity indicators |

Source: (US Climate Resilience Toolkit, 2021) (Yu, 2021)

Through the climate vulnerability assessment process, this study produced a Climate Vulnerability Index (CVI). The goal of the CVI is to create a geospatial tool that synthesizes key climate, environmental, and community data to inform the City's land use and climate planning work. The CVI is designed to identify areas within Vancouver that are more vulnerable to climate change.

The Vancouver CVI presents a series of indices and bivariate intersections. The Exposure Index represents the City's first index regarding Climate Exposure. In addition, to support the CVI, a Vancouver Health Index was also prepared with components of population health sensitivity. The CVI also makes use of the City's Equity Index which considers facets of sensitivity and adaptive capacity, particularly socioeconomics. Altogether the following intersections were made:

- **Climate Exposure** intersection with **Vancouver Equity Index** analysis
- **Climate Exposure** intersection with **Community Health Metrics**

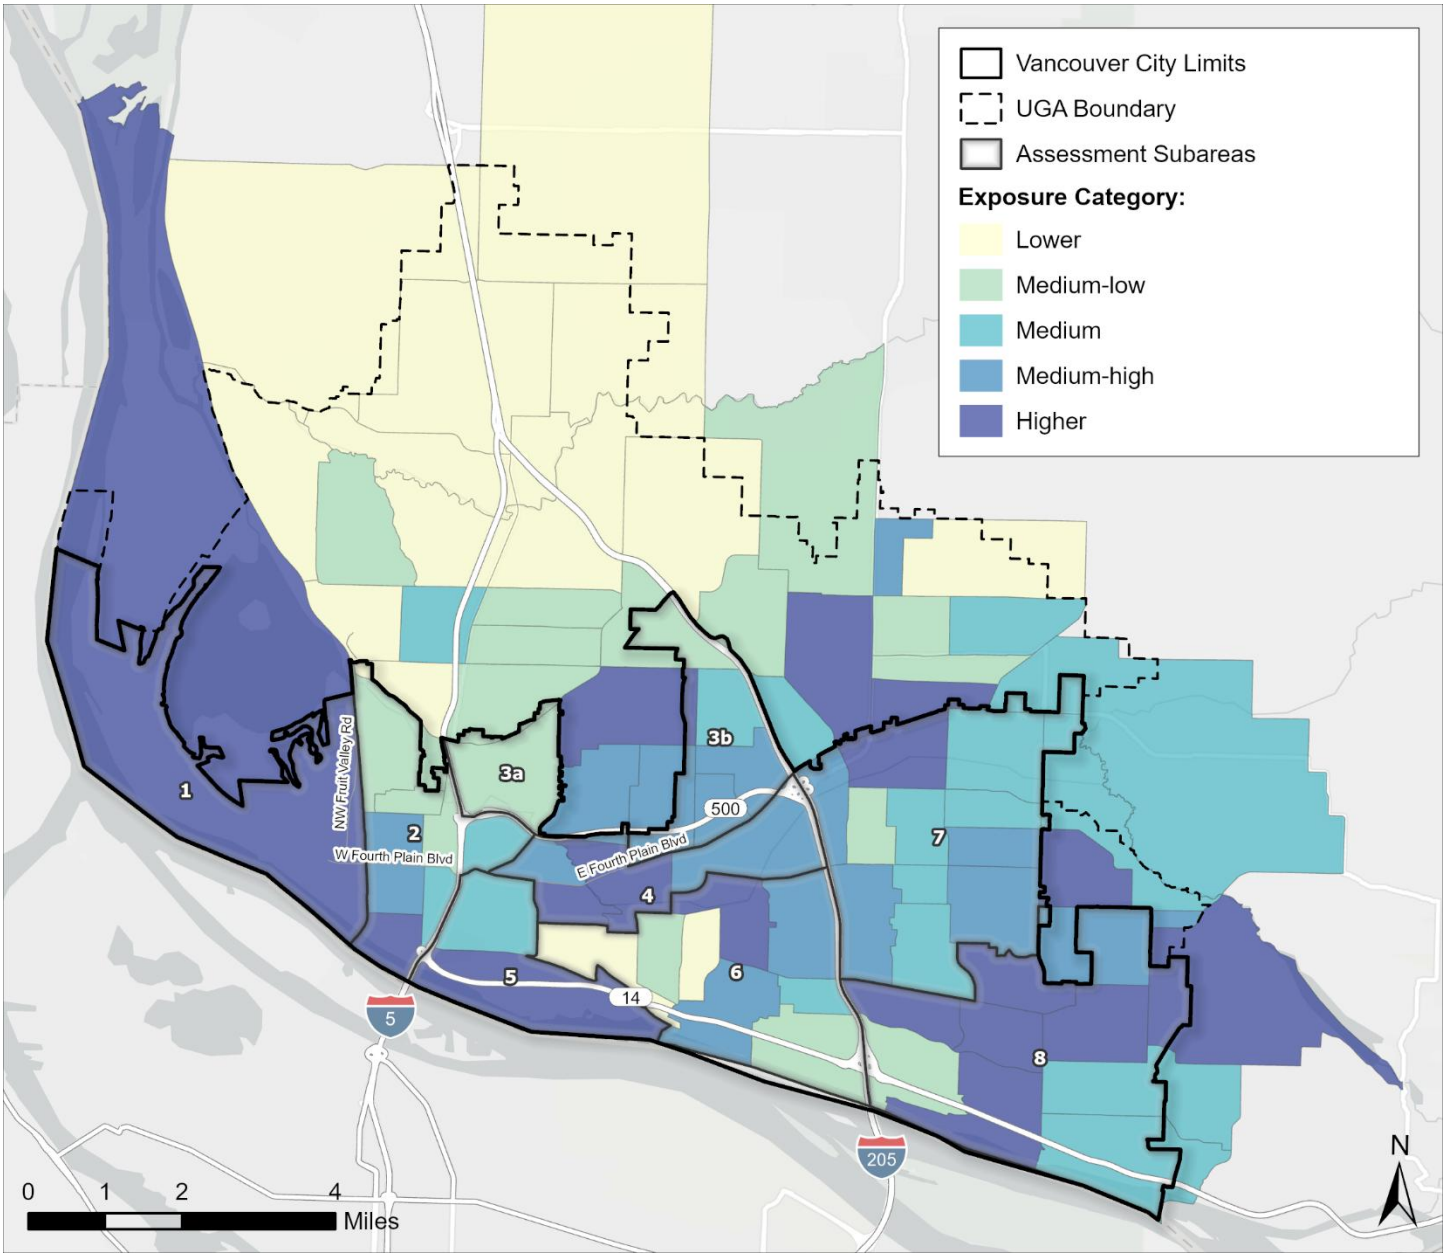
### CLIMATE INDEX DESCRIPTION AND SCORING

Building an index is the process of standardizing or normalizing data to allow for 'apples-to-apples' comparisons between dissimilar datasets. The data is summarized at the block group level for each block group in the planning area (Vancouver + UGA). After each block group contains the summarized metric for each of the exposures, z-score standardization is used to rank each exposure indicator. Z-scores represent how many standard deviations from the mean a given value is. These allow us to understand how a given indicator value for a block group relates to the rest of the dataset. For example, looking at urban heat islands, if a block group had a z-score value of -1.5, that would mean that urban heat island exposure in that block group is relatively low compared to the rest of the planning area. On the other hand, if it had a score of +1.5, that would mean exposure is relatively higher in that block group compared to the rest of the planning area. Once z-scores are calculated for each block group and each indicator, they are considered standardized, and because they are all representing the same metric (number of standard deviations away from the mean), they can be averaged together to create multidimensional metrics or indices.

## Climate Exposure, Equity, and Health

Exhibit 14 details the datasets used to analyze exposure to heat, precipitation/flooding, and smoke/air quality. These datasets provide for the greatest granularity and spatial resolution for use in an index. Notably, this list excludes climate projections for the region produced by the University of Washington Climate Impacts Group, as they do not have high enough spatial resolution to show geographic variability across the City of Vancouver.

*Exhibit 15: Exposure Index Metrics and Data Sources*



| Category | Metric | Description | Source | Data Year(s) |
|---|---|---|---|---|
| **Heat** | Land Surface Temperature – Urban Heat Islands | Average Land Surface Temperature | LANDSAT8 / BERK Consulting | 2019-2023 |
| **Heat** | Heat Wave Exposure - Hazard Type Risk Index Score | Heat Wave Exposure - Hazard Type Risk Index Score | FEMA National Risk Index for Natural Hazards | 2023 |
| **Heat** | Low Tree Canopy | Percent of Tract NOT Intersecting Tree Canopy | City of Vancouver / WDFW High Resolution Change Detection | 2019 / 2017 |
| **Flooding / Precipitation** | 100- and 500-yr Floodplains | Percent of Tract Intersecting 100- or 500-yr Floodplains (excluding the actual waterways from which floods originate) | FEMA FIRM Floodplains | 2021 |

| Category | Metric | Description | Source | Data Year(s) |
|---|---|---|---|---|
| **Flooding / Precipitation** | Urban Flooding - Impervious Surfaces | Percent of Tract Comprised of Impervious Surfaces | City of Vancouver / WDFW High Resolution Change Detection | 2019 / 2017 |
| **Flooding / Precipitation** | Riverine Flooding Exposure - Hazard Type Risk Index Score | Riverine Flooding Exposure - Hazard Type Risk Index Score | FEMA National Risk Index for Natural Hazards | 2023 |
| **Smoke / Air Quality / Fire** | Wildland Urban Interface | Percent of Land Area Intersecting WUI Intermix or Interface | WA DNR | 2019 |
| **Smoke / Air Quality / Fire** | Proximity to High Traffic Volume | Average Annual Daily Traffic at Major Roads Within 500 meters of Census Block Centroid | EJ Screen | 2020 |
| **Smoke / Air Quality / Fire** | Ozone Concentration | Average Ozone Concentration | NW-AIRQUEST Regional Background Design Values, 2014-2017 estimates | 2014-2017 |
| **Smoke / Air Quality / Fire** | Ozone Concentration | Ozone annual mean top 10 of daily maximum 8-hour concentration in air | EJ Screen / US EPA | 2019 |
| **Smoke / Air Quality / Fire** | PM2.5 Background Concentration | Average PM2.5 Concentration | Field PM2.5 2014 – 2017 estimates from the Washington State Department of Ecology | 2014-2017 |
| **Smoke / Air Quality / Fire** | PM2.5 Background Concentration | PM 2.5 levels in air measured using an annual average | EJ Screen / US EPA | 2019 |

Sources: Compiled by BERK, 2025.

Combining indicators of extreme heat, extreme precipitation/flooding, and wildfire danger/smoke, a unified index is presented below. The areas with the highest exposure to climate change are identified west of I-5 around Vancouver Lake and along NW Fruit Valley Rd, between I-5 and I-205 in central Vancouver south of SR 500, along Fourth Plain Blvd and E 18th St, and in east Vancouver along SE Mill Plain Blvd. See Exhibit 15.

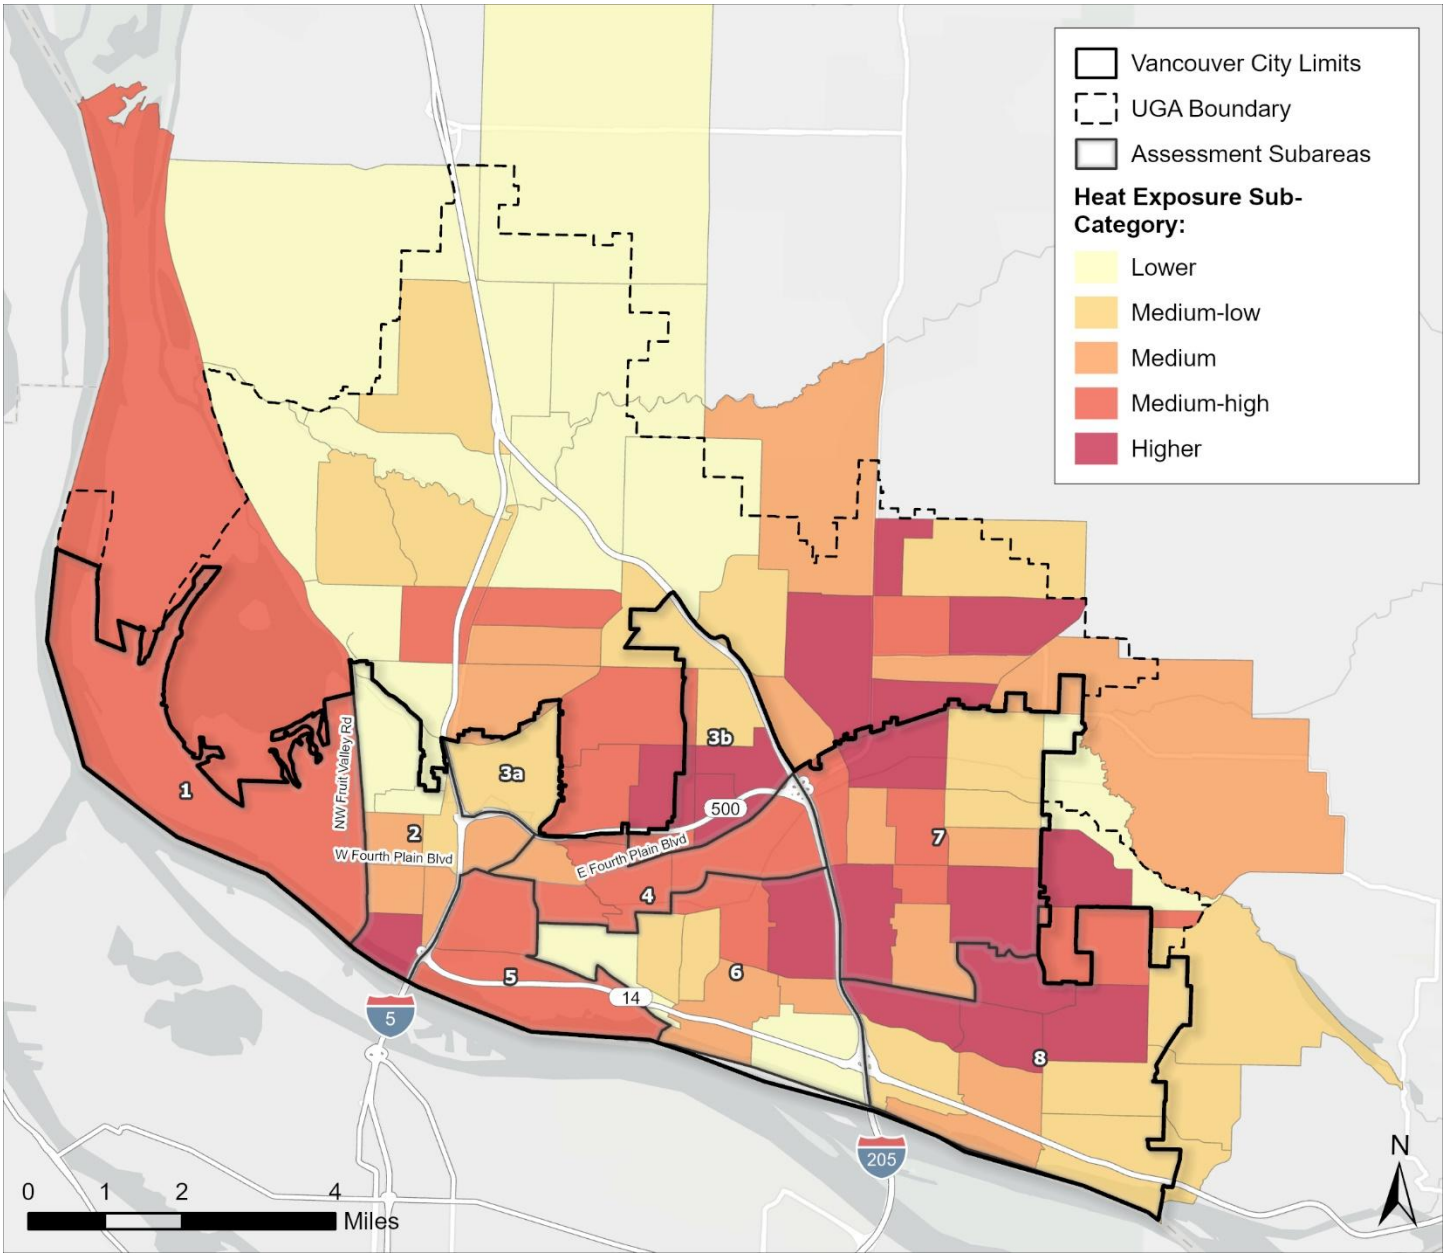


*Exhibit 16: Vancouver Climate Exposure Index*

Source: BERK Consulting, 2025.

Extreme heat is a driver of climate exposure east of I-205 and along SE Mill Plain Blvd, as well as areas in the UGA. Medium high exposure to extreme heat is found around Vancouver Lake and in other areas in east Vancouver. See Exhibit 16.

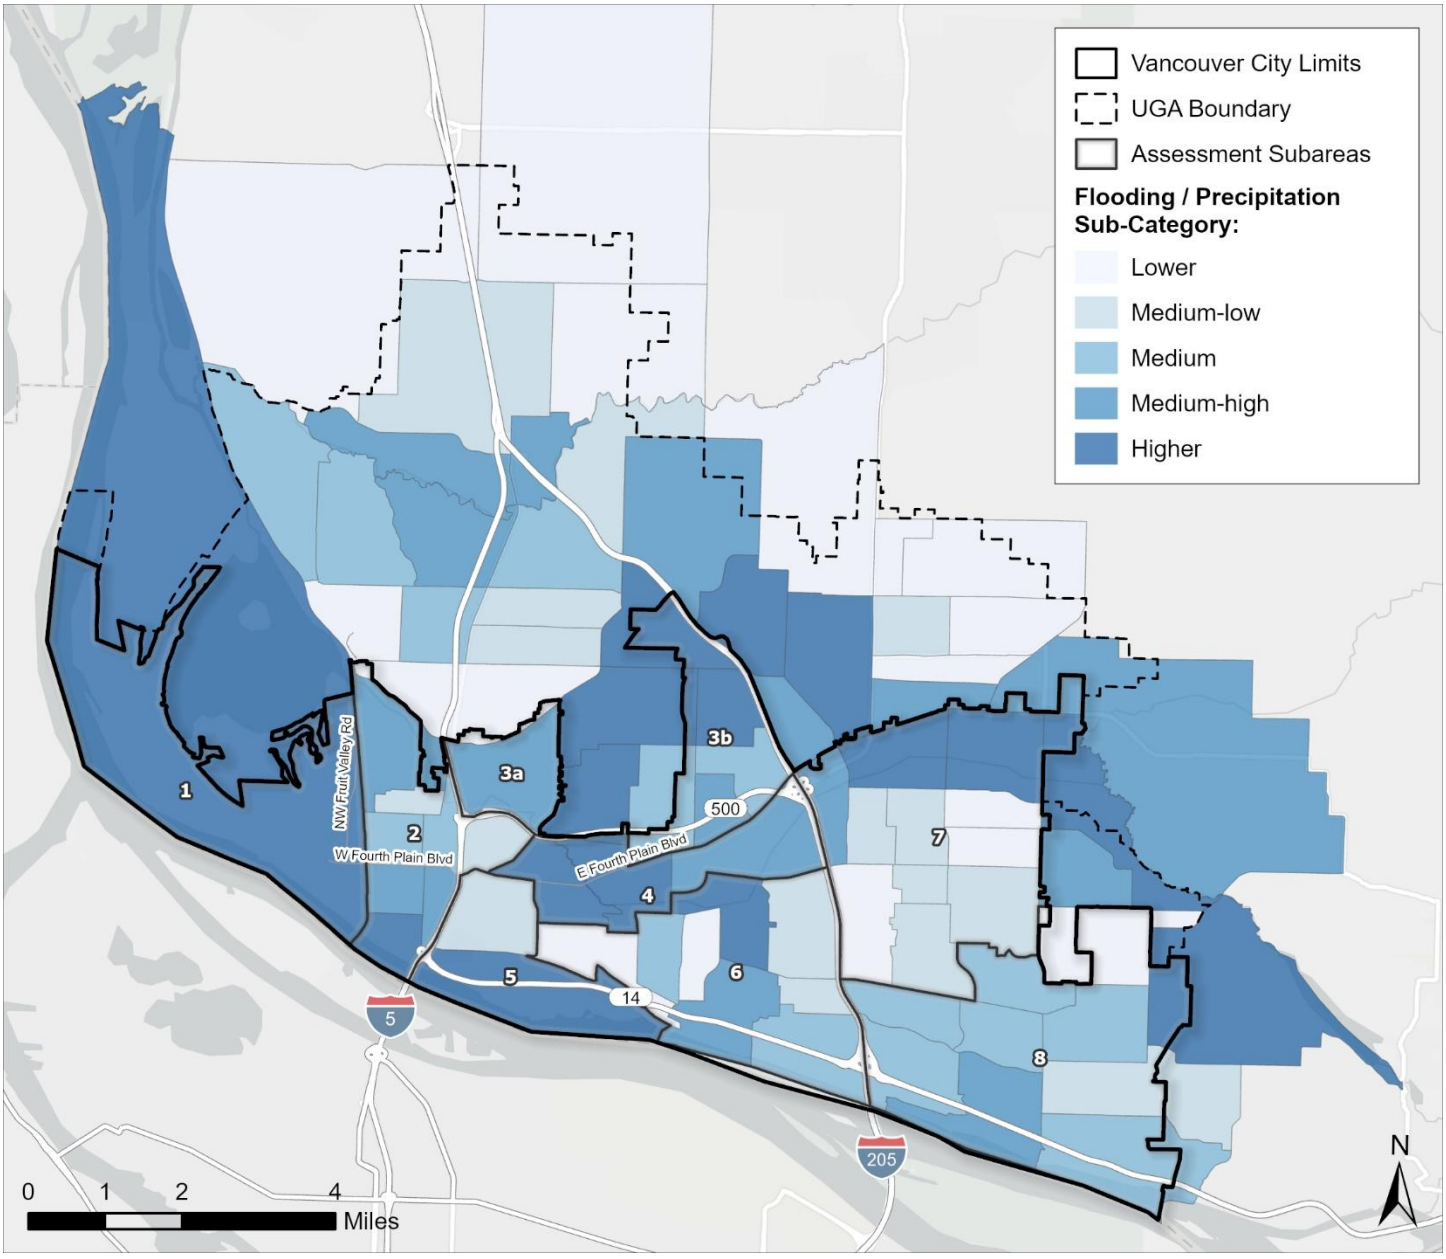

*Exhibit 17: Extreme Heat Exposure Index*

Source: BERK Consulting, 2025.

Higher exposure to flooding and extreme precipitation is identified around Vancouver Lake and in central Vancouver around Burnt Bridge Creek. See Exhibit 17.

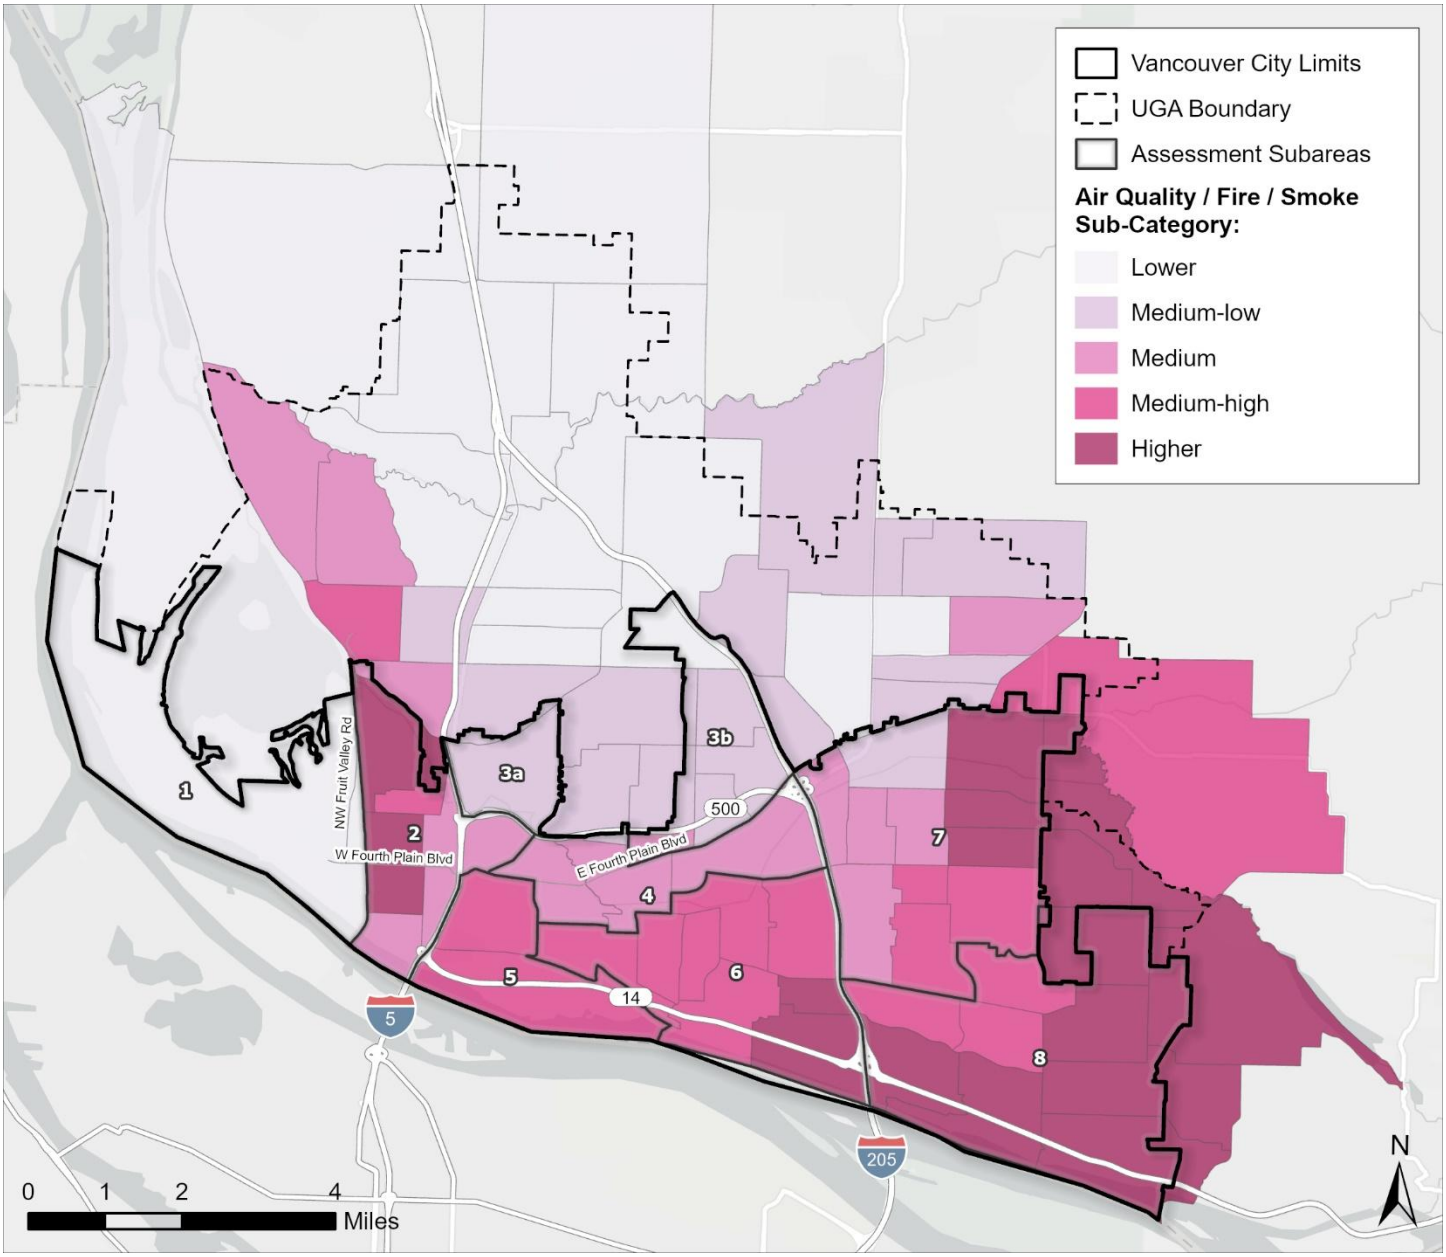

*Exhibit 18: Flooding and Precipitation Exposure Index*

Source: BERK Consulting, 2025.

Areas of higher Air Quality/Smoke/Wildfire exposure are east of NW Fruit Valley Rd, along SR 14 and in southeast Vancouver. While some data sources suggest wildfire risk around Vancouver Lake, the block has very low ozone scores and low to average PM2.5 scores. The Wildland Urban Interface for that area also is not as high as for other blocks in East Vancouver. See Exhibit 18.

*Exhibit 19: Air Quality/Smoke/Wildfire Exposure*

Source: BERK Consulting, 2025.

## Equity Index + Climate and Equity

The City created an Equity Index with a number of metrics meant to

> *"translate the self-expressed values and local knowledge of underrepresented or underserved community members into a data-driven mapping exercise. The results of the mapping exercise can be used in multiple ways. For example, to identify priority investment areas; to tailor programmatic offerings into specific communities; or to simply better understand the dynamics of social vulnerability across a geographic landscape."*

Metrics include aspects of sensitivity (age) and adaptive capacity (socioeconomics) such as race, language, poverty, renter households, and education. See Exhibit 19.

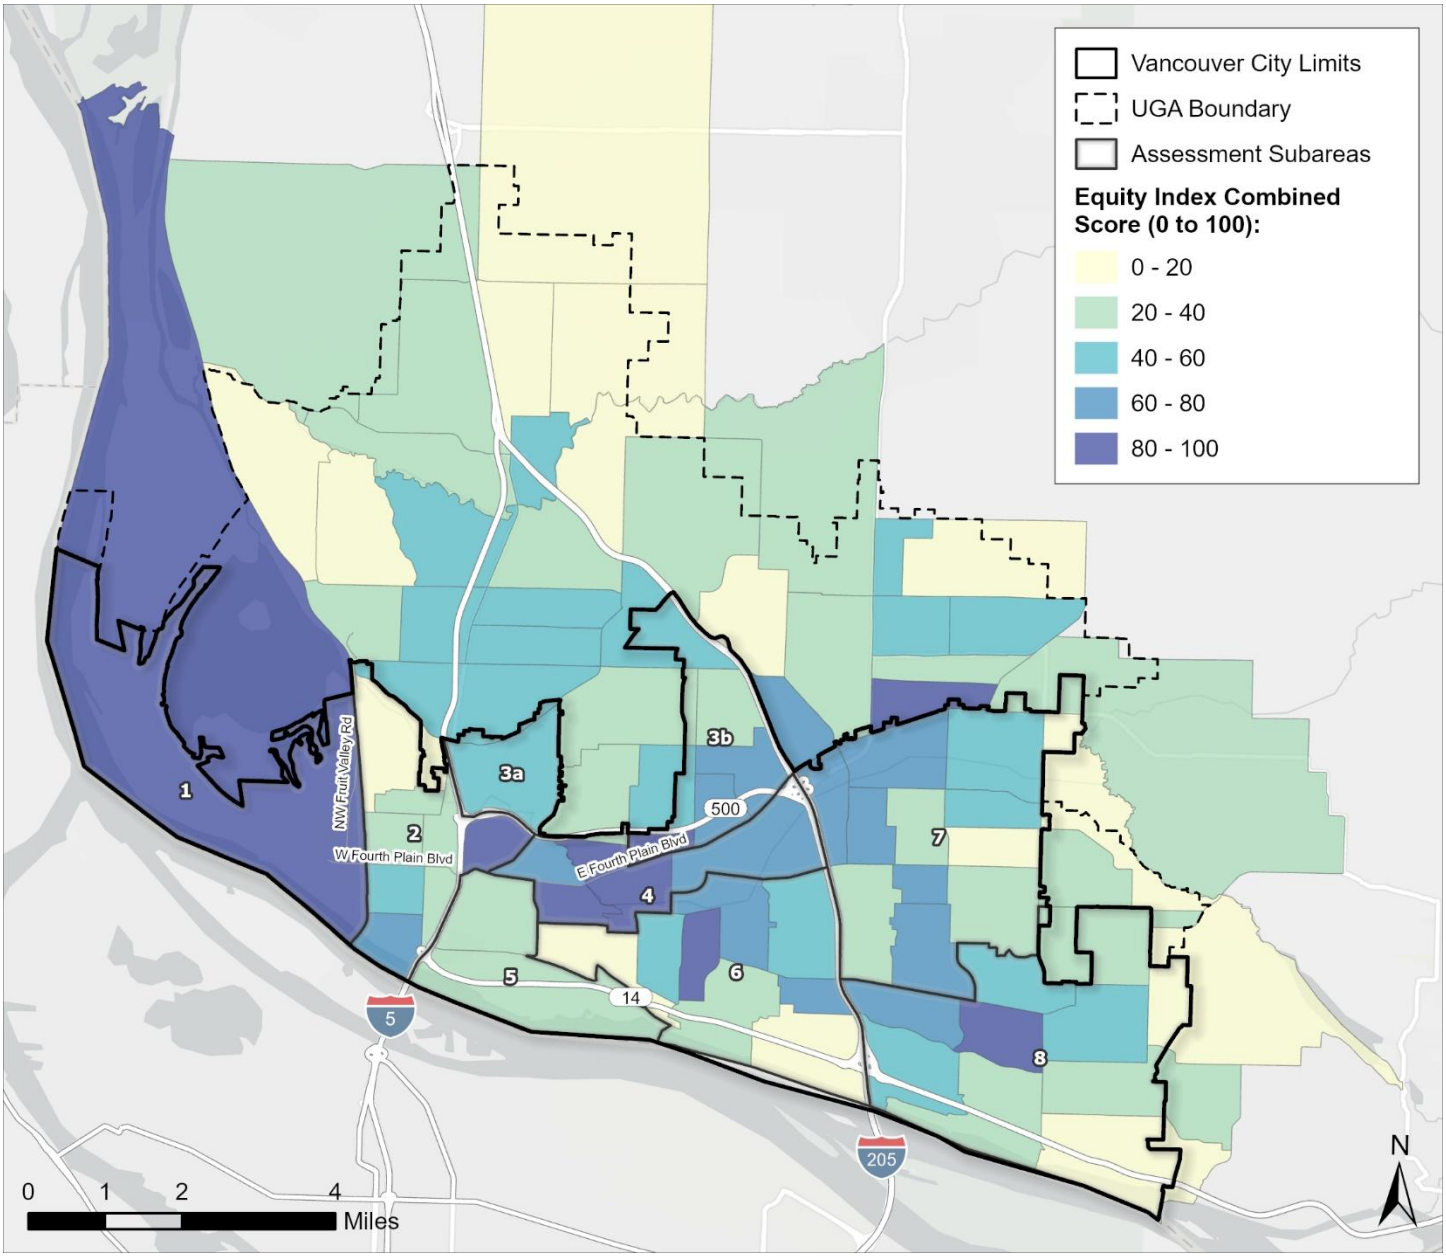

*Exhibit 20: Equity Index Metrics*

| Metric | Source 2010-2020 | Relationship to Vulnerability |
|---|---|---|
| People of color | ACS B03002 | Adaptive Capacity |
| People below 200% poverty | ACS C17002 | Adaptive Capacity |
| Renter households | ACS B25003 | Adaptive Capacity |
| Adults without a 4-yr degree | ACS B15002 | Adaptive Capacity |
| Households with limited English proficiency (LEP) | ACS C16002 | Adaptive Capacity |
| Persons with disabilities | ACS B18101 | Adaptive Capacity |
| Youth (0-17) | ACS B01001 | Sensitivity |
| Older adults (65+) | ACS B01001 | Sensitivity |

Source: (City of Vancouver, 2022)

The Equity Index results show communities with higher Equity disparities along Fourth Plain Boulevard such as Maplewood, Meadow Homes, and Baley Downs neighborhoods. See Exhibit 20.

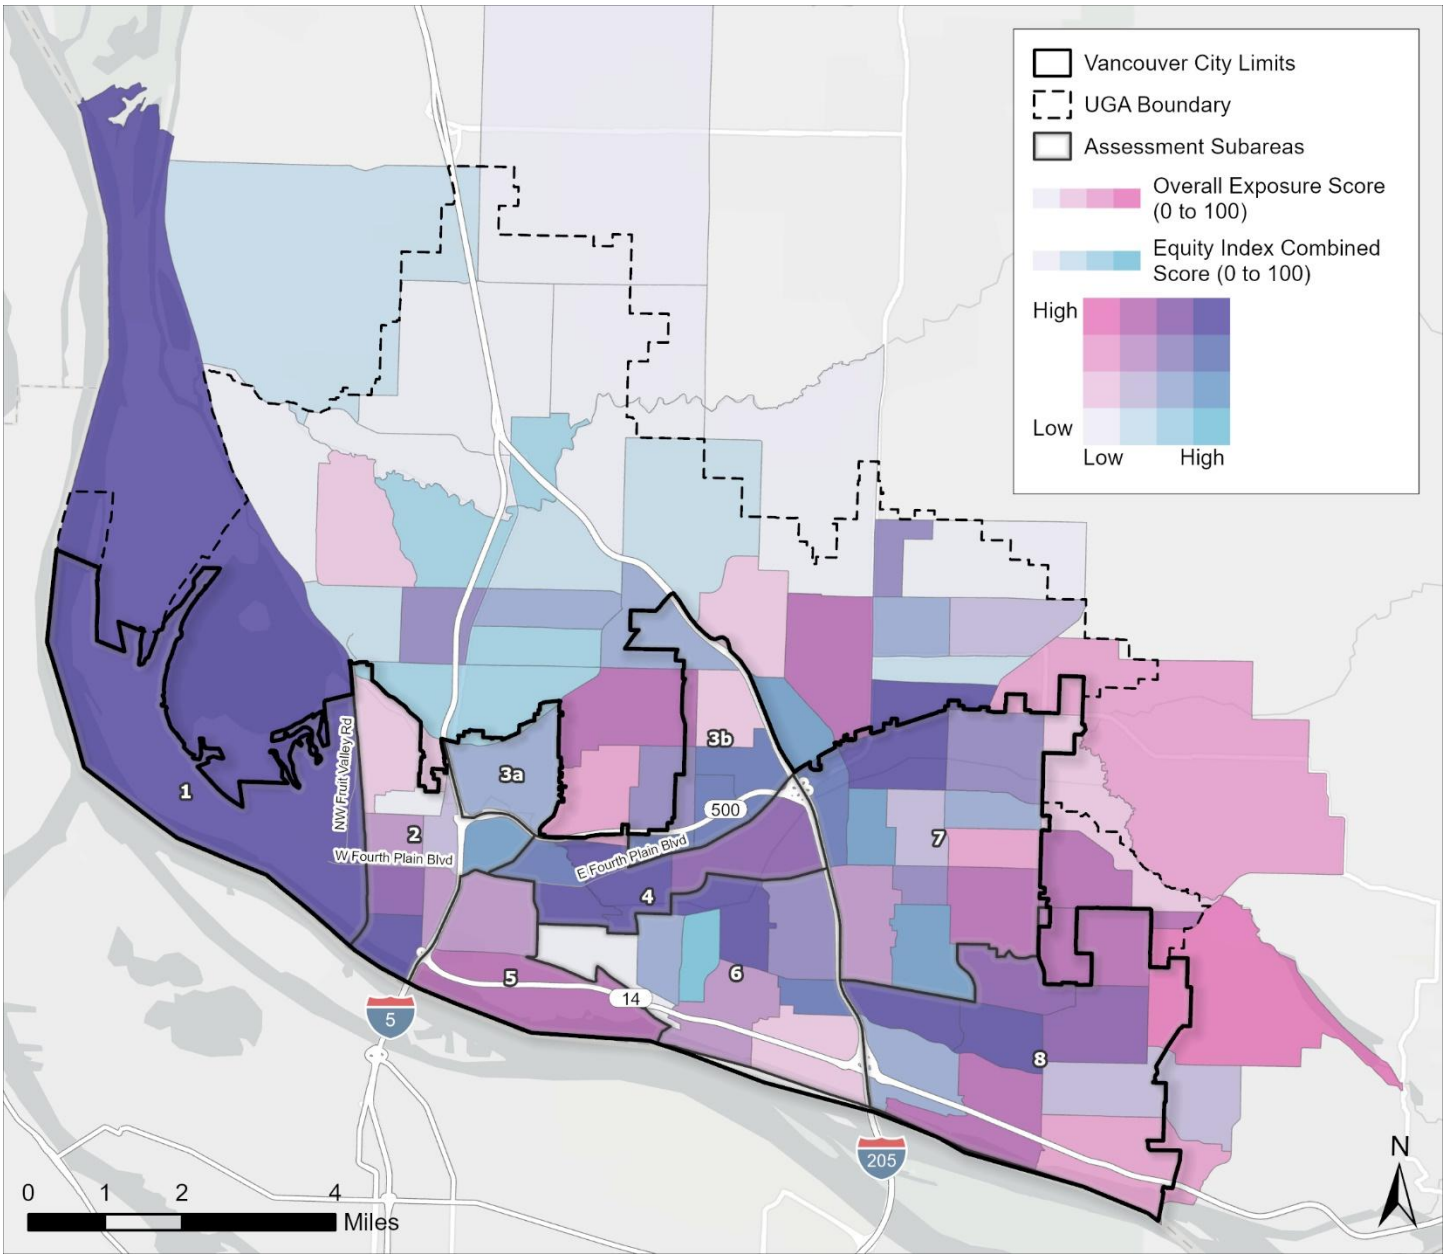

*Exhibit 21: Equity Index Score for Vancouver*

Source: (City of Vancouver, 2022): BERK 2025.

Considering both climate exposure and equity, the bivariate analysis shows areas with higher scores on both indices. A closer review of conditions and strategies include locations such as Vancouver Lake and NW Fruit Valley Road, Census tracts south of SR 500 and along Fourth Plain Boulevard as well as neighborhoods in southeast Vancouver. See Exhibit 21.

*Exhibit 22: Climate Exposure + Equity Index*

Source: (City of Vancouver, 2022); BERK 2025.

### Health Index + Climate and Health

Some attributes shown in the literature to correlate to higher sensitivity are asthma, chronic obstructive pulmonary disorder (COPD), diabetes, heart disease, poor physical health, and poor mental health. These data points were available at the tract-level from the Centers for Disease Control (CDC Places). See Exhibit 22.

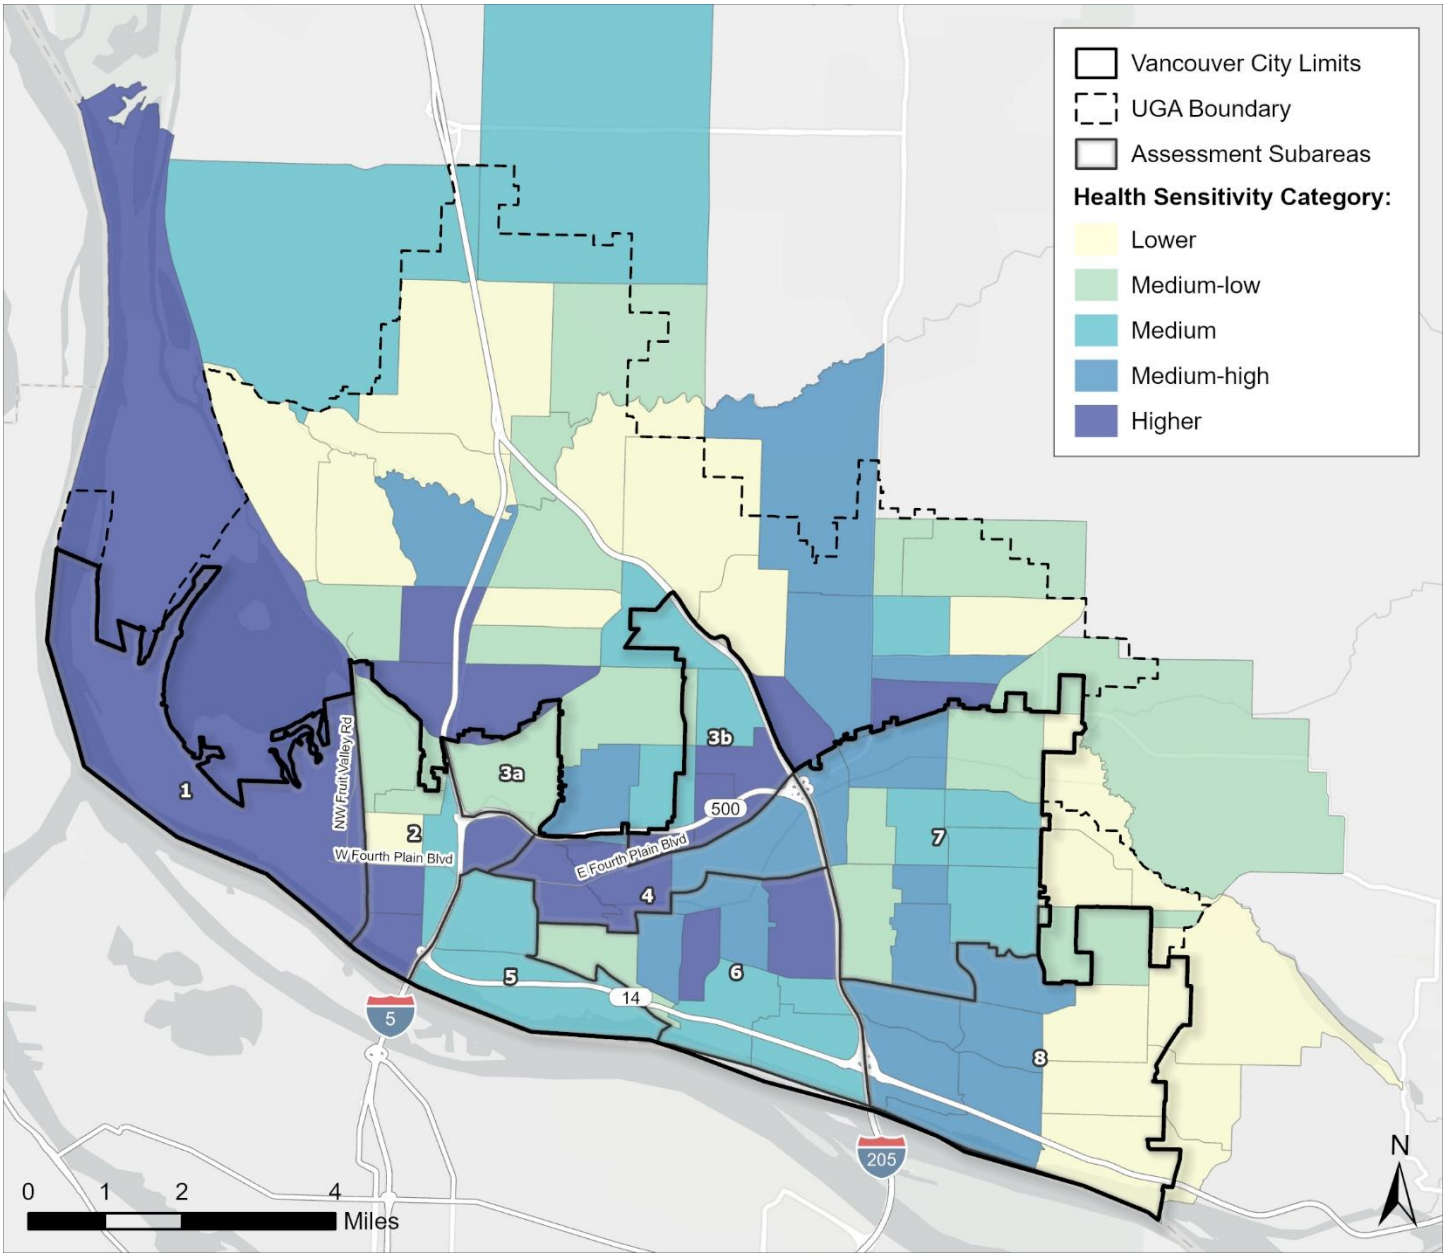

*Exhibit 23: Health Data Considered in Health Index*

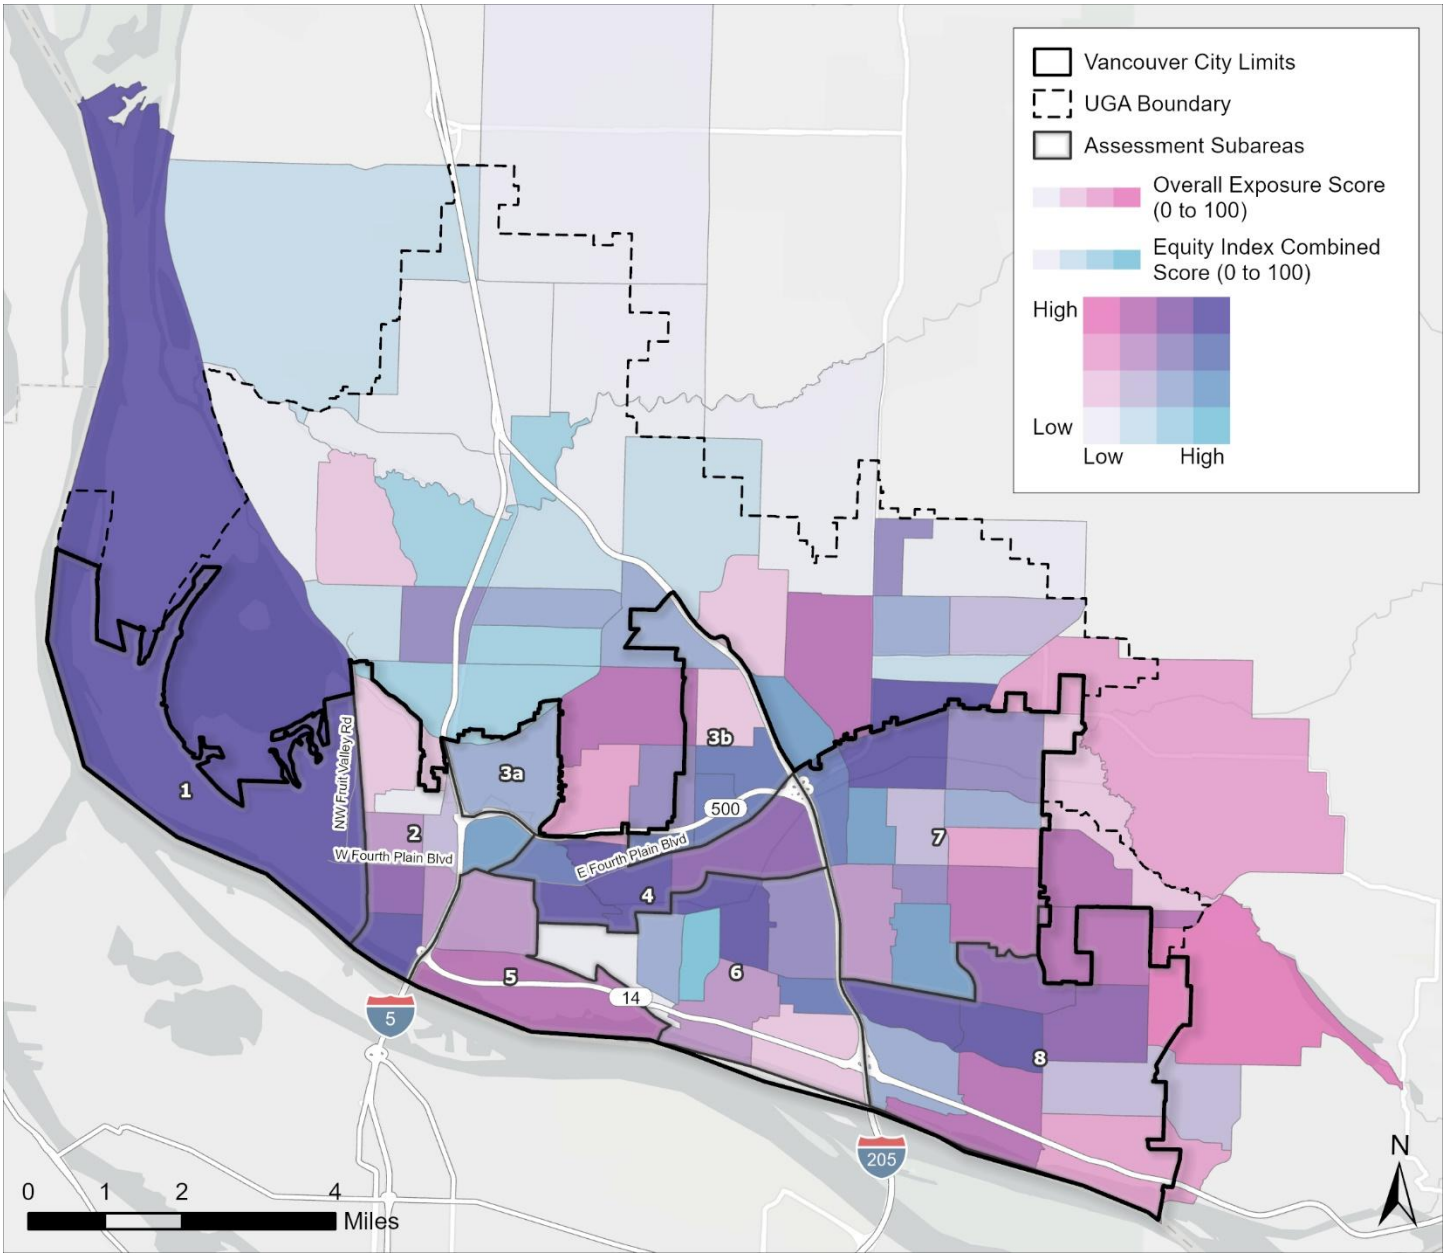
| Indicator | Variable Name | Definition |
|---|---|---|
| Health Insurance Access | CDC Places | Model-based estimate for crude prevalence of current lack of health insurance among adults aged 18-64 years, 2021 |
| Hypertension | CDC Places | Model-based estimate for crude prevalence of high blood pressure among adults aged >=18 years, 2021 |
| Asthma | CDC Places | Model-based estimate for crude prevalence of current asthma among adults aged >=18 years, 2021 |
| Coronary Heart Disease | CDC Places | Model-based estimate for crude prevalence of coronary heart disease among adults aged >=18 years, 2021 |
| COPD | CDC Places | Model-based estimate for crude prevalence of chronic obstructive pulmonary disease among adults aged >=18 years, 2021 |
| Diabetes | CDC Places | Model-based estimate for crude prevalence of diagnosed diabetes among adults aged >=18 years, 2021 |
| Poor Mental Health | CDC Places | Model-based estimate for crude prevalence of mental health not good for >=14 days among adults aged >=18 years, 2021 |
| Poor Physical Health | CDC Places | Model-based estimate for crude prevalence of physical health not good for >=14 days among adults aged >=18 years, 2021 |

Source: CDC Places, 2021.



Health Index results are similar to Equity Index results with populations having more sensitive health conditions in west and central parts of Vancouver. See Exhibit 23 for the Health Sensitivity Index and Exhibit 24 for a bivariate Exposure and Health Sensitivity map.

*Exhibit 24: Health Index – Vancouver*

# 3. Residents Vulnerable to Climate Change Impacts

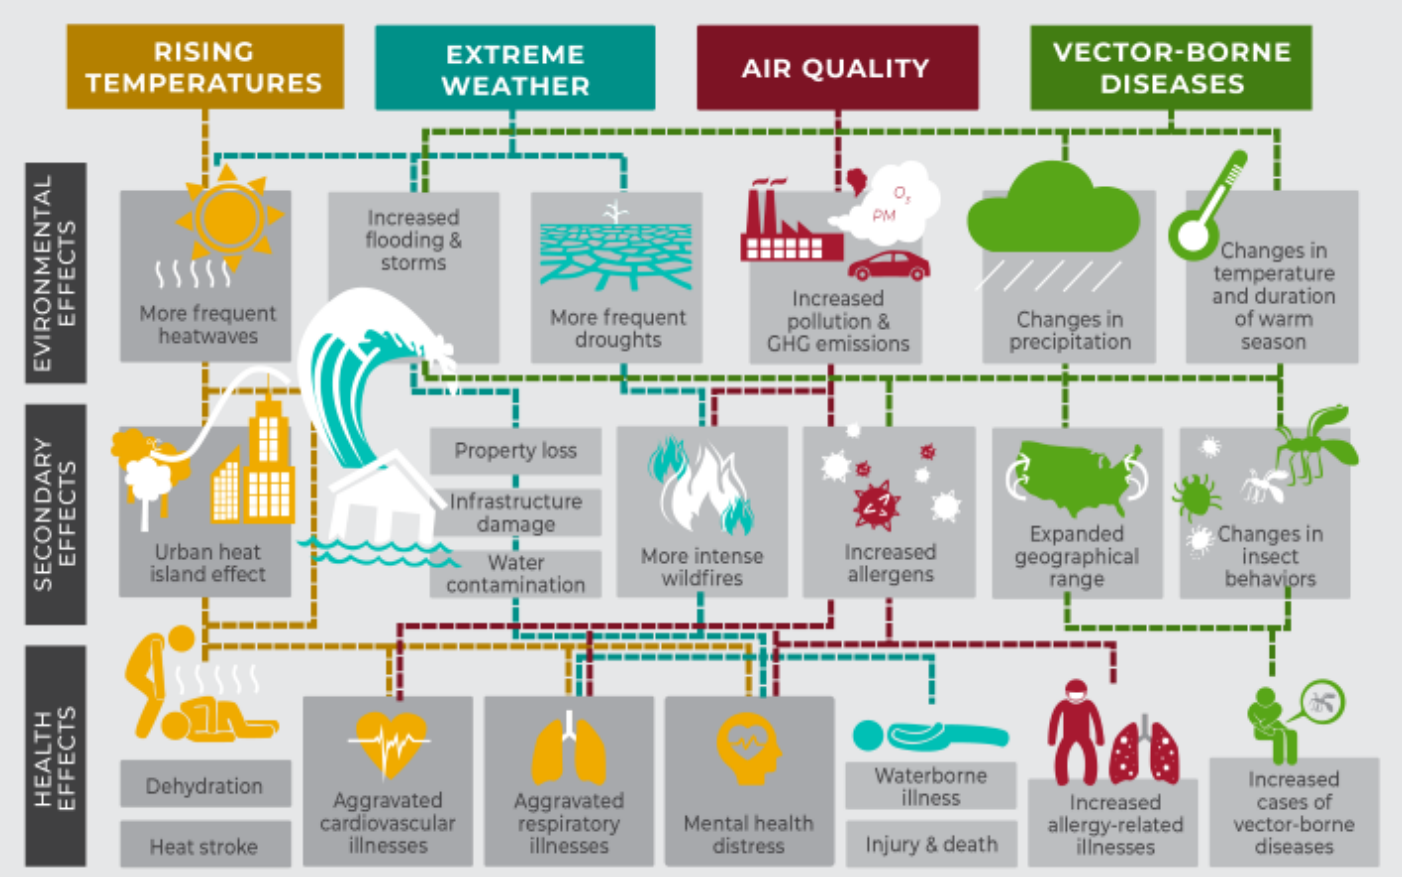
## People Vulnerable to Climate Change

Vancouver is home to 202,600 residents (OFM 2024). It is a growing community along the Columbia River and the Portland Metro area. While vibrant with opportunities, some socioeconomic factors may result in Vancouver communities having more challenges when coping with climate hazards and impacts:

- Over 15% experience poverty
- About 15% identified that they have a disability
- 8.3% are without health insurance
- 1 out of 5 speak a language other than English at home
- 32.5% are non-White residents

Source: ACS 2017-2021 per **OUR VANCOUVER** Equity Analysis, March 2024

Vancouver's share of populations with these characteristics are higher than the shares for Clark County and the State of Washington.



Communities that tend to be more vulnerable to climate change related impacts are those that are already at health, social, and economic risk, including older people, children, low-income families, persons of color, and immigrant communities. (EPA, 2021)

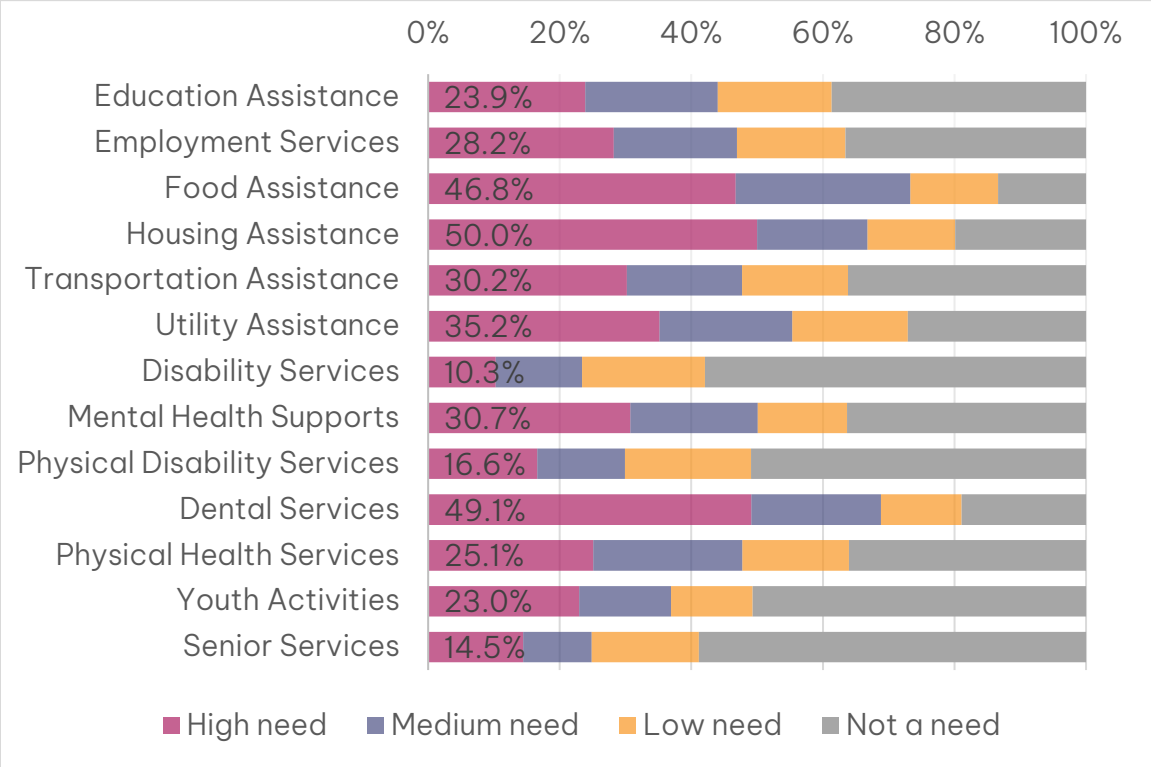
- Persons that are elderly may have more limited mobility or preexisting health conditions, and children under 5 years old may have a harder time regulating temperature and may have underdeveloped immune systems.
- Low-income households may be more susceptible to illnesses and have limited resources to adapt or respond to climate change.
- Communities of color may have cumulative exposures to pollution and health and social disparities.
- Persons that speak English less than very well may have more difficulties during evacuation and difficulties accessing post-disaster funding.

Sources: (Yu, 2021) (Hayden, 2023)

A graphic summary of how climate change affects health is in Exhibit 25.

*Exhibit 26: How Climate Change Affects Health*

Source: (American Public Health Association, 2024)



## Health Sensitivities

Some health attributes that correlate to higher sensitivity are asthma, chronic obstructive pulmonary disorder (COPD), diabetes, heart disease, poor physical health, and poor mental health. Using the Centers for Disease Control (CDC) Places information at a census tract level, a health index was developed for the purposes of this study. See Exhibit 23 in the prior chapter. These persons may be more vulnerable to climate change hazards.

Vancouver residents participated in a Clark County Health community needs assessment in 2023-2024. See Exhibit 26. Results showed the types of economic and physical challenges that predispose populations to climate vulnerability and offer areas of focus to improve resilience:

- Higher needs – assistance with housing, food, transportation, and utilities
- Moderate needs – support with dental, mental, and physical health services

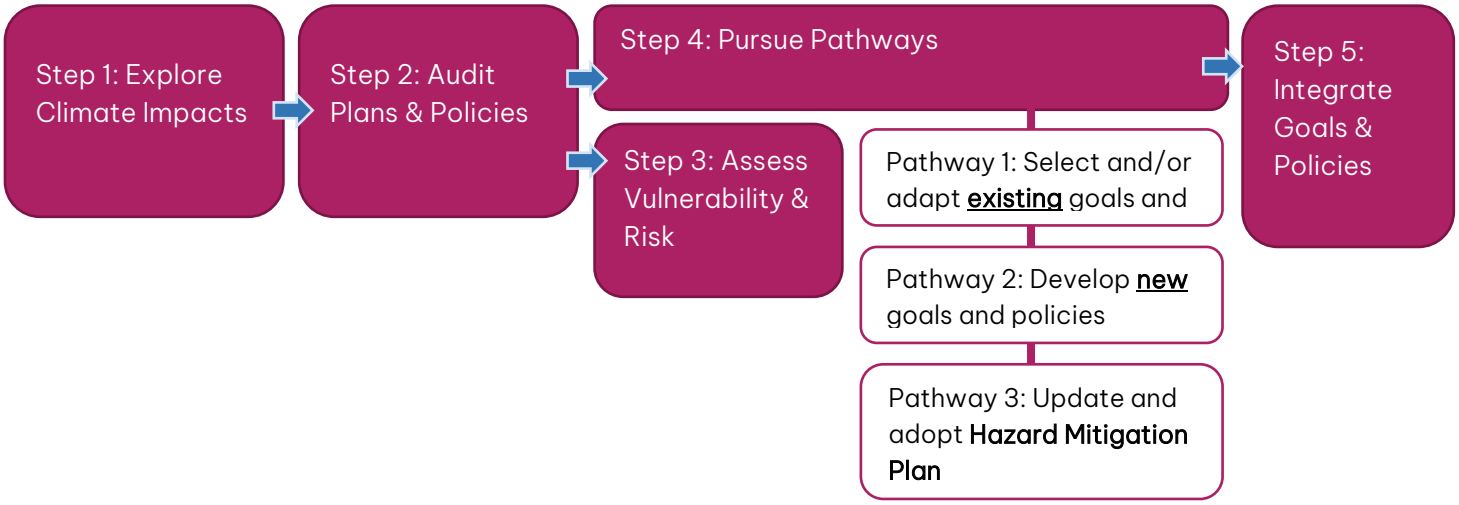
*Exhibit 27: Clark County Needs Assessment Survey 2024: Vancouver Respondent Findings*

Source: Clark County Public Health, March 2024

## Capacity to Adapt and Equity

Populations in Vancouver with potential socioeconomic disparities include persons in poverty, persons with disabilities, renter households, persons with high school or less education, and persons of color. These populations may have less resources to prepare for or respond to climate impacts. For example, in the Northwest United States, an EPA study in 2021 found that those with lower incomes are much more likely than those with higher incomes to have the highest labor hour losses among weather-exposed workers. BIPOC populations were more likely to have new asthma diagnoses due to particulate air pollution which can be exacerbated by climate change. (EPA, 2021) Vancouver's Equity Index considers the relative concentrations of these populations by Census block. Areas with populations that may have Equity disparities include Fruit Valley and Fourth Plain Blvd. See Exhibit 20 in the prior chapter.

Engagement with underserved community members could help surface priorities for investment in public services as well as locations needing more investment in amenities like parks, tree canopy, services, stormwater treatment, sidewalks, and others.



# 4. Planning for Climate Change

## Growth Management

The State legislature passed HB 1181 requiring a Climate Change & Resiliency Element. The element is to provide actions to reduce GHG emissions and per capita VMT. The element also must "equitably enhance resiliency to, and avoid or substantially reduce the adverse impacts of, climate change in human communities and ecological systems through goals, policies, and programs." The goals, policies and programs should be based on the best available science and credible climate projections and impact scenarios. Both the GHG reduction sub-element and the resiliency sub-element must prioritize GHG reductions and climate resilience actions that benefit overburdened communities.

The State of Washington Department of Commerce has developed guidance (Commerce, 2023) to develop the climate element including both GHG reduction and resiliency sub-elements. This document provides a Vancouver Climate Vulnerability Assessment consistent with Steps 1 through 3. A separate policy evaluation recommends adapting existing or proposing new goals and policies to address Steps 2 and 4. See Exhibit 27.

*Exhibit 28: Climate Resilience Sub-Element Steps – Washington Department of Commerce*

Source: (Commerce, 2023)

This Vulnerability Assessment addresses Resilience sub-element step 3. Regarding the GHG sub-element, the City has developed GHG emission reduction goals in a Climate Action Framework and has inventoried GHG emissions. The City is in the progress of developing per capita VMT goals with the Comprehensive Plan periodic update.

## Related Vancouver Climate Planning Efforts

### Climate Action Framework (2022)

In December 2022 Vancouver adopted a 2040 goal to be carbon neutral. A range of strategies was developed to address GHG reductions across energy, transportation, solid waste, and land use sectors, and build capacity with the city government as well as engage equitably with the community. Strategies are listed below. A wide range of actions were identified to implement each strategy.

- Strategy EQ-1. Enhance resilience of overburdened communities
- Strategy EQ-2. Build a more community-driven, circular economy
- Strategy EQ-3. Support growth of the green technology workforce
- Strategy BE-1. Increase use and storage of renewable energy while reducing consumption
- Strategy BE-2. Decarbonize homes, businesses, and other buildings
- Strategy TLU-1. Create neighborhoods that support clean modes of transportation
- Strategy TLU-2. Shift driving trips to clean, active modes of transportation
- Strategy TLU-3. Decarbonize and electrify vehicles
- Strategy TLU-1. Create neighborhoods that support clean modes of transportation
- Strategy TLU-2. Shift driving trips to clean, active modes of transportation
- Strategy NS-1. Increase carbon storage in trees, vegetation, and soil
- Strategy NS-2. Improve ecosystem resilience
- Strategy NS-3. Conserve Water Resources
- Strategy SW-1. Require recycling and organic material management
- Strategy SW-2. Zero out wastewater emissions
- Strategy GOV-1. Mainstream sustainability at the City, including staff capacity

The City is implementing the strategies and actions and monitoring GHG emissions to achieve the ambitious overarching goal of carbon neutrality.

### Climate Adaptation Strategy (2022)

The Vancouver Climate Adaptation Strategy was developed for the City by Hatch Planning associated with Portland State University. The report was intended to guide climate adaptation policies, and with the results of engagement – a survey, six pop-up events, and five focus groups – identified the following recommendations:

> **1. Climate-Ready Communities** - Provide essential services for communities to increase resiliency, and expand and increase inclusive access to services. Cultivate community connections to build resilient communities.

**2. Communication and Education** - Increase community-wide awareness of climate adaptation strategies and available resources. Foster communication and collaboration between the City and residents, and among residents and community organizations.

**3. Green Infrastructure** - Bolster green infrastructure in the urban environment that reduces urban heat island effects and mitigates poor air quality. Install green infrastructure in the built environment to increase the resiliency of structures.

**4. Land Use and the Built Environment** - Implement sustainable land use policies to address changing climate conditions. Promote building and development standards for public and private facilities.

**5. Food Security** - Increase equitable access to food in the face of rising food prices and insecurity. Promote self-sufficiency through local food production.

**6. Governance** - Institutionalize climate adaptation strategies among City departments.

### Equity and Displacement Indices

Vancouver has developed the Vancouver Equity Index to understand communities and places that have had less investment and are underserved. This can inform policy, budgets, and programs. In addition, Vancouver developed a Displacement Index to identify places in Vancouver experiencing or likely to experience displacement due to redevelopment or due to the expense of housing. This tool is used to inform the City's Comprehensive Plan to avoid impacts where possible and to develop anti-displacement policies.

The Reside Vancouver, Anti-Displacement Strategy, contains four strategies: people, preservation, production, and prosperity. Underneath these strategies are the following recommended actions:

- Manufactured Dwelling Park (MDP) Zoning
- Right of First Refusal
- Anti-Displacement Impact Assessments
- Rental Registration Program
- "Qualified" Local Small Businesses in Public Procurements
- Joint-Labor Management and Job Training Partnerships
- Community Investment Trusts

Some Reside Vancouver strategies could support economic development and zoning and development climate strategies, such as green technology jobs and building quality housing that meets environmental health standards. (Thread Community Planning, 2023)

### OUR VANCOUVER - COMPREHENSIVE PLAN 2045 – Climate Planning

The City is currently updating its comprehensive plan to encourage a connected and accessible. Per the City's approach (City of Vancouver, WSP, 2024) this means the following:

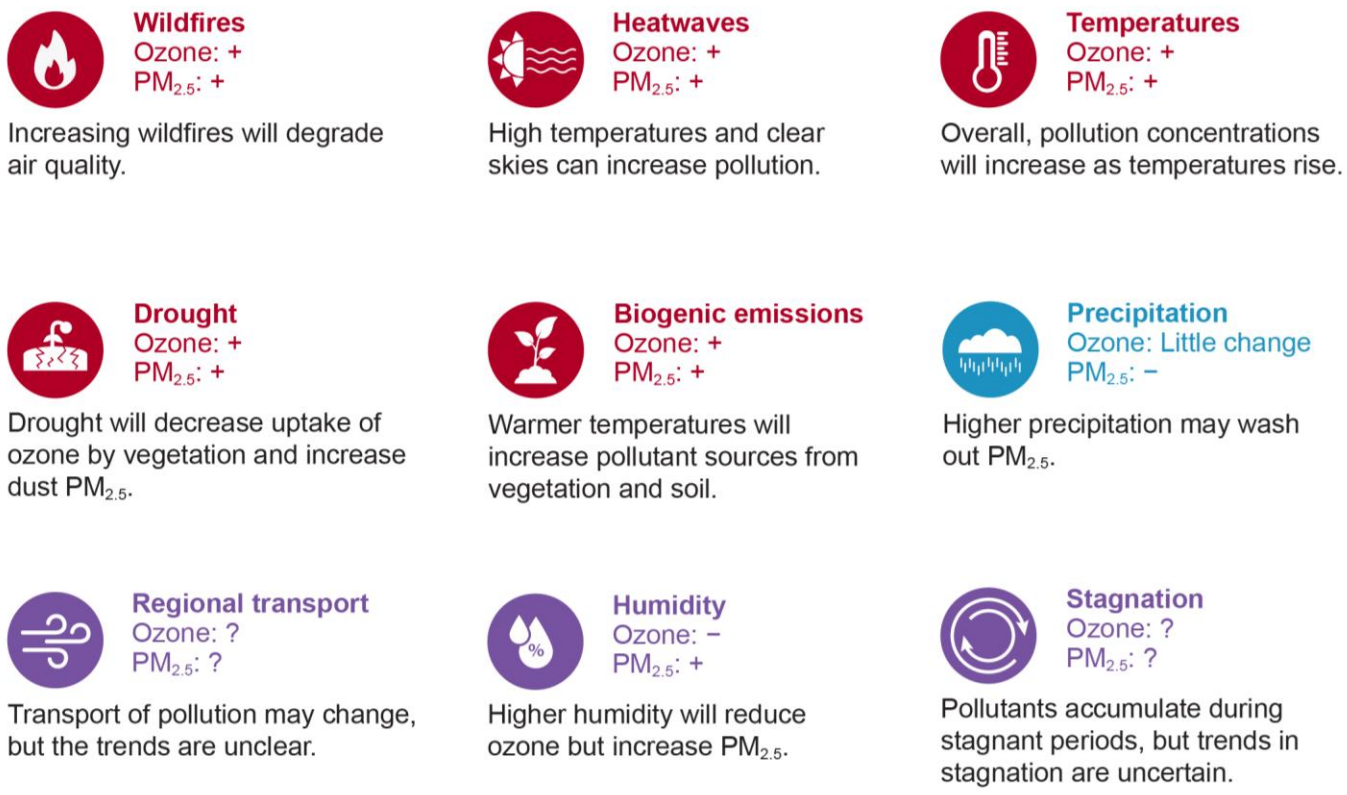
- Accessibility focuses on universally designed places, and the ability for all residents regardless of physical or neural capabilities or incomes to be well served by their built environment.
- Connectivity is intended to communicate how people are connected to services and amenities in neighborhoods, as well as how neighborhoods connect and inter-relate to one another.

The plan will review active trip potential to improve connectivity and increase bicycle and pedestrian trips. The City is evaluating these growth strategies for their ability to provide lower per capita GHG emission and VMT. The land use plan will be supported by a climate change and resilience element per HB 1181.

## Community Health

### Overburdened Communities Highly Impacted by Air Pollution

Communities across Washington State are exposed to air pollution from stationery, mobile, and other environmental sources. Vancouver was identified as a potentially overburdened community by the Washington State Department of Ecology in its 2023 report due to the city's proximity to major interstates like I-5 and I-205, the nearby industrial uses in the City of Portland, exposure to state-wide and regional wildfire smoke, and socioeconomic and demographic factors that exacerbate negative health outcomes. (Washington Department of Ecology, 2023) (Ecology W. D., 2024)



Poor air quality has been linked to negative health outcomes and in overburdened communities. The following impacts are more common in overburdened communities and can be linked to high concentrations of criteria pollutants:

- Heart and lung disease at higher rates than state average
- 2.4 year lower life expectancy than state average
- Older adults in overburdened communities highly impacted by air pollution were twice as likely to die from illnesses linked to breathing fine particles ($PM_{2.5}$) from human-caused sources than the statewide average.

- Older adult people of color have a higher risk of death from breathing fine particles ($PM_{2.5}$) compared to older white adults in the same area. (Washington Department of Ecology, 2023)

Climate change can directly degrade air quality such as during extreme heat events, causing ozone levels to be higher. Higher PM 2.5 pollution levels could also occur during heatwaves, Increasing wildfires would result in smoke and PM 2.5 exposure. (West, 2023) See Exhibit 28.

*Exhibit 29: Climate Change Impacts on Ozone and PM 2.5 over the United States*

CAPTION: Climate change is projected to alter concentrations of two key US air pollutants, ozone and $PM_{2.5}$, through several processes. Red icons signify increased ozone and $PM_{2.5}$, and the blue icon denotes decreased $PM_{2.5}$. Plus and minus signs indicate the expected pollutant response to climate-driven changes in meteorology. Question marks and purple icons denote uncertainty in either the response or in how the meteorological process will change with climate change. Given uncertainties and regional differences in pollution responses, the magnitude of these responses is not presented.
Source: (West, 2023)

Ecology intends to place air monitors in overburdened communities and publish biennial reports on community criteria pollution levels, greenhouse gas emissions, and health impacts. The Climate Commitment Act also requires Ecology to develop standards and strategies to reduce the criteria air pollution in overburdened communities highly impacted by air pollution.

Vancouver can coordinate with Ecology as it monitors pollutants and as it implements its Climate Action Framework to reduce greenhouse gas emissions.

### Adaptive Capacity Assessment

This report is also in conversation with the City's Adaptive Capacity Assessment (2025), which focused on understanding the systems, resources, and conditions that enable communities to respond to climate hazards. Findings from the Adaptive Capacity Assessment have been integrated—helping to illuminate where and why vulnerability varies, and what additional actions may be needed to support at-risk populations and infrastructure. (City of Vancouver, 2025)

### Health Impact Assessment

The City prepared a Health Impact Assessment (HIA) that considers how the growth alternatives studied as part of the **OUR VANCOUVER** Comprehensive Plan periodic update may benefit and impact health in Vancouver as it relates to the built environment.

The HIA also analyzes health-related conditions around these themes:

- Physical Activity
- Food Access
- Community Connections
- Exposure to Health Hazards
- Housing and Financial Security

The HIA addresses impacts from gaps in the built environment for secure and active lives, and access to services important for day to day living, as well as a range of health hazards. Analysis of these conditions has provided a basis for improved policies addressing community health.

Some sectors addressed in this Vulnerability Assessment overlap with the Health Impact Assessment such as Agriculture and Food Systems, Health and Well-being, and Zoning and Development.

Health and climate resilience are considered together in the Comprehensive Plan Update policies.

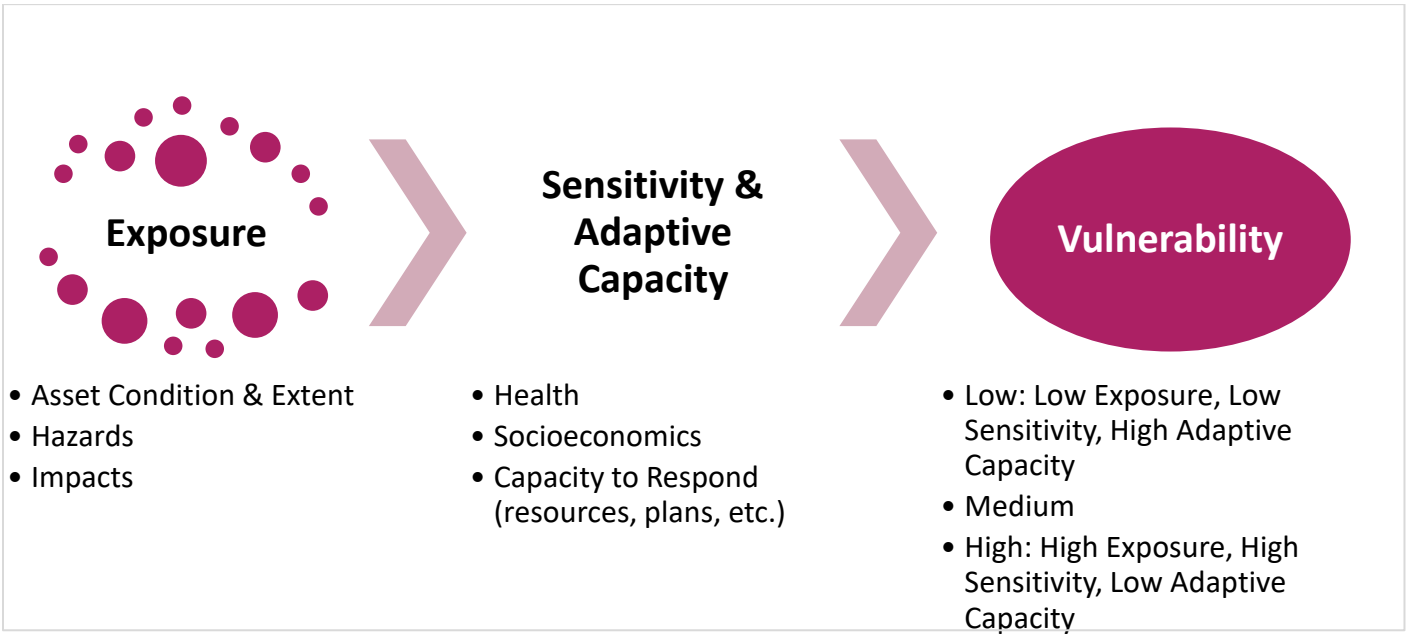
# 5. Vulnerability & Risk Assessment

## Introduction

This report provides a planning level evaluation of climate impacts in Vancouver. It describes communities, places, and infrastructure that may be more or less vulnerable. It describes current or potential new strategies to enhance Vancouver's resilience. This assessment informs new or amended policies in the Comprehensive Plan periodic update. Data, policies, and implementation strategies would be updated and evolve over time.

The climate impacts and strategies are reviewed across 11 sectors in the following order:

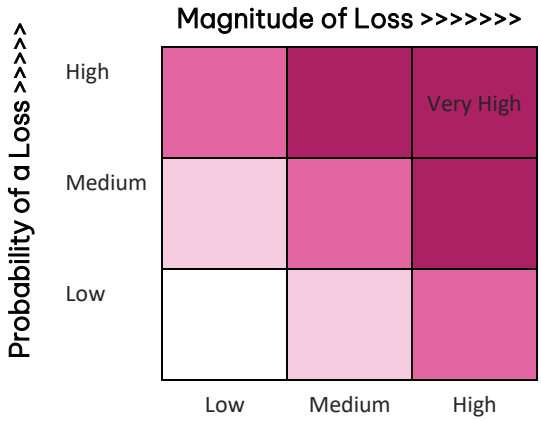
- Agriculture & Food Systems
- Buildings & Energy
- Cultural Resources & Practices
- Economic Development
- Emergency Management
- Health & Well-being
- Ecosystems
- Transportation
- Waste Management
- Water Resources
- Zoning & Development



For each sector, the following information is provided:

- Sector Overview and Assets
- Potential Climate Impacts
- Adaptive Capacity
- Vulnerability Summary
- Gaps and Opportunities

The Vulnerability Summary is based on criteria described below.



Vulnerability Criteria: Under each sector, the Census tracts or Areas (1 through 8) with higher exposure, higher sensitivity, or lower adaptive capacity are identified. Key indicators or assets that are most impacted are also considered. See Exhibit 29. These planning level considerations of vulnerability and risk can help Vancouver identify and prioritize policies and development regulations. Also see a Climate Resilience Policy Evaluation available under separate cover.

*Exhibit 30: Assessment of Climate Vulnerability*

Source: (US Climate Resilience Toolkit, 2024), BERK 2025.

Risk Criteria: Under each sector, a summary of Risk is provided considering likely climate impacts in 10+ years, magnitude of loss, extent of City responsibility, and effect on vulnerable communities. (See sidebar on following page.)

## RISK: PROBABILITY AND MAGNITUDE

Probability is the potential that the impact would occur during the 20-year planning period, and is informed by the Natural Hazards Mitigation Plan (Clark Regional Emergency Services Agency, 2023), University of Washington Climate Impacts Group resiliency mapping tool (Raymond, Climate Mapping for a Resilient Washington, 2022), and other literature.

Probability is based on whether climate impacts have occurred or are possible during the short term (5 years), medium term (10 years), and long term (20 years).

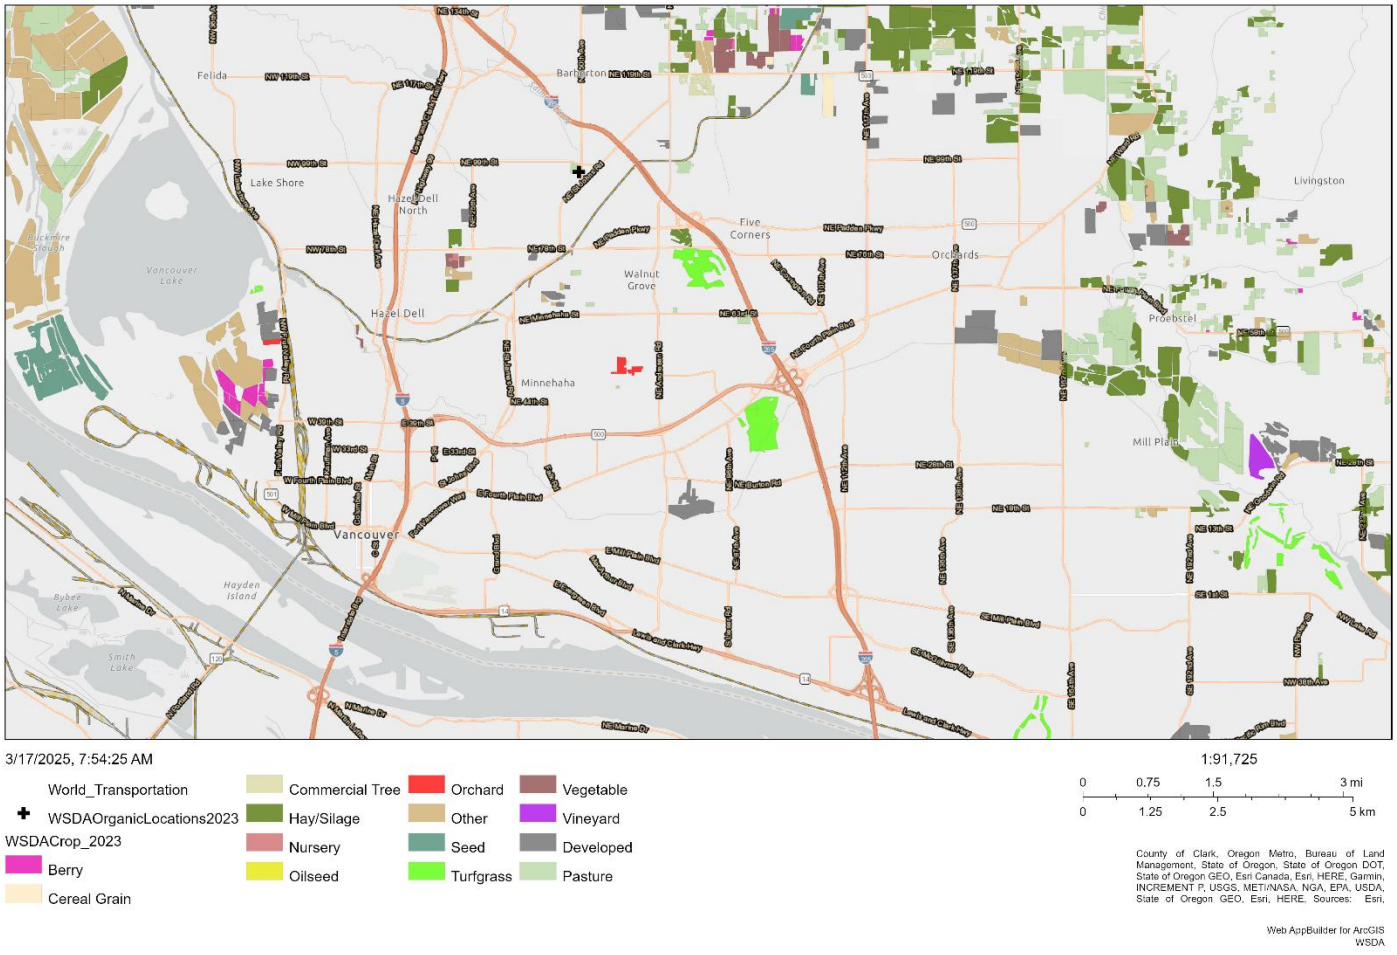
- All sectors would be impacted by extreme heat and wildfire smoke or worsening air quality, and these impacts have occurred and are most likely to occur in the next 5-10 years making them a medium or high probability.
- Severe flooding in the 100-year floodplain is a lower probability given the limited floodplain and flood protection infrastructure, but urban stormwater impacts are more likely at least with a medium probability in the next 10 years.

Magnitude would vary across the landscape and by sector, and considers:

- The potential for multiple climate impacts.
- The City's responsibility for system management or recovery needs.
- Whether costs would broadly affect vulnerable populations (extent or numbers) including those with health sensitivities or low resources (adaptive capacity).

# Agriculture & Food Systems

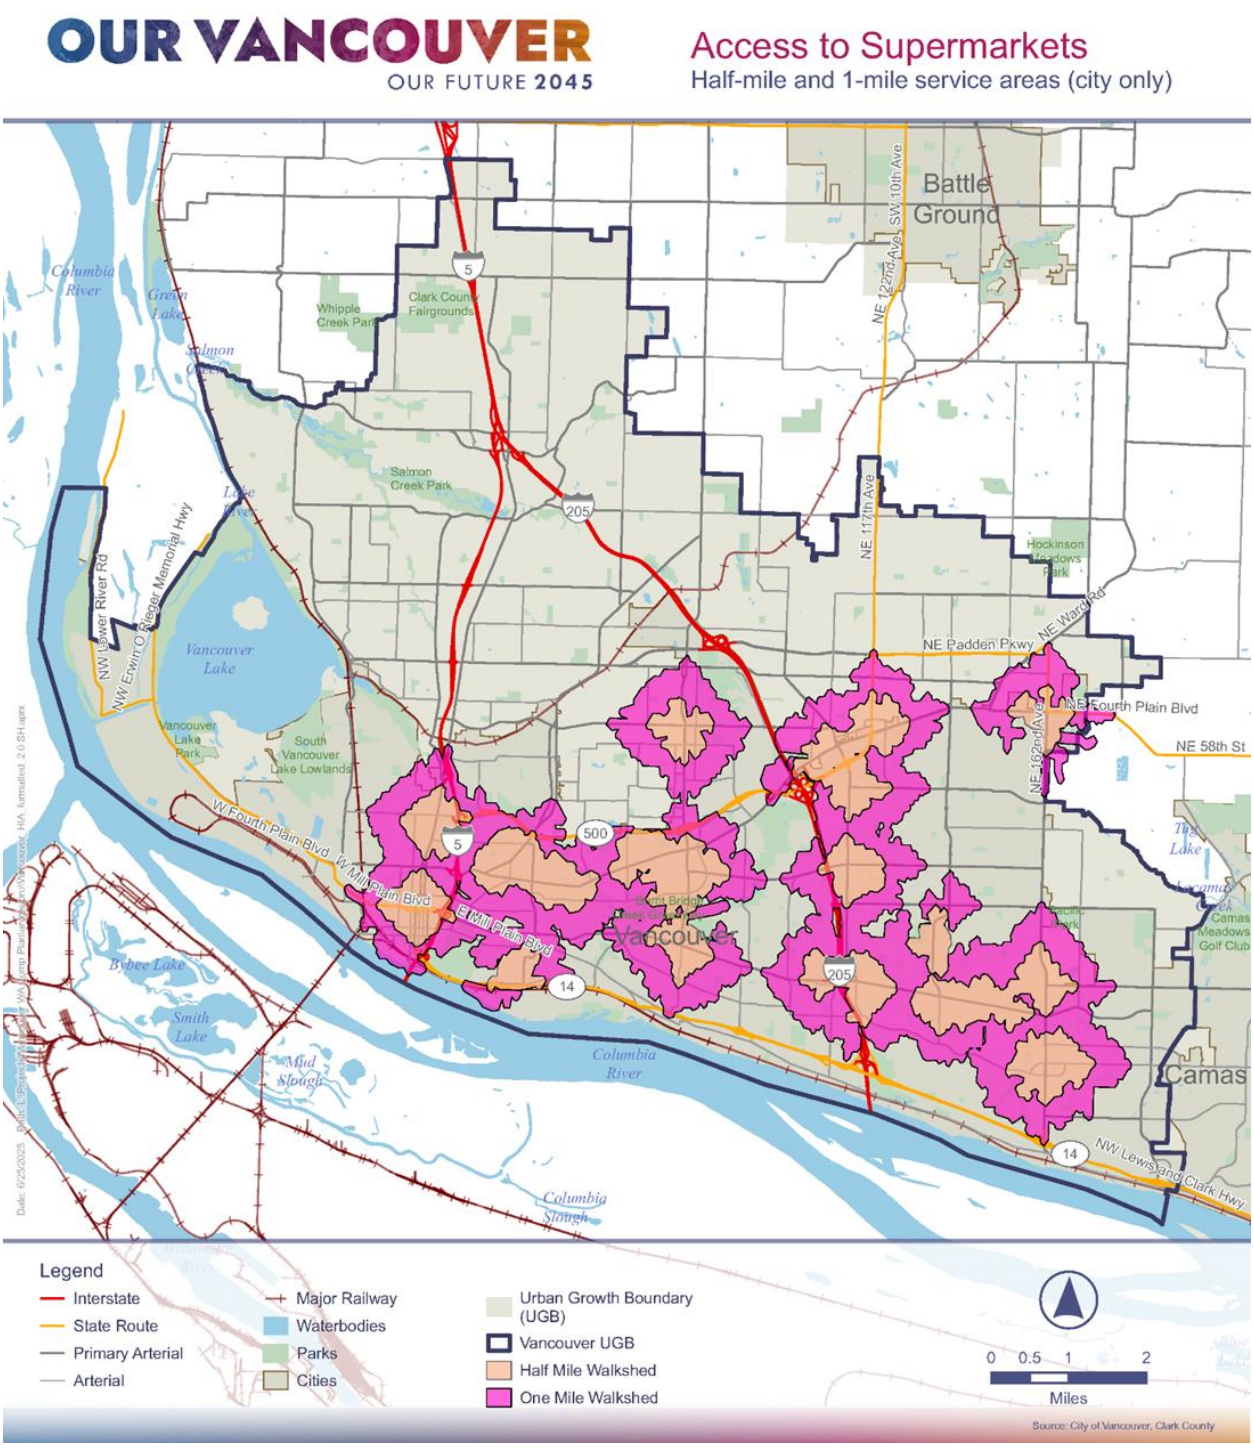
## Sector Overview and Assets



The food system in Vancouver is comprised of various sites and services: places to buy food, such as grocery stores and farmers markets; services combating food insecurity, such as food pantries and free and reduced school lunches; opportunities for food growing and urban foraging, such as gardens and fruit-bearing trees; and the supply chain systems that transport and process food. There is only a small amount of urban agriculture within Vancouver, but Clark County has an active farming community that serves the city through area farmer's markets and community supported agriculture programs, where households can buy a share of produce during the growing season.

The Clark County Community Needs Assessment survey, conducted by Clark County Public Health in 2024, found that food assistance and access to fresh and healthy foods were among the top physical health services needs for Vancouver respondents (Clark County Public Health, 2024).

Key assets for agriculture and food systems in Vancouver include:



- A small amount of urban agriculture, mostly located near Vancouver Lake (Area 1) and along NE Fourth Plain Boulevard (Area 7) (see Exhibit 30)
- Farmer's markets, including the Downtown Market (year-round) and East Vancouver Market (seasonal)
- Community Supported Agriculture (CSA) programs (generally offered by farms outside of city limits)
- City community gardening program (five sites across the city including Areas 1, 4, 5, 6, 7)
- Grocery stores (see Exhibit 31)
- Food pantries (operated by Clark County Food Bank and partner organizations—see Exhibit 32)
- Food transportation and supply chain
- School lunch programs, including free and reduced school lunches
- Home gardens
- Fruit-bearing trees in the right-of-way and in parks

*Exhibit 31: Agricultural Inventory – Vancouver Vicinity*

Source: WSP 2024, BERK 2024.

*Exhibit 33: Clark County Food Pantry Sites*

Source: (Clark County Food Bank, 2024)

## *Potential Impacts*

Heat, extreme precipitation, flooding, drought, wildfire, and smoke are all expected to impact food systems in Vancouver, including crop viability and watering costs, health of farmers and gardeners, demand for food banks and other resources, costs for operating grocery stores, logistics for the transportation of food, and farmers market operations.

- Extreme heat and drought can stress plants in farms and gardens, as well as public fruit-bearing trees, affecting yields, viability of urban agriculture, and availability of some local food items. Watering costs also increase in such events, impacting producers and possibly resulting in higher food prices. Extreme precipitation and flooding events could also result in crop loss. While much of the city is likely to be exposed to similar levels of drought and extreme heat, agriculture is highly sensitive and primarily located on the west side. The west and central areas of the city are also more exposed to extreme precipitation and flooding.

- Extreme heat can increase the cost of food refrigeration for businesses and households. This can impact several links of the food system, including harvesting, transportation, distribution, and household use.
- Unsafe temperatures and smoke can impact the work and wellbeing of farmers, gardeners, and city maintenance staff, who work outside. These events can also result in cancelled outdoor farmers markets, and food banks may become more crowded as extreme weather refuges for those who are experiencing housing insecurity. Individuals without a vehicle may also be unable to safely travel to get food.
- Wildfire and flooding may affect some food transportation routes at a regional level, impacting the logistics of food businesses in Vancouver. Local flooding could also impact household access to grocery stores.
- Areas near Vancouver Lake and on the eastern edge of the city are within the wildland urban interface and may be susceptible to wildfire, including the city's primary area for urban agriculture on the west side.
- Assets like grocery stores may be less sensitive to climate impacts than agriculture, which is highly dependent on predictable weather patterns and less able to recover from shocks. Therefore, the west area of the city, where most of the urban agriculture is located, may be more sensitive than other areas.

### Adaptive Capacity

Adaptive capacity of food systems in Vancouver varies by asset type.

Food banks, SNAP support, and free and reduced school lunch programs already see a lot of demand in Vancouver: 15.5% of households receive Supplemental Nutrition Assistance Program (SNAP) support (American Community Survey, 2022). In the 2021-2022 school year, 48% of students in Vancouver received free and reduced lunch (Design Workshop, 2024). If food costs increase due to the impacts of climate change on agriculture, many households will struggle to keep up with the rising prices. The Clark County Food Bank has recently completed a new facility, which could allow them to expand their programs.

The City's community gardening program and other programs that support hyperlocal food production and distribution could make communities more resilient to supply chain shocks, and resulting cost increases, from regional, national, and international climate impacts. Slow Food Southwest Washington has an Urban Abundance program, which supports Vancouver and nearby communities in creating publicly-accessible food-scapes and gleaning and donating food that would otherwise go to waste (Urban Abundance, 2024).

Climate events that impact transportation, such as by making it unsafe to walk or wait at a bus stop, would be harder to adapt to for parts of the city that do not have access to grocery stores within one mile. See Exhibit 31.

Food production in Vancouver may have more flexibility to adapt to drought conditions, by increasing watering, than extreme heat, smoke, and extreme precipitation.

### Vulnerability Summary

Hazards affecting the citywide food system include extreme heat, drought, flooding and extreme precipitation, and wildfire smoke. While the whole city is exposed to these hazards, urban agriculture is generally more sensitive to climate events than assets such as grocery stores. See Exhibit 33 for a summary of vulnerability to agriculture and community gardens.

Area 1 has urban agriculture and a community garden (Fruit Valley) and is exposed to a higher risk of extreme heat and flooding. Area 4 has a community garden (Campus) but no known commercial agriculture; it has a medium-high risk of exposure. Other areas with the presence of community gardens include Areas 2 (Marshall), 5 (Fort Vancouver) and 7 (LeRoy Haagen). Areas 3b and 7 also have limited agriculture. However, the Census tracts in areas 3b, 5, and 7 have less exposure to hazards.

*Exhibit 34: Vulnerability by Census Tracts – Agriculture and Community Gardens*

| Census Tracts | Area | Heat | Flooding/ Precipitation | Smoke/ Air Quality | Overall Exposure | Health Conditions | Equity Index | Agriculture, Community Garden |
|---|---|---|---|---|---|---|---|---|
| 53011041005 | 1 | Higher | Higher | Lower | Higher | Higher | Higher | Ag, Gar |
| 53011041800 | 2 | Medium-low | Medium-low | Medium-low | Medium-low | Higher | Higher | Gar |
| 53011041107 | 3b | Medium | Lower | Medium-low | Medium-low | Lower | Medium-low | Ag, Gar |
| 53011041600 | 4 | Medium | Medium-high | Medium-high | Medium-high | Higher | Higher | Gar |
| 53011042602 | 5 | Medium | Medium | Medium | Medium | Medium | Medium-low | Gar |
| 53011041207 | 6 | Medium | Medium | Medium | Medium | Medium | Higher | Gar |
| 53011041326 | 7 | Lower | Medium | Medium | Medium-low | Medium-low | Medium | Ag |
| 53011041337 | 7 | Medium-low | Lower | Medium-low | Medium-low | Medium-high | Medium-high | Gar |

Source: See Chapter 2 for indicators and methods. BERK, 2025.

In summary, the area most affected with agricultural assets and heat and flooding exposure is Area 1 as described above. Area 1 contains some vulnerable communities and abuts other

vulnerable communities in Area 2. Area 3b has exposed agricultural and garden assets but medium low or lower populations with health sensitivity or equity disparities; thus, Area 3b is not highlighted in the summary of risk.

*Exhibit 35: Risk Summary – Agriculture Sector*

Source: BERK, 2025.

## Gaps and Opportunities

### Strategies to Improve Adaptive Capacity

Based on the Asset Mapping Assessment and climate planning engagement, following are some strategies to address agriculture and food systems:

- Pilot edible rain gardens or de-paving projects near NE Fourth Plain to support food access and manage stormwater runoff (City of Vancouver, 2025)
- Provide food forests or edible landscapes in heat-impacted neighborhoods. (City of Vancouver, 2025)
- Consider opportunities to combine adaptation and food security efforts, such as through increasing the urban tree canopy with plantings of fruit and nut trees when/where appropriate. Plantings should be coordinated with fruit and nut tree maintenance education programs (e.g. plantings on public school properties) to relieve burden on Public Works. (Hatch Planning and City of Vancouver, 2022)

*Discussion: City staff who maintain fruit and nut trees on public property could be a source of information on the City's current inventory of food-producing trees, how the food is harvested and used, and resilience considerations for these assets. The school district could also be a connection point as many children in Vancouver qualify for free and reduced school lunches, making school a key food source.*

### Policies

A policy audit of City plans to support the **OUR VANCOUVER 2045** periodic update showed limited policies addressed agriculture and food systems in the context of climate hazards. The audit suggested policy revisions such as:

- Address affordability of healthy food and support of healthy food in schools or other programs.
- Add more specific policy language about actions to support food security.
- Address resilience of plants and trees that support local fruit and nut production on public property.

The **OUR VANCOUVER 2045** effort is developing policies incorporating these concepts to address these findings in the Climate Vulnerability Assessment and the related Health Impact Assessment:

- Expanding access to community gardens and incentivizing urban agriculture to improve food security and increase healthy food options. (Policy 32)
- Incentivizing and removing regulatory barriers to locating grocery stores and neighborhood markets near housing and in underserved neighborhoods. (Policy 78)

Another policy that supports stormwater management and de-paving, which is also an opportunity for the co-benefit of food security with edible raingardens, includes:

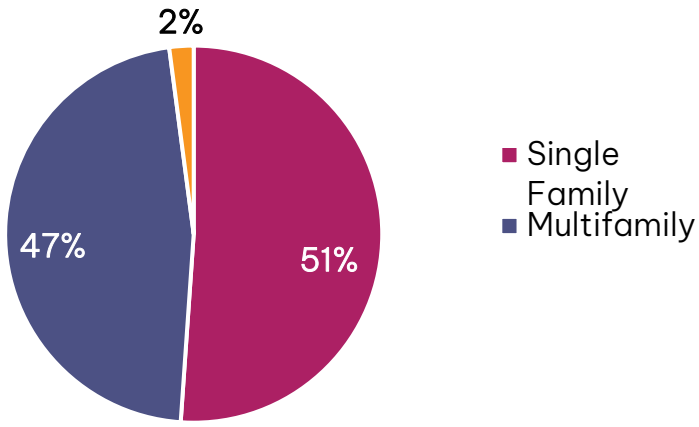
- Focus on improving water quality and prevent flooding through managing stormwater flows, encouraging natural filtration of precipitation to ground water, reducing runoff, mitigating flood risks by advancing systems that manage stormwater effectively, and enhancing local water quality in the watershed. (Policy 136)

## Buildings & Energy

This section addresses energy generation, transmission, and consumption in buildings with a focus on resilience. This section used information from the City of Vancouver Community Profile, Community Atlas, Climate Action Framework, and Climate Adaptation Strategy Policy as well as the County Assessor building data.

### Sector Overview and Assets

#### Buildings



Based on 2024 County assessor data, Vancouver has 57,119 total buildings. Out of that, 93.4% are residential buildings, 4.7% are commercial, and 1.9% are industrial (Exhibit 35). However, 62.3% of total square footage of all Vancouver buildings are residential, while commercial and industrial buildings make up a greater percentage of total square footage than percentage of buildings, at 24.7% and 13.0% respectively (Clark County, 2024). In 2021, there were 83,868 housing units in Vancouver, a 32% increase from 63,620 in 2010 (City of Vancouver, 2022). Out of these housing units, 51.1% are single-family units, 46.8% are multifamily units, and 2.1% are mobile homes (Exhibit 36).

*Exhibit 36: Number of Buildings and Square Footage by Residential, Commercial, and Industrial, 2024*

| | Buildings | | Square Footage | |
|---|---|---|---|---|
| | Number | Percent | Square Footage | Percent |
| Residential | 53,354 | 93.4% | 111,889,986 | 62.3% |
| Commercial | 2,690 | 4.7% | 44,366,622 | 24.7% |
| Industrial | 1,075 | 1.9% | 23,259,751 | 13.0% |
| *Total* | 57,119 | | 179,516,359 | |

Source: Clark County Housing Assessor Data, 2024

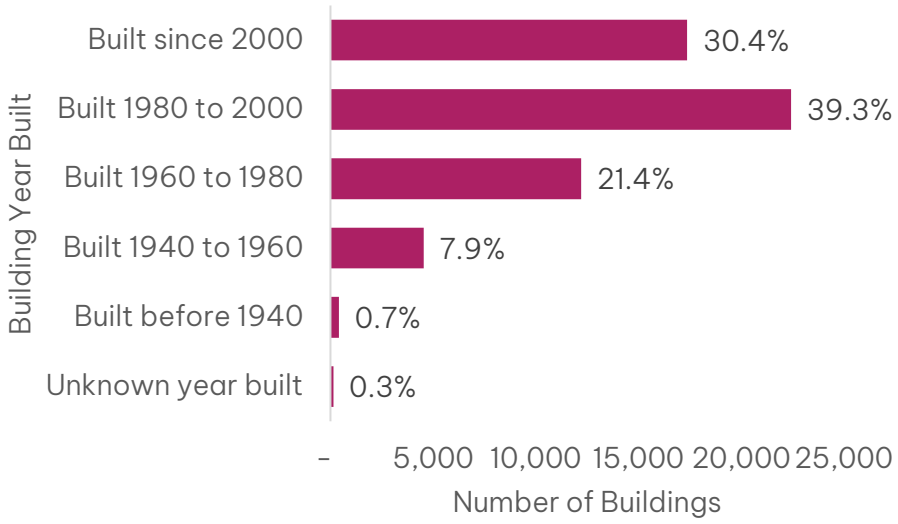


*Exhibit 37: Housing Units by Type, 2024*

Sources: Postcensal Estimates of Housing Units, Washington State Office of Financial Management, 2024; BERK, 2024.

Vancouver's housing stock is fairly young, as shown in Exhibit 37. The largest percentage of buildings were constructed between 1990 and 1999, and the median year of construction is 1985 (Design Workshop, 2024). 39.3% of all buildings were built between 1980 and 2000, 30.4% were built after 2000, and 21.4% were built between 1960 and 1980. The remaining 8.9% of buildings were built before 1960 or have an unknown age (Clark County, 2024). A share of the housing stock built prior to 1980, about 30% of Vancouver's housing stock, is likely in need of energy efficiency updates as the State Energy Code was adopted in 1985 (Design Workshop, 2024).

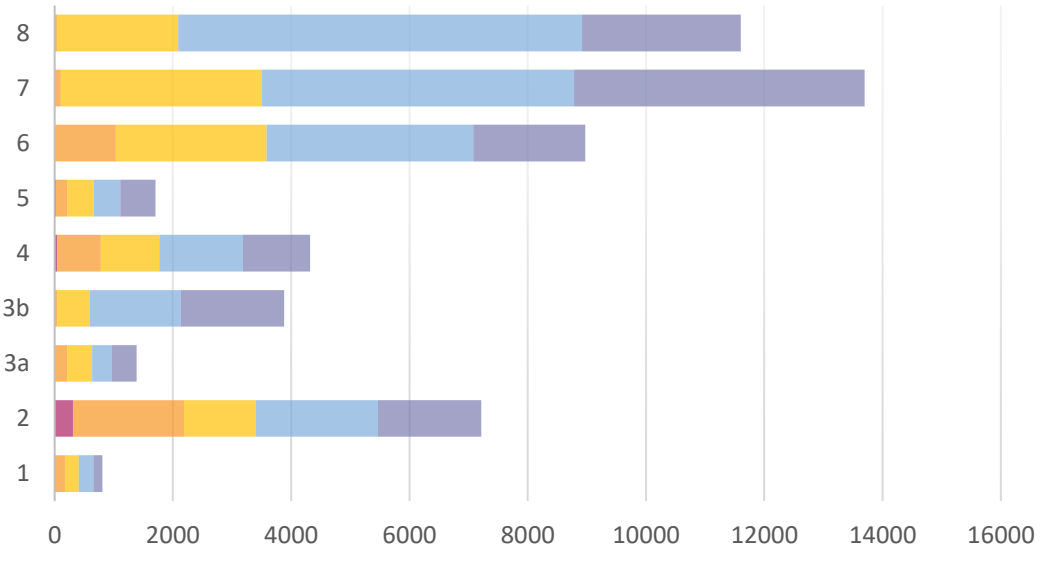

*Exhibit 38: Building Age, Residential and Non-Residential, 2024*

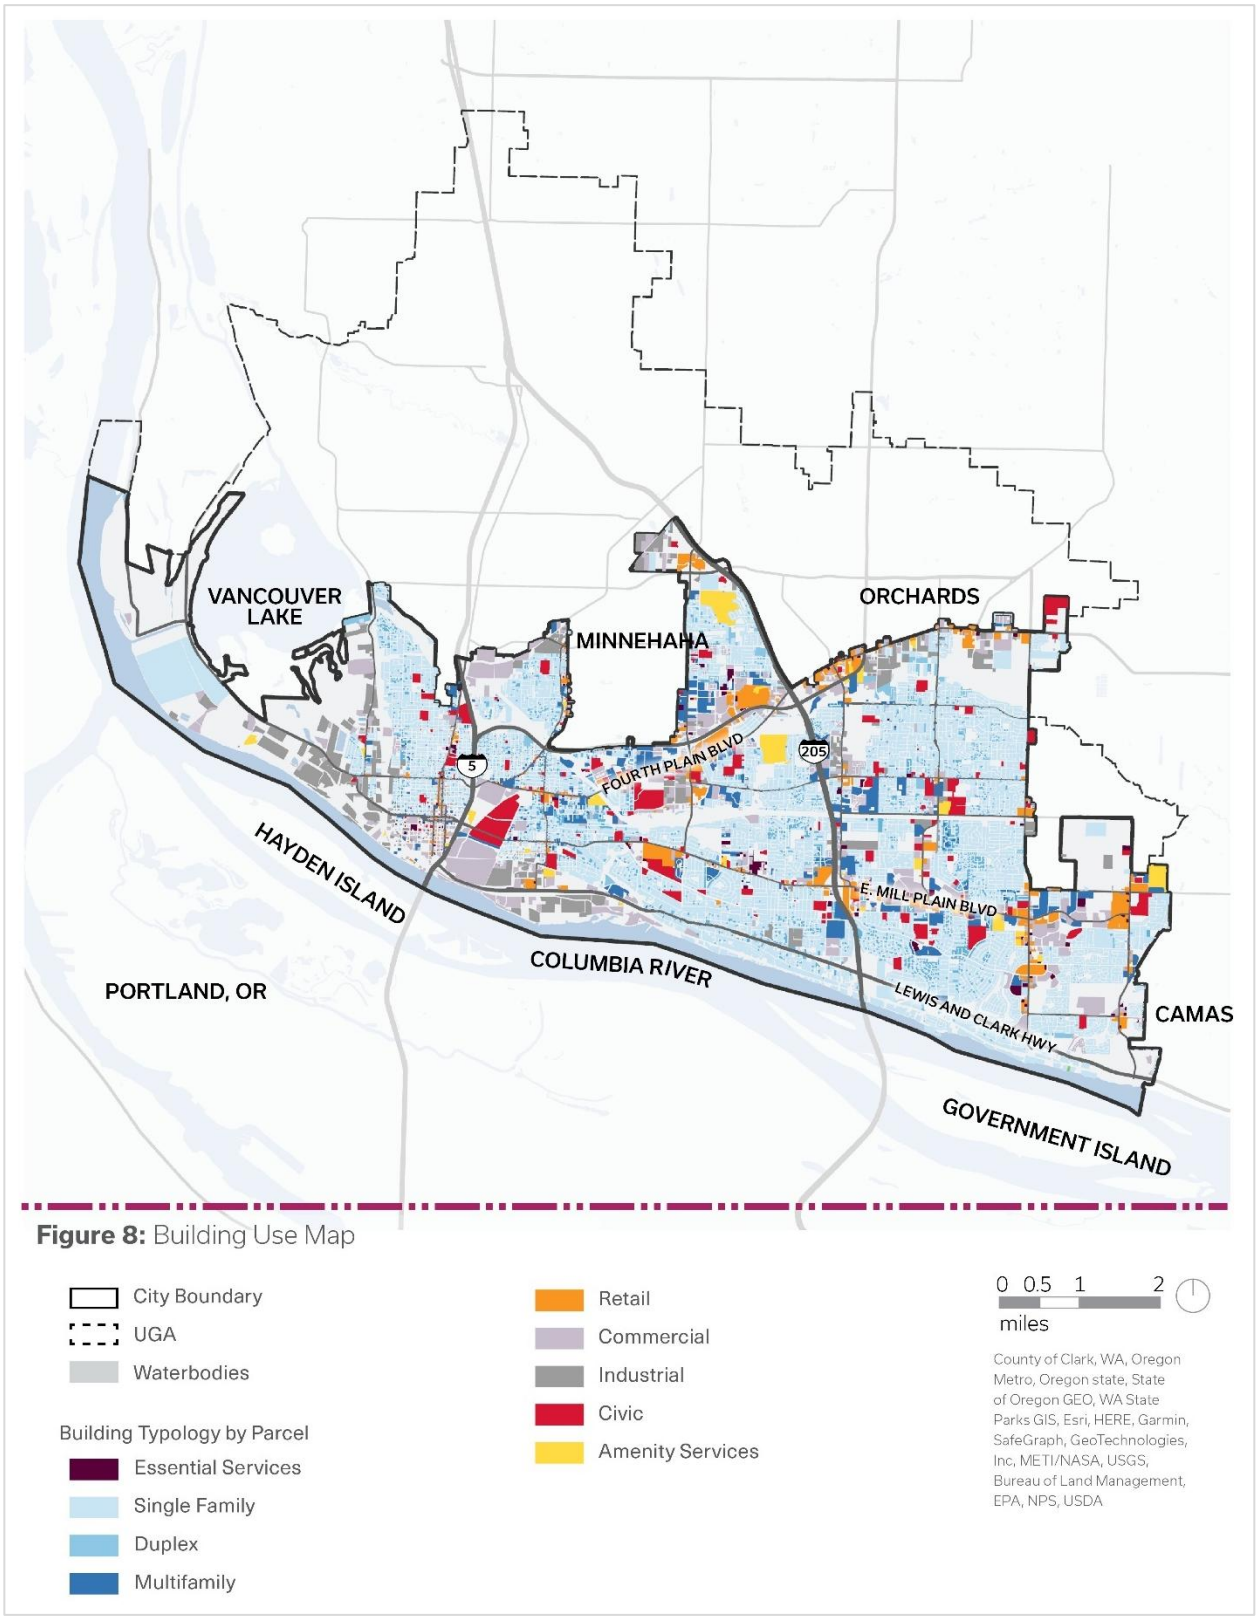
Sources: Clark County Housing Assessor Data, 2024; BERK, 2024.

Older housing stock is found primarily in 2 and 6, but all areas have housing built prior to 1980. Generally, newer housing has been developed on the east side of the city. Older structures may not be weatherized to address cooling and ventilation. See Exhibit 38.

*Exhibit 39: Relative Age of Residential and Non-Residential Buildings by Area in Vancouver*



| | 1 | 2 | 3a | 3b | 4 | 5 | 6 | 7 | 8 |
|---|---|---|---|---|---|---|---|---|---|
| Before 1940 | 3 | 307 | 6 | 2 | 43 | 23 | 7 | 6 | 2 |
| Built 1940-1960 | 171 | 1882 | 204 | 42 | 735 | 193 | 1028 | 98 | 37 |
| Built 1960-1980 | 233 | 1213 | 423 | 551 | 991 | 447 | 2548 | 3405 | 2048 |
| Built 1980-2000 | 246 | 2065 | 338 | 1538 | 1411 | 447 | 3496 | 5274 | 6830 |
| Built since 2000 | 155 | 1748 | 414 | 1748 | 1139 | 593 | 1891 | 4914 | 2685 |

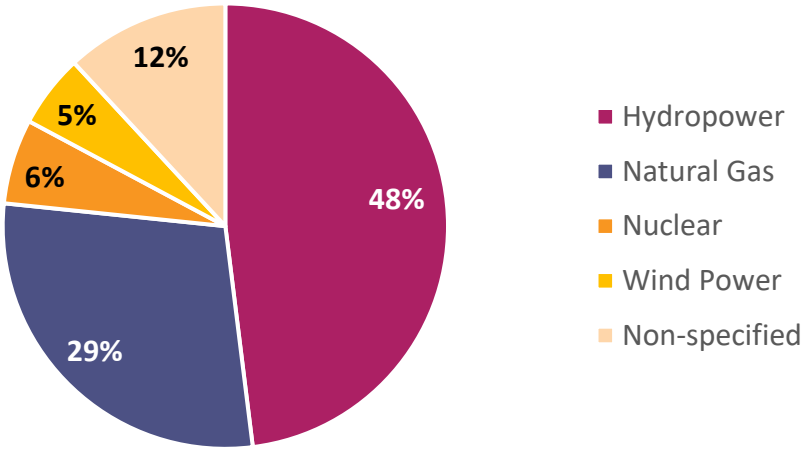
Sources: Clark County Housing Assessor Data, 2024; BERK, 2025.

Buildings in Vancouver include residential uses (single-family, duplex, multi-family), essential services, retail, commercial, industrial, civic, amenity services, and parks and recreation. As indicated in the building use map, the predominant portion of parcels are residential uses, either single-family or duplex residences. However, there are concentrations of multi-family units along the Fourth Plain corridor and to the north and south of the Mill Plain corridor (Design Workshop, 2024). See Exhibit 39.

*Exhibit 40: Building Use Land Map, 2024*

Source: (Design Workshop, 2024)

Centers and corridors that have a high-level of essential service provision include Fourth Plain, Vancouver City Center, Central Park and Columbia Tech Center. Areas that are otherwise identified as areas for concentrated growth on the City's 2011 Comprehensive Plan and are still in progress include 112th Avenue Corridor, Fruit Valley, Evergreen and Grand Commercial Corridors, the Heights District, Riverview Gateway, Lower Grand Employment Area, and Section 30.



### Energy

Energy sources for Vancouver are hydropower, natural gas, nuclear, and some renewable energy. Bonneville Power Administration and Clark Public Utilities serve the city. Clark Public Utilities specifically sources energy from the following:

- 48.03% is hydropower purchased from the Bonneville Power Administration (BPA).
- 28.61% is natural gas produced at Clark Public Utilities River Road natural gas-fired generating plant. This facility is located in Vancouver.
- 6.17% is produced by nuclear electricity (BPA purchases the output of the Columbia Generating Station located in Richland, Washington).
- 5.30% is wind power generated at the Combine Hills II wind farm near Milton Freewater, OR.
- 11.89% is market-purchased power from non-specified sources.

As of January 2020, Clark Public Utilities reported facilitating 1,489 individual privately-owned generating systems, primarily rooftop solar, totaling 10.414 megawatts of installed distributed generation capacity (Clark Public Utilities, 2020). Clark Public Utilities also have constructed two Community Solar projects that offer "virtual net metering" for participants benefiting from the two large solar arrays constructed (Clark Public Utilities, 2024). These projects include a total of 1,118 kilowatts of solar capacity. The projects are both fully utilized, and 199 kilowatts were reserved for low-income customers. See Exhibit 40.

*Exhibit 41: Clark County Energy Sources, 2022.*

Source: Clark Public Utilities Integrated Resource Plan, 2022; BERK, 2024.
Vancouver's nearly 30 electrical substations are distributed evenly across the City (Clark County, 2024).

In 2023, the buildings and energy sector made up 37% of Vancouver community-wide emissions, second to transport and travel. Out of that 37%, 15% was residential energy, 13% was commercial energy, and 9% was industrial energy (City of Vancouver, 2024). This was an increase in energy use for the community from 2019. However, GHG emissions decreased, likely due to the increased clean energy within the Clark Public Utilities resource mix. The buildings and facilities sector made up 23% of Vancouver government operations emissions, a 9% decrease from 2019. (City of Vancouver, 2024).

## Potential Impacts

Vancouver's buildings and energy are expected to be mainly impacted by extreme heat, wildfires, and wildfire smoke. The potential impacts could involve increased energy demands, urban heat island effects, extreme heat exposure health risks, shuttered energy systems, and damage or loss of both energy infrastructure and buildings.

- Energy demand is expected to increase for air conditioning and industrial cooling systems in summer when regional hydropower supply is expected to decrease.
- Demand for air conditioning and infrastructure with cooling systems is expected to increase where it does not exist. Older buildings are less equipped with air conditioning systems or are less efficient, and the residents of these buildings will be more at risk to extreme heat. Lower income communities of color tend to live in these older buildings. The cost of using cooling systems during peak demand could also not be affordable for lower income households (Duque, 2023).

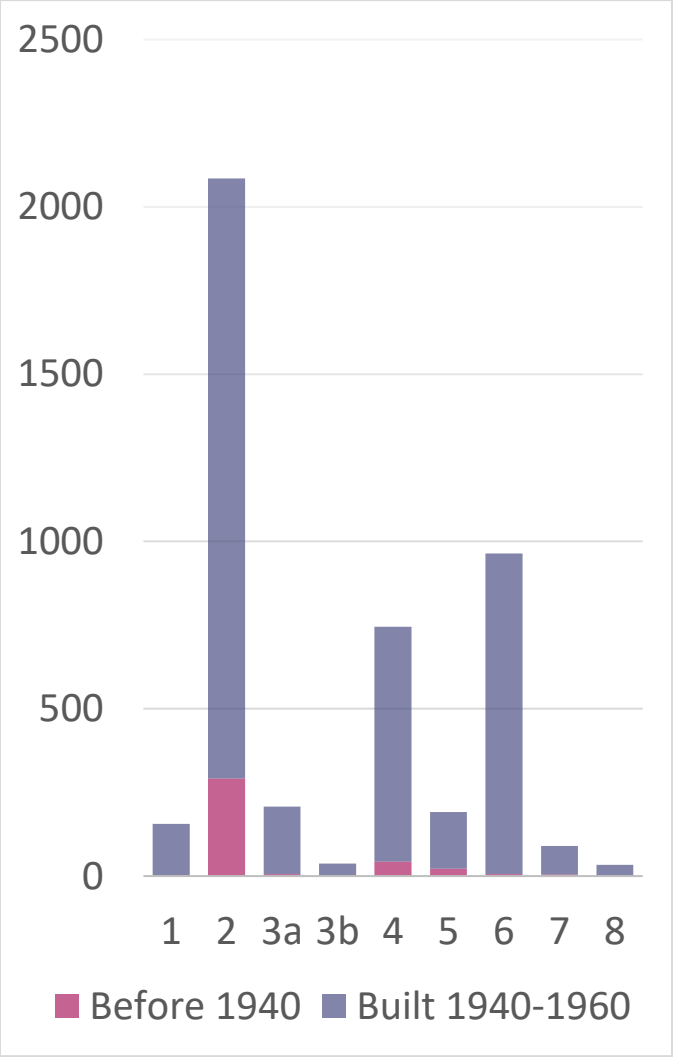
- Power cables have been known melt during extreme heat, such as during a heat wave in 2021 in Portland, OR (Fischels, 2021).
- There may be shuttered power generating stations or transmission corridors to reduce wildfire risk.
- Greater potential to affect energy transmission by extreme weather damaging infrastructure and interrupting transmission and distribution. The Natural Hazards Management Plan identifies extreme weather as a risk.
- Expected building and infrastructure damage and loss.
- Poor air quality due to wildfire smoke could increase demand for air filtration systems in buildings. A recent example took place in August 2023, when the Air Quality Index measured at "unhealthy" ranges in Vancouver (Ellenbecker, 2023).

Exposure of buildings to increases in extreme heat, urban heat island impacts, and energy demand for cooling system can depend on tree canopy level. Vancouver has a current tree canopy cover of 19% with a goal of reaching 28% by 2030 (City of Vancouver, 2024). However, tree canopy coverage is higher in the east and west areas of Vancouver, than central Vancouver. Central Vancouver therefore has a higher risk of potential impacts. These central neighborhoods are prioritized for tree canopy improvements (City of Vancouver, 2024).

### Adaptive Capacity

Clark Public Utilities offers many rebates and programs to incentivize energy efficiency. They offer rebates for the installation of heat pumps and ductless heat pumps. They also offer a home weatherization program, a heat pump water heater program, a solar energy program, multi-family property programs, new construction programs, electric vehicle programs, and an electric vehicle managed charging program.

The City of Vancouver's initial efforts in this sector have focused on transitioning to renewable energy, reducing government building emissions, reducing community-wide energy consumption, and decarbonization. In September 2023, the City purchased a 10-kW share (the maximum amount allowed) of Clark's PUD's Community Solar East project. In October 2023, the City also started to identify energy efficiency improvement projects and opportunities to swap gas-powered systems for lower-emission electric systems in City facilities. City facilities were also being reviewed for compliance with WA Clean Building Standards.



The City of Vancouver is in the process of developing Vancouver's first Green Building Policy. The policy and associated building code updates were discussed with the City Council at the end of 2024. Work is expected to continue to 2026 to account for voter initiatives in 2024.

### Vulnerability Summary

Most structures in Vancouver are residential, which are sensitive uses for air quality and heat. Based on age of housing stock, Areas 2 and 6 have older buildings built before 1960, which are less likely to have cooling or air filtration, and these areas have higher or medium-high levels of exposure to heat or smoke. Area 4 has the third highest number of older homes, and a medium-high exposure to heat. See Exhibit 41 and heat and smoke/air quality maps in Chapter 2. Other areas have more homes built later which may have cooling systems but may not have air filtration systems.

These findings align with the Adaptive Capacity Assessment, which also emphasizes the importance of modern HVAC systems, backup power, and clean air shelters—especially in socially vulnerable neighborhoods—to ensure residential resilience under worsening climate conditions.

*Exhibit 42: Vulnerability by Area: Residential Structures Built before 1960*

Sources: Clark County Housing Assessor Data, 2024; BERK, 2025.

The probability of extreme heat and smoke in the planning period, and the need to retrofit older homes are drivers of vulnerability and risk. See Exhibit 42.

*Exhibit 43: Risk Summary – Building Sector*

| Likely Climate Impacts in next 10+ years | | | | Magnitude of Loss | | | City Responsibility | | | Vulnerable Communities | | | Areas Most Affected | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|

## Gaps and Opportunities

### Strategies to Improve Adaptive Capacity

Climate adaptation and engagement results highlighted a number of strategies to improve the community's adaptive capacity associated with buildings and energy, both public and private:

- Increase the adaptability of public buildings. (Hatch Planning and City of Vancouver, 2022)
- Update building and development codes to increase adaptability of non-public buildings. (Hatch Planning and City of Vancouver, 2022)
- Promote renewable energy within the built environment. (Hatch Planning and City of Vancouver, 2022)
- Implement an uninterruptible power supply and backup generator for critical facilities (e.g. wastewater treatment plant). (City of Vancouver, 2025)
- Pilot hybrid energy systems and microgrid readiness at critical facilities to ensure service continuity. (City of Vancouver, 2025)

### Policies

The current Comprehensive Plan, last updated in 2011, has limited policies on energy, focused on conservation. Amendments could be made to catch the Comprehensive Plan up to the extensive work the City has done regarding climate action and energy.

Vancouver plans to transition to 100% clean energy with Clark Public Utilities ahead of the state's Clean Energy Transformation Act (CETA) requirements, and before 2045. There are opportunities for Vancouver to develop concrete policies to work with businesses, property owners, and nongovernmental partners and prevent displacement of low-income residents and ensure the costs and benefits of energy efficiency upgrades are shared equitably. This is promoted in the Climate Action Framework Action #1: Community energy efficiency incentives.

The Vancouver Urban Forestry Management Plan offers opportunities to bolster green infrastructure, reducing the urban heat island effect, and increasing the resiliency of structures. See Ecosystems and Zoning & Development for more discussion.

The City could also lead with the Green Building Policy that is currently being developed and adopt it for all municipal buildings. The Climate Action Framework actions 7 and 8 address green building policies for public and private development.

The Climate Adaptation Strategy also recommends energy efficiency measures such as retrofitting buildings with passive and active cooling, promoting renewable energy

production and storage projects in the case of power outages, and researching built environment climate resilient materials. Many of these considerations are part of the Climate Action Framework. The City could model by retrofitting older city-owned buildings with cooling systems. The City or Clark Public Utilities could also implement programs and incentives for renewable energy production and storage projects, and fund or partner with organizations researching climate-resilient alternative materials.

The Vancouver Climate Action Framework also highlights key actions that would improve climate adaptability, such as promoting solar incentives and to reduce dependency on the energy grid and enhance resilience during disruptions, increasing energy efficiency through electrification and retrofits to reduce overall energy demand.

Battery energy storage systems (BESS) are used to store renewable energy from solar or wind power to ensure more reliability and match it to customer demands. BESS can be of any size and are modular and may only require "a concrete pad to sit on and a connection to the electric grid." As a result, the BESS can be built anywhere including near existing commercial and residential uses and present concerns regarding safety, aesthetics, noise, odor, and environment impacts. Cities and counties are beginning to address such uses in zoning codes. Vancouver may wish to develop a policy and development regulations addressing these uses as well. (Twitchell, 2023)

Policies developed for **OUR VANCOUVER 2045** address energy resilience and reduction of greenhouse gas emissions, such as:

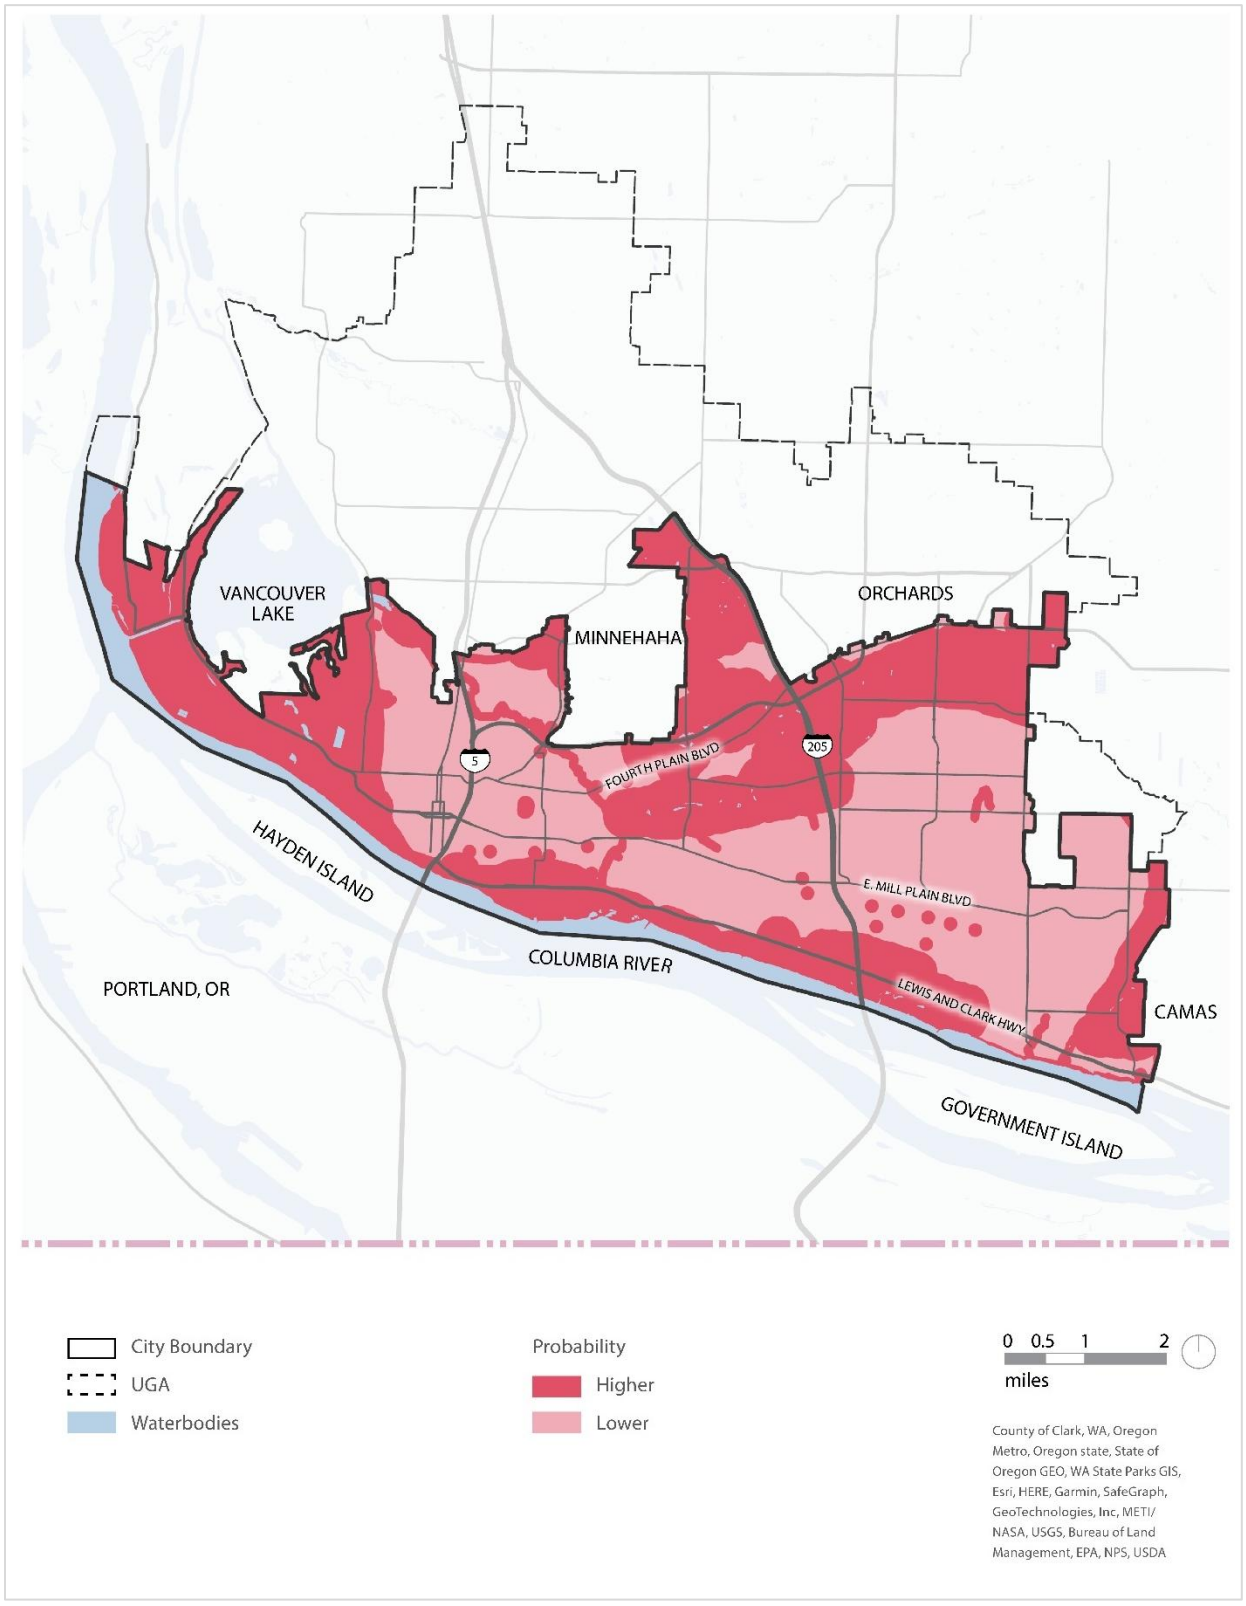
- Ensure that buildings contribute to the City's greenhouse gas reduction goals, protect occupants from climate hazards and extreme weather, and minimize harm to wildlife and natural ecosystems. (Policy 48)
- Expand residential, commercial and industrial access to solar power to meet energy needs. (Policy 134)
- Encourage new renewable energy infrastructure and promote development of storage systems to ensure a stable, resilient, and sustainable energy grid. (Policy 150)
- Support decentralized local energy and water solutions while strengthening community adaptability to environmental, social, and economic changes. (Policy 145)

# Cultural Resources & Practices

## Sector Overview and Assets

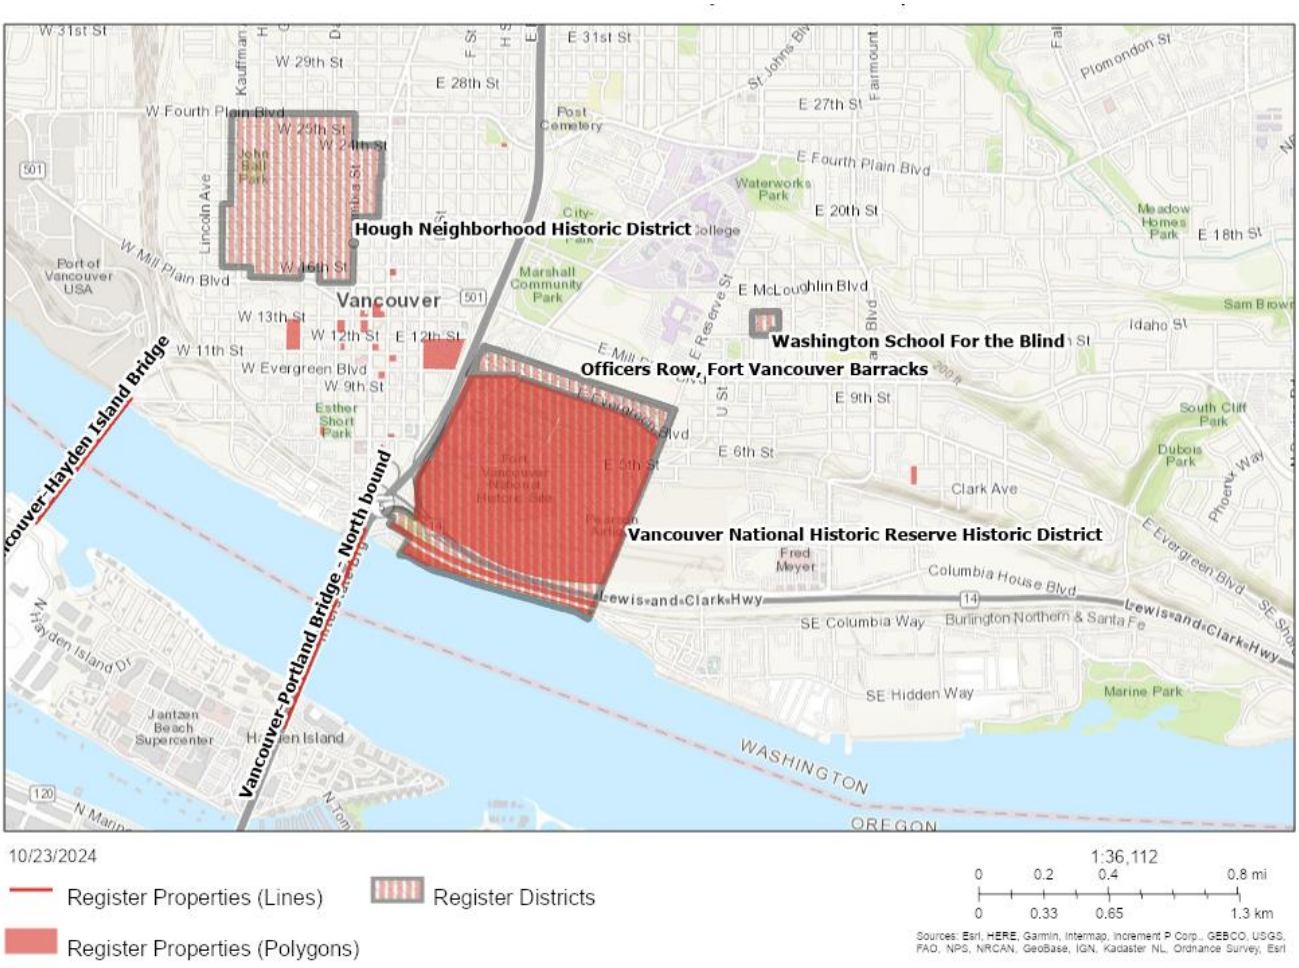
Originally inhabited by peoples of the Chinook and Cowlitz tribes for thousands of years, Vancouver was established as a trading post for the British Hudson's Bay Company and military fort in the 1800s. (Design Workshop, 2024) See Exhibit 43. A non-native community was founded in 1825 and the city incorporated in 1857. From an 1890 census population of 3,545 (OFM) Vancouver is home to 202,600 persons as of 2024.

*Exhibit 44: Fort Vancouver Garden – In use historically and today*



Historically, the Fort Vancouver Garden was a place of rest for the fort's officers and visitors, and provided food for the Chief Factor's House table. Today's reconstruction at Fort Vancouver National Historic Site is tended by volunteer gardeners.

Source: (National Park Service, 2022)



The original historic and walkable downtown is connected to residential areas by an arterial system and is more suburban in character as it expanded to the east. Maps of archaeological resources and historic resources are shared in Exhibit 44 and Exhibit 45. There is a higher probability of archaeological resources along the Columbia River, Vancouver Lake, and Burnt Bridge Creek.

*Exhibit 45: Archaeological Probability Map*

Source: (Design Workshop, 2024)

*Exhibit 46: Historic Resources Map*

Source: DAHP, 2024.

## Potential Impacts

Vancouver's Hazard Mitigation Plan identified concerns with extreme weather and urban flooding, but less so flooding in the 100-year floodplain. However, Clark County notes flood stage measured at the Port of Vancouver is at 16 feet, and there have been 25 historic crests, most recently in 2011 and 2017. Extreme heat is a likely occurrence in the **VANCOUVER 2045** planning period.

Climate change could impact archaeological, historic, and other cultural resources.

- Loss of cultural sites due to more frequent and intense severe weather events. The location of cultural archaeological sites along rivers and streams and the expected increase in extreme precipitation and flooding could put assets at risk. Adapting

cultural resources to climate change impacts can be challenging because many are unique, irreplaceable, and location based.

- Due to their historic nature and the associated limitations on structural adaptation some historic structures have very constrained adaptative capacity. However, while there are some historic sites along water bodies like the Columbia River, most historic properties such as in downtown are at low risk of flooding due to building locations and existing flood control structures. An exception could be the Vancouver National Historic Reserve Historic District that fronts the river in part. The site also contains priority habitats.
- Loss of locally grown, temperature-sensitive foods that are culturally important (berries, salmon, etc.). Hot dry summers are projected to reduce stream flow volumes and increase instream temperatures. This stressor is compounded by extreme precipitation events, flooding, and erosion. Watershed plans and evaluations for the City's critical areas ordinance highlight declining water quality and fish habitat and a need to improve riparian areas along streams and shorelines.

### Adaptive Capacity

Priority habitats like prairies and Oregon white oaks are found in some parts of the city such as the Fort Vancouver National Historic Site and along stream corridors and greenways. (Sound Oaks Initiative, 2024) Remnant wetlands, riparian and non-riparian habitat areas continue to be found along streams and lakes, parks, and transportation rights of way. (WSP USA, 2023) These habitats can support, or be restored or enhanced to support, plants and fish species important for tribal customs, medicines, and foods.

The Cowlitz Indian Tribe members have indicated an interest in Food Sovereignty. (Cowlitz Indian Tribe, 2022) Protecting and restoring habitats and adapting to climate stressors can help sustain culturally important habitats, foods, and practices.

The City is supporting updated riparian buffers based on site potential tree height which could improve shading, stream temperature, and other functions of buffers. In addition, the City has an Urban Forestry Management Plan that is meant to improve management of existing canopy and expand it inside and outside of critical areas.

### Vulnerability Summary

A summary of vulnerability for cultural resources is provided in Exhibit 46 below. Habitat is found along lakes and streams throughout the city. Extreme heat, drought, and flooding are anticipated to affect culturally important plants and wildlife and require adaptation measures (enhancement, restoration) along streams, lakes, and other sites. Throughout but

particularly areas 1, 2, and 5, archaeological and historic sites could require adaptation (flood management measures, retrofits for energy and air filtration).

*Exhibit 47: Vulnerability by Census Tracts – Cultural Resources*

| Census Block | Area | Heat Exposure | Flooding/ Precipitation Exposure | Smoke/Air Quality Exposure | Overall Exposure | Health Conditions | Equity Index | River, Lake, or Creek | Register Properties |
|---|---|---|---|---|---|---|---|---|---|
| 53011041005 | 1 | Medium-high | Higher | Lower | Higher | Higher | Higher | X | X |
| 53011042400 | 2 | Higher | Higher | Medium | Higher | Higher | Higher | X | X |
| 53011041105 | 3b | Medium-high | Higher | Medium-low | Higher | Medium-low | Medium | X | |
| 53011041600 | 4 | Medium-high | Higher | Medium | Higher | Higher | Higher | X | |
| 53011042700 | 4 | Medium-high | Higher | Medium | Higher | Higher | Higher | X | |

Based on the evaluation, cultural resources risks and vulnerabilities are noted below.

*Exhibit 48: Risk Summary – Cultural Resources*

Source: BERK, 2025.

## Gaps and Opportunities

### Engagement and Strategies to Improve Adaptive Capacity

As part of social vulnerability and asset mapping efforts, engaged community members about their important places. Strategies identified through climate engagement includes:

- Food: Expand culturally relevant gardens as a way to increase food access and resilience. (City of Vancouver, 2025)

The City could similarly engage Tribes about ecosystems, habitats, and foods/plants that should be considered when planning for climate resilience. Direct engagement can help ensure that culturally significant landscapes, species, and materials are not overlooked in technical assessments of risk and adaptation.

One parks and habitat strategy relevant to Tribes identified through the Adaptive Capacity Assessment includes:

- Park Resilience: Incorporate traditional ecological knowledge if working with local Indigenous groups for habitat restoration in parks to handle climate changes. (City of Vancouver, 2025)

Additional strategies can be elicited through consultation and collaboration with Tribes.

### Policies

Vancouver's cultural resources policies are primarily found in the Shoreline Master Program,. Current policies address general protection of archaeological and historic resources. Some address engagement with tribes in restoration of habitat.

The City could add policies covering cultural resources adaptation to extreme heat and flooding and Tribal consultation, similar to examples in the Washington Department of Commerce's Climate Policy Explorer. Accordingly, the **OUR VANCOUVER 2045** plan includes the following:

- Foster meaningful partnerships with tribal communities and land stewards, integrating their knowledge, priorities, and cultural perspectives into local decision-making processes. (Policy 49)
- Protect and preserve significant cultural, historic, archeologic, and ecologic community resources. Promote preservation, restoration, protection and rehabilitation of historic and architecturally significant structures and heritage trees. (Policy 66)

# Economic Development

## Sector Overview and Assets

Vancouver has approximately 99,057 jobs as of 2021. (US Census Bureau, 2021) There are approximately 7,840 businesses in Vancouver. In certain neighborhoods, including Fourth Plain, at least one-third of businesses are minority owned or cater to communities of color. (Design Workshop, 2024)

Approximately 27% of all parcels in the City are zoned for commercial uses. Another 17% of all parcels in the City are zoned for industrial uses. (Design Workshop, 2024) The City is planning for growth of at least 38,000 new housing units and 43,100 new jobs by 2045.

## Potential Impacts

### Job Sectors in Vancouver

While flooding, wildfire, and drought are relatively lower risk in Vancouver (Clark Regional Emergency Services Agency, 2023), severe weather including extreme heat and extreme precipitation could impact businesses and employees. Wildfire smoke in the region could also affect businesses and employees for those who work outdoors.

*Exhibit 49: Clark County, Washington, Top Employers*

| | Company | Clark County Employees |
|---|---|---|
| 1 | Peace Health | 4,908 |
| 2 | Vancouver Public Schools | 3,300 |
| 3 | Evergreen Public Schools | 2,599 |
| 4 | Vancouver Clinic | 2,305 |
| 5 | Legacy Health | 1,800 |
| 6 | Clark County | 1,570 |
| 7 | Ilani | 1,500 |
| 8 | City of Vancouver | 1,480 |

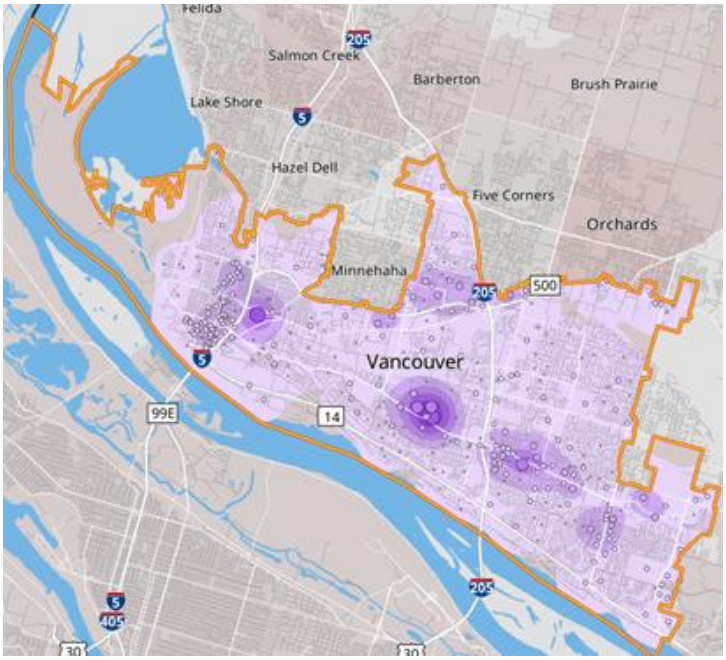
| 13 | HP | 1,000 |
| 14 | Kaiser Permanente | 1,000 |
| 15 | SEH America | 950 |



Source: CREDC Research (Accessed September 2024)

Health care (19%), retail and wholesale trade (15.3%), and manufacturing/transportation/utilities (12.2%) are notable sectors in Vancouver's local economy. (US Census Bureau, 2021) Top employers in the county are often based in Vancouver including health care – Peace Health, Vancouver Clinic, Legacy Health, Kaiser Permanente – and education or government – Vancouver Public Schools, Evergreen Public Schools, as well as the City and County employees. See Exhibit 48.

Sectors under stress during extreme climate related hazards include health care (e.g., adverse health with extreme heat or wildfire smoke) or utilities (BPA, Clark Public Utilities) with potential power demand spikes (extreme heat) or outages (extreme storms). Exposure

of health care facilities to poor air quality or power disruption could reduce continuity of operations during critical events. Healthcare employment density is highlighted in Exhibit 49.

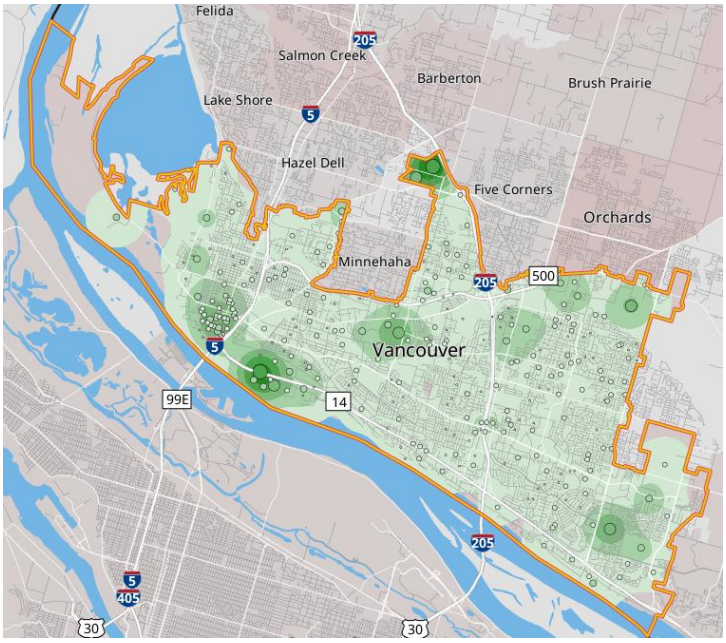


*Exhibit 50: Location of Health Care Employment, 2022*

Source: Census on the Map, 2022

About 6.2% of Vancouver's jobs relate to construction, likely outdoors and potentially exposed to extreme heat and wildfire smoke. (US Census Bureau, 2021) The concentration of construction jobs is illustrated in Exhibit 50 below. These workers face increased health and productivity risks during climate extremes, particularly in areas lacking tree canopy or shade infrastructure.

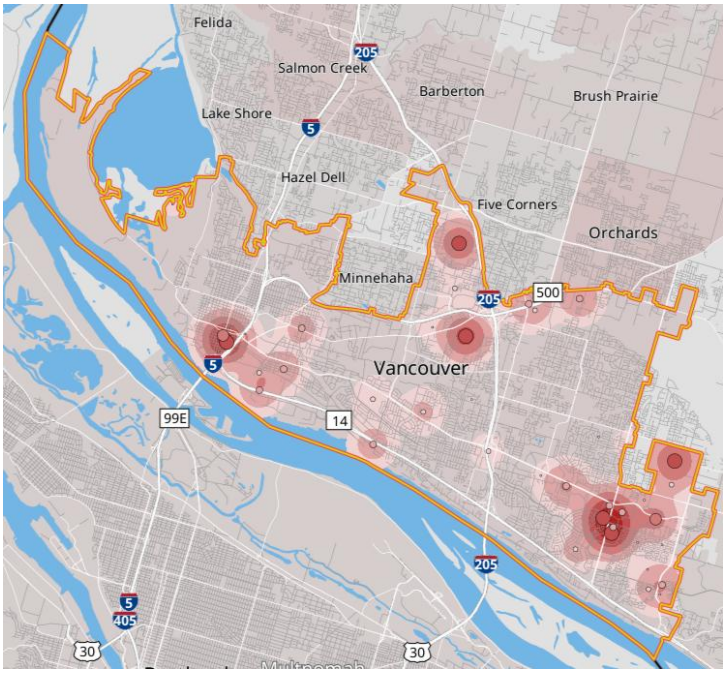

*Exhibit 51: Location of Construction Jobs, 2022*

Source: Census on the Map, 2022

Arts and entertainment venues that are outdoor, such as Esther Short Park and the Farmers Market or Vancouver Volcanos Home Games, could be more vulnerable and lose revenue during heat or smoke events and indoor facilities such as museums and performing arts or movie theaters with cooling and filtration such as could see greater demand for services. Investment in HVAC upgrades and air filtration systems in indoor venues could support both public health and local economic resilience. Concentrations of arts and entertainment jobs are shown in Exhibit 51.

*Exhibit 52: Arts & Entertainment Jobs, 2022*

Source: Census on the Map, 2022

## Commuters

Almost two-thirds of residents work outside of Vancouver though most work within 10 miles of home. See Exhibit 52 and Exhibit 53. Employers and commuters in and out of Vancouver could be impacted by climate related events such as extreme precipitation and flooding affecting roads or extreme heat affecting transit.

> *In Washington, the heat caused sections of Interstate-5 and State Route 162 to buckle, causing some lanes to be closed. In Portland, the heat exceeded the design limits of the TriMet MAX system, melting train power lines and shutting down trains for a day. (USDA Northwest Climate Hub, 2024)*

| Less than 10 miles | 50,945 | 61.3% |
| 10 to 24 miles | 15,942 | 19.2% |
| 25 to 50 miles | 1,860 | 2.2% |
| Greater than 50 miles | 14,410 | 17.3% |

Source: (US Census Bureau, 2021)

## Adaptive Capacity

Vancouver has an Emergency Operations Plan that considers severe weather, forest/wildland fire, flooding, and energy shortages. (City of Vancouver, 2018) The City also coordinates with Clark County and cities through the Clark Regional Emergency Services Agency (CRESA) on emergency planning, such as the 2023 *Natural Hazard Mitigation Plan*. (Clark Regional Emergency Services Agency, 2023)

During severe weather such as extreme heat, Vancouver advertises places to cool off including Community Centers and Libraries serving in effect as cooling centers and quasi-resilience hubs. (City of Vancouver, 2024) Regarding transit access, during extreme heat, C-TRAN will take anyone riding to a cooling center.

A regional initiative is defining emergency transportation routes and updating a 2006 plan between Clackamas, Columbia, Multnomah and Washington counties in Oregon and Clark County in Washington. The effort is addressing wildfires, landslides, floods, extreme weather events, and impacts of climate change as well as earthquakes and volcanic eruptions. In addition to state routes, a number of arterials in the city limits and port vicinity are defined as regional emergency transportation routes. Some are at risk of floods and other hazards. Ensuring access along these routes during emergencies is critical for maintaining economic function, particularly for industrial areas and essential service workers. A current phase (2024-2026) is prioritizing an updated network. (RDPO, 2024)

## Vulnerability Summary

Based on the locations of workers and venues described in Job Sectors in Vancouver above and Climate Exposure, Equity, and Health in Chapter 2, the areas with greatest exposure are shared in Exhibit 54.

*Exhibit 55: Vulnerability by Area – Economic Development*

| Area | Outdoor Workers | Health Care | Arts & Entertainment |
|---|---|---|---|
| Type of Impact | Exposure & Risk of Lost Business or Wages | Increased Demand | Exposure & Risk of Lost Business or Increased Demand |
| 1 | | | |
| 2 | | X | X |
| 3A | | | |
| 3B | X | | X |
| 4 | | | X |
| 5 | | X | X |
| 6 | | X | |
| 7 | X | | |
| 8 | X | | X |

Source: BERK, 2025.

Outdoor workers, health care providers serving those with health sensitivities, and outdoor recreation and events workers would be vulnerable to extreme heat and smoke events that are more probable in the planning period and more widespread in their effect. Flooding from extreme precipitation could be more focused in its location but impact many commuters. In neighborhoods with higher social and health vulnerability, these disruptions may be compounded by limited access to protective infrastructure or recovery support. The potential magnitude of loss to the economy from one or more events could be more than moderate and require City investment in recovery. See Exhibit 55.

*Exhibit 56: Risk Summary – Economic Development*

## Gaps and Opportunities

### Engagement and Strategies to Improve Adaptive Capacity

Resilience Rising results identified some adaptive strategies especially related to emergency hubs and information:

- Potential of existing neighborhood institutions—including gyms or grocery stores—to serve as hubs during emergencies. (City of Vancouver, 2025)
- Leveraging local businesses to help spread emergency information. (City of Vancouver, 2025)

The Adaptive Capacity Assessment identified examples of collaborative programs including with businesses, noting that in some cities, local businesses have sponsored bus shelters with cooling features, in exchange for modest advertising. (City of Vancouver, 2025)

The City could also continue to work through regional bodies to understand commute patterns and risks as well as learn about concerns from residents commuting across lifeline networks. Additional engagement could focus on minority- and immigrant-owned businesses, who may face barriers to accessing recovery resources following climate disruptions.

### Policies

A policy evaluation, available under separate cover, identified topics that could be integrated into the updated plan to further address economic development such as:

- Address green technology/jobs opportunities.
- Bring in strategies from Climate Action Framework such as building a more community-driven, circular economy.
- Promote business continuity planning in climate-sensitive sectors such as construction, transportation, healthcare, and logistics.
- Prioritize infrastructure upgrades in areas where economic activity overlaps with high exposure and vulnerability.

Example policy concepts in the Our Vancouver 2045 plan include:

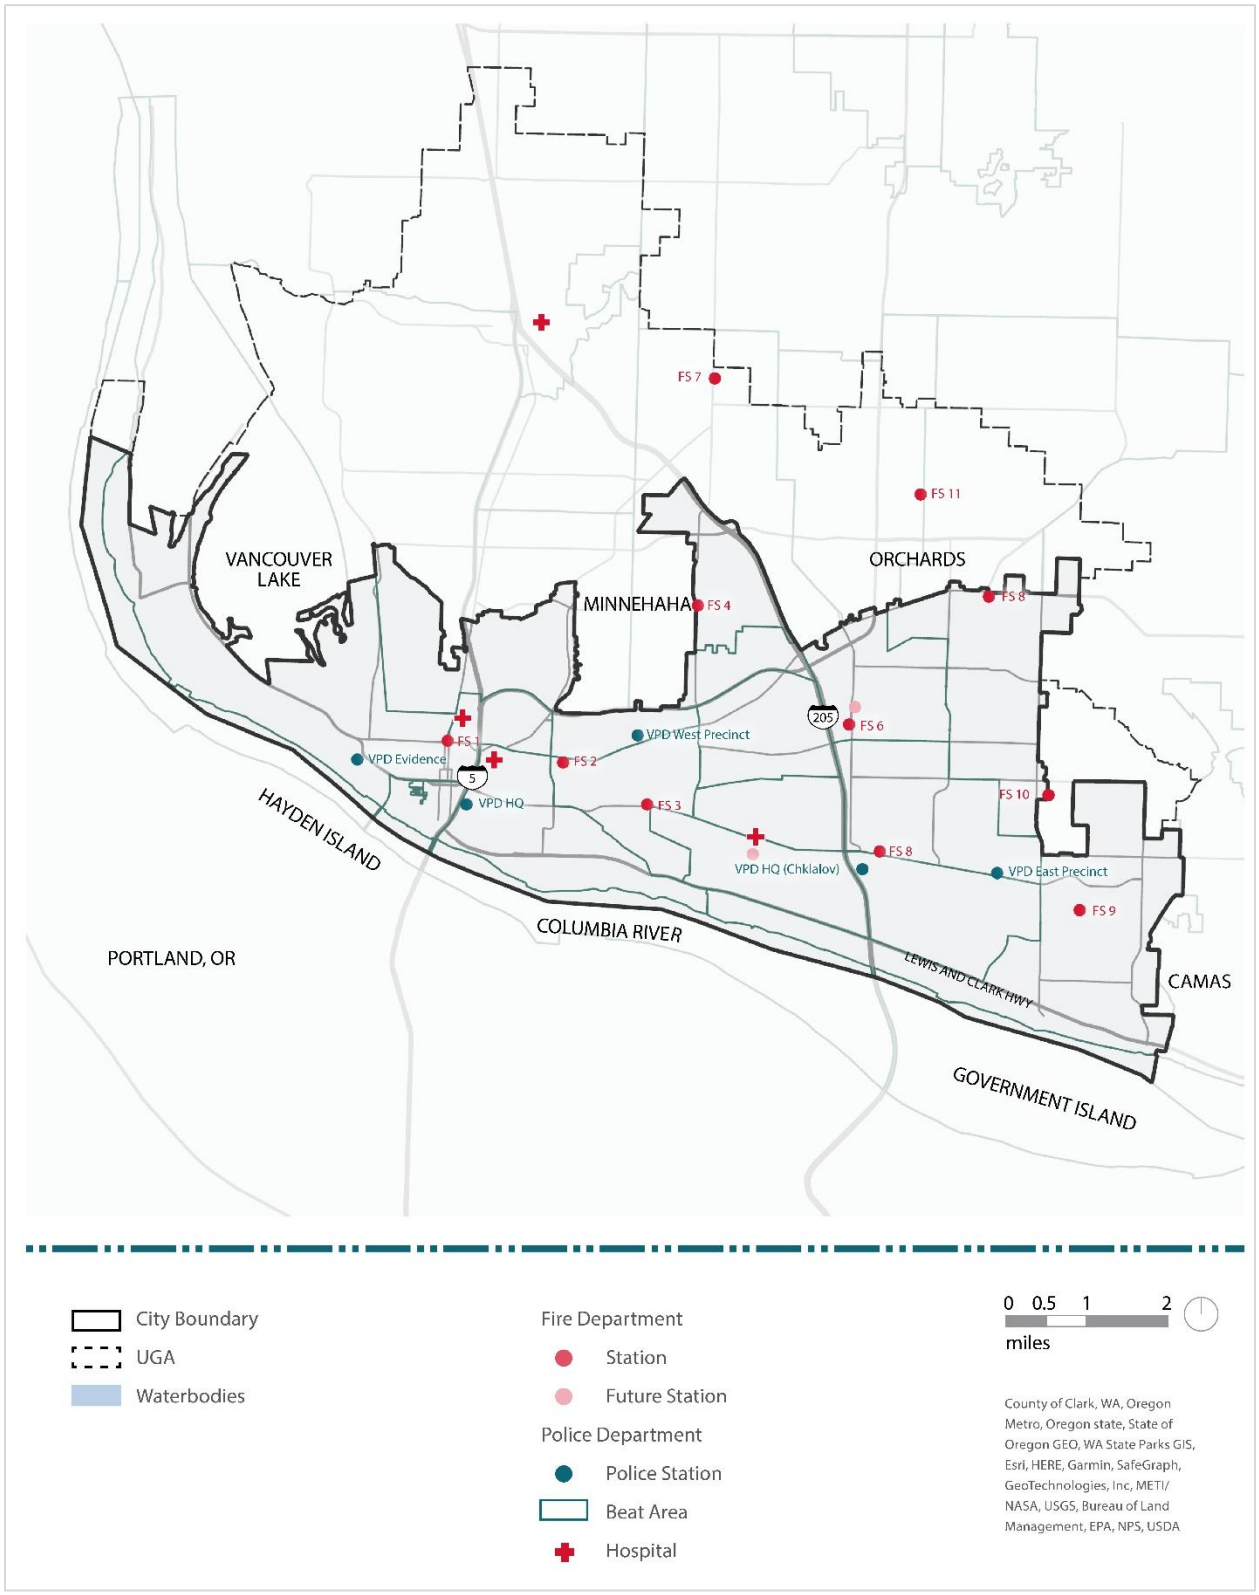
- Build a resilient economy: Encourage business growth, retention, and expansion, with an emphasis on family-wage jobs and foster resilience within Vancouver's economy. (Policy 24)

See also Emergency Management.

## Emergency Management

Climate change presents a threat to the City's emergency response due to increased frequency and severity of extreme weather events. The City has updated its emergency management plan to reflect the hazards posed by climate change, but this increase could strain capacity and challenge current approaches to mitigation, preparedness, response, and recovery.

Local resources reviewed for this section include the following:



- Chapter 2.12 VMC, Emergency Management
- City of Vancouver Emergency Operations Plan, 2018
- City of Vancouver Climate Adaptation Strategy, 2022
- Clark Regional Emergency Services Agency (CRESA), 2023 Clark County Natural Hazard Mitigation Plan, Volume 2 Planning Partner Annexes, March 31, 2024
- State of Washington Comprehensive Emergency Management Plan and Program – Updated, 2019
- Vancouver Police Department Policy Manual Policy 206

### Sector Overview and Assets

Vancouver's emergency management priorities are to eliminate major threats to life and safety, stabilize the incident situation, provide basic human needs, maintain/restore essential services, and protect critical infrastructure and the environment. (City of Vancouver, 2018) Many departments respond to and work to mitigate potential hazards and emergencies through planning, regulation, and capital improvements. The departments that manage day-to-day emergency response are Fire, Police, and EMS, while larger emergencies can require disseminating information, coordinating resources, and activation of an interdepartmental Emergency Operations Center (EOC) as well as the Clark Regional Emergency Services Agency (CRESA) that provides 911 dispatch, technology services and emergency management. Recovery involves damage assessment, conducting repairs to capital facilities, and aiding impacted people and organizations.

Emergency facilities in Vancouver include about eight fire stations, two police precincts, three major hospitals, three community centers, and several mobile EMS units provided through a contract with American Medical Response. Hospitals are located predominantly in the western and central parts of the city. See Exhibit 56. Additional emergency facilities are evenly distributed throughout the city to meet the needs of residents. Emergency facilities are unevenly distributed with greater concentrations of hospitals and EMS resources in the central and western parts of Vancouver. In contrast, eastern neighborhoods may face slower response times, particularly if transportation networks are disrupted by heat or flooding.

*Exhibit 57: Emergency Services Locations in Vancouver*

Source: (Design Workshop, 2024)

## Potential Impacts

Vancouver's emergency management system would likely be affected by heat and wildfire smoke events. Extreme heat events would lead to acute heat related illness and hospitalizations and put severe strain on emergency medical service personnel within the Vancouver Fire Department and the paramedics from American Medical Response (AMR). (City of Vancouver, 2018) (Hayden, 2023) Areas of the city with more tree canopy cover are likely to experience lower, safer temperatures during extreme heat events and reduce damage to roadways. Vancouver has a current tree canopy cover of 19% with a goal of reaching 28% by 2030 (TreeCAP, 2024). However, canopy cover varies greatly across the city. See Zoning & Development for more information.

Wildfire smoke can lead to both chronic and acute pulmonary health impacts that can also strain emergency management resources (Ecology W. S., 2023). In the event of both extreme heat events and wildfire smoke events, community spaces may be strained for capacity as they serve as either explicit or de facto clean air and cooling shelters. According to regional assessments, many existing facilities do not meet the ventilation or filtration standards necessary for sustained clean air shelter function. (City of Vancouver, 2025) Groups especially vulnerable to both of these hazards are older adults, individuals experiencing homelessness, undocumented immigrants, low-income individuals, and individuals with limited English proficiency as these group may be socially isolated and therefore less likely to seek emergency services or community shelter (City of Vancouver, 2022). Based on demographic analysis of the city, these vulnerable populations are more prevalent in the west and central portions of the city and less so in the east area of the city; see Exhibit 20. The potential health impacts of these specific climate hazards are also detailed in the Health & Well-being section of this document.

Additionally, extreme precipitation, roadside brush fires, and extreme heat may impact the transportation infrastructure that is necessary for emergency response for all departments. The 2025 Adaptive Capacity Assessment suggests the fire department collaborate with transportation departments to identify and fortify the critical routes used by fire engines and ambulances. (City of Vancouver, 2025) Extreme heat events can lead to cracking and buckling of roads or damage to transit infrastructure (Fischels, 2021). Roadside brush fires can damage roads and make them temporarily impassable until the fire is adequately suppressed especially in the west and the northeast/east portions of the city which have been identified as part of the Wildland Urban Interface (WUI, 2024). Emergency vehicle access in these areas may also be impaired by narrow roadways or lack of redundancy in evacuation routes.

The Vancouver Fire Department serves residential, commercial, and industrial uses, and protects 22 miles of shoreline. (City of Vancouver, 2025) Urban flooding may simultaneously increase demand for emergency services to manage impacts including but not limited to hazardous materials contamination and potential structural collapse while also makes it very challenging to reach individuals facing these emergencies due to roadway flooding (FEMA, 2021). Even moderate localized flooding can trigger cascading service impacts, including delays to emergency response, reduced access to healthcare, and temporary power outages that affect communication and traffic control systems.

While flood events have been experienced in Vancouver, the risk is considered low, except for urban flooding with extreme weather. (Clark Regional Emergency Services Agency, 2023) In the event of urban flooding from extreme precipitation, the same vulnerable populations mentioned in the previous section may be unable to effectively navigate the city and reach medical care or social services. Examples of urban flooding have been identified in climate planning efforts including:

- On the Fourth Plain BRT line, which runs through some older, low-lying neighborhoods, chronic street flooding has already been noted at certain intersections – these incidents are likely to worsen with climate change. (City of Vancouver, 2025)
- Fruit Valley residents described frequent flooding and clogged storm drains. (City of Vancouver, 2025)

Both the Transportation and Health & Well-being sections of this document also address these concerns.

### Adaptive Capacity

Aspects of the emergency management system with adaptive capacity include:

- The City of Vancouver in coordination with Clark Regional Emergency Services Agency (CRESA) has identified and advertised several cooling shelters such as Vancouver community library, Vancouver Mall Library, Firstenburg Community Center, Marshall/Luepke Community Center, Water Resources Education Center and provides no cost C-TRAN bus service to and from cooling centers in the event of extreme heat. (City of Vancouver, 2024)
- The City is also able to open temporary cooling centers during extreme events, in collaboration with area churches and other organizations. Additional coordination with culturally specific organizations could increase participation from immigrant and refugee communities that face heightened barriers to accessing city resources.

- CRESA, in coordination with the City of Vancouver, provides recommendations for actions to take during smoke events but does not have specific facilities or strategies to combat poor air quality caused by wildfires.
- Facilities necessary for citywide emergency response are typically equipped with emergency generators to ensure continuity of services during power disruptions. However, greater frequency of power outages due to increased energy use during heat events could lead to increased cost and dependency on these generators during emergencies. Backup power remains uneven across critical facilities. Clean energy resilience strategies—such as solar+storage—may offer co-benefits in energy savings and emissions reduction.
- The Vancouver emergency operations plan identifies localized flooding from extreme precipitation as a "Major Emergency" and specifies effective response to all major emergencies including this specific hazard. (City of Vancouver, 2018) (Clark Regional Emergency Services Agency, 2023) The 2025 Adaptive Capacity Assessment has recommended that Vancouver's ongoing regional planning for an emergency transportation network (2024–2026) should explicitly incorporate flood, landslide, and wildfire scenarios. (City of Vancouver, 2025)

### Vulnerability Summary

The City of Vancouver Emergency Management Program and the associated service providers are particularly vulnerable to the impacts of extreme heat and wildfire smoke as those are the types of hazards that are more likely to impact service provision as climate conditions worsen. These hazards require the most emergency services and facilities to help alleviate potential human health impacts. Extreme precipitation could interfere with infrastructure, power, and emergency responses, but would be more likely along water bodies or areas with poor drainage.

Census tracts in almost every area have more than one higher climate exposure and either higher health sensitivity or higher equity disparity, which could require a greater emergency response. Areas with a combined higher exposure and higher health sensitivity or higher equity disparity include Areas 1, 2, 4, 6, 7, and 8. Area 3b has higher heat but exposure to other climate impacts is less than "higher." See Exhibit 57.

*Exhibit 58: Vulnerability by Census Tracts – Emergency Management*

| Census Tract | Area | Heat Exposure | Flooding/ Precipitation Exposure | Smoke/Air Quality Exposure | Overall Exposure | Health Conditions | Equity Index |
|---|---|---|---|---|---|---|---|
| 53011041005 | 1 | Medium-high | Higher | Lower | Higher | Higher | Higher |
| 53011042300 | 2 | Medium | Medium-high | Higher | Medium-high | Higher | Medium-high |
| 53011042400 | 2 | Higher | Higher | Medium | Higher | Higher | Higher |
| 53011041113 | 3b | Higher | Medium-high | Medium-low | Medium-high | Higher | Higher |
| 53011041114 | 3b | Higher | Medium | Medium-low | Medium-high | Higher | Higher |
| 53011041600 | 4 | Medium-high | Higher | Medium | Higher | Higher | Higher |
| 53011041700 | 4 | Medium | Higher | Medium | Medium-high | Higher | Medium-high |
| 53011042700 | 4 | Medium-high | Higher | Medium | Higher | Higher | Higher |
| 53011041205 | 6 | Medium-high | Higher | Medium-high | Higher | Medium-high | Higher |

A summary of risks is shared below in Exhibit 58.

*Exhibit 59: Risk Summary – Emergency Management*

| Likely Climate Impacts in next 10+ years | | | | Magnitude of Loss | | | City Responsibility | | | Vulnerable Communities | | | Areas Most Affected | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| *Heat* | *Fire* | *Precip* | *Drought* | *Less* | *More* | *Most* | *Less* | *More* | *Most* | *Less* | *More* | *Most* | 1 | 2 | 3A | 3B | 4 | 5 | 6 | 7 | 8 |
| | | | | | | | | | | | | | | | | | | | | | |

Source: BERK, 2025.

Certain actions can be taken to mitigate the risks of these hazards and the overall adaptive capacity to manage these hazards is high due to the clear instructions, strategies, and chain of command laid out in the Emergency Management Plan. Hazards may put stress on personnel and facilities and increase the need for resources; the City can build upon its current emergency services as a foundation and increase services as climate related hazards worsen and increase in frequency.

## Gaps and Opportunities

### Engagement and Strategies to Improve Adaptive Capacity

Currently, the City of Vancouver provides several online materials for emergency preparedness and resiliency. About 1 in 5 households speak a language other than English at home such as Spanish, Indo-European, and Asian and Pacific Island languages. Understanding the best formats and venues to receive and share information in appropriate languages could be helpful in engagement around community assets and needs There are physical and procedural gaps that hinder preparedness and resilience: limited cooling centers with adequate space and signage, public transit challenges during storm events, lack of emergency information in multiple languages, and difficulty navigating scattered resources. (City of Vancouver, 2025)

Resilience Rising engagement (pages 6 and 7) identified the following strategies that could be implemented to improve information, communication, and facilities:

- Build formal partnerships with community-based organizations that already serve vulnerable populations during emergencies. Fund their preparedness outreach, include them in emergency planning and drills, and ensure they have access to real-time updates and supplies.
- Develop neighborhood-scale pilot projects such as mobile clean air/cooling units in areas lacking brick-and-mortar shelters.
- Provide resilient public assets in East Vancouver since there are currently long travel distances to cooling centers and limited transit options.
- Incorporate accessibility and equity into facility design, such as signage and wayfinding in multiple languages, and proximity to public transit and walking paths.

In addition, the Asset Capacity Assessment identified improvement strategies such as:

- Provide backup power and HVAC resilience audits for all essential service facilities and shelters.
- Ensure that future planning efforts address WUI-specific fire risk, especially in relation to mobility constraints and critical facility access.

Other Climate Adaptation Strategy recommendations were to:

- Improve and increase access to cooling centers, clean air quality centers, and other resource centers during extreme climate events.
- Coordinate with the County to incorporate projected climate risks into future hazard plans.

- Support safe environments at home and work during extreme climate events. (Hatch Planning and City of Vancouver, 2022)

### Policies

A policy audit suggested Comprehensive Plan policy revisions and additions similar to those identified in the strategies above, as well as:

- Adopting additional policies to the Public Facilities and Services Element that include emergency operations.
- Incorporating strategies from the Natural Hazard Mitigation Plan into the Comprehensive Plan, such as determining critical government functions and establishing redundancy for these functions.
- Integrating the Vancouver 2018 Emergency Operations Plan strategies such as EMS, Fire, Police, and Debris Removal.

The **OUR VANCOUVER 2045** plan includes the following policy ideas:

- Develop plans and resources to ensure effective emergency response and equal access to emergency services and recovery resources, mitigating risks from natural disasters, climate-related hazards, and social hazards. (Policy 43)
- Support public safety through investment in emergency services, facilities, infrastructure and coordinated preparedness efforts that strengthen community resilience and response. (Policy 109)
- Coordinate with the Vancouver Fire Department and Vancouver Police Department to plan for expected growth, equitably serve the community, and facilitate emergency response. (Policy 38)

## Health & Well-being

### Sector Overview and Assets

There are various factors in the built environment, natural environment, and public services that affect public health, many of which are likely to be impacted by climate change to some extent. Cross connections to other sectors reviewed in this assessment include Agriculture & Food Systems (food access), Buildings & Energy (safe and healthy housing), Economic Development (financial stability), Water Resources (water quality), Transportation (active transportation and air quality), and Zoning & Development (tree canopy and parks access). The Human Health sector itself is focused on healthcare services as well as the general health and wellbeing of residents.

Population health statistics for adults in Vancouver are similar to that of Clark County as a whole, with slightly higher rates of poor mental health and asthma and slightly lower rates of hypertension and diabetes than the county population. See Exhibit 59. With hypertension affecting almost a third of adults in Vancouver, poor mental health affecting almost a fifth, and asthma affecting more than a tenth, many individuals may be particularly sensitive to the health impacts of climate change, particularly extreme heat and extreme precipitation. (Hayden, 2023) (EPA, 2021)

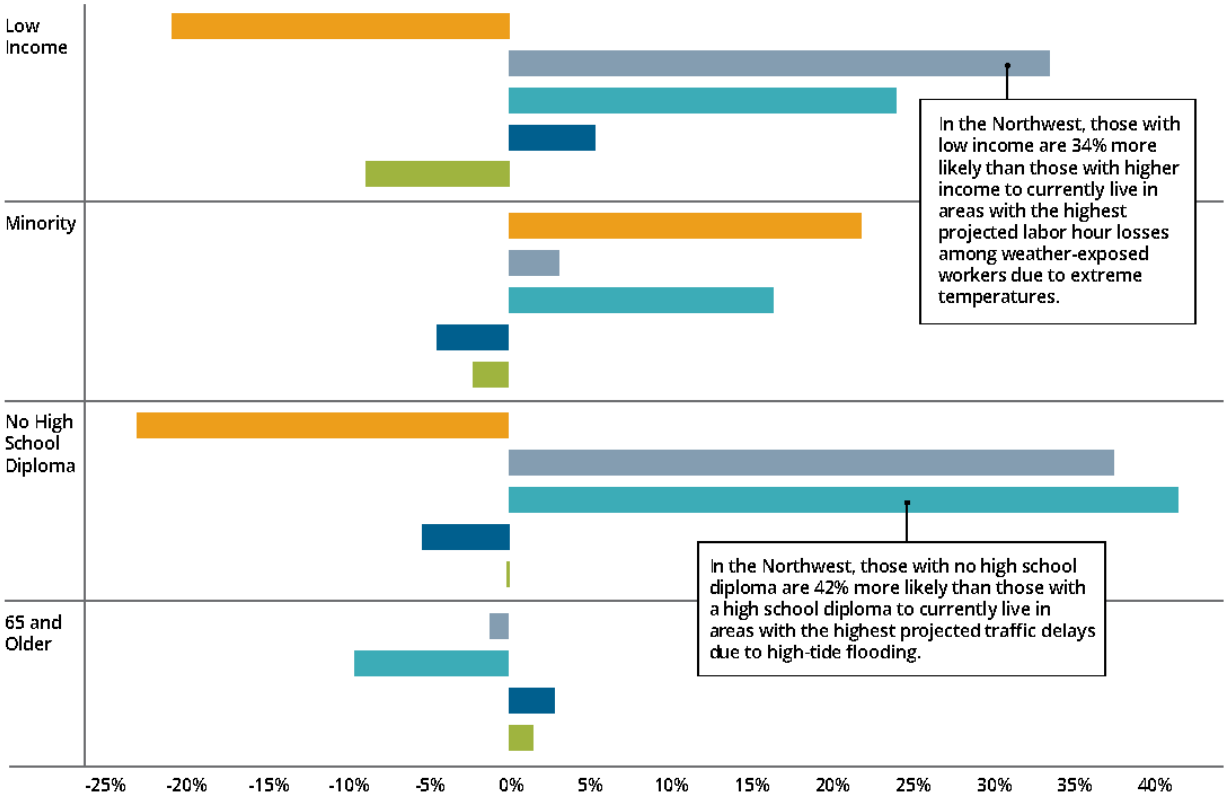
*Exhibit 60: Health Data for Vancouver and Clark County*

| Measure | Vancouver (% of adults) | Clark County (% of adults) |
|---|---|---|
| Hypertension (High Blood Pressure) | 28.1% | 29.2% |
| Asthma | 11.5% | 10.8% |
| Coronary Heart Disease | 5.1% | 5.3% |
| Chronic obstructive pulmonary disease (COPD) | 6.3% | 6.1% |
| Diabetes | 8.8% | 9.2% |
| Poor Mental Health (mental health not good for 14 days or more) | 17.5% | 15.8% |
| Poor Physical Health (physical health not good for 14 days or more) | 11.7% | 11.2% |

Source: (CDC, 2024)

Individuals living with disabilities may also be more sensitive in a climate event due to health and medication needs, mobility challenges, and information accessibility. (Hayden, 2023) Approximately 9.7% of Vancouver residents are living with a disability (Design Workshop, 2024).

Children and older adults also tend to have more medical needs and be more sensitive to air quality, heat, and other climate impacts. 22% of the population is children and youth under age 18, including 6% of the population under age 5, and 16% of the population is over age 65 (Design Workshop, 2024).



Another key factor in human health is access to health insurance. The CDC estimates that 9% of adults aged 18-64 in Vancouver do not have health insurance, which is slightly lower than the national estimate of 11% (CDC, 2024).

Different parts of the Vancouver population are likely to experience varying health impacts due to climate change, based on existing health concerns and sensitivities, as shown in Exhibit 23.

Low income and non-White residents and residents with less than a high-school diploma are more likely to experience greater impacts due to climate change. This includes labor hour losses to extreme heat, traffic delays due to flooding, and new asthma diagnoses especially in children due to exacerbated air pollution. (EPA, 2021) See Exhibit 60 illustrating these conditions with a focus on Northwest populations.

*Exhibit 61: Differences in Risks to Socially Vulnerable Groups in the Northwest Relative to Reference Populations with 2°C of Global Warming*

The estimated risks for each socially vulnerable group are relative to each group's "reference" population, defined as all individuals other than those in the group being analyzed. The estimated risks presented in the chart are for scenarios with 2°C of global warming (relative to the 1986-2005 average) or 50 cm of global sea level rise (relative to 2000). For the inland flooding analysis, the baseline is 2001-2020. Results for additional scenarios are provided in the respective chapters and appendices.

**AIR QUALITY AND HEALTH***
New asthma diagnoses in children due to particulate air pollution.

**EXTREME TEMPERATURE AND LABOR**
Lost labor hours for weather-exposed workers.

**COASTAL FLOODING AND TRAFFIC**
Traffic delays from high-tide flooding.

**COASTAL FLOODING AND PROPERTY**
Property inundation due to sea level rise.

**INLAND FLOODING AND PROPERTY**
Property damage or loss due to inland flooding.

*Impacts not estimated for 65 and Older.

Source: (EPA, 2021)

Air quality is a health issue of particular concern in Vancouver. The Washington State Department of Ecology has identified Vancouver as an overburdened community due to elevated levels of $PM_{2.5}$ compared to the rest of the state, as well as rates of poverty, linguistic isolation, and unaffordable housing. (Washington Department of Ecology, 2023) Poor air quality has been linked to negative health outcomes in overburdened communities, including heart and lung disease, lower life expectancy, and older adult mortality.

The healthcare system in Vancouver includes two hospitals in Area 2 (PeaceHealth and Vancouver VA Medical Center), and one in Area 6 (PeaceHealth Southwest Medical Center) as well as clinics across the city. Pharmacies and health-related human services are also located throughout Vancouver.

Assets for human health in Vancouver include:

- Community wellbeing
- Healthcare system
- Hospital
- Pharmacies
- Clinics
- Health-related human services

Source: (Design Workshop, 2024)

## Potential Impacts

Heat, wildfire, and smoke are the climate impacts most relevant to human health, per the UW Climate Impacts Group (UW Climate Impacts Group, 2024). Certain groups are more sensitive to these impacts than others. Healthcare infrastructure is also likely to be affected due to demands on the power grid and increases in medical needs, putting pressure on existing resources.

- The Health Sensitivity to Climate Index (see Exhibit 23) suggests the west and central areas are more sensitive than the east area.
- Equity scores (see Exhibit 20) vary across the city, with somewhat lower equity scores generally in the West area (with the exception of the Fruit Valley neighborhood, which has high equity scores or greater equity concerns). Equity scores are mixed throughout the rest of the city. High equity scores may indicate greater sensitivity to health impacts of climate change.
- Warmer summers are expected to increase concentrations of air pollutants, such as ozone and some vector-borne illnesses. This could amplify existing air quality concerns in Vancouver.

- An increase in the number of days with a maximum humidex above 90°F and increase in the number of nights with minimum humidex above 65°F are expected to increase heat-related deaths, illness, and hospitalizations. This directly affects public health as well as healthcare systems.
- More frequent wildfires in the region could reduce human health through loss of life, injury and reduced mental health associated with displacement. Poor air quality due to more wildfire smoke can cause adverse respiratory health effects. Increased healthcare needs during such events could put pressure on medical facilities and staff.
- Individuals with existing health conditions, children, and older adults are likely to be more sensitive to heat and smoke events.
- Renters may be more susceptible to heat and smoke risks given less control over making improvements to their homes, such as insulation and air conditioning systems.
- People living in lower-quality housing with minimal insulation will be less able to cool their homes during heat events and may be more susceptible to smoke exposure. Households with lower incomes are likely to be affected more by the cost of increased energy needs for cooling. Adaptive strategies such as air conditioners and air filtration systems may also not be affordable to them.
- Regional assessments have found that many existing community facilities do not meet the filtration or ventilation standards necessary to serve effectively as clean air shelters (Adaptive Capacity Assessment, 2025).
- Individuals experiencing homelessness are especially vulnerable to heat and smoke as they have limited access to safe shelter.
- Individuals with disabilities and mobility challenges may experience barriers to accessing cooling centers or other refuges during heat and smoke events.
- Workers in outdoor professions, such as construction, agriculture, and outdoor recreation, are likely to be more exposed to heat and smoke and have little flexibility in addressing those conditions (see Economic Development).
- High energy demand for cooling could strain the power grid and contribute to outages, which would directly expose more people to heat as their cooling systems go unpowered.
- Households with limited English proficiency may not receive important information about heat and smoke events and available resources if messages are not translated into their primary language.

### Adaptive Capacity

Existing programs and conditions in Vancouver can support adaptive capacity to heat, wildfire, and smoke events in the context of human health.

As energy demands go up to cool homes and preserve indoor air quality, home energy efficiency will be increasingly important to the physical and financial health of Vancouver households. Clark Public Utilities offers various rebate and incentive programs for energy efficiency improvements. The Weatherization Assistance Program (WAP) is also a resource available to low-income families to reduce energy costs through improved efficiency.

Several resources already exist to meet immediate needs during heat and smoke events, including community centers and libraries, which can serve as unofficial cooling centers and hubs during heat and smoke events, and temporary cooling centers in collaboration with area churches and other organizations. C-TRAN does not turn anyone away riding to a cooling center. If passengers tell the driver they are going to a cooling center, fares are not enforced. Buses also have air conditioning.

Southwest Clean Air Agency monitors air quality and issues advisories when air quality is poor during smoke events. This connects communities with information they can use to better protect themselves.

Areas of the city with more tree canopy cover are likely to experience lower, safer temperatures during extreme heat events. According to Tree Equity Score, canopy cover varies greatly across the city, with some areas having as low as 8% cover while others have almost 50% cover (Tree Equity Score, 2024). The City's urban forest strategy proposes to increase tree canopy citywide and in equity priority areas. (City of Vancouver, 2023) The City's Treefund and the nonprofit Friends of Trees both provide low-cost trees for planting on private property. (City of Vancouver, 2024)

Hospitals are typically equipped with emergency generators to ensure continuity of services during power disruptions. However, greater frequency of power outages due to increased energy use during heat events could lead to greater emergency energy needs at medical facilities.

### Vulnerability Summary

Communities with higher health conditions are expected to have higher vulnerability to extreme heat as well as smoke. Blocks with the combined higher heat and higher health conditions are a greater priority and are found in Areas 2, 3b, 4, and 6. The east side has greater tree canopy cover, which may provide some relief in extreme heat. See Exhibit 61.

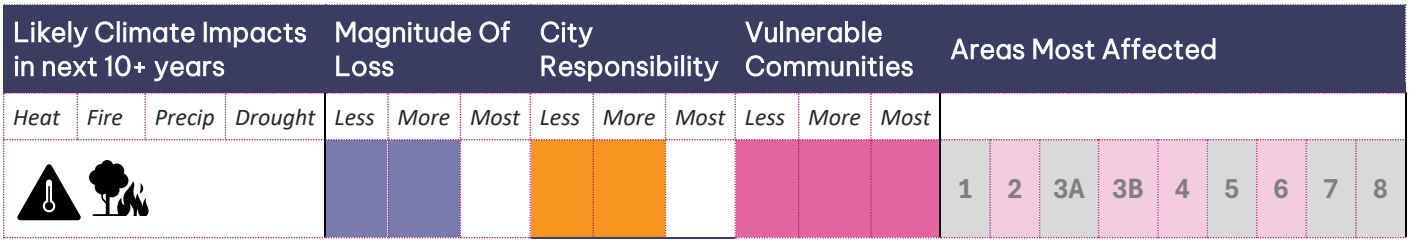


*Exhibit 62: Vulnerability by Census Tracts – Health & Well-being*

| Census Tract | Area | Heat Exposure | Flooding/ Precipitation Exposure | Smoke/Air Quality Exposure | Overall Exposure | Health Conditions | Equity Index |
|---|---|---|---|---|---|---|---|
| 53011041005 | 1 | Medium-high | Higher | Lower | Higher | Higher | Higher |
| 53011042400 | 2 | Higher | Higher | Medium | Higher | Higher | Higher |
| 53011041111 | 3b | Medium-high | Medium | Medium | Medium-high | Higher | Higher |
| 53011041113 | 3b | Higher | Medium-high | Medium-low | Medium-high | Higher | Higher |
| 53011041114 | 3b | Higher | Medium | Medium-low | Medium-high | Higher | Higher |
| 53011041600 | 4 | Medium-high | Higher | Medium | Higher | Higher | Higher |
| 53011042700 | 4 | Medium-high | Higher | Medium | Higher | Higher | Higher |
| 53011041206 | 6 | Higher | Medium-low | Medium-high | Medium-high | Higher | Medium-high |

Source: See Chapter 2 for indicators and methods. BERK, 2025.

Areas 5 and 6 also have hospitals that would feel the effects of greater demand for services; see Economic Development.

*Exhibit 63: Risk Summary – Health & Well-being*

Source: BERK, 2025.

## Gaps and Opportunities

### Engagement and Strategies to Improve Adaptive Capacity

A previous survey as part of the Clark County Community Needs Assessment found that getting to services, including physical health services, was among the top barriers to social services access (Clark County Public Health, 2024). Climate planning engagement found similar concerns about access to facilities during emergencies due to infrastructure challenges, lack of information or neighborhood connection, and identified improved strategies:

- Increase public awareness of health and safety precautions in the event of extreme climate events. (Hatch Planning and City of Vancouver, 2022)
- Coordinate with local health departments to address impacts of poor air quality on frontline communities. (Hatch Planning and City of Vancouver, 2022)

- Work with community-based organizations and local leaders to organize neighborhood specific community preparedness, through providing meeting spaces, direct funding, information sharing or other mechanisms. (City of Vancouver, 2025)
- Residents suggested spaces (schools, churches, vacant commercial buildings) that would function best as resilience hubs based on community trust and accessibility. (City of Vancouver, 2025)
- In high-risk neighborhoods (e.g. Fruit Valley in the west, the Fourth Plain corridor in the central city, and parts of east Vancouver), the City's Homeless Assistance and Resources Team (HART) team can partner with public health and community organizations to conduct wellness checks on at-risk residents during heat waves or smoky wildfire days. They should also assist with disseminating climate emergency alerts – heat warnings, evacuation orders, air quality advisories – making sure these reach non-English-speaking populations and those with limited access to media. (City of Vancouver, 2025)

See also Emergency Management and Transportation for additional strategies to support and connect communities to essential services.

### Policies

A policy audit of the Comprehensive Plan and other City plans showed some policies addressed human health in the context of climate hazards. The audit suggested policy revisions such as:

- Add more language around climate justice and equitable distribution of cooling centers, clean air quality centers, and other resources.
- Explicitly address climate resiliency of assets such as trails and green infrastructure.

Policies developed for the Our Vancouver 2045 plan recognize the underlying health disparities that can make communities more vulnerable to ongoing stressors as well as climate impact events such as extreme heat or adverse air pollution:

- Focus on high environmental health disparities when mitigating the impacts of air, water, heat, noise, and light pollution. (Policy 113)
- Broaden access to essential healthcare and services in underserved populations and address built environment causes of health disparities. (Policy 65)

# Ecosystems

## Sector Overview and Assets

Extreme heat, drought, flooding, and wildfire could harm ecosystems in Vancouver and the services that nature provides such as food, water filtration, shade, recreation, and more. Ecosystems in Vancouver including the landscape, habitats, and other critical areas are described below and mapped in Exhibit 63.

> An ecosystem is a geographic area where plants, animals, and other organisms, as well as weather and landscapes, work together to form a bubble of life. (National Geographic, 2024)

### Geologic Hazards

Vancouver is located within a geologic province called the Portland Basin, in the northern terminus of the Willamette Lowland in Oregon. The city largely has a flat terrain due to ancestral flooding along the Columbia River, although there are areas of steep slopes, landslides, erosion, and liquefaction hazard areas along portions of the Columbia River, Burnt Bridge Creek, and Vancouver Lake. (Washington Department of Natural Resources , 2024) (WSP USA, 2023)

### Water Resources

Vancouver is located in the Salmon-Washougal Watershed known as Water Resource Inventory Area (WRIA) 28. Most of Vancouver is contained in the Burnt Bridge sub-basin and to a lesser degree in the Salmon and LaCamas subbasins on the north and east respectively. Within the basin, growth, agriculture, and other consumption have resulted in lower stream flows and groundwater impacting fisheries. The Department of Ecology notes: *The impacts of climate change in WRIA 28 are also yet to be fully realized. However, it is apparent that water availability is limited throughout the Salmon-Washougal Watershed.* (Ecology W. D., WRIA 28 Salmon-Washougal Watershed Water Availability, 2023)

Major surface waters in Vancouver include the Columbia River, Vancouver Lake, and Burnt Bridge Creek. Frequently flooded areas in the City are found along these major surface waters, and areas between Vancouver Lake and the Columbia River. Other streams include Salmon Creek, Love Creek, Curtin Creek, Fisher Creek, and others. (WSP USA, 2023) The Columbia River, Burnt Bridge Creek, Salmon Creek, Curtin Creek and Vancouver Lake are on the 303d list for water quality impairments such as temperature, sediment, and more.

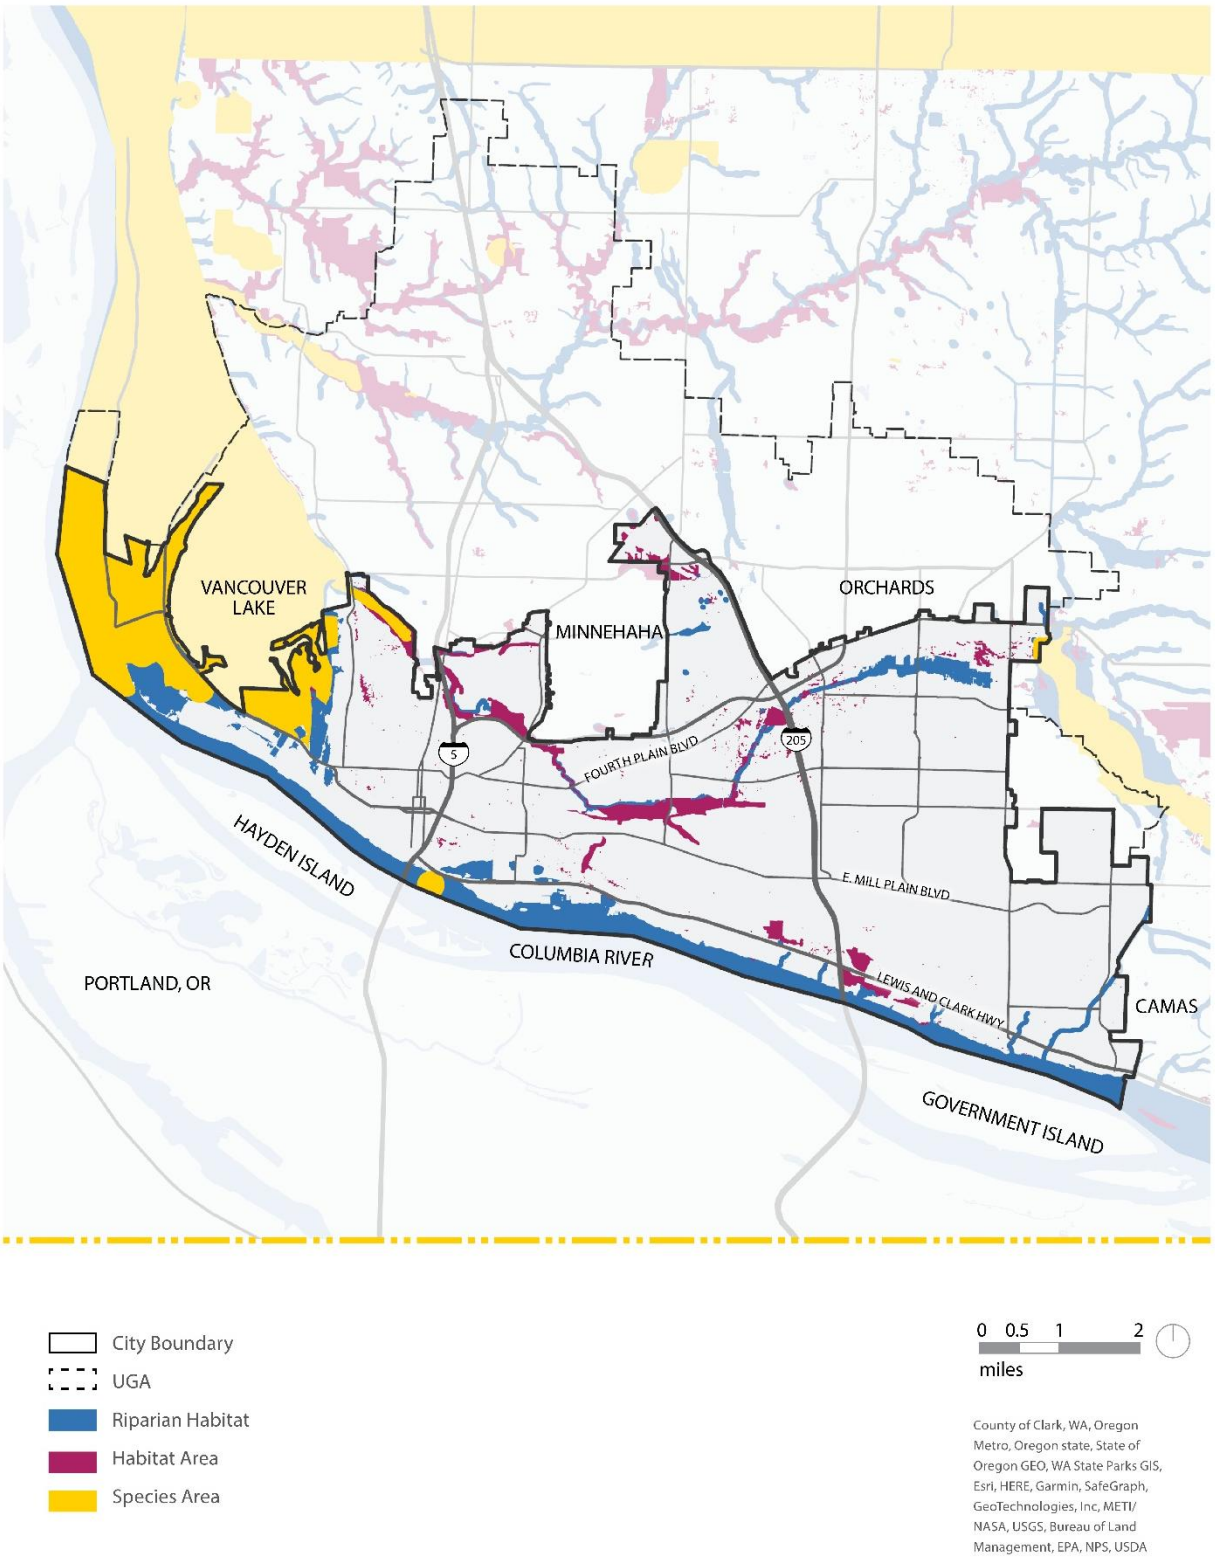
Vancouver Lake is about 2,600 acres in size and is relatively shallow and is used for recreation. Following flood control structures being placed on the Columbia River, the lake was cut off from the river. A river connection was restored to promote flushing to improve

water quality. Despite dredging and the addition of the flushing channel in the early 1980s, water quality issues remain with algae blooms. A 2014 study helped develop water and nutrient budgets for the lake. (Foreman, 2014) An economic impact study has identified a desire for increasing algae control and flushing, allowing for watercraft passage from the Columbia River, and adding l recreation facilities. (Friends of Vancouver Lake, 2020) Legislative appropriations have supported a phase 1 long-range plan ($150,000) and a phase 2 one-time implementation effort ($330,000). (Clark County Public Works, 2024)

### Wetlands and Riparian Areas

Significant wetlands include the Water Resources Education Center Wetlands along the Columbia River, the restored wetlands in the Burnt Bridge Creek Greenway, and those near Vancouver Lake. The Port of Vancouver has established a 154-acre wetland mitigation bank.

Although there has been riparian enhancement along Burnt Bridge Creek, there are stretches that lack sufficient vegetation and shading, which can lead to increased water temperatures and reduced water quality. (City of Vancouver, 2021) (Port of Vancouver, 2024)



### Habitats

Priority habitats in Vancouver include riparian areas, freshwater wetlands, Oregon white oak woodlands, and other biodiversity areas (primarily along Burnt Bridge Creek). (WSP USA, 2023) In or near Vancouver, the Washington Department of Fish and Wildlife has identified priority species including bald eagles, western grey squirrel, chum salmon, chinook salmon, coho salmon, steelhead, great blue heron, peregrine falcon, purple martin, and leopard dace. Bull Trout, along with chum and coho salmon and steelhead, are also listed under the federal Endangered Species Act (ESA). The Columbia River, Lake Vancouver, Burnt Bridge Creek and their shorelines are the primary habitat for most listed species. (City of Vancouver, 2021)

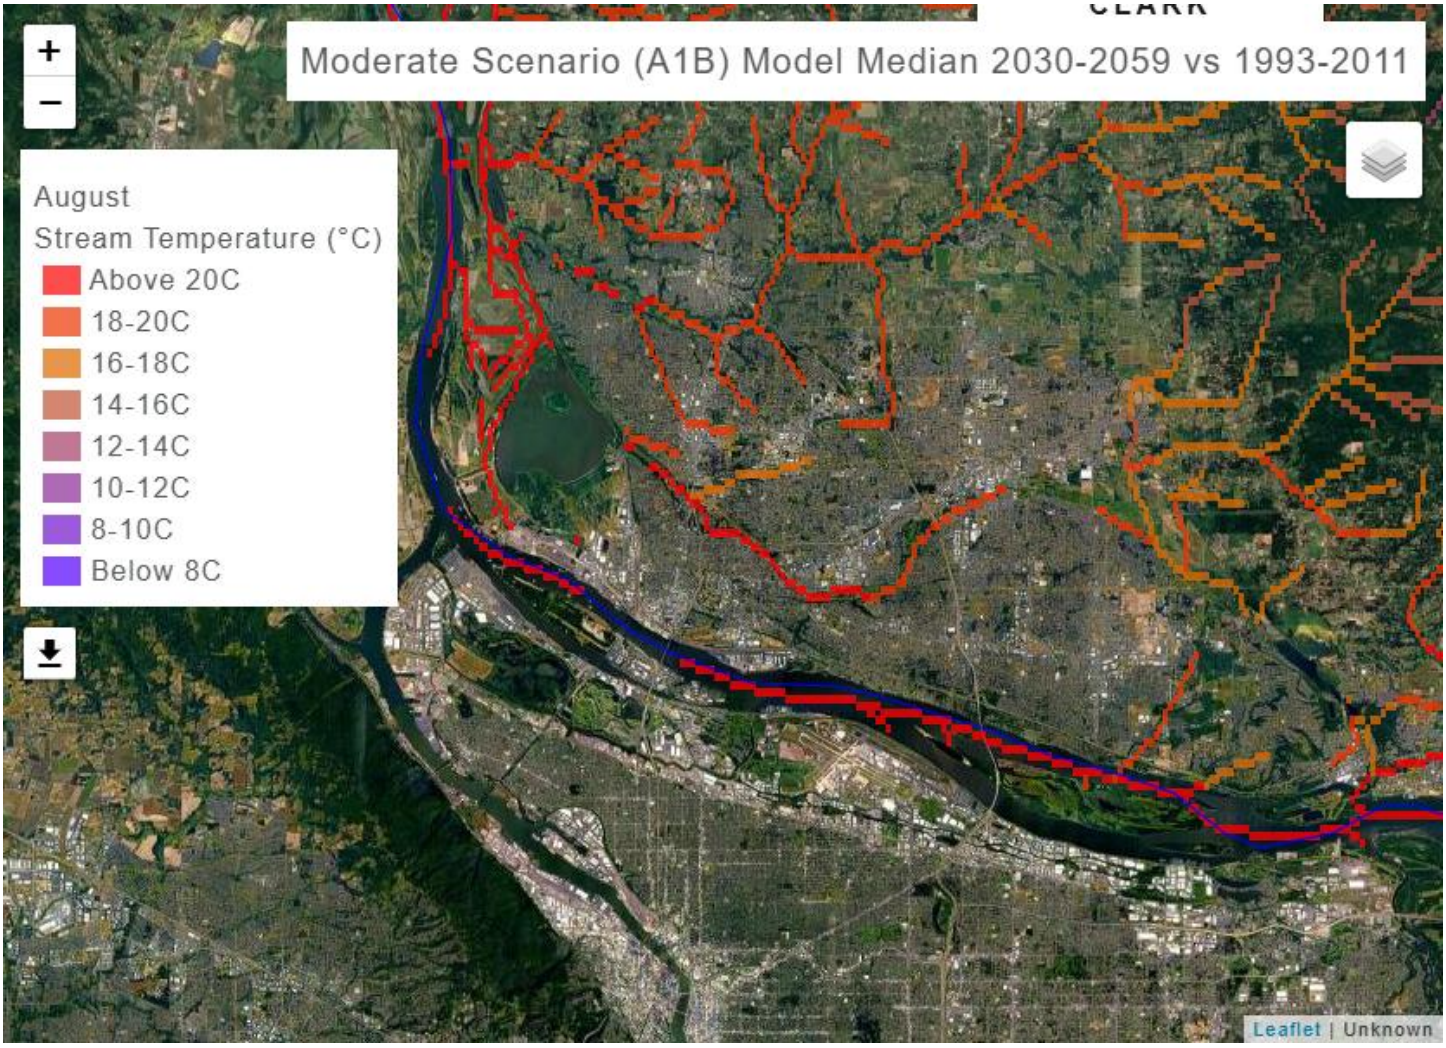
### Tree Canopy

Trees are an important part of Vancouver's natural and urban setting. As of 2021, tree canopy currently covers 18.9% of Vancouver' land area. There is a possible planting area of 31.8%. While most neighborhoods have between 16 and 20% tree canopy, about 13 neighborhoods have between 5 and 15% canopy. The citywide goal is 28%. (City of Vancouver, 2023) While more designated habitat is located in the west and south along Lake Vancouver, Burnt Bridge Creek, and the Columbia River, tree canopy is more present in eastern Vancouver. See Zoning & Development for additional information on tree canopy.

*Exhibit 64: Critical Areas in Vancouver*

Source: WSP, 2025.

### Potential Impacts



A best available science technical report (WSP USA, 2023) identified potential impacts of climate change to the City's critical areas including extreme precipitation and flooding in existing and future floodplains: As the impacts of climate change become more prevalent, floods are expected to become more frequent. The study recommended that Vancouver consider the future flow floodplain at buildout, the potential effects of climate change, and the effects of increasing impervious surfaces when designating frequently flooded areas (WAC 365-190-110). The study also suggested the City consider regulating severe risk channel migration zones as floodways, where new development is generally not allowed.

Increased stream flows can scour streams, increase sedimentation, and damage riparian areas. Wider culverts may be needed to support fish passage. Lower summer stream flows can reduce fish habitat quality. Some of the present water quality impairments could worsen, increase pathogens, and harm native cold-water fish. Algal blooms could increase in Lake Vancouver or other freshwater bodies. (Raymond, 2022) (Shirk, 2021) (Rentz, 2020)

Due to reduced summer precipitation, average August stream temperature is anticipated to increase in some Vancouver streams by 2040:

- 20.9 °C Burnt Bridge Creek
- 18.4 °C Fisher Creek
- 23.1 to 23.6 °C Columbia River

*Exhibit 65: August Stream Temperature – 2030-2059*

Source: (Raymond, Climate Mapping for a Resilient Washington, 2022)

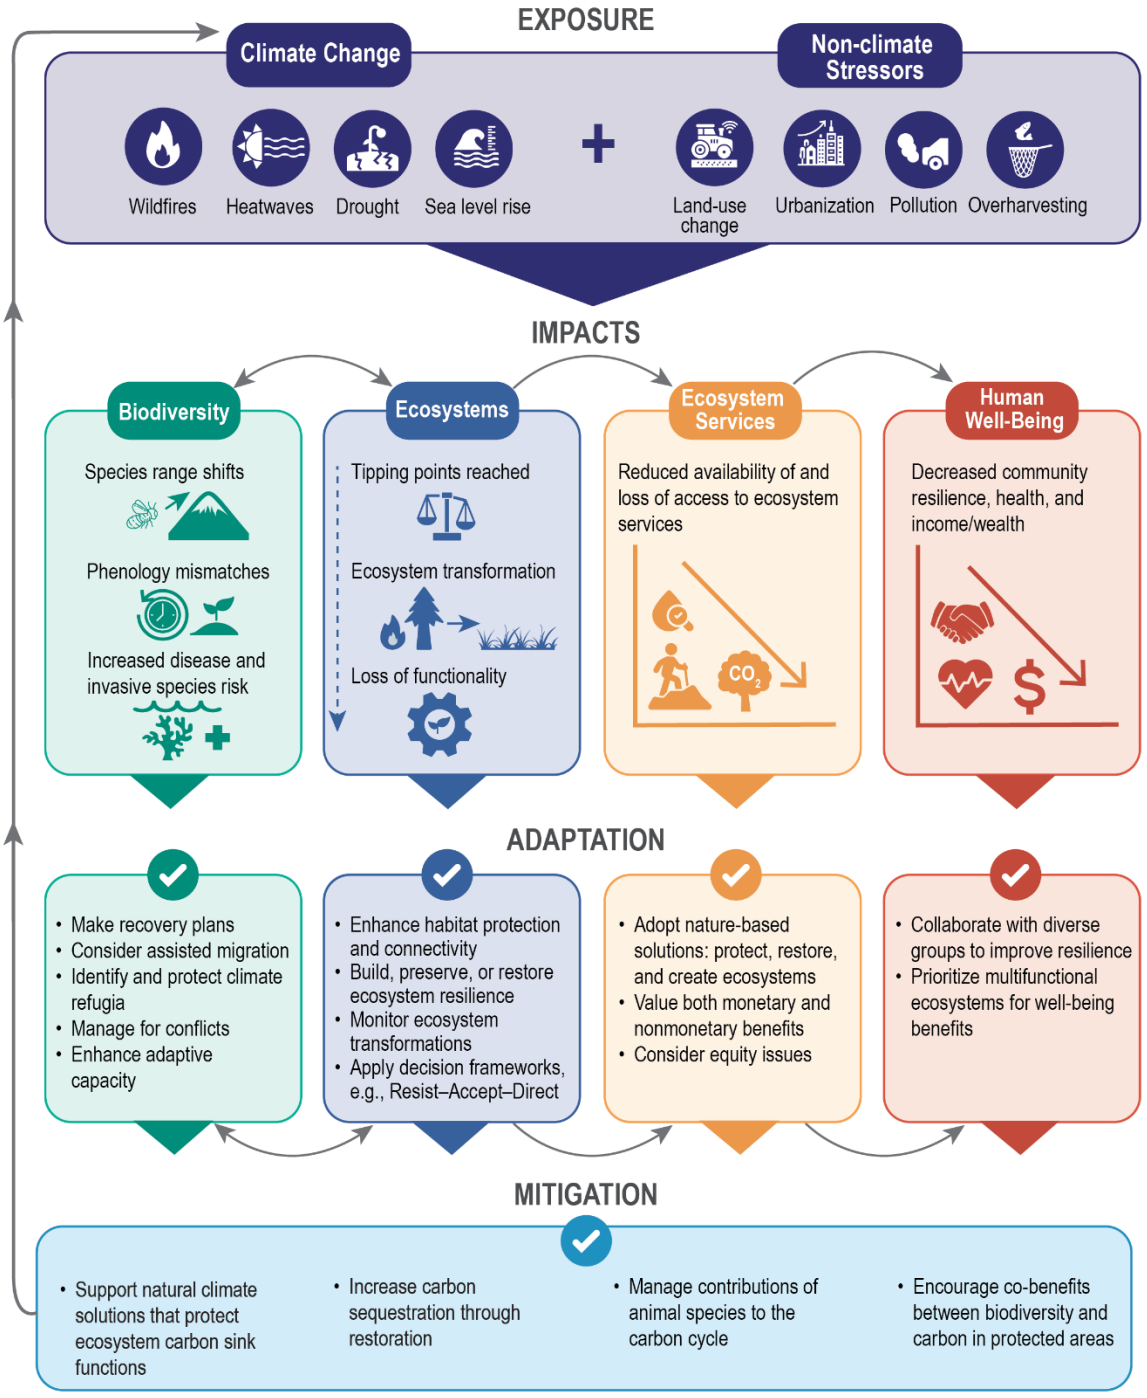
Wetlands could be harmed by changes in the amount and timing of precipitation, or changes in peak flows where associated with floodplains. (Shirk, 2021)

Increased heat and drought can impact tree canopy that may not be acclimated to changing conditions. This could exacerbate the heat island effect.

> *Urban trees already have an uphill struggle to reach their maximum size and function due to the competition for space, elements of an urban environment, vandalism, pests and diseases, among other factors and stressors. Abnormally high temperatures and prolonged heat can have a negative impact on established trees especially those not acclimated or unable to adjust to these changes. (City of Vancouver, 2023)*

Shifts in seasonal temperature and precipitation could alter the range of Oregon white oak, Douglas-fir and other species and lead to pest and disease outbreaks. (Mauger, et al., 2015) Oregon white oaks are tolerant to drought and periodic wildfire may facilitate sprouting of oak, but frequent fire could damage soil and allow for invasive species. (Hudec, Halofsky, Peterson, & Ho, 2019) (WSP USA, 2023)

### Adaptive Capacity



Ecosystem policies can support both adaptation and climate mitigation per Exhibit 65.

Similar to adaptation measures in the graphic, the City's provides robust regulations to protect ecosystems:

- The City regulates the protection of critical areas and shorelines. Vancouver is proposing to increase required stream buffers to match state recommendations regarding site potential tree height. (City of Vancouver, 2024)
- The City is proposing updated standards for wetland buffers and associated habitat corridors. (City of Vancouver, 2024) Less disturbed wetlands can support carbon sequestration to help reduce GHG emissions. (WSP USA, 2023)

The City recently updated its Urban Forestry Management Plan and last amended its tree protection regulations in 2023 (VMC 20.770). (City of Vancouver, 2023)

*Exhibit 66: Climate Change and Ecosystems, Biodiversity, and Ecosystem Services*

CAPTION: Species and ecosystems respond to pressures in different ways, such as shifting their locations or transforming into new, often degraded systems less able to provide ecosystem services.(Weiskopf et al. 2020) Adaptation measures can help species and ecosystems cope with some climate impacts but are not always going to be effective or feasible, requiring increasingly difficult decisions on what resources to prioritize and what changes to accept.(Prober et al. 2019) Adapted from Lipton et al. 2018.(Lipton et al. 2018) (McElwee, 2023)

## Vulnerability Summary

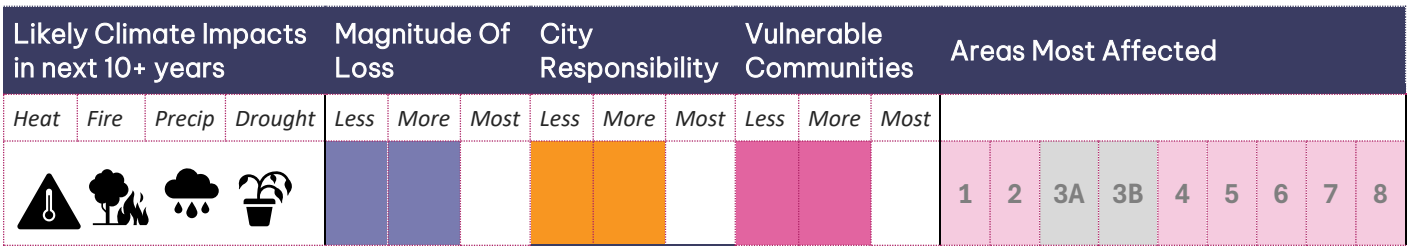
A tract-level matrix of vulnerability for ecosystems is provided in Exhibit 66. Sensitive ecosystems with exposure to extreme heat, drought, or extreme precipitation include Vancouver Lake in Area 1, Burnt Bridge Creek in areas 2, 4, 6, and 7, and the Columbia River in Areas 1, 2,5, 6, and 8. For these waterbodies and shorelines, there has been progress towards enhancement and restoration but there are still water quality concerns. Vulnerability to climate change is high and the cost to improve water resource functions is also high to fulfill lake management plans, watershed plans, and stormwater plans.

In Area 3A, the exposure is considered Medium-Low and none of the individual exposures are "higher."

Oak Tree habitat is found in Area 5 at Fort Vancouver as well as scattered in other areas. Tree canopy and wildland urban interface is anticipated to be at greater risk in Areas 7 and 8. Providing for wildland urban interface policies and regulations could improve adaptive capacity.

> Climate change is having variable and increasing impacts on ecosystem services and benefits, from food production to clean water to carbon sequestration, with consequences for human well-being (very likely, high confidence). Changes in availability and quality of ecosystem services, combined with existing social inequities, have disproportionate impacts on certain communities (very likely, high confidence). Equity-driven nature-based solutions, designed to protect, manage, and restore ecosystems for human well-being, can provide climate adaptation and mitigation benefits (likely, medium confidence). (McElwee, 2023)

*Exhibit 67: Vulnerability by Census Tracts – Ecosystems*



| Census Tracts | Subarea | Heat Exposure | Flooding/Precipitation Exposure | Smoke/Air Quality Exposure | Overall Exposure | Health Conditions | Equity Index | Riparian | Habitat | Species |

Based on the evaluation above, the risk of climate impacts to ecosystems is shared in Exhibit 67.

*Exhibit 68: Risk Summary – Ecosystems*

Source: BERK, 2025.

## Gaps and Opportunities

### Engagement and Strategies to Improve Adaptive Capacity

Some strategies that could improve ecosystem resilience were identified through climate planning efforts with the community and an interdepartmental team:

- Implement land use planning policies for flood mitigation. This included actions to review regulations such as stormwater and critical areas, and potentially addressing a flood protection overlay zone. (Hatch Planning and City of Vancouver, 2022)
- Consider controlled burns or mechanical thinning in larger natural parks to reduce accumulated fuel (in coordination with fire authorities and when weather permits safe burning) – this can actually improve ecosystem health while lowering wildfire risk. (City of Vancouver, 2025)
- Use parks as venues for climate education: interpretive signs about drought-resistant gardens, or a pilot plot showing a native meadow vs. conventional lawn and explaining water savings. (City of Vancouver, 2025)

Future engagement regarding ecosystem assets could include:

- Watershed sub-basin conditions and identifying priorities by engaging with watershed planning units.
- Prioritizing fish passage barrier removal, enhancing biodiversity corridors, and adding green infrastructure.
- Collaborating with overburdened communities to identify their priority environmental improvements. For example, Vancouver's Resilience Rising and Adaptive Capacity Assessment identified some potential pilot projects for stormwater projects with urban greening and rain gardens (City of Vancouver, 2025) and food forests or edible landscapes in heat-impacted areas (City of Vancouver, 2025)

### Policies

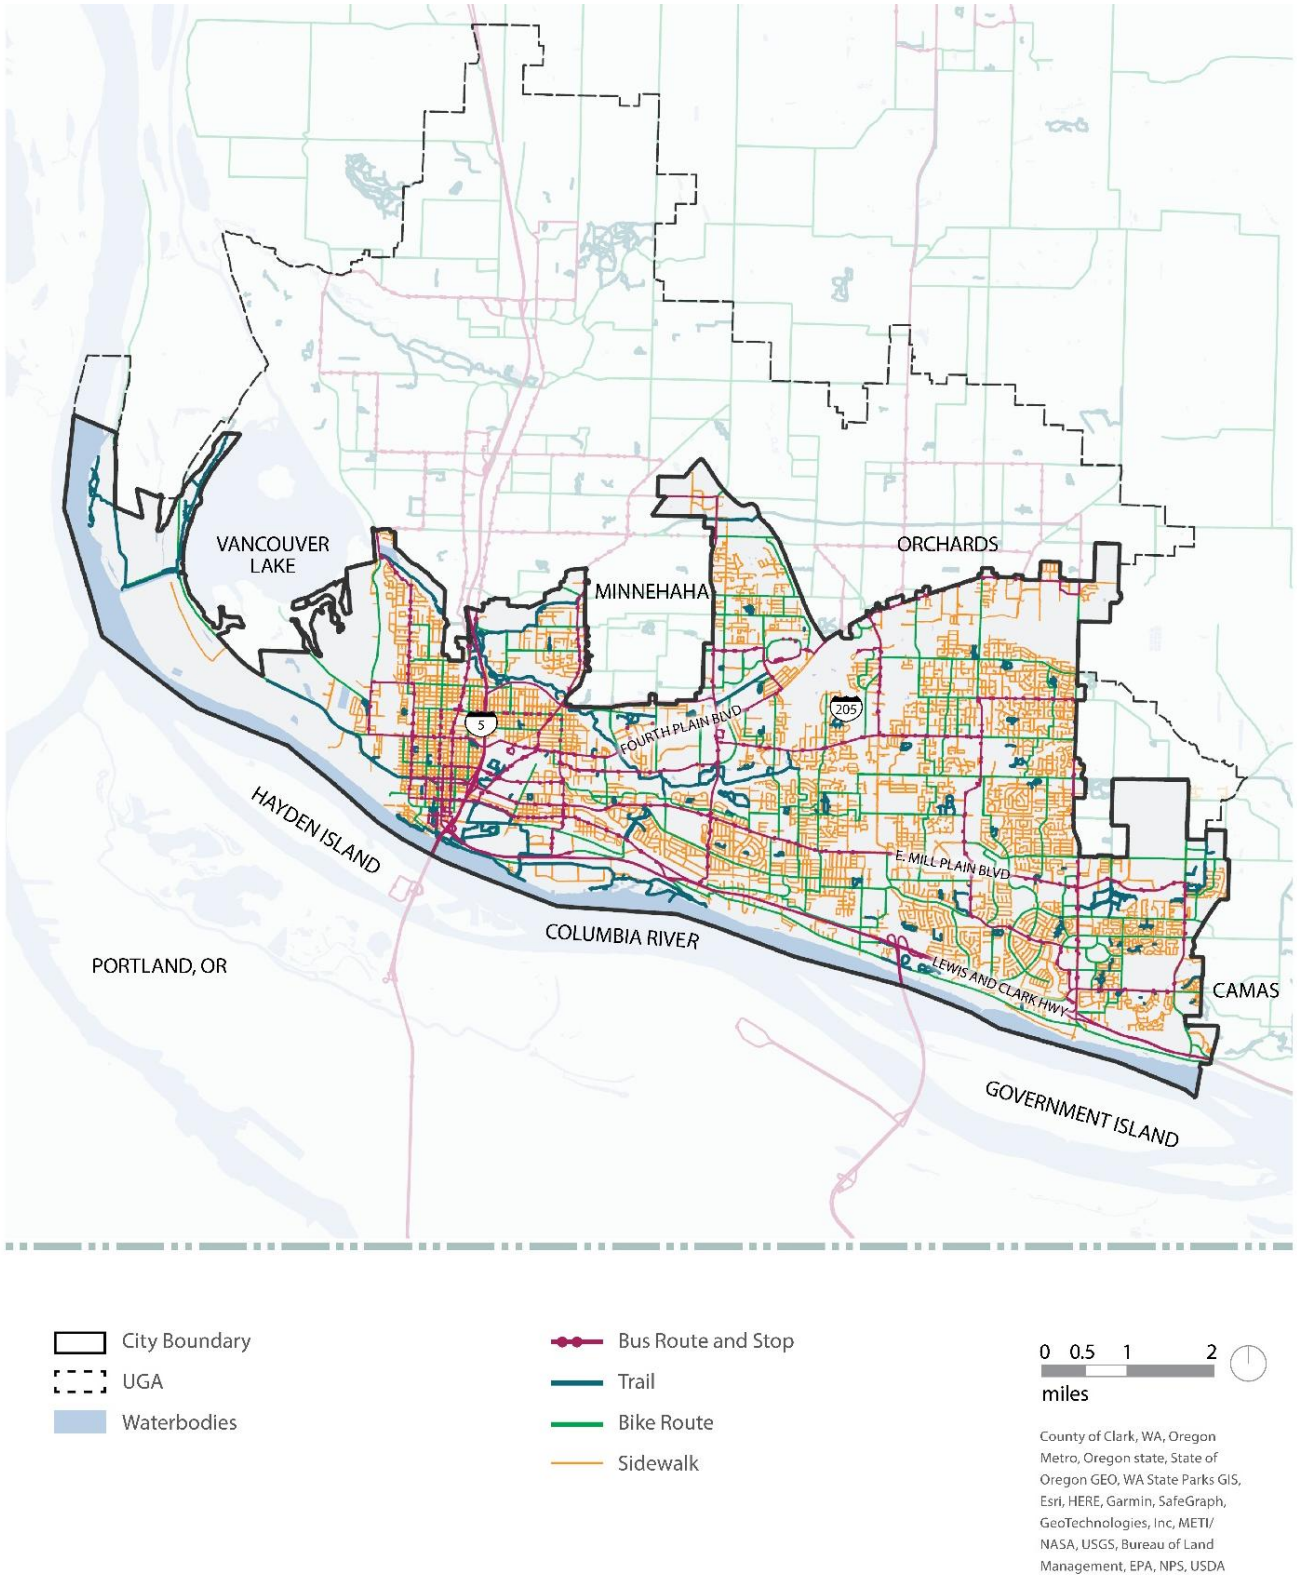
A number of Comprehensive Plan policies or Climate Action Framework strategies address ecosystem protection and enhancement. Amended policies could further address:

- Habitat protection for salmonids and listed species by addressing potential impacts to salmon species due to climate change.
- GHG reduction, climate-exacerbated impacts to a policy addressing air quality protection and enhancement.
- Increased frequency/risk of hazards due to climate change (e.g., extreme precipitation) to a policy addressing geologic hazards.
- Issues of insects, invasive species, and increased ecosystem impacts due to climate change related stresses.
- Risk of water quality degradation due to climate change impacts.
- Flood management with green infrastructure and setbacks and protection where necessary.

The **OUR VANCOUVER 2045** plan addresses many of these concepts:

- Ensure that buildings contribute to the City's greenhouse gas reduction goals and protect occupants from pollution, extreme weather, and climate hazards. (Policy 48)
- Improve water quality, protect watersheds and reduce flood risks by promoting groundwater infiltration, reducing runoff, and advancing effective stormwater best management practices. (Policy 136)
- Take inventory of and protect climate refugia, and fish and wildlife habitat needs for species under stress from climate change. (Policy 64)

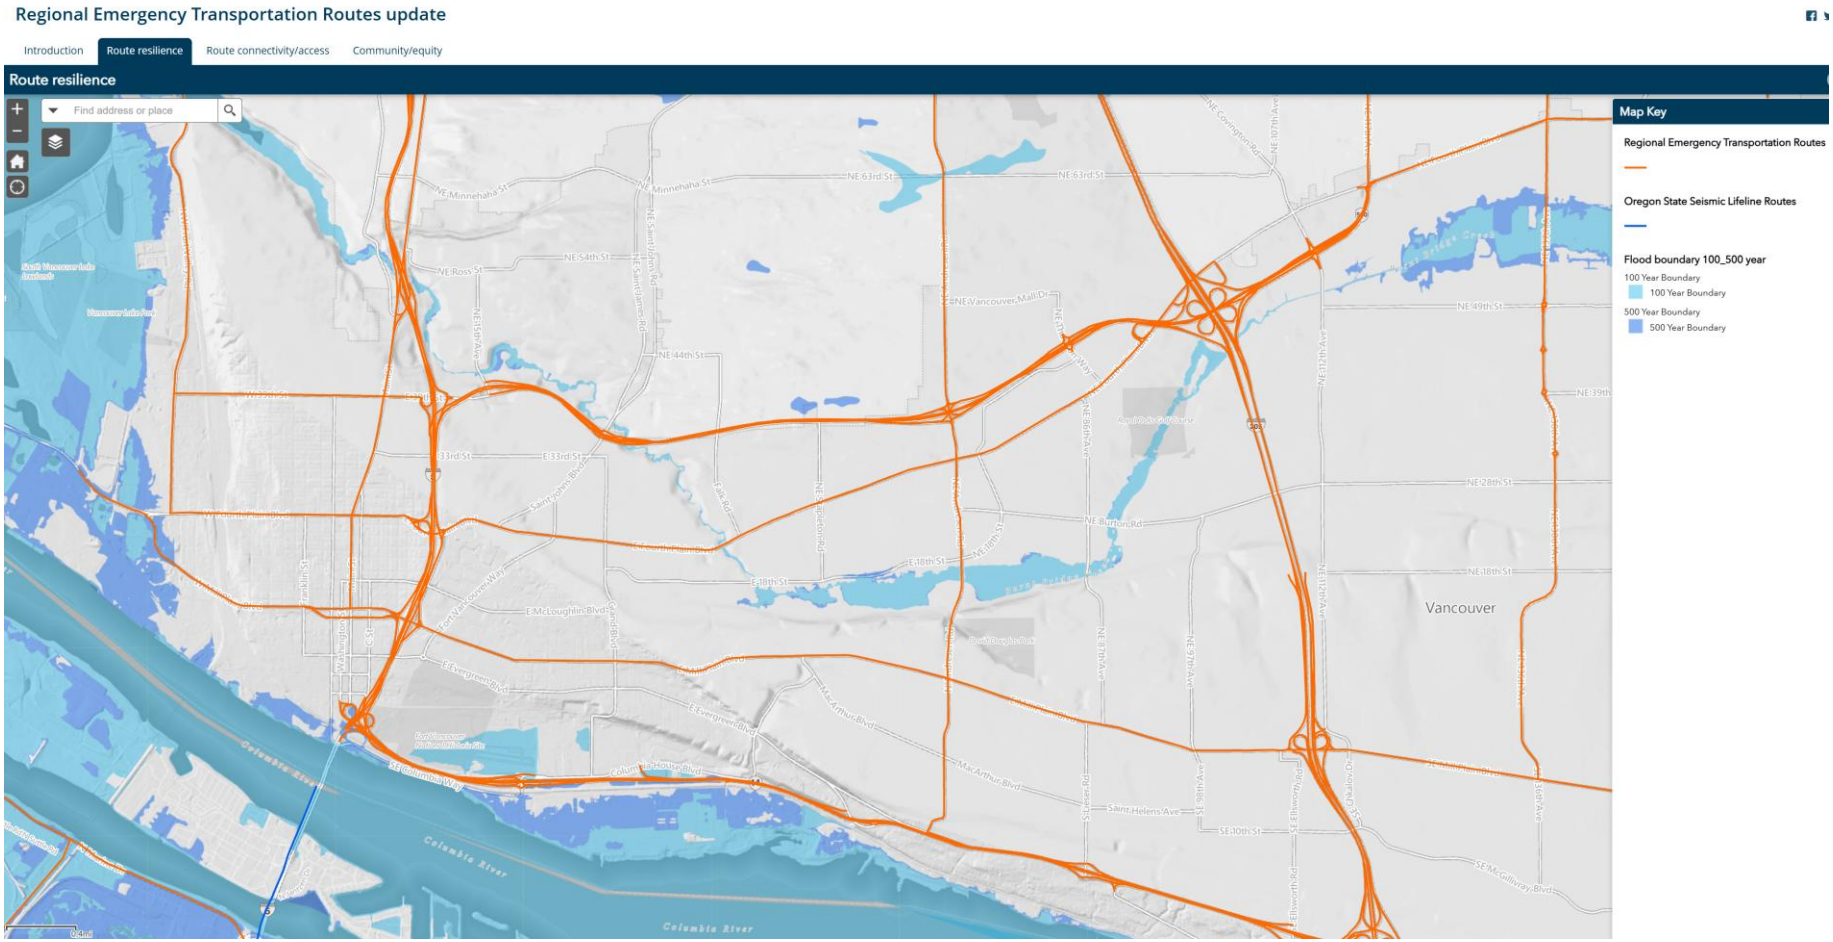
- Protect and preserve significant cultural, historic, archeologic, and ecologic community resources. Promote preservation, restoration, protection and rehabilitation of historic and architecturally significant structures. (Policy 66)
- Support a healthy urban ecosystem by embedding pollinator habitat into public and private development, prioritizing pesticide-free landscaping, enhancing biodiversity, and connecting natural spaces across the city through pollinator-friendly plantings. (Policy 103)



## Transportation

Climate related hazards have the potential to negatively impact transportation services necessary for other sectors like Zoning and Development, Economic Development, Emergency Services, and more. Roads, sidewalks, bridges, and transit facilities are vital to maintain access and connectivity for a resilient transportation system.

### Sector Overview and Assets

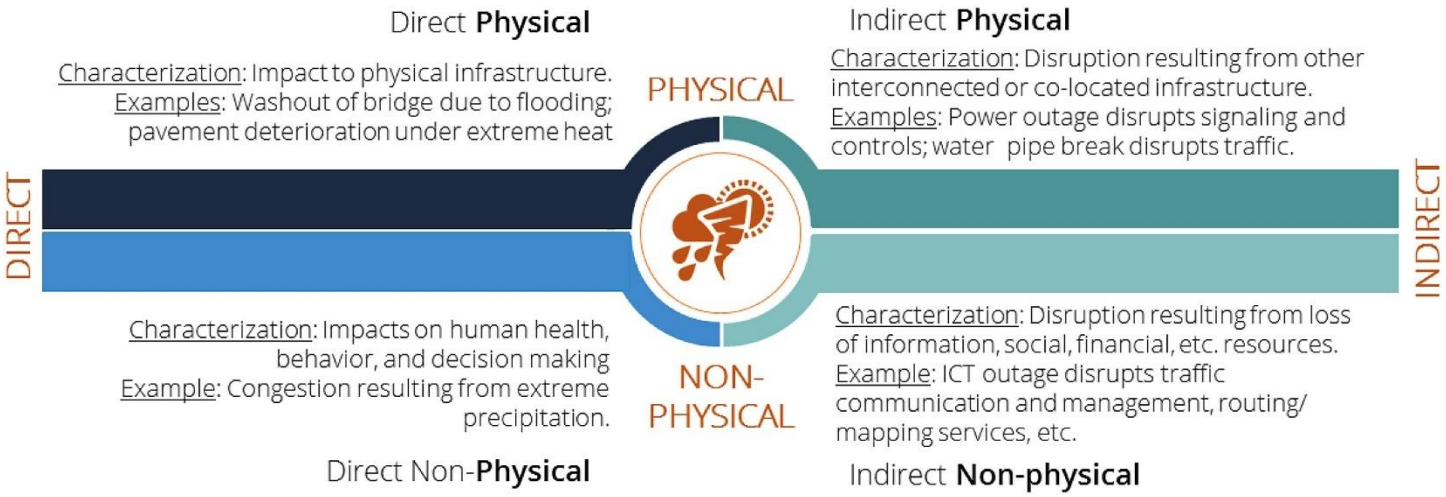


Transportation assets include three major highways such as Interstates 5 and 205 as well as Washington State Routes 14 and 500, transit centers that connect large swaths of the city with services via bus include the VA, 99th street, Fisher's Landing, Mill Plain, and Vancouver Mall Transit Centers. See Exhibit 68. Major roads that are considered part of the regional emergency transportation routes are shown in Exhibit 69 with several locations in floodplains such as Areas 1, 5, 6, and 7.

*Exhibit 69: Multimodal Transportation Assets in Vancouver*

Source: (Design Workshop, 2024)

*Exhibit 70: Regional Emergency Transportation Routes in Vancouver Area and Floodplains*



Source: (RDPO, 2024)

## Potential Impacts

Bike, pedestrian, and vehicular infrastructures are susceptible to roadway flooding and damage from extreme heat and precipitation that can impact the ability of residents to reach grocery stores, hospitals, and several other vital resources during climate related events. Examples of physical and non-physical transportation system impacts are described in Exhibit 70.

*Exhibit 71: Direct and Indirect Climate Change Impacts to Transportation Infrastructure*

Source: (Samuel A. Markolf, 2019)

Extreme precipitation can create roadway flooding hazards that have major impacts on transportation routes, damage infrastructure and increase maintenance and repair costs. These specific impacts are limited in exposure for a majority of the city per FEMA flood risk mapping (FEMA, 2021) and Vancouver's Annex to the 2023 Clark Natural Hazard Mitigation Plan (Clark Regional Emergency Services Agency, 2023), but can more severely impact the east and central areas as shown in Exhibit 17. Wildfire related hazards such as smoke and roadside brush fires could increase in likelihood and severity. These specific hazards can disrupt travel by increasing road closures from roadside brush fires near the wildland urban interface (Washington State Department of Natural Resources, 2024), and delaying time sensitive roadway maintenance for the sake of protection of outdoor workers (L & I, 2022).

Wildfire smoke events can create additional health impacts for vulnerable populations that may be dependent on transit and non-motorized transportation. In cases such as this, seeking medical attention can create additional exposures and worsen existing conditions. Additional information on wildfire smoke related health hazards can be found in the Health & Well-being section of this document. While exposure to wildfire smoke and extreme heat impact largely the same vulnerable segments of the population, there may be fewer

transportation resources and services available for vulnerable communities seeking refuge from poor air quality.

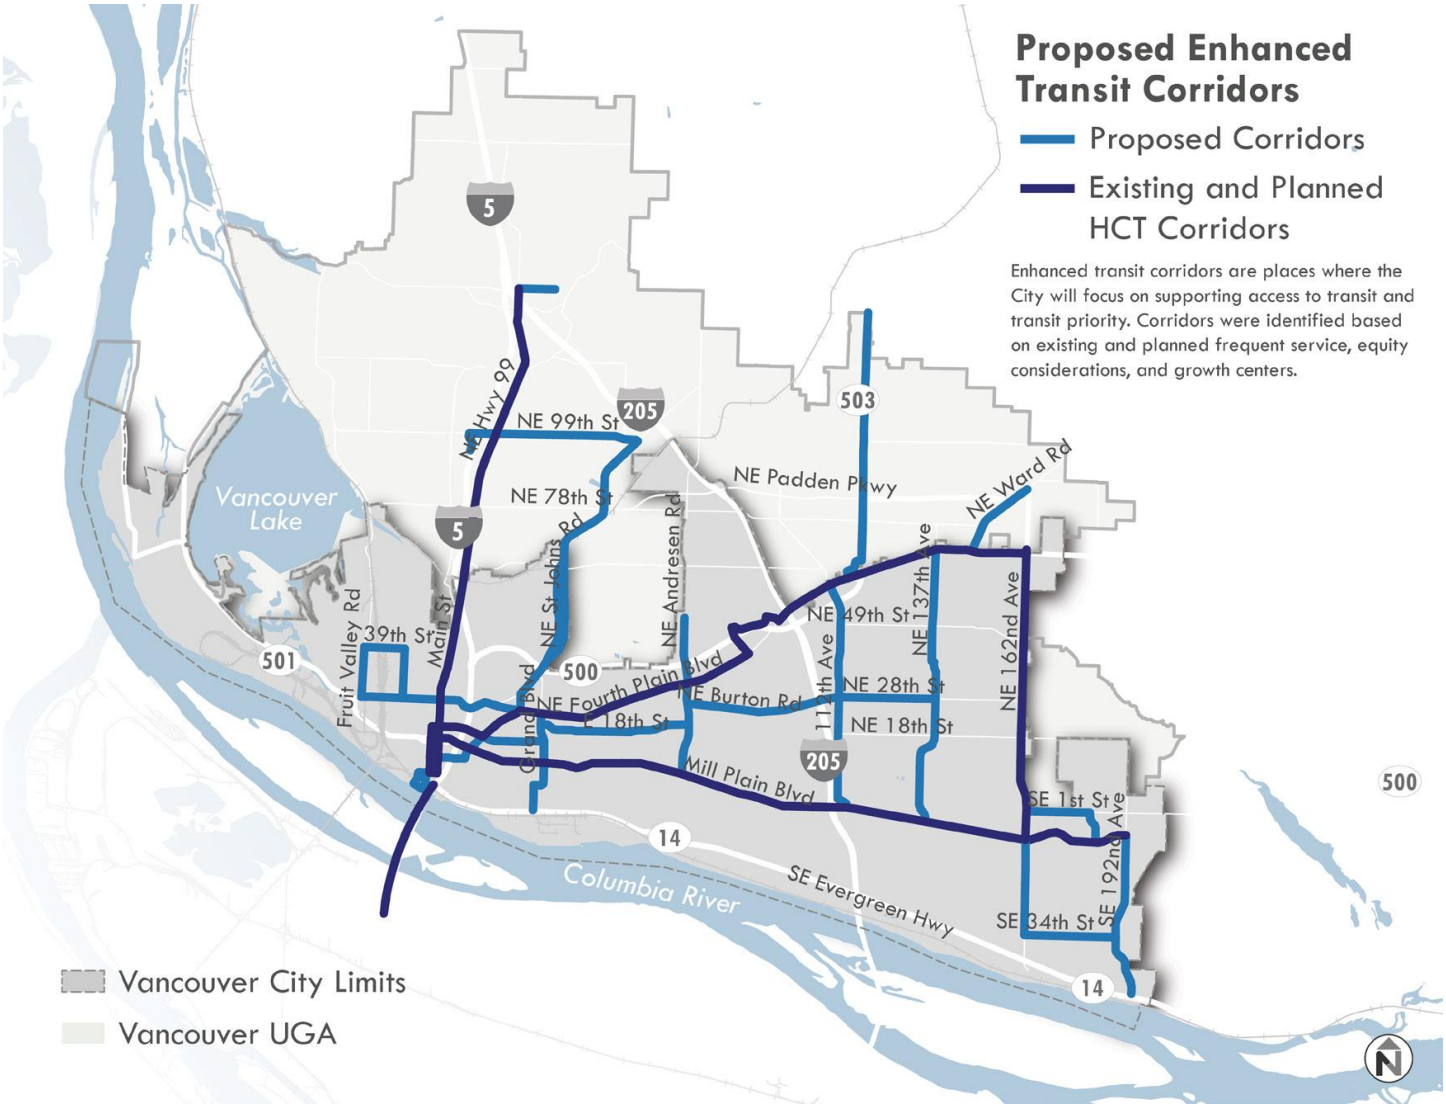
Extreme heat events may lead to roadway and sidewalk damage as a result of prolonged exposure of asphalt and concrete to extreme heat. The risk of this potential impact is low but the impact is quite high as it will increase maintenance requirements and costs while preventing effective transportation for emergency personnel or those needing to access their services (Fischels, 2021). Extreme heat can also put strain on public transportation assets during acute heat events both in infrastructure assets and in demand since public transportation is a common refuge for some low-income individuals as well as those needing to access emergency cooling shelters (City of Vancouver, 2024).

### Adaptive Capacity

Vancouver's transportation network is not particularly vulnerable to climate change related hazards when compared with other sectors.

However, the transit network does have a proportionally high number of capital facilities that are vital to the connectivity, health, and safety of the City that, if damaged, could result in severe disruptions to service provision and human health.

The City is at a low risk of erosion and severe riverine flooding impacting roadways, transportation facilities, and bike lanes per the City's 2023 *Natural Hazard Mitigation Plan*. Other hazards such as extreme heat, wildfire smoke, and extreme precipitation leading to acute stormwater flooding could inequitably limit transportation to areas of the city that already have transportation challenges. One example of this is the high potential for active trips (any travel that is not a single occupancy private vehicle) in areas at the highest risk for urban heat island effects. This could damage the potential for non-drivers to reach necessary services and also limit the impact of GHG reduction goals and policies that seek to reduce the overall VMT in personal vehicles and encourage active transportation.



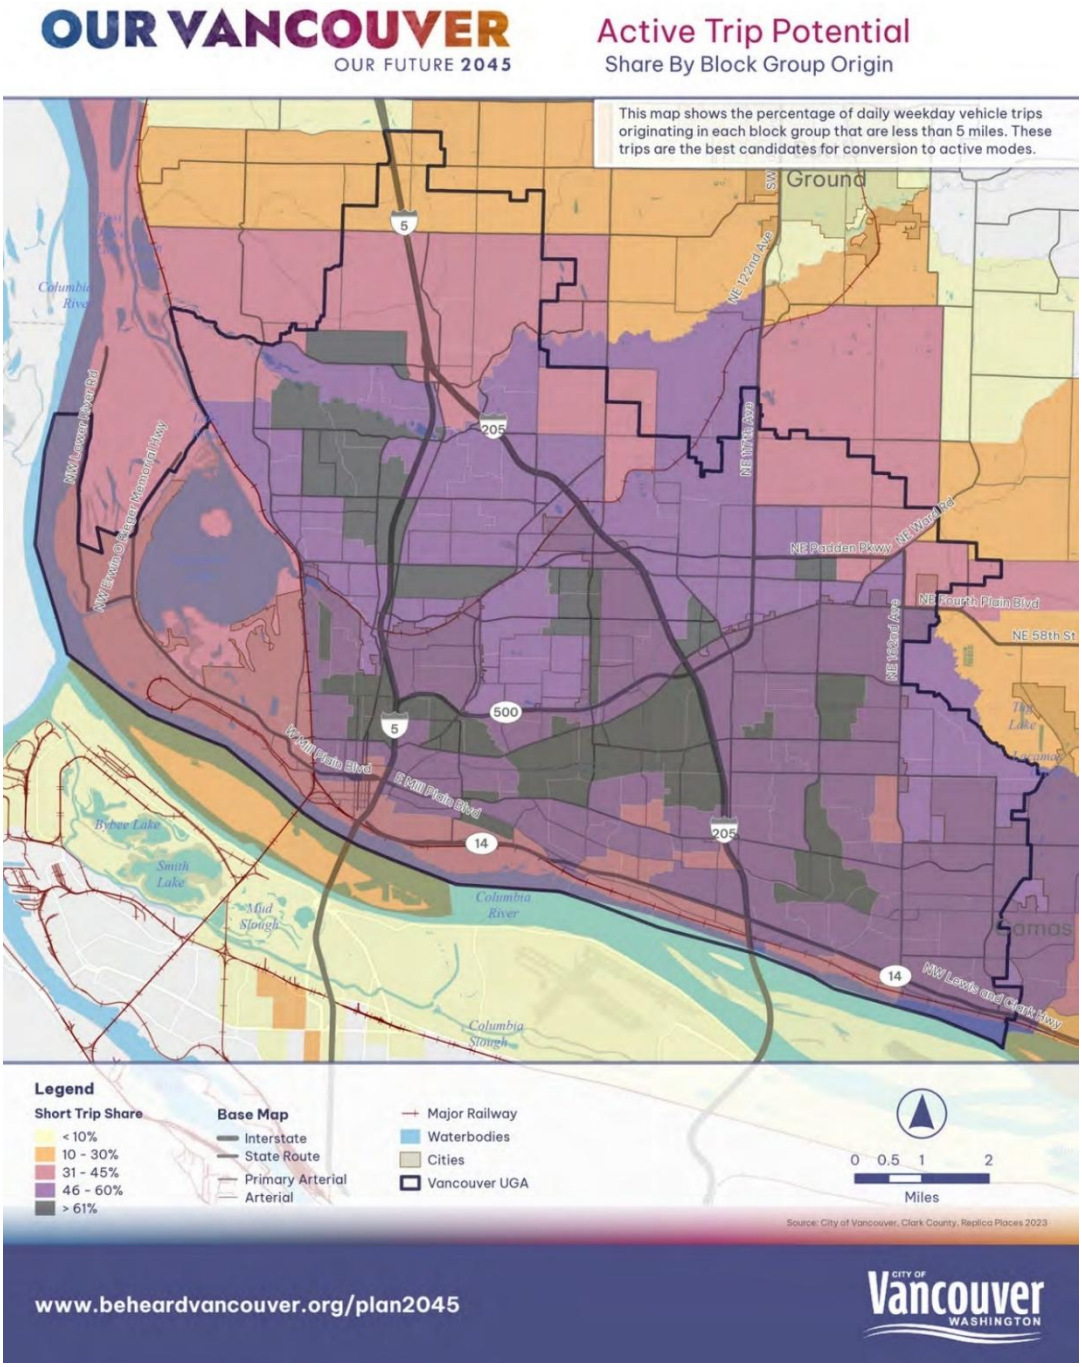
Commuters could be impacted by urban flooding with extreme precipitation, or a lack of power due to energy demand exceeding network capacity during extreme weather (e.g., heat dome). Emergency evacuations could disrupt both workers and residents. Regional emergency plans addressing cross county and cross state road networks are under update as described under Economic Development.

A summary of adaptive capacity (high and low) conditions are noted below:

- Transportation system access could be limited for several groups:
  - ➡ Non-drivers may be unable to access transportation infrastructure without risking exposure to climate hazards. For example, there may be public transit challenges during storm events. In addition, in East Vancouver, there are limited transit options. (City of Vancouver, 2025)Individuals with disabilities and mobility challenges may experience barriers to accessing cooling centers or other refuges during heat and smoke events without risking prolonged exposure. These challenges were reinforced through the Resilience Rising engagement in 2025, which identified inequitable access to resources like air conditioning, clean air shelters, and public cooling infrastructure in part due to transportation limitations for seniors, youth, and people with disabilities. (City of Vancouver, 2025)
  - ➡ Outdoor laborers working on transportation construction projects may have negative health impacts associated with prolonged exposure to wildfire smoke or extreme heat. As climate conditions worsen it is possible that fewer individuals are willing to work in the field of transportation construction which could increase overall costs and delay construction projects significantly without proper protections put in place.
- Plans, programs, and policies that can address climate impacts and improve resilience include:
  - ➡ Pedestrians and Bicyclists including access to transit:
    - Areas of the city such as in the east with more tree canopy cover are likely to experience lower, safer temperatures during extreme heat events. See Zoning & Development for more information by neighborhood.
    - Specific reference to “comfortable” last mile transportation to connect pedestrian and bike infrastructure with C-TRAN network to serve all communities’ transportation needs at each step of their journey even during adverse weather conditions.
    - Vancouver’s Climate Action Framework specifically seeks to mitigate inequity in C-TRAN network by shifting trips to active modes of transportation through network improvements targeted at transit dependent and historically poorly served communities in Vancouver.
    - C-TRAN has a policy of not turning anyone away riding to a cooling center.

- Transit System Sustainability and Resilience:
  - C-TRAN has a Sustainability Policy, and a transition plan to have zero-GHG emissions by 2043 by adding more electric buses. (C-TRAN, 2022)
  - Clark Regional Emergency Services Agency (CRESA) plans to partner with C-TRAN to identify climate-vulnerable infrastructure and retrofit it to ensure longevity of service and to reduce capital project needs.
  - Vancouver's Transportation System Plan identifies existing and planned transit routes. See Exhibit 71.

*Exhibit 72: Transit Corridors, Existing and Proposed*



Source:

Source: (City of Vancouver, 2023)

The City has planned for improvements to its bicycle and pedestrian system in the 2023 Transportation System Plan, but more connections could be made to increase active trips. See Exhibit 72,

*Exhibit 73: Active Trip Potential as a Share of All Vehicle Trips*

Source: Alta, 2024

The City's overall goals and strategies laid out in the Climate Action Framework (City of Vancouver, 2022) and the associated transportation sections of the Emergency Management Plan, coupled with implementation, would be adequate in alleviating the disconnect between areas with low overall access, areas with high active trip potential and areas that are more acutely impacted by climate hazards than elsewhere in the city. This contributes to high overall adaptive capacity to climate hazards both through proposed capital investments and through climate hazard risk reduction strategies.

### Vulnerability Summary

A summary of vulnerability for transportation is provided in Exhibit 73 below. Major regional transportation routes that are part of emergency evacuation routes are located in the Areas 2-8. Transit routes are more exposed to heat and smoke in Areas 2, 3b, and 6-8. Lake and river flooding is less likely to impact transportation facilities but urban flooding with extreme events could affect roadways and the residents, businesses, and commuters that rely on them in Areas 1, 2, 4, 5, 6, and 7. Newer street standards have been applied in more recently developed areas in areas 7 and 8.

All communities and businesses rely on different transportation modes and freight. Those with the most vulnerable populations due to disability or exposure to high-volume roads are highlighted below:

- Considering Census tracts with higher shares of people with disabilities who may be more dependent on transit or vehicular transportation and are in areas with higher exposure are in Areas 2, 4, and 8.
- Census tracts with higher climate exposure and proximate to high-volume roads are in Areas 5 and 8. Areas with Medium-High Exposure (including Higher Heat) along with Higher Health or Equity Disparities are in Areas 3b and 6.
- Census tracts with higher flooding potential and vulnerable populations are found in Areas 2, 4, and 8.

All Census tracts included on Exhibit 73 have at least one emergency route, and also have potential for active trips with improved connections for walking, biking, e-bikes, that can help provide redundancy in transportation modes to improve resilience.

*Exhibit 74: Vulnerability by Census Tracts – Transportation*

| Census Tract | Area | Heat Exposure | Flooding/ Precipitation Exposure | Smoke/Air Quality Exposure | Overall Exposure | Health Conditions | Equity Index | Persons with disabilities > 20% | Potential Active Trips | Traffic Proximity Greater than Average | Regional Transportation Routes |

## Gaps and Opportunities

### Engagement and Strategies to Improve Adaptive Capacity

The Clark County *Community Needs Assessment* found that transportation barriers to social services, health services, and employment was a significant concern in climate vulnerable population throughout Clark County (Clark County Public Health, 2024).

Based on engagement for Resilience Rising and interdepartmental efforts for the Adaptive Capacity Assessment in 2025, many transportation-related strategies were identified to address climate impacts and transportation barriers:

- When implementing public facility retrofits (e.g., HVAC upgrades, power redundancy), also consider proximity to public transit and walking paths. (City of Vancouver, 2025)
- Provide amenities like water fountains or misting stations at key transit centers during extreme heat events so riders can stay hydrated and cool. (City of Vancouver, 2025)
- Making [BRT] making stations into small oases – cooler, with seating, shade, and information – will improve safety and ridership during extreme weather. Prioritize upgrades at stations in heat-prone and socially vulnerable areas (for instance, stations along E. Fourth Plain in central Vancouver, which serves lower- income communities and sees high foot traffic). (City of Vancouver, 2025)
- Identify the chronic flood spots along each BRT route and invest in stormwater infrastructure to mitigate them. This could mean enlarging street culverts, adding extra storm drains, or regrading road surfaces so water doesn't pool in the bus lanes. (City of Vancouver, 2025)
- Integrate climate resilience into all future transit planning and investments. Pursue funding for more covered stations and cooling features as standard design

elements for new projects. The City and C-TRAN can also explore micro- transit or on-demand shuttles for extreme events. (City of Vancouver, 2025)

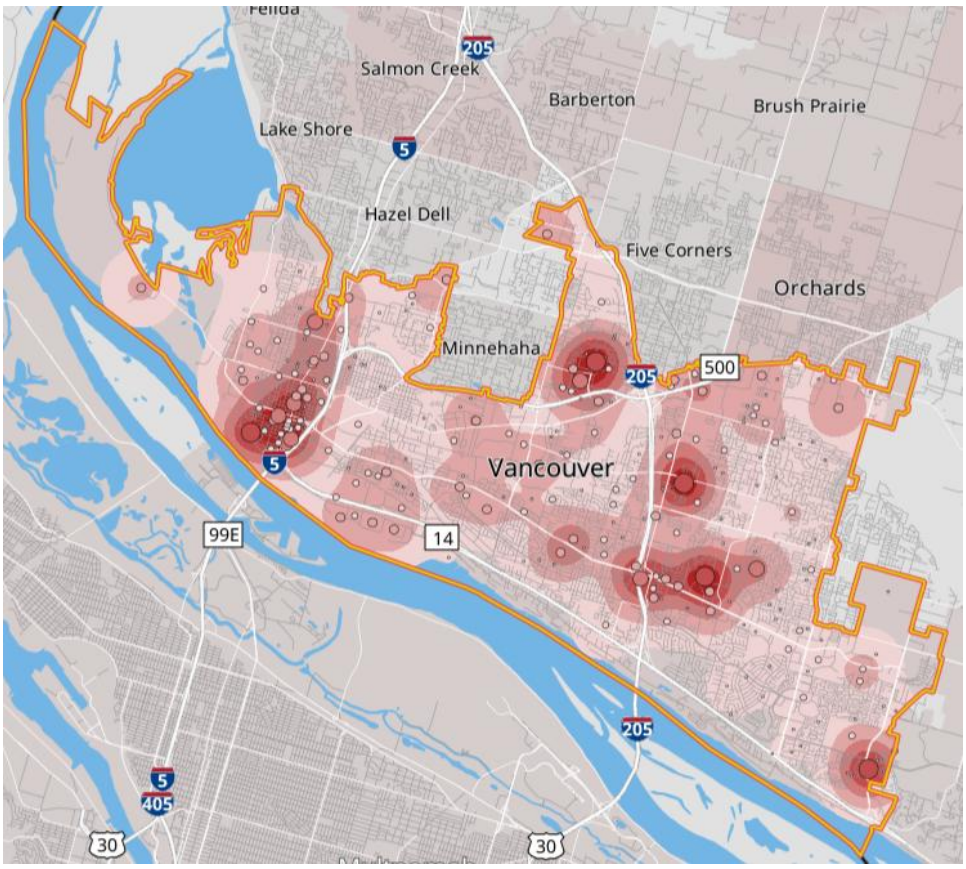
- Increase sheltered bus stops. By 2045, the aim is that no frequently used stop in a Category A or B tract (see Exhibit 4) is just a bare bench – all have some form of cover or tree shade. (City of Vancouver, 2025)
- At major transfer points or transit centers (like Vancouver Mall, downtown, or 99th Street Transit Center), provide cooling and air quality amenities. (City of Vancouver, 2025)
- Incorporate green stormwater infrastructure around bus stops to handle runoff and reduce flooding. (City of Vancouver, 2025)

### Policies

Vancouver's transportation policies are explicit about reducing VMT and would also help reduce GHG emissions and poor air quality. Some policies address the climate resiliency of transportation infrastructure in the event of climate emergencies.

Integrating the TSP policies and the Climate Action Framework objectives and strategies into the Comprehensive Plan would benefit climate mitigation, resilience, and equity as these policies were crafted with climate change in mind.

# Waste Management



## Sector Overview and Assets

The City of Vancouver waste management system is necessary for daily commercial and residential refuse collection and sorting as well as debris clearing during and after extreme weather events. Assets include waste hauling personnel, transfer stations, and heavy rail infrastructure for export from transfer stations to long term waste storage.

The City's solid waste services are contracted to Waste Connections and requires service in all residential areas. Waste hauling requires reliable and safe transportation infrastructure to reach all solid waste customers.

Waste management-related jobs are shown in Exhibit 76, and are primarily found in Areas 2, 3b, and 7. The West Vancouver transfer station is located in Area 1. The Central Transfer and Recycling station is located in the UGA north of Area 7, and a third Washougal Transfer Station is found east of Vancouver.

*Exhibit 76: Waste Management and Remediation Services Jobs in Vancouver, 2022*

Source: Census on the Map, 2022.

## Potential Impacts

Waste management providers in the city do have a low overall risk to service provision due to climate related hazards but are impacted by climate adaptation in other sectors. Transportation network interruptions from roadway damage, flooding, and debris can hinder services and create significant workload increases following climate hazard events. The threat of extreme heat can also increase instances of roadway debris that need to be cleared as part of emergency response.

A summary of potential impacts is shared below:

- Extreme Precipitation
    - Extreme precipitation can impact roadways and other physical waste management assets throughout the city such as transfer stations and hazardous waste storage that has not yet been safely transported to a transfer station.
    - Impacts to waste collection and increases in debris clearing on roadways and on private property.
- Extreme heat
    - Though extreme heat is not directly identified as a threat to waste management assets in the city (UW Climate Impacts Group, 2024), waste haulers are predominantly outdoor laborers and extreme heat can significantly impact their ability safely and effectively service their waste collection routes
- Wildfires and wildfire smoke
    - Waste haulers are predominantly outdoor laborers and wildfire smoke can significantly impact their ability safely and effectively service their waste collection routes.
    - Related to transportation infrastructure, roadside brushfires can impact roadways and delay clearing certain debris for the safety of solid waste staff.

## Adaptive Capacity

Programs that address the resilience of the waste management system include debris management elements of the City's Emergency Operations Plan.

- Debris management is included in Vancouver's Emergency Operations Plan (City of Vancouver, 2018) and the Regional Disaster Debris Management Plan and regional Natural Hazard Mitigation Plan.

*The City of Vancouver Annex outlines a strategy for managing disaster debris operations and assigns critical response roles and responsibilities. It also provides a timeline of activities based on normal, pre-event, response, and recovery time periods; and includes extensive pre-event messaging and implementing documents. Potential Debris Collection Sites have been identified and surveyed. (Clark Regional Emergency Services Agency, 2023)*

- Extreme heat and wildfire smoke protections for outdoor workers provided by Washington State Department of Labor and Industries (L & I, 2022) would apply to waste management employees.
- Increases in tree canopy cover could improve outdoor worker resilience to extreme heat but could also increase roadway debris and strain existing staff and equipment resources.

Capital assets such as the transfer stations and roadway infrastructure to transport sorted solid waste to landfills and recycling plants are resilient to worsening climate hazards as they provide redundant services. This means that if one transfer station is damaged or is out of commission for a climate related hazard the other two have the capacity to service waste haulers, residential customers, and special item drop offs. There are also a large number of sorting facilities and transfer stations outside of city limits that can effectively service these customers but are not technically a part of the City of Vancouver waste system.

## Vulnerability Summary

Waste facilities, including a Transfer Station, are located in Area 1 with medium-high heat exposure and higher flooding/precipitation exposure. Waste-related jobs are focused in Areas 2, 3b, and 7 with areas of medium-high and higher heat exposure. See Exhibit 16 and Exhibit 76. Heat in particular would affect outdoor facilities and workers. Facility vulnerability is less than for outdoor workers associated with waste management.

*Exhibit 77: Risk Summary – Waste Management*

Sources: BERK, 2025.

## Gaps and Opportunities

### Engagement

Engagement with communities in Vancouver is ongoing in the form of waste reduction strategies and proper waste sorting. Materials on proper waste disposal and hazardous waste are available to all residents online and several free classes exist. Engagement activities could reinforce existing programs as well as offer additional engagement helping property owners and homeowner associations understand the importance of clearing stormwater infrastructure of debris.

### Policies and Strategies to Improve Adaptive Capacity

A policy audit of city and regional plans contained several explicit policies related to Waste Management. A majority of the policies address the holistic cycle of consumption and production as well as providing opportunities to reduce emissions at the consumer level from landfilled waste.

Additional waste management policies should address weather related debris management, continued service delivery, and ensured system redundancy during a climate emergency.

A broad policy could address emergency responses and services:

- Disaster Recovery and Emergency Response: Develop plans and resources to ensure effective emergency response and equal access to emergency services and recovery resources, mitigating risks from natural disasters, climate-related hazards, and social hazards. (Policy 43)

A recommendation of the Adaptive Capacity Assessment called for this implementation action for Policy 43:

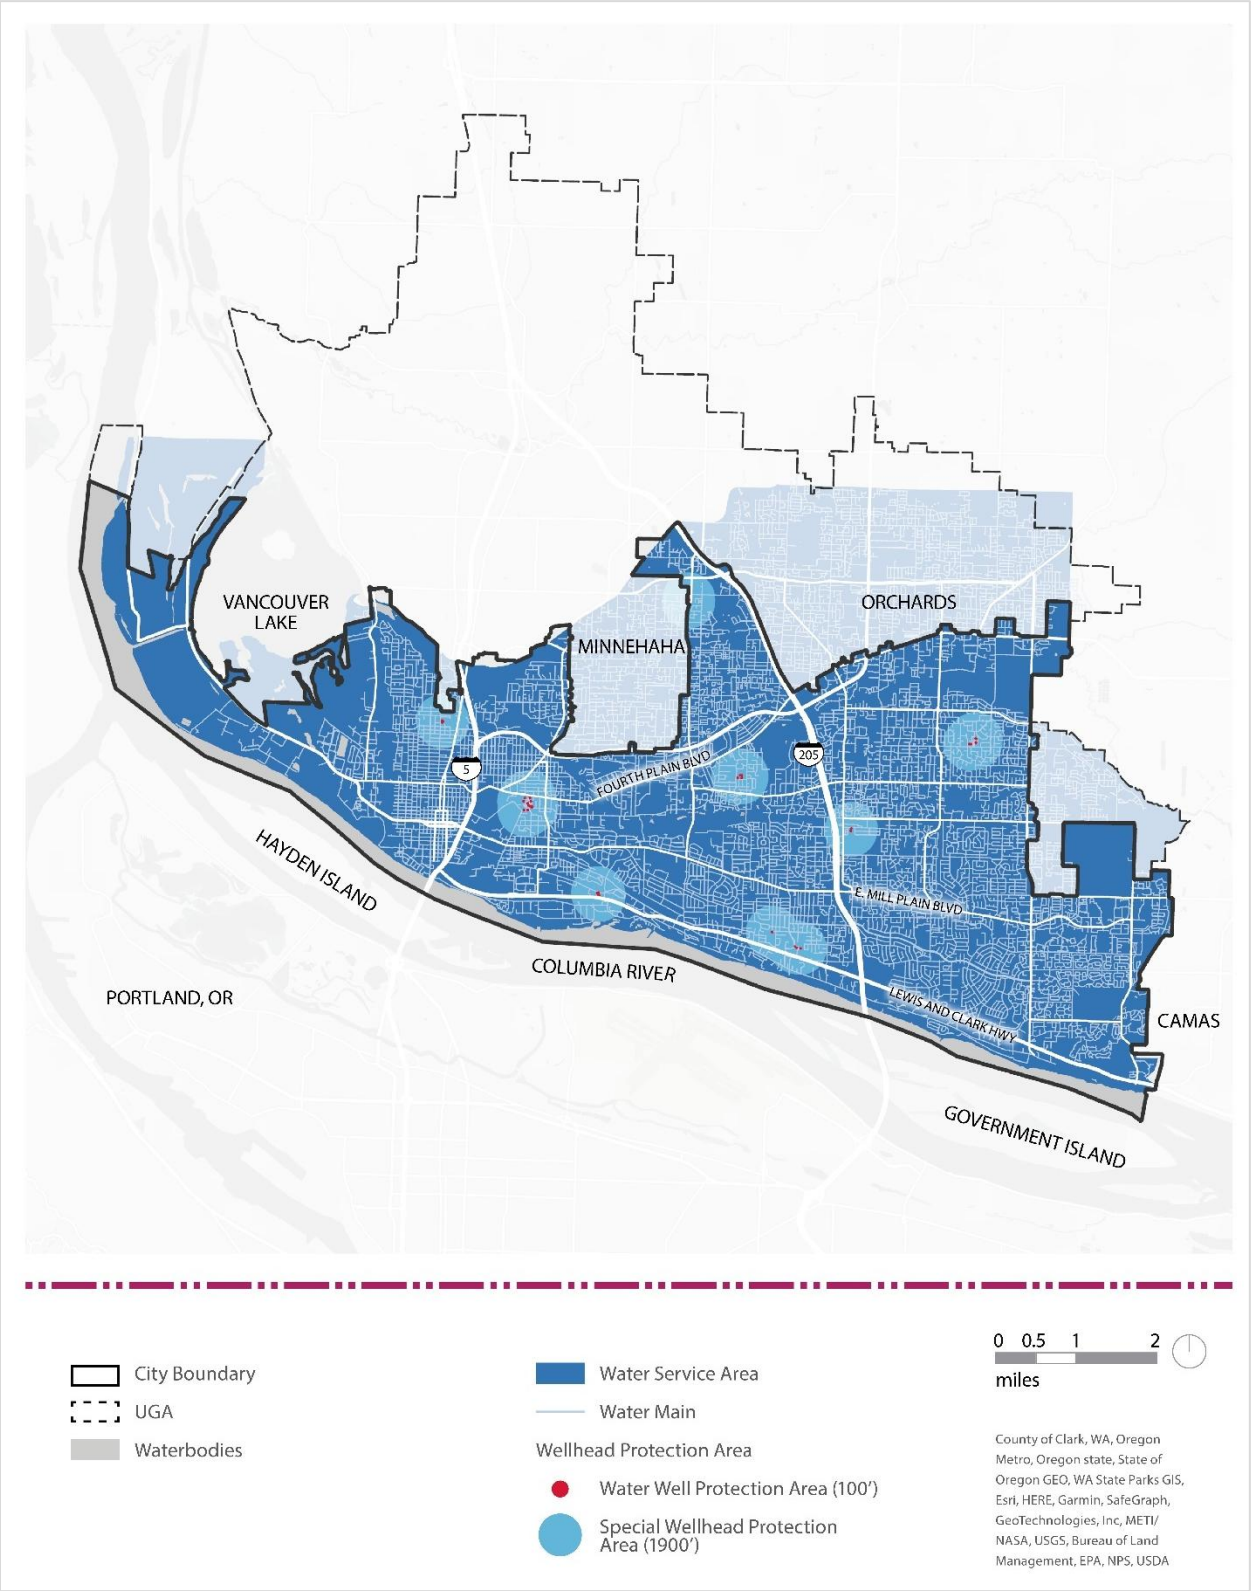
- Institutionalize climate vulnerability data into emergency response planning—including evacuation, debris management, and contingency protocols for essential services. (City of Vancouver, 2025)

# Water Resources

## Sector Overview and Assets

This section addresses Vancouver's water, wastewater, and stormwater systems relying on the City's system plans.

### Water System



Vancouver provides water protection, treatment and management serving more than 270,000 people within the City and a portion of the urban unincorporated area, covering a 72-square-mile service area. See Exhibit 78. The system includes 9 water production stations, 40 wells, 52 booster pumps, more than 1,100 miles of pipes, and more than 77,000 service connections (water meters). (City of Vancouver, 2024)

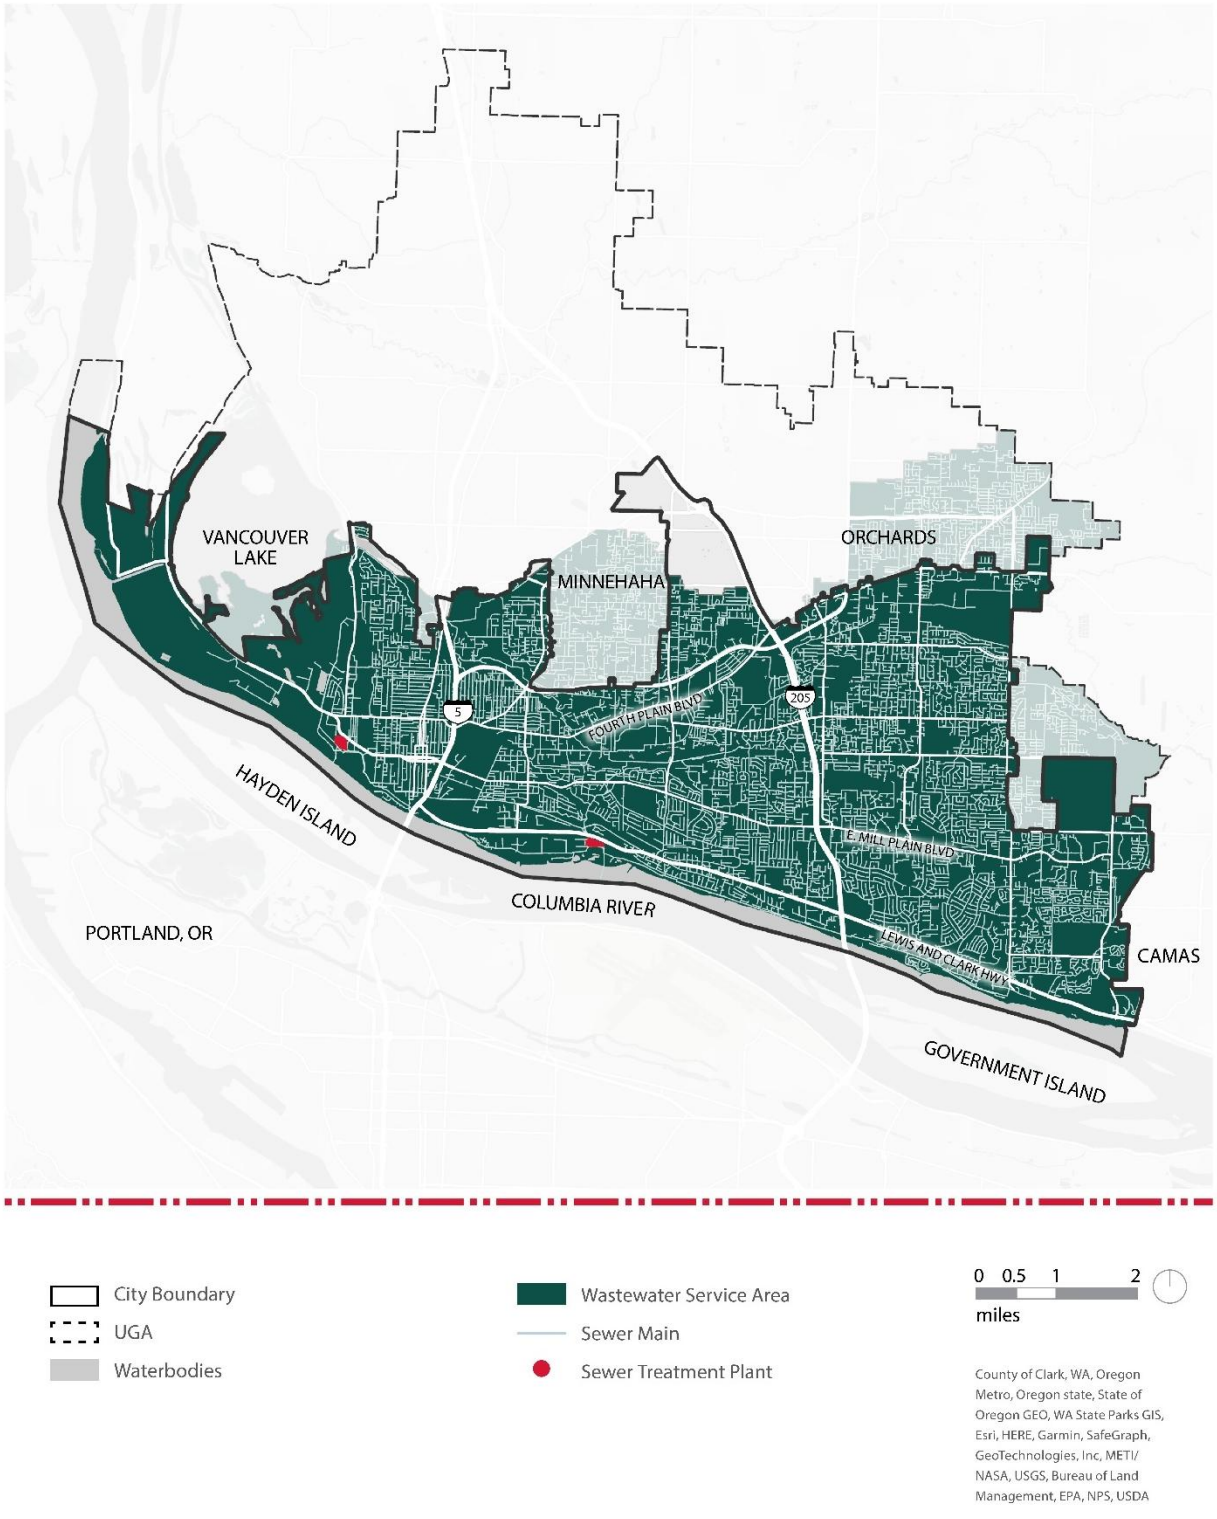
Vancouver's water supply comes from underground aquifers under the city and county. It is a sole source aquifer called the Troutdale Aquifer System Area. (US EPA, 2024) Treated groundwater is stored in reservoirs and elevated tanks. Stored water is gravity fed or pumped to pressurize the distribution system. (City of Vancouver, 2015) The City protects groundwater through a wellhead protection program and limits activities that could contaminate critical aquifer recharge areas.

While groundwater is the primary source of water, watershed plans have recommended sourcing water from the Columbia River:

> *Vancouver has been active in the WRIAs 27 and 28 planning effort. The Salmon-Washougal and Lewis Watershed Management Plan (WRIA Plan) was adopted in 2006. The WRIA Plan addresses a range of issues related to water resources, including water supply, stream flow management, water quality, and fish habitat. It reviews alternative approaches for managing water resources in the area and recommends select strategies for implementation. The WRIA Plan discusses Vancouver's sources of supply and projected needs and identifies groundwater in the Vancouver Lake lowlands as a major new source of regional supply. Given this regional source of supply, the WRIA Plan recognizes that Vancouver's regional supply may play a role in assisting other communities within Clark County to meet future demand. The WRIA Plan also encourages new developments and industrial facilities to rely on the City's existing public water system. (City of Vancouver, 2015)*

*Exhibit 78: Vancouver Water System*

Source: (Design Workshop, 2024)



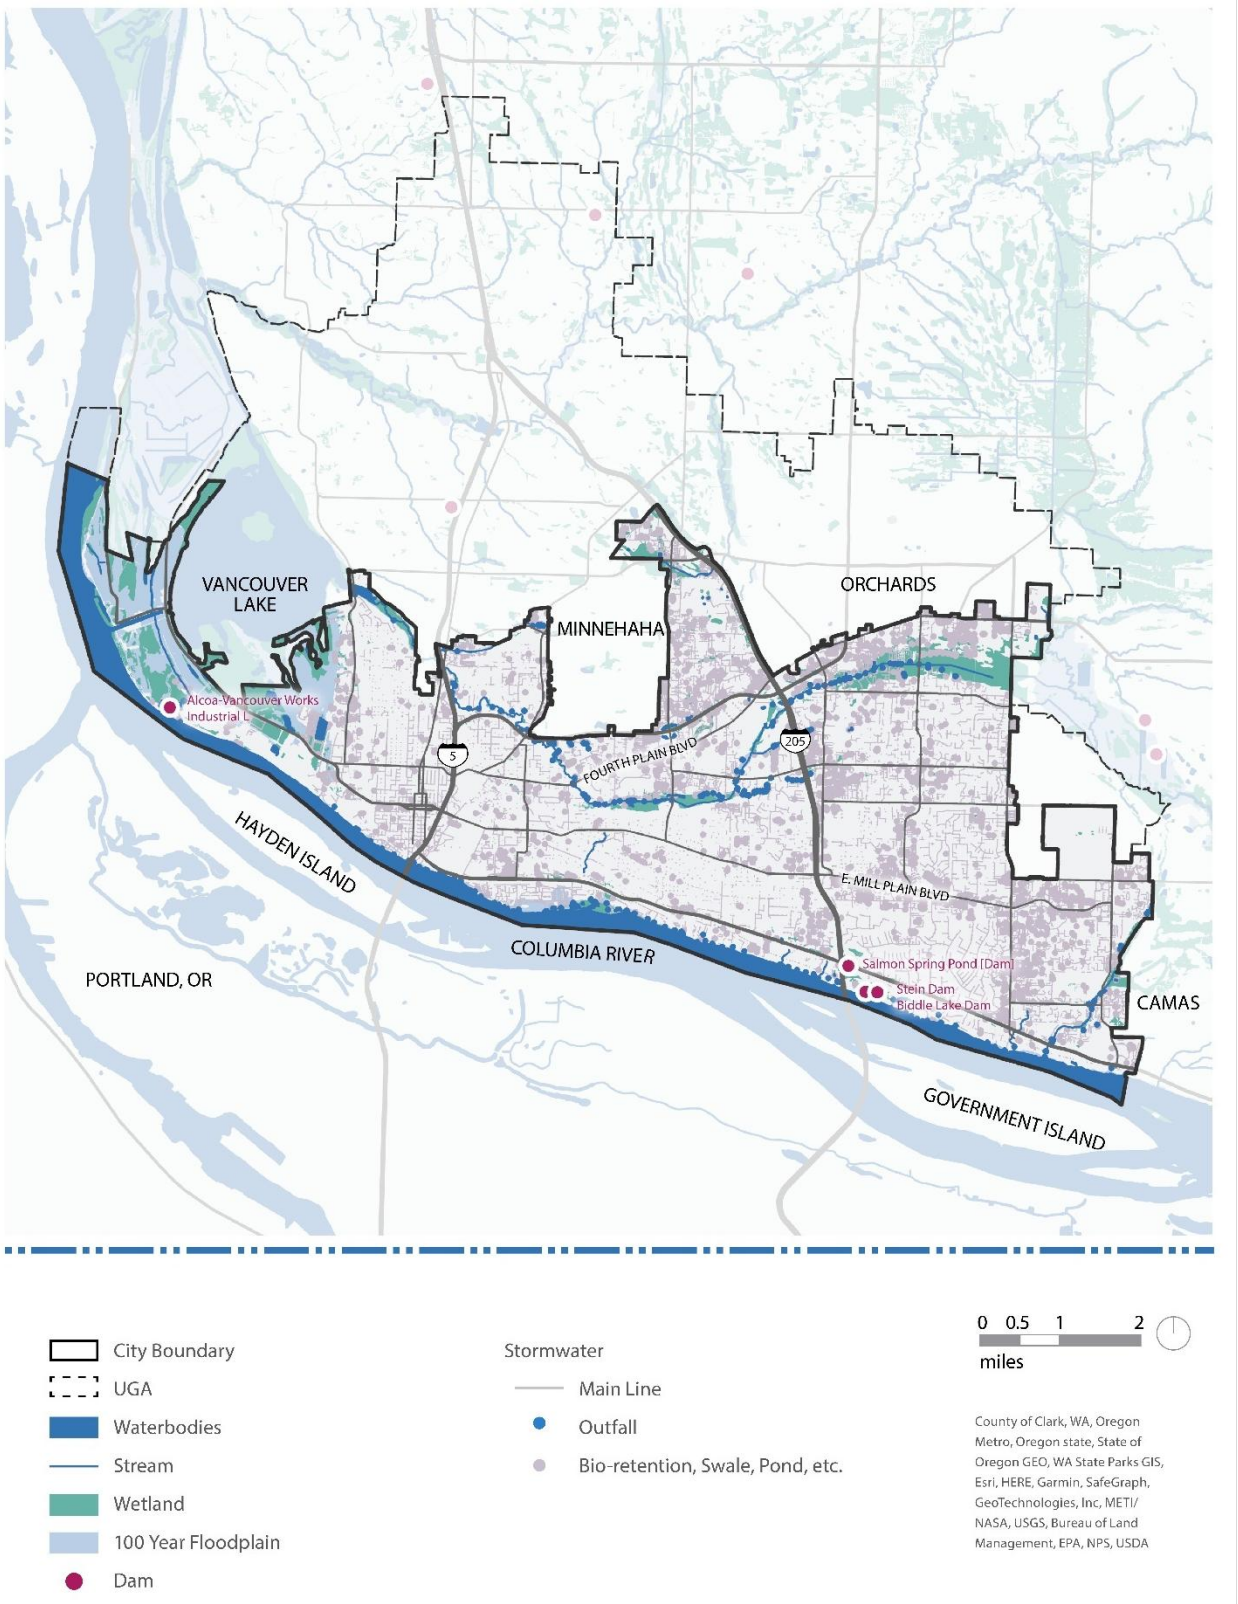
Vancouver's Water System Plan also considers watershed plan recommendations and state rules that identify subbasin closures to additional ground or surface water withdrawals:

> *The City is located in the Burnt Bridge Creek subbasin. Portions of the service area and UGA are located in the Salmon Creek and Lacamas Creek subbasins. Instream flows have been set in each of the City's three subbasins. The subbasins have been closed to further surface water and groundwater withdrawals, except limited situations provided in WAC 173-528-080 and the designated "regional supply areas." The Vancouver Lake Lowlands Area has been designated a "regional supply area." The City has a small (0.2 cfs) reservation of water in Burnt Bridge creek for future use. (City of Vancouver, 2015)*

### Wastewater System

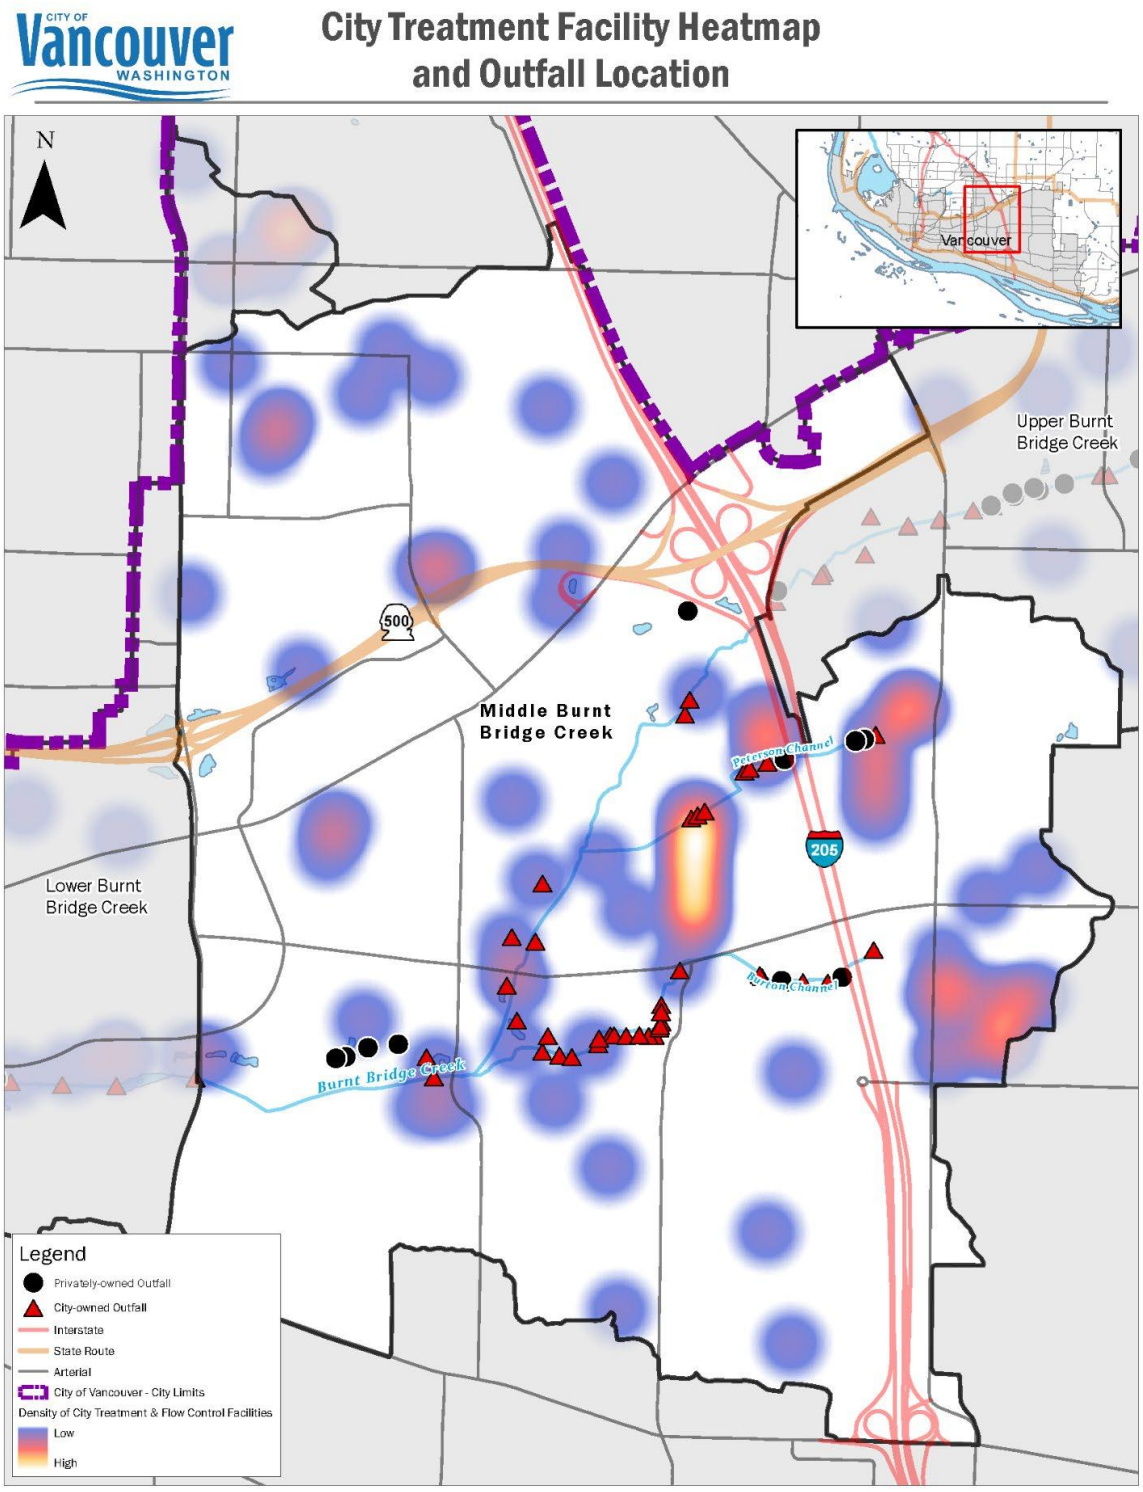
Vancouver provides a wastewater collection system serving 244,000 residents in a 58.6 square mile area, with 791 miles of sewer lines and 48 pump stations. See Exhibit 79. The City also has two wastewater treatment facilities. The City has partnered with the Clark Regional Wastewater District. Even with an extensive system some properties are still using septic systems and the City offers incentives to hook up to sewers with affordable financing, which can help improve water quality. (City of Vancouver, 2024) The Climate Action Framework calls for reducing per capita water usage and operate the wastewater treatment system more efficiently. (City of Vancouver, 2022)

*Exhibit 79: Vancouver Wastewater System*



Source: (Design Workshop, 2024)

### Stormwater System



The City has a Stormwater, Surface Water and Groundwater Utility. Vancouver has 400 miles of stormwater pipelines and 16,000 catch stormwater drains. See Exhibit 80. The City manages both natural and built stormwater systems to manage water quantity and quality and avoid non-point pollution and unmanaged runoff. (City of Vancouver, 2024) The City applies stormwater rules to new development and prioritizes low impact development best management practices. The City has identified some priorities in a Stormwater Management Action Plan in 2023 for Middle Burnt Bridge Creek, with a goal of lower stream temperature, increase dissolved oxygen and reduce bacteria. (City of Vancouver, 2024) (City of Vancouver, 2023) The Climate Action Framework promotes stormwater infiltration and rainwater reuse. (City of Vancouver, 2022)

*Exhibit 80: Stormwater System*

Source: (Design Workshop, 2024)

*Exhibit 81: Priority Stormwater Management Action Plan Sub-basin*

Source: (City of Vancouver, 2023)

## Potential Impacts

### Drought

There has been a persistent drought since 2019, easing in 2023, but in 2024 a statewide drought was declared. (Bumbaco, 2024) This drought applies in Clark County and nearly the entire state except for parts of King, Pierce, and Snohomish County. (Washington Department of Ecology, 2024)

The University of Washington Climate Impacts Group has summarized potential impacts due to changes in annual and late summer precipitation associated with extreme precipitation and drought:

- Changes in the timing and intensity of precipitation and increases in water demand and evaporation could offset increases in groundwater recharge due to more annual precipitation.
- Less summer precipitation is expected to contribute to summer water shortages for commercial and residential uses. Water quality may also decrease with less summer input and associated warmer water temperatures.
- More frequent and severe droughts due to low summer precipitation have the potential to increase voluntary or mandatory conservation requirements and water use restrictions.
- Less streamflow in the warm season is expected to increase dependence on stored water and reduce water available for residential and commercial uses.
- Warmer temperatures are expected to increase water demand and energy demand for cooling. (Raymond, 2022)

### Wildfire

Wildfire risk is relatively limited in Vancouver per the *Hazard Mitigation Plan*. (Clark Regional Emergency Services Agency, 2023) Climate change mapping shows a relatively greater probability in western and central Vancouver and less in the east or north. A potential impact of increased wildfire likelihood could affect water resources such as:

- More frequent wildfires have the potential to damage water distribution infrastructure and reduce water quality in reservoirs due to more runoff, erosion, and turbidity. Changes in water quality could increase the need for water treatment and filtration. (Raymond, 2022)

### Extreme Precipitation and Flooding

There would be increased demand on stormwater management systems. The *Natural Hazard Mitigation Plan* indicates that there are several areas in Vancouver already experiencing

shallow flooding. Areas already experiencing urban flooding could have more frequent or severe flooding with extreme precipitation events.

> *There are a number of areas in the community that experience seasonal, shallow urban flooding during prolonged periods of high precipitation. This can impact mobility as well as threaten life and property. Drainage and/or infiltration structures and pipes may become blocked by excess water, debris, sediment, landslides, or volcanic ash. Hazardous material spills may move off-site and contaminate downstream locations if not property managed. (Clark Regional Emergency Services Agency, 2023)*

Locations identified as having riverine and urban flooding concerns were identified in the 2025 Adaptive Capacity Assessment and 2025 Resilience Rising engagement.

*Exhibit 82: Flooding and Drainage Concern Areas*

| Location | Description of Urban Flooding |
|---|---|
| Wastewater Treatment Plant | Potentially vulnerable to riverine flooding from the Columbia River (ACA p. 31). |
| Fruit Valley and Fourth Plain | Locations facing barriers to climate-adaptive transportation and cooling access (ACA p. 39).<br>Fruit Valley residents described frequent flooding and clogged storm drains (Resilience Rising, p. 5) |
| Fourth Plain BRT Line | On the Fourth Plain BRT line, which runs through some older, low-lying neighborhoods, chronic street flooding has already been noted at certain intersections – these incidents are likely to worsen with climate change. (ACA, p. 8) |
| Burnt Bridge Creek Watershed and Locations along Fourth Plain and Hwy 99 | Flood-prone areas in Vancouver include low-lying neighborhoods along creeks (like parts of the Burnt Bridge Creek watershed), areas with high groundwater, and pockets with poor drainage (such as some intersections along Fourth Plain or Hwy 99 that flood in big storms). (ACA, p. 22)<br>Also cited as an area of water quality concern and potential risk for library branches located near it (pp. 12, 15, 30).<br>City has developed a Stormwater Management Action Plan (SMAP) for Burnt Bridge Creek. (ACA, p. 22) |
| Areas with High Groundwater | A contributing factor to stormwater challenges, though not tied to a specific location (ACA, p. 31). |

Sources: Adaptive Capacity Assessment (ACA), Resilience Rising, City of Vancouver 2025

## Adaptive Capacity

The City has a 2016 water system plan amended in 2022, and the City anticipates updating it by 2026. The current water system plan does not address climate change projections and anticipates it would occur in the next update. HB 1181 requires water system plans to address climate resilience in updates after 2025.

> *No changes to demand projections were made for the 20-year planning period to account for potential climate change due to the uncertain magnitude and timing of local effects, and the difficulty in correlating historical climate and demand data. It is recognized that demands have the potential to increase in the future given anticipated climate changes. The City may want to develop a model to better track demands with temperature and rainfall for future demand planning. Additionally, it may be beneficial for the City to participate in regional climactic studies to qualify and quantify potential local climate impacts. (City of Vancouver, 2015)*

Increased stormwater and precipitation events could adversely affect septic systems not yet connected to the sewer system and impact water quality. Extreme precipitation could also impact wastewater treatment facilities (overflow).

The City has stormwater plans and regulations in place and regularly updates them to meet federal requirements (NPDES). Standards for new stormwater facilities sized to address extreme precipitation have not been developed. The 2025 Adaptive Capacity Assessment has proposed a strategy to expand the capacity of stormwater systems including updated rainfall intensity forecasts and to design for projected storms rather than historic storms. (City of Vancouver, 2025)

## Vulnerability Summary

A summary of vulnerability for water resources is provided in Exhibit 82 and Exhibit 83 below. It is largely driven by flooding exposure and stormwater quality affecting vulnerable communities.

*Exhibit 83: Vulnerability by Census Tracts – Water Resources*

| Census Tracts | Area | Heat Exposure | Flooding/ Precipitation Exposure | Smoke/Air Quality Exposure | Overall Exposure | Health Conditions | Equity Index | SMAP |
|---|---|---|---|---|---|---|---|---|
| 53011042300 | 2 | Medium-high | Medium-high | Medium-high | Higher | Higher | Medium-high | |

| Census Tracts | Area | Heat Exposure | Flooding/ Precipitation Exposure | Smoke/Air Quality Exposure | Overall Exposure | Health Conditions | Equity Index | SMAP |
|---|---|---|---|---|---|---|---|---|
| 53011042400 | 2 | Higher | Higher | Higher | Higher | Higher | Higher | |
| 53011041111 | 3b | Medium | Medium-high | Medium-high | Medium-high | Higher | Higher | |
| 53011041113 | 3b | Higher | Medium-high | Medium-low | Medium-high | Higher | Higher | X |
| 53011041114 | 3b | Medium | Medium-high | Lower | Medium-high | Higher | Higher | X |
| 53011041600 | 4 | Medium-high | Higher | Medium | Higher | Higher | Higher | |
| 53011041700 | 4 | Medium | Medium-high | Medium-high | Medium | Higher | Medium-high | |
| 53011042700 | 4 | Medium-high | Higher | Medium-high | Higher | Higher | Higher | |
| 53011041205 | 6 | Medium-high | Higher | Medium-high | Higher | Medium-high | Higher | X |
| 53011041312 | 7 | Higher | Higher | Medium | Higher | Medium-high | Higher | |
| 53011041313 | 7 | Medium-high | Medium-high | Medium | Medium-high | Medium-high | Higher | X |
| 53011041320 | 8 | Medium-high | Medium-high | Medium-high | Higher | Medium-high | Medium-high | |
| 53011041322 | 8 | Higher | Higher | Higher | Higher | Medium-high | Higher | |
| 53011041323 | 8 | Higher | Higher | Higher | Higher | Medium-high | Higher | |
| 53011041329 | 8 | Medium-high | Higher | Higher | Higher | Lower | Medium-high | |

## Gaps and Opportunities

### Engagement and Strategies to Improve Adaptive Capacity

Through an interdepartmental engagement effort in an Adaptive Capacity Assessment and a community engagement process through Resilience Rising, a number of adaptive capacity strategies were developed:

- Fortify the wastewater treatment plant against flooding from both river rises and surface runoff. Enhance the wastewater treatment plant's (WWTP's) capacity and

flexibility to handle more variable flows and conditions. Guarantee an uninterruptible power supply for the WWTP. (City of Vancouver, 2025)

- Mitigate the risk of heavy rain overwhelming the WWTP by reducing how much stormwater gets into the sanitary sewers in the first place. This means continuing programs to detect and fix sewer leaks (lining or replacing old sewer pipes that crack and let groundwater in) and disconnect improper storm drain connections. (City of Vancouver, 2025)
- Have robust alert systems for neighborhoods around the WWTP and downstream along the river – if there's an unplanned discharge or issue. (City of Vancouver, 2025)
- Expand Capacity of Stormwater Systems: Upgrade the stormwater mains, culverts, and channels to accommodate larger storm events. This involves identifying the key bottlenecks in the system – e.g., a culvert under a road that frequently overtops, or a stretch of pipe that causes backups – and upsizing them. Use updated rainfall intensity forecasts (taking into account climate change) to set new design standards. (City of Vancouver, 2025)
- Green Infrastructure and Infiltration: Reduce the burden on piped systems by capturing runoff naturally at the source. Expand use of green infrastructure such as bioswales, rain gardens, permeable pavements, and green roofs across the city. (City of Vancouver, 2025)
- Increase inspection and maintenance of the stormwater system to ensure it functions at peak capacity when storms hit. (City of Vancouver, 2025)
- Use land use planning to improve stormwater outcomes. Preserve and restore natural floodplains and wetlands that can act as safety valves for floodwaters. (City of Vancouver, 2025)
- Explore advanced solutions like smart stormwater management technologies. (City of Vancouver, 2025)

The pending water system plan update due in 2026 will be an opportunity to engage residents and business owners in the integration of climate resilience into the plan. Ongoing watershed planning unit participation will dovetail water supply needs with watershed protection.

Interdepartmental and public engagement to further identify areas currently experiencing or at risk of urban flooding could help stormwater adaptation efforts.

A relatively large number of septic systems continue to be mapped by Clark County GIS in Vancouver's city limits. Integrating Clark County Public Health into engagement efforts could help support clean water and septic system decommissioning and link Vancouver's wastewater system implementation efforts with public health.

### Policies

Based on a policy evaluation, some areas identified to improve policies include:

- Amending existing water quality policies or add a new one to address climate related impacts to water quality and adaptation.
- Amending stormwater system policies to add need to address climate change impacts, e.g., vegetation type, facility sizing, etc.
- Addressing how improvements to utilities to address climate change (e.g., enhanced energy efficiencies with wastewater treatment, use of renewable fuels) will be addressed in rates considering overburdened communities.

The **OUR VANCOUVER 2045** plan addresses water quality, stormwater systems, and renewable energy:

- Stormwater Management: Improve water quality, protect watersheds and reduce flood risks by promoting groundwater infiltration, reducing runoff, and advancing effective stormwater best management practices. (Policy 136)
- Support the Use of Renewable Energy: Encourage new renewable energy infrastructure and promote development of storage systems to ensure a stable, resilient, and sustainable energy grid. (Policy 151)

## Zoning & Development

The Zoning & Development sector addresses Vancouver's urban design including land use and design. This section reviews Vancouver's:

- Land Use Plan & Zoning
- Shoreline Master Program
- Transportation system plan
- Urban forestry program
- Draft Green Building Strategy

### Sector Overview and Assets

#### Site Use and Zoning

Downtown is the central hub of Vancouver with a walkable historic core, hospitality, offices, and civic and institutional uses. Commercial corridors include Fourth Plain Blvd and East Mill Plain Blvd. The remainder of the community is largely zoned for single family development. Vancouver has a public waterfront designed for commercial and recreational purposes. Other shorelines host industrial businesses. See Exhibit 84 and Exhibit 85.

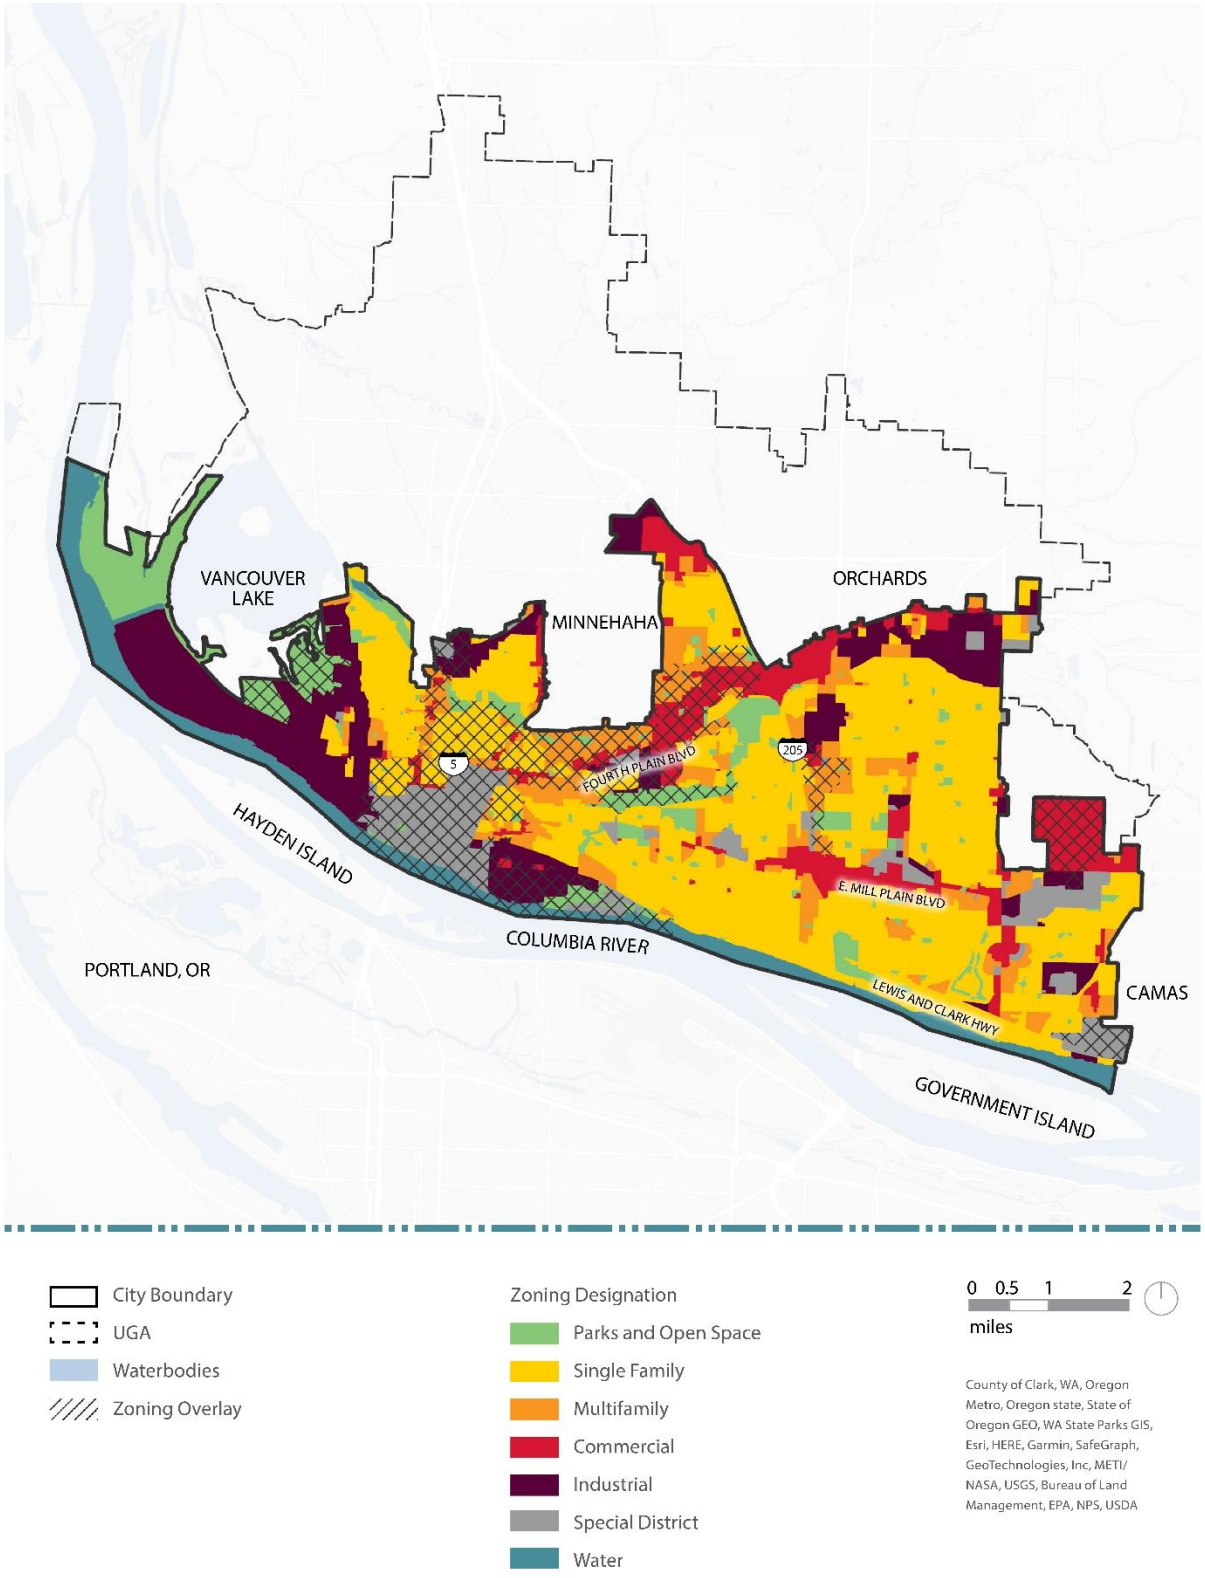
*Exhibit 85: Example Development Character and Neighborhoods*

Downtown

Uptown Village

Waterfront

East Vancouver



Fourth Plain

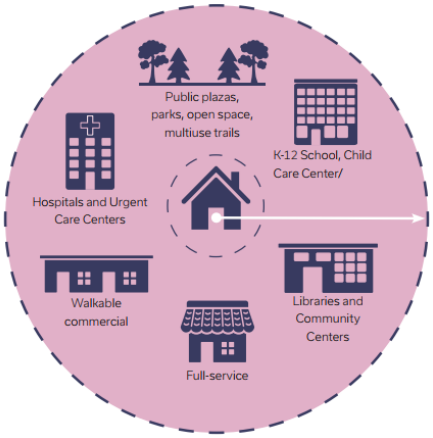
The Heights

Source; Visit Vancouver Washington, City of Vancouver, 2025.

*Exhibit 86: Vancouver Zoning (2024)*

Source: Design Workshop, 2024.

Vancouver has identified important centers and corridors in its Comprehensive Plan to provide for connected neighborhoods and accessible services. See Exhibit 86. The City is planning for more connected neighborhoods in its Comprehensive Plan Periodic Update.



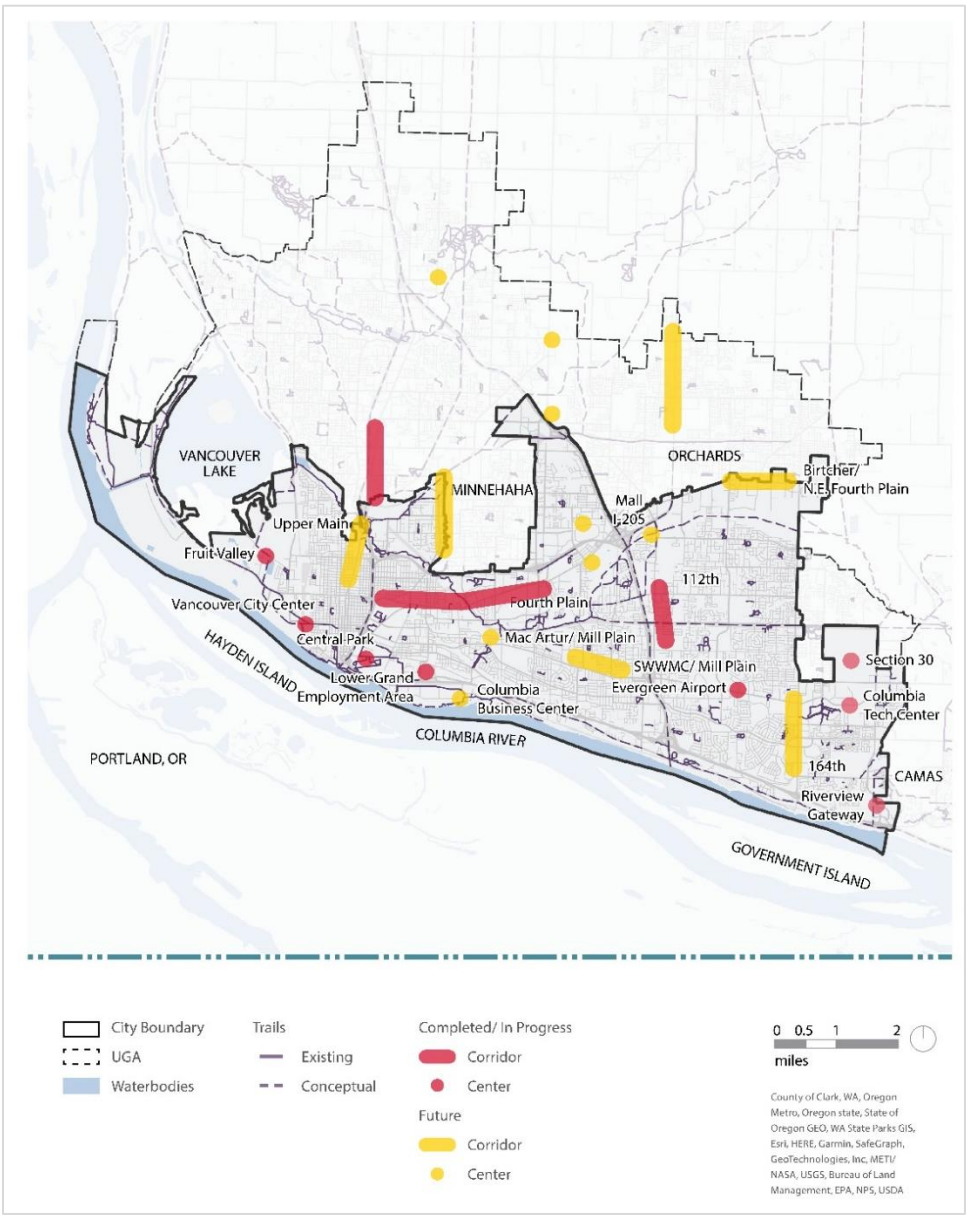


*Exhibit 87: Centers & Corridors*

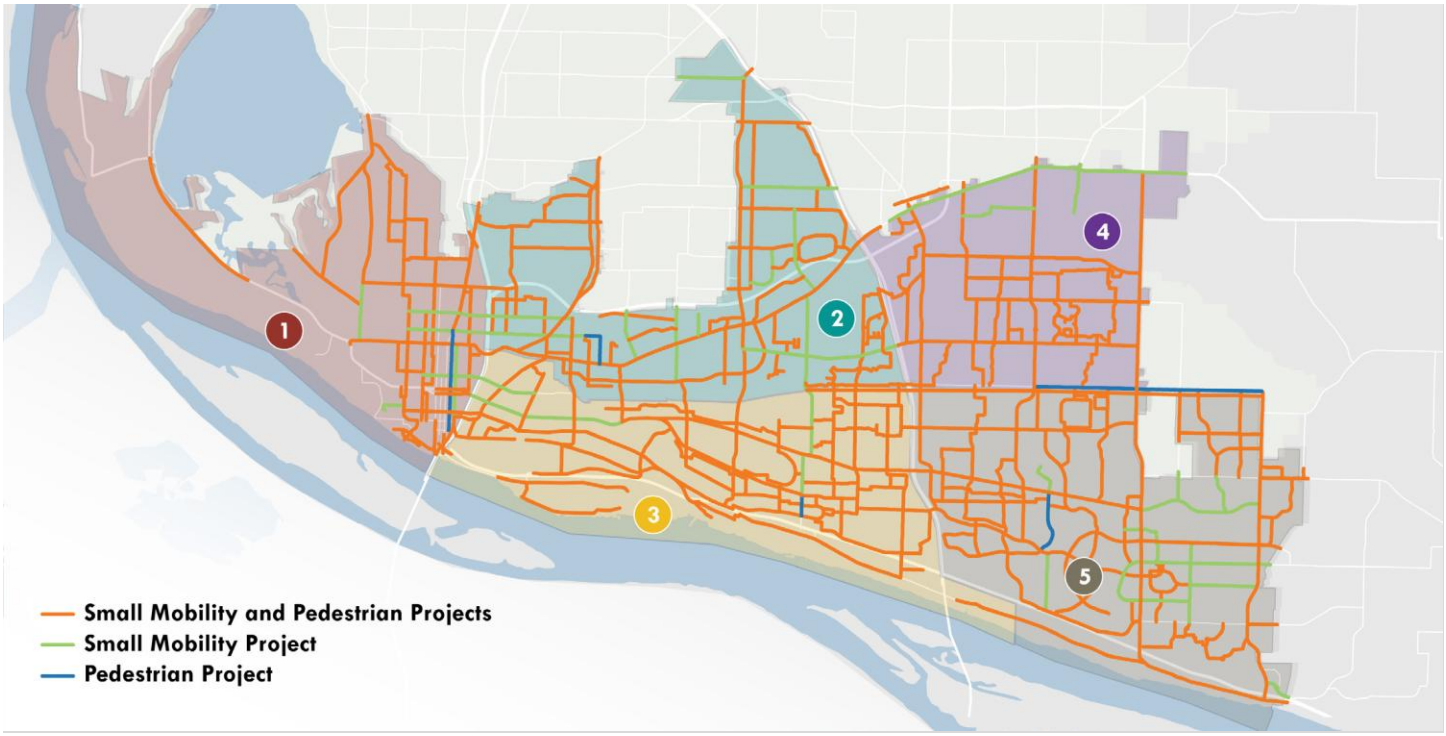
(Design Workshop, 2024)

## Public Realm

The public realm includes public streets, parks, and civic spaces where the public has access or can gather.



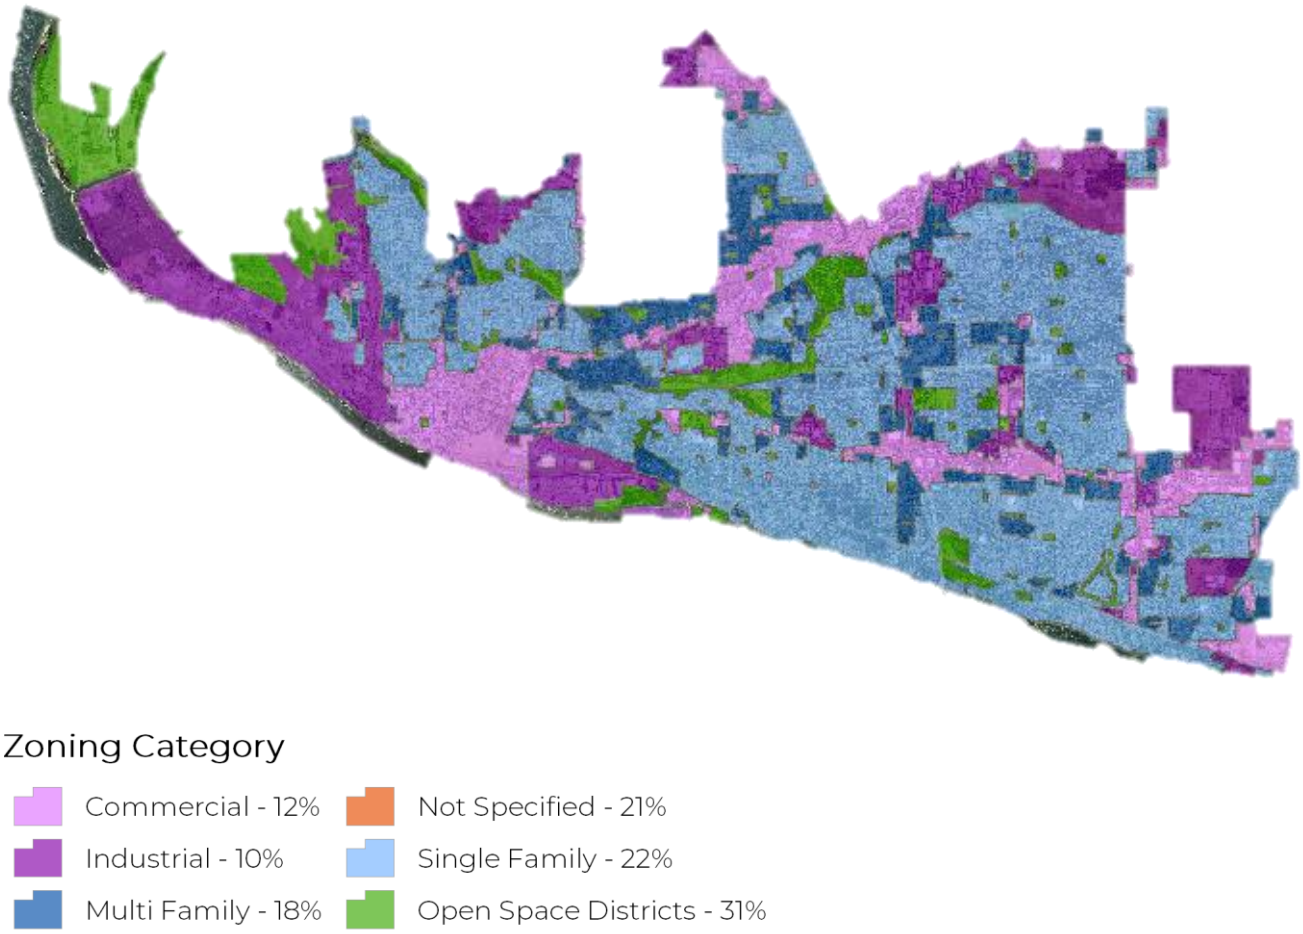
### Parks

Vancouver contains parks and natural areas largely around waterbodies and shorelines. The City's Parks, Recreation, and Cultural Services plan (City of Vancouver, 2022) identifies a need for 1,200 acres of park land with over 800 acres developed to serve the population through the year 2031. Service standards also consider a ½-mile park service area of all neighborhood and community parks. Parts of Areas 1, 2, 3B, and 8 are identified as having a gap in community or neighborhood parks.

### Transportation

The City developed a Transportation System Plan in 2023 that includes a number of mobility improvements including infill pedestrian projects, which would improve the public realm and make for a more walkable city. Each area is identified with priority projects.

*Exhibit 88: Mobility and Pedestrian Improvements*

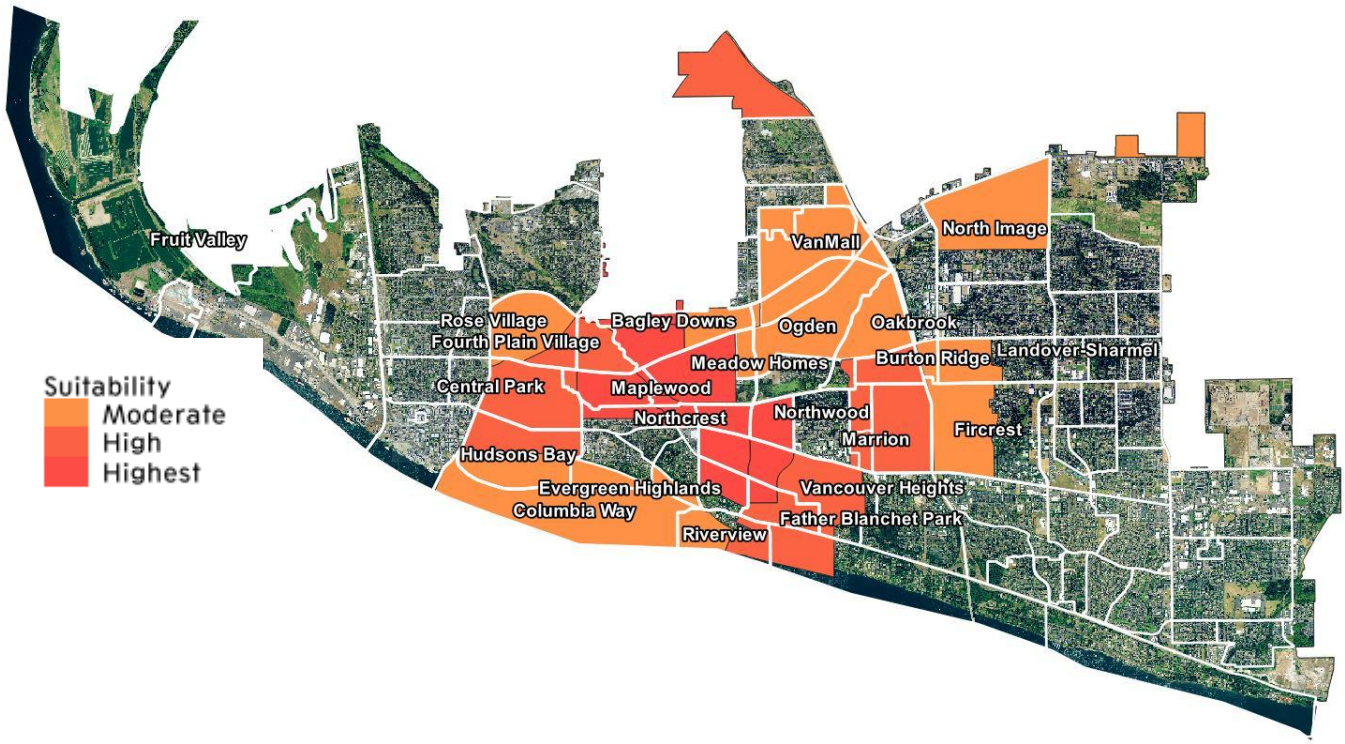


Source: (City of Vancouver, 2023)

## Urban Forest

To maintain and enhance the urban environment, the City has an Urban Forest Management Plan that seeks to achieve a 28% citywide canopy goal. To achieve it the City would need to plant 3,000 acres of new canopy cover by 2047. That is an increase from today's canopy of about 18.9%.

*Exhibit 89: Urban tree canopy in Vancouver by zoning (2021)*



Vancouver's canopy goals for zoning: Industrial properties= 9%, Commercial properties=15%; Residential properties = 33%.

Source: (PlanIT Geo, LLC, 2021)

Priority tree planning areas are proposed in areas 2, 3b, 4, 6, and 7. See Exhibit 89.

*Exhibit 90: Composite Map of Priority Planting Areas to Achieve Canopy Goals and Tree Equity*

Source: (City of Vancouver, 2023)

### Shoreline Master Program and Critical Areas

Vancouver has adopted a Shoreline Master Program (SMP) which promotes water oriented uses like ports, shoreline public access and enjoyment, and ecological protection and restoration. The SMP provides for shoreline uses, and buffers to protect sensitive environments and promotes soft shoreline alterations rather than hard structures. See Exhibit 90.

Vancouver also protects critical areas across the city such as wetlands, fish and wildlife habitat conservation areas, critical aquifer protection areas, flood hazard areas, and geologic hazard areas.

*Exhibit 91: Shoreline Master Program, Shoreline Environments*

Source: (City of Vancouver, 2021), WSP 2024.

## Potential Impacts

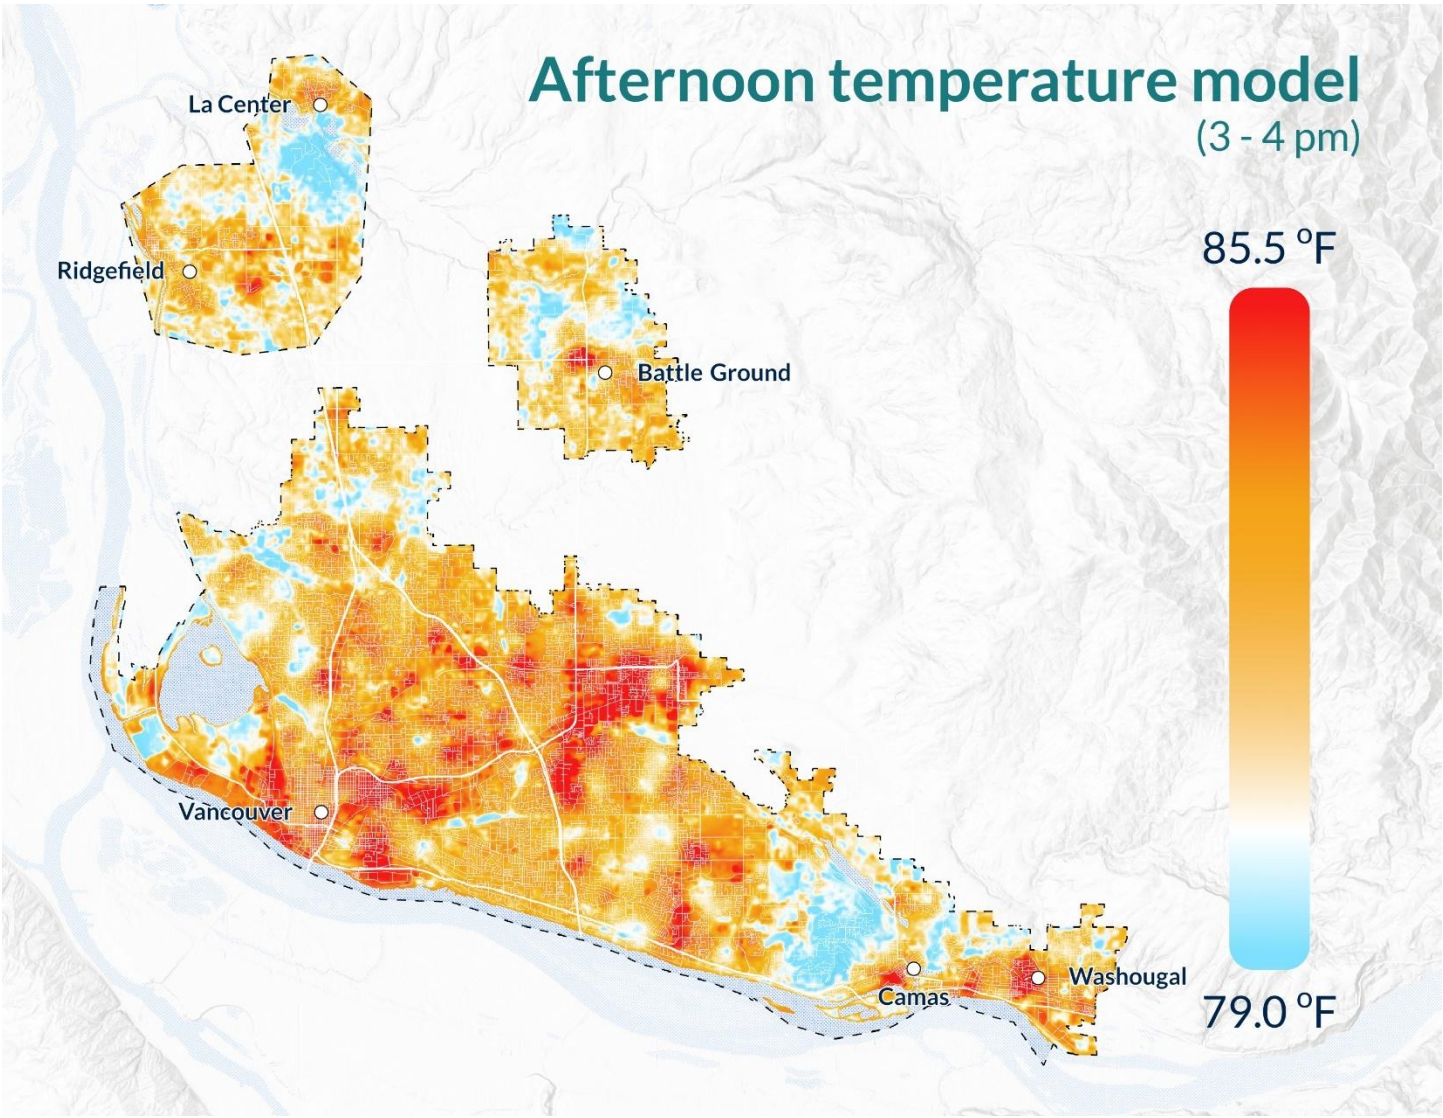
Urban places can exacerbate climate impacts because they tend to have greater impervious areas with taller buildings and pavement, less trees, and altered natural systems. Greater buildings and pavement can exacerbate flooding, magnify urban temperatures, compromise indoor air quality, increase exposure to allergens, and increase energy demand. (See sidebar and Exhibit 91.)

Vacant and redevelopable lands (5,583 acres) will add capacity for housing and jobs in the next 20+ years. Larger areas of development include the port, Section 30, and a number of commercial mixed-use areas. This could add imperious areas, but there are also opportunities to add green and blue infrastructure. (Design Workshop, 2024)

Black and Hispanic/Latino residents are less likely to be homeowners in Vancouver. (ECOnorthwest , 2024) Single-family zones have a greater percentage of tree canopy than in multifamily or commercial zones. (PlanIT Geo, LLC, 2021) Those with lower incomes tend to live in areas with less tree canopy and more pavement, near high traffic volume roadways, and in housing that may be older and with less modern HVAC and filtration systems.

Air pollution already generated by transportation and industry could be exacerbated by extreme heat such as ozone and by drought and wildfire smoke (PM 2.5). (US EPA, 2024) (West, Ch. 14. Air quality. In: Fifth National Climate Assessment. Crimmins, A.R.,, 2023)

### Climate Change: Built Environment, Urban Systems and Cities



Urban development patterns significantly influence local and regional environments, and these patterns can exacerbate the local effects of climate change. Depending on the type of built environment, both urban growth and land-use change have impacted and will continue to impact surface and ambient air temperature, local and regional humidity, wind patterns, precipitation, flooding, and dispersion of air pollutants...

Changes in design, form, and mass of buildings and configurations of streets, open green spaces, and water features—as well as their interactions—have direct effects on urban temperature and energy demand... Nighttime air temperatures, in particular, are expected to be higher across many urban areas due to radiant heat and heat conductance from buildings...

Exclusionary housing practices—which persist today—leave overburdened communities with lower access to heat-reduction strategies such as urban trees and green space, as well as to broader economic and social resources...

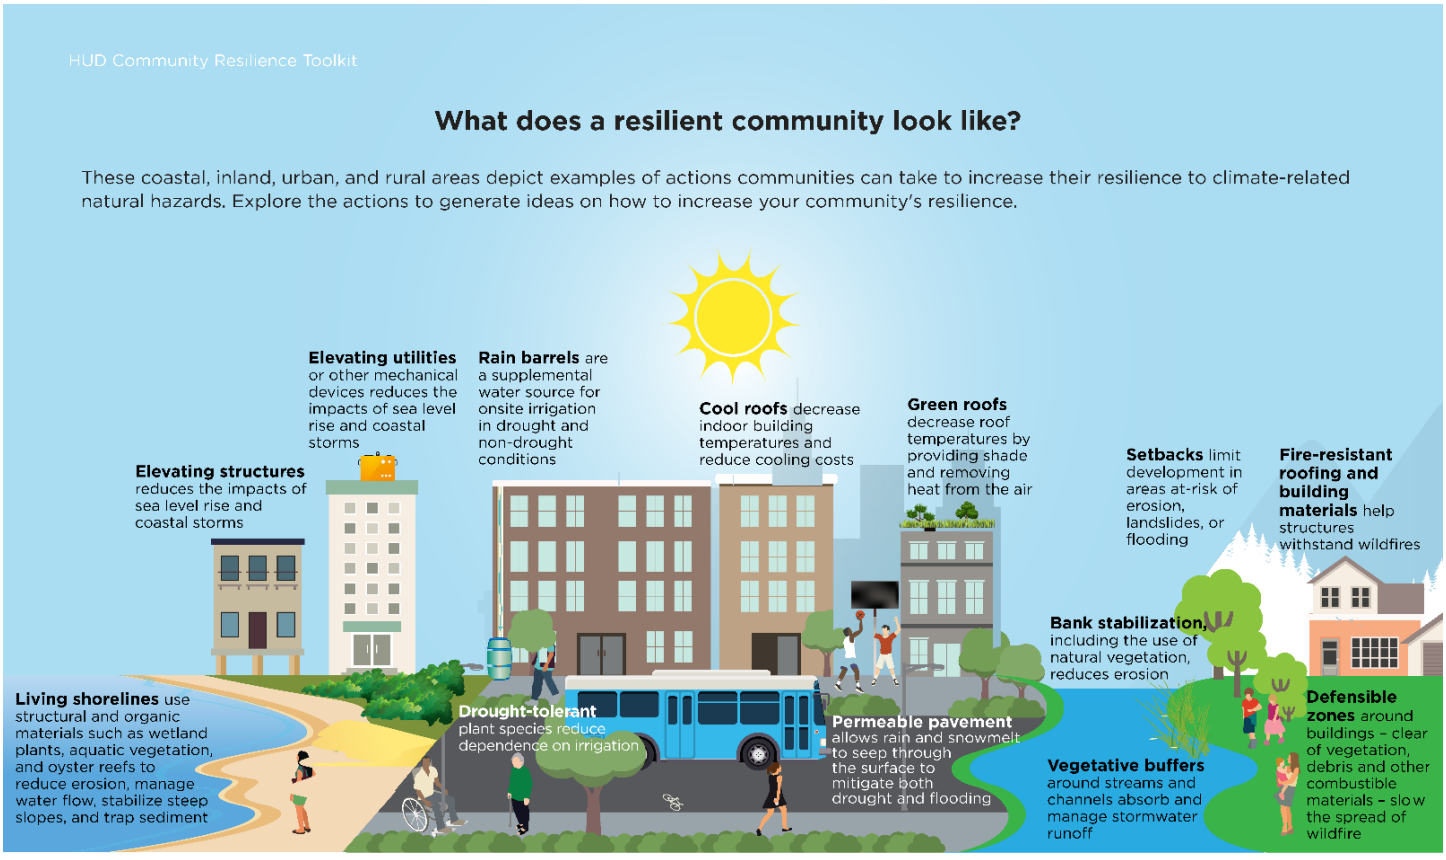
Another example of the uneven impact of climate change on the built environment is the deteriorating indoor air quality experienced by people living in neighborhoods with substandard housing. This includes exposure to allergens such as mold and dust and pollutants such as carbon dioxide and nitrogen dioxide. In wildfire-prone regions, indoor air quality is additionally compromised by smoke. There are also potential negative mental health outcomes from decreases in social interaction and physical activity when people are confined indoors to avoid temperature extremes. ... (Chu, 2023)

*Exhibit 92: Urban Heat Islands – Clark County Public Health Heat Watch*

Heat Watch data was collected on July 12, 2024, during a one-day event organized by Clark County Public Health with the support of more than 50 volunteers, local government partners and technical assistance from CAPA Strategies.

Source: (Clark County Public Health, 2024)

Vancouver's public parks, trails, and open spaces provide trees and green spaces that help cool the city, but extreme heat can make parks uncomfortable or even unsafe during heatwaves, especially those parks with large open turf or concrete and minimal shade. Wildfire smoke can interfere with outdoor activities. Many parks are intentionally located in low-lying areas to recognize floodplain and wetland functions and values, but then the parks would flood more frequently and severely as precipitation extremes intensify. (City of Vancouver, 2025)



## Adaptive Capacity

The creation of a resilient community is holistic. Important urban design elements include:

- Environmental conservation and protection like living shorelines and vegetative buffers.
- Protecting existing infrastructure in floodplains such as elevating structures and utilities.
- Green and blue infrastructure like rain barrels, cool roofs, green roofs, and permeable pavement.
- Greenspace with drought-tolerant species and tree canopy.
- Defensible zones and fire-resistant construction.
- Encouraging mobility that reduces greenhouse gas emissions but also provides redundant access to homes, services, and employment.
- Increasing the supply of affordable energy-efficient housing.

See Exhibit 92 for a diagram of many of these resilient community elements.

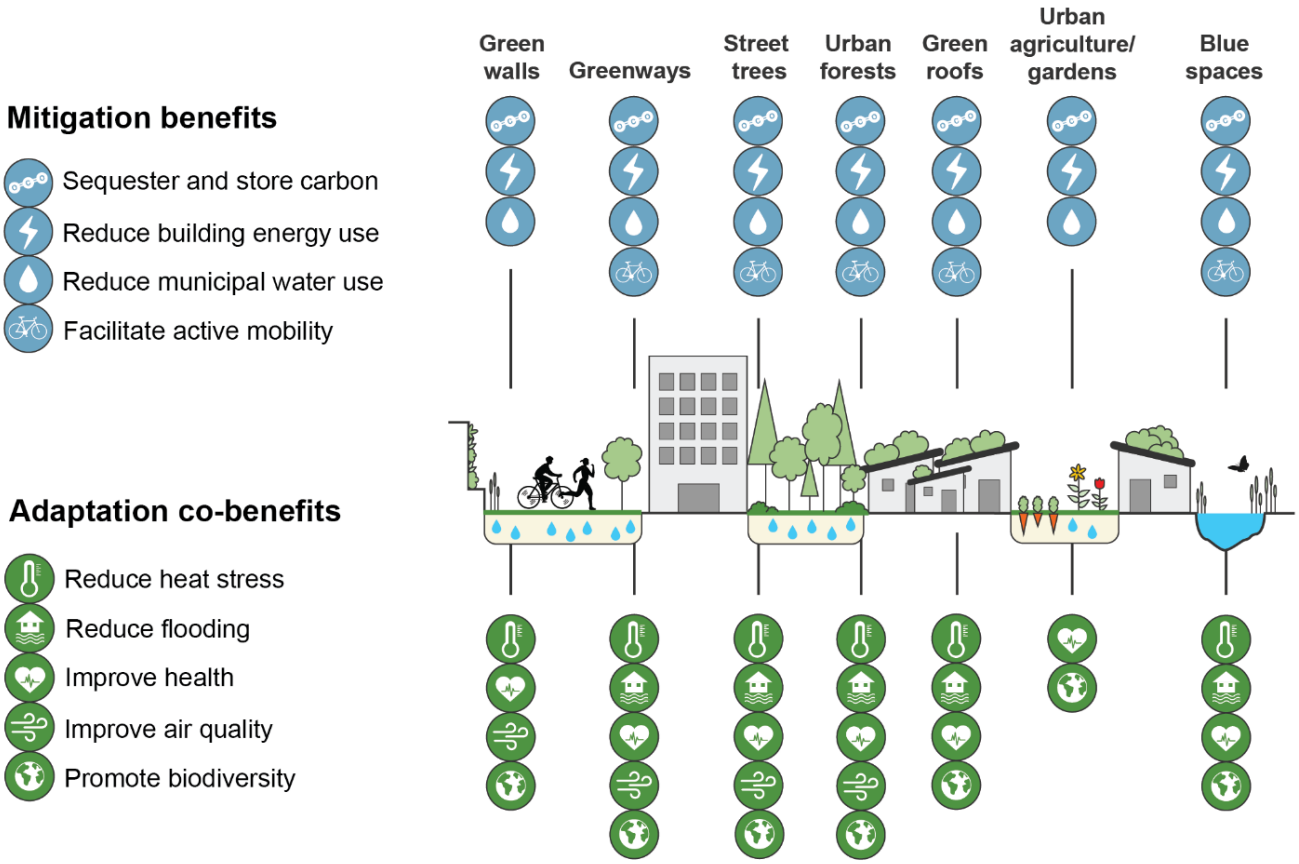


*Exhibit 93: What does a resilient community look like?*

Source: (U.S. Department of Housing and Urban Development, 2017)

Natural infrastructure – including green and blue elements applied to buildings and landscapes – has both mitigation and adaptation benefits. See Exhibit 93.

*Exhibit 94: Natural infrastructure in cities provides climate mitigation and adaptation benefits*

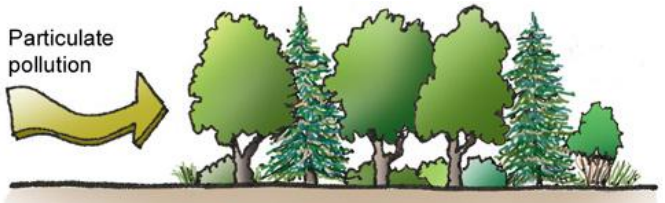
CAPTION: The figure illustrates the potential benefits (in no particular order) of integrating natural infrastructure strategies—also termed green, blue, or nature-based solutions—within the built environment. Nature-based, green, and blue infrastructure options are strategically planned interconnected sets of natural and constructed ecosystems, spaces with vegetation or waterscapes, and other landscape features that provide important GHG mitigation and climate adaptation functions, as well as improve human well-being, biodiversity, and ecosystem health. This figure shows examples of how urban forests and street trees can sequester and store carbon while simultaneously reducing building energy demand. Reducing municipal water use can provide a mitigation benefit by decreasing energy use in wastewater treatment plants. Lwasa et al. 2022) (Chu, 2023)

The City has programs underway that support many of these community resiliency measures:

- The City adopted a Stormwater Management Action Plan (City of Vancouver, 2023) to prioritize water quality treatments in the Middle Burnt Bridge Creek basin with impaired ecological conditions and with underserved and overburdened communities. There may be lessons learned with these basin improvement efforts that could apply to other locations in the city.
- Vancouver has an Urban Forest Management Plan to increase canopy to 28% by 2047. (City of Vancouver, 2023) Priority blocks are noted in Exhibit 89 to address tree equity.
- The City is implementing Middle Housing zoning to provide more homeownership opportunities for all incomes. This could increase opportunities for physical activity,

reduce greenhouse gases, and improve community connections through mixed use neighborhoods.

- The City's Transportation System Plan implementation would increase mobility and transit-oriented development connecting residents with amenities and employment.
- The City is developing a Draft Green Building Strategy which would ensure buildings have good indoor air quality and use better heating and cooling systems. The strategy would promote building designs that are safer for birds, using plants that need less water, and saving trees. The strategies would promote buildings that handle extreme weather by adding better insulation, keeping buildings cooler with shading or reflective materials, controlling energy use during busy times, and providing backup power for outages. (City of Vancouver, 2024)



In the future the City could consider adopting wildland urban interface codes to ensure human and property safety. The State Building Code Council developed rules, but they are not in effect while the mapping and rules are under review for applicability and effectiveness. (Demkovich, 2024)

The City is completing a health impact assessment along with the Comprehensive Plan Update that could help address wildfire smoke exposure, as well as ongoing exposure from transportation sources. Addressing right of way treatments and abutting site and building design to reduce exposure to air pollution and noise due to high volume roadways could improve adaptive capacity both for day-to-day pollution exposures and increasing risks of climate change.

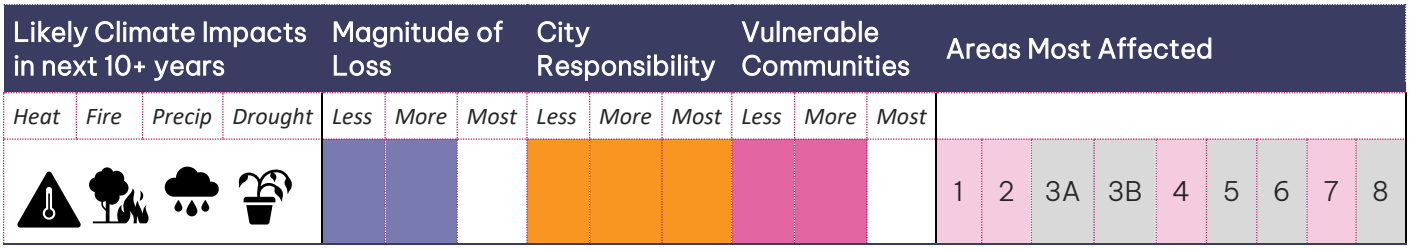
**Example Studies and Approaches to Mitigating Air Pollution**

Air Quality and Land Use Planning, 2023, Review of Literature by Bellevue, with Mitigation Strategies – land use (limiting sensitive uses), urban design, barriers/walls/vegetation, highway lids, building design and ventilation

USDA Air Quality and Conservation Buffers Manual to enhance visual quality, control noise levels, control air pollutants and odor

A 65 to 600 ft wide buffer may reduce particulate pollution by 40 to 75 percent although many factors will affect pollutant removal

## Vulnerability Summary



Vancouver is likely to be exposed to extreme heat in the planning period and has wide swaths of lands that have relatively lower tree canopy or implementation of adaptive building features (e.g., cool roofs, etc.) that can mitigate these risks. The City has a relatively small area subject to flooding often flanked by greenways (Burnt Bridge Creek) or with extensive flood control structures and with population densities relatively lower (Columbia River) but is subject to urban flooding that could experience extreme precipitation during the planning

period. The City has plans and priorities regarding where to address lacking tree canopy, as well as improving stormwater management, largely in central Vancouver.

Areas most vulnerable due to higher exposures and higher shares of communities with health sensitivities or equity disparities are identified in the Executive Summary in Exhibit 4 and Exhibit 5 and include Areas 1, 2, 4 and 7.

The widespread location of areas most vulnerable and the responsibility of the city to promote resilient urban design make zoning and development a higher risk and priority to address. See Exhibit 94.

*Exhibit 95: Risk Summary – Zoning & Development*

Source: BERK, 2025.

## Gaps and Opportunities

### Equitable Engagement and Strategies to Improve Adaptive Capacity

The City has engaged its interdepartmental team and community members to identify solutions addressing improved connectivity and parks in the public realm.

Example strategies include:

- Residents have identified community spaces they currently rely on or trust during extreme events (e.g., churches, schools, parks). (City of Vancouver, 2025)
- Promote other forms of green infrastructure, especially in places suffering from extreme heat. Prioritize investment in areas that have lower property values. Green infrastructure investments should be coordinated with affordable housing and other policies to avoid impacts of green gentrification and related displacement. (City of Vancouver, 2025)
- Implement land use planning policies for flood mitigation. (City of Vancouver, 2025)
- Increase Shade and Tree Canopy at park by planting more trees and preserving mature ones to create extensive shade. (City of Vancouver, 2025)
- Add Water Features and Cooling Elements. Incorporate cooling water features in park design to help people cool off. Splash pads, interactive fountains, or misting stations. (City of Vancouver, 2025)

- Heat-Resilient Landscaping: Adapt park landscaping and maintenance practices to withstand hotter, drier summers with less water. (City of Vancouver, 2025)
- Leverage parks as part of overall community stormwater management. (City of Vancouver, 2025)
- For parks at the wildland-urban interface or with significant natural wooded areas, implement fire management strategies. (City of Vancouver, 2025)
- Involve the community in making parks climate resilient and prioritize improvements in the parks that serve the most vulnerable populations. (City of Vancouver, 2025)
- Make physical upgrades to trails to better withstand heavy rain, flooding, and erosion. (City of Vancouver, 2025)
- Increase shade cover along popular walking and cycling routes to protect users during heat and also to extend the life of trail materials. (City of Vancouver, 2025)
- Implement practices to reduce wildfire risk in trail corridors and prepare for smoke events. (City of Vancouver, 2025)

### Policies

A policy evaluation found strength in Comprehensive Plan land use policies promoting resilience but opportunities to address a number of topics to address climate resilience and health. Exhibit 95 below shares example climate mitigation and adaptation options noted in the *Fifth National Climate Assessment Ch. 12. Built environment, urban systems, and cities*. (Chu, 2023) It also provides examples from the Commerce *Climate Planning Guidance* (Commerce, 2023), and the Vancouver Climate Action Framework. (City of Vancouver, 2022) The City could update its Comprehensive Plan policies to catch the plan up to the City's ambitious Climate Action Framework, as well as efforts under the **OUR VANCOUVER 2045** plan such as the Health Impact Assessment.

*Exhibit 96: Examples of Land- Mitigation and Adaptation Options in Cities and Built Environments*

| Options | NCA Examples of Mitigation and Adaptation Options | Commerce Climate Policy Explorer Examples | Vancouver Climate Action Framework |
|---|---|---|---|
| Natural, green, and blue infra structure | Urban ecosystems and biodiversity, street trees, greenery, coastal wetlands and dune systems | High Priority<br>Increase tree canopy cover to boost carbon sequestration, reduce heat islands, and improve air quality, prioritizing overburdened communities. | Strategy NS-1. Increase carbon storage in trees, vegetation, and soil<br>Strategy NS-2. Improve ecosystem resilience |

| Options | NCA Examples of Mitigation and Adaptation Options | Commerce Climate Policy Explorer Examples | Vancouver Climate Action Framework |
|---|---|---|---|
| | | | Action #10: Community gardens and local markets |
| Gray infrastructure | High albedo/reflective pavements, coastal protection (such as seawalls), dams, flood controls, drainage | High Priority<br>Consider climate change, including sea-level rise, extreme precipitation, increased winter streamflow, and other impacts, in floodplain management planning. | Indirectly; see above (NS-2) |
| Land management | Zoning to reduce impact exposure and support GHG emissions mitigation, co-location of development with low-GHG transportation and technologies, reduced encroachment on natural lands, fire management, land restoration | High Priority<br>Prioritize and promote public transit expansion and use through coordination of land use and transportation planning.<br>Establish development regulations that incorporate best practices for reducing the risk of wildfire, extreme heat, flooding, and other climate-exacerbated hazards. | Strategy TLU-1. Create neighborhoods that support clean modes of transportation |
| Resource use | Improved water supply, reduced emissions from waste and wastewater | High Priority<br>Manage water resources sustainably in the face of climate change through smart irrigation, stormwater management, preventative maintenance, water conservation and wastewater reuse, plant selection, and landscape management. | Strategy NS-3. Conserve water resources |
| Migration and relocation | Managed retreat | In areas with significant vulnerability to climate hazards, facilitate and support long-term community visioning including consideration of managed retreat. | Not addressed |

Source: (Chu, 2023), (City of Vancouver, 2022), BERK 2024.

The City's **OUR VANCOUVER 2045** plan incorporates many policies addressing a resilient built environment such as:

- Incorporate Climate Resilient Infrastructure into Development: Integrate climate resilience best practices into new development and infrastructure projects and investments in public spaces. (Policy 72)

- Stormwater Management: Improve water quality, protect watersheds and reduce flood risks by promoting groundwater infiltration, reducing runoff, and advancing effective stormwater best management practices. (Policy 136)
- Adapt Infrastructure to Climate Change: Retrofit existing infrastructure, parks and natural spaces, and construct new facilities to adapt to the localized impacts that will occur in the community due to climate change. (Policy 8)
- Protect and Restore Critical Areas and Shorelines: Protect critical areas, shorelines and other ecologically significant areas, ensure no net loss of ecological function through avoidance and mitigation of impacts, and apply conservation design principles to restore and enhance degraded areas. (Policy 108)
- Equitably Expand Tree Canopy: Utilize canopy assessment data and the City's Equity Index to prioritize areas for tree planting and greening investments. (Policy 53)
- Resilient, Transit-Supportive Infrastructure: Invest in infrastructure that supports reliable, frequent, and accessible transit service as outlined in the Enhanced Transit Network, while adapting to localized climate impacts. Investments should expand mobility options, improve neighborhood access, and deliver health, economic and social benefits. (Policy 124)
- Improve Connectivity Between Parks and Open Spaces: Create an expansive network of linear parks that encourage active transportation, improve community health and wellbeing, enhance tree canopy and stormwater management, and link parks and open space with housing. (Policy 68)

# 0. Executive Summary

This Health Impact Assessment (HIA) considers how the growth alternatives studied as part of the **OUR VANCOUVER** Comprehensive Plan periodic update may benefit and impact health in Vancouver as it relates to the built environment.

The analysis is organized around five themes:

- Physical Activity
- Food Access
- Community Connections
- Exposure to Health Hazards
- Housing and Financial Security

Three growth alternatives, as studied in **OUR VANCOUVER** Draft Environmental Impact Statement (DEIS), are included for analysis:

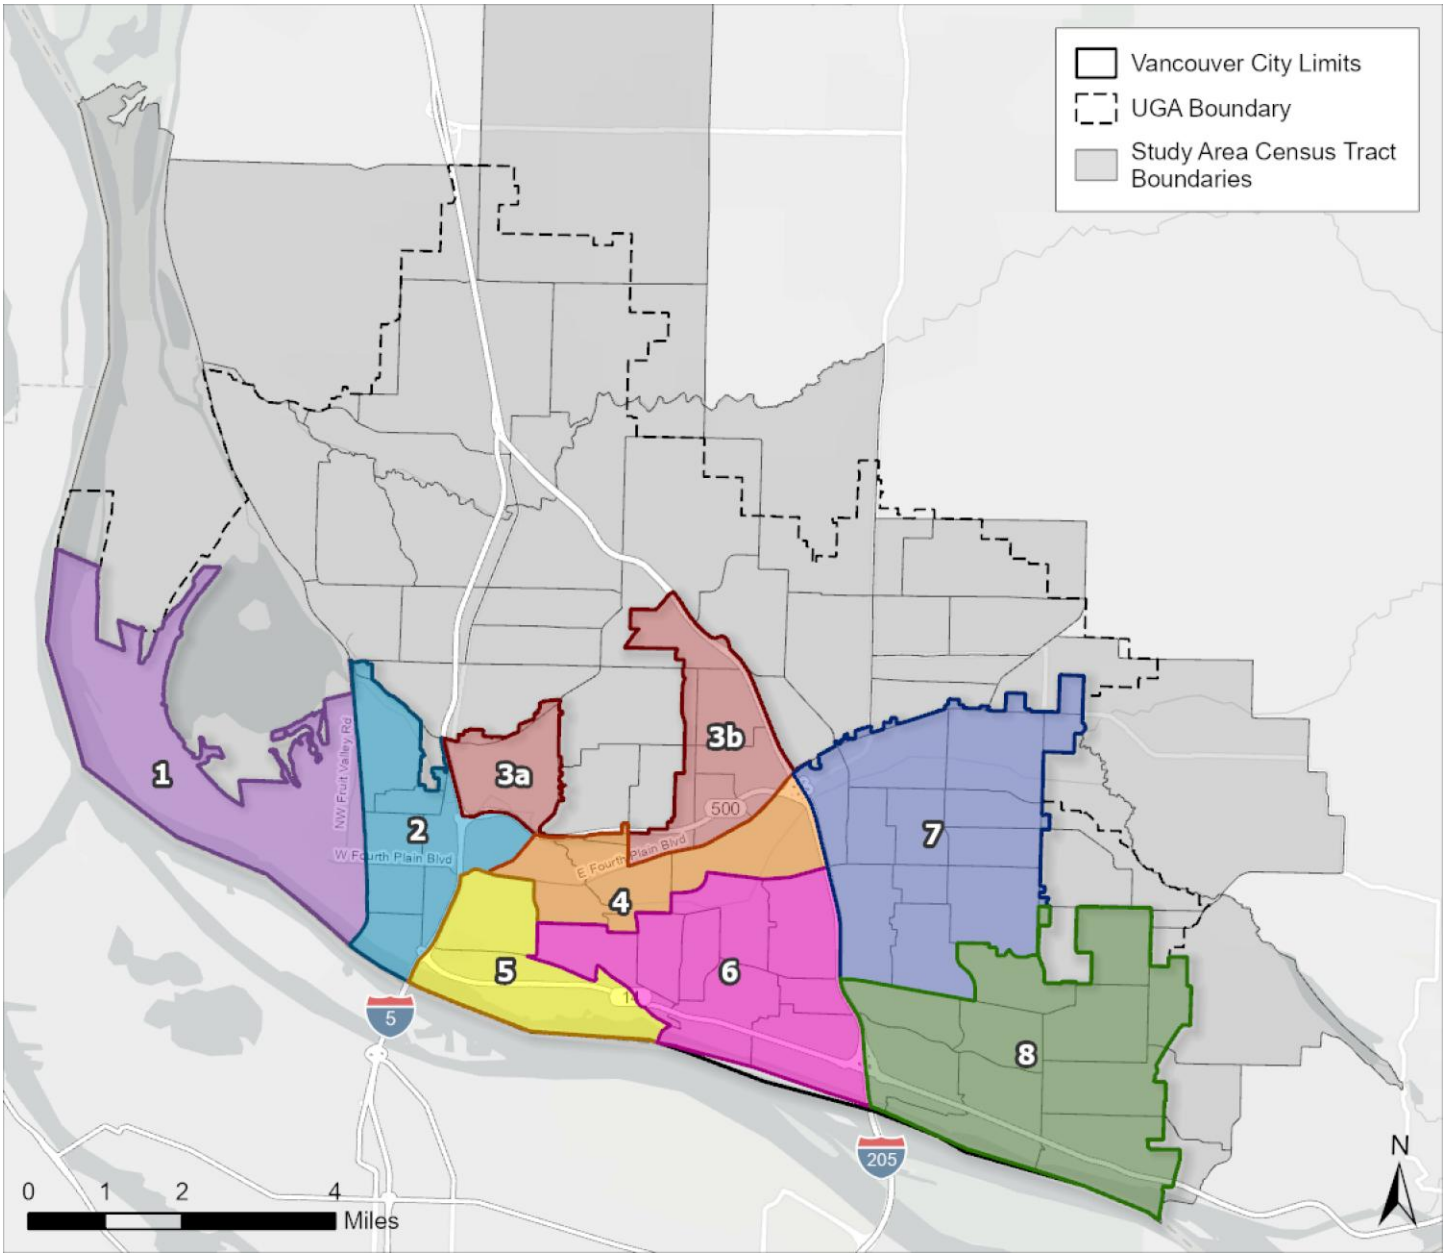
- A No Action Alternative, where existing policies are carried forward. Future growth and development would align with the adopted Comprehensive Plan and development regulations and recent amendments to state statutory requirements that contain self-executing provisions. The No Action Alternative would not meet the City's minimum 2045 targets for new housing units and jobs.
- Two Action Alternatives (Alternative 1 and Alternative 2), which add density and mixed uses and update plan policies. New place types would allow for more dense housing, employment, and activity centers in more areas across the city. Both Action Alternatives would exceed the City's minimum 2045 targets for new housing units and jobs.

The Action Alternatives generally include greater opportunities to improve community health. This is due to the growth patterns of the Action Alternatives and the policy changes associated with them (Exhibit 0-1). Other strategies are also identified in the HIA to build on strengths, address gaps, and mitigate negative health impacts of the growth alternatives. For the purposes of HIA analysis, the city was divided into eight areas (Exhibit 0-2).

*Exhibit 0-1: Key Findings, Strategies, and Cobenefits*

| Theme | Key Findings | Where/Who Impacted | Potential Strategies | Cobenefits of Implementation |
|---|---|---|---|---|
|  Physical Activity | **Existing:**<br>• Many existing vehicle trips are under 5 miles<br>• There are some gap areas in parks access<br><br>**No Action:**<br>• More demand for parks due to growth<br>• Most growth in areas without high density of intersections<br><br>**Action Alternatives:**<br>• Higher growth and higher demand for parks<br>• More opportunity for new parks via impact fees and policy changes<br>• Most growth in areas without high density of intersections<br>• More opportunity for walkability improvements | **Where:**<br>2, 3A, 3B, 4, 5, 6, 7, 8 (see Exhibit 0-2).<br><br>**Who:**<br>People with health conditions that could be improved by physical activity | **City:**<br>• Non-motorized infrastructure and safety<br>• Pedestrian scale design<br>• Strategic parks acquisitions<br><br>**Partner:**<br>• Community-led park and street improvements<br>• School and other partnerships for recreation | Emissions reduction from reduced VMT<br><br>Equitable access to parks |

| Theme | Key Findings | Where/Who Impacted | Potential Strategies | Cobenefits of Implementation |
|---|---|---|---|---|
| Food Access | **Existing:**<br>• Much of the current population has food access challenges<br><br>**No Action:**<br>• Some growth in areas with low supermarket access<br><br>**Action Alternatives:**<br>• More growth in areas with low supermarket access, but more opportunity for new stores via density and mixed uses | **Where:**<br>2, 3a, 5, 6, 7, 8 (see Exhibit 0-2).<br><br>**Who:**<br>Households with lower incomes are most affected | **City:**<br>• Community gardening and urban agriculture support<br>• Incentives for supermarkets<br><br>**Partner:**<br>• Food banks, farmers markets<br>• Community and faith organizations | Walkability to supermarkets = lower VMT and emissions<br><br>Equitable access to food |



| Theme | Key Findings | Where/Who Impacted | Potential Strategies | Cobenefits of Implementation |
|---|---|---|---|---|
| Community Connections | **Existing:**<br>• Access to amenities varies<br>• Challenges with childcare and access to social services<br><br>**No Action:**<br>• Less opportunity for better access to services<br>• Some commercial displacement<br>• Less density and mixed uses<br><br>**Action Alternatives:**<br>• More opportunity for better access to services<br>• More commercial displacement but better mitigation<br>• More density and mixed uses (especially Alternative 2) | **Where:**<br>Citywide<br><br>**Who:**<br>Car-dependent households, older adults | **City:**<br>• Incentives for small commercial spaces and lowered parking requirements<br>• Social programs and events<br><br>**Partner:**<br>• Pop-ups<br>• Regional childcare access | Better walkability to services = lower VMT<br><br>Equitable access to daily needs |

| Theme | Key Findings | Where/Who Impacted | Potential Strategies | Cobenefits of Implementation |
|---|---|---|---|---|
| <br>Exposure to Health Hazards | Existing:<br>• Air quality is a challenge that is hard to mitigate<br>• Heat islands also present but growth is an opportunity to address them<br>• Other hazards include climate change, water quality, and noise<br><br>No Action:<br>• Some air and water quality impacts<br>• Some growth in areas with noise<br>• Some growth in heat islands<br>• Some growth in climate hazard areas<br><br>Action Alternatives:<br>• Some air and water quality impacts but better mitigation<br>• Some growth in areas with noise but better mitigation<br>• More growth in heat islands and more opportunity to add vegetation<br>• Some growth in climate hazard areas and new policies for resiliency | Where:<br>Citywide but especially 2,5, 6, 7, 8 (see Exhibit 0-2)<br><br>Who:<br>People with existing health conditions, older adults, children | City:<br>• Electric vehicle support<br>• Vegetation requirements<br>• Urban forestry<br>• Shade in parks and rights of way<br>• Design standards for resilience<br>• Education on disposal of chemicals<br><br>Partner:<br>• C-Tran transit investments<br>• Community-led action planning<br>• Water and air quality monitoring<br>• Emergency hubs | Adding tree canopy cover = reduced emissions<br><br>Environmental justice |

| Theme | Key Findings | Where/Who Impacted | Potential Strategies | Cobenefits of Implementation |
|---|---|---|---|---|
| Housing and Financial Security | **Existing:**<br>• Many residents are cost burdened<br>• Displacement is an ongoing concern with growth<br><br>**No Action:**<br>• Some new housing but less variety and affordability<br>• Less radon mitigation<br>• Some displacement risk<br>• Some new jobs<br><br>**Action Alternatives:**<br>• More new housing and better affordability<br>• More radon mitigation<br>• Some displacement risk but new policies to mitigate<br>• More new jobs and opportunities to shape industries | **Where:**<br>Citywide<br><br>**Who:**<br>Households with lower incomes, single-parent households | **City:**<br>• Communicating home rehabilitation opportunities and radon testing<br>• Removing housing barriers<br>• Anti-displacement policies<br>• Workforce development and industry support<br><br>**Partner:**<br>• Regional collaboration on housing and economic development | Energy efficiency of newer buildings<br><br>Less displacement, more financial stability, housing for all incomes |

*Notes: Emissions Reduction Cobenefit, Equity Cobenefit*

# 1. Introduction

## Purpose

The City of Vancouver is conducting a Health Impact Assessment (HIA) to:

- **Evaluate each of the three OUR VANCOUVER land use alternatives (defined in the Draft Environmental Impact Statement)** from a health impact lens and support the selection of a preferred alternative and mitigation measures.
- **Provide policy recommendations for improved community health.**
- **Provide analysis to support communication** with the public, policy makers, and key decision makers the various health-related tradeoffs between the three alternatives.

The City's Comprehensive Plan was last updated in 2011 and is due for a periodic update by the end of 2025. The **OUR VANCOUVER** Comprehensive Plan will guide Vancouver's growth and development through the year 2045. The update is an opportunity to shape policies and actions that can improve the health of current and future Vancouver residents.

The Plan is guided by a goals framework, which emphasizes equity, livability, opportunity, sustainability, and health, among other values. For the Climate, Environment, Community Health, Sustainability, and Resiliency chapter, the key themes are:

- Equitable and Just Transition
- Increase Tree Canopy
- Decrease Emissions
- Community Preparedness
- Community Stewardship and Resilience
- Holistic Cycles of Consumption and Production
- Access to Healthy Food
- Built Environment Promotes Health.

## Key Questions

**What is an HIA?** A Health Impact Assessment (HIA) evaluates the potential health effects of a proposed plan, policy, project, or program. HIAs provide recommendations during the decision-making process to increase positive health effects and minimize negative impacts (CDC, 2025).

**What type of HIA is this?** This is a "rapid" HIA, in which the analysis is primarily based on existing data from a variety of sources. However, this HIA and its recommendations are also supported by engagement with key stakeholders as part of the periodic update.

**Who is involved in this work?** City staff and the project consultant team led the HIA. Clark County Public Health provided input on the framework and data sources. The City's Climate Working Group, which consists of various community organizations, reviewed the draft findings and informed the final document. The HIA is a parallel effort to the Vancouver Comprehensive Plan Periodic Update, with its own related engagement process that emphasizes Equity Priority Communities that have been historically marginalized or are most vulnerable. Staff will engage the Vancouver Planning Commission and City Council throughout the Comprehensive Plan periodic update process.

**Who is the decision maker?** The Planning Commission will provide a recommendation to the City Council on the Comprehensive Plan Periodic Update, including a preferred Land Use Alternative. The City Council is the decision maker for the Comprehensive Plan Periodic Update.

## Goals

The HIA seeks to accomplish the following goals, particularly as they relate to health and the built environment:

- Ensure the **OUR VANCOUVER** Comprehensive Plan emphasizes health-related goals and policies, particularly in the land use element and growth strategies.
- Influence policy implementation to positively impact resident health, particularly communities that are vulnerable and overburdened.
- Ensure the links between connected and accessible neighborhoods, walkability, and health benefits are clearly communicated to the public and decision makers and clearly evaluated within each of the three (3) alternatives.
- Develop recommendations that are clear and feasible to implement.
- Create awareness about health disparities in Vancouver.
- Engage community-based organizations and the general public on health considerations for the plan update.
- Use communication methods such as plain language, infographics, and maps to ensure the HIA is accessible to the general public as well as decision makers.

## HIA Process

HIA is a systematic process to evaluate the potential health impacts of a proposed action, such as a plan or policy. The following are the steps that generally form an HIA:

- Screening – documenting why an HIA is appropriate for a given project or decision *(Chapter 1: Introduction)*

- Scoping – setting parameters of assessment and identifying the most relevant health outcomes *(Chapter 2: Scoping the HIA)*
- Assessment – describing baseline conditions and estimating future impacts *(Chapters 3-6: Baseline Assessment, Metrics and Evaluation Framework, Impact Assessment and Strategies, and Community Engagement Summary)*
- Reporting – disseminating findings and making recommendations *(Chapter 5: Impact Assessment and Strategies)*
- Monitoring – evaluating the effectiveness of the HIA and health impacts of the implemented proposal *(Chapter 7: Next Steps)*

## Previous Health Impact Assessment in Vancouver

Clark County completed a Rapid Health Impact Assessment for the Vancouver Comprehensive Plan in 2011. The assessment focused on two primary topics: physical activity and access to healthy food. The HIA included an evaluation of the proposed policy changes in the plan and found no evidence of negative disproportionate impacts on vulnerable populations. The key takeaway was the importance of implementation of the Comprehensive Plan through development standards, and recommendations for additional actions to improve opportunities for physical activity and healthy food access. The City also conducted a brief HIA for park development in the Rose Village neighborhood in 2010.

## Integration with Comprehensive Plan Update

The Comprehensive Plan update process includes evaluation of three land use alternatives (including one "no action" alternative), which distribute the city's future housing, job, and population growth in different ways. The HIA will evaluate these alternatives for potential health effects, relative to one another. This evaluation will inform the City's selection of a preferred alternative, which will provide the basis for the updated plan that will be adopted by the end of 2025. The HIA will also provide policy recommendations for the plan as a whole that could apply across all the land use alternatives.

*Exhibit 1-1: HIA Process*

### Growth Alternatives

The City's periodic update to the Comprehensive Plan, the 20-year growth plan for Vancouver, is due in 2025. Under the State Environmental Policy Act (SEPA), an environmental impact statement (EIS) is being prepared to consider the environmental impacts of the plan. The Draft EIS analyzes three land use possibilities or "alternatives":

- No Action Alternative assumes that the Comprehensive Plan update and associated changes to the zoning code and development regulations would not be adopted. Future growth and development would occur in line with the current adopted City Comprehensive Plan and development regulations, as well as recent amendments to state statutory requirements that contain self-executing provisions. The No Action Alternative would not meet the City's minimum 2045 targets for new housing units and jobs.
- Alternative 1 assumes the proposed Comprehensive Plan Update and associated changes to the zoning code and development regulations would be implemented, including new place types that allow more dense housing, employment, and activity centers in more areas across the city. Alternative 1 would allow for more dense, mixed-use development patterns than the No Action Alternative but in fewer areas than Alternative 2. Alternative 1 would exceed the City's minimum 2045 targets for new housing units and jobs.
- Alternative 2, like Alternative 1, assumes the proposed Comprehensive Plan Update and associated changes to the zoning code and development regulations would be implemented. Alternative 2 would allow for the highest density, intensity, and mix of uses of all of the alternatives in a greater number of areas of the city than Alternative 1. Alternative 2 would exceed the City's minimum 2045 targets for new housing units and jobs and would provide the highest capacity among the alternatives.

This Health Impact Assessment reviews each alternative for its potential impacts to health based on a series of metrics.

See Chapter 4 for maps of each growth alternative.

## 2. Scoping the HIA

For this HIA, the City and Consultant team focused on five themes around which to organize the evaluation. These were identified based on the themes of the **OUR VANCOUVER** Comprehensive Plan update, review of peer HIAs, Vancouver's previous rapid HIA (2011), and engagement with City and County staff. This includes Physical Activity, Food Access, Community Connections, Exposure to Health Hazards, and Housing and Financial Security.

*Exhibit 2-1: Themes*

| Theme | Subtopics | Description |
|---|---|---|
|  Physical Activity | Parks access<br>Walkability and bikeability | Built environment factors to encourage community members to be more active |
|  Food Access | Access to healthy food sources | Physical proximity and access to supermarkets and other sources of healthy food |
|  Community Connections | Access to services<br>Social connection and isolation | Access to essential services and spaces that encourage people to meet and engage |
|  Exposure to Health Hazards | Air and water quality<br>Noise<br>Urban heat<br>Climate impacts | Environmental health risks in relation to areas of planned growth |
|  Housing and Financial Security | Safe and healthy housing<br>Affordable housing<br>Displacement<br>Living wage jobs | Topics related to housing quality and access and economic opportunities in Vancouver |

# 3. Baseline Assessment

The following baseline data is intended to provide background context for the HIA and to inform the evaluation of the three land use alternatives. This includes demographic data as well as data relating to the health themes scoped for this HIA. A policy audit is also included to review Comprehensive Plan policies currently in place related to health.

## Population

Social determinants of health (SDOH) are nonmedical factors that influence health outcomes (CDC, 2024). SDOH include access to resources such as housing, education, wealth, and employment, which are impacted by systemic injustices. Addressing differences in SDOH achieve better health equity, where all people have the opportunity to be in their best health. Several key demographics relating to SDOH are discussed below. Race and ethnicity is included due to the health inequities that continue to persist due to a history of systemic racism in the United States.

*Exhibit 3-1: Demographics Summary*

| Demographic | Percentage |
|---|---|
| Race and Ethnicity | |
| American Indian and Alaska Native | 0.4% |
| Asian | 5% |
| Black or African American | 3% |
| Native Hawaiian and other Pacific Islander | 2% |
| White | 65% |
| Two or More Races | 7% |
| Other Race | 0.5% |
| Hispanic or Latino | 17% |
| Income and Poverty | |
| Median Household Income | $80,618 |
| Household income below the poverty level | 11% |
| Household income at or above the poverty level | 89% |
| Housing Tenure | |
| Renter households | 50% |
| Owner households | 50% |
| Renter households spending 30%+ of income on rent | 53% |

| Demographic | Percentage |
|---|---|
| Education | |
| High School Diploma or Higher | 92% |
| Bachelor's Degree or Higher | 32% |
| Language Spoken at Home by Limited English Speaking Households | |
| Russian, Polish, or other Slavic language | 0.9% |
| Spanish | 1.7% |
| Other Indo-European | 0.2% |
| Chinese (Mandarin and Cantonese) | 0.4% |
| Vietnamese | 0.2% |
| Tagalong | 0.1% |
| Other Asian and Pacific Island Languages | 0.2% |
| Disability | |
| Population with One or More Disabilities | 9.7% |
| Age | |
| Median Age | 38 |
| 19 and Younger | 24% |
| Over 65 | 16% |
| Health Insurance Access | |
| Adults Without Coverage | 9% |

*Source: US Census Bureau, 2023; CDC, 2022; BERK, 2025.*

### Race and Ethnicity

In Vancouver, 5% of residents identify as Asian, 3% as Black or African American, 0.4% as American Indian and Alaska Native, 2% as Native Hawaiian and other Pacific Islander, 65% as White, and 7% as Two or More Races (U.S. Census Bureau, 2023). 17% of the population identifies as Hispanic. Vancouver's population became more racially and ethnically diverse from 2010-2020, with a 64% increase in the population of communities of color (Design Workshop, 2024; U.S. Census Bureau, 2020; U.S. Census Bureau, 2010).

### Income and Poverty

Median household income in Vancouver is $80,618. 11% of households are experiencing poverty citywide (U.S. Census Bureau, 2023).

### Housing Tenure

Renter and owner households are split evenly (U.S. Census Bureau, 2023). Housing costs in Vancouver are high, and 53% of renters are rent-burdened (spending more than 30% of their income on rent).

### Education

92% of Vancouver residents hold a high school diploma and 32% of Vancouver residents hold a bachelor's degree (U.S. Census Bureau, 2023).

### Language

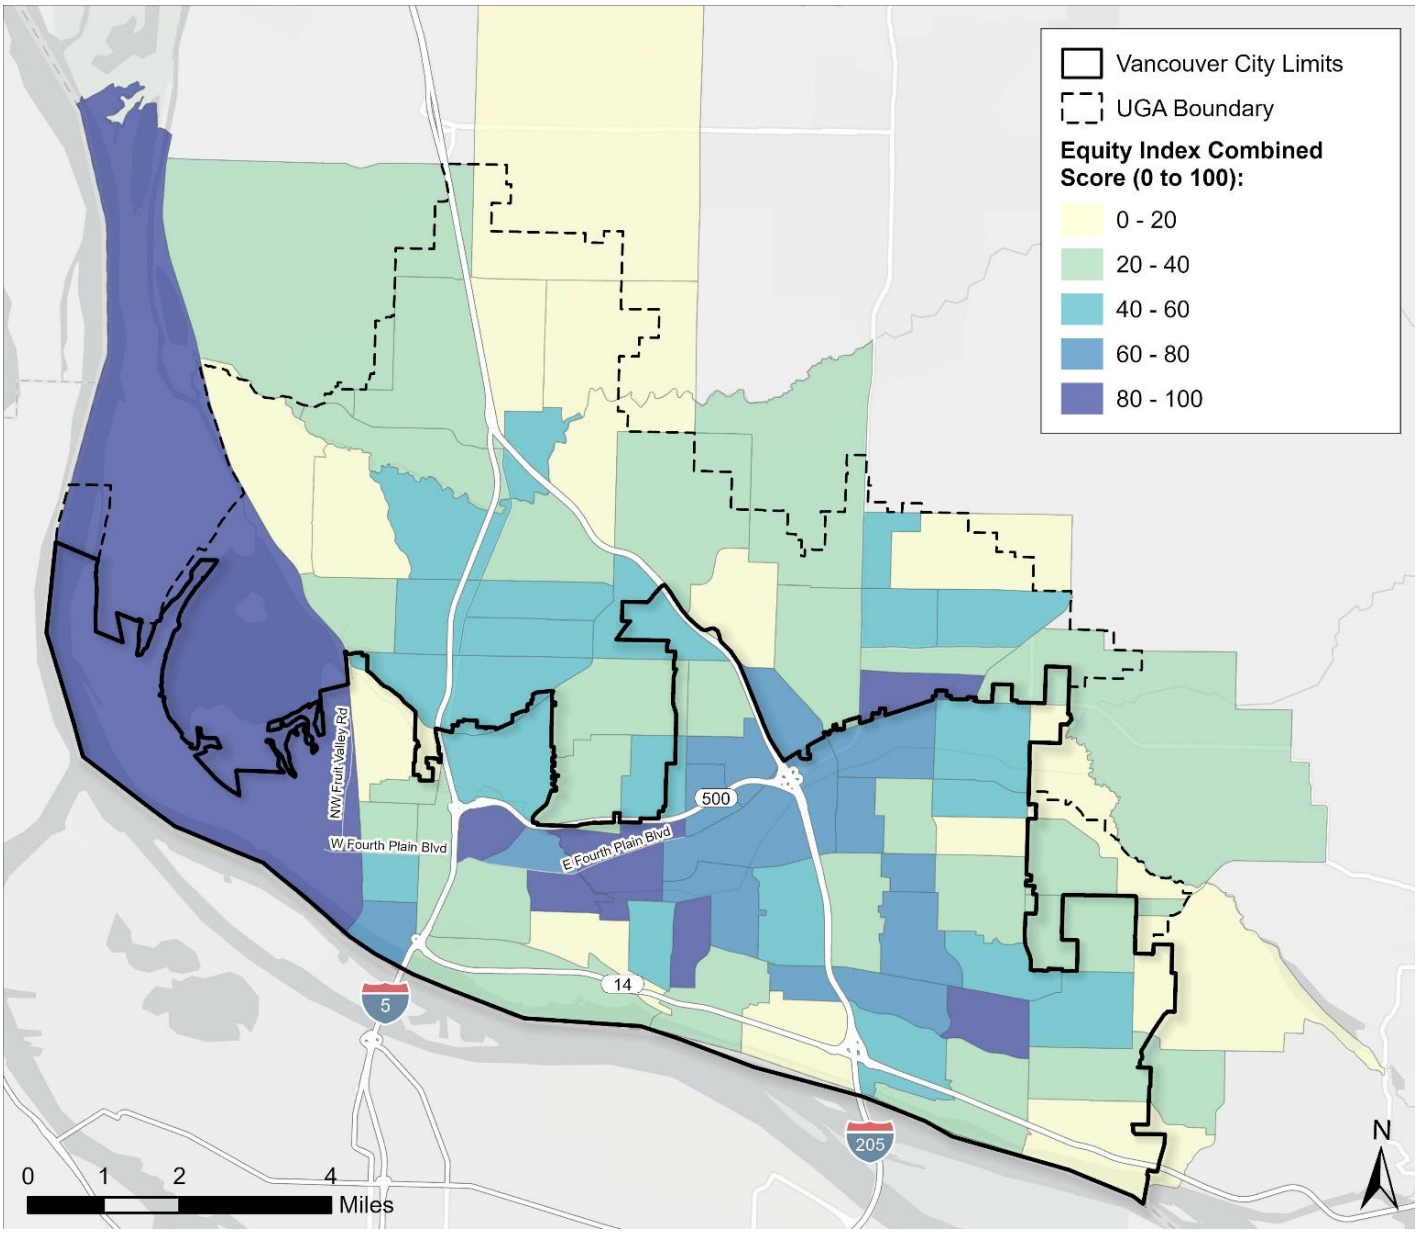
20.7% of the Vancouver population speaks a language other than English at home (U.S. Census Bureau, 2023). About 8.5% of the population speaks English less than "very well" (U.S. Census Bureau, 2023).

### Disability

Approximately 15.1% of Vancouver residents are living with a disability as of 2023 (U.S. Census Bureau, 2023).

### Age

Median age in Vancouver is 38 years old. Approximately 24% of the population is 19 years old and younger and 16% of the population is over age 65 (U.S. Census Bureau, 2023).



### Health Insurance Access

The Centers for Disease Control (CDC) estimates that 9% of adults aged 18-64 in Vancouver do not have health insurance. This is slightly lower than the national estimate of 11% (CDC, 2022).

### Equity

Vancouver has an Equity Index, which helps the City prioritize investments based on the needs of historically marginalized and vulnerable communities. The Equity Index shows higher scores, or greater disparities, for several Census block groups, including areas around Fruit Valley, Rose Village, Fourth Plain Village, and Mill Plain Boulevard on the east side of the city (Exhibit 3-2).

*Exhibit 3-2: Vancouver Equity Index*

*Source: City of Vancouver, 2020; BERK, 2024.*

## Health Outcomes

Data from the CDC shows health outcomes for Vancouver's adult population and comparisons to Clark County. This includes similar rates of asthma, coronary heart disease, chronic obstructive pulmonary disorder, diabetes, and self-reported poor physical health, but higher rates of poor mental health and lower rates of high blood pressure (see Exhibit 3-3).

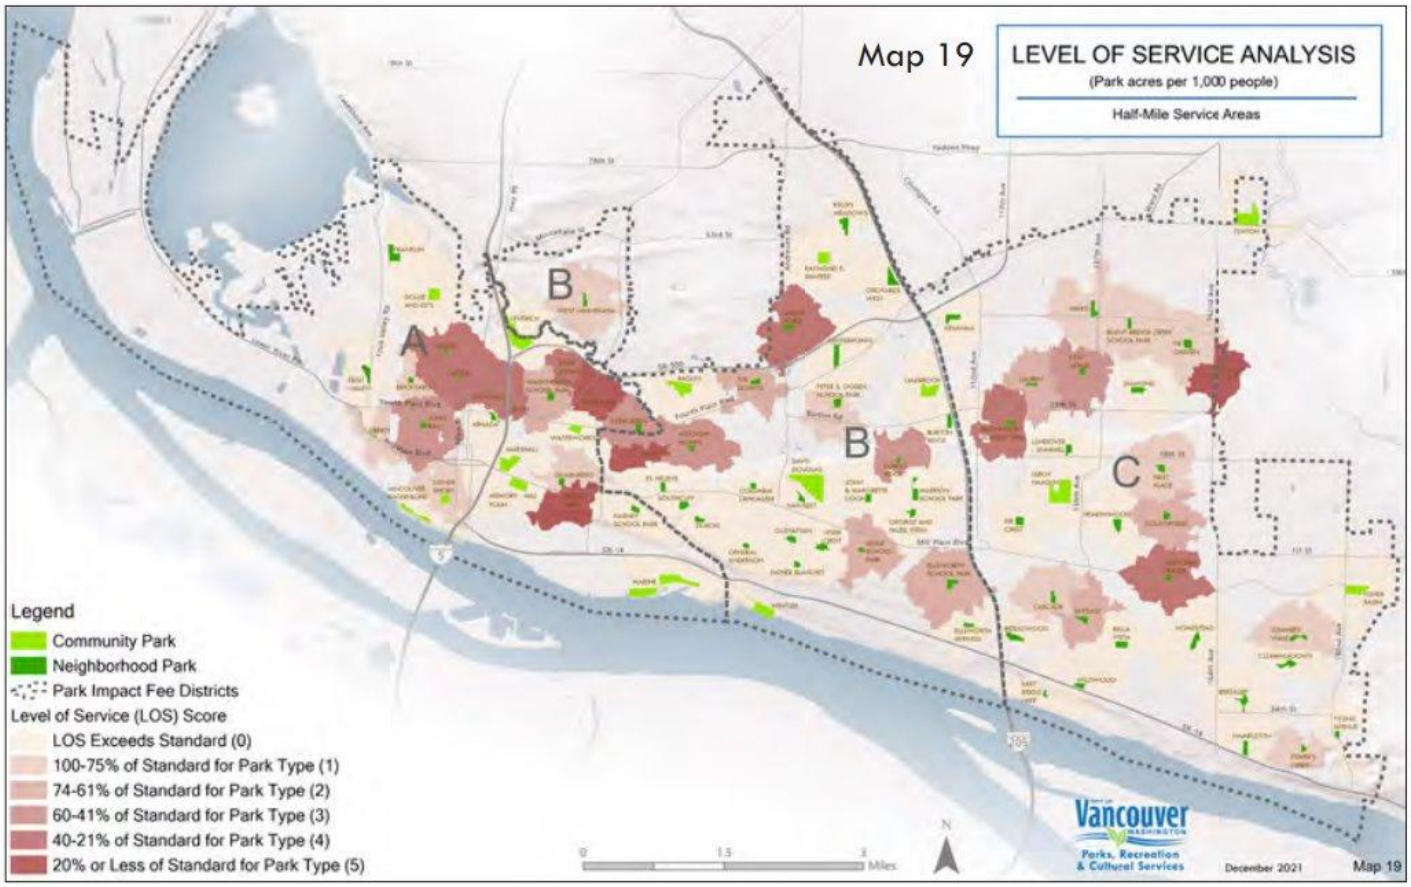
Almost a third of adults in Vancouver have been diagnosed with high blood pressure, a key risk factor for heart disease. Heart disease is a major cause of death in Vancouver, with 2018 rates of 176 male deaths and 118 female deaths per 100,000. Chronic lower respiratory diseases, including asthma and chronic obstructive pulmonary disease, accounted for 210 deaths per 100,000. Diabetes caused 507 deaths per 100,000 (Clark County, 2018; Design Workshop, 2024).

*Exhibit 3-3: Health Data for Vancouver and Clark County*

| Measure | Vancouver (% of adults) | Clark County (% of adults) |
|---|---|---|
| Hypertension (High Blood Pressure) | 28.1% | 29.2% |
| Asthma | 11.5% | 10.8% |
| Coronary Heart Disease | 5.1% | 5.3% |
| Chronic obstructive pulmonary disease (COPD) | 6.3% | 6.1% |
| Diabetes | 8.8% | 9.2% |
| Poor Mental Health (mental health not good for 14 days or more) | 17.5% | 15.8% |
| Poor Physical Health (physical health not good for 14 days or more) | 11.7% | 11.2% |

*Source: CDC, 2022.*

## Physical Activity



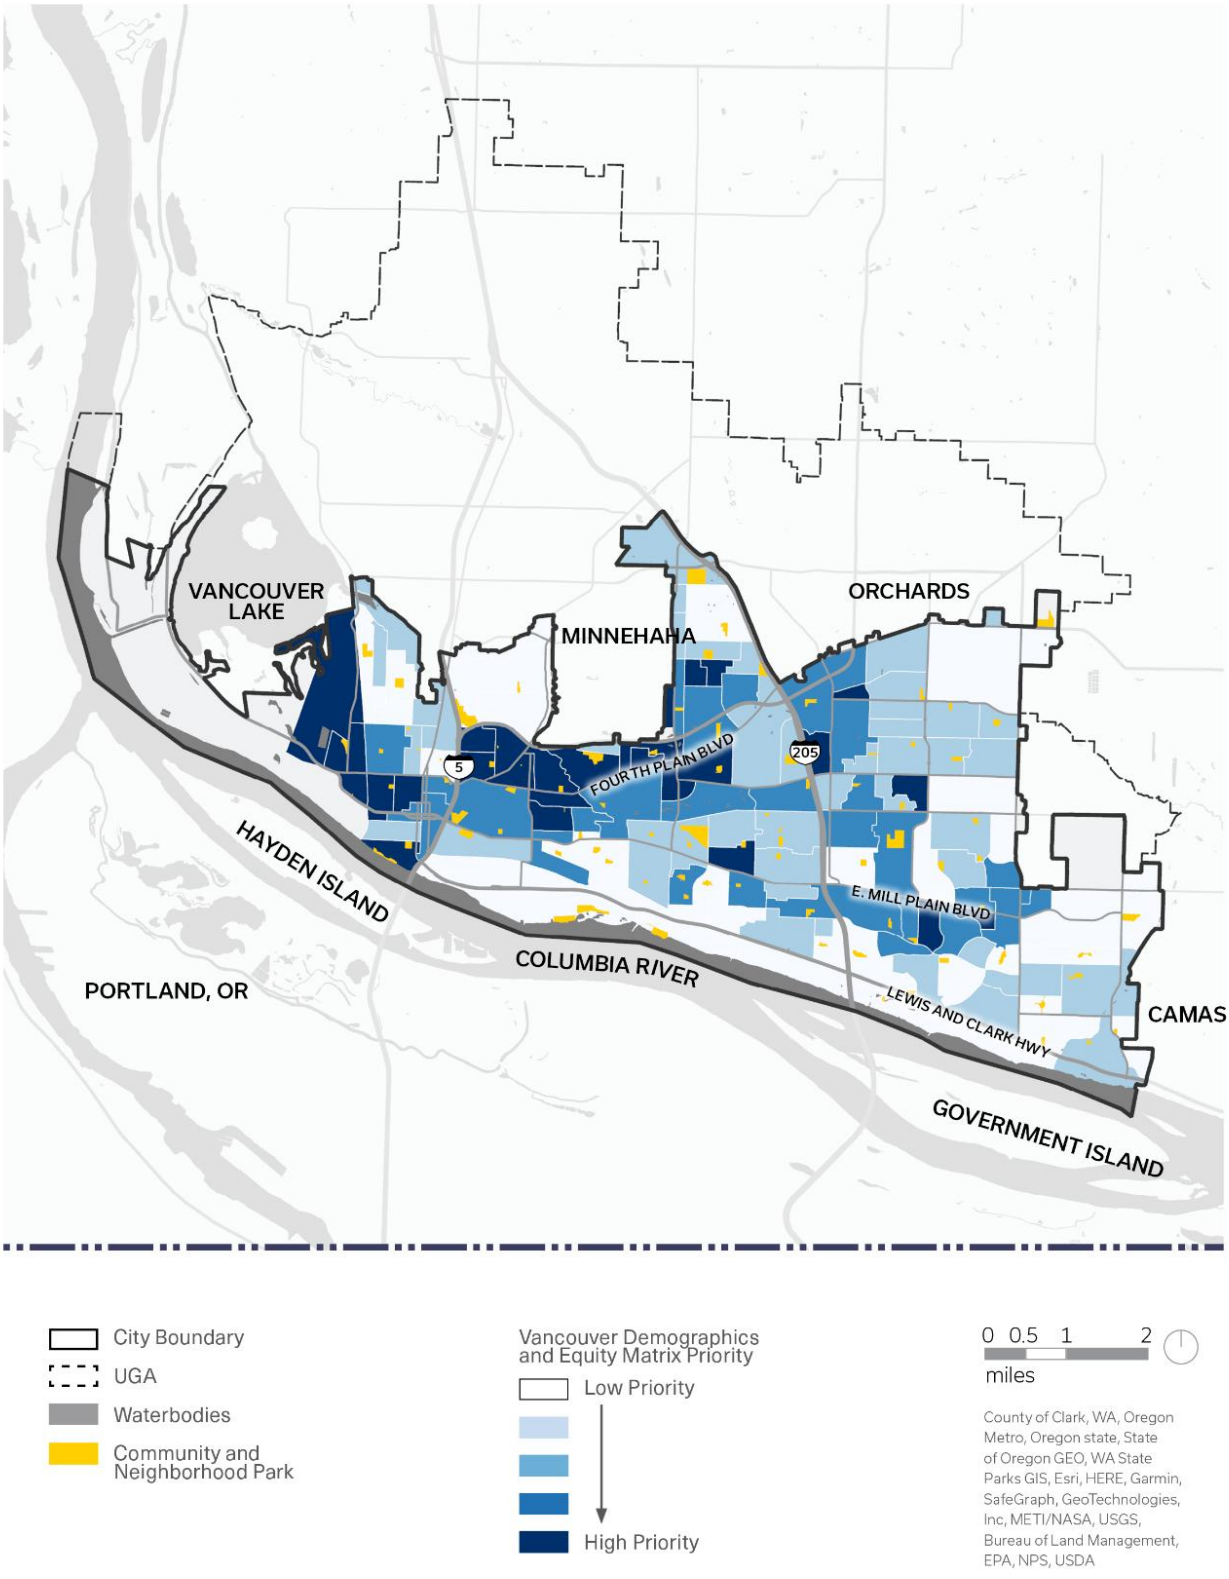
- **Physical Activity Summary:** Investments are needed in park and active transportation gap areas to support active living throughout Vancouver.

### Parks Access

Parks can promote health by providing a space for people to be physically active, whether through sports or unstructured activities like walking. A report from the Trust for Public Land suggests that having parks closer to homes is associated with improved health for people of all ages, including lower blood pressure, reduced cardiovascular risk, and better mental health (Trust for Public Land, 2023).

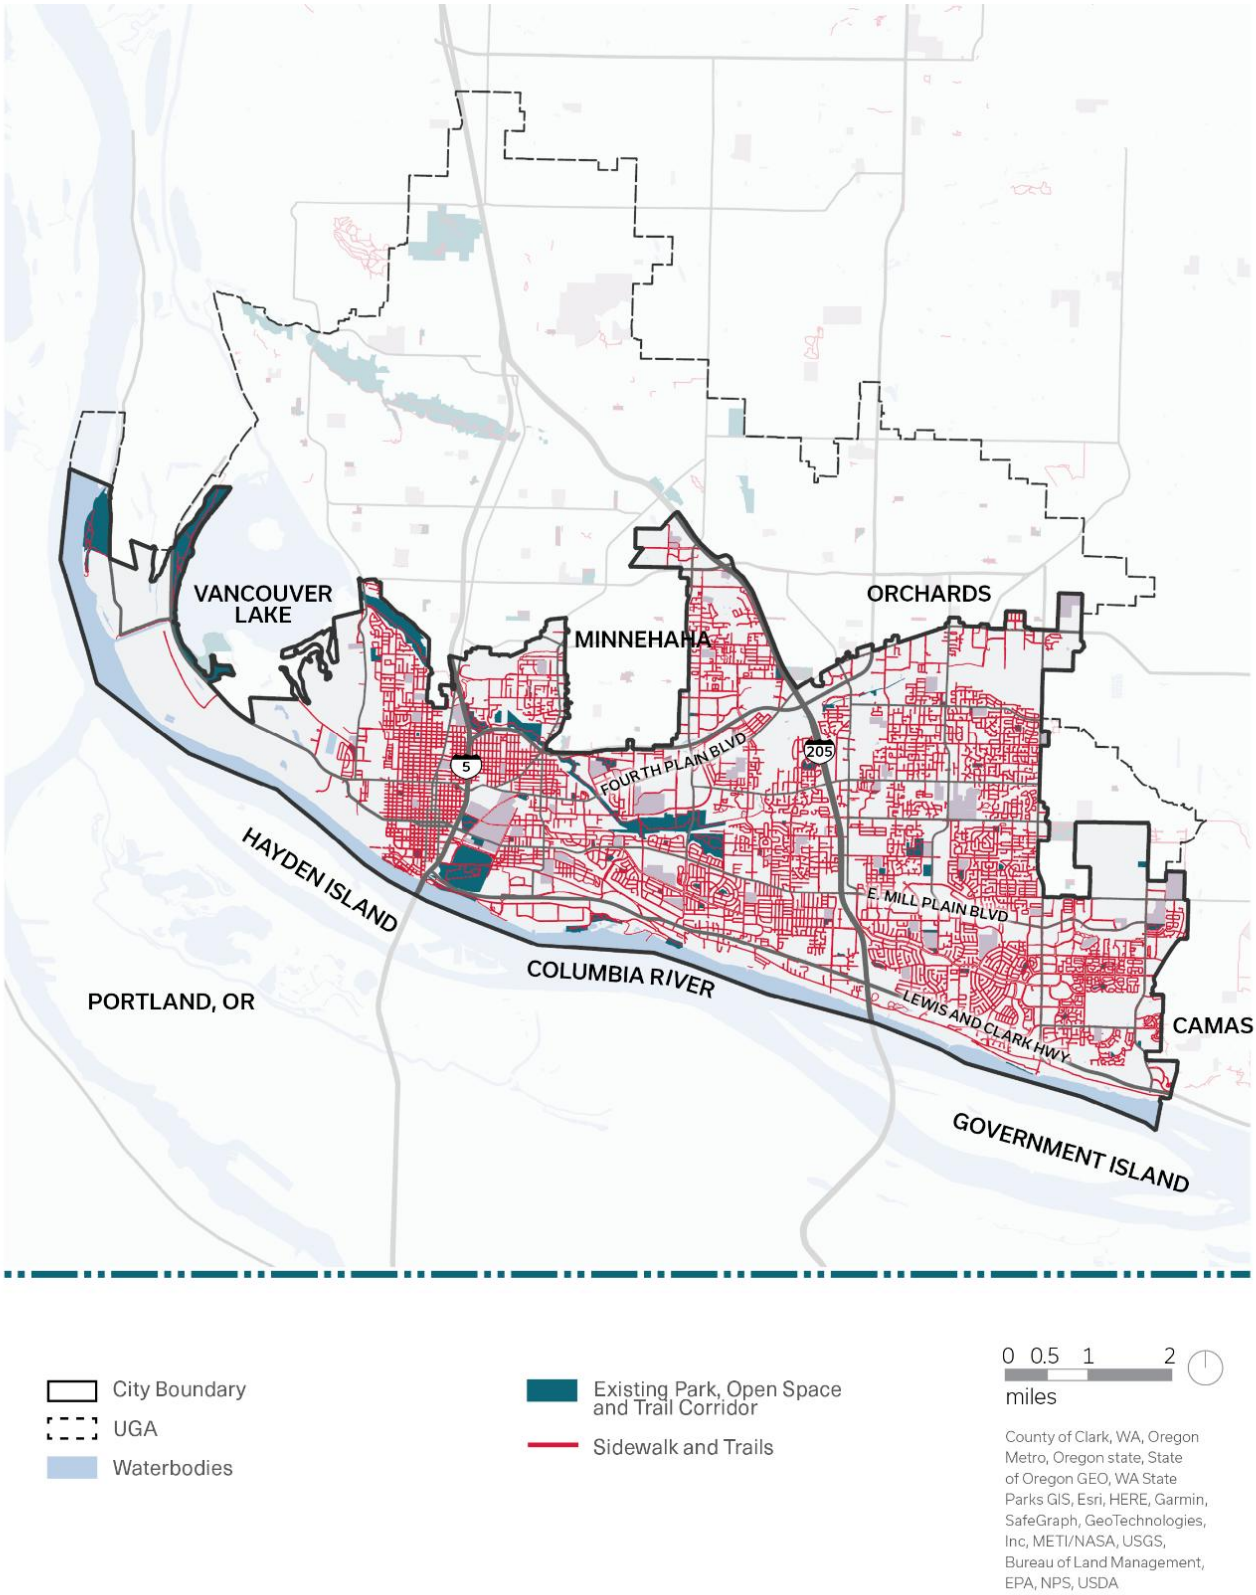
In Vancouver, access to parks varies across the city, with some areas exceeding the City's level of service for park acreage and others having less than 20% of the park acreage needed to meet the level of service (Exhibit 3-4). Areas of note include Fruit Valley, Rose Village, Fourth Plain Village, parts of Hudson's Bay, and several areas in the east side of the city.

*Exhibit 3-4: Half-Mile Parks Service Areas*



*Source: City of Vancouver, 2022.*

Based on community demographics and existing level of service, Exhibit 3-5 identifies high-priority areas of the city for future park investment. Several high-priority areas are located in and around the Bagley Downs and Rose Village neighborhoods in the north-central part of the city, as well as Fruit Valley on the west side of the city and nearby neighborhoods.

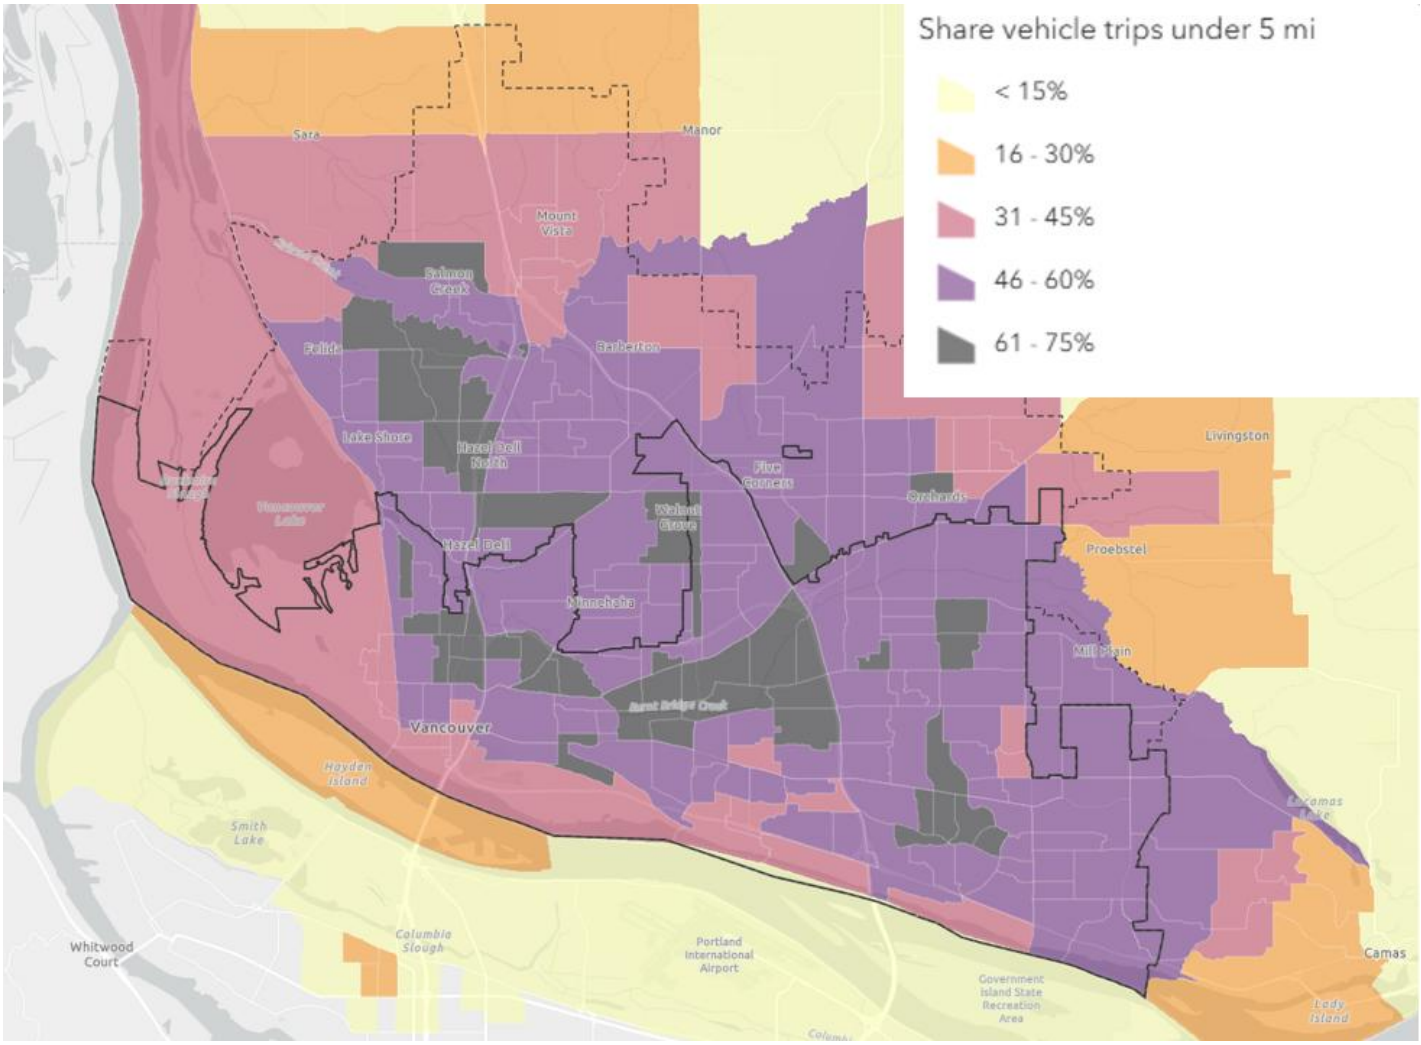


Pedestrian infrastructure is also a factor in park access. Exhibit 3-6 shows where parks are well served and poorly served by sidewalks. Known sidewalk gaps are dispersed throughout Vancouver, and the City plans to assess these through the 2025 Comprehensive Plan update.

*Exhibit 3-5: Park Equity*

*Source: Design Workshop, 2024.*

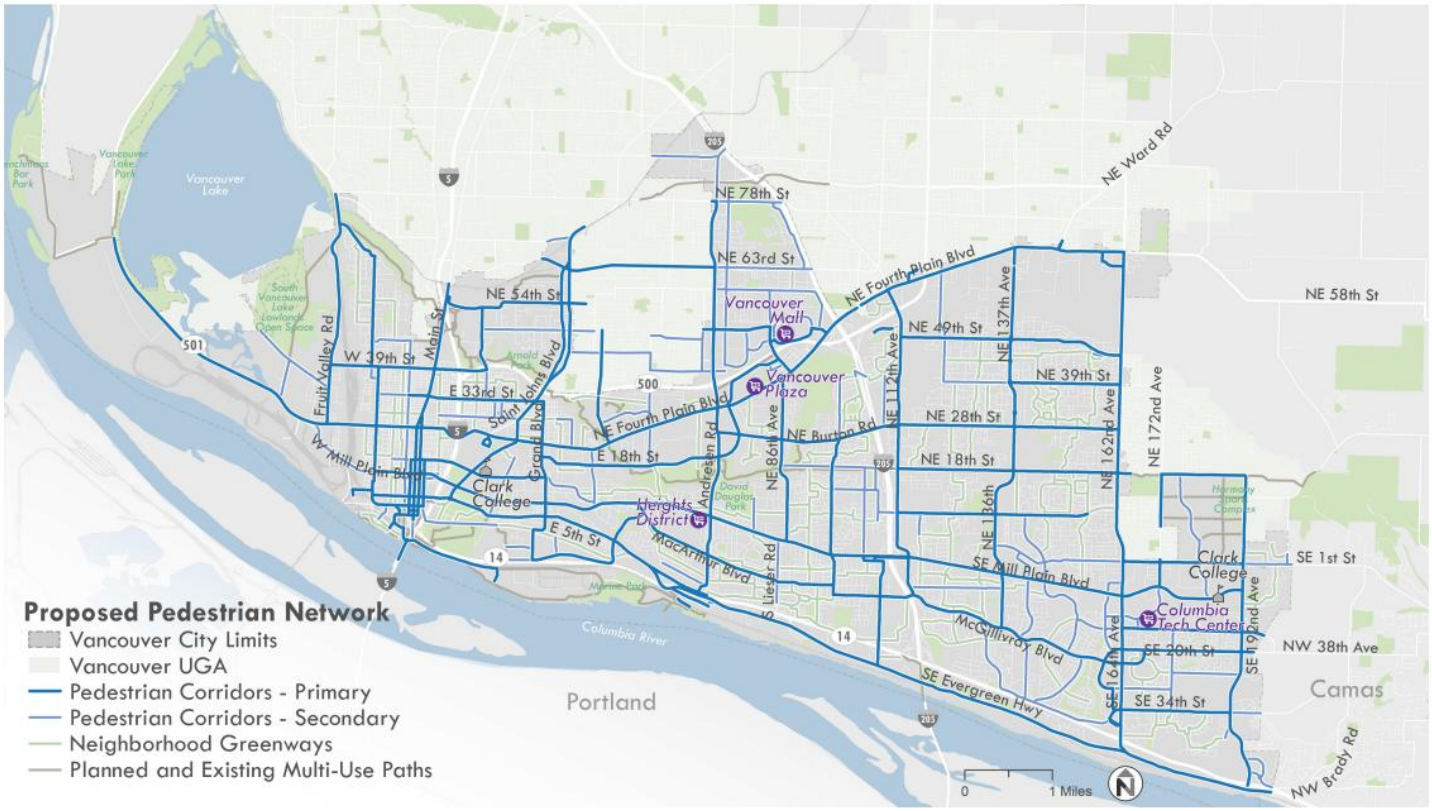
*Exhibit 3-6: Park/Sidewalk Interface*



*Source: Design Workshop, 2024.*

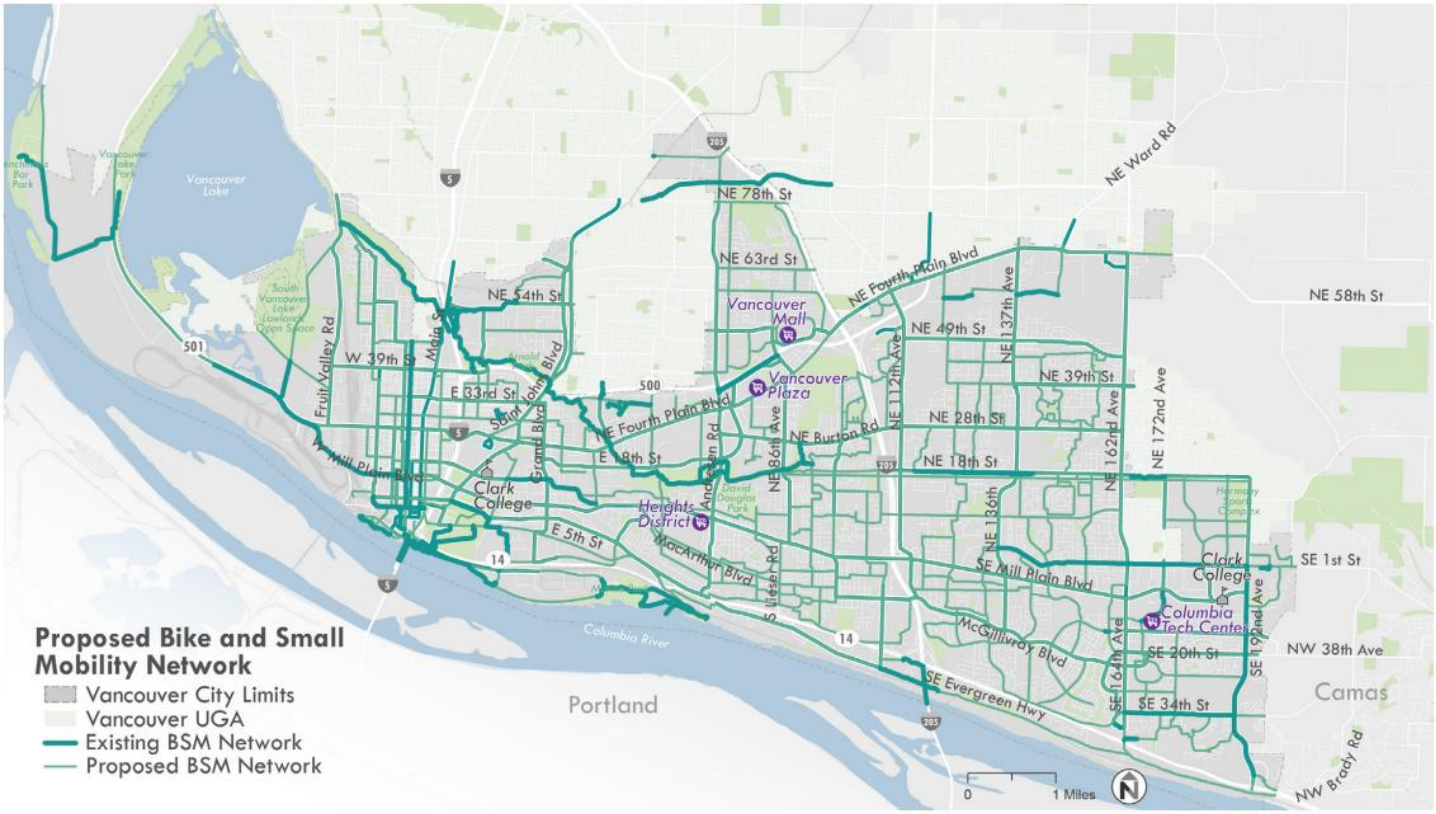
## Active Transportation

Infrastructure and urban design for walkability and bikeability can also encourage a more physically active population. Vancouver has an existing active transportation network, with trails, sidewalks, and bike lanes (Exhibit 3-8, Exhibit 3-9, and Exhibit 3-10). Vancouver also has bus rapid transit (BRT), and 47,000 Vancouver residents live within a quarter mile of the Vine BRT and the Mill Plain BRT (Design Workshop, 2024). However, only 2% of Vancouver workers walk to work, 0.5% bike to work, and 3% take public transit (and are likely to walk some amount in their commute), while the overwhelming majority (75%) drive alone to their jobs (Design Workshop, 2024).



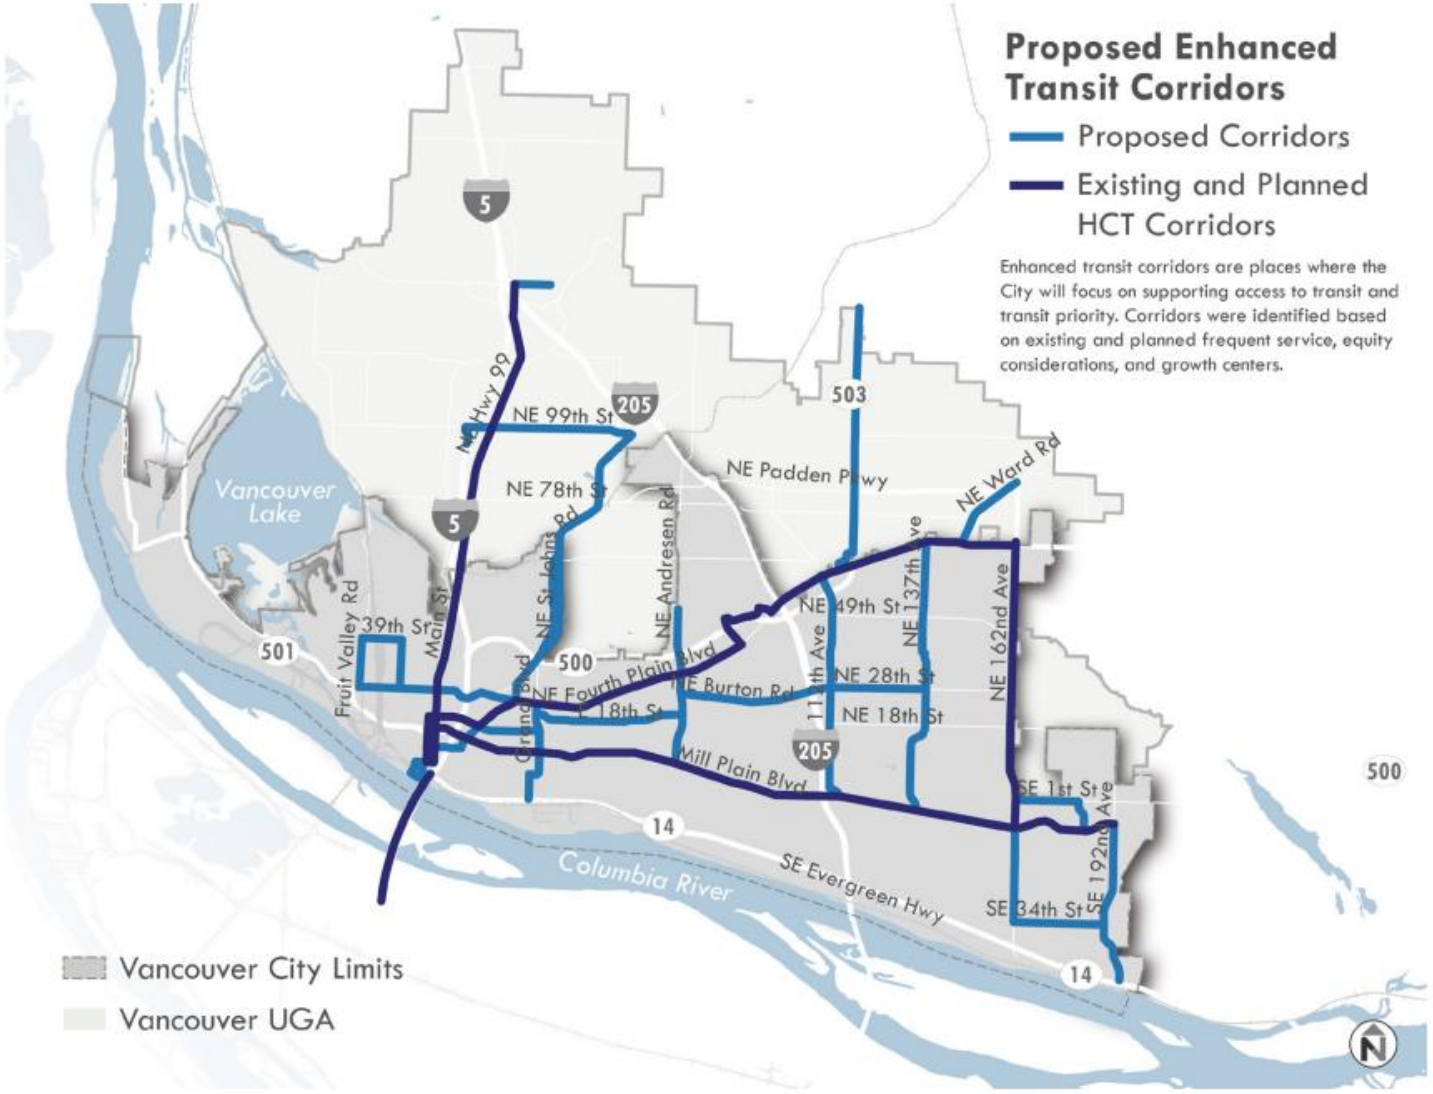
Vancouver is an economic hub for the region, and only 34% of workers in the city also live in Vancouver, according to Census OnTheMap (U.S. Census Bureau, 2021). However, there are many parts of the city where the majority of vehicle trips occurring, not limited to work commute trips, are under 5 miles long (Exhibit 3-7). Many of these short trips have the potential to be converted to active transportation or transit trips, if improvements to infrastructure, urban design, and programming effectively create behavior change.

*Exhibit 3-7: Trips Under 5 Miles*



*Source: City of Vancouver, 2024; Alta Planning + Design, 2023; BERK, 2024.*

*Exhibit 3-8: Walking and Rolling Network*



*Source: City of Vancouver, 2024.*

*Exhibit 3-9: Bicycling and Small Mobility Network*

*Source: City of Vancouver, 2024.*

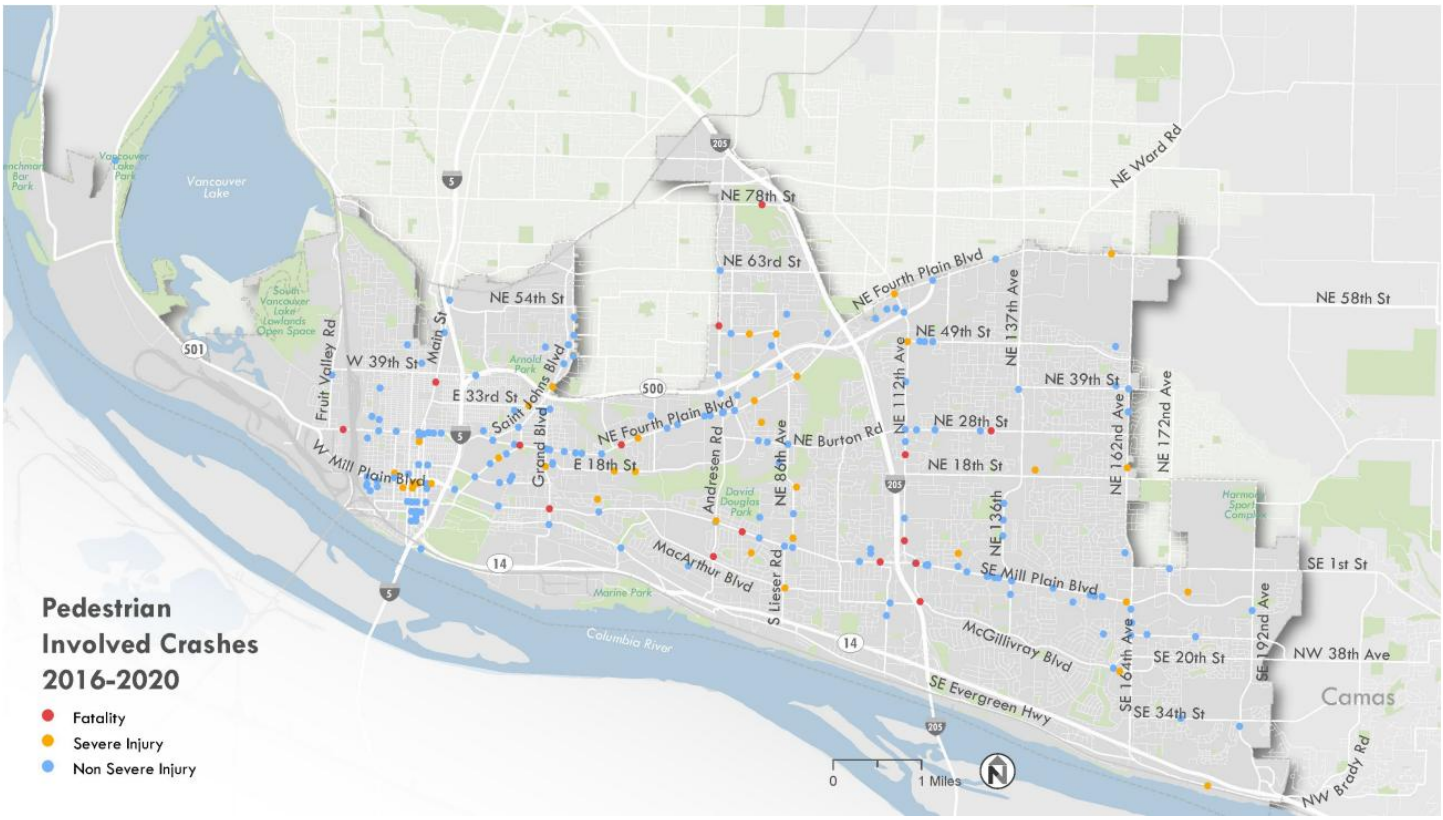


*Exhibit 3-10: Proposed Enhanced Transit Corridors*

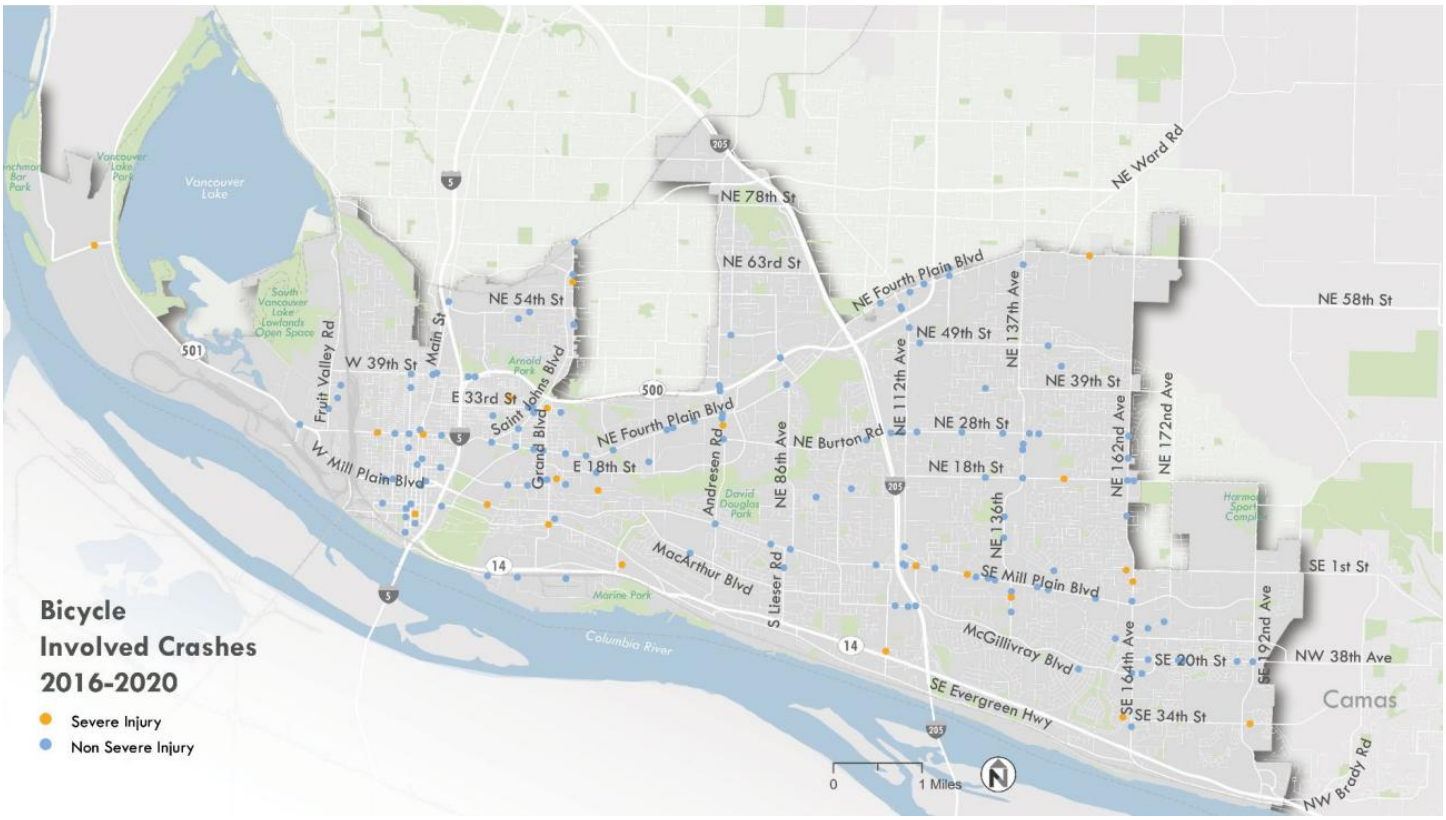
*Source: City of Vancouver, 2024.*



Safety is a key concern for active transportation modes. Between 2016 and 2020, there were 76 fatal and severe-injury crashes involving a pedestrian or bicyclist, per the City's 2022-2026 Local Road Safety Plan (City of Vancouver, 2022). These crashes most commonly involved pedestrians crossing at non-intersection locations without a crosswalk, but many took place at a signalized intersection. Principal arterials were the site of 27% of all pedestrian crashes, 47% of pedestrian fatalities, and 30% of pedestrian severe injuries. Specific locations for pedestrian- and bicycle-involved crashes from 2016-2020 are shown in Exhibit 3-11 and Exhibit 3-12.

*Exhibit 3-11: Crashes Involving Pedestrians 2016-2020*

*Source: City of Vancouver, 2022.*

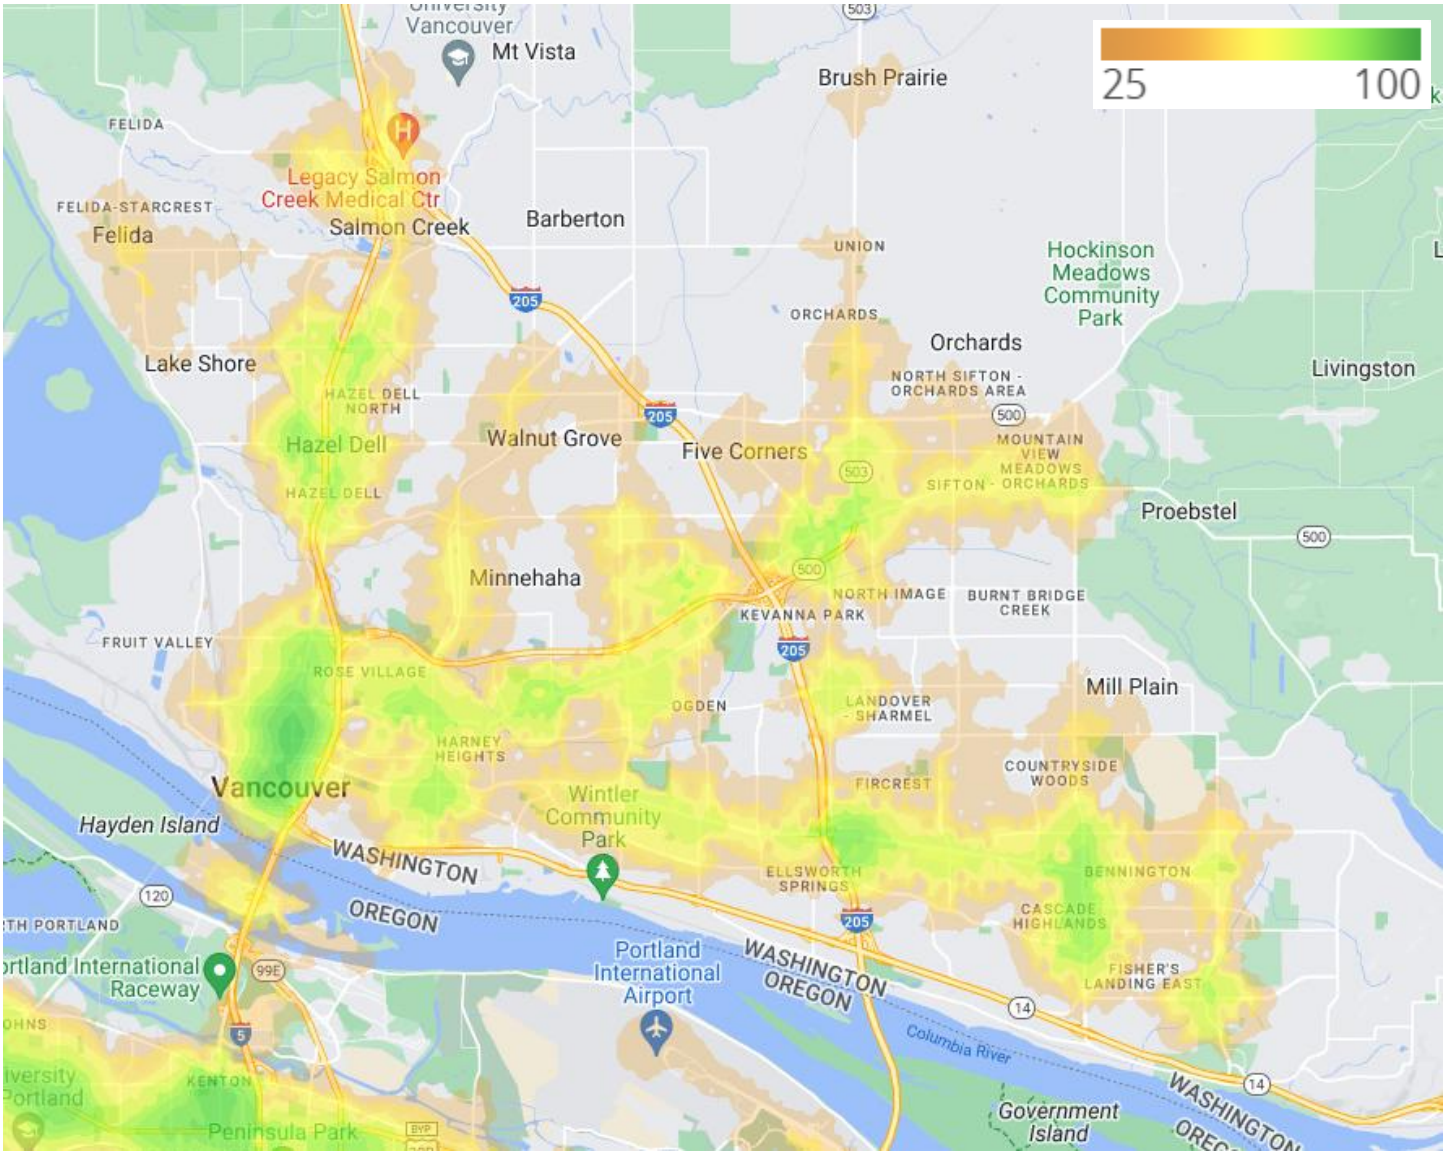


*Exhibit 3-12: Crashes Involving Bicyclists 2016-2020*

*Source: City of Vancouver, 2022.*

Walk Score is one way of measuring the walkability of a place (Walk Score, 2024). It provides a number between 0 and 100 based on the amenities available nearby, population density, and road metrics. In Vancouver, scores vary significantly, with some areas, such as the Esther Short, Hough, and Arnada neighborhoods in the downtown core, reaching scores near 100, while other areas score at the lower end of the range (Exhibit 3-13). Intersection density, as one metric of walkability, is highest in Esther Short, Hough, Arnada, Carter Park, Shumway, Lincoln, Rose Village, Fircrest, and around Clark College.

*Exhibit 3-13: Walk Score Heat Map*

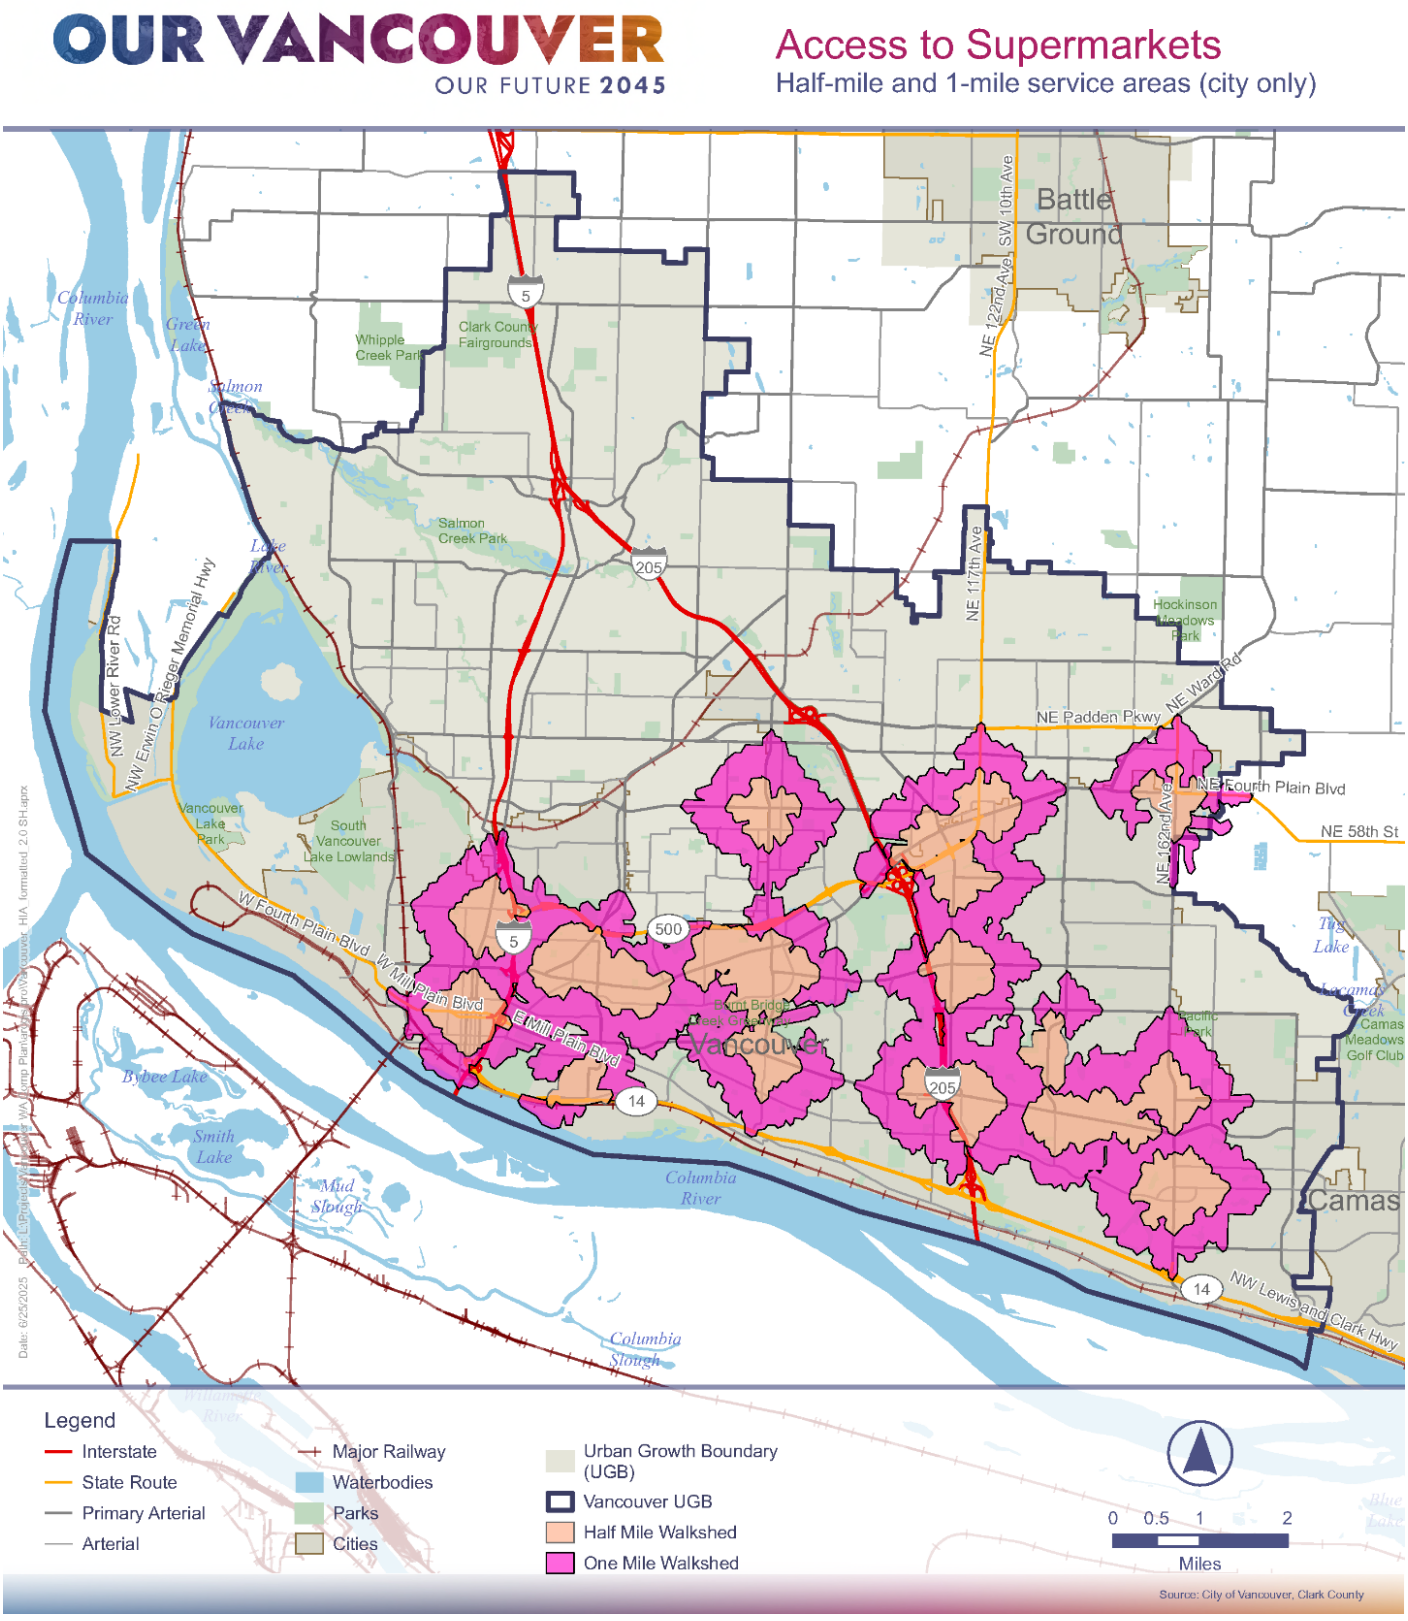
*Source: Walk Score, 2024.*

## Food Access

- **Food Access Summary:** Supermarket access varies across the city and addressing gaps could improve community health.

Socioeconomic factors and neighborhood patterns can affect households' ability to access food, particularly fresh and healthy foods. Many households in Vancouver are facing food insecurity, with 15.5% receiving Supplemental Nutrition Assistance Program (SNAP) support (U.S. Census Bureau, 2022). In the 2021-2022 school year, 48% of students in Vancouver received free and reduced lunch (Design Workshop, 2024). The 2024 Clark County Community Needs Assessment survey also found that food assistance and access to fresh and healthy foods were among the top physical health services needs for Vancouver respondents (Clark County, 2021).

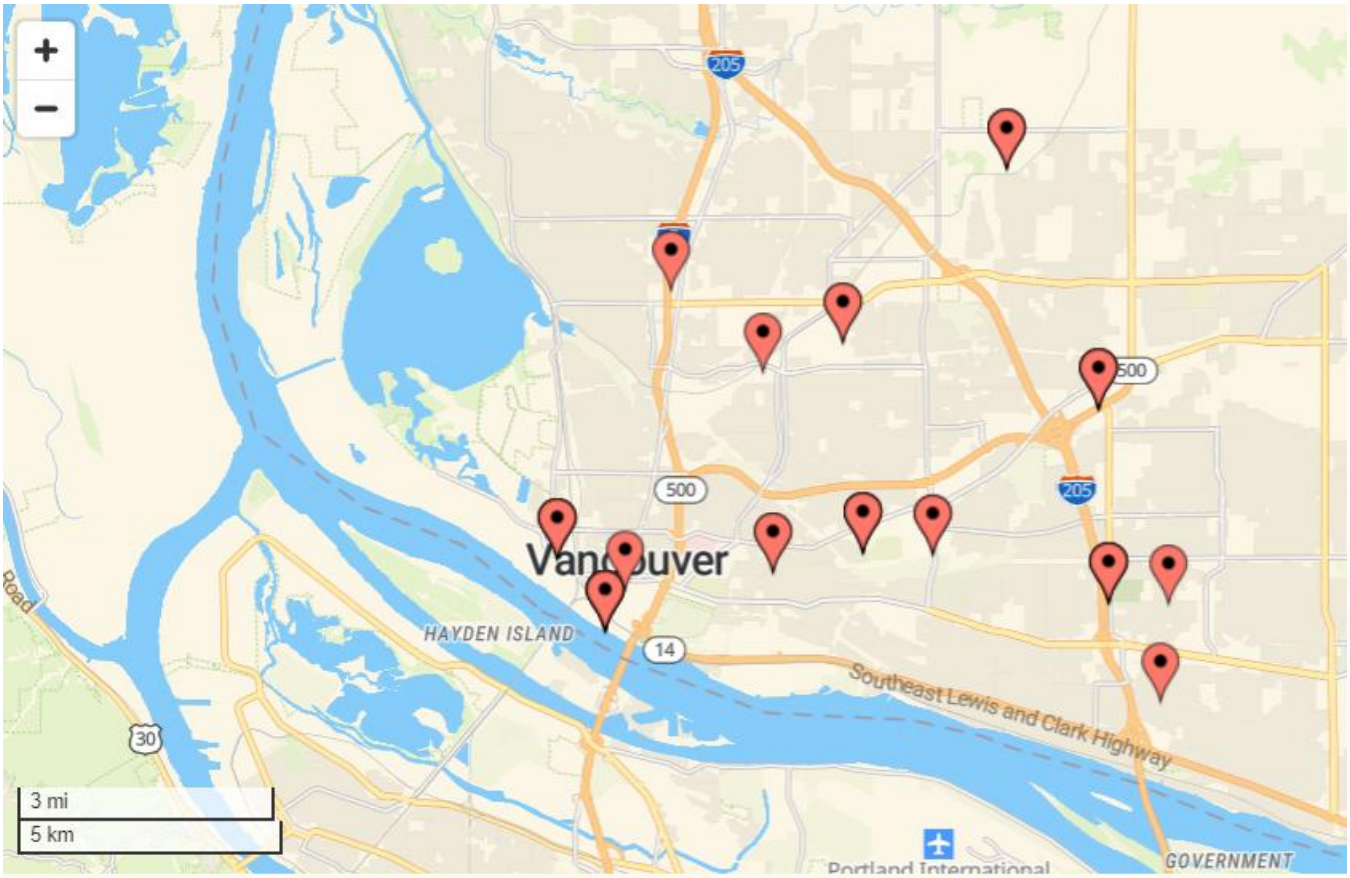
In the context of the city's built environment, some parts of Vancouver do not have any supermarkets within one mile of housing (Exhibit 3-14). While physical proximity to supermarkets is only one factor in a household's access to food, it does play a role, as longer trips take time and fast-food and convenience stores may be located closer and be easier to get to. Some households living near grocery stores, however, may also need to travel for food if the nearby store is too expensive or if they rely on food banks.



For food insecure households, food banks provide necessary support in access to nutrition. Clark County Food Bank partners with other organizations to distribute food at multiple food pantries throughout Vancouver, which have varying service times during the week (Exhibit 3-15).

The City of Vancouver also has five established community gardens where people can grow food in designated areas of some public parks. Gardens operated by the City include Campus Garden, Ellsworth Road Garden, Fruit Valley Park Garden, Leroy Haagen Memorial Community Park Garden, and Marshall Community Park Garden (City of Vancouver, 2022). Private non-profits, churches, and school groups operate additional garden spaces. Between 2014 and 2021, 1,671 people participated in the City's garden programs, 80% of whom were Vancouver residents. Residents over age 65 have reduced rates to secure a plot. Gardens open for the season in April and close in November. Urban Abundance, a local non-profit, also supports the creation of edible landscapes, harvesting local fruit and building publicly accessible foodscapes (Urban Abundance, 2025).

While there is only a small amount of urban agriculture within Vancouver, mostly located near Vancouver Lake, Clark County has an active farming community that serves the city through area farmers markets. Farmers markets in Vancouver include the Downtown Market, open year-round, and the East Vancouver Market, open in the summer (Vancouver Farmers



Market, 2025). The markets participate in SNAP Market Match, with which SNAP/Electronic Benefits Transfer (EBT) customers can spend their benefits on farmers market produce, and their spending is matched dollar for dollar up to $25 in vouchers. The Vancouver Farmers Market also supports the Market Box Produce Prescription Program, in partnership with Vancouver Clinic and American Heart Association, delivering produce to patients every week. Some farms also have Community Supported Agriculture (CSA) programs where households can buy a share of produce during the growing season that they can pick up or have dropped off on a regular schedule (Clark Food and Farm Network, 2025).

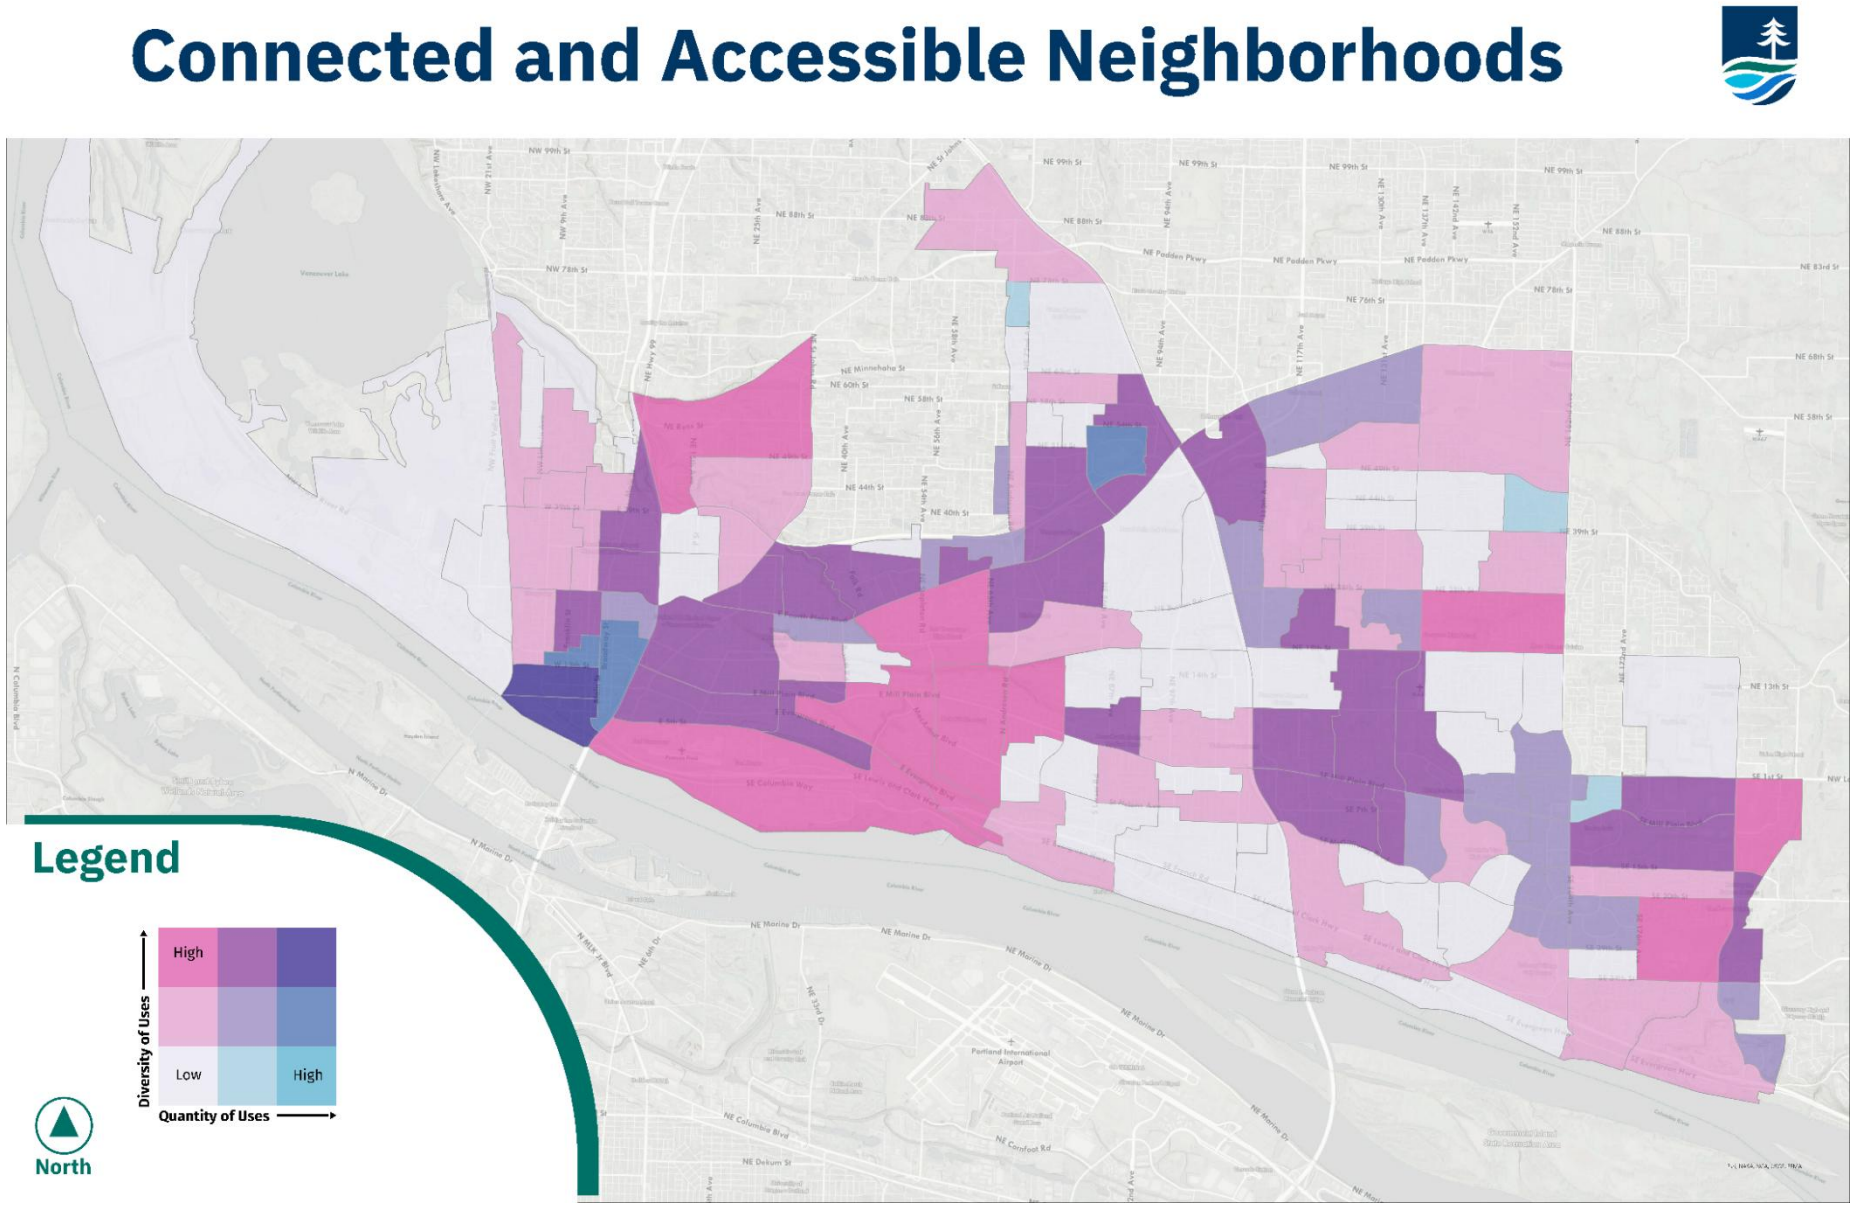
*Source: Clark County Food Bank, 2024.*

## Community Connections

- **Community Connections Summary:** Some neighborhoods have a low density of services and amenities, creating challenges with access to healthcare, childcare, and daily needs. Social isolation is also a challenge nationally that can be improved through programming.



### Access to Services

Neighborhoods with a density of essential places, such as schools, childcare, healthcare, social services, and gathering spaces, may be better for health due to improved walkability and easier access to services that support well-being. The concept of a connected and accessible neighborhood aligns with this idea and describes a place where various daily needs can be reached by walking or biking. In Vancouver, some neighborhoods could be considered connected and accessible neighborhoods while others have a much lower proximity to and diversity of amenity types (Exhibit 3-16). This includes essential uses, like grocery stores, urgent care, public schools, and bus stops, and supportive uses, like cafes, community centers, libraries, and trade schools. Neighborhoods with lower amenity access scores include Fruit Valley, Rose Village, and several areas immediately to the west of I-205 and on the east side of the city.

Childcare is one specific type of essential service with varying factors that affect access. Clark County Public Health is conducting the multi-phase Raising Clark County project to identify community support needs for infants, young children, parents, and caregivers. The first phase of the project has found that "families struggle with navigating the complexities of finding a child care center that is available, affordable, reliable, and safe." (Clark County, 2024). Challenges include the high cost of childcare, long wait lists, childcare gaps during holidays and seasonal breaks, program quality, and outdated provider lists. These challenges extend far beyond simply the proximity of childcare to families and their homes and are more likely to be addressed through programs than built environment interventions.

Many Vancouver residents also need access to social services, and transportation to and from these services is a key issue. A Community Needs Assessment survey conducted by Clark County in 2024 found that getting to services, such as housing, physical health, behavioral health, and support services, was among the top barriers to social services access for respondents in Vancouver (Clark County, 2024).

*Exhibit 3-16: Connected and Accessible Neighborhoods (Diversity and Quantity of Uses)*

*Source: City of Vancouver, 2025.*

## Social Connection and Isolation

There is an epidemic of loneliness and isolation across the United States, according to the U.S. Surgeon General (U.S. Surgeon General, 2023). Connection with others is critical to health and wellbeing, and neighborhoods play a role in facilitating that connection. Physical elements, like schools, libraries, parks, and other places that bring people together, can strengthen our relationships with one another by providing places to meet and interact.

According to 2022 American Community Survey estimates, 31% of households in Vancouver are people living alone, and 13% of that 31% are older adults (over 65) living alone. These percentages have grown over the past 10 years: in 2012, 30% of households in Vancouver were people living alone and 10% of all households were older adults living alone. According to Washington State Home and Community Services, older adults are particularly at risk for isolation and loneliness (Washington Department of Social and Health Services, 2021).

With almost a third of Vancouver households currently living alone and not experiencing the daily social interactions that come from sharing a home, access to gathering spaces and opportunities for connection is increasingly important. Better access to amenities and parks is likely to enhance social connections and therefore community health (see Exhibit 3-4 and Exhibit 3-16).

In addition to supporting physical spaces for gathering, the City also provides opportunities for connection through programming. The City currently runs recreation and community event programs through the Firstenburg Community Center, serving East Vancouver, and the Marshall/Luepke Center, serving West Vancouver. City recreation programs for adults include sports, fitness, and arts, with additional programs tailored specifically toward older adults. The City also coordinates special events, such as summer concerts and movies, and works with community partners on celebrations for various holidays throughout the year. The Vancouver Community Library, operated by Fort Vancouver Regional Libraries, also has ongoing programs, including book groups and workshops.

## Exposure to Health Hazards

- **Exposure to Health Summary:** Air quality is a key issue in Vancouver, especially $PM_{2.5}$ exposure. Water quality, noise, heat, and climate change impacts are also present and can be addressed in part by planning and policy.

### Air Quality

Criteria air pollutants (CAPs) are specific pollutants that the US Environmental Protection Agency (EPA) has designated as specifically causing harm to people's health and the environment. They include:

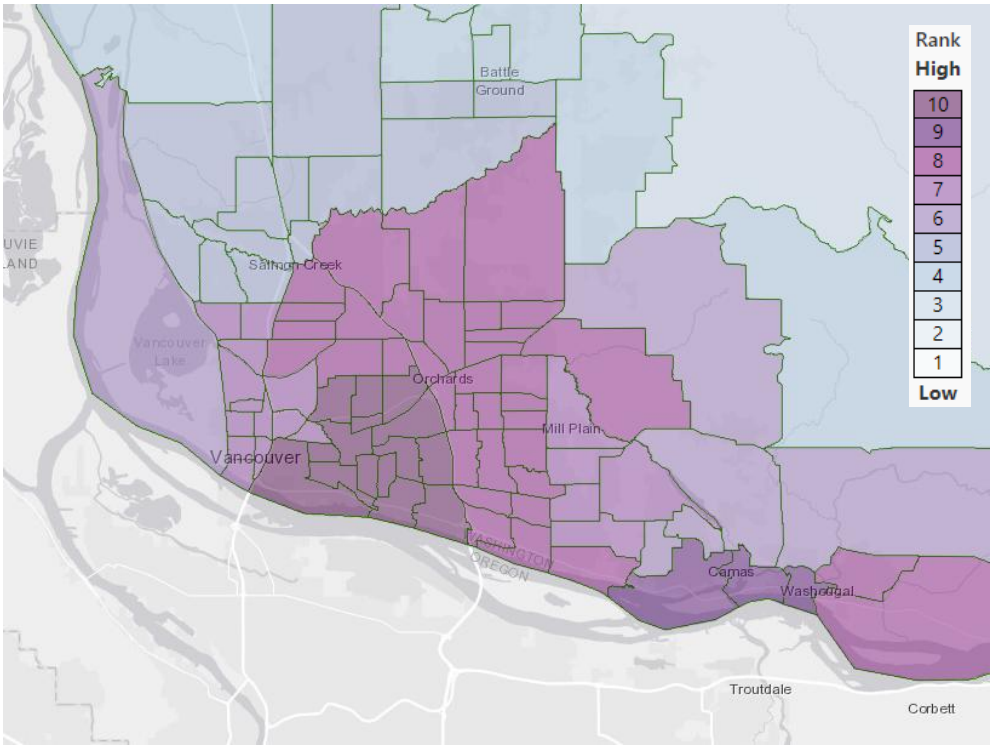
- Particulate matter
  - Fine particulate matter ($PM_{2.5}$)
  - Inhalable particulate matter ($PM_{10}$)
- Ozone ($0_3$)
- Nitrogen dioxide ($NO_2$)
- Sulfur dioxide ($SO_2$)
- Carbon monoxide (CO)
- Lead (Pb)

The Washington State Department of Ecology has identified Vancouver as an overburdened community highly impacted by criteria air pollution (Washington Department of Ecology, 2025). Vancouver was identified because of the elevated levels of $PM_{2.5}$ compared to the rest of the state, and the vulnerability of the community to air pollution impacts due to poverty, linguistic isolation, and unaffordable housing.

Specific pollutants of concern, per a 2023 Ecology report, include short-term (24-hour) $PM_{2.5}$ and cumulative criteria air pollution, which is mostly driven by $PM_{2.5}$, $0_3$, and $NO_2$ (Washington Department of Ecology, 2023). Sources of pollution in Vancouver include wildfire, wood burning, cars, trucks, trains, and port activity. Proximity to the larger city of Portland is also likely an influence. As shown in Exhibit 3-17 and Exhibit 3-18, Vancouver ranks highly for $PM_{2.5}$ and $O_3$ exposure compared to other places in the state (Washington State Department of Health, 2022). The Ecology report estimates that there are 30 deaths each year associated with $PM_{2.5}$ in Vancouver, with the largest impact on older adults.

Current air quality monitoring in Vancouver includes $PM_{2.5}$ and $0_3$. The Washington State Environmental Health Disparities map tool also provides mapping for these pollutants (Washington State Department of Health, 2022). The Vancouver area on average is in attainment with the national ambient air quality standards (NAAQS) for all CAPs but is well above NAAQS levels of $PM_{2.5}$ during severe wildfire events. Even during years with less severe

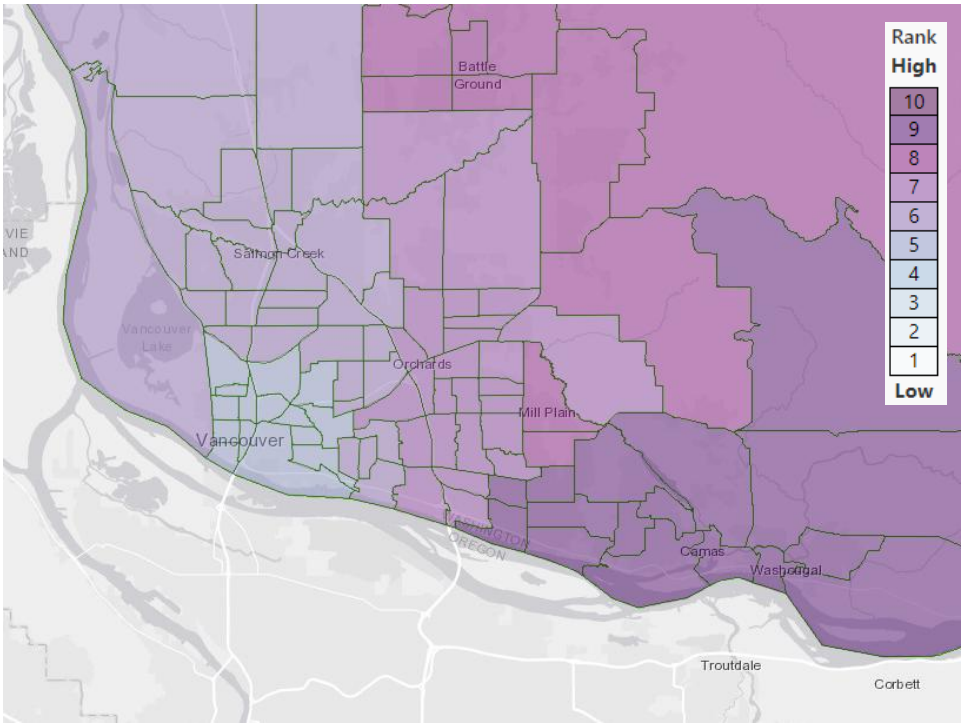
wildfire events, $PM_{2.5}$ concentrations approach or surpass the Department of Ecology's healthy air goals of 20 µg/m3. During summers when wildfires are not prevalent, $O_3$ is the dominant CAP as there is more direct sunlight and high concentrations of volatile organic compounds (VOCs) from vehicle exhaust, which react to form ground level $0_3$.



Poor air quality has been directly linked to negative health outcomes in overburdened communities. The following outcomes are more common in overburdened communities and can be linked to high concentrations of criteria pollutants:

- Heart and lung disease at higher rates than state average
- Lower life expectancy than state average
- Older adults in overburdened communities highly impacted by air pollution were twice as likely to die from illnesses linked to breathing fine particles ($PM_{2.5}$) from human-caused sources than the statewide average. Older adult people of color have a higher risk of death from breathing fine particles ($PM_{2.5}$) compared to older white adults in the same area.

There are also multiple sites in Vancouver that the US EPA identifies as brownfields or superfund sites, which have been contaminated by past uses and may pose a hazard to human health and the environment (Exhibit 3-19). Brownfields are properties where contamination is present that could impact future use and the federal government is not typically involved. Superfund sites are those with a typically more hazardous type of contamination and the federal government is involved in cleanup. The EPA provides grants and technical assistance to remediate these contaminated sites. All of the superfund sites in Vancouver have been removed from the superfund national priorities list due to effective cleanup actions. Brownfield sites in the city have varying statuses regarding their cleanup.



Greater density of trees and plantings is one strategy to mitigate air pollution. Dense tree canopies are prevalent in some residential neighborhoods in Central Vancouver, but overall, Vancouver's tree canopy coverage is significantly lower than the recommended 40%, with only 19% coverage (Exhibit 3-20). This is also lower than other cities in Washington, which maintain an average of 32% coverage. Communities of color in Vancouver experience less tree canopy coverage, falling below the City's average by 2.4% (Design Workshop, 2024). Vancouver aims to achieve a tree canopy coverage of 28% by 2030.

*Source: City of Vancouver Community Atlas, 2024.*

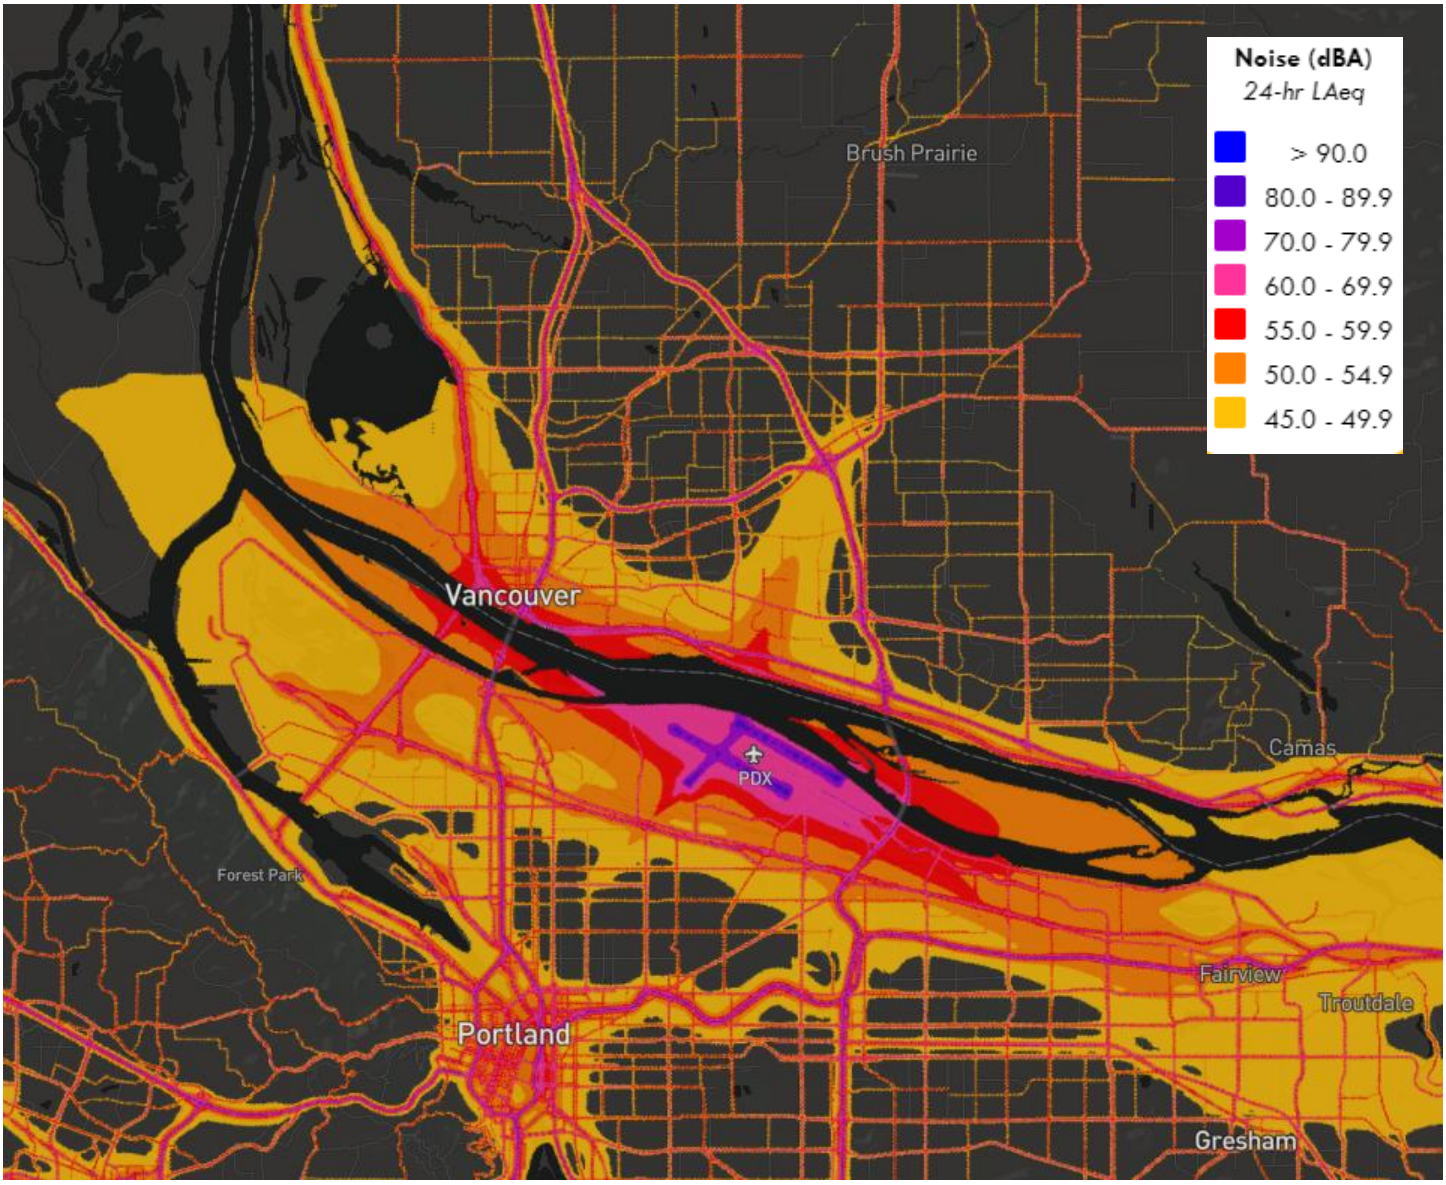
## Water Quality

The City of Vancouver 2023 Annual Water Quality Report examines groundwater and distribution system testing results for select contaminants. Testing of groundwater sources found that the highest levels of fluoride and nitrate were well within the ideal goal limit and the highest level allowed (City of Vancouver, 2023). Within the water distribution system, coliform bacteria was not detected in 2023, but chlorine was slightly higher than the ideal goal. Other contaminants without goals defined were detected at levels far below the highest allowed. The City also conducted sampling for per- and polyfluoroalkyl substances (PFAS), human-made chemicals with links to harmful health impacts. Samples ranged from none detected to levels above the level that the State defines as requiring monitoring and action. The City has a range of ongoing activities to help address PFAS in the city's water, including short-term measures and treatment projects in long-range capital facilities plans. Vancouver also has eight wellhead protection areas located throughout the city (Exhibit 3-21).

Overall, based on 2023 testing results, chlorine but especially PFAS may be the greatest contaminant risks to the water quality in Vancouver.

*Exhibit 3-21: Potable Water*

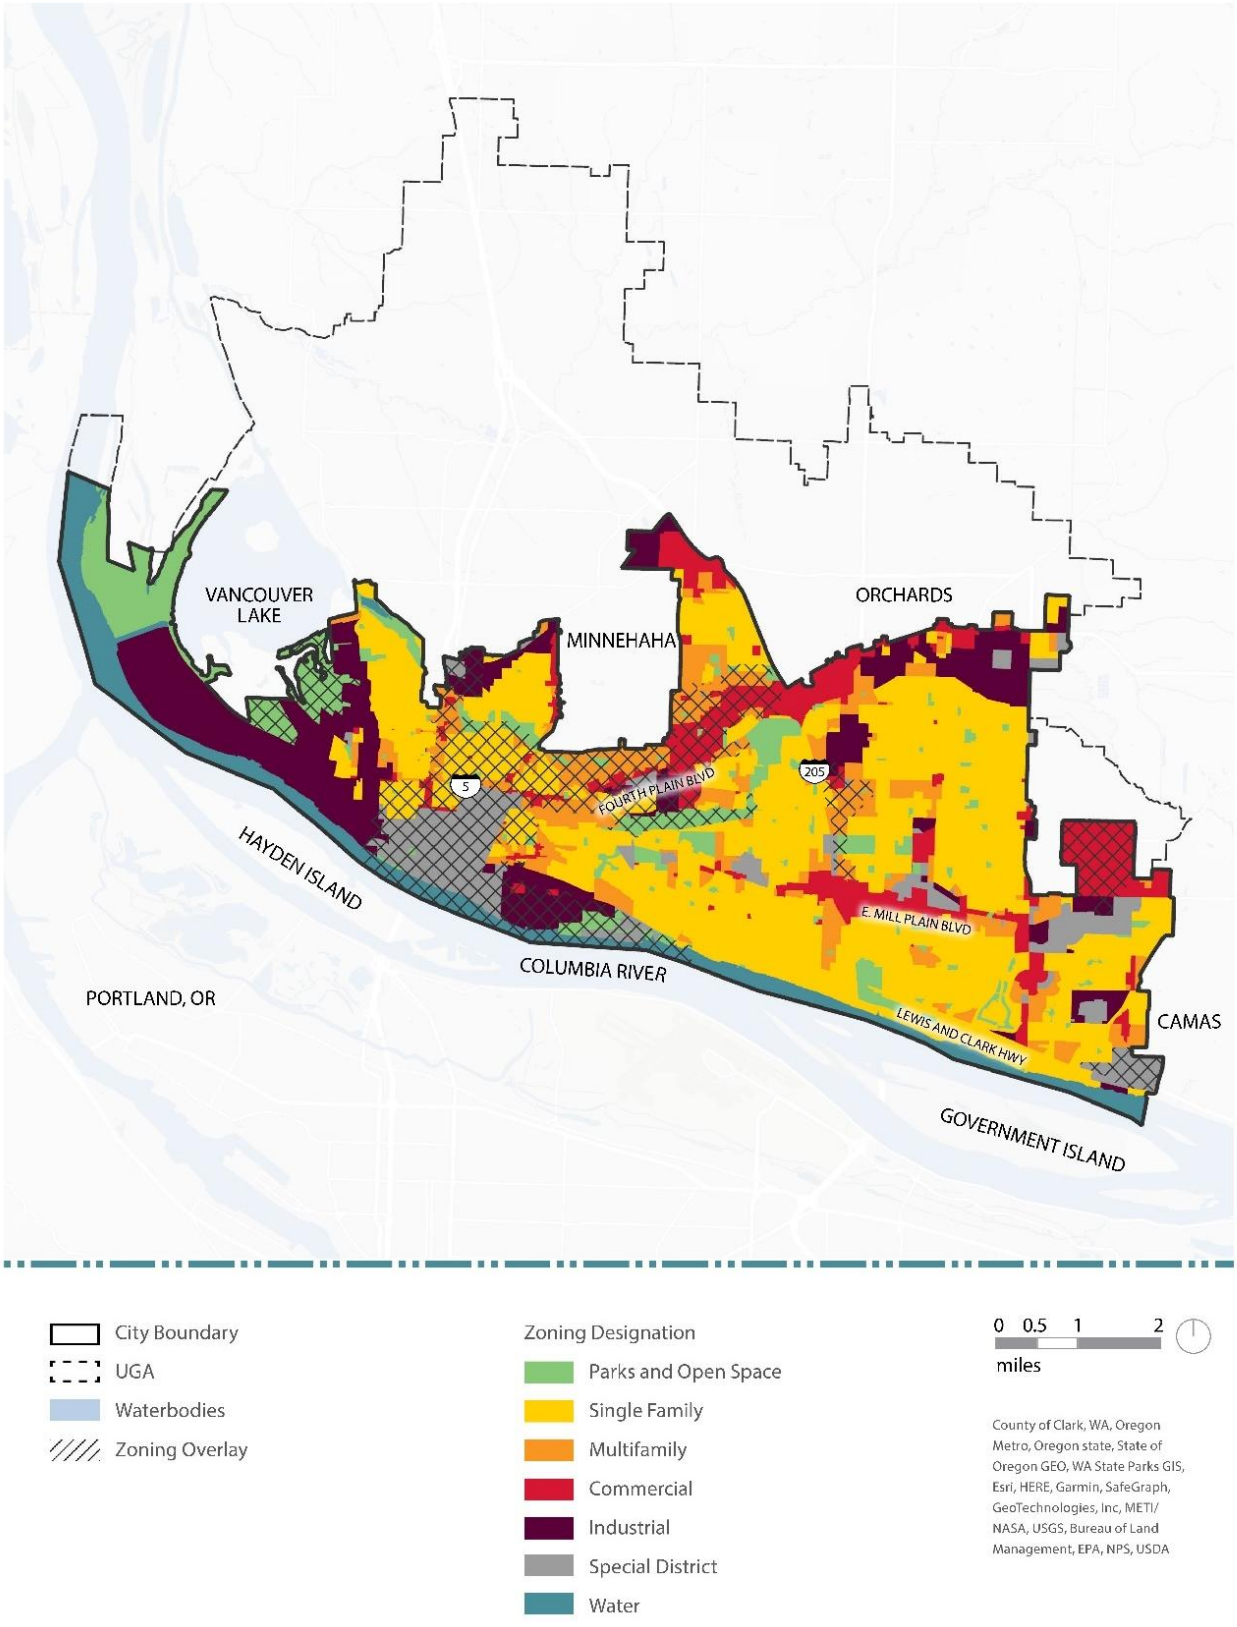
*Source: City of Vancouver Community Atlas, 2024.*



## Ambient Noise

According to the American Public Health Association, chronic noise can have a range of impacts on sleep and stress levels that can contribute to cardiovascular disease, psychological disorders, and other health conditions (American Public Health Association, 2021). In an urban environment, noise can come from a range of sources, such as construction, industrial uses, and transportation. Washington State defines maximum permissible noise as between 55 and 70 A-weighted decibels (dBA), depending on the uses that are creating and receiving the noise (Washington Administrative Code, 1975).

The US Department of Transportation provides national data on transportation noise (Exhibit 3-22) (U.S. Department of Transportation, 2020). In Vancouver, much of this noise is centered around the Portland International Airport to the south, the rail lines on the west and south ends of the city, and major roads and highways, including I5, SR14, SR205, and SR500.

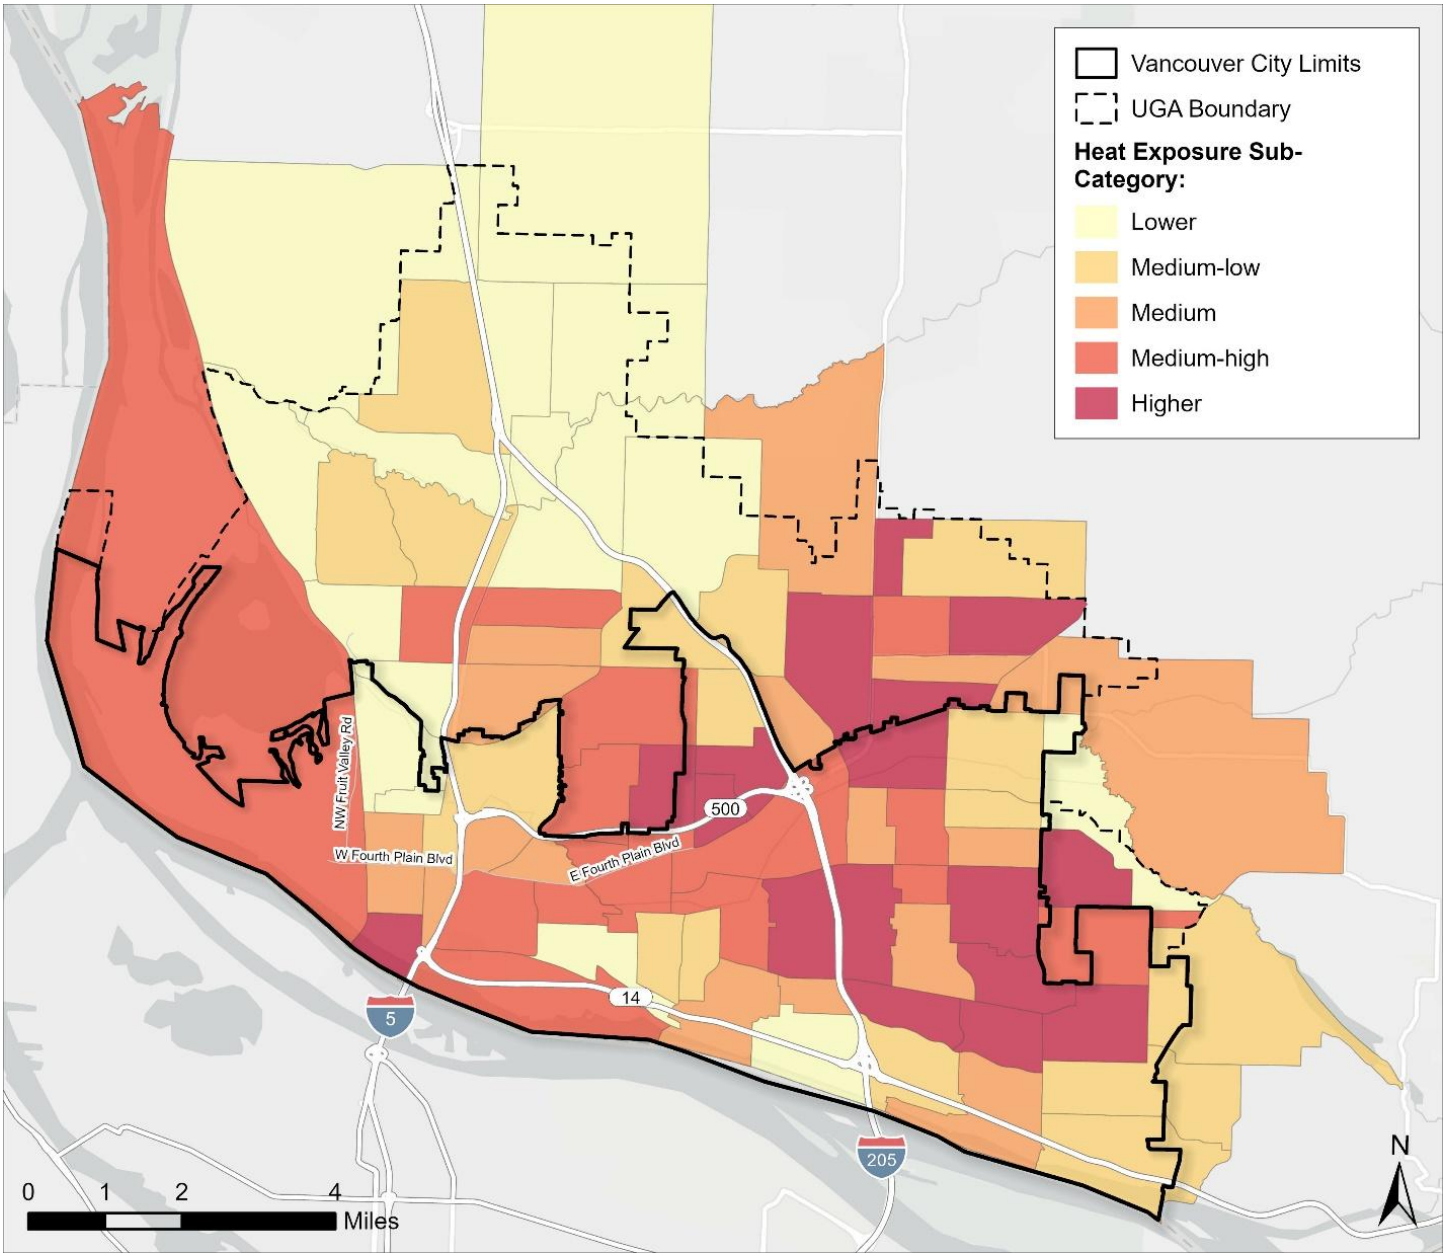


Noise impacts from construction can occur anywhere in the city, whereas noise from industrial uses is most likely to occur in industrial zones, located primarily near the edges of city limits. There are several areas of the city where industrial zones abut residential zones, where homes may be especially at risk for noise exposure, such as on the west side around Fruit Valley, near the Vancouver waterfront south of SR-14, and in the northeast corner of the city (Exhibit 3-23).

*Exhibit 3-22: Transportation Noise*

*Source: U.S. Department of Transportation, 2020.*

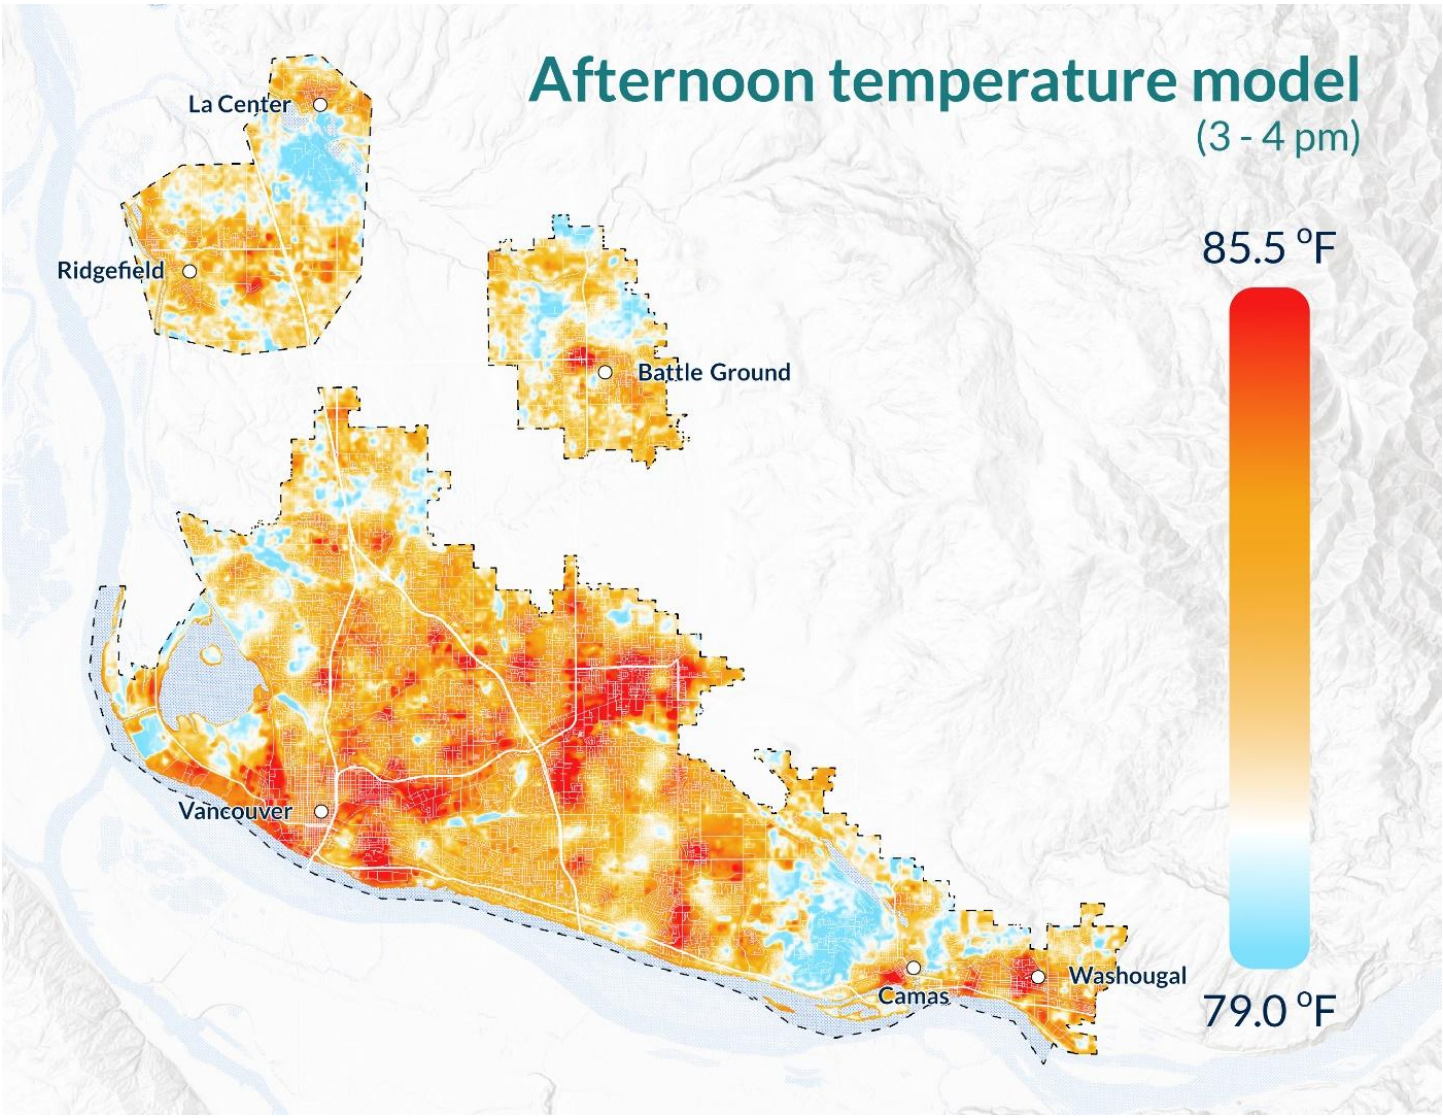
*Exhibit 3-23: Zoning*



*Source: City of Vancouver Community Atlas, 2024.*

## Urban Heat

According to the World Health Organization (WHO), heat stress is the leading cause of weather-related deaths, and can also exacerbate health conditions such as cardiovascular disease, diabetes, asthma, and mental health (World Health Organization, 2025)

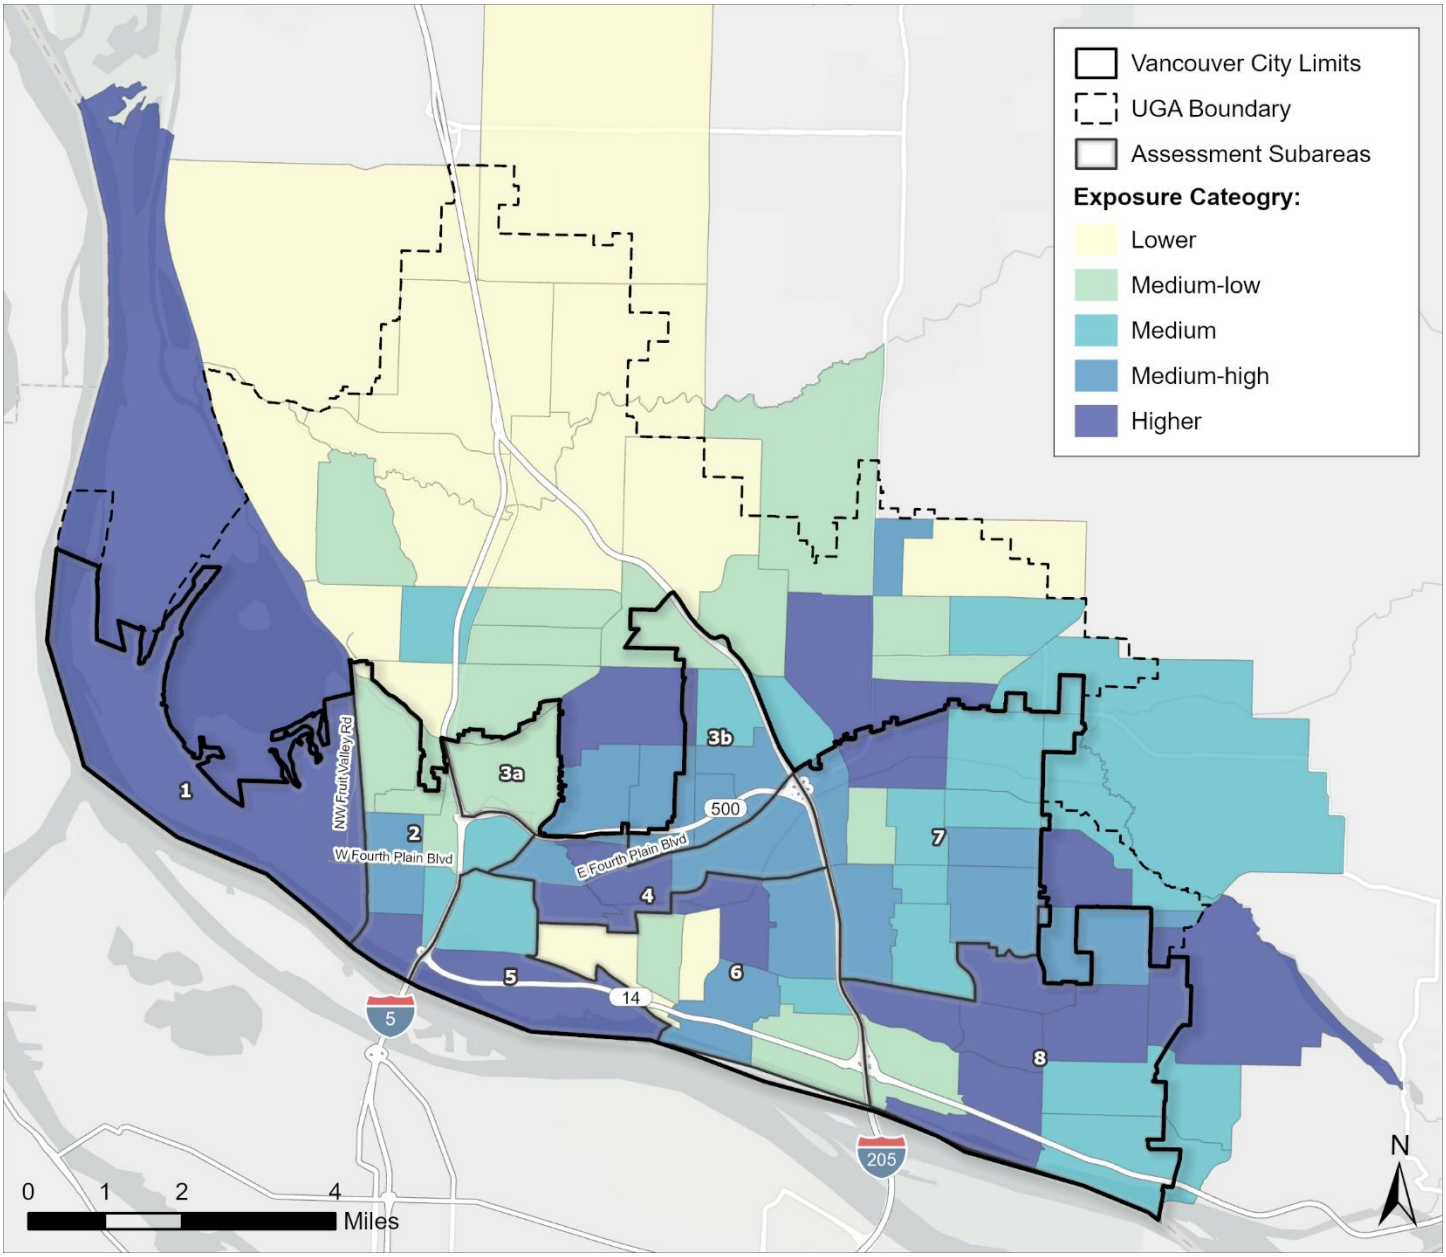


As part of climate change resilience work in 2024, a heat exposure index was created to understand summer heat differences across Vancouver (Exhibit 3-24). Block groups with greater heat exposure are found across the city, generally in areas with more impervious surfaces. Clark County has also conducted a Heat Watch project, collecting point-in-time temperature data on July 12, 2024 (Exhibit 3-25). In their afternoon readings, there was a difference of more than 6 degrees Fahrenheit in different locations. Hotter temperatures were found in the Fruit Valley, Rose Village, and Fourth Plain areas, and areas with large amounts of surface parking and other impervious surfaces across the city, such as industrial parks, office parks, shopping centers, and the VA and PeaceHealth hospitals.

*Exhibit 3-24: Heat Exposure Index*

*Source: BERK, 2024.*

*Exhibit 3-25: Clark County Heat Watch Map*



*Source: Clark County, 2024.*

## Exposure to Climate Impacts

The City's 2024 Climate Exposure Index, created as part of the **OUR VANCOUVER** Comprehensive Plan periodic update, uses data from a variety of sources to create a score for each Census tract (BERK Consulting, 2024). This score represents a tract's combined exposure to heat, precipitation, flooding, smoke, air quality, and fire. Areas with the highest scores have the most potential exposure to climate impacts. High exposure areas primarily include areas along the Columbia River, in and around Fourth Plain Village, and on the east side of the city around major corridors (Exhibit 3-26).

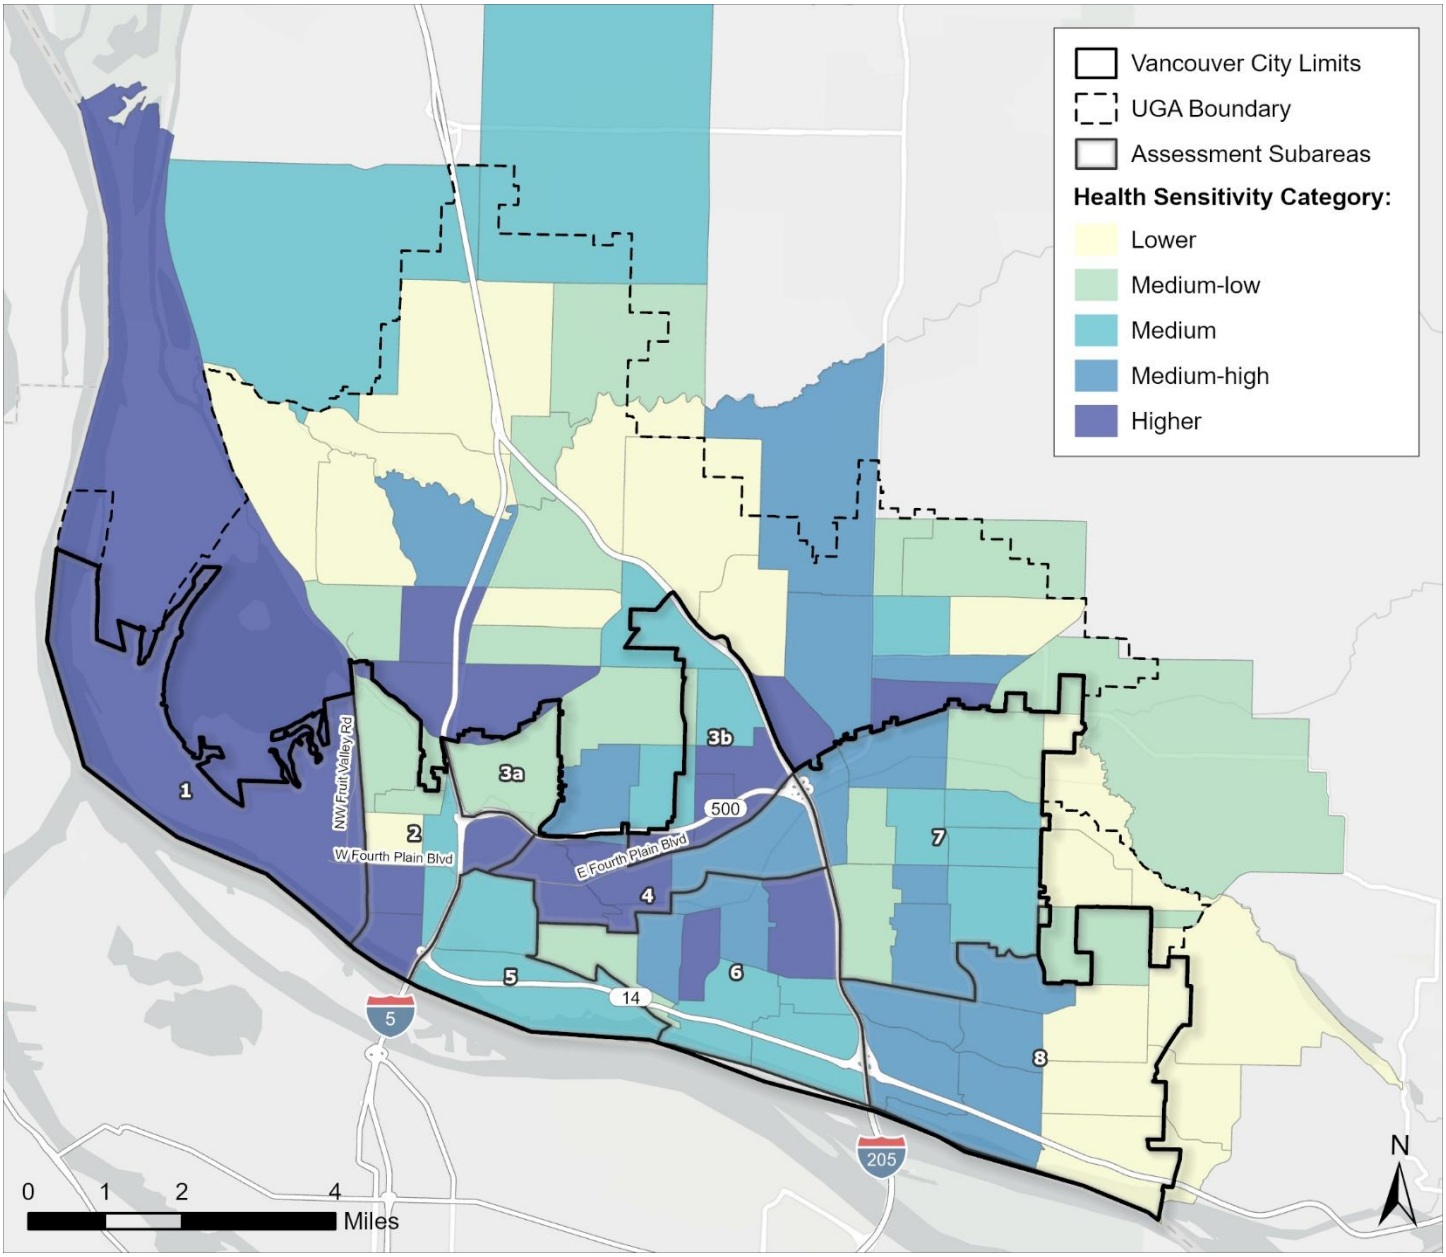


*Exhibit 3-26: Climate Exposure Index*

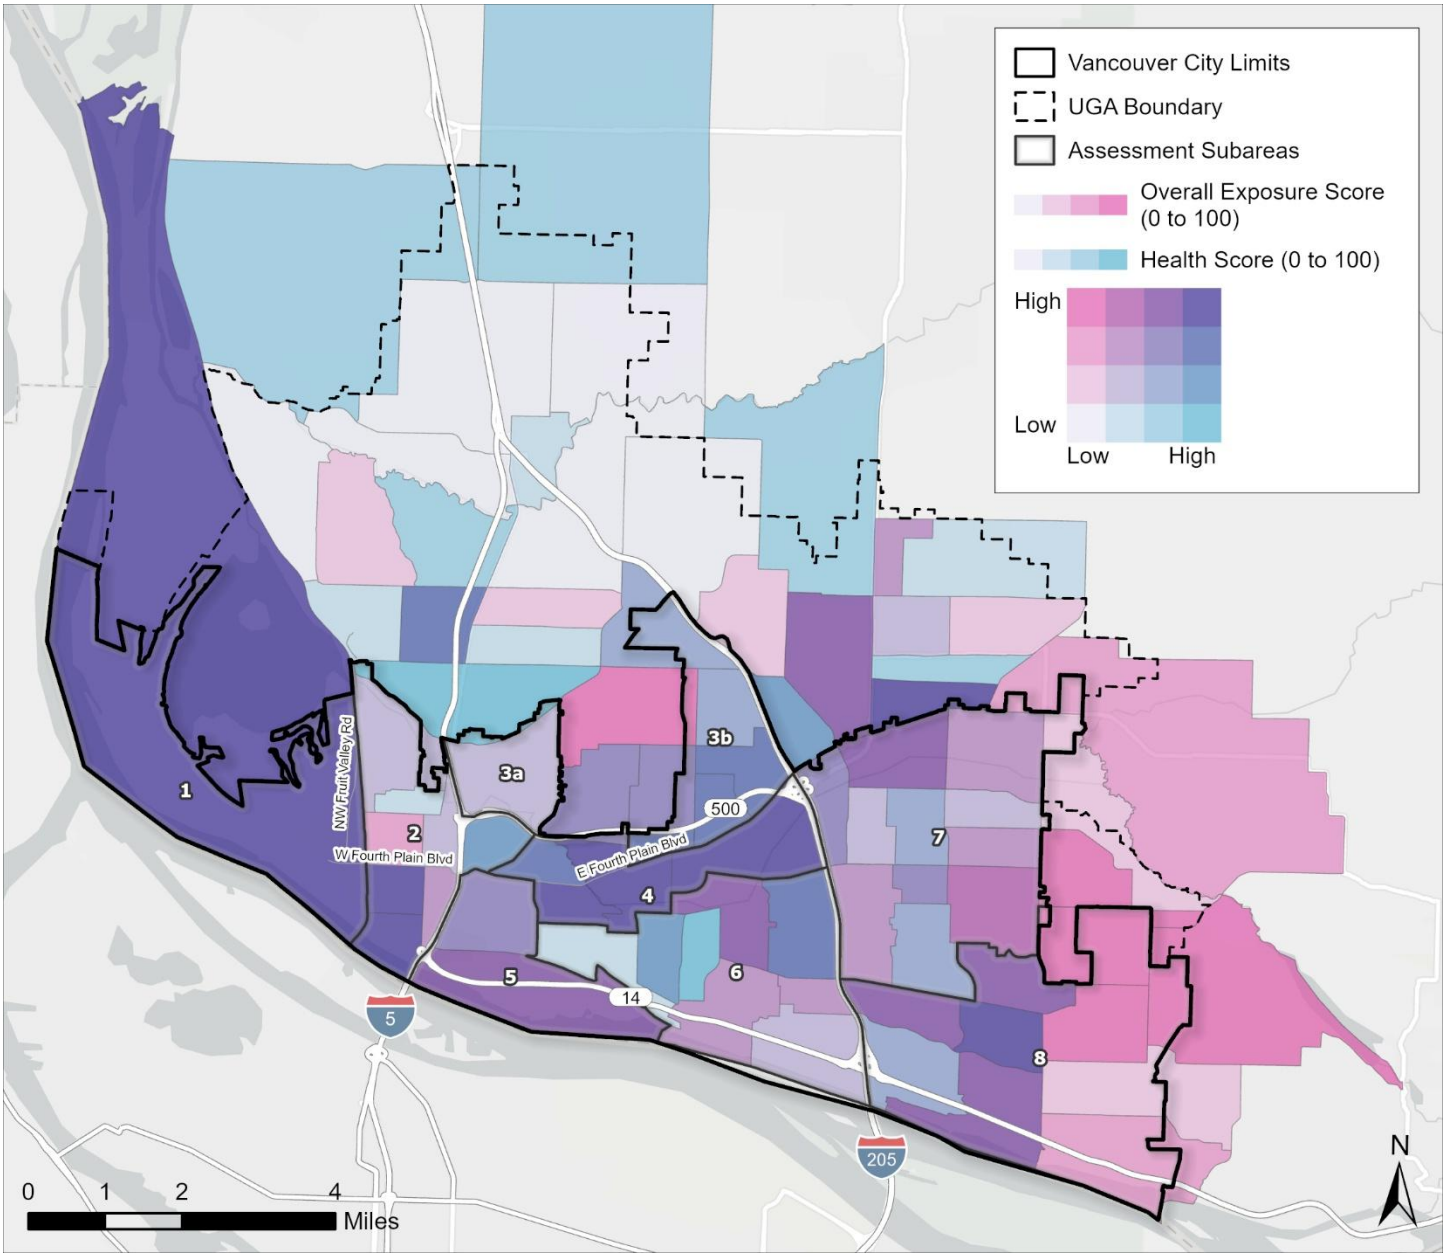
*Source: BERK, 2024.*

A separate Health Sensitivity to Climate Index was created as part of the same effort. It combines metrics around health insurance access, asthma, coronary heart disease, COPD, diabetes, poor mental health, and poor physical health to create a health sensitivity score. Higher scores indicate higher instances of health concerns (Exhibit 3-27). Areas with health sensitivity are similar to those exposed to climate hazards.

*Exhibit 3-27: Health Sensitivity to Climate Index*



*Source: BERK, 2024.*

When combined, areas of particular vulnerability include areas along the Columbia River and downtown, in and around Fourth Plain Village, and on the east side of the city around major corridors (Exhibit 3-28).

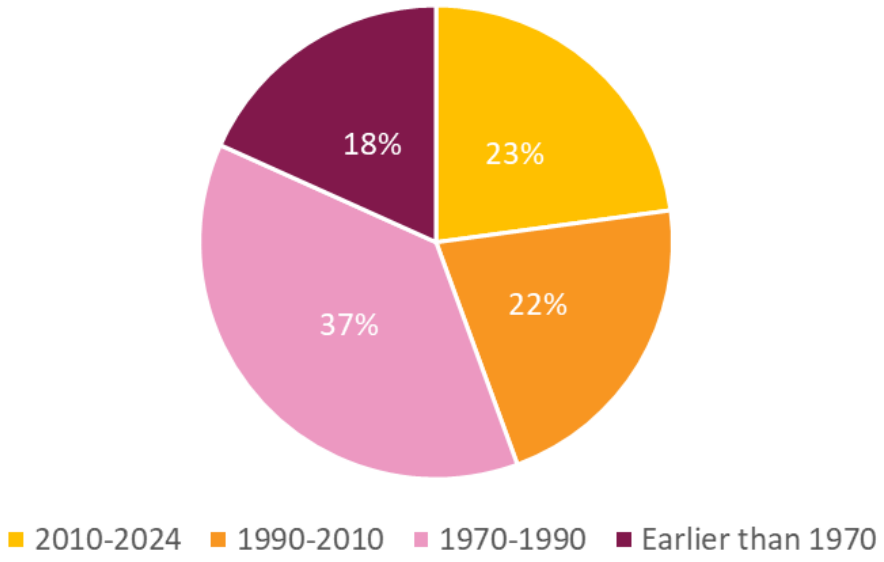
A full Climate Vulnerability Assessment will be published with the Comprehensive Plan periodic update in addition to this HIA.

*Exhibit 3-28: Climate Exposure Index X Health Sensitivity to Climate Index*

*Source: BERK, 2024.*

## Housing and Financial Security

- **Housing and Financial Security Summary:** Affordability and displacement are pressing issues for health, and a quarter of Vancouver's housing stock may also have exposure to hazards like lead. About 1 in 8 households is living below the federal poverty level and average wages are especially insufficient for single parents.



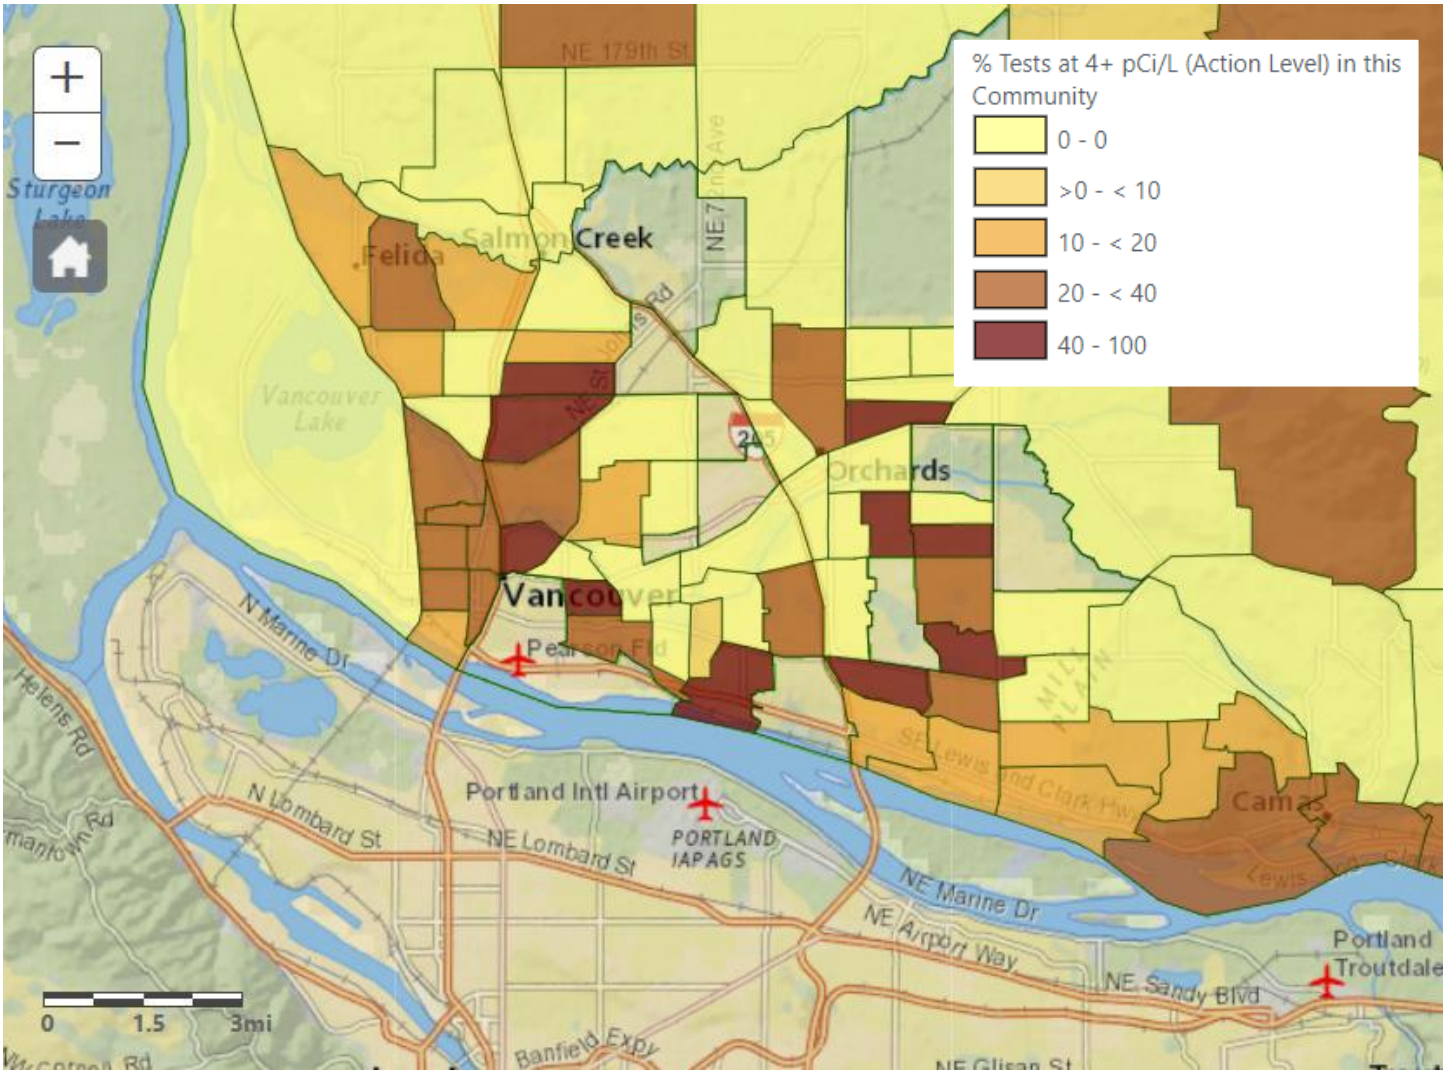
### Safe and Healthy Housing

There are many factors that may contribute to the safety and health of a housing unit. Two measures include the age of the building and radon exposure risk.

While older housing units are not necessarily unsafe or unhealthy to live in, the age of a home can be used as a proxy for lead exposure from lead-based paint. Homes built before 1978 are likely to have lead-based paint, according to the Washington State Department of Health (Washington State Department of Health, 2025). In Vancouver, approximately 25% of units were built before 1978 (Clark County, 2025).

Age of housing stock can also act as a proxy for quality, as aging homes need more investment in maintenance to continue being safe and healthy. More than half of all housing units in the city were built prior to 1990, and 18% were built before 1970 (Exhibit 3-29).

*Exhibit 3-29: Housing - Year Built*



*Source: Clark County, 2024; BERK, 2024.*
*Note: Based on "effective year built," which is adjusted for major renovations.*

Another factor for housing health is radon exposure, which is the leading cause of lung cancer among nonsmokers and contributes to higher rates of lung cancer for smokers (Washington State Department of Health, 2025). Radon is a colorless, odorless gas that can seep into homes and become trapped and concentrated. All types of homes can be affected, regardless of age or whether they contain a basement. However, there is a lower risk in homes above the third floor, and therefore the EPA recommends testing all residences below the third floor (National Center for Healthy Housing, 2025). New homes can also be built with radon-resistant features.

According to the Washington State Department of Health, radon testing in Vancouver has reported varying results in different parts of the city, with clusters near the west, south, and east edges (Exhibit 3-30) (Washington State Department of Helath, 2019).

*Exhibit 3-30: Radon Testing*

*Source: Washington Tracking Network, 2019.*

## Affordable Housing and Displacement

Housing instability is considered a social determinant of health by the United States Department of Health and Human Services, as it can have negative impacts to physical health and make it harder to access health care (U.S. Department of Health and Human Services, 2025). Housing instability can also lead to frequent moves, evictions, and homelessness, all of which are also associated with impacts on mental and physical health.

Housing costs have rapidly increased in Vancouver over the past decade, with median home prices nearly tripling and average rents increasing 60% between 2012 and 2023 (City of Vancouver, 2024). Incomes have not been rising proportionately to the rising costs of housing. Cost burden tends to be higher for renters compared to homeowners: 53% of renters

are rent-burdened (U.S. Census Bureau, 2023). This high cost of housing may affect households' ability to meet other daily needs or save for emergencies. The City's Affordable Housing Fund sponsors 1,242 rent-restricted affordable units, of which 26% are set aside for seniors.

More than 1,700 new housing units are needed per year to meet housing needs as the population grows between 2023 and 2045. Many of these units are needed for households with incomes below 80% Area Median Income (AMI), as shown in Exhibit 3-31.

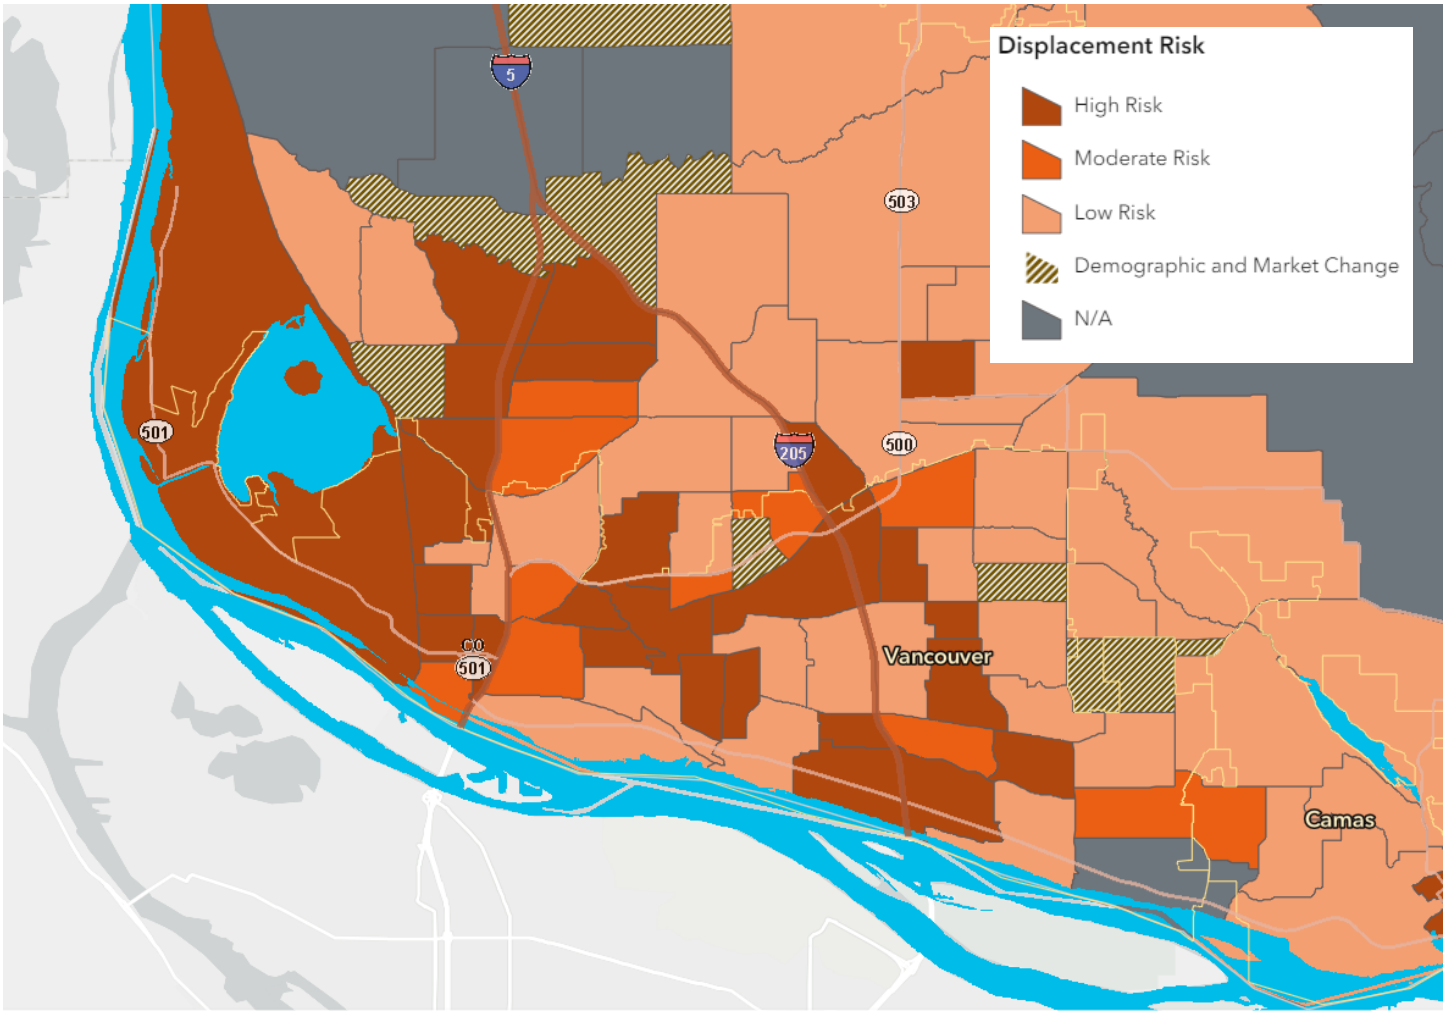


*Exhibit 3-31: Housing Unit Targets by Income Band (2023-2045)*

| Household Type | Unit Need (2023-2045) |
|---|---|
| Emergency Shelter | 1,374 (shelter beds) |
| Permanent Supportive Housing (PSH) | 2,651 |
| Below 30% AMI | 4,371 |
| 30-50% AMI | 5,890 |
| 50-80% AMI | 5,788 |
| 80-100% AMI | 3,351 |
| 100-120% AMI | 3,175 |
| 120%+ AMI | 12,902 |

*Source: City of Vancouver, 2024.*

Displacement of existing households is a concern in Vancouver: as rents and housing prices rise and development interest increases, residents are at risk of having to leave their homes and communities for lower-cost areas. The stress associated with being displaced can have negative health impacts. The City has identified Central Vancouver as particularly vulnerable, due to high rates of households with low incomes and renter households (City of Vancouver, 2025). The Washington State Department of Commerce has also published a displacement risk map, which shows areas on the west, north-central, and east sides of the city as being high risk based on market trends, demographic change, and social vulnerability (Exhibit 3-32) (Washington State Department of Commerce, 2024).

*Exhibit 3-32: Displacement Risk*

*Source: Washington State Department of Commerce, 2023.*

The City developed an anti-displacement plan in 2023, Reside Vancouver, which includes goals and recommendations to mitigate displacement through preservation, production, protection of people from eviction and discrimination, and financial prosperity (City of Vancouver, 2025).

## Income and Living Wage Jobs

The unemployment rate in Vancouver is low, at approximately 5.6% (U.S. Census Bureau, 2023). However, approximately 11% of the population is living below the poverty level. Rates are much higher for Black or African American residents (21%) and Native Hawaiian and Other Pacific Islander residents (19%).

A living wage job is one where an individual can work full time and cover their household's basic cost of living. Statewide, the family living wage job, or a job with healthcare benefits that is sufficient for raising a family, is defined at $23 per hour (Revised Code of Washington, 2022).

Massachusetts Institute of Technology (MIT)'s living wage calculator estimates that, in Clark County, for a household with two working adults and two children, both adults must be making an average of $29.59 per hour to make a living wage, or $61,500 per adult (combined income of approximately $123,000) (MIT, 2025). A living wage for a single parent with one child is much higher per earner, at $43.16 per hour or $90,000 annually. For a single adult with no children, the living wage is $26.24 or approximately $55,000 total per year. Actual living wage numbers in Vancouver are likely to be higher than for the county as a whole.

The average annual salary in Clark County per the Washington State Employment Security Department (in industries covered by unemployment insurance) is $68,000. This average is above the living wage for a single working adult, or two working adults with two children, but is $22,000 short of a living wage for a single parent of one child.

Among the highest-paying industries are the management of companies and enterprises; finance and insurance; information industries; professional, scientific, and technical services; and wholesale trade. Lowest paying industries include accommodation and food services; arts, entertainment, and recreation; educational services; retail trade; agriculture, forestry, fishing, and hunting; and administrative and waste services (Exhibit 3-33). Vancouver's economy has been changing and professional and creative class jobs have been growing, making the city less dependent on traditional manufacturing industries to drive growth (EcoNorthwest, 2024).

*Exhibit 3-33: Industries and Wages (Q3 2024)*

| 2-digit NAICS | Industry subsectors | Average employment | Average weekly wage | Estimated annual wage |
|---|---|---|---|---|
| 52 | Finance and insurance | 6,608 | $2,213 | $115,076 |
| 55 | Management of companies and enterprises | 3,734 | $2,203 | $114,556 |
| 51 | Information | 3,716 | $2,112 | $109,824 |
| 54 | Professional, scientific, and technical services | 10,856 | $2,031 | $105,612 |
| NEC | NOT ELSEWHERE CLASSIFIED | 159 | $1,912 | $99,424 |
| 42 | Wholesale trade | 7,110 | $1,720 | $89,440 |
| GOV | GOVERNMENT | 26,819 | $1,585 | $82,420 |
| 23 | Construction | 18,324 | $1,521 | $79,092 |
| 31-33 | Manufacturing | 14,226 | $1,490 | $77,480 |
| 48-49 | Transportation and warehousing | 3,533 | $1,416 | $73,632 |
| 62 | Healthcare and social assistance | 30,825 | $1,358 | $70,616 |
| 53 | Real estate and rental and leasing | 3,146 | $1,202 | $62,504 |
| 56 | Administrative and waste services | 9,473 | $1,118 | $58,136 |
| 81 | Other services, except public administration | 5,718 | $1,050 | $54,600 |
| 11 | Agriculture, forestry, fishing and hunting | 576 | $963 | $50,076 |
| 44-45 | Retail trade | 18,894 | $836 | $43,472 |

| | | | | |
|---|---|---|---|---|
| 61 | Educational services | 1,763 | $724 | $37,648 |
| 71 | Arts, entertainment, and recreation | 2,828 | $716 | $37,232 |
| 72 | Accommodation and food services | 15,729 | $593 | $30,836 |
| 21 | Mining | Not available | Not available | Not available |
| 22 | Utilities | Not available | Not available | Not available |
| TOTAL | Total | 184,038 | $1,375 | $71,500 |

*Source: Washington State Employment Security Department, 2024.*

The Columbia River Economic Development Council (CREDC), serving Clark County, is focused on five strategic sectors, including software, computers and electronics, clean tech, life sciences, and technology enhanced production, which are industries that tend to have higher wages than the average (CREDC, 2025). The 2018-2023 Clark County Comprehensive Economic Development Plan outlines strategies for supporting these sectors, through becoming industry experts, strategically marketing industry clusters, and building a startup ecosystem (CREDC, 2024). The plan also defines strategies for supporting people in skills development, preparing youth for economic opportunity, attracting emerging talent, and promoting equity, diversity, and inclusion. CREDC has an objective to support economic opportunity in Vancouver, specifically, by supporting incentives, considerations for parking and transportation needs, arts and culture, efforts to improve downtown's appearance, and multi-family housing.

The ratio of debt to income is one measure of a household's ability to meet basic needs and build financial wellbeing. According to 2023 data from the United States Federal Reserve, the debt-to-income ratio in Clark County was 2.6, higher than the state average of 1.7 (Federal Reserve, 2024). While there are many factors that affect a household's debt and income, the primary way that the City can address this through land use is to facilitate the conditions for higher-paying industries to expand and create more job opportunities. Policies that help create connected and accessible neighborhoods, as discussed in the Community Connections section above, may also help reduce debt by minimizing the need for a car: 28% of Clark County residents have auto loans (Urban Institute, 2024). Affordable housing policies, as discussed above, could also reduce housing cost pressure and lessen household reliance on borrowing funds, whether in the form of actual housing debt or debt for emergencies and daily needs.

## Key Findings and Implications

This section described the current context regarding population and health outcomes, physical activity, food access, community connections, exposure to health hazards, and housing and financial security in Vancouver. Chapter 5 builds on these findings to examine the three growth alternatives and includes recommendations to address health disparities as the city grows.

### Population and Health Outcomes

Heart disease, respiratory diseases, and diabetes account for a high number of adult deaths in Vancouver. These diseases may be improved or prevented through physical activity, nutrition, and air quality, which Vancouver can support through planning.

Vancouver's population varies widely in terms of demographics and socioeconomic characteristics. Equity Index mapping suggests areas around Fruit Valley, Rose Village, Fourth Plain Village, and Mill Plain Boulevard have the greatest equity disparities.

### Physical Activity

Access to parks and active transportation varies across the city. Priority areas for future park investment based on existing access and equity risk scores include Fruit Valley, Rose Village, Fourth Plain Village, and several other block groups across the city. Walkability in terms of proximity to destinations is strongest near downtown and along major corridors, and many of the vehicle trips from these areas are under 5 miles. These indicate opportunity areas for further bicycle and pedestrian infrastructure.

### Food Access

Many households in Vancouver face food insecurity, with more than 15% receiving SNAP support and almost half of students receiving free and reduced lunch. Some parts of the city do not have any supermarkets within a mile. Food banks are distributed across the city and there are several community gardens and two farmers markets that also provide residents with access to food.

### Community Connections

Access to amenities is greater in some parts of Vancouver than others: Fruit Valley, Rose Village, and several areas immediately to the west of I-205 and on the east side of the city have fewer amenities and diversity of amenities within walking distance. Challenges with access to childcare and access to social services are also present throughout Vancouver.

### Exposure to Health Hazards

Air quality is a hazard of particular concern in Vancouver due to elevated levels of $PM_{2.5}$ compared to the rest of the state. Heat islands are also present, particularly in areas with large amount of surface parking and other impervious surfaces. Tree canopy, which can mitigate air quality impacts and heat, varies significantly across Vancouver, with 19% cover on average for the whole city. Noise is also an issue around major roadways, rail lines, and the Portland International Airport. Vancouver is expected to see impacts from climate change, including heat, extreme precipitation and flooding, and smoke.

### Housing and Financial Security

Approximately a fifth of housing units in Vancouver were built prior to 1970, which may correspond with exposures to substances such as lead and other housing quality concerns. Radon testing has also revealed several areas of concern.

Housing costs are rising rapidly, and housing cost burden affects a large amount of residents, especially renters. Displacement is a concern as prices rise and development interest increases, with varying risk levels across Vancouver. The average annual salary in the city is above the living wage for households without children and two-parent households but is below the living wage for single-parent households. 12% of the population is living below the poverty line, and rates are much higher for Black or African American residents and American Indian and Alaska Native residents. Overall, debt-to-income ratio is much higher in Vancouver than the state average.

## Policy Audit

There are several existing policies in the City's adopted Comprehensive Plan that relate to health (City of Vancouver, 2011). Some key policies include:

- CD-15 Public Health and the built environment
  Promote improved public health through measures including but not limited to the following:
  - (a) Develop integrated land use and street patterns, sidewalk and recreational facilities that encourage walking or biking
  - (b) Recruit and retain supermarkets and other stores serving fresh food in areas otherwise lacking them. Discourage supermarkets and fresh food stores that do relocate from using non-compete clauses that prevent timely replacement of similar uses. Encourage stores that locate near sensitive populations or underserved areas to offer healthy food choices
  - (c) Assess and promote opportunities for growing food in home or community gardens. Consider guidelines for service provision levels.

    - (d) Coordinate with Clark County Public Health to better integrate health impacts and land use and public facilities and service planning
- CD-17 Aging Populations
  Update policies, standards, and practices as necessary to accommodate anticipated aging of the local population, though measures such as:
    - (a) Develop integrated land use patterns and transportation networks that facilitate shorter vehicular trips, walking, or use of public transportation
    - (b) Review standards for specialty housing to ensure they are consistent with anticipated age-related housing needs
    - (c) Review standards and designations of conventional single and multi-family housing to ensure they are consistent with anticipated needs, including provisions for aging in place
    - (d) Review standards for roads and sidewalk design, signage, and lighting to address senior safety issues
- H-6 Special needs housing
  Facilitate housing for special needs populations dispersed throughout Vancouver and the region. Such housing may consist of residential-care facilities, shelters, group homes, or low-income housing, and should be located near transportation and other services such as health care, schools, and stores.

These policies address several key health topics, including food access, physical activity, community connections, and housing and financial security.

The Vancouver Climate Action Framework (2023), Vancouver Climate Adaptation Strategy (2022), and Clark County Natural Hazard Mitigation Plan (2023) also include policies relevant to exposure to health hazards, food access, and housing and financial security:

- Climate Action Framework
    - Strategy EQ-2
        - Build a more community-driven, circular economy. Reduce the carbon footprint of goods and services by building a community-driven economy to promote the reduction, reuse, and repair of goods and materials and expand downstream markets for waste products.
        - Work with City economic development partners to support small- and mid-sized businesses in the transition to a local, green economy that ensures equitable distribution of benefits and impacts.
        - Conduct outreach and provide resources to residents, business, schools, and community partners to improve our food system by limiting waste, promoting low carbon diets, expanding community gardens and markets, and securing surplus food to food-insecure
    - Strategy BE-1
        - Increase use and storage of renewable energy while reducing consumption

    - Work with Clark PUD to procure renewable energy ahead of Clean Energy Transformation Act (CETA) mandates and increase community-wide renewable electricity supply to 100%. Exceed state requirements for building efficiency. Work with businesses, property owners, and nongovernmental partners to establish policies that prevent displacement of those with low incomes and renters, and ensure equitable distribution of the costs and benefits of energy efficiency upgrades. Identify additional opportunities for climate resilient, renewable, affordable, and environmentally just forms of renewable energy systems and electrification.
    - Increase green space and tree plantings in identified heat islands and in areas with poor air quality.
- Climate Adaptation Strategy
    - Promote other forms of green infrastructure, especially in places suffering from extreme heat.
    - Prioritize investment in areas that have lower property values. Green infrastructure investments should be coordinated with affordable housing and other policies to avoid impacts of green gentrification and related displacement.
    - Support food security.
    - Consider opportunities to combine adaptation and food security efforts, such as through increasing the urban tree canopy with plantings of fruit and nut trees when/where appropriate. Plantings should be coordinated with fruit and nut tree maintenance education programs (e.g. plantings on public school properties) to relieve burden on Public Works.
- Natural Hazards Plan
    - VC-9— Develop a Plan and Agreement to Increase Elevation of Units within Lakeside Mobile Estates. Work with property owner on a plan and schedule for raising or removing mobile homes that are located in the 100-year floodplain, and identification of possible grant funding that can assist in the costs of such enhancements.

Vancouver's Parks, Recreation, and Cultural Services Comprehensive Plan (2022-2031) also supports future park access by identifying areas of greatest need (City of Vancouver, 2022). It found that many of these areas have not seen significant growth, so the City has not collected substantial park impact fees that would help fund future park development. The plan includes a capital facilities plan with more than 20 acquisition projects and more than 60 park improvement projects across the city, prioritized based on community needs, unique natural and cultural resources, improving interconnectivity, and partnership opportunities.

# 4. Metrics and Evaluation Framework

## Description of the Alternatives

As described in Chapter 1, there are three growth alternatives evaluated as part of the Draft EIS for the Comprehensive Plan periodic update:

**No Action Alternative.** The No Action Alternative, required by SEPA, is a future scenario that assumes future growth and development would occur in line with the currently adopted City Comprehensive Plan and development regulations, and recent amendments to state statutory requirements that contain self-executing provisions. The No Action Alternative assumes the implementation of House Bill (H.B.) 1110, which generally requires cities of at least 75,000 people to permit "middle housing" of at least four residential units per lot in all areas of the city where single-family housing is allowed. However, the No Action Alternative does not assume the implementation of other amendments to state law that do not contain self-executing provisions, such as H.B. 1220, which requires planning for and accommodating housing affordable to all economic segments of the population, and H.B. 1337, which requires cities like Vancouver to allow up to two accessory dwelling units (ADUs) on a residential lot assuming development regulations are met.

Under the No Action Alternative, the Comprehensive Plan land use designations would remain the same as they are today. The Comprehensive Plan Update and associated zoning code and development regulations would not be adopted. Exhibit 4-1 shows the City's zoning designations under the No Action Alternative.

**Action Alternatives.** Both Action Alternatives assume that future growth and development would occur in line with the proposed Comprehensive Plan Update and the associated revised zoning code and development regulations. The Action Alternatives assume implementation of all current amendments to state law that affect comprehensive planning and development processes, including H.B. 1110, H.B. 1220, and H.B. 1337.

Under both Action Alternatives, the Comprehensive Plan land use designations and associated zoning code would be renamed and simplified to a smaller set of place types. The locations and sizes of the proposed place types would differ between the two Action Alternatives, as would the distribution of new housing units and jobs. Both Action Alternatives are forecasted to exceed the City's minimum 2045 targets of at least 38,129 new housing units and 43,198 new jobs.

- **Alternative 1** would allow greater intensity and density of development in more areas of the city than the No Action Alternative but in fewer areas of the city than Alternative 2. These changes in land use designations would result in a higher capacity for new housing

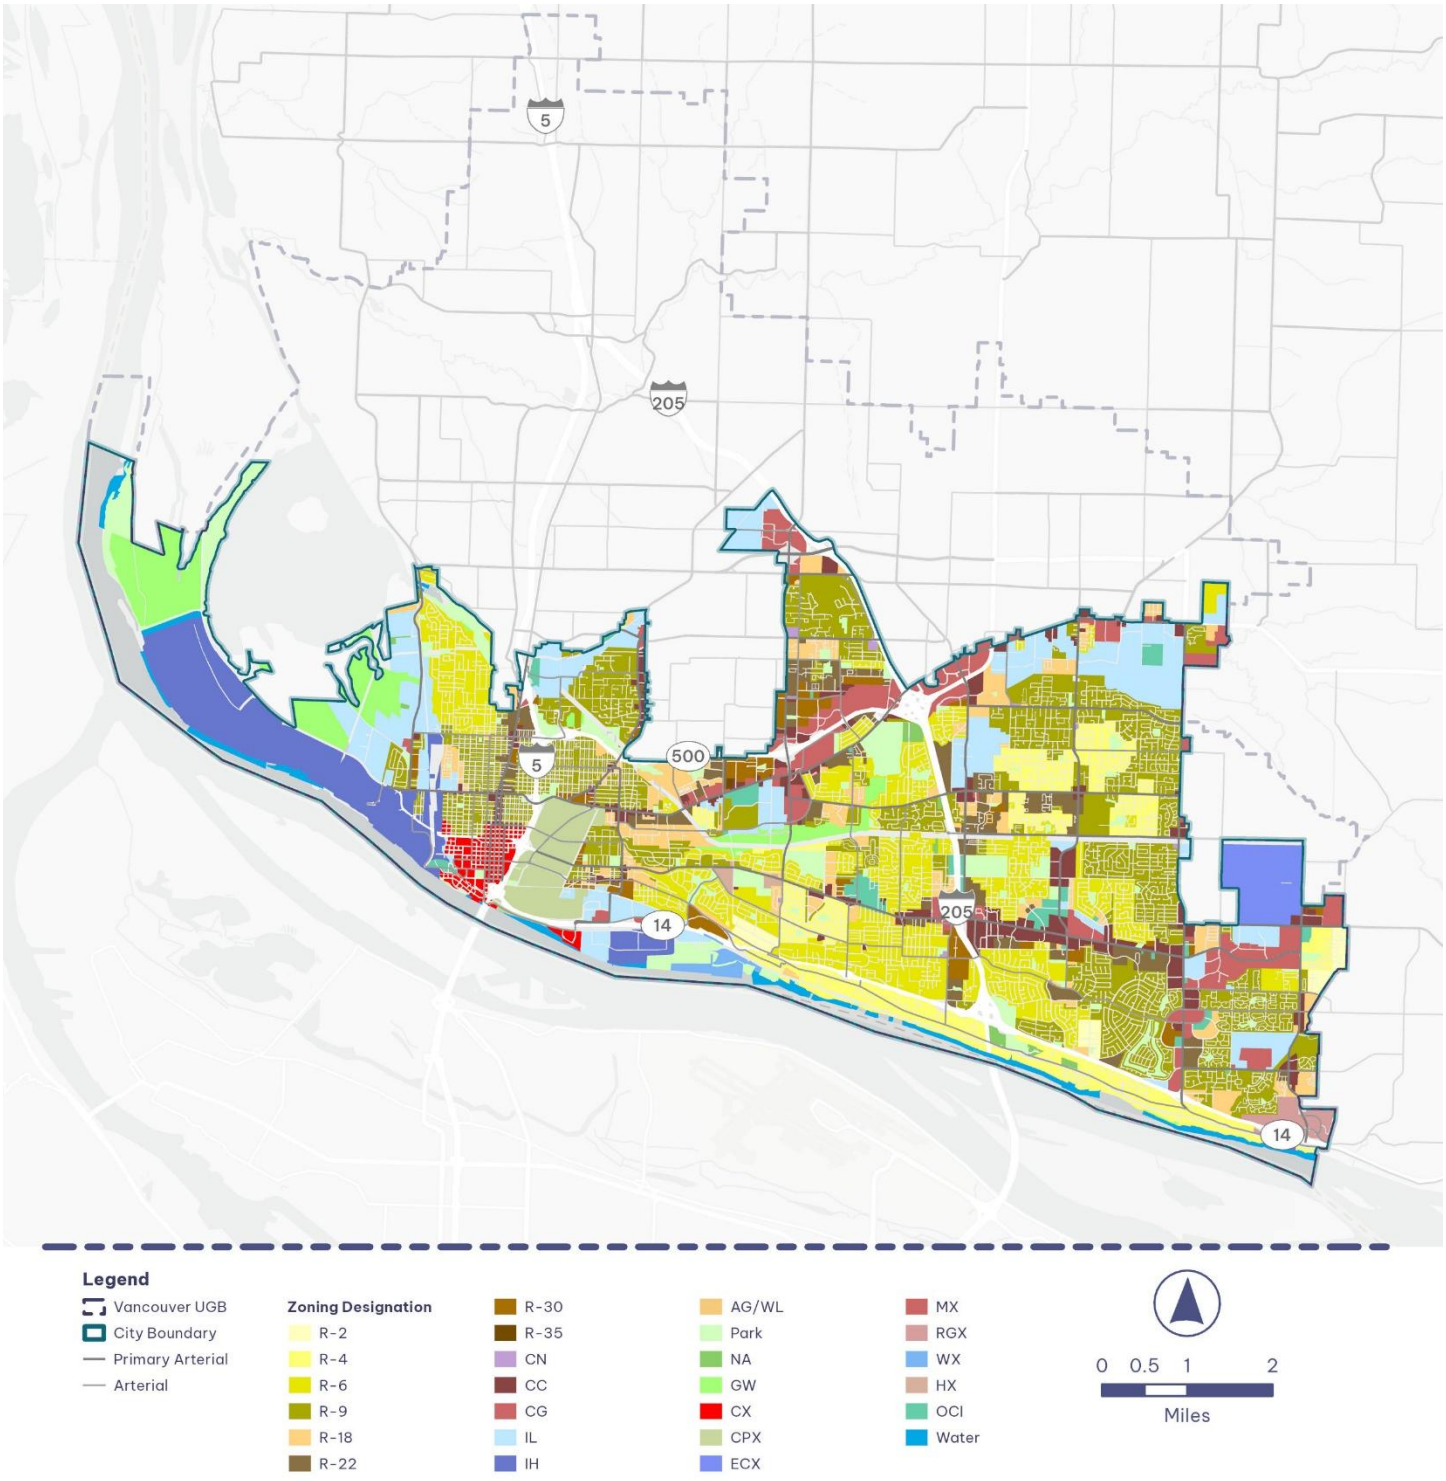
units and jobs than the No Action Alternative but a lower capacity than Alternative 2. Based on market feasibility and redevelopment potential, Alternative 1 would have capacity for approximately 45,100 new housing units and 47,500 new jobs citywide, which is higher than the City's minimum 2045 planning targets of at least 38,129 new housing units and 43,198 new jobs. Exhibit 4-2 shows the proposed zoning under Alternative 1.

- **Alternative 2** would allow the greatest intensity and density of development in more areas of the city compared to the other alternatives. With these changes in land use designations, Alternative 2 would have the highest capacity for new housing units and jobs of all the alternatives. Based on market feasibility and redevelopment potential, Alternative 2 would have capacity for approximately 50,700 new housing units and 51,800 new jobs citywide, which exceeds the minimum City's 2045 planning targets of at least 38,129 new housing units and 43,198 new jobs. Exhibit 4-3 shows the proposed zoning under Alternative 2.

Of all the alternatives, Alternative 2 would allow the greatest density, intensity, and mix of land uses in the most areas of the city, and the No Action Alternative would allow the least. Alternative 1 would allow greater density, intensity and mix of land uses in more areas of the city than the No Action Alternative but generally less than Alternative 2.

The biggest differences in place types as measured by land area would be:

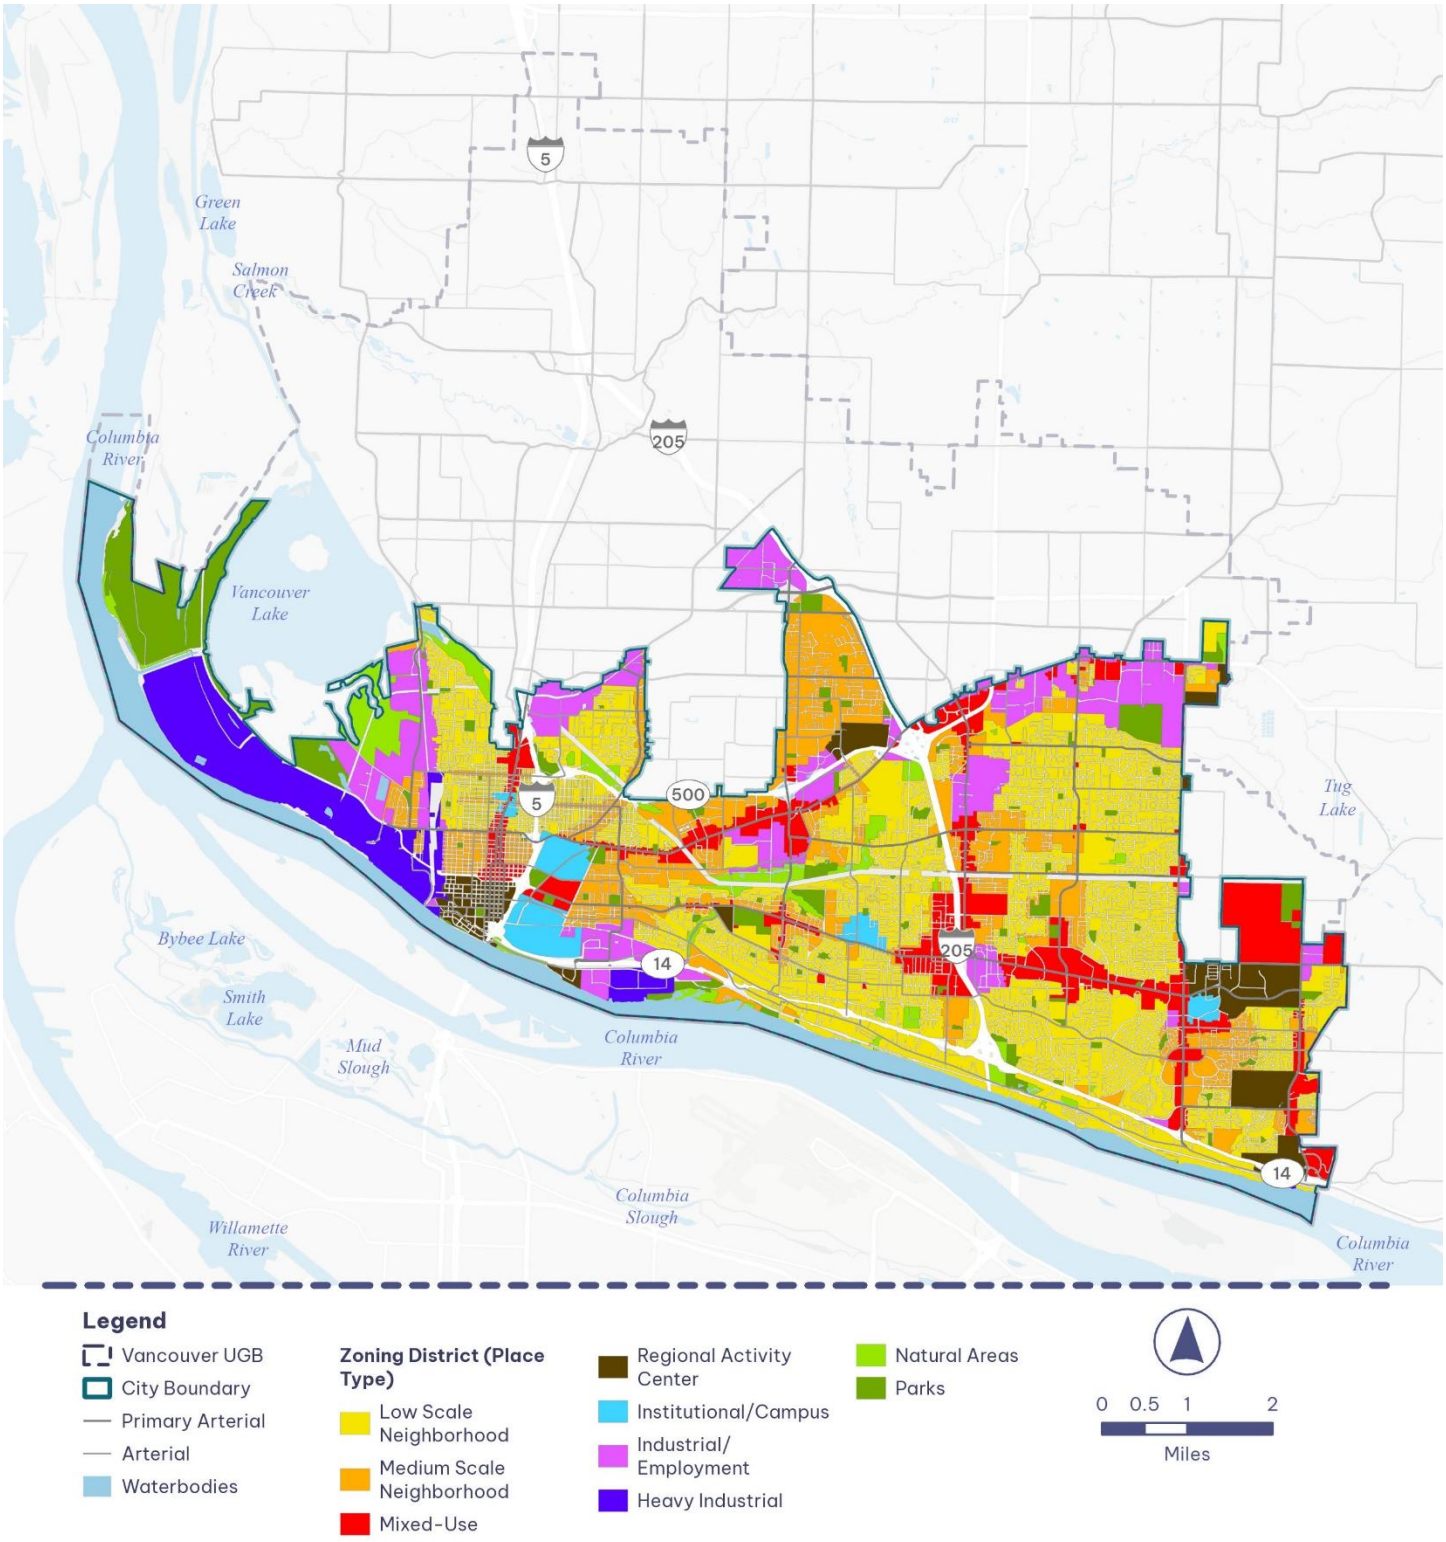
- Almost 50 percent more land area designated as Low-Scale Neighborhood under Alternative 1 compared to Alternative 2.
- Almost 50 percent more land area designated as Medium-Scale Neighborhood under Alternative 2 compared to Alternative 1.
- About double the land area designated as Regional Activity Center under Alternative 2 compared to Alternative 1.



Place type descriptions for the Action Alternatives are as follows:

- **Low-Scale Neighborhood:** Focuses on low-scale housing choices, typically with up to 6 units per parcel and building heights of up to 3 stories (maximum of 45 feet). Any lot would be allowed to have at least four units. Housing types include single-family homes, accessory dwelling buildings, and multifamily residential buildings sometimes referred to as "middle housing," including duplexes (two-unit structures), townhouses (attached single-family homes), quadplexes (four-unit structures), and sixplexes. Small-scale commercial activities like cafes, salons, professional services, and restaurants mostly serving the surrounding neighborhood would also be allowed.

- **Medium-Scale Neighborhood:** Focuses on medium-scale housing choices, typically with up to 12 units per parcel and building heights of 2 to 5 stories (maximum of 60 feet). Housing types include all of the types allowed in the Low-Scale Neighborhood plus additional multifamily building types, including courtyard buildings and multifamily mixed-use buildings. Civic/institutional buildings and commercial activities like cafes, restaurants, small offices, and other retail goods would also be allowed.
- **Mixed-Use Neighborhood:** Provides for a broad range of housing, commercial, and civic/institutional use types, with building heights of 3 to 8 stories (maximum of 90 feet). Housing types include multifamily buildings at a variety of scales. Commercial or retail uses may include professional offices, medical providers, cafes, restaurants, small grocery stores, markets, and other retail goods.
- **Regional Activity Center:** Includes lands that offer opportunities for economic, entertainment, civic, and housing needs, with minimum building heights of 3 stories and no maximum building heights. Size and makeup of this place type would vary based on location but would typically consist of compact, mixed-use development that maximizes residential, commercial, and open space opportunities. Typical housing options would be mixed-use residential, apartment, mid-rise, and podium buildings.
- **Institutional/Campus:** Includes lands that support academic, civic, or medical buildings up to 12 stories (maximum of 150 feet). Allowable housing types include townhouses, multifamily, and mid-rise buildings. Buildings for athletic facilities, event spaces, equipment or other accessory uses needed to support an educational, medical, or large institution would also be allowed.
- **Industrial/Employment:** Includes lands typically housing large-scale, single-tenant industrial, warehouse and flex space building and smaller, multi-tenant industrial buildings ranging from 2 to 12 stories (maximum of 150 feet). The buildings would be grouped to support and serve one another and to provide opportunities for employment clusters. Housing would not be allowed in this place type.
- **Heavy Industrial:** Includes lands that are currently zoned for heavy industrial uses, such as manufacturing and production, within the city and would remain unchanged. Housing would not be allowed in this place type.
- **Parks/Open Space:** Includes lands dedicated to public parks, open spaces, natural areas, trails, and greenways, intended to provide a full range of passive and active uses as well as environmental protection and enhancement.



Refer to the City's Draft EIS for more details on the growth alternatives.

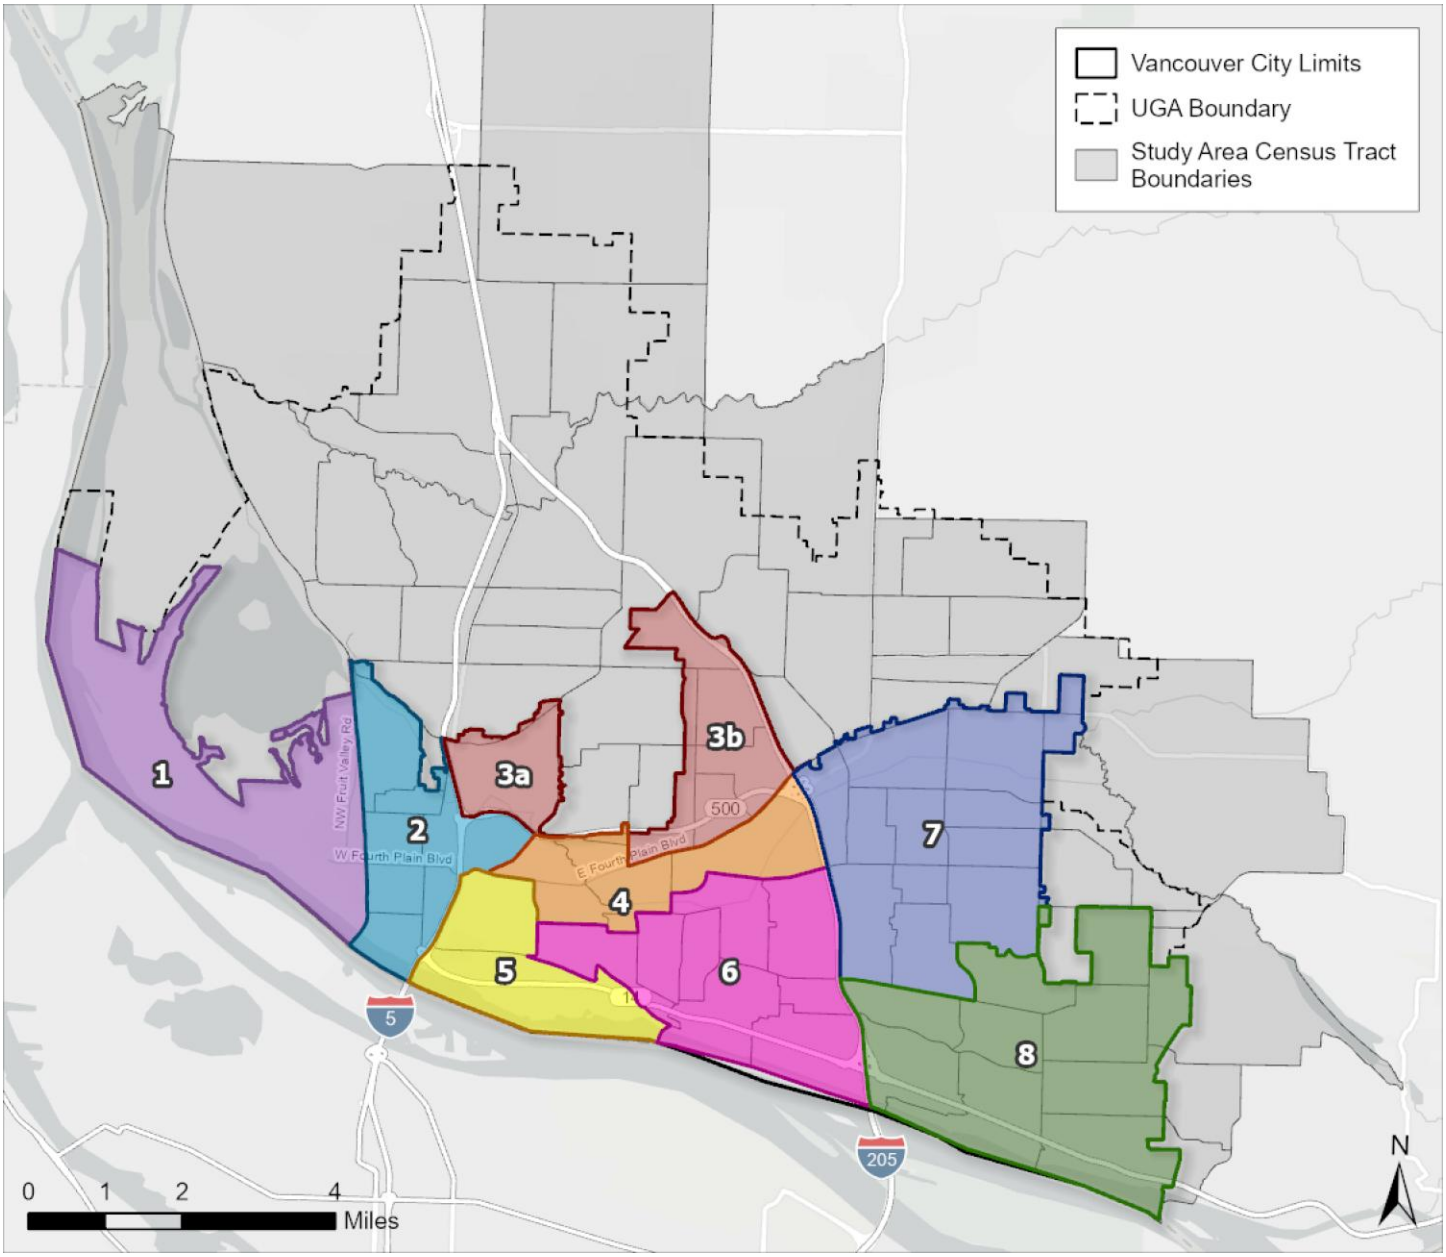
## Metrics

There are 19 total metrics for this health analysis (Exhibit 4-4). The metrics relate to the scoped topics of physical activity, food access, community connections, exposure to health hazards, and housing and financial security.

There are two types of metrics included:

- **Impacts:** These metrics consider where growth is placed in relation to health hazards and gaps in health-related services. Related strategies may mitigate the impacts or address the gaps.
- **Strengths:** These metrics consider the health benefits built into each alternative. Related strategies may build upon the alternatives' strengths.

*Exhibit 4-4: Health Metrics*



| Theme | Topic | Metric | Type |
|---|---|---|---|
| **Physical Activity** | *Parks Access* | Park acreage needed based on housing growth | Impacts |
| | *Active Transportation* | New housing outside of areas with high intersection density | Impacts |
| **Food Access** | *Access to Supermarkets* | Housing growth in areas with low access and potential for new stores | Impacts |
| **Community Connections** | *Connected and Accessible Neighborhoods* | Job growth in areas with high equity risk scores and low connectivity/accessibility | Strengths |
| | *Commercial Displacement* | "Underutilized" parcels and parcels with older buildings that are designated for mixed use or higher densities | Impacts |
| | *Density and Mixed Uses* | Increases to density and mixed uses | Strengths |
| **Exposure to Health Hazards** | *High $PM_{2.5}$ Concentration* | Housing growth in areas with high concentrations | Impacts |
| | *High Ozone Concentration* | Housing growth in areas with high concentrations | Impacts |
| | *Tree Canopy Coverage* | Housing growth in areas with low canopy coverage | Impacts |
| | *Transportation Noise* | Housing growth in areas with high noise | Impacts |
| | *Heat Islands* | Housing and job growth in heat islands | Impacts |

| Theme | Topic | Metric | Type |
|---|---|---|---|
| | *Proximity to Transit* | Housing and job growth in areas not accessible by transit, and potential for new transit | Impacts |
| | *Vehicle Miles Traveled (Water Quality)** | Overall projected vehicle miles traveled per capita | Impacts |
| | *Climate Exposure* | Housing and job growth in areas exposed to climate hazards | Impacts |
| **Housing and Financial Security** | *Redevelopment of Older Housing* | New housing in areas with older buildings | Strengths |
| | *Apartments of Three or More Stories (Radon Risk)* | Housing growth in designations that allow apartments of three of more stories | Strengths |
| | *Housing Capacity for All Income Bands* | Housing capacity by income bands | Strengths |
| | *Displacement Risk* | Housing growth in areas of high displacement risk | Impacts |
| | *Higher-Wage Jobs* | Amount of and projected average wages of new jobs, based on land use designations | Strengths |

** Reducing vehicle miles traveled is associated with improved water quality, see Literature Review below.*

The impact assessment in the next chapter considers which eight areas of the city, as shown in Exhibit 4-5, are most affected in the context of each metric.

*Exhibit 4-5: Analysis Areas*

*Source: City of Vancouver, 2025; BERK, 2025.*

# 5. Impact Assessment and Strategies

This chapter evaluates the potential health impacts associated with each land use alternative. A brief literature review is included to inform the impact assessment. Key strategies for each topic are also discussed as part of the alternatives evaluation.

## Literature Review

### Physical Activity

Physical activity is a critical social determinant of health, according to the Washington State Department of Health (Washington State Department of Health, 2013). Parks have a positive association with physical activity and are therefore one way the built environment can encourage health (Washington State Recreation and Conservation Office, 2019; National Park Service, 2017). Walkable proximity to parks, specifically, has been found to have connections with physical activity (Washington State Recreation and Conservation Office, 2019; Trust for Public Land, 2023).

Active transportation interventions (such as street connectivity, sidewalks, trails, and bicycle infrastructure) and land use interventions (such as mixed uses, increased density, and proximity to destinations) are also associated with greater physical activity. One review of academic studies conducted by the U.S. Department of Health and Human Services found evidence to support this: physical activity increased among individuals in communities with new or improved projects or policies that combine transportation and land use components (Community Preventative Services Task Force, 2018). One 2022 study suggested that 100 intersections per square kilometer (or about 0.4 intersections per acre) is associated with greater likelihood of walking for transportation (Cerin, et al., 2022).

### Food Access

Several studies have found a link between “food deserts” (neighborhoods with minimal food options) or “food swamps” (neighborhoods with fast food and snack food available but not fresh grocery staples) and poor health outcomes. One study from 2023 found that food swamps are associated with much higher likelihood of greater obesity-related cancer mortality (Bevel, et al., 2023). Another article reviewed the literature on food deserts, much of which emphasizes the link between access to supermarkets and health outcomes (Walker, Keane, & Burke, 2010).

### Community Connections

Research has found connections between neighborhood design and health, including availability of amenities and social interaction (Elegbede, J. et al., 2020; Dannenberg, A. et al., 2003). Specific types of public spaces, such as parks and community centers, may be

particularly helpful for fostering social connections and reducing isolation (Kweon et. al, 1998).

### Exposure to Health Hazards

Research has found connections between a variety of health hazard topics and land use planning. Trees and shrubs are known to be effective for removing air pollution and improving urban air quality, as well as reducing urban heat (Nowak, Crane, & Stevens, 2006; Trust for Public Land, 2016). Reducing vehicle miles traveled is connected to less stormwater runoff and improved water quality (Currey et al., 2015). Effective strategies identified for climate resiliency include designing buildings and infrastructure that are adaptable, using community-driven planning, and improving natural infrastructure such as green spaces, urban forests, and stormwater management (Kong, L. et al, 2022).

### Housing and Financial Security

Research has found that housing affordability, quality, and stability are key to health and wellbeing. Affordable housing initiatives, housing quality improvements, and anti-displacement efforts can support health outcomes (Rolfe, S. et al., 2020). Planning for more living wage jobs also impacts health. Ensuring that households earn enough income to meet basic needs can reduce financial pressure, improve access to healthcare, and enhance overall wellbeing (Turcu, C. et al., 2012). Findings also suggest that residential displacement can have negative health outcomes, particularly related to mental health (Delong, 2023).

## Alternatives Evaluation and Strategies

### Key Findings

The following section summarizes key findings for consideration in the policy recommendations, with metrics falling under one of two types: 1) impacts or 2) strengths.

*Exhibit 5-1: Metrics Summary*

| Impacts | No Action | | | | | | | | | | Alternative 1 | | | | | | | | | | Alternative 2 | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|

## Physical Activity

### Metrics

- Park acreage needed based on housing growth *(Impacts)*
- New housing outside of areas with high intersection density *(Impacts)*

### Overview

- All alternatives will need more investment in parks, especially the Action Alternatives
- Alternatives 1 and 2 also create greater opportunities to address existing gaps through park impact fees and new policies
- All alternatives place the majority of growth in areas with a lower density of intersections, which may impact walkability
- Alternatives 1 and 2 also create more opportunities for walkability through density, mixed uses, and opportunities for sidewalk development and connectivity

### Evaluation

All alternatives will increase demand for parks and recreation as the city grows. Exhibit 5-2 shows the estimated amount of new park acreage that would need to be acquired and developed under each alternative to meet this standard based on the estimated 2045 capacity for new housing units and associated new residents.

Under all alternatives, Park Impact Fee District C would have the largest need for park land acquisition and development because it is projected to have the highest capacity for new growth. The No Action Alternative would have the lowest overall parks need because it would have the lowest projected level of population growth based on capacity for new housing units. Alternative 1 and Alternative 2 would have higher needs than the No Action Alternative because of their higher levels of projected new housing units and associated residents. While growth would create demand for more parks, it would also increase the amount of funding available from impact fees, which make it possible to fill gaps that otherwise would be challenging to address.

In the No Action Alternative, areas of housing capacity with low park access include parts of areas 2, 3a, 3b, 4, 5, 6, 7, and 8. In Alternatives 1 and 2, concentrations of housing growth in low access areas include parts of areas 2, 6, 7, and 8 (plus area 3a in Alternative 2).

*Exhibit 5-2: Projected Park Land Demand by Park Impact Fee District and Alternative (acres)*

| Park Impact Fee District | New Park Acquisition Demand[1] for No Action Alternative[2] | New Park Development Demand[1] for No Action Alternative[2] | New Park Acquisition Demand[1] for Alternative 1 | New Park Development Demand[1] for Alternative 1 | New Park Acquisition Demand[1] for Alternative 2 | New Park Development Demand[1] for Alternative 2 |
|---|---|---|---|---|---|---|
| A | 76 | 54 | 75 | 53 | 65 | 46 |
| B | 134 | 95 | 70 | 50 | 126 | 89 |
| C | 199 | 141 | 477 | 338 | 509 | 361 |
| **Total** | **408** | **289** | **622** | **441** | **700** | **496** |

*Notes:*

*1 The acreage of park acquisition demand under the alternatives was estimated as follows: 1) multiplying the total projected number of new housing units in each Park Impact Fee district by 2.3, which is the assumed average number of persons per household from the Our Vancouver Housing Needs Assessment ( (EcoNorthwest, 2024)), to derive the estimated new population in each PIF district. 2) Dividing the estimated new population by 1,000 and multiplying the resulting number by 6, based on the City's goal of 6 acres per 1,000 residents, to calculate the estimated acreage demand for this new population. Totals may be affected by rounding.*

*2 The No Action Alternative is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.*

*Source: WSP, 2025.*

All alternatives include most of their capacity or growth in areas that do not have high intersection density (more than 0.4 intersections per acre) (Exhibit 5-3). Higher intersection density is associated with greater likelihood of walking for transportation. Therefore, other urban design considerations will be needed to support walkability in growth areas. Alternatives 1 and 2 create more density and opportunities for mixed uses than the No Action Alternative. Alternatives 1 and 2 also plan for more development, which creates more opportunities for improved sidewalks and pedestrian connectivity. Affected areas are similar across all the alternatives, including parts of area 2, 3a, 3b, 4, 6, 7, and 8. Part of area 5 is also affected in the No Action Alternative.

*Exhibit 5-3: Growth in Areas Without High Intersection Density*

| | No Action | Alternative 1 | Alternative 2 |
|---|---|---|---|
| Units | 24,000* | 41,000 | 48,510 |
| Percent of Units | 81%* | 91% | 96% |

**Note: The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.*

*Source: BERK, 2025.*

## Strategies

### Features of the Alternatives

- The Comprehensive Plan periodic update includes an opportunity to consider future transportation improvements based on growth. The Action Alternatives therefore may be better positioned to make targeted investments in non-motorized access, prioritizing equity.
- Growth under the Action Alternatives especially could leverage park impact fees to fill gaps in park access.

### Other Considerations

#### *City-Led Opportunities*

- Identify strategic property acquisitions before expected growth occurs that could later be developed into parks through park impact fees *(related to Policy 23: Broaden Equitable Access to Natural Spaces and Parks, Policy 68: Improve Connectivity Between Parks and Open Spaces, and Policy 7: Acquire Land for Public Parks)*.
- Adopt street standards that support active transportation *(related to Policy 140: Street Standards)*.
- Consider a pilot program to close certain residential streets to through traffic, as discussed in Appendix 3. Case Studies *(related to Policy 34: Community Streets)*.
- Continue working towards transportation safety improvements for pedestrians and cyclists, with targeted investments in known collision areas and overall improvements in active transportation, to eventually support better "safety in numbers" *(related to Policy 144: Support Active Transportation Investments, Policy 139: Street Connectivity, Policy 87: Low-Stress Bicycle and Small Mobility Network, and Policy 33: Community Safe Routes)*.
- Review the City's land use code for opportunities to encourage pedestrian scale design, such as transparent frontages, surface parking, and driveways at the rear of buildings, weather protection, street trees, and public art *(related to Policy 99: Pedestrian Oriented Design)*.

*Partnership Opportunities*

- Partner with schools and other public facilities to add recreation facilities and benefit from multiple funding and implementation streams (see Appendix 3. Case Studies) *(related to Policy 23: Broaden Equitable Access to Natural Space and Parks and Policy 152: Sustainable Parks Funding)*.
- Engage neighborhoods in tactical, community-led short-term and long-term phased park and street improvements, especially in underserved areas (see Appendix 3. Case Studies) *(related to Policy 34: Community Streets and Policy 144: Support Active Transportation Investments)*.

## Food Access

### Metrics

- New housing in areas with low access to supermarkets and potential for new stores *(Impacts)*

### Overview

- All alternatives place some capacity or growth in areas without existing access to supermarkets
- Alternatives 1 and 2 place a greater proportion of growth in these gap areas
- Alternatives 1 and 2 also create greater opportunities to address existing gaps by creating the density supermarkets need to be feasible

### Evaluation

All alternatives place the majority of growth in areas without an existing supermarket within a mile walkshed. However, Alternatives 1 and 2 are also more likely to create opportunities for new supermarkets by allowing more mixed-use development and higher housing densities that could support new retail locations.

Generally, a parcel needs 6,000 to 8,000 households within a 1-2 mile radius to feasibly support a new supermarket (Gibbs, 2012). Assuming 6,000 households per 1.5 mile radius as a threshold, this is about 1.3 households per acre.

In the areas of Vancouver that are currently more than a mile from a supermarket, the average density is 0.7 units per acre in the No Action Alternative, 1.5 units per acre in Alternative 1, and 1.6 units per acre in Alternative 2. Alternatives 1 and 2 are therefore over the density threshold and could support new supermarkets in gap areas whereas the No Action Alternative may not create enough density to do so. Approximately 5 new supermarkets could be supported in gap areas under Alternatives 1 and 2 given the total number of households and average density of those households.

Alternatives 1 and 2 would also be better positioned to support small corner stores due to this density and support for mixed uses. Around 1,000 households are needed to support these uses (MRSC, 2024).

*Exhibit 5-4: New Housing Units without Supermarket Access*

| | No Action | Alternative 1 | Alternative 2 |
|---|---|---|---|
| Units | 13,900* | 31,000 | 33,800 |
| Percent of Units | 47%* | 69% | 67% |
| Potential new supermarkets supported @ 6,000 households in 1.5 mile radius | 0 | 5 | 5 |

**Note: The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.*

*Source: BERK, 2025.*

In the No Action Alternative, areas of housing capacity outside of supermarket access include 2, 3a, 6, 7, and 8. Alternatives 1 and 2 have concentrations of housing growth outside of supermarket access in parts of areas 2, 6, 7, and 8 (and 3a and 3b in Alternative 2).

## Strategies

### Features of the Alternatives

- Density increases and more mixed use under Alternatives 1 and 2 are likely to create more opportunities for new supermarkets, expanding access to food for current and future residents.

### Other Considerations

#### *City-Led Opportunities*

- Provide policy and programmatic support for community gardening, food banks, farmers markets, and other food access initiatives across Vancouver. This could include zoning allowances and incentives that promote urban agriculture (see Appendix 3. Case Studies) *(related to Policy 32: Community Gardens)*.
- Continue implementing the Vancouver Local Food Systems Action Plan *(related to Policy 78: Increase Food Access)*.
- Facilitate the success of supermarkets in areas with low access. Incentivize and/or remove barriers to the development of commercial space suitable for supermarkets. This could include tax incentives, density exemptions, or other tools (see Appendix 3. Case Studies) *(related to Policy 78: Increase Food Access)*.
- Review city code for opportunities to expand access to fishing, gathering, and raising livestock and supporting the availability of culturally-specific foods *(related to Policy 32:*

*Community Gardens, Policy 49: Engage with Tribal Community Members, and Policy 66: Historic and Culturally Significant Resources)*.

- Integrate food into public spaces and landscaping, such as planting edible plants and adding grills and food preparation areas in parks *(related to Policy 23: Broaden Equitable Access to Natural Spaces and Parks)*.
- Consider allowing mobile farmers markets and food trucks in locations with low access (see Appendix 3. Case Studies) *(related to Policy 78: Increase Food Access)*.

*Partnership Opportunities*

- Explore partnerships with community organizations, faith organizations, and existing commercial uses to distribute healthy food in areas of need (see Appendix 3. Case Studies) *(related to Policy 78: Increase Food Access)*.
- Maintain partnership with the Vancouver Farmers Market to improve food access and other economic and social benefits to the community *(related to Policy 78: Increase Food Access)*.

## Community Connections

### Metrics

- Job growth in areas with high equity risk scores and low connectivity/accessibility *(Strengths)*
- "Underutilized" parcels and parcels with older buildings that are designated for mixed use or higher densities *(Impacts)*
- Increases to density and mixed uses *(Strengths)*

### Overview

- All alternatives place some capacity or growth in areas with low access to services. All alternatives create some risk of commercial displacement.
- Alternatives 1 and 2 place a greater proportion of growth in areas with low access to services, creating more opportunity for future services. They also have greater commercial displacement potential.
- Alternatives 1 and 2 also create greater opportunities to mitigate commercial displacement by creating opportunities for mixed uses.

### Evaluation

While the three alternatives distribute capacity and growth in different ways, they all place a substantial amount of job growth in areas with high equity risk scores that are not particularly connected and accessible. More than 21% of the capacity or growth in each possibility is in areas with "High" or "Very High" equity risk scores and low connectivity and accessibility scores. Alternatives 1 and 2 place more than twice as many jobs in these areas than the No Action Alternative.

Job growth in these areas suggests an increase in commercial space and therefore more services. Proximity to services can benefit resident wellbeing in terms of access to healthcare, food, and daily needs, as well as opportunities to interact with others. This may be particularly impactful in areas with high equity risk scores, which have greater social and economic inequities.

*Exhibit 5-5: New Jobs in Areas with High Equity Risk Scores and Low Connectivity/Accessibility*

| | No Action | Alternative 1 | Alternative 2 |
|---|---|---|---|
| Jobs | 4,000* | 10,200 | 10,800 |
| Percent of Jobs | 24%* | 22% | 21% |

**Note: The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.*

*Source: BERK, 2025.*

The three alternatives also include a different mix of land uses. Increases to mixed use designations and increased density can support access to services by providing space for businesses and encouraging the concentrations of residents needed for businesses to be viable. Alternatives 1 and 2 have significantly more potential for mixed-use neighborhoods and higher densities than the No Action Alternative (

Exhibit 5-6). The No Action Alternative has minimal opportunities for mixed uses and higher density housing and therefore is likely to have less access to services.

*Exhibit 5-6: Mixed Uses and Density*

| | No Action | Alternative 1 | Alternative 2 |
|---|---|---|---|
| Mixed Use and Regional Activity Center Gross Acreage % | 0%* (Mixed Use zoning is minimally applied) | 11% | 16% |
| New Housing Units in Mixed Use/ Regional Activity Center or Medium Scale and Higher % | 15%* | 67% | 77% |

**Note: The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.*

*Source: BERK, 2025.*

Commercial displacement is likely to occur to some extent under all alternatives as the city will experience some amount of growth and development. Parcels that are considered "underutilized" based on building value per acre (per the Clark County 2023 Vacant and Buildable Lands Model) are considered more likely to redevelop than those that are fully

"built" (Clark County, 2023). Older buildings may also be more likely to redevelop based on their condition. Parcels with mixed use, medium density, or high density land use designations may be more likely to redevelop into higher density uses, with potential commercial displacement impacts.

Alternatives 1 and 2 include more of these zoning districts and therefore may have higher potential for commercial displacement and need for mitigation (Exhibit 5-7). This includes more than 1,000 commercial buildings on parcels considered "underutilized" that are in medium/high density residential or mixed use/regional activity center designations. However, Alternatives 1 and 2 would also create more opportunity for new business spaces and anti-displacement measures. The No Action Alternative would rely on existing policies and would be less strong in terms of anti-displacement.

*Exhibit 5-7: Commercial Displacement Potential*

| | No Action | Alternative 1 | Alternative 2 |
|---|---|---|---|
| Commercial Buildings on "Underutilized" Parcels, Land Use Designation Medium/High Density Residential or Mixed Use / Regional Activity Center | 35 | 196 | 242 |
| Commercial Buildings Built Pre-1985, Land Use Designation Medium/High Density Residential or Mixed Use / Regional Activity Center | 33 | 277 | 333 |

**Note: The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.*

*Source: BERK, 2025*

## Strategies

### Features of the Alternatives

- Density increases and more mixed use under Alternatives 1 and 2 are likely to create more opportunities for access to services and mitigate commercial displacement.

### Other Considerations

#### *City-Led Opportunities*

- Support the ability of small businesses to locate in neighborhoods by requiring or incentivizing the development of small commercial spaces and lowering parking requirements (see Appendix 3. Case Studies) *(related to Policy 10: Affordable Commercial*

*Space, Policy 133: Shared Parking, and Policy 88: Maximize the Utilization of Existing On-Street Parking)*.

- Consider anti-displacement policies such as incentives for setting aside small business space in new developments, providing affordable commercial leasing opportunities on City-controlled properties, or requiring community benefits agreements that protect existing businesses *(related to Policy 112: Reduce Displacement in the Face of New Growth)*.
- Consider programmatic opportunities to address the social needs of the community, through group recreation, community events, or other programs *(related to Policy 75: Increase Access to Community Spaces and Policy 30: Community Centers)*.
- Review land use code for potential barriers to the creation of new childcare facilities *(related to Policy 143: Support Access to Childcare and Policy 125: Resources for Youth and Aging Populations)*.

### *Partnership Opportunities*

- Provide flexibility in neighborhood commercial spaces, such as a short-term program to fill vacant spaces or add pop-ups (see Appendix 3. Case Studies) *(related to Policy 10: Affordable Commercial Space)*.
- Build on the findings of the Raising Clark County project to improve childcare access in Vancouver and support public-private partnerships *(related to Policy 143: Support Access to Childcare and Policy 125: Resources for Youth and Aging Populations)*.

## Exposure to Health Hazards

### Metrics

- New housing units in areas with high $PM_{2.5}$ concentration *(Impacts)*
- New housing units in areas with high ozone concentration *(Impacts)*
- New housing units in areas with low tree canopy coverage *(Impacts)*
- New housing units in areas with high transportation noise *(Impacts)*
- New housing units and jobs in heat islands *(Impacts)*
- New housing units and jobs not accessible to transit and potential for new transit *(Impacts)*
- Overall projected VMT (water quality) *(Impacts)*
- Growth in areas with climate exposures *(Impacts)*

### Overview

- All alternatives expose some amount of new housing to air quality hazards, noise, heat, and climate hazards, and have water quality impacts.
- The Action Alternatives include better mitigation of impacts through policy changes that are part of the periodic update.
- The Action Alternatives also include opportunities to address gaps, such as by requiring new developments to add trees or otherwise address heat islands.

### Evaluation

Based on the distribution of growth and capacity across the city, all alternatives expose some amount of new housing units to air quality hazards. This includes high $PM_{2.5}$ concentration and ozone concentration, as defined as scoring 9 or 10 for these exposures on the Washington State Environmental Health Disparities Map (Washington State Department of Health, 2022). Per this source, $PM_{2.5}$ is highest in the middle of the city while ozone is highest towards the east.

All the alternatives include at least 18% of their housing capacity or growth in areas with high $PM_{2.5}$ concentration and at least 16% in areas with high ozone concentration. Residents of this housing would be more exposed to air quality health impacts than in some other parts of the city.

In the No Action Alternative, areas with high capacity in air quality hazard areas include 3a, 3b, 4, 5, and 6 for $PM_{2.5}$ and area 7 for ozone. In the Action Alternatives, areas 5 and 6 have the highest growth and exposure to $PM_{2.5}$ and area 8 is of more concern for ozone.

The Action Alternatives, however, would encourage a walkable, compact, and mixed-use style of development in more areas of the city than the No Action Alternative, and over time,

would be more likely to shift vehicle trips to zero-emission modes, facilitate shorter trips, and reduce air pollutant emissions.

*Exhibit 5-8: New Housing Units in Areas with Air Quality Impacts*

| | No Action | Alternative 1 | Alternative 2 |
|---|---|---|---|
| High $PM_{2.5}$ concentration | | | |
| Units | 10,100* | 8,000 | 9,700 |
| Percent of Units | 34%* | 18% | 19% |
| High Ozone Concentration | | | |
| Units | 4,800* | 15,100 | 16,700 |
| Percent of Units | 16%* | 33% | 33% |

**Note: The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.*

*Source: BERK, 2025.*

All alternatives also place at least 57% of their housing capacity or growth in areas with low tree canopy cover (defined as those Census tracts with less than the current citywide average of 19%, using City data) (City of Vancouver, 2025; City of Vancouver, 2020). Residents of these areas could see fewer air quality benefits from trees (Exhibit 5-9Exhibit 5-9).

In the No Action Alternative, areas with capacity and low canopy cover include areas 1, 2, 3b, 5, 6, 7, and 8. In the Action Alternatives, affected areas with growth include 2, 7, and 8 (plus 5 for Alternative 2).

*Exhibit 5-9: New Housing Units in Areas with Low Tree Canopy Cover*

| | No Action | Alternative 1 | Alternative 2 |
|---|---|---|---|
| Units | 16,800* | 27,800 | 30,900 |
| Percent of Units | 57%* | 62% | 61% |

**Note: The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.*

*Source: BERK, 2025.*

All alternatives place some housing unit growth in areas with existing transportation noise above 55 dBA, per mapping from the USDOT (Exhibit 5-10). Distribution of growth is such that all the alternatives place a similar proportion of new housing unit or unit capacity in areas with high transportation noise: approximately 6%. Concentrations of growth in high transportation noise areas in all alternatives are primarily near key corridors such as I-5, I-205, SR-14, and Mill Plain Boulevard. Since Alternatives 1 and 2 would grow beyond the capacity of the No Action, they would place a greater total number of units in transportation noise areas, but they also have stronger opportunities for mitigation through new policies. Construction noise associated with new development would also be likely under all alternatives.

*Exhibit 5-10: New Housing Units in Areas with High Transportation Noise*

| | No Action | Alternative 1 | Alternative 2 |
|---|---|---|---|
| Units | 1,600* | 2,800 | 3,100 |
| Percent of Units | 6%* | 6% | 6% |

**Note: The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.*

*Source: BERK, 2025.*

All alternatives place some housing and job growth in urban heat islands, defined as those areas with Medium-High or Higher heat exposure scores in the City's Climate Index (BERK Consulting, 2024). At least 41% of housing units and 39% of jobs under all alternatives are in high heat exposure areas (Exhibit 5-11). Areas with high heat exposure could be positively impacted by growth over time, as new development is required to incorporate trees and plantings. The Action Alternatives have stronger opportunities to address heat islands through new policies.

Areas of housing and/or job capacity in heat islands in Alternative 1 include 3b, 4, 5, 6, and 7. In the Action Alternatives, areas 2, 5, 7, and 8 are of most concern based on where growth is expected.

*Exhibit 5-11: New Housing Units and Jobs in Heat Islands*

| | No Action | Alternative 1 | Alternative 2 |
|---|---|---|---|
| Units | 14,400* | 22,400 | 20,800 |
| Percent of Units | 49%* | 50% | 41% |
| Jobs | 11,500* | 27,600 | 30,700 |
| Percent of Total Projected Capacity for New Jobs | 39%* | 61% | 61% |

**Note: The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.*

*Source: BERK, 2025.*

All alternatives also place at least one third of housing capacity or growth and at least 37% of job capacity or growth in areas without transit access within one mile. However, Alternatives 1 and 2, due to higher housing densities, may create opportunities for viable new transit routes, which could reduce transportation air quality and noise impacts over time. As described in

Exhibit 5-6 in Community Connections above, Alternatives 1 and 2 put more than 67% of their new housing units in Mixed Use, Regional Activity Center, or medium scale and higher designations. These designations are much more likely to support new transit routes and stops (PSRC, 2015). The growth pattern of the No Action Alternative would be harder to serve with new transit improvements, with lower densities than the other alternatives and only 15% of new units located in similar designations.

Under the No Action Alternative, areas with housing and job capacity with low transit access include 1, 3a, 6, 7, and 8. In the Action Alternatives, growth areas with low transit access include 3a, 6, 7, and 8.

*Exhibit 5-12: New Housing and Jobs without Transit Access*

| | No Action | Alternative 1 | Alternative 2 |
|---|---|---|---|
| Units | 9,900* | 20,100 | 19,600 |
| Percent of Units | 33%* | 45% | 39% |
| Jobs | 6,200* | 21,600 | 22,900 |
| Percent of Jobs | 37%* | 46% | 44% |

**Note: The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.*

*Source: BERK, 2025.*

All alternatives result in an increase of overall vehicle miles traveled (VMT), per modeling completed as part of the City's Comprehensive Plan Environmental Impact Statement. However, VMT per household is expected to decrease as investments are made in other travel modes. Alternatives 2 and 3 result in a lower VMT per household than the No Action Alternative but a greater total VMT as they plan for greater growth. Therefore, water quality impacts at the citywide scale may be greatest under Alternatives 2 and 3, but these alternatives also mitigate the overall increase by minimizing VMT per household.

*Exhibit 5-13: Modeled Existing and Future Daily Vehicle Miles Traveled in Vancouver*

| Vehicle Type | Existing (2023) | No Action Alternative (2045) | Alternative 1 (2045) | Alternative 2 (2045) |
|---|---|---|---|---|
| All Vehicles Except Trucks | 3,949,553 | 4,783,852* | 5,343,949 | 5,465,254 |
| Trucks (in Passenger Car Equivalent) | 215,391 | 544,077* | 541,923 | 541,302 |
| **Total** | **4,315,718** | **5,327,928*** | **5,885,872** | **6,006,556** |
| **VMT Per Household (average miles per day)[1]** | **45.6** | **44.9*** | **42.5** | **41.9** |

**Note: The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.*

*[1] VMT per household assumes 94,587 households in existing conditions (2023). For 2045, VMT per household is based on assumptions of 118,607 households in the No Action Alternative, 138,517 households in Alternative 1, and 143,473 households in Alternative 2, calculated by adding estimated new housing unit capacity to 2023 estimated household data from Clark County.*

*Source: RTC 2025; WSP, 2025.*

All alternatives include growth in areas of high climate exposure (Exhibit 5-14). Under all alternatives, about a quarter of the growth or capacity is in areas that are more susceptible to extreme heat, extreme precipitation and flooding, and/or air quality, smoke, and fire. However, Alternatives 1 and 2 include the development of a new Climate Element of the Comprehensive Plan, which includes policies specifically aimed at improving the city's resilience to climate hazards. Therefore, Alternatives 1 and 2 are stronger in terms of climate resilience than the No Action Alternative.

In Alternative 1, areas with capacity that are in high climate exposure areas include 1, 2, 4, 5, 6, 7, and 8. In the Action Alternatives, key areas of growth in exposure areas include 2, 5, 6, and 8.

*Exhibit 5-14: New Housing in High Climate Exposure Areas*

| | No Action | Alternative 1 | Alternative 2 |
|---|---|---|---|
| Units | 7,600* | 11,000 | 11,800 |
| Percent of Units | 26%* | 25% | 23% |

**Note: The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.*

*Source: BERK, 2025.*

## Strategies

### Features of the Alternatives

- Greater development in urban heat areas and low canopy cover areas under Alternatives 1 and 2 creates more opportunities for new trees and vegetation.
- The new Climate Element developed under the Action Alternatives includes a range of policies aimed at improving community resilience to climate hazards.
- Opportunities for expanded transit access can help mitigate air quality and noise impacts of growth. The Action Alternatives include a growth pattern that is more feasible to serve with transit.

### Other Considerations

#### *City-Led Opportunities*

- Review vegetation requirements for new development and require or incentivize greater investment in trees and plants in areas with high heat and low tree canopy cover. This could also include green roofs and permeable pavement (see Appendix 3. Case Studies) *(related to Policy 115: Reduce Heat Island Effect, Policy 72: Incorporate Climate Resilient Infrastructure into Development, Policy 53: Equitably Expand Tree Canopy, and Policy 111: Reduce Climate Impact Exposure to Vancouver's Neighborhoods)*
- Create a policy related to indoor air quality, including standards for new development and a program for retrofitting existing homes *(related to Policy 79: Indoor Air Quality)*.
- Provide temporary or permanent shade structures in parks or rights of way to supplement the existing shade capacity of newly planted trees (see Appendix 3. Case Studies) *(related to Policy 115: Reduce Heat Island Effect and Policy 111: Reduce Climate Impact Exposure to Vancouver's Neighborhoods)*
- Develop or modify design standards to integrate exterior building features that reduce the impacts of climate change and increase resilience (see Appendix 3. Case Studies) *(related to Policy 115: Reduce Heat Island Effect, Policy 72: Incorporate Climate Resilient*

*Infrastructure into Development, and Policy 111: Reduce Climate Impact Exposure to Vancouver's Neighborhoods)*

- Consider mitigation strategies around major corridors and areas of poor air quality, such as enhancing tree canopy cover and vegetation through street trees, incentivizing tree planting on private property, and strategically locating parks and open spaces *(related to Policy 53: Equitably Expand Tree Canopy and Policy 113: Reduce Environmental Health Disparities)*
- Reduce and mitigate noise pollution through soundproofing measures, incentives, and other strategies *(related to Policy 89: Mitigate Noise Pollution and Policy 113: Reduce Environmental Health Disparities)*
- Create educational opportunities for residents to learn about proper disposal of household chemicals and water quality best practices (see Appendix 3. Case Studies) *(related to Policy 136: Stormwater Management)*.
- Implement policies that support water quality improvements through stormwater management and filtration *(related to Policy 136: Stormwater Management)*.
- Consider implementing policies in support of electric vehicles, which do not emit the same air quality hazards as conventional vehicles. This could include creating public charging stations, transitioning parts of the City's fleet where appropriate, or creating developer requirements or incentives *(related to Policy 85: Low Carbon Fuels and Policy 86: Low Carbon Transportation Alternatives)*.

### *Partnership Opportunities*

- Work with C-TRAN to plan transit investments where future growth is expected to occur and transit is not yet available. The Action Alternatives plan for growth along major corridors, creating opportunities for transit-oriented development if new bus stops are added *(related to Policy 81: Invest in Underserved Areas and Policy 122: Regional Planning)*
- Create opportunities for community-led action plans to address needs in specific areas with proximity to highways and other pollution sources *(related to Policy 113: Reduce Environmental Health Disparities)*.
- Collaborate with Washington State University (WSU) Vancouver Extension and their Water Research Center to monitor water quality trends *(related to Policy 136: Stormwater Management)*.
- Continue to monitor air quality and consider opportunities for partnerships *(related to Policy 113: Reduce Environmental Health Disparities)*.
- Consider partnering with local libraries and schools to provide emergency cooling and heating shelters *(related to Policy 43: Disaster Recovery and Emergency Response)*.

## Housing and Financial Security

### Metrics

- New housing in areas with older buildings *(Strengths)*
- New housing in designations that allow apartments of three or more stories *(Strengths)*
- Housing capacity for all income bands *(Strengths)*
- New housing units in areas of high displacement risk *(Impacts)*
- Amount of and projected average wages of new jobs, based on land use designations *(Strengths)*

### Overview

- All alternatives will result in some redevelopment of older buildings that may be of poorer quality and development of new buildings of three or more stories that may better protect residents from radon exposure.
- All alternatives are expected to have some displacement impacts, but Alternatives 1 and 2 include anti-displacement policies to help mitigate such impacts while the No Action Alternative does not.
- Alternatives 1 and 2 also include better options for housing affordability at all income bands.
- All alternatives create jobs with similar average wages, but Alternatives 1 and 2 create opportunities for encouraging specific industries.

### Evaluation

All alternatives place a similar percentage of capacity or growth on parcels with older buildings (32-38%), however the number of units is higher under Alternatives 1 and 2. This may look like redevelopment of older buildings, which are more likely to have health hazards such as lead or poor insulation. Older buildings, however, also tend to be more affordable, so there is a health tradeoff.

*Exhibit 5-15: New Housing Units on Parcels with Older Buildings*

| | No Action | Alternative 1 | Alternative 2 |
|---|---|---|---|
| Units | 10,100* | 17,200 | 16,400 |
| Percent of Units | 34%* | 38% | 32% |

**Note: The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.*

*Source: BERK, 2025.*

All alternatives place growth in designations that allow three or more stories, but Alternatives 1 and 2 place substantially more growth in those areas. Units at or above the third story have less risk of radon exposure.

*Exhibit 5-16: New Housing Units in Designations that Allow Three or More Stories*

| | No Action | Alternative 1 | Alternative 2 |
|---|---|---|---|
| Units | 10,600 | 30,200 | 39,000 |
| Percent of Units | 32% | 67% | 77% |

**Note: The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.*

*Source: BERK, 2025.*

All of the alternatives would provide new housing units throughout the city; however, there would be varying capacity for housing that serves all income bands. In general, it is assumed that alternatives with a higher capacity for new housing units would allow for the greatest opportunity to construct different housing typologies, which in turn have the potential to be more affordable for a broader range of income levels. The No Action Alternative would have the least potential for addressing identified needs. Under this alternative, more than 40% of the new housing would need to be constructed for incomes of less than 80% AMI to meet needs. The No Action Alternative also does not include additional policy or zoning provisions to address the need for more diversity in housing supply. Alternatives 1 and 2 include greater capacity for new housing units with a broader range of typologies, as well as code updates that make requirements easier and simpler to understand. Alternatives 1 and 2 therefore have the most potential to address housing affordability needs.

All alternatives are likely to have some impact on residential displacement due to growth and redevelopment. Under all alternatives, at least 14% of housing unit capacity or growth is located in areas defined as high risk in the Washington State Displacement Risk Map (Exhibit 5-17) (Washington State Department of Commerce, 2024). The No Action Alternative places a higher proportion of growth in areas with higher displacement risk. Alternatives 1 and 2 place a lower proportion and similar or lower overall number of units in these areas and include anti-displacement policies as part of the Comprehensive Plan periodic update.

Areas with high displacement risk and housing capacity under the No Action Alternative include 2, 3a, 3b,4, 5, 6, 7, and 8. In the Action Alternatives, areas of growth and high risk include 2, 6, 7, and 8.

*Exhibit 5-17: New Housing Units in Displacement Risk Areas*

| | No Action | Alternative 1 | Alternative 2 |
|---|---|---|---|
| Units | 9,400* | 6,500 | 8,500 |
| Percent of Units | 32%* | 14% | 17% |

**Note: The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.*

*Source: BERK, 2025.*

Land use mix can have an impact on wages due to the types of jobs that can be created in different districts. For example, a heavy industrial area would include capacity for manufacturing jobs, while a mixed-use area may include a combination of healthcare, retail, service industry, and professional services jobs. Data from the US Census provides average wages for a range of industries in the Portland metropolitan area (Exhibit 5-18) (U.S. Census Bureau, 2023).

While Alternatives 1 and 2 create many more jobs (47,500-51,800) than the No Action Alternative has capacity for (16,600 jobs), the overall average wage of new jobs is expected to be similar. All alternatives focus most of their new job growth in industrial and mixed use or commercial land use designations, making their average wages comparable. The Action Alternatives have better opportunities to adjust policies to encourage specific industries and workforce development, however.

*Exhibit 5-18: Land Use and Job Mix*

| Place Type | Types of Jobs | Average Annual Wages |
|---|---|---|
| Heavy Industrial | Manufacturing | $77,000 |
| Institutional/Campus | Public Administration, Education, Hospital | $85,000 |
| Industrial Employment | Warehousing, Specialty Trade Contractors | $69,000 |
| Low Scale Neighborhood | Retail, Food/Drink Services | $39,000 |
| Medium Scale Neighborhood | Retail, Food/Drink Services | $39,000 |
| Mixed Use | Healthcare, Retail, Food/Drink Services, Professional Services | $72,000 |
| Regional Activity Center | Healthcare, Retail, Food/Drink Services, Professional Services | $72,000 |

*Source: US Census, 2023.*

## Strategies

### Features of the Alternatives

- The City's existing Housing Action Plan identifies strategies to increase housing supply and address affordability that would be implemented under all alternatives.
- The Action Alternatives include additional housing policies to ensure housing options for all income bands.
- The Action Alternatives include additional anti-displacement policies.

### Other Considerations

#### *City-Led Opportunities*

- Pursue workforce development initiatives, small business assistance programs, and efforts to retain manufacturing, construction, and skilled trades jobs (see Appendix 3. Case Studies) *(related to Policy 162: Workforce Development and Career Pathways and Policy 24: Build a Resilient Economy)*.
- Help communicate home rehabilitation opportunities and radon testing options through City channels *(related to Policy 113: Reduce Environmental Health Disparities)*.

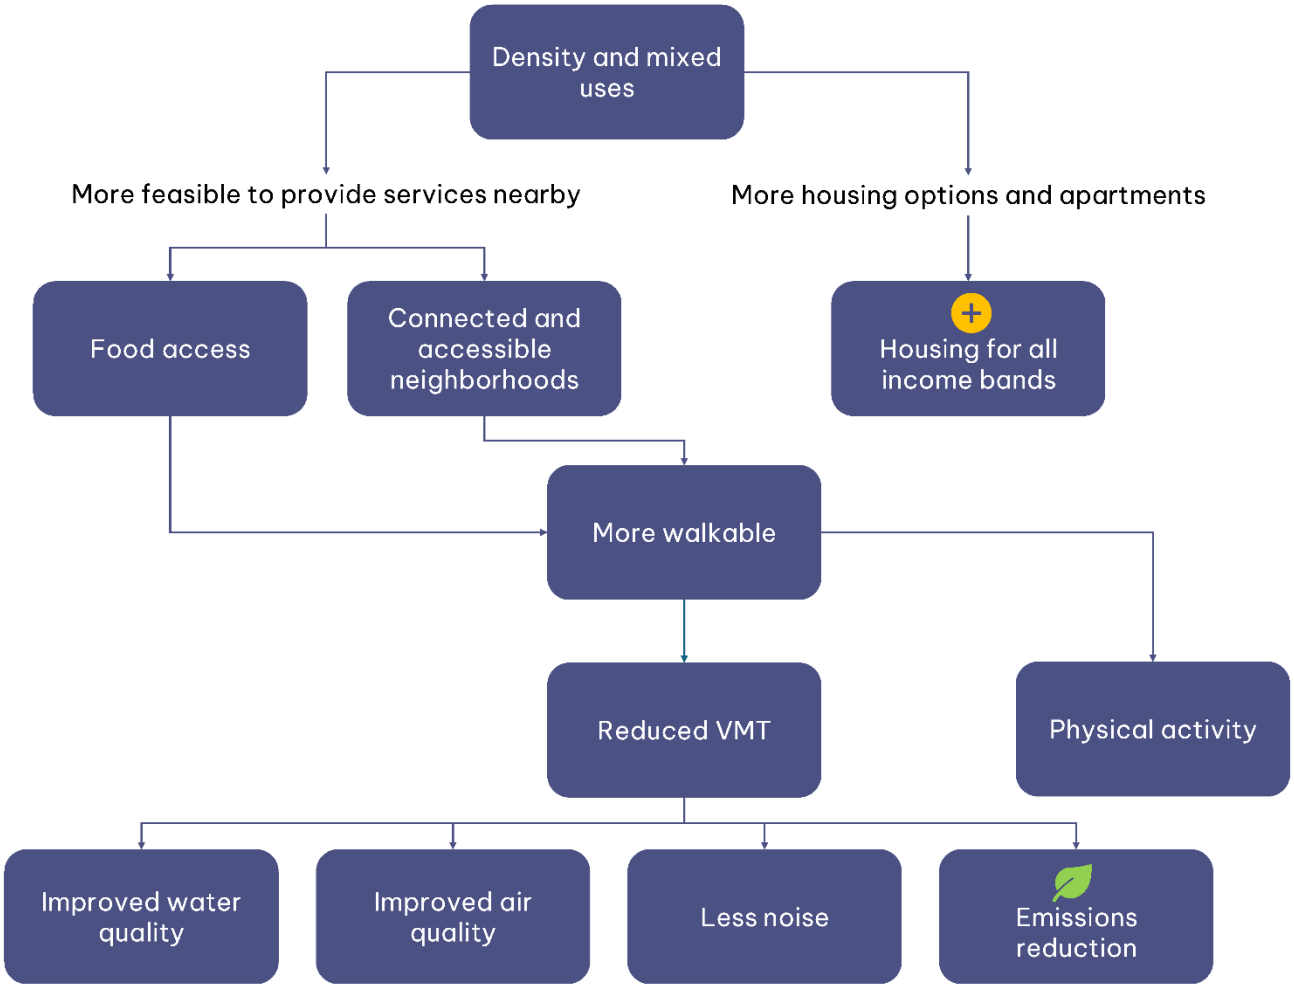
*Partnership Opportunities*

- Build on the work of CREDC and collaborate regionally to support the software and electronics, clean tech, life sciences, and technology-enhanced production sectors, which tend to be higher-paying industries. This could include a marketing campaign positioning Vancouver as a hub for innovation *(related to Policy 162: Workforce Development and Career Pathways and Policy 24: Build a Resilient Economy)*.

# Tradeoffs and Cobenefits

## Cobenefits

Several cobenefits and connections emerge when considering the relationships across metrics. Some features of the growth alternatives cascade into benefits across a range of health considerations. Others have cobenefits for emissions reduction ( ) or equity ( ).



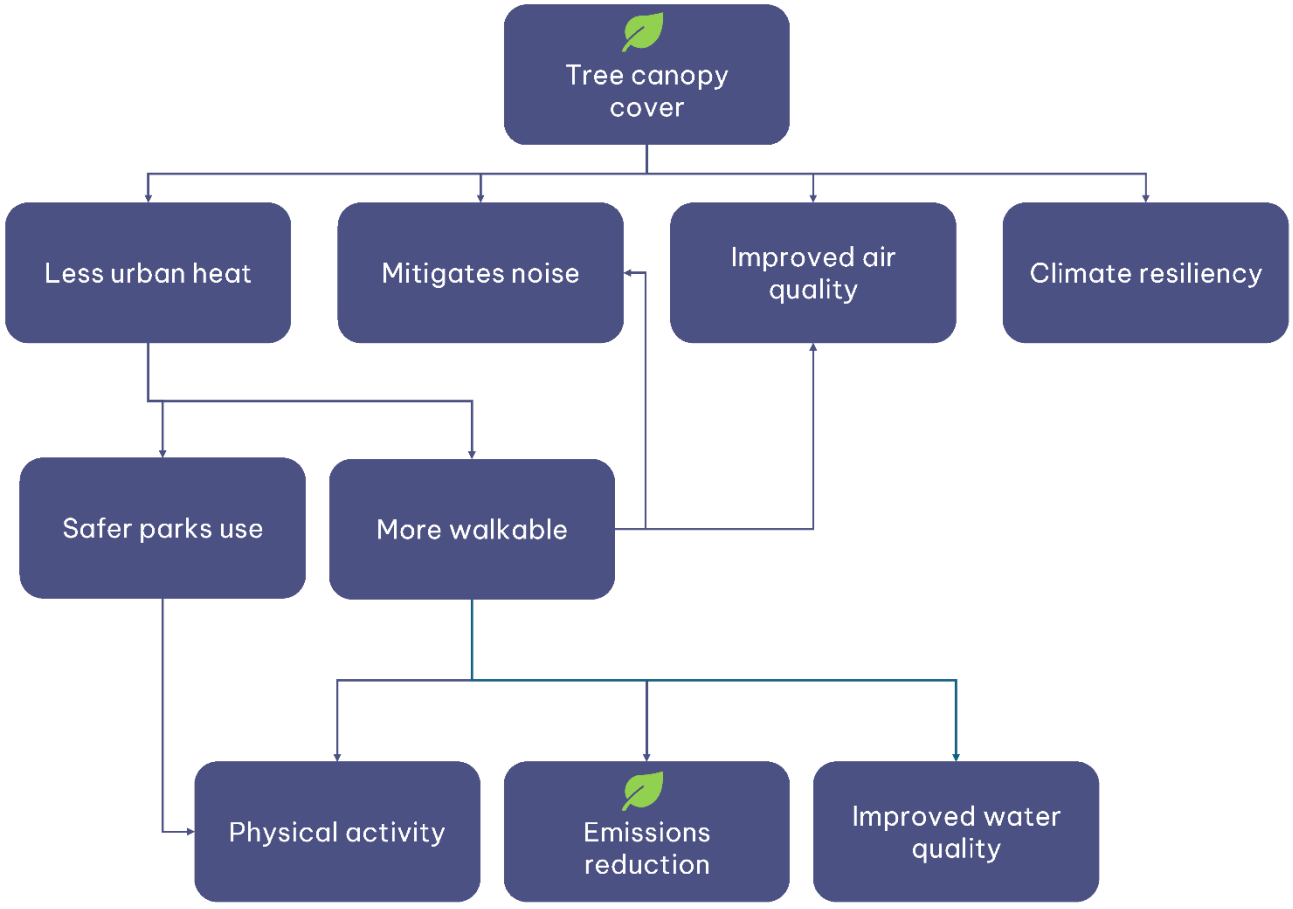
### Density and Mixed Uses and Other Health Metrics

Density and mixed uses have connections to a range of other health topics (Exhibit 5-19). More density and opportunities for mixed use development make it more feasible for businesses to open new locations, creating more connected and accessible neighborhoods and better food access. These in turn create less reliance on driving, which can improve physical activity, and lower vehicle miles traveled (with air quality, noise, and emissions benefits).

Density also provides more housing options, including apartments and other housing types that are more likely to serve people making under the area median income.

**Both Action Alternatives emphasize density and mixed uses**, with Alternative 2 especially strong in this area.

*Exhibit 5-19: Density and Mixed Uses and Other Health Metrics*



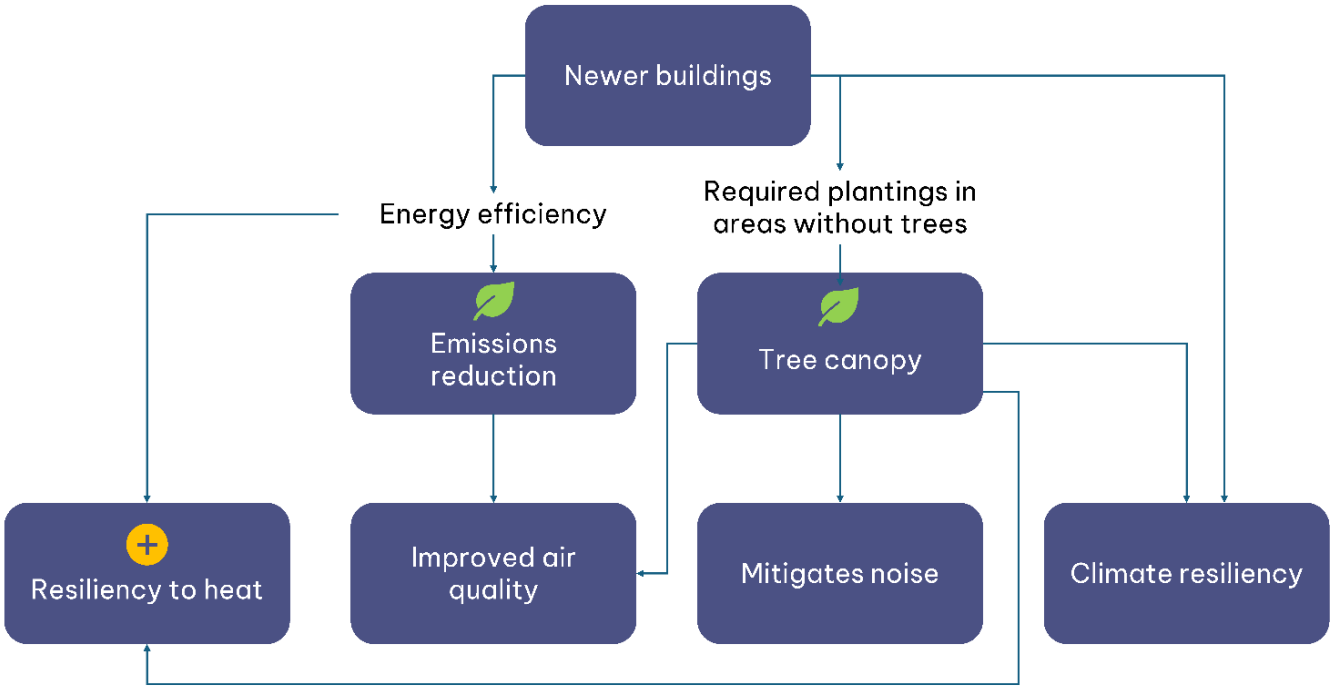
*Source: BERK, 2025.*

### Tree Canopy Cover and Other Health Metrics

Tree canopy cover also has connections to other health topics (Exhibit 5-20). It helps to reduce urban heat, which makes parks safer to use and biking and walking safer modes of transportation in summer. This can result in more physical activity, as well as lower emissions and less noise from less vehicle use. Tree canopy cover also has direct benefits for mitigating noise, improving air quality, and improving climate resiliency to extreme precipitation as well as heat.

**The Action Alternatives create more opportunities for expanded tree canopy cover** by directing much of the growth in areas without existing trees, and through policy changes that support more tree canopy.

*Exhibit 5-20: Tree Canopy Cover and Other Health Metrics*



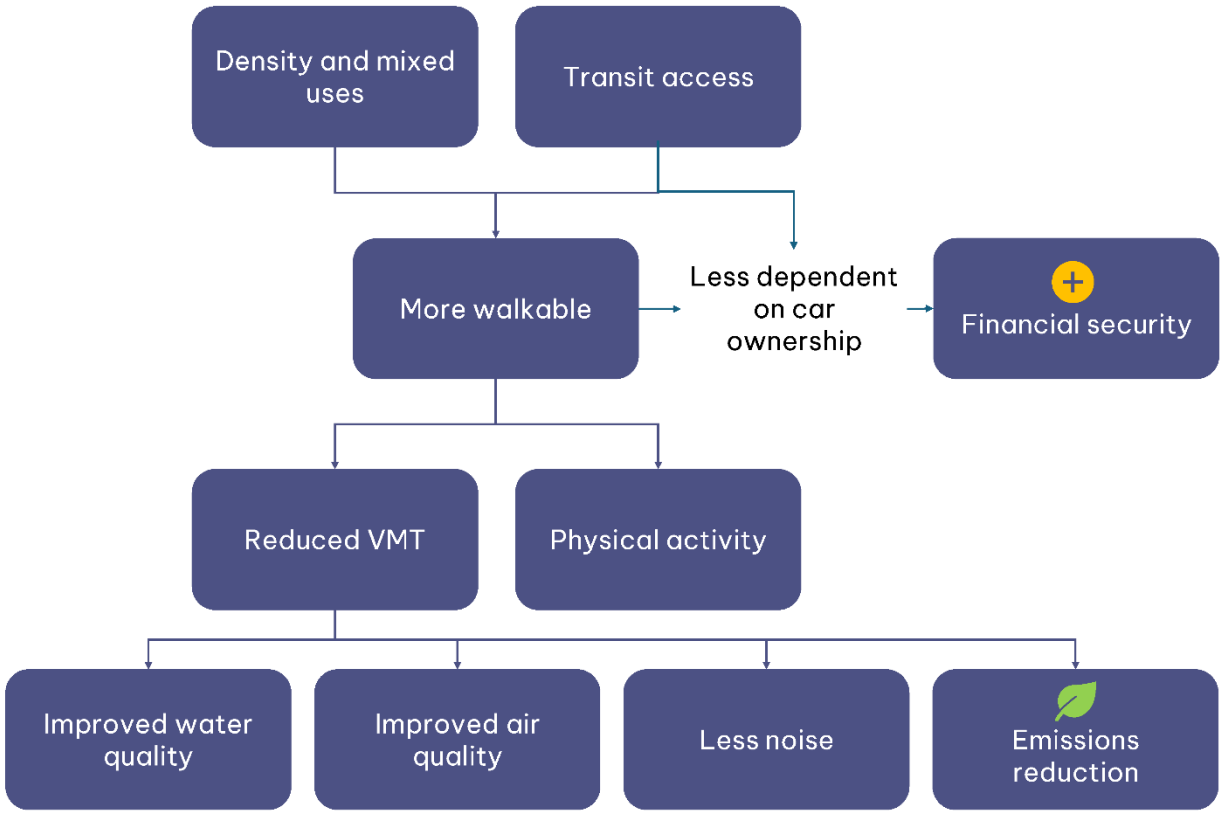
*Source: BERK, 2025.*

### Newer Buildings and Other Health Metrics

An increase in the proportion of newer buildings can also relate to health metrics beyond exposure to health hazards (Exhibit 5-21). Newer buildings tend to be more energy efficient, which results in lower emissions and lower costs for air conditioning and filtration, with cobenefits for air quality. Lower energy costs have the equity cobenefit of making air conditioning more accessible in heat events. New development can also help increase the amount of vegetation in areas without much tree canopy cover, as it is required to include a certain amount of trees and green space. This has benefits in turn for air quality, heat, noise, and climate resiliency. Finally, newer buildings may be more resilient to climate impacts such as extreme precipitation, flooding, and fire.

**The Action Alternatives result in more new buildings** than the No Action Alternative.

*Exhibit 5-21: Newer Buildings and Other Health Metrics*



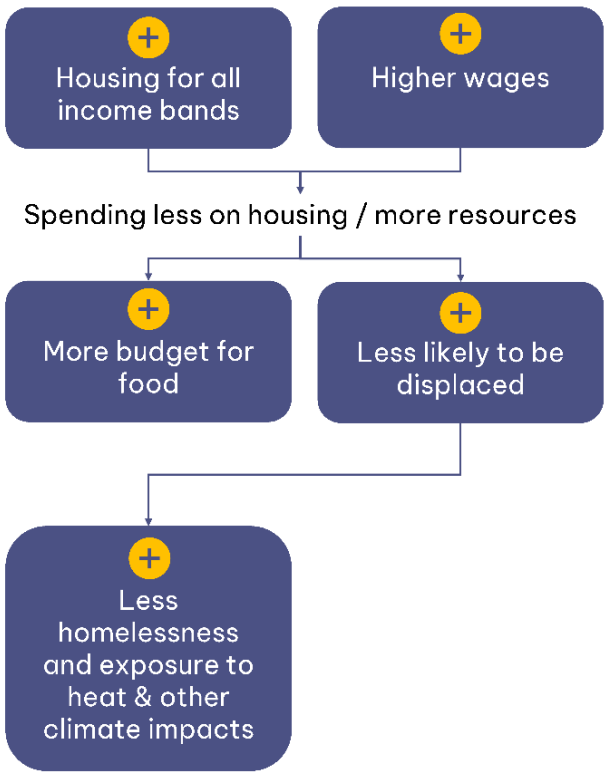
*Source: BERK, 2025.*

### Density, Mixed Uses, and Transit Access

When combined, density, mixed uses, and transit access can have benefits for walkability, which has other health benefits itself (Exhibit 5-22). Transit-oriented development and mixed uses could result in more walking and biking trips for daily needs, and use of transit to reach other destinations. The additional walking to and from transit has benefits for physical activity. Transit access also has benefits for reducing vehicle dependency, resulting in improved air quality, less noise, and lower emissions.

**The Action Alternatives emphasize density and mixed uses, and place growth in such a way that could be served by future transit lines**, where transit doesn't currently exist. The No Action Alternative focuses on lower densities, which are also harder to serve with transit.

*Exhibit 5-22: Density, Mixed Uses, and Transit Access*



*Source: BERK, 2025.*

### Housing Affordability and Higher Wages

When combined, housing affordability and higher wages can have far-reaching benefits to health (Exhibit 5-23). Spending less on housing and having more resources overall can lead to being able to afford more or healthier food, and lower displacement risk. This could also prevent homelessness for households that otherwise may be at risk, therefore also preventing exposure to heat and climate hazards.

**The Action Alternatives include housing capacity for all income bands** and policies to remove barriers to the development of that housing. While all alternatives have capacity for jobs at a similar average wage, **the Action Alternatives present an opportunity to encourage specific industries and workforce development programming, which could lead to higher wages over time**.

*Exhibit 5-23: Housing Affordability and Higher Wages*

*Source: BERK, 2025.*

## Tradeoffs

### Density, Newer Buildings, and Displacement

Some amount of older housing redevelopment and displacement will occur regardless of density allowances. However, if more density and flexibility is possible, development interest may grow. While there are health benefits associated with more density, it may also have impacts on residential and commercial displacement. Policies should be considered to ensure that new development includes housing units and commercial spaces that meet the needs of the businesses and households that are already in Vancouver.

The Action Alternatives include the greatest density and amount of newer buildings, which could lead to displacement impacts, however they also include the greatest mitigation opportunities.

## 6. Community Engagement Summary

This HIA included community engagement primarily in two ways. The HIA used findings from the 2024 Clark County Community Needs Assessment survey to understand baseline conditions for access to services. The HIA was also brought to two Climate Community Working Group meetings in August 2024 and September 2025. This group of representatives from various community organizations, convened as part of the Comprehensive Plan Periodic Update, provided input on initial findings and the full HIA draft.

## 7. Next Steps

As the City completes the 2025 Comprehensive Plan Periodic Update and associated environmental review, this HIA will assist decision makers in considering specific mitigation and policy actions. Vancouver will also select a "Preferred Alternative" based on the analysis in the HIA and DEIS, which will be carried forward in the adopted plan.

*Policy 91: Monitoring Progress* specifies that the City will "regularly review progress towards implementation of the Vancouver Comprehensive Plan goals and policies using the metrics identified for each policy." The City is also required to complete a 5-year progress report on the implementation of its Climate Element of the Comprehensive Plan. For Vancouver, this will be due in 2030. Many policies that relate to climate resiliency and emissions reduction are also related to health, so this will also be an opportunity to report on health-related outcomes of the plan.

# Acronyms

| | |
|---|---|
| ADU | Accessory Dwelling Unit |

## 1. Current Health-Related Programs in Vancouver

| Topic | City | County | School, Nonprofit, and Business Partners | Other |
|---|---|---|---|---|
|  Physical Activity | Parks and trails system<br>Parks planning<br>Biking and walking infrastructure<br>Transportation planning<br>Community centers and programs | Walk, Run, Ride, or Roll website | School sports<br>School facilities<br>YMCA<br>Private gyms | Private sports clubs<br>Adult recreation league sports |
|  Food Access | Community gardening<br>Urban agriculture | Clark County SNAP-Ed Program | Free and reduced school lunches<br>Clark County Food Bank and partners<br>Farmers markets<br>Supermarkets<br>Urban Abundance programs<br>CSAs | |
|  Community Connections | Parks<br>Community centers and programs<br>Community events<br>Community and Neighborhood Grants | Clark County Community Services | Schools<br>Healthcare facilities<br>Small businesses<br>Social services<br>Childcare<br>Libraries | |

| Topic | City | County | School, Nonprofit, and Business Partners | Other |
|---|---|---|---|---|
| Exposure to Health Hazards | Tree canopy<br>Water quality monitoring<br>Emergency preparedness<br>Climate resiliency planning<br>Fire<br>Police<br>EMS | Heat Watch Project<br>Clark Regional Emergency Services Agency<br>Hazard mitigation planning | Healthcare facilities<br>Social services<br>Fourth Plain Forward Climate Adaptation Taskforce | Southwest Clean Air Agency<br>Federal Superfund program |
| Housing and Financial Security | Planning for housing affordability<br>Economic development planning | Columbia River Economic Development Council<br>Property tax relief | Affordable housing providers<br>Shelter providers<br>Fourth Plain Forward Financial Education | Federal Housing Choice Vouchers |

## 2. Tradeoffs and Cobenefits Matrix

→ Strategies that have magnified health benefits when combined

⇆ Strategies that may represent a health tradeoff when combined

Strategies have a magnified emissions reduction cobenefit when combined

Strategies have a magnified equity cobenefit when combined

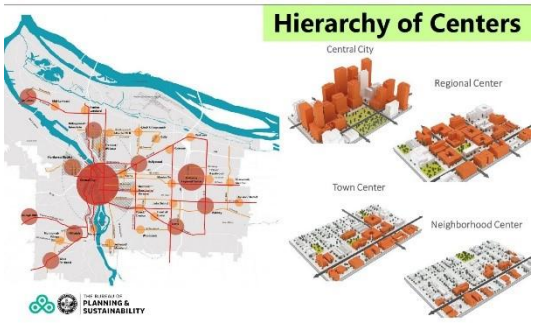
\- No major connection

| | **Connected and accessible neighborhoods** | **$PM_{2.5}$ and ozone** | **Noise** | **Urban heat** | **Housing in areas with older buildings** | **Greater % of new housing as apartments** | **Areas with high displacement risk** | **Proximity to parks** | **Proximity to supermarkets** | **Climate impacts** | **Proximity to transit** | **More jobs in higher wage sectors** | **Housing for all income bands** |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| **Connected and accessible neighborhoods** | | → More connected and accessible neighborhoods<br><br>-> lower VMT<br><br>-> lower air quality impacts | → More connected and accessible neighborhoods<br><br>-> lower VMT<br><br>-> lower noise from traffic | Strategies that reduce urban heat<br><br>+<br><br>Connected and accessible neighborhoods<br><br>=<br><br>More comfortable to walk/bike<br><br>-> lower VMT & emissions | - | → Higher density<br><br>-> more feasible to provide certain services, greater density of services<br><br>-> more likely to result in connected and accessible neighborhoods | - | → Better park access near housing<br><br>-> supports connected and accessible neighborhoods | → Proximity to supermarkets<br><br>-> supports connected and accessible neighborhoods<br><br>-> may result in desirable locations for new stores | → Better access to services<br><br>-> resiliency to climate impacts | Connected and accessible neighborhoods<br><br>+<br><br>proximity to transit<br><br>= walkability locally and transit connections for longer distances, lower VMT & emissions | Higher wages<br><br>+<br><br>Proximity of housing and services/jobs<br><br>= can afford to live closer to work and services, less time burden of commuting and daily errands<br><br>-> lower VMT & emissions | Housing options at all income bands<br><br>+<br><br>Proximity of housing and services/jobs<br><br>= can afford to live closer to work and services, less time burden of commuting and daily errands<br><br>-> lower VMT & emissions |

| | Connected and accessible neighborhoods | $PM_{2.5}$ and ozone | Noise | Urban heat | Housing in areas with older buildings | Greater % of new housing as apartments | Areas with high displacement risk | Proximity to parks | Proximity to supermarkets | Climate impacts | Proximity to transit | More jobs in higher wage sectors | Housing for all income bands |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| **$PM_{2.5}$ and ozone** | | | → Strategies to address transportation noise via VMT reduction<br><br>-><br><br>Strategies to address air quality via VMT reduction | → Greening urban heat areas<br><br>-> improved air quality | → Newer buildings<br><br>-> better indoor air quality | → Higher density<br><br>-> lower VMT<br><br>-> lower air quality impacts | - | → More parks with trees and vegetation<br><br>-> improved air quality<br><br>Strategies that improve air quality<br><br>-> parks more comfortable and safe to use | → Easier to walk or bike to supermarkets<br><br>-> lower VMT<br><br>-> lower air quality impacts | → Climate impacts<br><br>-> worse air quality<br><br>Some climate resiliency strategies (for example, more indoor recreation facilities, air conditioning, tree planting)<br><br>-> air pollution mitigation | → More people taking transit<br><br>-> lower VMT<br><br>-> lower air quality impacts | → Higher wages<br><br>-> can afford to live closer to work and services<br><br>-> lower VMT<br><br>-> lower air quality impacts | → Housing options at all income bands<br><br>-> can afford to live closer to work and services<br><br>-> lower VMT<br><br>-> lower air quality impacts |
| **Noise** | | | → Newer buildings<br><br>-> better noise mitigation | - | - | → More parks with trees and vegetation<br><br>-> mitigates noise | - | → Easier to walk or bike to supermarkets<br><br>-> lower VMT<br><br>-> lower noise impacts | - | → More people taking transit<br><br>-> lower VMT<br><br>-> lower noise impacts | → Higher wages<br><br>-> can afford to live closer to work and services<br><br>-> lower VMT<br><br>-> lower noise impacts | → Housing options at all income bands<br><br>-> can afford to live closer to work and services<br><br>-> lower VMT<br><br>-> lower noise impacts | |

| | Connected and accessible neighborhoods | $PM_{2.5}$ and ozone | Noise | Urban heat | Housing in areas with older buildings | Greater % of new housing as apartments | Areas with high displacement risk | Proximity to parks | Proximity to supermarkets | Climate impacts | Proximity to transit | More jobs in higher wage sectors | Housing for all income bands |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| **Urban heat** | | | | | → Newer buildings -> more efficient cooling | - | - | → More parks with trees and vegetation -> cooling, refuge during heat events Strategies that reduce heat -> parks more comfortable and safe to use | - | → Climate impacts -> more heat impacts Some climate resiliency strategies (for example, more indoor recreation facilities, air conditioning, tree planting) -> heat mitigation | - | → + Higher wages -> greater adaptive capacity to heat impacts (for example, can afford air conditioning) | → + Housing options at all income bands -> fewer people living unsheltered or in low quality housing -> better safety during heat events |
| **Housing in areas with older buildings** | | | | | | - | → Redevelopment in areas with older buildings -> likely impacts to displacement | - | - | → Newer buildings -> potentially more resilient to climate impacts | - | - | ⇆ Redevelopment in areas with older buildings -> loss of some naturally occurring affordable housing, housing for all income bands needs to balance various strategies for long-term needs |

| | Connected and accessible neighborhoods | $PM_{2.5}$ and ozone | Noise | Urban heat | Housing in areas with older buildings | Greater % of new housing as apartments | Areas with high displacement risk | Proximity to parks | Proximity to supermarkets | Climate impacts | Proximity to transit | More jobs in higher wage sectors | Housing for all income bands |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| **Greater % of new housing as apartments** | | | | | | | Short term: ⇄<br><br>Rezoning for higher densities<br><br>-> land is more valuable and more likely to redevelop<br><br>-> potential for displacement<br><br>Long term: →<br><br>Apartments more likely to provide housing for middle- and lower-income bands<br><br>-> availability of housing options at all income levels mitigates displacement | - | →<br><br>Higher density<br><br>-> may result in desirable locations for new stores | - | <br><br>Higher density<br><br>+<br><br>Proximity to transit<br><br>= transit-oriented development<br><br>-> lower VMT and emissions | <br><br>Higher wages<br><br>+<br><br>More housing options<br><br>=<br><br>can afford to live closer to work and services, less time burden of commuting and daily errands<br><br>-> lower VMT & emissions | →<br><br>Apartments more likely to provide housing for middle- and lower-income bands<br><br>-> availability of housing options at all income levels |
| **Areas with high displacement risk** | | | | | | | | - | - | - | - | →<br><br>Higher wages<br><br>-> less vulnerable to displacement | →<br><br>Housing options at all income bands<br><br>-> households are less likely to be displaced; displaced households have somewhere to move to in the same city or neighborhood |



| | Connected and accessible neighborhoods | $PM_{2.5}$ and ozone | Noise | Urban heat | Housing in areas with older buildings | Greater % of new housing as apartments | Areas with high displacement risk | Proximity to parks | Proximity to supermarkets | Climate impacts | Proximity to transit | More jobs in higher wage sectors | Housing for all income bands |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| **Proximity to parks** | | | | | | | | | - | → More parks with trees and vegetation -> cooling, refuge during heat or other events Strategies that address climate resiliency -> parks more comfortable and safe to use | - | - | + Housing options at all income bands + Proximity to parks = Households at all incomes can access health benefits of parks |
| **Proximity to supermarkets** | | | | | | | | | | → Better access to supermarkets -> resiliency to climate impacts (for example, ability to stock up on supplies prior to a potential power outage or other event) | - | + Higher wages -> greater ability to afford foods, less dependent on “budget” stores | + Housing options at all income bands -> less budget spent on housing, more available for food Housing options at all income bands + Better access to supermarkets -> Households at all incomes have good access to supermarkets |

| | Connected and accessible neighborhoods | $PM_{2.5}$ and ozone | Noise | Urban heat | Housing in areas with older buildings | Greater % of new housing as apartments | Areas with high displacement risk | Proximity to parks | Proximity to supermarkets | Climate impacts | Proximity to transit | More jobs in higher wage sectors | Housing for all income bands |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| **Climate impacts** | | | | | | | | | | | - | → + Higher wages -> greater adaptive capacity to climate impacts (for example, can afford air conditioning, home retrofits, etc.) | → + Housing options at all income bands -> fewer people living unsheltered or in low quality housing -> better safety during climate events |
| **Proximity to transit** | | | | | | | | | | | | + leaf Higher wages -> Can afford to live where more transit options available -> lower VMT & emissions | + leaf Housing options at all income bands -> Can afford to live where more transit options available -> lower VMT & emissions |
| **More jobs in higher wage sectors** | | | | | | | | | | | | | + leaf Higher wages + Housing options at all income bands = can afford to live closer to work and services, less time burden of commuting and daily errands -> lower VMT & emissions |
| **Housing for all income bands** | | | | | | | | | | | | | |

## 3. Case Studies

Examples of health-related initiatives in other parts of the Pacific Northwest and United States provide insights into potential strategies for Vancouver.

### Connected and accessible neighborhoods

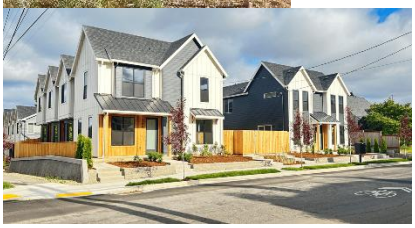
| Description | Examples | Potential Policy/ Strategy for Vancouver |
|---|---|---|
| Ability to have a range of housing types for all ages and incomes in where people can easily walk or bike to groceries, cafes, shops and services, healthcare, schools and open space.<br><br>Articles and Studies:<br>• Can 15-Minute Cities Work in America? Bloomberg article on MIT Study, February 2024<br>• NLC: Exploring the 15-Minute City Concept and Its Potential for Communities of All Sizes, June 2023<br>• NAR: Implementing 15-Minute Cities: Where to Start? April 2021 | **Portland, Oregon** 20-minute neighborhood concept since 2010: expanding pedestrian and bicycle infrastructure and trails, redesigning streets for community use, investing in arts and culture facilities as incubators and building affordable housing.<br><br>Hierarchy of Centers for 15-minute City, July 2023, CNU, Portland, Oregon.<br><br><br><br>*Lessons Learned:* Thesis, University of Washington, 2022, comparing Portland 2010 and 2020 and increase in accessibility across numerous metrics, but still higher VMT.<br><br>**Olympia, Washington**: City of Olympia is updating its neighborhood centers strategy, April 2024. Five centers were identified for potential success across metrics in 2022: Jolt News, July 2022. Issue has been lack of street connectivity and sidewalk infrastructure: Jolt News, April 2024.<br><br>**Low cost, rapid implementation, pop-up businesses/retail incubator programs** for BIPOC businesses, arts/culture:<br>• Downtown Bothell Pop Shops on Main<br>• Seattle Waterfront Promenade Pop Ups<br>• Seattle Small Businesses in Vacant Storefronts | Land Use Alternatives addressing nodes and housing types, coordinated with transportation, and parks and recreation plans.<br><br>Flexibility in neighborhood commercial spaces (short term program to fill vacant spaces or add pop-ups; longer term code to require or incentivize small spaces, limit parking for small businesses). |

## Growth near transit

| Description | Examples | Potential Policy/ Strategy |
|---|---|---|
| Promote active living by helping to improve pedestrian, bicycling, and transit spaces.<br><br>People may not walk, bicycle, or take transit because they may be unsafe, unavailable, or unreliable. Better infrastructure means people have more ways to get regular physical activity.<br><br>Promoting transit-oriented development such as increased housing density in places with existing/ planned transit can support the success of more frequent transit.<br><br>Articles and Studies:<br>• Relationships between density, transit, and household expenditures in small urban areas, 2020<br>• Minneapolis St Paul, Density & Activity Near Transit, Local Planning Handbook, 2018 | Portland (OR) Metro, Transit-Oriented Development Program: Grants, site acquisition, and partnerships to build housing along transit; cut sheets for several years; strategic plan 2023.<br><br>Spokane TOD Framework Study (2022): The study identifies recommendations for aligning policies, regulations, and investments in public infrastructure along Spokane's current and future high-frequency transit corridors and includes plans for integrated TOD and multi-modal access within a portion of the rapid transit line.<br><br>Redmond 2050 continues to focus growth on Redmond's centers in a way that addresses needs and goals related to equity, sustainability, and resiliency. The City has developed increased floor area ratios, densities, and identified multimodal improvements around station areas, as well as developing fast-track permitting tools (planned action, infill exemption).<br><br>Mountlake Terrace Municipal Code Ch. 19.50: Lists regulations and standards to implement a vision for the town center as a blend of attractive transit-oriented uses connected to the light rail transit station, civic campus, and surrounding neighborhoods. Light rail station underway with public and private development: Herald article, April 2024 | Use Transportation System Plan and Active Trip Potential to identify best locations for improvements in non-motorized access.<br><br>Prioritize equity in access, safety, and efficiency in the Capital Facility Plan in the allocation of resources.<br><br>Promote greater mixed uses and densities in proximity to transit. |

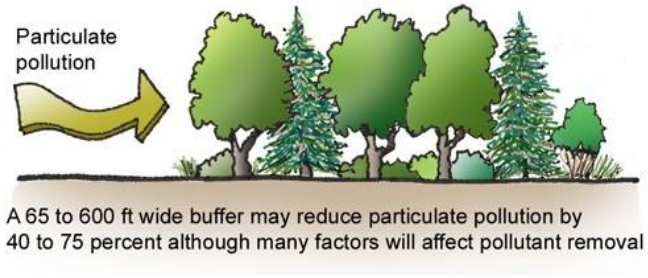
## Park and recreation access

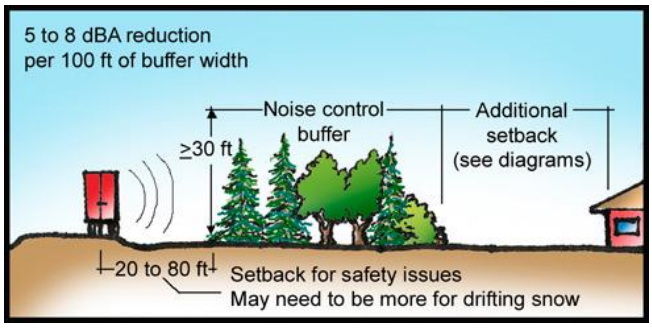
| Description | Examples | Potential Policy/ Strategy |
|---|---|---|
| Increase access to parks within a 10-15 minute walk to promote active living and health.<br><br>Articles and Studies:<br>• Trust for Public Land, Parks Promote Health, 2023. with Creative Strategies to Address Gaps reviewing 100 communities<br>• National Park and Recreation Association, Parks and an Equitable Recovery, 2021<br>• NRPA, Greening Without Gentrification, November 26, 2019 | Improving Systems to Achieve Equitable Park Access: Using Policy to Overcome Acquisition Challenges in Tukwila, Washington, with new equity policy and tax levy. Other communities in examples.<br><br>NYC Community Parks Initiative: Addresses targeted investments and programming across neighborhoods with equity focus.<br><br>Chicago Green Schoolyards Program Case Study: City Parks Alliance. Partnership with schools to improve playgrounds in underserved areas.<br><br><br><br>Puget Sound Regional Council, Stormwater Parks program.<br><br>Seattle linear parks/ green infrastructure.<br><br>Aspen Institute's Project Play team reports on how well youth are being served in defined geographic areas, across country including Seattle-King County, Tacoma-Pierce County: Only 19% of Pierce County youth receive 60 minutes of daily physical activity , below the national (24%) and state (23%) averages. The State of Play-Pierce County advisory group aspires to increase Pierce County's physical activity rate to at least the national average, if not higher, through collective and individual actions. | Address equity and park investments in Capital Facilities Plan through levels of service on distribution, quality, and amount.<br><br>Leverage schools and stormwater or other public facilities to add park and recreation facilities that can serve as hubs and create multiple funding and implementation streams.<br><br>Engage neighborhoods in tactical short-term as well as long term phased park improvements especially in underserved areas. Optimize the open space already in hand, such as streets and alleyways, schoolyards, and brownfield redevelopment.<br><br>Develop anti-displacement strategies related to park and green infrastructure. |



## Heat island mitigation

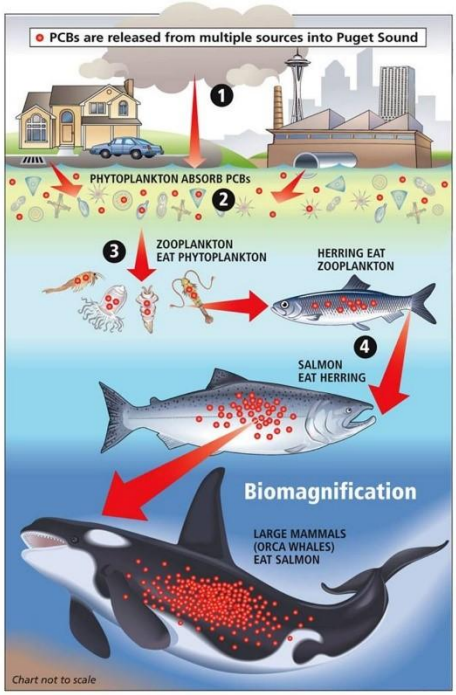
| Description | Examples | Potential Policy/ Strategy |
|---|---|---|
| Increase resilience to extreme heat. Recognize health impacts to sensitive populations. Adapt urban environments through canopy cover, pavement/roof treatments, and smart growth.<br><br>Articles and Studies:<br>• EPA Heat Island Cooling Strategies<br>• EPA Reduce Heat Island Effect | Sacramento Metropolitan, 2019, Urban Heat Island Mitigation Plan: Pilot projects, best practices, implementation mechanisms across West Coast. Vegetation cover, cool pavement, cool and green roofs, electric vehicles, and smart growth.<br><br>*Example Portland Eco Roof*<br><br><br>Heat Island Community Actions Database, August 2023: EPA database of examples of policies, codes, and programs across country. Can filter examples.<br><br>Redmond 2050 updates to Green Building Incentive Program (RZC 21.67).<br><br>LEED Heat Island Reduction Measures: Sustainable Sites. | Enhance Vancouver Urban Forestry Program and implement Management Plan<br><br>Address building and street adaptations for cool/green roofs and pavement. |





## Tree canopy, urban shade, landscaping, green infrastructure

| Description | Examples | Potential Policy/ Strategy |
|---|---|---|
| Natural and built solutions that decrease temperatures and improve water quality in an urban environment.<br><br>**Tree Canopy:** Tree canopy covers the ground and shades the area below it.<br><br>**Green Infrastructure**: Stormwater management systems that mimic nature's ability to soak up and store water.<br><br>Articles and Studies:<br>• Urban Greening, Climate Action for Healthy People, Healthy Places, Healthy Planet: Urban Greening & Green Infrastructure, Climate Change and Health, 2016<br>• Building green infrastructure to enhance urban resilience to climate change and pandemics, 2021<br>• Green Infrastructure and Gentrification: Harness the Benefits, Avoid the Displacement, by Renee Mazurek, Apr 24, 2023 | King Conservation District, Puget Sound Urban Tree Canopy and Stormwater Management Handbook, 2021.<br><br>Port of Seattle, Student engagement model, tree canopy enhancement projects, June 2022.<br><br>City of Clovis, Urban Greening Master Plan, 2015 and Fontana Urban Greening Master Plan, ASLA Award, 2020: Green Streets and Places.<br><br><br><br>Denver Green Infrastructure Implementation Plan. | Increase tree canopy cover to boost carbon sequestration, reduce heat islands, and improve air quality, prioritizing overburdened communities. (Menu of Measures).<br><br>Provide temporary or permanent shade structures in parks or in rights of way to supplement the shade capacity of newly planted trees.<br><br>Develop or modify design standards to integrate exterior building features that reduce the impacts of climate change and increase resilience. (Menu of Measures). |



## Mixed uses and Housing variety

| Description | Examples | Potential Policy/ Strategy |
|---|---|---|
| Increase opportunities for physical activity, reduced greenhouse gases, and improved community connections through mixed use neighborhoods.<br><br>Increase access to housing ownership and affordability. Increase amenities that support quality of life.<br><br>Articles and Studies:<br>• What is a Mixed-Use Neighborhood?, Blue Zones 2020<br>• Impacts of Affordable Housing on Health, Center for Housing Policy, 2015<br><br>*[See also Connected and accessible neighborhoods and Growth near transit ]* | Middle Housing in 6 cities, Sacramento, Portland, Minneapolis.<br><br><br><br><br>Title X: Middle Housing Toolkit: Objective Design + Development Standards (ODDS), Puget Sound Region.<br><br>Expanding affordable housing opportunities, case studies: Policy and zoning.<br><br>Port Orchard Municipal Code Sec. 20.139.055: Provides side-by-side duplex and attached house design standards (July 2024).<br><br>ULI Case Studies: Select mixed use or district/corridor, and cities. | Land Use Alternatives, focusing on mixed uses in focal points as well as middle housing implementation across low density residential areas.<br><br>Consider inclusionary housing and regulatory incentives for mixed use and infill housing (density or FAR bonuses, SEPA infill exemptions, MFTE, etc. per housing needs assessment and housing action plan). |

## Buffering from highways / Reduce air and noise pollution

| Description | Examples | Potential Policy/ Strategy |
|---|---|---|
| Address right of way treatments and abutting site and building design to reduce exposure to air pollution and noise due to high volume roadways.<br><br>Articles and Studies:<br>• EPA, Living Close to Roadways: Health Concerns and Mitigation Strategies<br>• Urban Institute, The Polluted Life Near the Highway, 2022<br>• University of Washington Mobile Observations of Ultrafine Particles (MOV-UP) study<br>• Noise abatement requirements under HUD in areas subject to noise | Air Quality and Land Use Planning, 2023: Review of Literature by Bellevue, with Mitigation Strategies – land use (limiting sensitive uses), urban design, barriers/walls/vegetation, highway lids, building design and ventilation.<br><br>USDA Air Quality and Conservation Buffers: Manual to enhance visual quality, control noise levels, control air pollutants and odor.<br><br><br>A 65 to 600 ft wide buffer may reduce particulate pollution by 40 to 75 percent although many factors will affect pollutant removal<br><br><br><br><br>Community Air Action Planning, Oregon: New program.<br><br>West Oakland Community Action Plan: Community led, addressing port and industrial area. Has annual reports and monitoring.<br><br>Tacoma Air Quality Pilot Program: Test prototype air sensors for potential for measurable observations that can be compared to Tacoma's Equity Index. | Adapt urban landscape to reduce exposure of overburdened populations and sensitive uses to air pollution and noise through vegetation, site, and building design.<br><br>Create opportunities for community led action plans to address needs of communities in subareas near industrial, port, and highway locations. |

## Water pollution

| Description | Examples | Potential Policy/ Strategy |
|---|---|---|
| Implement land use strategies to minimize water pollution and reduce contamination.<br><br>Articles and Studies:<br><br>• Water Quality: Agencies Should Take More Actions to Manage Risks from Harmful Algal Blooms and Hypoxia, 2022<br>• Water Infrastructure: Technical Assistance and Climate Resilience Planning Could Help Utilities Prepare for Potential Climate Change Impacts, 2020<br>• Urban Water: Strategies That Work, 2013 | King County Clean Water Healthy Habitat Strategic Plan, 2020.<br><br><br><br><br>*Source: Impact of Water Pollution on the Environment State of Salmon, n.d.*<br><br>Adopt a Storm Drain – Sweep Up, Rake Up, Pick Up, Tacoma: Individuals, organizations and businesses can participate to adopt a storm drain in their neighborhood and commit to keeping it clear of litter, debris, and pollution. The program's goal is to reduce stormwater pollution. | Collaborate with WSU Vancouver Extension and utilize their Water Research Center through staying up to date on water quality trends in the state.<br><br>Create educational opportunities for residents to learn about proper disposal of household chemicals and water quality best practices. |

## Conservation of forest and agricultural land, urban farms and forests

| Description | Examples | Potential Policy/ Strategy |
|---|---|---|
| Protection of contiguous forest canopy and urban farms in cities to provide ecosystem services and food security.<br><br>Urban farms are likely privately owned and larger than a community garden. Community forests may have recreation elements, but a primary goal is conservation of larger forest patches in urban area.<br><br>Articles and Studies:<br>• MRSC, Local Government-Supported Urban Agriculture Adds Equity and Climate Change Benefits for the Public, May 2024<br>• Healthy Food Policy, Project, Zoning for Urban Agriculture, 2024<br>• DNR's Urban and Community Forestry program | **Kitsap County**: Port Gamble Heritage Park Master Plan, 2011-2021, 3500 acres.<br><br>**Clark County:** 78th Street Heritage Farm Master Plan, 2020-2024.<br><br><br><br>NRCS: Urban Agriculture and Climate Change in the Northwest, includes Village Gardens, **Portland.**<br><br>Community Forest Lands (ACFL): **Anacortes,** Washington.<br><br> | Enhance Vancouver Urban Forestry Program and implement Management Plan.<br><br>Promote urban agriculture with zoning allowances and incentives. Consider models of affordable housing and agriculture ("agrihood"). |

## Community gardens

| Description | Examples | Potential Policy/ Strategy |
|---|---|---|
| Implement a community garden program to promote community wellbeing, resiliency of local food systems, and support environmental stewardship.<br><br>Articles and Studies:<br>• Public Health Benefits of Community Gardens, 2024<br>• Community gardens and their effects on diet, health, psychosocial and community outcomes: a systematic review, 2022<br>• Community Gardening: Stress, Well-Being, and Resilience Potentials, 2020 | P-Patch Gardening Program, Seattle.<br><br>Community Garden Program, Bellingham.<br><br>Community Garden Program, Auburn.<br><br><br><br>Community Gardens, Tigard, Oregon. | Encourage the expansion and maintenance of community gardens by ensuring equitable access to land and offering educational resources for new gardeners. |

## Healthy streets

| Description | Examples | Potential Policy/ Strategy |
|---|---|---|
| Open more public spaces for people to use by closing streets to pass through traffic. Closed streets are open to people walking, biking, and playing. This initiative improves community connections and individual health.<br><br>Articles and Studies:<br>• Rethinking Streets to Drive Commerce and Connection – Not Just Cars, 2024<br>• Ditch Cars for Open – and Equal – Streets, 2022<br>• The Benefits of Closing a Street, 2017 | Healthy Streets, Seattle.<br>Healthy Streets, Bellevue.<br>Safe Streets, Spokane.<br>Slow Street Program, San Francisco.<br>Open Streets, New York.<br>Open Streets, Washington, D.C.<br><br> | Implement Main Street pilot program to close residential streets to through traffic. Closed streets may improve safety for people walking, biking, and playing and enhance community connection.<br><br>Consider utilizing the Safe Streets and Roads for All Grant Program to finance the pilot program. |

## Emergency shelter spaces, resilience hubs, neighborhood meeting points

| Description | Examples | Potential Policy/ Strategy |
|---|---|---|
| Provide temporary daytime or overnight shelter or resources to protect community members.<br><br>Articles and Studies:<br>• MRSC, Severe Weather Shelters for Winter and Beyond, 2022<br>• Severe Weather Shelters, Washington State Resources<br>• Urban Sustainability Directors Network, Resilience Hubs | Clark Regional Emergency Services Agency (CRESA).<br><br>Hazard Sheltering, Spokane.<br><br>Extreme Heat and Cooling Centers, Snohomish County.<br><br><br><br>Seattle, Citywide Resilience Hub Plan.<br><br>Resilience Hub Pilot Project, Washington D.C. | Consider partnering with local libraries and schools to provide emergency cooling and heating shelters.<br><br>Develop resilience hubs — community-serving facilities that are designed to support residents, coordinate communication, distribute resources, and reduce carbon pollution while enhancing quality of life. (Menu of Measures) |

## Food access

| Description | Examples | Potential Policy/ Strategy |
|---|---|---|
| Neighborhoods or places where access to affordable, healthy food options (especially fresh fruits and vegetables) is restricted or nonexistent.<br><br>Articles and Studies:<br>• Food Insecurity among the Overall Population in Clark County, 2019<br>• Downtown Vancouver's Block 10: The Grocery Gap, 2019<br>• Assessment of Healthy Food Availability in Washington State–Questioning the Food Desert Paradigm, 2017<br>• Characteristics and Influential Factors of Food Deserts, 2012 | • What 5 Cities are Doing to Change the Way America Eats, January 2016.<br>• Farmbrite, Combating Food Deserts: How Some US States Are Leading the Way, December 2023.<br>• Clark Food & Farm Network. | Review and amend existing zoning policies that restrict supermarket development in areas with low access to fresh and healthy foods.<br><br>Partner with faith-based and neighborhood organizations to provide healthy and fresh food. # OUR VANCOUVER

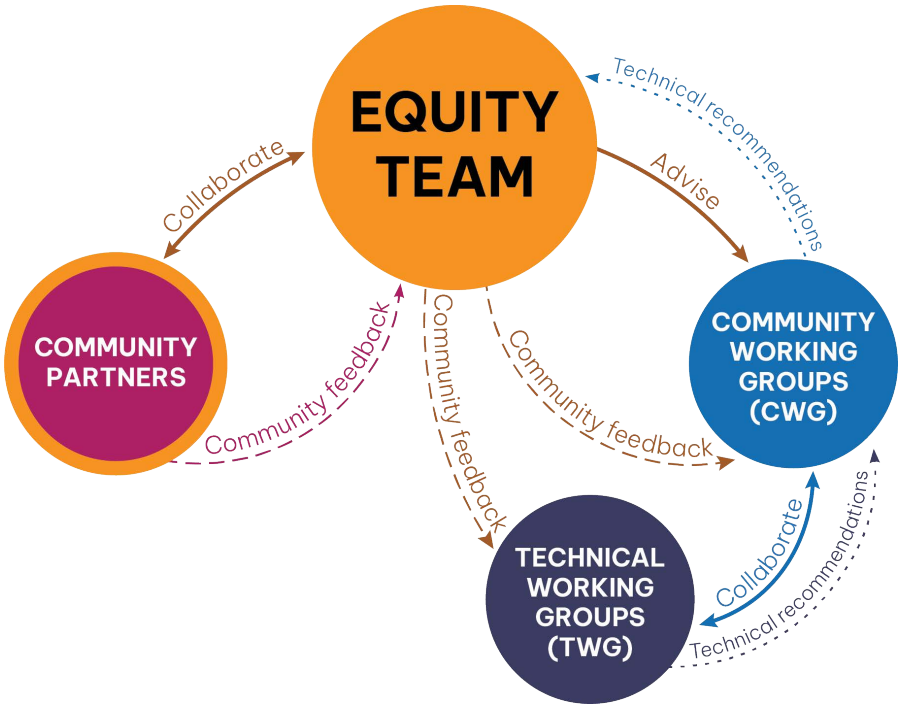
OUR FUTURE **2045**

**COMMUNITY PARTNERSHIP FRAMEWORK**

Prepared by WSP

December 18 , 2023



OUR VANCOUVER is a three-year initiative where community members and the City will embark on a co-creative process to update the City's Comprehensive Plan and Title 20 of the City's Municipal Code. The OUR VANCOUVER Public Involvement Plan is a strategic document that outlines the methods and strategies for engaging and involving the public in the decision-making processes, policy development, and project implementation. Through this process, the City is committed to equity, transparency, and meaningful engagement with the public to foster trust and create equitable outcomes for all Vancouver residents.

This framework summarizes the co-creative process described in the Public Involvement Plan, the key advisory groups engaged in the project, the public involvement goals, the tools that will be used throughout the project to engage community members, how input will be tracked and inform the process, and a general schedule of engagement events. Additional details are provided in the Public Involvement Plan.

## Co-Creative Process

As part of the project's commitment to engage in a co-creative process and center equitable engagement, the project team has implemented strategies to partner with community representatives. These **Community Partners** have deep connections with local communities and strong existing relationships that will help facilitate engagement and lead to a co-creative process. Community Partners help facilitate engagement, bridge communication gaps, and provide valuable insights into the needs and priorities of the communities they serve.

Co-creation through the comprehensive plan update means Community Partners work directly with the project team as members of the OUR VANCOUVER Equity Team and as community engagement liaisons to facilitate conversations with community members and lead "Envision Events" (described further below). Co-creation will shift power dynamics and give community members a direct link to influence the technical analysis and policy development included in the comprehensive plan.

The **Equity Team** includes Community Partners and project team staff. Their role is to ensure integration between the technical recommendations, community feedback and the OUR VANCOUVER Equity Framework. The Equity Team will review technical recommendations, analyze community feedback collected during Envision Events and report back to the project team to ensure equity is centered throughout the project and community priorities are amplified, evaluated, and included, to the extent possible, in the final plan.

There will be multiple **Community Working Groups** focused on topic areas consistent with the comprehensive plan elements (i.e. Climate, Housing, Economic Development, etc.). Community Working Groups will collaborate with the Technical Working Groups to identify and share technical recommendations with the Equity Team. The Community Working Groups will include partner agency staff, community representatives, service providers, business owners, advocacy organizations, and other interested parties that have expertise or knowledge in these topic areas that will help inform the technical analysis and plan development.

The **Technical Working Groups** will include city and consultant technical staff, and technical agency partners. Technical Working Groups will be topic-area focused (housing, land use, transportation, public services, etc.) and meetings

will occur throughout the project to inform existing conditions analyses and drive the technical work.

### Public Involvement Goals

1. Establish a co-creative process between the City and the Vancouver community that shifts power dynamics and elevates the voices of equity-priority communities.
2. Build trust through transparent two-way communication channels that humanize the project, advance community knowledge, create community ownership, and build long-lasting relationships.
3. Emphasize Vancouver pride to highlight future benefits at a personal, community, and city level to encourage participation throughout the process.
4. Establish comprehensive plan policies that are reflective of community and agency input and will advance the implementation of the plan.

## Communication and Engagement Tools

The table below identifies the communications and engagement tools that will be used specific to each audience involved in the comprehensive plan update process. The communications and engagement tools are divided into three categories:

- **Informational tools:** designed as one-way communication to deliver information about the project to all interested parties.
- **Envision Events:** is a broad term used to describe in-person and online events to engage the community during each project phase. Envision Events seek to inform people about the project and gather feedback to shape the vision, land use possibilities, and policy development and implementation. Envision events will be designed to reach and collect feedback from a broad swath of the community, with an emphasis on equity-priority communities.
- **Meetings:** designed to collect and report out on input received. Project working and advisory groups will be internal to the project. Planning Commission and City Council meetings and workshops will be external and provide additional opportunities for public input.

| Key Audience | Informational Tools | | | | Envision Events | | Meetings | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | Emails | Social media | Paid media | Earned media | Be Heard | In-person events | Community Working Group Meetings | Equity Team Meetings | Technical Working Group Meetings | PC/CC Workshops/ Meetings |
| Equity priority communities* | X | X | X | X | X | X | | X | | X |
| Local Businesses | X | X | X | X | X | X | | | | X |
| Neighborhood Associations | X | X | | | X | X | | | | X |
| General Public | X | X | X | X | X | X | | | | X |
| Community Partners | X | X | | | X | X | X | X | | X |
| Equity Team | X | X | | | | | X | X | X | X |
| Project Team Staff (City and Consultant) | X | X | X | X | X | X | X | X | X | X |
| City Elected and Appointed Officials | X | | | | X | X | | | | X |
| Community Working Group | X | | | | | | X | X | X | X |
| Technical Working Group | X | | | | | | | | X | X |

*Equity-priority communities are those that have historically been excluded from or who have not participated in City planning processes. For a full list of groups, see the project's Equity Framework.
PC = Planning Commission
CC = City Council

## Digital Engagement

The Be Heard website (https://www.beheardvancouver.org/plan2045) will be used throughout the project to share information about the process, details on upcoming events, and to interact with the community. Project information and engagement tools will be updated and added to the Be Heard website at key milestones. OUR VANCOUVER will leverage existing City of Vancouver social

media channels to inform the public of project milestones, public-facing events, and opportunities to provide feedback.

## Data Analysis, Reporting, and Evaluation

The OUR VANCOUVER Accountability Matrix has been designed to collect data and feedback throughout the planning process. The matrix will track comments received by mail, email, at community events, and at Envision Events. The accountability matrix will be updated following events and reviewed with Community Partners to ensure underrepresented communities are being engaged and their feedback prioritized. This information will be used by the Technical Working Groups to ensure community feedback is being incorporated into planning scenarios. The final matrix will be included as an appendix to the Comprehensive Plan Update.

Evaluation surveys will be administered before and after Envision Events to ensure participants find the information relevant and accessible.

# PUBLIC INVOLVEMENT PLAN

June 2023, updated March 2024

## About the Public Involvement Plan

OUR VANCOUVER is a three-year initiative where community members and the city will work together to update the city's Comprehensive Plan and Title 20 of the city's Municipal Code. The OUR VANCOUVER Public Involvement Plan is a strategic document that outlines the methods and strategies for engaging and involving the public in the decision-making processes, policy development, and project implementation. Through this process, the city is committed to equity, transparency, and meaningful engagement with the public to foster trust and create equitable outcomes for all Vancouver residents.

The purpose of this Public Involvement Plan is to outline a public involvement process that meets the intent of the GMA requirement for early and continuous public participation (RCW 36.70A.140) and clearly articulates the approach to co-creating the plan with members of the community. The Plan includes public involvement goals, the approach and process for community engagement, an overview of public engagement tools to be used, the process for tracking and integrating feedback, and the role of the Planning Commission and City Council in making recommendations and final decisions about the Comprehensive Plan.

## Public Involvement Goals

1. Establish a co-creative process between the city and the Vancouver community that shifts power dynamics and elevates the voices of equity-priority communities. Co-creation means developing possibilities, polices and implementation steps together, in a way that makes clear and documents how community voice helps create options and is reflected in final decisions.
2. Build trust through transparent two-way communication channels that humanize the project, advance community knowledge, create community ownership, and build long-lasting relationships.
3. Emphasize Vancouver pride to highlight future benefits at a personal, community, and city level to encourage participation throughout the process.
4. Establish comprehensive plan policies that are reflective of community and agency input and will advance implementation of the plan.

# Community Engagement Approach

## Public Involvement Phases

Community engagement and outreach will be sequenced around key project milestones to ensure that conversations with the public are meaningful and occur at intervals where feedback can be considered and incorporated into the plan update. The three project phases are briefly described below. Additional details on the tools used in each phase are included in the Engagement Tools section.

### Phase 1: Visioning

During this phase, the project team will focus on project awareness, introducing the project to the community, and collecting community input to lead to an overall comprehensive plan vision and individual vision statements for each comprehensive plan element (housing, transportation, climate, etc.). Project informational materials, such as factsheets, postcards, and other small project collateral will be distributed by city and project team staff at community events where the city is already engaging the public. Staff will facilitate informal conversations with community members to understand their values and vision for the future. Feedback will be shared across the project team at team meetings and with Community Partners as part of their onboarding process.

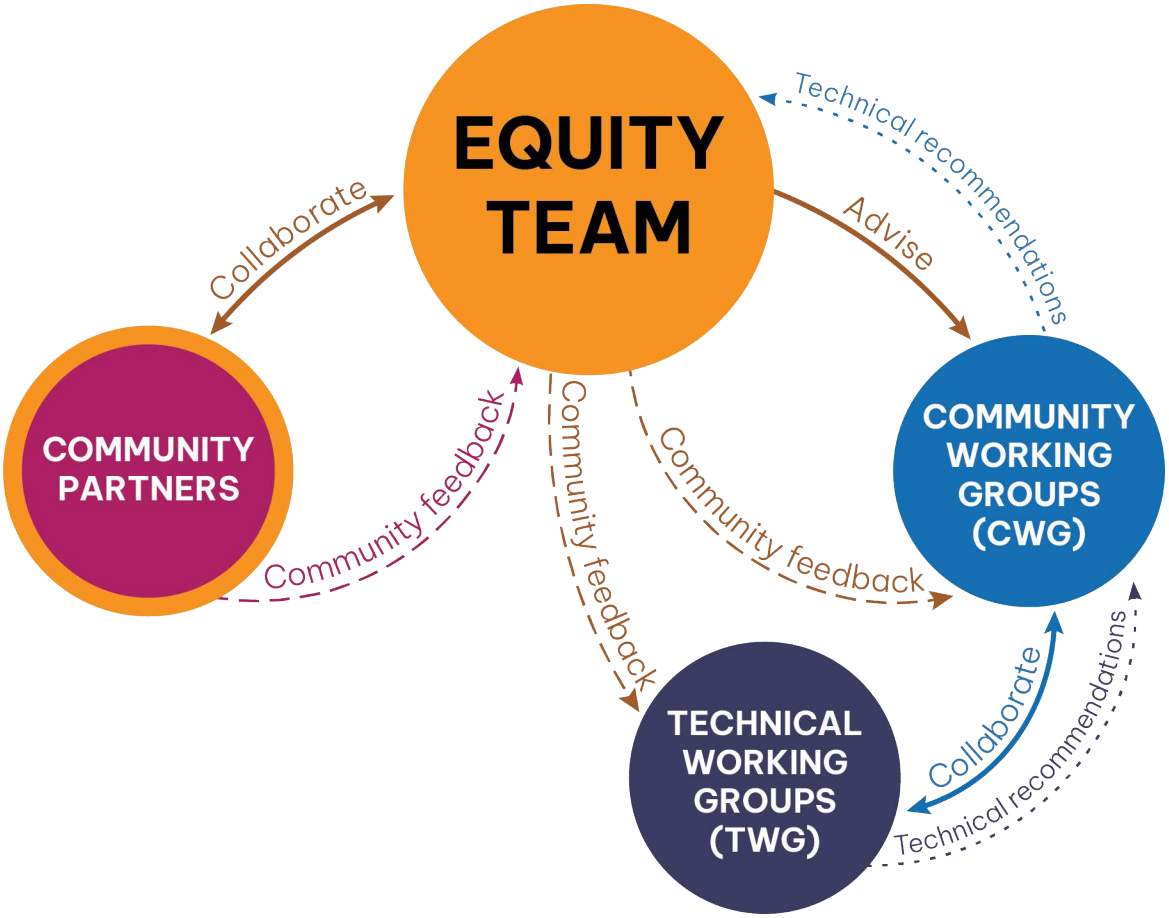
### Phase 2: Land Use Possibilities

The land use possibilities phase will include interactive workshops and Envision Events (described further below) designed to develop and solicit feedback on land use possibilities.

The first step in the land use possibilities phase is developing a set of land use possibilities as 3-dimensional models that reflect the community's vision in the urban form. Development of these models will be based on feedback gathered through Phase 1 and through mapping workshops designed to gather community input on land use preferences. The project will engage the community in several mapping workshops, including the Vancouver community broadly, neighborhood associations, community organizations, local schools and youth-focused organizations, community working groups established for the project, and other equity-priority communities.

The second step in the land use possibilities phase is gathering feedback on the 3-dimensional land use models. Outreach during this phase will include Envision Events, including small group conversations with community-based organizations, tabling events, and digital engagement, like surveys and online maps through Be Heard Vancouver, as well as meetings with technical working groups and community working groups. During this phase, the project team will work to show how the different land use possibilities could change how

community members navigate and live in the city. Visualizations and storytelling will be used to provide concrete examples of what the city could look like in the future and what that will mean for the community.



### Phase 3: Policy Development/Implementation

The policy development/implementation phase will focus on reporting back and demonstrating how community input was reflected in plan policies and code development. Materials prepared will identify the connections between the community's vision and feedback on land use possibilities and comprehensive plan policies and implementation measures.

## Co-Creative Process

As part of the project's commitment to engage in a co-creative process and center equitable engagement, the project team has implemented strategies to partner with community representatives. These **Community Partners** have deep connections with local communities and strong existing relationships that will help facilitate engagement and lead to a co-creative process. Community Partners help facilitate engagement, bridge communication gaps, and provide valuable insights into the needs and priorities of the communities they serve.

Co-creation through the comprehensive plan update means Community Partners work directly with the project team as members of the OUR VANCOUVER Equity Team and as community engagement liaisons to facilitate conversations with community members and lead "Envision Events" (described further below). Co-creation will shift power dynamics and give community members a direct link to influence the technical analysis and policy development included in the comprehensive plan at the outset, rather than just being asked to respond to staff generated content.

The **Equity Team** includes Community Partners and project team staff. Their role is to ensure integration between the technical recommendations, community feedback and the OUR VANCOUVER Equity Framework. The Equity Team will review technical recommendations, analyze community feedback collected during Envision Events and report back to the project team to ensure equity is centered throughout the project and community priorities are amplified, evaluated, and included, to the fullest extent possible, in the final plan.

There will be multiple **Community Working Groups** focused on topic areas consistent with the comprehensive plan elements (i.e. Climate, Housing, Economic Development, etc.). Community Working Groups will collaborate with the Technical Working Groups to identify and share technical recommendations with the Equity Team. The Community Working Groups will include partner agency staff, community representatives, service providers, business owners, advocacy organizations, and other interested parties that have expertise or knowledge in these topic areas that will help inform the technical analysis and plan development.

The **Technical Working Groups** will include city and consultant technical staff, and technical agency partners. Technical Working Groups will be topic-area focused (housing, land use,

transportation, public services, etc.) and meetings will occur throughout the project to inform existing conditions analyses and drive the technical work.

## Communication and Engagement Tools

The table below identifies the communications and engagement tools specific to each audience involved in the comprehensive plan update process. The communications and engagement tools are divided into three categories:

- **Informational tools**: designed as one-way communication to raise awareness and deliver information about the project to all interested parties.
- **Envision Events**: is a broad term used to describe in-person and online events to engage the community during each project phase. Envision Events seek to inform people about the project and gather feedback to shape the vision, land use possibilities, and policy development and implementation. Envision Events will be designed to reach and collect feedback from a broad swath of the community, with an emphasis on equity-priority communities.
- **Meetings**: designed to collect and report out on input received. Project working and advisory groups will be internal to the project. Planning Commission and City Council meetings and workshops will be external and provide additional opportunities for public input.

| | Informational Tools | | | | Envision Events | | Meetings | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Key Audience | Emails | Social media | Paid media | Earned media | Be Heard | In-person events | Community Working Group Meetings | Equity Team Meetings | Technical Working Group Meetings | PC/CC Workshops / Meetings |
| Equity priority communities* | X | X | X | X | X | X | | X | | X |
| Local Businesses | X | X | X | X | X | X | | | | X |
| Neighborhood Associations | X | X | | | X | X | | | | X |
| General Public | X | X | X | X | X | X | | | | X |
| Community Partners | X | X | | | X | X | X | X | | X |
| Equity Team | X | X | | | | | X | X | X | X |
| Project Team Staff (City and Consultant) | X | X | X | X | X | X | X | X | X | X |

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| City Elected and Appointed Officials | X | | | | X | X | | | | X |
| Community Working Group | X | | | | | | X | X | X | X |
| Technical Working Group | X | | | | | | | | X | X |

*Equity-priority communities are those that have historically been excluded from or who have not participated in city planning processes. For a full list of groups, see the project's Equity Framework.
PC = Planning Commission
CC = City Council

## Informational Tools

### Digital Engagement

**Website:** The Be Heard website (https://www.beheardvancouver.org/plan2045) will be used throughout the project to share information about the process, details on upcoming events, and to interact with the community. Project information and engagement tools will be updated and added to the Be Heard website at key milestones. The website will also provide an option to sign up for project emails through a subscription form and an email address to reach city staff.

**Emails:** The project team will distribute email communication out to the public through established listservs and a project-specific list generated through sign ups at events and on Be Heard. Email communication may include project updates, event information, and public engagement opportunity announcements.

**Social Media:** OUR VANCOUVER will also leverage existing City of Vancouver social media channels to inform the public of project milestones, public-facing events, and opportunities to provide feedback.

**Paid and Earned Media:** Earned and paid media are critical tools to amplify outreach efforts and increase project awareness and visibility. The project team may engage with local news media outlets, including non-English language media and trade publications and support the development of news releases as the project progresses.

### Offline Engagement

In order to reach community members that are not online, it is important to share information in a variety of ways. The following strategies will be employed:

- Promote in-person events through offline channels like local non-profit and neighborhood association newsletters, community bulletin boards at libraries, word of mouth and/or flyers at local businesses.
- Work with Community Partners and Community-based Organizations to share information with their networks at partner organization events and through one-on-one conversations.
- Use non-invasive tactile urbanism methods to engage people in the built environment and facilitate observing their surroundings in a new way.
- In person presentations and conversations with a variety of technical and community working groups.
- Small group discussions coordinated through different organizations and advocacy groups.

## Envision Events

Envision Events is a broad term used to describe in-person and online engagement opportunities during each project phase and gain feedback to shape the vision, land use possibilities, policy development, and implementation. These events will be sequenced around key project milestones to ensure we are asking meaningful questions that allow community members to influence the development of the Comprehensive Plan. For example, during the land use possibilities phase of the project, Envision Events will ask the community to weigh in on what the city could look like in the future, where new housing or commercial centers may be located, and the changes that are expected in the city over the next 20 years.

A key approach to ensure equitable community engagement and outreach is meeting people where they are. Envision Events will occur throughout the city at places where people gather. Envision Events may be conversations and interactive exercises at community events throughout the city, informal Community Partner-led conversations with their neighbors or networks, large community open houses, event partnerships with community-based organizations, and/or presentations to community organizations or neighborhood associations. Envision Events will also include a digital component with interactive surveys or features on Be Heard.

Envision Events will be advertised using the informational tools described in the previous section in advance of the event (at least 10 days but often more, depending on the audience).

## Meetings

Meetings are designed to collect and report out on input received. Project working and advisory groups will be internal to the project. Planning Commission and City Council

meetings and workshops will be external and provide additional opportunities for public input.

Meetings will be advertised using the informational tools described in the previous section at least 10 days before the meeting.

## Incorporating Community Feedback

An important part of the project is ensuring that we are leading with equity and that the final adopted Comprehensive Plan and Land Use Code updates include community identified priorities and emphasize the development of an equitable future for Vancouver residents.

To ensure that the priorities flagged by the community are considered in the planning process, the Community Engagement Team, in close coordination with selected Community Partners, will track all stakeholder comments in an accountability matrix.

The OUR VANCOUVER Accountability Matrix has been designed to collect data and feedback throughout the planning process. The matrix will track comments received by mail, email, at community events, and at Envision Events. The accountability matrix will be a living document that will be updated regularly throughout the life of the project, when it will be finalized and included as an appendix to the Comprehensive Plan Update. The accountability matrix will track outreach and engagement efforts conducted by the project team; and comments and key themes from community members received by email, phone or mail, at community workshops, at tabling events, via digital engagement tools, and in organic conversations conducted by Community Partners. Comments and key themes will be summarized at key project milestones and shared with Community Partners, Community Working Groups, Technical Working Groups, advisory bodies and policymakers, and the community at large. Community Partners and all the various working groups will review and consider this feedback as they make plan and policy recommendations. How public feedback is incorporated into recommendations will also be tracked in the accountability matrix.

## Planning Commission and City Council Review and Approval

The Planning Commission and City Council will be involved throughout the process with workshops and public hearings held at key milestones. The Planning Commission will review materials and make recommendations to the City Council, who has the ultimate approval authority over the final comprehensive plan document. Planning Commission and City Council workshops and hearings are open to the public and will be advertised on the project Be Heard page, the project mailing list, and various other communication channels.

# OUR VANCOUVER

OUR FUTURE **2045**

**GOALS FRAMEWORK**

December 18 , 2023

# Introduction

The City of Vancouver's Comprehensive Plan is an important tool that helps us navigate and plan for the future. The plan provides the overall long-term vision and policy direction needed to manage the built and natural environment in Vancouver and provide necessary public facilities needed to achieve that vision. The reality of long-term policy making in our community is recognizing that there is a wide range of complex, interconnected systems that influence how our community looks, operates, feels and functions, including market forces, federal and statewide policy, changing demographic and socioeconomic conditions, among other factors that will change over time. Within these larger forces there are areas where the City can shape and influence outcomes, like the delivery of municipal infrastructure and urban services, constructing, repairing, and maintaining roads, providing municipal services like water, sewer, fire and police protection, as well as parks & recreation programs and arts and cultural services. The City also administers land use policy and takes an active role in reviewing Vancouver's residential, commercial and industrial development for building safety, appearance, design, and function.

In these areas where the City can influence outcomes, Vancouver's next Comprehensive Plan, called **OUR VANCOUVER** will define the goals, policies, and implementation measures to guide the growth and development of our community over the next 20 years, with 2045 identified as the year for realizing the vision set forth in the plan. The City acknowledges that it has a deep responsibility to ensure that the intended and potential unintended consequences of policies developed through the Comprehensive Plan benefit community members that have typically been historically underrepresented, excluded or negatively impacted from public decision-making processes. Because of this, a specific equity focus has been integrated into the goals framework, to ensure insights and perspectives from these communities are emphasized and uplifted.

The last time the Plan was updated was **2011**, and since then, there have been significant demographic and socioeconomic changes that have occured in our community.

## How has our community changed since the last plan?

- ↑ 18% Population increase
- ↑ 64% Communities of color increase
- ↑ 34% Median income increase
- ↑ 174% Average home value increase

# What is a Goals Framework?

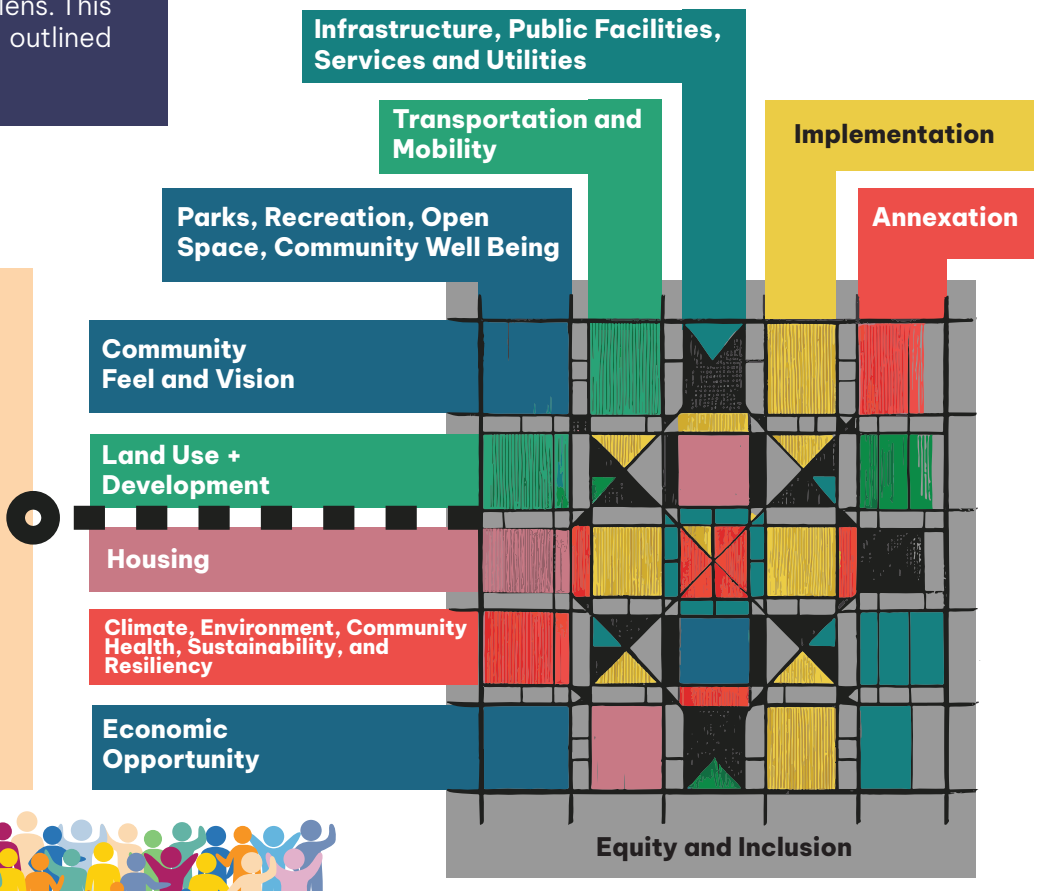
The goals framework for the Comprehensive Plan will help to define the structure and organization by which we go about designing more specific goals, policies and implementation measures throughout the plan development process. The framework includes 12 chapters in which categories of policies will be integrated, as well as a set of key themes that will inform more specific goals in subsequent phases of the planning process.

# What elements are legally mandated by law?

The Growth Management Act specifies mandatory elements that Cities in the State of Washington are legally required to integrate into their Comprehensive Plans. For Cities, this includes land use, housing, capital facilities, utilities, transportation, economic development, parks and recreation, and climate change and resiliency. As you read the goals framework, you will notice a number of chapters and elements that are included that aren't mandated by state law. These additional chapters were informed during the plan scoping process, the initial phase of community engagement, and input from the Community Partners - who are the core committee of City residents tasked with co-creating the plan with the City.

# How was the Framework Developed?

The basis of the Goals Framework is the plan's vision statement – which was the result of a detailed visioning process which engaged more than 1,015 community members between June 2022 and February 2023. During this process, community members were asked about their hopes, needs and concerns, and their big ideas for the future of Vancouver. Some of the most frequently mentioned concerns included public safety, economic opportunity (jobs, business development and growth), housing affordability, houselessness, and climate change. These themes were reviewed with the City's Strategic Plan Advisory Committee, and then incorporated into a vision statement for the Comprehensive Plan. The plan vision statement serves as the basis from which all other goals and policies in the plan are developed, and helped to prioritize additional elements to integrate into the framework, beyond what's legally mandated by state law. The Community Partners - who are the core committee of City residents tasked with co-creating the plan with the City, also played a major role in forming the goals framework - particurlarly in developing more detailed vision statements for each of the plan elements, which will serve as the foundation for the land use alternatives and policy development phases of the plan. They provided input on the community partnership framework, and established the equity priority outcomes in the equity framework, which heavily influenced the goals framework structure, which is shown below.



## Equity

The graphic of the goals framework shown below represents a quilt, where the different elements of the Goals Framework of the Comprehensive Plan are weaved together. Equity represents the base fabric in which all of the plan elements are weaved into, symbolizing the approach of integrating equity into all aspects of policy development. The Goals Framework includes a chapter specific to equity and inclusion with goals and policies that will be developed, but all elements of the Goals Framework are evaluated through an equity lens. This is consistent with the approach outlined in the plan's equity framework.

### Plan Vision Statement

"Vancouver is an equitable and prosperous community, which ensures that all residents, businesses and organizations benefit from the growth and advancement we make together. Vancouver will be recognized for our quality of life, as evidenced by affordable housing in vibrant, safe and walkable neighborhoods, access to jobs and economic opportunity for all, and resilience to the impacts of climate change."

# Goals Framework

The framework for the plan includes chapters, represented in **bold text**, along with the key themes and desired community outcomes that will guide the development of more specific goals during the policy development phase of the planning effort.

1. **Introduction.** City's Core Values, Focus Areas.
2. **Community Feel and Vision.** Inclusive, Affordable, Safe, Vibrant, Accessible, Prosperous, Livable.
3. **Land Use and Development.** 15-minute neighborhoods, access to jobs & essential spaces, healthy, connected, resilient, harmony between built and natural environment.
4. **Housing.** Affordable, Accessible, Choice, diversity in sizes and types, Universal Design, Culturally Appropriate, Neighborhood Cohesion, reduce houselessness, Homeownership and opportunities for wealth creation.
5. **Equity and Inclusion.** Inclusive, Reparative , Promote health and wellness, Universal Access to Resources, Nurturing and Valuing All People.
6. **Climate, Environment, Community Health, Sustainability, and Resiliency.** Equitable and Just Transition, Increase Tree Canopy, Decrease Emissions, Community Preparedness, Community Stewardship and Resilience, Holistic Cycles of Consumption and Production, Access to Healthy Food, Built Environment Promotes Health.
7. **Economic Opportunity.** Support Business and Industry, Job Growth, Facilitate Startups and Innovation, Resilient Green Economy, Equitable Access, Wealth Creation, Access to Childcare.
8. **Parks, Recreation, Open Space, and Community Well Being.** Increase access, More Trails and Green Spaces, Inclusive and Safe Public Spaces, Climate Adaptation, Native Plants and Species, Increase Health Opportunities Through Recreation, Diversity in Amenities, Youth Programming.
9. **Transportation and Mobility.** Reliable, Frequent, Safe, Accessible, Equitable, Multi-Modal, Climate Friendly, Enhanced Transit, Regional Connectivity.
10. **Infrastructure, Public Facilities and Services and Utilities.** Utilize Existing Infrastructure, Expand Services and Programs, Equity Lens, Community Safety, Green Infrastructure.
11. **Annexation.** Sustainable Growth, Maintain Levels of Service.
12. **Implementation.** Actionable Policies, Alignment with Strategic Plan, Local and Regional Coordination, Accountability.

# ENGAGEMENT AND OUTREACH SUMMARY

April 2026

## Introduction

**OUR VANCOUVER** is a multiyear engagement initiative that took place between early 2023 to June 2026, where community members and the City of Vancouver worked together to update the City's Comprehensive Plan and Title 20 of the Vancouver Municipal Code. This timeframe allowed for in-depth community engagement and helped the project team ensure alignment with City and community priorities as well as State legislation. The engagement summaries in this appendix outline engagement methods and feedback by project phase:

- Phase 1: Visioning
- Phase 2: Land Use Alternatives
    - Community Mapping Activities
    - Land Use Alternatives
    - Draft Environmental Impact Statement (Draft EIS) Comment Period
- Phase 3: Draft Plan and Code

Overall community feedback is summarized and noted in a call-out box in each respective chapter of the Comprehensive Plan.

## By the Numbers

The following stats help show the overall scope of community engagement and outreach that was conducted as part of the Comprehensive Plan and Zoning Code Update:

- 2,000+ people directly engaged through:
    - 104 public and small-group meetings and events, including:
        - 1 Community Housing Forum
        - 4 Community Mapping Activities
        - 4 Experience Our Vancouver 2045 events on the Draft Environmental Impact Statement
        - 4 Community Presentations on the Draft Plan and Code

        - 29 tabling events
        - 12 Vancouver Neighborhood Alliance and neighborhood association meetings
        - 3 NAYA Elders Luncheons
        - 3 Resilience Rising events
        - 1 Empower Vancouver Mini-conference with SWEC and OWI Education Services
        - 1 Zine and Collage Workshop
    - 26 Our Vancouver Community Partner meetings, plus 14 breakout sessions
    - 44 Our Vancouver Community Working Group meetings:
        - Business Leaders group
        - Climate group
        - Community-Based Organizations group
        - Housing - Building Industry Association group, Market-rate Housing group, and Affordable Housing group
        - Transportation group
    - 12 City Board and Commission meetings with:
        - City Center Redevelopment Authority
        - Parks and Recreation Advisory Commission
        - Transportation and Mobility Commission
        - Urban Forestry Commission
- 2,000+ ideas and input shared through:
    - 270 completed visioning tags
    - 150 map pins on online map
    - 1,017 community survey responses
    - 65 maps from in-person and virtual mapping activities
    - 409 Draft EIS comments through form, email, voicemail, mail
    - 150 Draft Plan and Code feedback through Community Presentations, form, and email
- 10,000+ visits to Be Heard – the main webpage for Our Vancouver
- 16,500+ views of the StoryMap – an additional interactive webpage that was used to share information about the Alternatives, Draft EIS, Preferred Alternative, and draft plan and code.
- Up to 970 subscribers reached through 65+ Our Vancouver e-newsletters
- Additional community members were reached and notified of Our Vancouver through:

    - 11 Vancouver Connects City e-newsletters, 14 Office of Neighborhoods City e-newsletters, 110+ social media posts across 4 platforms, flyers at 40+ locations and events, 200+ direct emails, three Citywide mailed newsletters, local news coverage, and a video played at 3 community events and on the government access cable channel (CVTV).
- 26 City Council Workshops, 5 City Council Consent items, 1 City Council Public Hearing, 22 Planning Commission Workshops and 1 Planning Commission Public Hearing, plus two joint City Council-Planning Commission workshops, where members of the public could provide public testimony.

# PHASE 1: VISIONING ENGAGEMENT AND OUTREACH SUMMARY

# Introduction

## Purpose of Engagement Summary

- Summarize engagement feedback and input from community to be incorporated into Comprehensive Plan.
- Report how feedback is being utilized as part of Comprehensive Plan development process, including metrics and outcomes.

## Overall Approach to Outreach and Engagement

- Various methods of outreach and engagement were utilized with a dual purpose of collecting feedback and input and informing the community about the project for engagement and educational efforts.
- Targeted outreach methods were used to reach priority communities by collaborating with local community-based-organizations and local leaders.
- Social Media Kits included content in both written and visual formats and were shared with multiple CBOs and partners across the City for educational purposes and participation recruitment.
- Ongoing engagement with Russian, Spanish, and Vietnamese speakers, people with lower incomes, people with disabilities, and people experiencing houselessness was facilitated by Community Engagement Liaisons.

## Who Was Engaged?

The Community Survey generated responses from a variety of community members:

- Most respondents were residents of Vancouver.
- Hispanic and Black respondents were under-represented, while Native and Asian respondents had greater representation compared to the population of Vancouver.
- Youth and adults under 35 were under-represented while older adults and elders were over-represented in the survey.
- Respondents came from a wide range of income brackets.

Demographic information was provided by 7 of 31 respondents on the Be Heard Pin Map. Respondents that provided demographic information were adults and predominantly white.

Demographic information was not collected at in-person engagement events. The project team attended several Summer 2023 Community Envision Events that attracted diverse representation from the community, including BIPOC, non-native English speakers, LGBTQ+, youth, and low-income community members.

Community Partners consist of local leaders affiliated with organizations serving BIPOC, queer, youth, immigrant communities, transit users, and people with disabilities.

During Phase I, the project team started working with partner organization to identify co-conveners and potential participants for the community working group process, initial meetings of these groups kicked off in Phase II of the project. Six community working groups were formed with the following focus:

- Business Leaders, co-convened with Identity Clark County and the Greater Vancouver Chamber of Commerce
- Housing working group, includes providers, developers, builders and advocates
- Climate working group, includes community members engaged in climate and environmental justice work
- Transportation working group, includes community members focused on increased transportation access and safer mobility
- Building Industry Association of Clark County, Legislative Affairs Committee, includes regional builders
- Leaders of Community Based Organizations that serve equity priority communities, including BIPOC, people with lower incomes, people with disabilities, people exiting the criminal justice system, and advocates for housing and healthcare access.

## Data Collection

- Quantitative data was collected in the community survey, spatial analysis of pin maps, and survey questionnaires to Community Partners.

- Qualitative data was collected through conversations at tabling events, pin map comments, survey open ended questions, working group discussions, field notes, and questionnaires.

### Analysis Methods

- Mixed methods of both qualitative and quantitative analysis were used for triangulation when reviewing data.
- The project team considered Sense of Place as a key theory driving analysis when exploring themes related to community input in relation to not only the expressed physical space needs of the City but also the reasoning and values behind them.
- Grounded theory was used to identify and organize key themes from engagement by pulling out input and feedback grounded in the data rather than assumptions of answers from biased project team perspectives.

## Overview of Engagement Events

This section provides a quick overview of the Engagement Events that occurred during Phase 1 engagement for the Our Vancouver Comprehensive Plan project. Individual engagement summaries provide for more detailed information about each event and are available by request by email at ourvancouver2045@cityofvancouver.us

### Summer 2023 Community Envision Events

- **Date(s):** May 2023 – October 2023
- **Engagement Method:** Tabling Events
- **Purpose:** City Envisioning
- **Participation:** 19 total events, over 850 direct conversations
- **Outreach Methods Used:** Be Heard, Social Media
- **Topics Covered:** Vision for future of Vancouver

### Interactive Be Heard Pin Map

- **Date(s):** August 2023 – February 2024
- **Engagement Method:** Online Pin Map
- **Purpose:** City Envisioning
- **Participation:** 150 pins, 31 unique visitors
- **Outreach Methods Used:** Be Heard, Social Media, Tabling

- **Topics Covered:** Arts & culture, essential services, housing, community vision, parks & recreation, transportation

### Housing Forum Open House Event

- **Date(s):** December 6, 2023
- **Engagement Method:** Presentation and Group Discussions
- **Purpose**: Educate community about new state level housing requirements and discuss implementation preferences within the Comprehensive Plan.
- **Participation:** ~50 attendees
- **Outreach Methods Used:** Social media, Community network of 40 contacts, Flyers
- **Topics Covered:** Current state of Vancouver housing and Vancouver's Housing Action Plan, State Housing Regulations, Affordable Housing, Middle Housing, Homeownership, Multi-Family Housing Development, New State Laws and Regulations and General Comprehensive Plan

### Our Vancouver Community Survey

- **Date(s):** December 2023 – March 2024
- **Engagement Method:** Online Survey
- **Purpose:** City Envisioning
- **Participation:** 1,017 responses
- **Outreach Methods Used:** Be Heard, social media, canvassing, community events, newsletters, flyers, Community Engagement Liaison contacts
- **Topics Covered:** Neighborhood, housing, community health & well-being

### Community Partners Meetings

- **Date(s):** 8 meetings between June 2023 to January 2024 specifically focused on Phase 1
- **Engagement Method:** Meetings, storytelling, questionnaire
- **Purpose:** Gather local leaders input on comprehensive planning and expand engagement of equity priority communities.
- **Participation:** 13 local leaders
- **Topics Covered:** Equity Analysis, Equity Framework, Community Partnership Framework and Goals Framework including Chapter Vision Statements

### Our Vancouver Email Inbox

This mailbox is managed internally by some City staff on the project team.

- **Date(s):** May 2023 – March 2024
- **Engagement Method:** shared Outlook mailbox (OurVancouver2045@cityofvancouver.us)
- **Purpose:** Provide a way for community members to contact the project team, ask questions, and share their thoughts. Newsletter emails were sent from this email address.
- **Participation:** Emails were received that contained direct project input/inquiries. Additional emails were for answering logistical/technical questions, coordinating events, connecting inquirers with correct City staff when un-related to Our Vancouver, or were considered spam.
- **Outreach Methods Used:** Email address was listed on tabling materials, social media posts, newsletter emails, presentations, and Be Heard.
- **Topics Covered:** Parks, transportation, and housing

### Informational Sessions

In addition to the previously stated engagement events, City staff were invited to present project information with local groups to spread awareness and provide opportunities for involvement and collaboration. Attendees were encouraged to share about the project in their networks, visit Be Heard and share their feedback through other engagement opportunities like the Pin Map and Community Survey. The project team presented at meetings with education partners like environmental science teachers at ESD 112, community-based non-profits, and neighborhood associations and attended City Manager Quarterly meetings and Council community forums.

## Policy and Program Recommendations from Engagement

This section provides an overview of community feedback that emerged during Phase 1 of community engagement for the Our Vancouver Comprehensive Plan. Common "Key" themes emerged across feedback gathered at engagement events, which are organized based on the Comprehensive Plan chapters.

Each Key Theme includes:

- **Key topic overlaps:** The chapter topics that community members commonly referenced in relation to each other are listed here to illustrate the intersectionality of different community values and highlight the need to consider how they impact each other.
- **Themes from the Chapter Vision Statements**: these outline the overall vision and intent of each Comprehensive Plan chapter and what it will aim to achieve. The vision statements are consistent with the Goals Framework previously endorsed by the City Council. For more about the Chapter Vision Statement themes, see final chapter vision statements document.
- **Recommendations for policy and program implementation:** Recommendations emerged from common themes in community input and feedback during engagement events.
    - For each recommendation, we identify the engagement event(s) where community input related to that topic was gathered that informed the recommendations.
- These recommendations will be incorporated into the Comprehensive Plan development when possible and influence decision-making and values to use while creating further policy. If recommendations are outside of the scope of the Comprehensive Plan, recommendations may be shared with other City teams and projects.
- The project team documents when and how feedback is incorporated into comprehensive plan development and decision-making in an Accountability Matrix, which will be routinely shared with communities.

## Community Feel and Vision

KEY TOPIC OVERLAPS: LAND USE AND DEVELOPMENT, HOUSING, PARKS AND RECREATION, EQUITY AND INCLUSION

### Chapter Vision Statement Themes

- Valued, included, and honored
- Different histories and lived experiences
- Strengthens bonds
- Individual and collective trauma and systemic injustice
- Uplift individuals and communities
- Truly belong

### Policy and Program Recommendations from Engagement

#### Maintain existing attributes and aesthetics that exist in green spaces, local art, and community hubs across the City while improving other areas to match.

FEEDBACK FROM COMMUNITY SURVEY AND PIN MAP.

- Appreciation for existing features and character of Vancouver, like green spaces, events, concerts, food trucks, and local art.
- Concerns about graffiti and litter – there are some areas where aesthetic improvements are needed.

#### Create more community hubs and spaces outside of work and home around the City to foster community.

FEEDBACK FROM COMMUNITY SURVEY, SUMMER ENGAGEMENT, COMMUNITY PARTNER MEETINGS, AND PIN MAP.

- Appreciation for existing community hubs that create strong sense of community, including community centers, faith centers, schools, neighborhoods, parks, libraries, waterfront, and Vancouver Mall.
- Desire for more spaces and amenities outside of work and home to encourage community.
- Community partners noted that Esther Short is a "living room" for the community and asked how we can create more of those types of spaces throughout the City *(see Parks and Recreation)*.

#### Foster belonging through culturally inclusive design and aesthetics.

FEEDBACK FROM COMMUNITY PARTNER MEETINGS.

- Welcome people from all backgrounds and cultures and make that visible in our community aesthetics and design through recognition of historical development.

**Place equity at the forefront of all components of the Comprehensive Plan to uplift individuals and communities and make Vancouver a welcoming place for all.**

FEEDBACK FROM COMMUNITY PARTNER MEETINGS AND CHAPTER VISION STATEMENT.

- Need to foster belonging in the community through affordable and accessible housing *(see Housing)*.
- Concern about houselessness crisis *(see Housing)*.

## Land Use and Development

KEY TOPIC OVERLAPS: TRANSPORTATION AND MOBILITY, COMMUNITY FEEL AND VISION, COMMUNITY HEALTH

### Chapter Vision Statement Themes

- Sense of inclusion for people of all backgrounds
- Preventing displacement
- Community spaces
- Build and sustain community
- Harmony between the built and natural environment
- Choice and opportunity

### Policy and Program Recommendations from Engagement

**Develop land use policy with trauma informed practice and a goal of preventing displacement of current residents.**

FEEDBACK FROM COMMUNITY PARTNER MEETINGS.

- Incorporate trauma informed practice into built environment.

**Focus land use policies on creating connected and accessible communities with access to essential services, grocery stores and retail areas, employment, childcare, community spaces, and recreation opportunities.**

FEEDBACK FROM COMMUNITY SURVEY, PIN MAP AND COMMUNITY PARTNER MEETINGS.

- Importance of having employment centers, commercial centers, recreation opportunities, and public facilities within walking distance of home *(see Transportation and Mobility)*.
- Desire for balance between residential and commercial development to support walkable communities, i.e. the waterfront.
- Support for walkable neighborhoods with access to essential services, healthcare, and businesses *(see Community Health)*.
- It is especially important to have places of employment with housing available nearby and access to walkable childcare.
- Community partner neighborhood asset questionnaire results.

**Take advantage of underutilized lots and parking areas as opportunities for development to increase neighborhood density.**

FEEDBACK FROM PIN MAP AND COMMUNITY PARTNER MEETINGS.

- Opportunities for development in underutilized lots or underutilized parking areas.
- Support for building neighborhood density, while allowing for community spaces.

**Maintain low-density residential zoning in many existing neighborhoods throughout the City based on community desire. Consider reducing existing parking minimums while ensuring that there is sufficient parking availability to accommodate increasing density.**

FEEDBACK FROM COMMUNITY SURVEY.

- Concern about density increasing too much.
- Desire to maintain low-density residential zoning in existing neighborhoods.
- Concern about parking availability to accommodate increasing density.

**Maintain character and qualities of historic neighborhoods like Main Street. New developments should have consistent design standards with existing parts of the City and foster harmony between the natural and built environment.**

FEEDBACK FROM COMMUNITY SURVEY.

- Desire for consistent design standards for new developments *(see Community Feel and Vision)*.
- New development should consider historic developments and neighborhoods like Main Street.

# Housing

KEY TOPIC OVERLAPS: LAND USE AND DEVELOPMENT, EQUITY AND INCLUSION

## Chapter Vision Statement Themes

- Community pride
- Prioritize historically excluded community members
- Non-traditional design methods
- Middle and multigenerational housing
- Connected and accessible neighborhoods
- Access to jobs, education, essential services and open space

## Policy and Program Recommendations from Engagement

### Increase density and availability of housing, especially middle housing, to create a diverse housing market that meets the varied needs of our community across the lifespan, especially seniors and people with disabilities.

FEEDBACK FROM COMMUNITY SURVEY, COMMUNITY PARTNER MEETINGS, AND SUMMER ENGAGEMENT.

- Increased density of housing is necessary to meet future housing needs *(see Land Use and Development)*.
- Need for diverse housing options to meet current and future needs.
- Housing needs evolve across the lifespan - some residents may need larger homes to accommodate growing families, while older residents may be looking to downsize or move to senior living facilities.
- Increase availability and affordability of housing for disabled population on fixed incomes, with specific housing needs.
- Increased housing options are needed to meet needs of seniors and people with disabilities.

### Incorporate a variety of housing types to increase availability of middle housing, including ADUs, mixed use housing, duplex / triplex / quadplex housing, cottage clusters, and more.

FEEDBACK FROM COMMUNITY SURVEY, COMMUNITY PARTNER MEETINGS, AND HOUSING FORUM.

- Community Survey: single family homes, mixed use buildings, and duplexes/triplexes/quadplexes and townhomes were the most popular housing types.
- Mixed use buildings were very popular among business owners and renters.
- Desire for mixed use, cottage clusters, ADUs, and tiny home developments to meet a range of needs and income levels.

### Plan for culturally specific housing needs, including multigenerational housing.

Feedback from Community Partner Meetings.

- Incorporate culturally specific housing needs, i.e. multigenerational housing.
- Housing can help foster independence, develop community support networks, and increase community connectedness and interdependence.

### Plan for a future where housing options are and remain affordable throughout Vancouver, despite cost of living and inflation increases, including for people on fixed incomes or people with disabilities.

Feedback from Community Survey, Community Partner Meetings, and Summer Engagement.

- Impacts of inflation can impact housing access, especially for single individuals.
- Need for affordable housing for people with disabilities and on fixed incomes.
- Concern about not having attainable or affordable housing ownership options, the rising cost of living, and having to leave Vancouver to find affordable housing in the future due to rising home prices.
- Consider what affordable means in a real-world scenario for a real family. A lot of people are paying up to 50% of their income for housing.

### Develop policies to support affordable housing, including rent control, restrictions on short-term rentals, restrictions on private equity and corporate home ownership, inclusionary zoning, and development standards for residential use.

Feedback from Community Survey and Housing Forum.

- Concern about cost of housing.
- Desire for policies to support affordable and attainable housing options, like rent control, restrictions for short-term rentals, restrictions on private equity

and corporate home ownership, inclusionary zoning, development standards for residential use, and social and supportive services *(see Land Use and Development)*.
- There should be more funding for renting and owning, including rental assistance and downpayment assistance.

### Consider policies to include air conditioning and heat to address safety concerns in a changing climate.

FEEDBACK FROM COMMUNITY PARTNER MEETINGS.
- Need for access to air conditioning and heat *(See Climate & Sustainability)*.

### Reduce barriers to housing through social and supportive services; rental assistance and downpayment assistance; and eliminating credit checks, criminal records checks, and rental history requirements.

FEEDBACK FROM COMMUNITY PARTNER MEETINGS AND HOUSING FORUM.
- Concern about barriers to housing access (renting and owning).
- Credit checks, affordability, rental history, criminal records/screening and access to funding support for renting and buying are policies that can create barriers to access.
- Name changes (esp. for women and LGBTQ+) are barriers to housing access.
- Undocumented residents pay extra for downpayments and pay taxes but do not get benefits of social security.

### Increase housing and supportive services to reduce and prevent houselessness, including transitional housing services, supportive services for people on the verge of houselessness, and increased housing options.

FEEDBACK FROM COMMUNITY SURVEY AND SUMMER ENGAGEMENT.
- Concern about prevalence of houselessness in Vancouver.
    - Summer engagement: Some community members were personally experiencing displacement or living out of their cars.
    - Community Survey: A few respondents commented on houselessness in response to a question about top issues impacting neighborhood health and wellbeing.
- Keep streets safe by addressing houselessness with built infrastructure, which will allow for children to travel more independently of adults.

- Support for transitional housing services. Lead with a housing-first model and implement transitional housing services.
- Need increased housing options for houseless individuals and supportive services to prevent houselessness and help people who are on the verge of houselessness keep their housing.
- Some opposition to spending public tax dollars on supportive services for houseless individuals in the Community Survey.

## Equity and Inclusion

KEY TOPIC OVERLAPS: COMMUNITY FEEL AND VISION, INFRASTRUCTURE, PUBLIC FACILITIES AND SERVICES, LAND USE AND DEVELOPMENT

### Chapter Vision Statement Themes

- Intersectional Identities
- Past and ongoing exclusion
- Exclusionary practices, raciest and oppressive systems
- Reparative actions
- Increasing pathways to access and participation

### Policy and Program Recommendations from Engagement

**Evaluate all aspects of the Comprehensive Planning process in the context of historical injustice and systemic racism, exclusionary practices, and intersectionality to ensure that the new plan does not perpetuate harm.**

FEEDBACK FROM COMMUNITY PARTNER MEETINGS, SUMMER ENGAGEMENT AND CHAPTER VISION STATEMENT.

- Recognize historical injustice and systemic racism and make reparative actions.
- Be bold, clear, and transparent about these topics.
- Continue to maintain Vancouver's equitable and inclusive community environment and high quality of life *(see Community Feel and Vision)*.

**Be mindful of the needs of people with disabilities throughout the planning process and set design standards that are compatible with and/or exceed ADA accessibility requirements.**

FEEDBACK FROM COMMUNITY SURVEY AND SUMMER ENGAGEMENT.

- Importance of Designing with ADA accessibility in mind *(see Infrastructure, Public Facilities and Services)*.
- Consider disabilities in the planning process.

**Be deliberate in conducting outreach to and including people of diverse backgrounds in the Comprehensive Planning process.**

FEEDBACK FROM COMMUNITY SURVEY.

- Center diversity and inclusion in community events and planning.

- Desire for culturally specific resources in neighborhoods, like grocery stores and events *(see Land Use and Development)*.

**Increase supportive services for vulnerable populations in our community, especially youth, elders, and people with disabilities.**

FEEDBACK FROM COMMUNITY SURVEY, SUMMER ENGAGEMENT AND PIN MAP.

- Need for more services for youth and people with disabilities.
- Need for more supportive services for elders and older adults, including senior centers and senior living communities.
- Community Survey: Resources should be available to support the expected increase in senior residents over the next 20 years.

# Climate, Environment, Community Health, Sustainability, and Resiliency

KEY TOPIC OVERLAPS: PARKS, RECREATION AND OPEN SPACE, LAND USE AND DEVELOPMENT, PUBLIC SERVICES, EQUITY AND INCLUSION, TRANSPORTATION AND MOBILITY

## Chapter Vision Statement Themes

- Built and natural environment
- Climate adaptation and mitigation
- Heat islands
- Sustainable infrastructure and green spaces

## Policy and Program Recommendations from Engagement

### Consider holistic strategies to reduce air, water, and noise pollution across the City.

FEEDBACK FROM COMMUNITY SURVEY.

- Concern about air, water, and noise pollution.
- Community Survey: air, water, and noise pollution was ranked as the top issue in response to a question about issues impacting neighborhood health and well-being.

### Incorporate policies to increase tree canopy and urban shade, landscaping, community gardens, habitat protection, and access to green spaces.

FEEDBACK FROM COMMUNITY SURVEY AND PIN MAP.

- Desire to preserve open space, minimize habitat destruction, and increase urban shade and landscaping.
- Develop more community gardens and plant native, pollinator plants in public spaces *(see Parks and Open Space)*.
- Support for increasing the tree canopy.
- Community Survey: Access to green spaces was ranked third priority in response to a question about issues impacting neighborhood health and well-being *(see Parks and Open Space)*.
- Community Survey: Habitat destruction was ranked fifth priority in response to a question about issues impacting neighborhood health and well-being.

- Pin Map: 6 pins were placed for increased landscaping, including shade and native plants, primarily in Central Vancouver. 2 pins were placed along the Waterfront to indicate need for increased shade.

### Prioritize climate-friendly practices in land use, like closing streets to cars, technological innovations like using porous concrete, and conservation of forest and agricultural land.

Feedback from Community Survey and Summer Engagement.

- Implement climate-friendly practices and priorities.
- Consider e-bike subsidies, closing streets to cars, and using porous concrete *(see Transportation and Mobility)*.
- Consider long-term sustainability in land use practices *(see Land Use and Development)*.
- Balance development with forest and agricultural land conservation.

### Be deliberate in planning for climate change and resiliency, including considering urban heat islands, guarded power lines, shelter spaces, and neighborhood meeting points.

Feedback from Community Partner Meetings and Community Survey.

- Consider resiliency through tree canopy, guarded powerlines, shelter spaces, and meeting points.
- Concern about access to air conditioning and heat.
- Community Survey: Extreme weather events was ranked toward the bottom of priorities in response to a question about issues impacting neighborhood health and well-being.

### Prioritize access to healthcare and social services and food and fresh produce in connected and accessible communities.

Feedback From Community Survey.

- Need for increased access to healthcare and social services *(see Public Services, Land Use and Development)*.
    - Community Survey: Access to healthcare and social services was ranked as second priority in response to the question about issues impacting neighborhood health and well-being. This was the most important priority for non-white respondents with incomes below $50,000 or above $150,000.

- Need for increased access to food and fresh produce.
    - Community Survey: Food insecurity was among the top four priorities in response to the question about issues impacting neighborhood health and well-being for respondents with incomes below $90,000, and non-white respondents between the ages of 25-44 or with incomes above $150,000.

### Reduce barriers to accessing social services and recreation.

FEEDBACK FROM COMMUNITY SURVEY.

- Need to improve accessibility of services and information for people of all abilities *(see Public Services, Parks and Recreation, Equity and Inclusion)*.
- Community Survey: Accessibility of services, recreation, and information for people of all abilities was ranked fourth priority in response to the question about issues impacting neighborhood health and well-being.

# Economic Opportunity

KEY TOPIC OVERLAPS: HOUSING, LAND USE AND DEVELOPMENT

## Chapter Vision Statement Themes

- Equitable, community-centered economic development
- Housing and childcare as key economic development strategies
- Breaking down barriers to entry
- Uplifting existing residents and workforce
- Upward mobility

## Policy and Program Recommendations from Engagement

### Prioritize providing neighborhood access to coffee shops, restaurants, and grocery stores.

FEEDBACK FROM COMMUNITY SURVEY AND COMMUNITY PARTNERS MEETINGS.

- Restaurants, coffee shops and grocery stores were most popular businesses to add to neighborhoods in the community survey.
- Coffee shops are particularly popular among respondents 24 years old and younger.
- Grocery stores were slightly more preferred among renters.
- Community Partners indicated local access to these types of businesses is a priority and added arts facilities and retail.

### Consider a variety of uses and use cases for small business when developing land use and zoning codes – enable opportunities for flexible use space, food carts, and incubator spaces.

FEEDBACK FROM COMMUNITY PARTNER MEETINGS.

- City should seek to provide incubator spaces, food carts, etc.
- Optimize underutilized spaces for business opportunities.
- Consider affordability – areas along the waterfront are not affordable or accessible to smaller businesses because of high rents.
- Displacement can have significant impacts for small businesses.

### Encourage programs to provide workforce development opportunities and technical assistance for small and emerging businesses, especially for equity priority communities.

FEEDBACK FROM COMMUNITY PARTNER MEETINGS, THE COMMUNITY SURVEY AND SUMMER ENGAGEMENT.

- Supporting small business was a common theme in all engagements.
- Community Partners suggested providing technical assistance for small businesses including resources around required licensing.

**Prioritize youth education and developing workforce pipeline. Require large corporations and developers to support local workforce development priorities.**

FEEDBACK FROM COMMUNITY PARTNER MEETINGS AND COMMUNITY SURVEY.

- Education disparity impacts access to economic opportunities.
- Community Partners recommended workshops focused on youth education.
- Large corporations attracting residents to the area should contribute to affordable housing and other strategies to support local workforce.

## Parks, Recreation, Open Space, and Community Well-Being

KEY TOPIC OVERLAPS: COMMUNITY FEEL AND VISION, CLIMATE, ENVIRONMENT, EQUITY AND INCLUSION, PUBLIC FACILITIES

### Chapter Vision Statement Themes

- Increased access to vibrant green spaces
- Adapting to climate change
- Embracing native plants and species
- Diverse recreational opportunities
- Interconnected community

### Policy and Program Recommendations from Engagement

**Maintain and improve access to existing parks, especially for non-white and low-income residents in Vancouver to increase feelings of belonging.**

FEEDBACK FROM COMMUNITY SURVEY, SUMMER ENGAGEMENT, AND PIN MAP.

- Access to parks and open space was reflected as top priority. People frequently commented on trails, positive aspects of recreational spaces, and community resources like libraries, parks, and community centers that respondents enjoy.
- In the Community Survey, most respondents indicated that it is somewhat or very easy to access parks and recreational facilities in their neighborhoods, although approximately 25% of non-white respondents indicated that it was somewhat or very difficult.
- Parks and public spaces encourage feelings of belonging *(see Community Feel and Vision)*.
    - City parks, community centers, libraries, farmers markets, and the waterfront are common places to build community.
    - Connection to the natural environment also fostered a sense of belonging.

**Develop new green and community spaces with a variety of uses and prioritize culturally specific needs. Ensure that these resources are free or have low-cost to reduce barriers to entry focused on youth.**

FEEDBACK FROM COMMUNITY SURVEY, SUMMER ENGAGEMENT, AND PIN MAP.

- Desire for more parks, green spaces, paths, trails, and other community resources *(see Climate and Environment)*.
    - Community Members indicated parks and green spaces were a top priority, followed by community centers, preforming arts venues and other arts-focused spaces, and libraries.
    - Additional suggestions included indoor recreation spaces, community pool, playgrounds, skateparks and pump tracks, museums, community events, trails, dog parks, and street trees.
    - Community Partners emphasized the importance of culturally specific organizations, parks, libraries and community centers.
- Desire for increased availability and accessibility of spaces outside of work and home, especially for youth *(see Community Feel and Vision, Equity and Inclusion)*.
- Low-cost and free activities were particularly important to access and feelings of belonging *(see Community Feel and Vision, Equity and Inclusion)*.

**Seek resources to maintain and improve existing amenities at existing parks and playgrounds around the City.**

FEEDBACK FROM PIN MAP.

- Suggestions at playgrounds included making structures safer, using non-toxic materials, maintenance to remove litter, and inclusive design *(see Equity and Inclusion, Public Facilities)*.
- Suggestions at parks included increased parking and bathroom facilities, especially at Wintler and Marine Parks.

# Transportation and Mobility

KEY TOPIC OVERLAPS: INFRASTRUCTURE, PARKS AND RECREATION, ANNEXATION

## Chapter Vision Statement Themes

- Equitable and connected transportation options
- Prioritize reliability and frequency
- Multi-modal options
- Remove barriers to new modes
- Integrated transportation hubs
- Enhanced regional connectivity

## Policy and Program Recommendations from Engagement

### Increase transit options, including bus rapid transit, bus routes, and light rail to Portland, especially on the outskirts of the City and connecting to the Vancouver Urban Growth Area.

FEEDBACK FROM ALL ENGAGEMENT.

- Need for more and improved transit options, including increased bus routes and bus rapid transit, and a light rail line to Portland *(see Infrastructure)*.
    - Community Survey: Youth were more likely to select or comment on increased transit as priority.
- Privileged people take independence afforded by transportation for granted. If you rely solely on public transit for transportation, the lack of it is a barrier to access *(see Equity)*.
- Need increased transit especially on outskirts of the City, especially as it relates to housing displacement.
    - Pin map: 8 pins were placed in areas where more transit was needed, primarily in East Vancouver.
- Need for increased transit between Vancouver and unincorporated areas to the north, including Battle Ground *(see Annexation)*.

### Increase and improve convenience of transit stops, including adding shelter.

FEEDBACK FROM COMMUNITY PARTNER MEETINGS AND HOUSING FORUM.

- Need for greater accessibility and convenience of transit stops, including shelter.
- Importance of making sure that transit is and feels welcoming and safe to use.

### Consider strategies to balance need for parking while reducing underutilized space currently dedicated to parking.

Feedback from Community Survey, Housing Forum, and Pin Map.

- Mixed feelings about availability of parking: some people would like to see less space used for parking, others are concerned about parking being removed.
    - Housing Forum: people expressed worry about parking being removed.
    - Pin Map: 10 pins were placed where there was too much underutilized space for parking.
- When thinking about development, we need to make sure that there is enough parking and facilities to handle new development *(see Infrastructure)*.

### Reduce traffic congestion and incorporate strategies to manage speeding and improve safety on local streets.

Feedback from Pin Map and Community Survey.

- Concern about traffic safety and speeding *(see Law Enforcement)*.
    - Pin Map: 11 pins were placed in locations indicating traffic congestion, speeding, and concerns about safety and 5 pins were placed in areas with concerns about safety and noise related to industrial traffic. 4 pins were placed in areas where participants suggested traffic calming measures.
- Need for strategies to address traffic congestion and commuting concerns.
- Need for clean and safe roads by addressing street maintenance and potholes, especially on-ramps on highways.

### Improve pedestrian facilities across the City by adding sidewalks, ADA ramps, crosswalks, lighting, and connected walkways.

Feedback from Pin Map, Community Survey and Summer Engagement.

- Widespread support for multimodal transportation.
- Need for more pedestrian friendly development, like sidewalks, ADA crosswalks, and connected walkways.
    - Pin Map: 6 pins were added to identify locations for new pedestrian sidewalks and crosswalks.
- Need for pedestrian improvements to increase accessibility to parks *(see Parks and Recreation)*.

- Increase street lighting, especially along pedestrian facilities *(see Infrastructure)*.

### Improve bike facilities, including separated bike lanes, and improve maintenance of existing facilities to prioritize cyclist safety.

FEEDBACK FROMPIN MAP, COMMUNITY SURVEY AND SUMMER ENGAGEMENT.

- Need for improved bike facilities, including separated bike lanes, and improved maintenance of existing bike facilities.
    - Community survey: Most responses were supportive of bike lanes, but a few responses were opposed to converting parking and roadway to bike lanes.
    - Pin Map: 9 pins were added to suggest new or improved bike lanes.
- Importance of fostering a sense of safety and promoting physical safety of cyclists.

### Plan for, enable, and encourage opportunities for micromobility options like electric scooters/bikes and bike share.

FEEDBACK FROM PIN MAP.

- Improve access to micromobility options like electric scooters and bike share systems.

## Infrastructure, Public Facilities and Services, and Utilities

KEY TOPIC OVERLAPS: TRANSPORTATION AND MOBILITY, ANNEXATION, COMMUNITY FEEL AND VISION, HOUSING, EQUITY AND INCLUSION, COMMUNITY HEALTH, COMMUNITY WELL-BEING

### Chapter Vision Statement Themes

- Leverage existing investments
- Efficient and equitable growth
- Mitigate and adapt to climate change
- Equitable access to programs and resources
- Strategic Distribution
- Social Infrastructure

### Policy and Program Recommendations from Engagement

#### Consider cultural differences and plan for a broad variety of use cases in infrastructure development.

FEEDBACK FROM COMMUNITY PARTNER MEETINGS.

- There is a lack of historical consideration of cultural differences in infrastructure development.

#### Pursue strategies to improve existing public utilities and provide new utilities while avoiding cost increases to users.

FEEDBACK FROM COMMUNITY SURVEY, SUMMER ENGAGEMENT AND COMMUNITY PARTNER MEETINGS.

- Concern about cost of public utilities, including water, sewer, garbage and electricity.
- Desire for improved stormwater management and drainage.
- The City should focus on improving existing infrastructure rather than expanding *(see Annexation)*.
- Suggestion to provide City-wide access to free internet.

#### Enforce existing traffic safety laws and codes to improve safety, reduce illegal parking, and maintain aesthetics.

FEEDBACK FROM COMMUNITY SURVEY AND SUMMER ENGAGEMENT.

- Need for more enforcement of traffic safety laws and speed limits *(see Transportation and Mobility)*.

    - Community Survey: Desire for increased law enforcement presence was particularly strong among respondents over age 65 or with an income of less than $50,000, though a few shared concerns about police corruption.
- Need for code enforcement to address illegal parking.
- Need for code enforcement to address litter and unmaintained building facades *(see Community Feel and Vision)*.
- Community Survey: A few respondents commented on crime and public safety concerns in response to a question about top issues impacting neighborhood health and wellbeing.

### Ensure that all parts of the City are reachable by fire trucks and emergency services.

FEEDBACK FROM SUMMER ENGAGEMENT.

- Concern about road infrastructure being inadequate to enable fire trucks and emergency services to quickly reach parts of the City where roads are narrow (See Transportation and Mobility).

### Increase support for and availability of emergency and health services.

FEEDBACK FROM COMMUNITY SURVEY AND SUMMER ENGAGEMENT.

- Need for more support for emergency and health services, including affordable mental health services, disaster preparedness and resilience hubs, resources for houseless communities, drug prevention and rehabilitation programs, family planning programs, and other social justice programs *(see Housing, Equity and Inclusion, Community Health, Community Well-Being)*.
    - Community Survey: Access to healthcare and social services was particularly important to non-white respondents.
- Services for houseless community members, youth, people with disabilities, LGBTQIA+ individuals, and people living in poverty were also identified as priorities *(see Housing, Equity and Inclusion)*.

## Annexation

KEY TOPIC OVERLAPS: INFRASTRUCTURE

### Chapter Vision Statement Themes

- Sustainable, balanced growth
- Urban levels of service
- Logical boundaries
- Sense of pride, place, character, and identity

### Policy and Program Recommendations from Engagement

#### Plan to conduct additional community engagement when considering annexing new areas within the Urban Growth Area.

FEEDBACK FROM COMMUNITY SURVEY AND SUMMER ENGAGEMENT.

- Support for prioritizing annexation of areas within Vancouver's Urban Growth Area.
- Discussion and questions about timeline for annexing Hazel Dell neighborhood.
- A few people commented that the City should not annex unincorporated areas.

#### Seek to maintain and improve existing infrastructure while considering expanding service.

FEEDBACK FROM SUMMER ENGAGEMENT.

- One person suggested focusing on improving existing infrastructure rather than expanding *(see Infrastructure)*.

## Outreach and Engagement Method Lessons Learned

**Prioritize youth, black and Hispanic community members in future outreach and engagement by continuing to partner with local community-based organizations and utilizing community partner connections and networks.**

Based on demographic information collected, the project team engaged with youth, black and Hispanic populations less than other populations in Vancouver.

**Track engagement input from in-person events with more consistent methods for accountability of implementation by requiring reporting and systems in place be utilized.**

Due to the variety of engagement methods, audiences and formats, input was not collected as consistently as is possible.

**When hosting events, make presentation materials more accessible to community members with less technical jargon, more communal and interactive environments, translated materials and interpretation available.**

Based on field notes, the housing forum content could have been less technical, interpreters were available in multiple languages, but materials were not translated into all languages, and the environment felt more formal than many community members feel comfortable with.

## Next Steps

- Input from phase 1 engagement will continue to be used as the project progresses. Community members will be able to provide feedback on reflections during small group sessions.
- In phase 2 engagement, the project team will be conducting City-wide mapping activities that community members can select where to place various housing types to utilize their input in zoning codes within the comprehensive plan.

# PHASE 2: COMMUNITY MAPPING ACTIVITIES ENGAGEMENT AND OUTREACH SUMMARY

June 2024

## Overview

The **OUR VANCOUVER** team hosted a series of four community mapping activities over two weeks in April to help create a plan for future growth in Vancouver. While all four events were open city-wide, one event targeted engagement with the Vancouver neighborhood associations through a partnership with the Vancouver Neighborhood Alliance, and one event focused on engaging with youth, ages 13 to 25. The events featured a brief presentation from the project team to give an overview of **OUR VANCOUVER**, review key legislative updates influencing the comprehensive plan, and to explain the purpose of the mapping exercise.

After the presentation, project staff facilitated small group conversations around three maps showing focus areas in West, Central, and East Vancouver. Participants provided input on planning for housing and job growth over the next 20 years by identifying areas on the map where they think types of residential and employment development should occur. To do this, participants mapped six "place types" which were: low-scale neighborhood, medium-scale neighborhood, mixed-use neighborhood, regional activity center, employment, and institutional/campus. Each place type had an associated housing unit count estimating the number of new units that would be added, and also included information about the types of jobs that could locate in each. Place type descriptions were reviewed in the presentation and on posterboards at each table. Informational sheets on the table provided detailed information about place types, including the types of housing, jobs, and businesses that would be allowed. The objective of the activity was for participants to use a combination of the different place types to allocate a minimum number of units per focus area in accordance with Vancouver's anticipated 20-year population growth, which is a core requirement of Comprehensive Planning under the Washington State Growth Management Act.

The mapping activity was co-created with a group of community leaders, the Our Vancouver Community Partners, the Planning Commission, City Council, and technical staff. Early

versions of the activity were run with each of these groups. Feedback from those sessions was used to refine the instructions, place types, base maps, and focus areas to ensure that the activity was easy to understand and would provide meaningful input for the project team to use when developing land use possibilities.

### Analysis

Project staff recorded the location and number of areas that participants placed various place types on the map. Physical maps created during the workshops were scanned and digitized and data was used to identify commonalities among how respondents allocated housing growth and jobs across the city.

This document summarizes qualitative feedback captured during the workshops, by project staff as they facilitated the workshops, in feedback forms that participants filled out at the end of the meeting, and from sticky notes participants left on the maps. General themes that emerged in the qualitative data are summarized below and categorized based on how themes align with chapters of the comprehensive plan. Throughout this summary, we use the terms "few," "some," "several," or "many" to provide an indicator of how frequently key themes and topics were discussed.

- *Few* = 2 or 3 comments that emerged from individual or group discussions.
- *Some* or *several* = more than 3 comments, but less than a third of the comments observed.
- *Many* = at least a third of the comments from individual or group discussions.

Themes are presented with general comments first. Comments related to specific areas or land use strategies are labeled as spatial considerations and will be incorporated directly into the development of the land use possibilities maps that will be analyzed as part of the project's environmental review process. Comments pertaining to policy and code considerations are also identified and will be taken into account when developing comprehensive plan zoning code and policies. More information about how the results of this mapping activity will be used is included in the next steps section on page 7.

## Outreach Activities

**OUR VANCOUVER** team conducted outreach to increase awareness and encourage attendance at the events. Information about the events was shared on the project website, City social media channels, and highlighted in the project e-newsletter. The City also reached out to Community Partners and Vancouver neighborhood associations to inform residents of the events. There was a special focus on reaching youth in this process, especially helping to encourage youth attendance at the youth-focused mapping activity.

To meet community members where they are, the **OUR VANCOUVER** team visited approximately 30 local businesses, non-profits, and other organizations to share information about the events and drop-off event flyers in multiple languages. Several of these organizations indicated a preference for receiving materials in a specific language to share with clients.

In addition to the in-person activities, a virtual version of the mapping activity was available on the project website to reach community members that were not able to attend in-person. Participants were asked to select either west, central, or east Vancouver and assign place types to different subareas within the larger area. The count of responses received by area was:

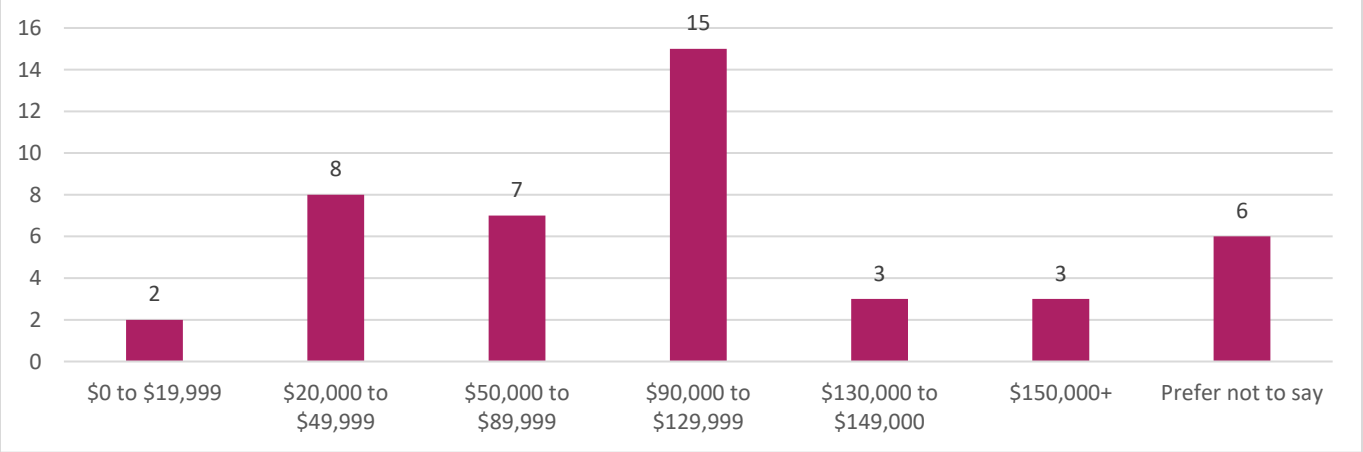
- West: 14
- Central: 8
- East: 6

The results of the online activity were analyzed along with results of the in-person activities to inform land use alternatives. No qualitative feedback was captured in the virtual version of the mapping activity.

## Demographics

In total, 68 community members participated in the four in-person community workshops. Participants were asked to provide optional demographic information as a part of the feedback form; 47 participants shared demographic information (69% of participants). Demographic information was not captured from the youth event.

While participants at the community mapping activities represent a small sample size of Vancouver's population, the race and ethnicity demographics of participants were similar to the overall population. The largest age group represented were individuals 65 or over (16%), while approximately 11% of participants were 24 or younger. Individuals over the age of 65 were represented proportionately compared to the population of Vancouver (17%)[1] but adults and youth were underrepresented. Approximately 56% of participants identified as



[1] US Census Bureau Community Survey, 2022 1-year estimates

female, 42% identified as male, and 2% identified as non-binary. Almost 13% of participants indicated that they have a disability compared to 14.7% in the general population.[1]

The largest race or ethnicity group represented at the four activities was white or European American (approximately 45%). About 8% of participants were Hispanic or Latino/a/e, 6% were Black or African American, 3% were American Indian or Alaska Native, 3% were Asian or Asian American, and 3% were two or more races. Approximately one third of participants indicated that they speak a language other than English, including Spanish, American Sign Language, Vietnamese, Mandarin, French, and German.

Participants at the community mapping events made up a larger portion of homeowners than the overall population in Vancouver; nearly 60% of participants own their home compared to 52% of Vancouver residents. About 20% of participants rent their homes, and 20% live with someone else but don't pay rent (primarily youth participants). Many participants reported that they have an annual household income of more than $90,000, which is higher than the median income of Vancouver residents ($63,617) (see Figure 1).

*Figure 1. What is your annual household income?*

# What We Heard

## Community Feel and Vision

While many participants shared feedback about the types of development they would like to see, a few community members focused on the existing community feel and vision, expressed some concern about the amount of growth Vancouver will see over 20 years, and commented that they want to maintain the community feel and vision by preserving existing buildings and neighborhoods.

## Housing

### Housing Affordability

- Many people had concerns about housing affordability city-wide.
- Several people had concerns specifically about senior housing options being limited and unaffordable.
- Some groups had conversations about different ways to increase affordable housing options.

***Spatial considerations:***

- A group discussed having space for mobile home parks in East Vancouver.
- Another group suggested new multifamily housing in the existing Winco parking lot.
- One group suggested a housing development near the VA to help connect people to essential services.

Accessory Dwelling Units

- Some participants were hopeful that the new state housing bills would encourage the development of ADUs and middle housing options to increase Vancouver's housing supply.
- A few groups were skeptical that the City can realistically plan for more housing, commenting that development should be driven by market conditions.

***Policy and Code Considerations:***

- A few people observed that the northern neighborhoods in West Vancouver have a lot of old garages, and they commented that having pre-approved Accessory Dwelling Units (ADU) conversions would help overcome permitting barriers for small-scale developers.

## Transportation and Mobility

- A few people suggested developing more bike facilities in the area and designating a greenway for bike access.
- City-wide, participants expressed a need to improve transit options and prioritize development along existing transit lines.

***Spatial Considerations:***

- Several participants made suggestions for pedestrian improvements in East Vancouver, commenting that there are not enough walkable sections currently and there should specifically be improvements connected to the Mill Plain corridor.
- One group suggested developing a greenway off Burnt Bridge Creek Trail to improve bike connections to downtown. A community member commented that increasing density along this trail would help to establish the greenway and would ideally increase transit options.

- Some participants also commented that more bus routes are needed throughout East Vancouver.

## Infrastructure, Public Facilities and Services, and Utilities

There is significant overlap between comments about Infrastructure and comments about Transportation.

- A few participants had concerns about the existing infrastructure in East Vancouver supporting development, saying that sewer system needs to be improved.
- Most people did not have specific concerns about infrastructure, public facilities, and utilities, but some people did express concern about having adequate infrastructure in 20 years to support a growing population.

## Land Use and Development

- The majority of discussions centered around land use and development.
- Several discussions indicated a need for Vancouver to have more mixed-use neighborhoods.
- Many people generally commented that they would like to see an emphasis on higher density developments that integrate green spaces, public services, and employment opportunities to create walkable neighborhoods with complementary uses.

***Spatial Considerations:***

- Specific areas that participants discussed as needing to have more mixed-use development included north of Mill Plain at 136th Street, north side of the Section 30 sub-area, infill lots at Broadway and McLoughlin, underused parking lots city-wide, and adjacent to Columbia Tech Center and other existing employment centers.
- Several community members referenced Fourth Plain Commons as an example of the type of mixed-use developments they would like to see in their neighborhoods.
- Some community members felt that it is important to consider the compatibility of adjacent land uses, commenting that low-density areas should not be next to high-density areas.
- A few people had concerns about densification through upward growth, commenting that taller buildings should only be allowed downtown.
- In general, community members were supportive of locating higher-density developments along major roads and transit lines. A few groups commented that employment centers should be located near transit and should have denser development or mixed-use development around the area to support the economic activity.

- A few people suggested designating land for employment near the railroad tracks in West Vancouver to help mitigate noise impacts to nearby residents.
- Several people commented that more housing should be located next to parks and schools.

## Parks, Recreation, Open Space, and Community Well-Being

Participants had the option to use stickers to indicate on the map where they would like to see more parks and community resources throughout the city, which was utilized on almost all the maps.

***Spatial Considerations:***
Several people commented that new community centers should be developed along transit lines.

- A few groups noted that there is a need for a library in East Vancouver.
- A few people said that the areas in East Vancouver they identified for new community resource developments should include daycares, community centers, and senior centers, but commented that new schools are not needed in East Vancouver.
- Some community members discussed the potential to increase community resources around existing institutions, including medical centers, senior centers, and Clark College, to provide essential services to people using those centers.

***Policy and Code Considerations:***

- Many community members would like preservation of existing parks and open spaces to be a priority for the future.
- Several people commented that they would like to see more parks and an increase in the tree canopy city-wide.
- A few people felt that, as the city densifies, more parks will be needed to serve the growing population and the City should work to improve and maintain existing parks.

## Equity and Inclusion

- Some groups considered equity and inclusion when planning for new residential growth.
- Some community members commented that they have concerns about finding a balance between new development to meet residential needs and the displacement of existing residents.

***Spatial Considerations:***

- One group commented that they would like to see low density residential development in West Vancouver around the Washington State School for the Deaf and Washington State School for the Blind to reduce traffic and create a safer pedestrian environment.

## Climate, Environment, Community Health, Sustainability, and Resiliency

- Some groups discussed the impacts of different types of development on the environment, commenting that mixed-use developments and creating more walkable neighborhoods will help the city meet its climate goals.
- Some community members identified areas where they saw a need for essential facilities or services to support the overall community health.

***Spatial Considerations:***

- A few people commented that there need to be more medical or hospital facilities around Vancouver Mall.
- A few people expressed concern about not having adequate access to grocery stores in the future, particularly in East Vancouver and downtown.

***Policy and Code Considerations:***

- One group said that they would like to see more community gardens and options to access local food.

## Economic Opportunity

While most conversations were focused on locating residential development, some participants also discussed the implications for job growth and economic development.

***Spatial Considerations:***

- When discussing the Central Vancouver focus areas, participants frequently talked about the redevelopment potential around the Vancouver Mall and associated parking lots.
- A few people commented that they see a potential to redevelop the areas around NE 40th Street and Andresen Road to a more active use to increase economic activity.
- A group suggested developing a large new employment center in Section 30, although a few people commented that they were concerned about the traffic impacts of development at this location.
- Another group commented that new employment areas were needed north of Mill Plain, west of I-205.

- A few participants suggested allowing home-based businesses (e.g., bike shops) in East and Central Vancouver neighborhoods.

## Event Reflections and Lessons Learned

Reflections from participants and staff will inform future engagement efforts as a part of the **OUR VANCOUVER** project.

### Participant Reflections

Participants were encouraged to provide feedback at the end of the event to share their key takeaways from the activity. Most of the input received was directly related to the event. In general, most community members had positive feedback about the events, the venues they were held at, and appreciated that there was food available.

- Mapping activities helped participants feel more connected to and increased understanding of the comprehensive planning process.
    - The input received indicates that the activities were beneficial to the community because it familiarized them with **OUR VANCOUVER** and helped to make participants feel more connected to the planning process and to their community.
    - Most participants (80%) agreed or strongly agreed that their input will be used to inform Vancouver's Comprehensive Plan update, although two individuals indicated that they don't believe their input will be used.
    - Over 80% of participants said that they feel more connected to the community after the activity.
    - Nearly 87% of participants indicated that the mapping activity helped them understand the need for additional housing in Vancouver.
- Use facilitation strategies to welcome all voices to participate. Almost all participants responded that they felt welcome and comfortable at the event, although two participants felt neutral about the event. One group commented that one participant at their table seemed to take over the activity and they did not feel that they had an opportunity to provide valuable feedback.
- Continue sharing information about events on multiple platforms. Participants indicated that they heard about the event through various methods, including seeing a posting on the City's website, LinkedIn, through the BeHeard email list, social media, neighborhood association meetings, or through word-of-mouth from friends or family.
- Continue scheduling events at shared community locations. A few participants said that they were not aware of the event in advance but happened to be at the venue at the time.

## Staff Reflections

Overall, staff felt that the mapping activities were successful in gathering the types of feedback that will be helpful in developing the land use possibilities. This section includes a set of reflections from staff about the activity and steps for future engagement.

- **Consider strategies to make activities accessible to folks with little to no background in land use planning.**
    - Mapping activity was successful at engaging community and conveying the scale of housing that will need to be added to the city. Community members found it helpful to get regular updates on how many housing units they had added to the map as they were working on it and were sometimes surprised at how easily they could reach their target housing unit count.
    - For community members who were unfamiliar with land use planning or housing types, it could take a while to get started on the activity because they had to spend more time to understand the place types.
    - Community members sometimes had difficulty distinguishing between the different place types and gravitated towards mixed use housing because it was familiar and had a high housing unit count.
- **Gather additional feedback to confirm priorities shared during the mapping activity**.
    - Feedback from the mapping activity provides initial insight into community priorities for how housing growth is allocated across the city. However, participants were not a representative group of community members; more feedback is needed from a broader swath of the City of Vancouver, and was the focus of more targeted engagement as the land use possibilities were developed.
    - Mapping activities provided only high-level information about community priorities. Future engagement efforts should verify these priorities with a broader audience.
    - The mapping activity provided some policy and code considerations, but more input is needed to shape policies in the Comprehensive Plan.
- **Increase engagement with equity priority communities through future engagement,** including people experiencing low incomes, youth under age 25, Hispanic/latino/a/x and Black communities, and communities with limited English proficiency who were underrepresented in this engagement effort.

## Comprehensive Plan Policy and Program Implementation

Maps and qualitative feedback from the community mapping activities and online mapping activity provided a foundation to develop two land use possibilities to plan for growth through 2045.

- The land use possibilities will consider community input, development potential, housing and employment needs, and infrastructure and public facilities.
- The team will take the qualitative themes documented in this summary into account when creating the initial land use possibility maps, with a particular emphasis on the spatial considerations.

- Policy and Code Considerations will be taken into account when developing zoning code and policies associated with the Comprehensive Plan.
- More feedback will be gathered in subsequent phases of Comprehensive Plan development.
  - The next phase of community development will focus on soliciting input on the resulting two land use possibilities to further refine and analyze them as part of the project's environmental review process.
  - More feedback is also needed regarding the policy and code considerations community members would like to see across the city.

# PHASE 2: LAND USE ALTERNATIVES ENGAGEMENT AND OUTREACH SUMMARY

November 2024 through June 2025

# Introduction

## Purpose

The purpose of this document is to summarize engagement feedback and input from the community so that it can be incorporated into the **OUR VANCOUVER** Comprehensive Plan, specifically the land use alternative maps and the plan's goals, policies, and actions.

## Approach to Outreach and Engagement

This phase focused on raising public awareness about the land use alternatives and preparing the public to provide comments during the draft environmental impact statement (EIS) comment period.

This phase's strategy focused on attending existing meetings and events and partnering with community-based organizations to organize events, instead of organizing City-led events.

During this phase, the project team proactively worked to hear from youth and Black and Hispanic community members, because these groups were under-represented in earlier comprehensive plan engagement (see Phase 1 and Phase 2 summaries).

# Overview of Engagement and Outreach

This section provides an overview of the engagement and outreach methods used during this phase.

## Engagement Methods

### Group Presentations

**Date(s):** November 2024 – June 2025
**Engagement Method:** Board and commission meetings, neighborhood association meetings, community-based organization meetings/events
**Purpose:** Awareness, land use alternatives feedback
**Participation:** 18 events

**Outreach Methods Used:** Outreach was typically conducted by the partnering organization. Public meetings were posted to the Be Heard page. Promoted requests for presentations in e-newsletters.
**Topics Covered:** Comprehensive plan, land use alternatives, EIS process

### Mini Mapping Activities

**Date(s):** 1/30/2025, 4/1/2025, 4/23/2025
**Engagement Method:** Mapping activities at NAYA Elders Luncheon
**Purpose:** Land use alternative feedback
**Participation:** 3 events
**Outreach Methods Used:** Outreach was conducted by the partnering organization.
**Topics Covered:** Comprehensive plan, land use alternatives

### Tabling

**Date(s):** 1/14/2025, 2/5/2025, 2/6/2025, 3/6/2025
**Engagement Method:** Tabling at three Clark College student affinity luncheons and one community resource fair
**Purpose:** Awareness, land use alternatives feedback
**Participation:** 4 events
**Outreach Methods Used:** Outreach was conducted by the partnering organization.
**Topics Covered:** Comprehensive plan, land use alternatives

### Visioning Collage and Zine Workshop

**Date(s):** Saturday, March 22, 2025
**Engagement Method:** Collage activity
**Purpose**: Awareness, community connection
**Participation:** 1 event
**Outreach Methods Used:** Social media, Be Heard, City and Kindred websites, Our Vancouver e-newsletter
**Topics Covered:** Chapter vision statements

### Our Vancouver Email Inbox

**Date(s):** November 2024 – June 2025
**Engagement Method:** shared Outlook mailbox (OurVancouver2045@cityofvancouver.us)

**Purpose:** Provide a way for community members to contact the project team, ask questions, and share their thoughts. E-newsletters with project updates were also sent from this email address.
**Participation:** 23 emails were received that contained direct project input and/or inquiries.
**Outreach Methods Used:** Email address was listed on the StoryMap, hardcopy materials, social media posts, **OUR VANCOUVER** e-newsletters, presentations, and Be Heard.
**Topics Covered:** Comprehensive plan, land use alternatives, EIS process

## Outreach Methods

- **Be Heard** – project webpage
  - 5,500+ views
- **StoryMap** - online interactive map of land use alternatives
  - 5000+ views
- **Our Vancouver e-newsletter:** 11/1/2024, 2/7/2025, 2/21/2025, 3/10/2025, 4/4/2025, 5/9/2025, 6/12/2025
  - From 493 to 628 recipients
- **Vancouver Connects** e-newsletter – November 2024, December 2024, 3/11/2025, 4/9/2025, 6/6/2025
- **Office of Neighborhoods** e-newsletter – 11/8/2024, 1/31/2025, 2/14/2025, 3/14/2025, 4/11/2025, and 6/27/2025
- **The Columbian** newspaper – 3/21/2025
- **Social Media** - Facebook, Instagram, LinkedIn, NextDoor
- **Flyers** at Coffee with the Mayor, Neighborhood Convenings, and Community Forums.

## Summary of Feedback

This section provides an overview of community feedback that emerged during Phase 2C of community engagement for the **OUR VANCOUVER** Comprehensive Plan. Common "key themes" emerged across feedback gathered at engagement events, which are organized based on the comprehensive plan chapters. Additionally, some feedback was specific to the land use alternative maps or had a spatial component to the comment, so a sub-section has been added below to summarize this feedback.

The summary section that follows may quantify comments received by the terms "few," "some," or "many." *Few* means less than 10 comments received; *Some* or several means between 10–20 comments received; and *Many* means 20 or more comments received on a particular topic.

## Community Experience

### Accessibility of Places, Services, and Resources

Many people expressed that they wanted places, information, and basic needs to be accessible – physically, financially, socially/culturally, and bureaucratically.

### Connection and Involvement

Many people had a strong desire for deeper community ties and engagement and wanted places and processes that would support this.

### Safety, Comfort, and Stability

Many people highlighted the importance of safety, comfort, and stability. This was discussed in terms of personal physical safety, as well as emotional and mental safety allowing community members to feel happy and respected.

### Belonging and Inclusion

Many people value and desire places, events, and organizations that reflect a specific aspect of their identity and that allow them to express themselves and connect with others who share that identity. Primarily, this was discussed in terms of culture and race/ethnicity.

### Lifelong Learning

Many people described a desire for learning and training opportunities and placed value on places and programs that supported growing and sharing one's talents.

### Mixed Feelings about Growth and Change

Some people acknowledged that growth and change will occur, while others expressed wanting to preserve things as they are. Many wanted to ensure that growth and change benefited existing and long-time residents. There were mixed views on the pace of change, as some were comfortable incremental

change while others expressed a need for more bold and immediate transformation.

### Blend of Urban and Natural Amenities

A few people expressed appreciation for the community's mix of urban and natural amenities.

#### Vancouver's Push and Pull

What draws people **to** Vancouver?

- Family, school, jobs
- Retirement
- Balance of urban amenities with access to nature
- Amenities like the waterfront, events, or specific businesses

What draws people **from** Vancouver?

- Family, school, jobs
- Culturally-specific places
- Housing costs/availability
- Amenities like specific restaurants or more regional amenities.

## Land Use and Development

### Important places

Many people value access to the following uses and would like to see them maintained and increased:

- **Community centers**, including teen centers, religious facilities, and a desire for more grassroots gathering spaces.
- **Food-related uses**, including grocery stores, gardens and agriculture, the farmers market, and restaurants.
- **Medical and healthcare** uses, including hospitals, specialty clinics, and emergency rooms.

- **Parks and natural areas**, including the Columbia River, sports fields, and the Waterfront.
- **Educational facilities**, including trade and specialty schools, the Water Resource Education Center, and libraries.
- **Commercial spaces**, including Vancouver Mall, gyms, and amusement spaces--Some youth specifically wanted go-karts, a zoo/aquarium, viewpoints, a stadium, and a waterpark.
- **Identity-specific places** – Many people value and desire places that reflect a specific aspect of their identity and that allow them to express themselves and connect with others who share that identity, primarily, in terms of culture and race/ethnicity.

### Places of concern and incompatibility

Some people had negative views of particular uses, including car dealerships, marijuana shops, large warehouses / industry, and "camping," and suggested measures such as transition areas, buffers, or prohibitions for these uses, particularly around schools, parks, and residential areas.

### Support for allowing mixing

While many people seemed to support greater mixing of non-residential and residential uses if externalities (traffic, noise, air quality) are limited, a couple people were concerned that overregulating or requiring mixing could make development infeasible. A couple people didn't want commercial in their neighborhood.

### Importance of single-story buildings/units

A few people inquired about building height and others noted that single-story buildings/units are important for residential and industrial uses.

### Impact on existing development

A few people were concerned about how the plan update would impact existing buildings and the creation of non-conformities, wanting to ensure that existing development can remain and function.

## Housing

### Houselessness and Housing Security

Many people view houselessness as an issue in the community and want to help people be and stay safely housed. Some people specifically expressed support for shelters, safe stays, using underutilized spaces, building affordable housing, and other programs and resources as ways to improve housing security.

### Housing Affordability

Many people recognized the rising cost of housing and felt that greater housing affordability is imperative. A few people asked what is meant by "affordable" and were skeptical about how adding more market-rate housing could improve affordability. However, others saw a connection and need for more housing broadly to improve affordability. One noted the need for subsidies to provide below-market rate housing.

### Housing Density

Many people seemed comfortable with adding middle housing and some density. Some saw adding more housing as a way to support affordability, businesses, walkability, and transit. However, many people were concerned about the impact of higher density housing on existing neighborhood character, traffic, trees and nature, parks, and property values/taxes.

### Housing Type and Design

While there was support for middle housing, people particularly value detached housing types (like single-family houses, ADUs, and cottage clusters) and ownership opportunities. Some people suggested design considerations like single-floor units for seniors, large units for families, outdoor space, and climate control features for climate resilience.

### Housing Location

Many people wanted housing to have access to commercial services, medical centers, jobs, parks, transportation options, and other opportunities and resources. A few people brought up concerns about locating housing in unsafe areas or areas with high traffic, noise, or air pollution. A few people noted that infrastructure needs to be able to accommodate additional housing.

### Residential Displacement

Some people were concerned about residential displacement, particularly for seniors, renters, and low-income residents. A couple of people expressed support for specific anti-displacement measures, like mobile home protections and rent caps.

## Equity

### People see and experience disparities and inequality in Vancouver

Many people spoke to the differences in access to a variety of things, including parks and trees, healthcare, jobs and economic opportunity, housing, transportation, community centers, internet, public spaces and processes, and places, organizations, and events that reflected their identity. There is a desire for equality in the community, allowing all to fully attain the themes outlined under Community Experience.

### Current system disadvantages particular groups

Some people shared that different aspects of the social and built environment make it disproportionately difficult for particular groups of people to access to the things mentioned above and attain the themes under Community Experience. Primarily, the groups mentioned were in terms of race/ethnicity and culture, and were also mentioned in terms of immigration status, age, language, sexuality, gender, incarceration, marital status, housing tenure, and economic class/income level. *Of note, disability was not prominently mentioned, possibly due to limited engagement.

### Greater focus on those who face the greatest barriers/have the greatest need

Some people directly expressed a desire and need for equity, including in planning and services. Many people expressed the need to support vulnerable populations, especially those with low incomes, those facing housing insecurity, youth and families, and seniors. Both the engagement feedback and process point to the need for diverse and tailored approaches (particularly culturally-aware and -specific approaches) in order to achieve equal access and attainment of desired community experience – not a one-size-fits-all approach.

### Putting equity into practice

While some people expressed appreciation for the steps the City is currently taking to advance equity and inclusion, there was a desire for more immediate and visible progress. A couple of people suggested implementing equity goals in partnership with impacted communities and organizations for full effectiveness.

## Climate, Environment, Community Health, Sustainability, and Resiliency

### Enthusiasm and appreciation for natural amenities

Many people value sustainability and the environment, especially Vancouver's parks and trees. People shared that they valued these because of the benefits they provide in terms of physical and mental health, habitat area, transportation, and recreational opportunities. Outdoor spaces that people highlighted ranged from one's own yard/garden to the Columbia River.

### Opportunities to support community health

Many people value health and saw ways that planning could support it, including in:

- Housing - housing stability, quality location and buildings
- Parks and recreation – exercise equipment and programming, spaces to be active, opportunities to connect with nature
- Transportation - bike lanes and walkability providing movement and connection, ability to access healthcare
- Land use and development – medical facilities, food access, gyms, green spaces
- Economic opportunity – income stability
- Implementation - culturally, linguistically, and physically accessible resources, partnering with community orgs

### Clean air and quiet places are important, especially at home

Many people had concerns about noise and air pollution. A few people brought up compatibility concerns between land uses because of air and noise issues, like industrial uses and traffic/vehicles versus parks and housing. A couple people saw opportunities for mitigation, like having bike lanes and the need to mitigate noise from denser living.

### Support emergency preparedness and better connect planning and climate

People did not usually bring up climate change or natural disasters on their own, but when discussed, many people were concerned and saw a need for increased awareness, communication, and preparedness. Public buildings and schools, hospitals and emergency services, grocery stores, religious facilities, Tribal offices, transit stops / centers, and trees were seen as critical infrastructure for resiliency. A couple people highlighted a need to consider Vancouver's rainy season when investing in infrastructure.

*See Climate Vulnerability Assessment engagement summary for more detailed feedback on resiliency.*

## Economic Opportunity

### Economic opportunity for all

Many people support jobs and economic growth and want it to benefit existing residents and local businesses, especially those who have historically lived in or contributed to Vancouver. Some people are concerned that job and housing growth may displace long-time residents and existing businesses. Some people stated the need to support equitable access to jobs for underrepresented groups and to support economically diverse neighborhoods.

### Support for Diverse, Livable-Wage Employment Opportunities

Many people, especially youth and those working with youth, want more livable-wage and diverse job opportunities and workforce development opportunities. Places and programs mentioned included trade and specialty schools, colleges, apprenticeships, and community center programs. A couple people highlighted the need for people's wages to meet rising costs of living.

### Need for Jobs Closer to Where People Live

Some people expressed a desire to reduce commuting, especially trips to Portland, and to have more jobs integrated into neighborhoods. This included support for neighborhood commercial areas, mixed-use developments that include jobs, and flexible zoning that allows low-impact employment in or near homes. However, a couple people wanted to ensure requirements for commercial uses do not prevent development, especially housing.

### Workplaces are economically and socially important

Many people spend a significant amount of time at businesses and workplaces when not at home. Businesses and jobs draw people to Vancouver with many people sharing that they either moved to or visit Vancouver for work, or workforce development. Many people value local markets, restaurants, shops, and services, while some also value non-local chains, both as economic drivers and places to gather.

## Parks, Recreation, Open Space, and Community Well-Being

### People value parks, green spaces, and community centers and access to these places

Many people value parks, green spaces, and community centers and wanted to these maintained and increased. Access was discussed both in terms of physical access and financial access. A few people shared that they value the mental and physical health benefits that parks and green space offer.

- Some places mentioned include Marshall, Waterfront Park, Water Resources and Education Center, Fourth Plain Forward, Ike Memorial Park, and Frenchman's Bar.
- Events mentioned include Powwows, First Friday Art Walks, and Pride events.

### Community centers for connection

Many people valued community centers and saw them as places to gather, connect, express, and learn. Some people had requests specifically for

- Culturally-specific centers,
- Smaller, grassroots, drop-in spaces,
- Teen and youth-focused centers, and
- Affordable memberships for income-burdened families

### Quality parks and green space

Some people desire upgrades to existing parks and community centers. Some people noted specific park features that they like / would like including:

- Sports courts, skateparks, yoga/workout areas, gardens
- Dog-friendly amenities, rain shelters, adult-friendly spaces

- Bathrooms, paved trails, stages, interactive art, scenic viewpoints
- More mature trees, especially in underserved neighborhoods
- Water related-recreation (river, pools, waterparks)

### Recreation as transportation

A few people saw opportunities for recreational spaces to also support transportation, like bike / pedestrian paths.

## Transportation and Mobility

### People want to be able to easily, safely, and quickly get to places they want to go

Some people highlighted the connection between transportation and land use, and the need for these to complement each other, particularly for transit. For example, locating transit where housing is being added and where essential services exist (and vice versa), and considering how remote work could impact transportation needs.

### Driving is convenient

Many people drive and see the need to drive/have a car as something that is not going to go away any time soon. Some people voiced frustration or concern about changes that make driving more costly (both in terms of time and money). Many people had concerns about growth leading to more vehicle traffic and about the safety, air pollution, and noise impacts associated with vehicles. Some supported changes that would allow people to not need to drive/have a car.

### Use of and improving non-driving options

Many people voiced support for walking, biking/small mobility, and/or transit but shared that improvements in physical infrastructure, comfort/safety, and service are needed to make these viable transportation options. A few people see these modes in competition with each other in terms of infrastructure and investments. These modes seemed to be more important to youth and seniors than to other ages, and students also use the school bus.

> Bike / Pedestrian - People often called for more sidewalks. A few people shared that they value health and social benefits these modes offer. One person noted that rainy weather can deter biking.

Transit - People often called for more frequent transit service and occasionally highlighted the desire for faster travel times and stops closer to their origin/destination, including outside of Vancouver. A few people had concerns about transit negatively impacting personal safety and comfort. A couple people suggested adding modes for shorter distances and adding night services, but there were mixed feelings about adding light rail (MAX) as an option.

### Spaces for transportation can support additional community needs

Some people highlighted that spaces for transportation can serve other purposes and vice versa. For example, transit centers could be used as gathering places and shelters, bike/ped paths for recreation, streets for events and murals, and parking lots for housing or bike gardens.

## Infrastructure, Public Facilities and Services, and Utilities

### Public facilities are important places for the community

Many people, especially youth and seniors, value and spend a lot of time at schools, libraries, community centers.

### Quality community spaces

Many people desire clean, updated, and well-maintained public spaces, with some calling for repairs and upgrades to specific community centers, streets, and sidewalks. At the same time, some people had concerns that improvements may lead to displacement or increases in cost of living. Some people highlighted how incorporating public art, especially murals, in public spaces enhances the quality.

### Infrastructure and services must keep pace with growth

Many people highlighted this need and brought it up in terms of utilities, transportation infrastructure, emergency services, traffic, air quality, jobs, housing, and parks.

### Infrastructure needs to support resilience and be resilient

Many people see infrastructure, public facilities and services, and utilities as supporting resilience and needing to be resilient itself – this includes schools, public buildings, emergency services, electricity, transit stops / centers, and

trees. A couple people highlighted the need to factor in climate, particularly Vancouver's rainy season, to infrastructure investments.

## Annexation

### Curiosity about relationship between annexation and plan

Many people were curious about annexation processes (when where and how it will happen) and how annexation relates to comprehensive planning. A few people specifically asked if annexation could be used to meet population, housing, and jobs targets.

### Questions about how to upgrade and serve the Urban Growth Area

A couple people were concerned about cost of annexation and ability to provide sufficient services, like police and fire, if areas are incorporated into the city. People want the City to coordinate with county to facilitate a smooth transition.

## Implementation

### Coordination and partnerships

Desire for coordination between planning and other departments, county, and community organizations. One person highlighted the importance of partnerships in addressing housing needs. Some partners that were mentioned during this phase were Council for the Homeless, NAYA homeless shelter, VHA, and SWACH.

## Land Use Alternative Maps

### Alternative Maps

- A few voiced a specific preference for Alternative 2.

### Low-scale Neighborhood and Medium-scale Neighborhood

- A few people had concerns about existing single-family/Low-scale neighborhoods being upzoned to either Medium-scale Neighborhood or Mixed-use Neighborhood.
- Many supported having some commercial uses in residential areas.
- Requests for Low-scale: 2308 La Frambois Rd and 906 Topeka Lane

- Requests for Medium-scale: The property next to 13604 SE 20th Circle, Vancouver, WA 98683 and parcels 35140000, 3516000 and 35150000.

### Mixed-use Neighborhood and Regional Activity Center

- People most often located these at key intersections and corridors dispersed across the city, with an emphasis on corridors served by transit like Fourth Plain and Mill Plain.
- Requests for Regional Activity Center: Columbia Business Center

### Institutional / Campus

- Some people wanted to keep or increase hospitals and emergency rooms, suggesting the need to keep or increase Institutional / Campus districts.

### Industrial / Employment and Heavy Industrial

- Creating and maintaining land for jobs was particularly important to high school students
- A few people noted the negative impacts industrial has on adjacent land uses where people live and visit, suggesting the need for separation/mitigation between industrial districts (IE and HI) and districts that allow residential (LS, MS, MX, and RA).

### Parks and Natural Areas

- Many people wanted more parks and to preserve existing parks. A couple people suggested more parks where there is more density.
- A few people identified corrections needed for parks land, which have already been corrected in the two action alternatives (DuBois Park, South Cliff Park, Burnt Bridge Creek School Park).

# PHASE 2: DRAFT EIS COMMENT PERIOD ENGAGEMENT AND OUTREACH SUMMARY

September 2025

## About the Draft EIS Comment Period

The Draft Environmental Impact Statement (Draft EIS) comment period extended from July 8 through September 8, 2025. Comments were collected via an online comment form available in in English, Chinese, Chuukese, Russian, Spanish, Ukrainian, and Vietnamese, as well as via phone, email, and mail.

### Outreach

Outreach methods informed people about the Draft EIS findings and directed people to the online StoryMap with an overview of the Draft EIS findings, public events, and the comment form and other comment methods.

- 4,300+ Be Heard visits
- 3,300+ StoryMap views
- 22 total e-newsletter emails sent through three City email lists.
    - 15 Our Vancouver email list
    - 3 Vancouver Connects email list
    - 4 Office of Neighborhoods email list
- 27 social media posts across 4 platforms garnered 69,454 unique views.
- 100+ community groups, neighborhood associations, and boards/commissions directly emailed.
- 2 interactive public meetings
    - One in east Vancouver on a weekday evening
    - One in west Vancouver on a weekend midday
- 2 public virtual sessions
    - One during weekday lunch hour
    - One during weekday evening
- 8 group-specific discussions
- 2 City Council Workshops and 1 Planning Commission Workshop
- 1 self-guided exhibit in the City Hall lobby
- 4 tabling events
- 7 locations with outreach materials
- Nearly 600 promotional video views, also shown at 3 Movie in the Park events

- 2 print articles – The Columbian and the City's quarterly newsletter

### Comments Received

The City received a total of 440 responses:

- 330 total responses from the online comment form, of which 24 responses were incomplete forms and did not contain a comment.
- 94 comments via email, 6 of which were also submitted via the online comment form or physical mail
- 15 comments via physical mail, 1 of which was also submitted via the online comment form or email
- 1 comment via voicemail

A total of 409 unique comments were received. Thirteen of these were received from agencies, businesses, or organizations.

## Comment Review Process

The project team reviewed each comment and coded responses based on the chapters of the Draft EIS. The project team also added additional codes to capture comments related to the Draft EIS and Comprehensive Plan Update process. Comments were coded into multiple categories as overlap occurred.

- Alternatives
- Land and Shoreline Use
- Housing
- Aesthetics
- Historic and Cultural Preservation
- Transportation
- Noise
- Public Services and Utilities
- Earth
- Air Quality, Greenhouse Gases, and Climate
- Water
- Plants and Animals
- Other – Draft EIS Information, Data, and Approach
- Other – Engagement Process
- Other – Policies and Implementation
- Other – Annexation
- Other – Non-project

An additional sub-code was added for Alternatives to capture comments related to how alternatives impact a specific address, parcel, or neighborhood.

The summary section that follows may quantify comments received by the terms "few," "some," or "many." *Few* means less than 10 comments received; *Some* or *several* means between 10-39 comments received; and *Many* means 40 or more comments received on a particular topic.

## Summary of Key Themes

This section provides a high-level summary of key themes and takeaways associated with each code, as well as how many comments pertained to each code. Refer to the Final EIS to view comments and responses in full.

**Alternatives: Specific Address, Parcel, Or Neighborhood** (226 comments)

Many comments included suggestions for modifications to a specific address, parcel, or neighborhood in one or both alternatives. Frequently mentioned areas included the Southcliff and Fisher's Landing neighborhoods and the downtown waterfront area.

**Alternatives** (114 comments)
Alternative 1 received some support from those who expressed concerns about rapid change, parking, traffic, neighborhood character, and dense development. Some comments indicated support for Alternative 2 as the best way to address housing, climate, and transportation needs. Some comments indicated support for both alternatives. Many comments indicated opposition to both alternatives.

**Transportation** (95 comments)
Many comments mentioned a desire for increased transit and connectivity and pedestrian and bike improvements. A few comments indicated concern about parking shortages amidst higher density, opposition to MAX light rail expansion, and frustration with downtown pay-to-park policies.

**Land and Shoreline Use** (82 comments)
Some comments shared support for density that creates walkable, mixed-use areas, locating jobs, services, and restaurants or grocery stores closer to neighborhoods. A few comments opposed mixing low- and medium- density zones and increasing industrial land uses; emphasized a desire for protecting farmland and open space; and highlighted conflicts between public zoning changes and private neighborhood covenants.

**Plants and Animals** (43 comments)
Comments called for better protection of tree canopy, wildlife corridors, and natural habitats and indicated concern regarding vegetation loss due to increased density.

**Housing** (39 comments)
Some comments indicated a desire for a variety of housing options, affordable housing, and homeownership opportunities. Some comments expressed opposition to high-density housing, citing traffic, parking, and neighborhood impacts to character and safety.

**Historic and Cultural Preservation** (31 comments)
Some comments mentioned a desire to preserve older brick buildings in Downtown, Fort Vancouver, and Pearson Airfield. There were also a few suggestions to recognize the unique history of Vancouver and partner with Indigenous nations to preserve and honor their history as part of the city's story and legacy.

**Other – Draft EIS information, data, and approach** (25 comments)
Some comments included concerns that the EIS analysis does not adequately evaluate combined impacts of rezoning and middle-ground options between the two Alternatives. A few questions about the analysis related to houselessness, tree canopy, Critical Areas Ordinance, and rezoning were also shared.

**Aesthetics** (24 comments)
Comments emphasized the importance of neighborhood character, cohesive, high-quality development, and concerns about graffiti, trash, and homelessness.

**Public Services and Utilities** (18 comments)
Comments mentioned concerns that existing public utilities, including schools, police, fire, emergency services, and parks, are strained and will not be able to keep up with demand as the city grows.

**Other – Engagement Process** (16 comments)
Comments included concerns that engagement did not fully reach all demographics (especially renters, non-English speakers, low-income residents, and those without internet access), information shared was difficult to understand, and input was being overlooked.

**Air Quality, Greenhouse Gases, and Climate** (14 comments)
Comments included support for growth along transit lines to reduce vehicle miles travelled, concern about air pollution near freeways and industrial zones, and calls to increase climate resiliency through tree canopy, open space preservation, and solar power.

**Noise** (14 comments)
Comments mentioned noise concerns associated with traffic, mixed-use rezoning, and industrial traffic, and expressed desire for noise barriers and protections.

**Water** (13 comments)
Comments mentioned concerns about stormwater runoff and pollution, increasing area of impervious surfaces, and groundwater availability in the future.

**Other – Non Project** (8 comments)
Comments were unrelated to the Comprehensive Plan update, including feedback related to the Interstate Bridge Replacement Program.

**Other – Annexation** (5 comments)
Comments included questions from residents outside City limits about how their areas will be managed, desire for increased communication regarding the annexation process, and concerns that annexation could result in increased congestion and taxes.

**Other – Policies and Implementation** (3 comments)
Comments included skepticism about how the rezoning process will be implemented, desire for building permits to include requirements for parking and natural space, and emphasized the need for regulation of small electric vehicle use in bike lanes.

**Earth** (1 comment)
Comment shared concern about whether geologic and environmental hazards related to increased housing and commercial density in Southcliff were adequately considered.

## Demographics of Commenters

The online comment form contained additional optional demographic questions. The following subsections summarize demographics of individuals who chose to respond to these questions.

**Zip Codes** (300 responses)
Comments came from 24 zip codes, including the City of Vancouver and surrounding areas in the urban growth boundary, Camas, and Washougal.

**Gender** (275 responses)
The gender breakdown of respondents is as follows:

- Female, 45.5% (125)
- Male, 40.0% (110)
- Non-binary, 0.4% (1)
- Transgender, 0.7% (2)
- Prefer not to answer, 14.0% (39)
- Self-identified, 0.7% (2)

**Age** (255 responses)
More than half of responses came from respondents over the age of 55. The age breakdown of respondents is as follows:

- Under 18 years, 1.2% (3)
- 18 – 24 years, 2.0% (5)
- 25 – 34 years, 7.8% (20)
- 35 – 44 years, 16.9% (43)
- 45 – 54 years, 12.9% (33)
- 55 – 64 years, 18.4% (47)
- Over 65 years, 40.8% (104)

**Race/Ethnicity** (271 responses)

Most respondents (61.6%) identified as white or European American. The racial/ethnic breakdown of respondents is as follows:

- American Indian or Alaska Native, 0.7% (2)
- Asian or Asian American, 4.4% (12)
- Black or African American, 1.9% (5)
- Hispanic or Latino/a/e, 4.4% (12)
- Middle Eastern or North African, 0.4% (1)
- Native Hawaiian or Pacific Islander, 0% (0)
- White or European American 61.6% (167)
- Other, 2.2% (6)
- Prefer not to answer, 26.9% (73)

**Language** (223 responses)

48% of respondents said that they only speak English fluently, while 33.2% of respondents selected prefer not to respond. The most common language spoken by participants other than English was Spanish (8.1%). No responses were received in a language other than English.

**Income** (271 responses)

The income breakdown of respondents is as follows:

- Below $19,999, 0.7% (2)
- $20,000 – $49,999, 3.7% (10)
- $50,000 – $89,999, 11.1% (30)
- $90,000 – $129,999, 11.4% (31)
- $130,000 – $149,999, 4.1% (11)
- Above $150,000, 23.3% (63)
- Prefer not to answer, 45.8%, (124)

**Disability** (274 responses)

Approximately 9.1% of respondents have a disability.

**Housing Situation** (275 responses)

About three-quarters of survey participants (76.4%) own their house. Roughly 10.6% of respondents rent, and 2.2% live with someone but do not pay rent.

# PHASE 3: DRAFT PLAN AND CODE ENGAGEMENT AND OUTREACH SUMMARY

February and March 2026

## Contents

Introduction ..... 1
Engagement and Outreach Methods ..... 2
Summary of Questions and Feedback ..... 5
Next Steps ..... 7
Demographics of Respondents ..... 8

## Introduction

Phase 3 engagement took place during Winter 2026. The purpose of Phase 3 engagement was to report back to the community and project participants on what we heard from them previously and demonstrate how this is reflected in draft 2045 Comprehensive Plan and updated development code. The goals of Phase 3 engagement were to:

- Inform the community about the draft plan and code process and content.
- Invite feedback and answer questions about the draft plan and code, specifically on items we missed or were unclear.
- Inform the community about final steps, including the Plan and code adoption process and the Final Environmental Impact Statement (FEIS) that support this.

This document summarizes engagement feedback from the community so that it can be incorporated into the **OUR VANCOUVER** Comprehensive Plan, specifically the final plan and code details before they're brought to City Council for adoption in Spring 2026. It also notes common questions heard during this phase.

# Engagement and Outreach Methods

## Overview

- PDFs of the full draft plan and zoning code were posted to the City's website on February 19, 2026.
  - Links to these were posted on BeHeard, the LinkTree, and StoryMap.
- Feedback form open from February 19 through March 31, 2026.
- Updated online StoryMap with an overview of the draft plan and zoning code. This included:
  - State requirements, community input, and goals by plan chapter,
  - Descriptions of the new zoning districts,
  - Information about final steps, and
  - Links to the full draft plan and code, the interactive Preferred Land Use Alternative map, and feedback form.
- Four Community Presentations
  - Two virtual, one during the lunch hour and one on a weekday evening.
  - Two in-person, one in East Vancouver on a weekday evening and one in West Vancouver midday over the weekend.
- 16 additional group-specific discussions with Community Partners, community working groups, boards and commissions, and neighborhood associations.
- Five City Council workshops and six Planning Commission workshops.
- Outreach promoted the StoryMap and Community Presentations via multiple email lists, social media, direct emails to partners and neighborhood associations, City website, BeHeard, and local news outlets.

## Engagement Methods

In total, 150 questions and feedback were received through the following methods.

### Community Presentations

Description: Four 2-hour presentation and Q&A sessions on the draft Comprehensive Plan and Zoning Code for community members to see how community input, City priorities, and state requirements shaped the draft plan

and zoning code, meet the project team, and ask questions. Events were free and open to the public.

**Dates:**

- 2/19/2026 – Virtual: Presentation and recording
- 2/26/2026 – Virtual: Presentation and recording
- 2/28/2026 – City Hall: Presentation
- 3/4/2026 – Cascade Park Community Library: Presentation and recording

**Participation:** Approximately 121 total public attendees (38 at 2/19, 25 at 2/26, 23 at 2/28, 35 at 3/4). 92 questions/comments received.

**Outreach:** Information and RSVP link posted to City calendar, LinkTree, and on the project BeHeard page; sent out via the Our Vancouver, Vancouver Connects, and Office of Neighborhood e-newsletters; sent out in direct emails to partner organizations and community working groups; and posted on social media. Local news outlets also advertised the community presentations. Additionally, recordings and slides from the presentations were posted to the BeHeard page and sent out in the Our Vancouver e-newsletter and in direct emails.

### Feedback Form

**Description:** Online feedback form for people to provide feedback on the draft plan and code online at a time and place that is convenient for them. Primarily, it asked people if we missed anything important, with additional space for open-ended questions/feedback. Feedback form was available in English, Spanish, Russian, Vietnamese, Ukrainian, Chinese (simplified), and Chuukese.

**Date(s):** Open from February 19, 2026, through March 31, 2026

**Participation:** 33 feedback form submissions received that included feedback.

**Outreach:** Link to form was included in LinkTree, which was shared in slides, over chat during virtual Community Presentations, and in a handout at in-person Community Presentations and in outreach flyers. Link posted on BeHeard page and in StoryMap. Link included in Our Vancouver e-newsletters and direct emails to partners and neighborhood associations.

### Our Vancouver Email Inbox

**Description:** Shared Outlook mailbox (OurVancouver2045@cityofvancouver.us) for community members to contact the project team, ask questions, and share

their thoughts. E-newsletters with project updates were also sent from this email address.
**Date(s):** This summary focuses on emails received from February 19, 2026 through March 31, 2026, which aligns with the release of the draft plan and code and the close of the feedback form. However, the email has been active since early on in the plan update process.
**Participation:** 23 emails received
**Outreach:** Email address was listed on the StoryMap, hardcopy materials, social media posts, Our Vancouver e-newsletters, presentations, and Be Heard. Email has been shared throughout the entire course of the plan update process.

2 hardcopies of feedback were also received.

## Outreach Details

- **Be Heard** – project webpage
- **StoryMap** – online overview of draft plan and zoning code
  - 1,600+ views, 2/19/2026-3/31/2026
- **Interactive Map** – online Preferred Alternative map
  - 1500+ views, 2/19/2026-3/31/2026
- **Our Vancouver e-newsletter**
  - 12 emails sent: 1/8/2026, 1/22/2026, 1/29/2026, 2/4/2026, 2/19/2026, 2/19/2026, 2/23/2026, 2/26/2026, 2/27/2026, 3/2/2026, 3/6/2026, 3/12/2026
  - From 904 to 970 recipients.
- **Vancouver Connects** e-newsletter
  - Three emails sent: January 2026, February 2026, March 2026
- **Office of Neighborhoods** e-newsletter
  - Three emails sent: 1/30/2026, 2/13/2026, 2/27/2026
- **Citywide Quarterly Newsletter**
  - Hardcopy mailed to all residents in Vancouver: March 2026
- **Local news outlets**
  - The Columbian 2/16/2026: City to discuss Vancouver's 20-year growth plan with residents
  - KATU 2/17/2026: Vancouver plans for growth as it eyes second-largest city status in Washington

    - The Columbian 2/26/2026: Vancouver weighs adding bike parking requirements to comprehensive plan update
    - The Columbian 3/28/2026: High anxiety over high density: Vancouver residents worry that city's plans for more housing will erode quiet neighborhoods
    - The Columbian 3/28/2026: City of Vancouver foresees 44,100 new units in 20 years
- City website/calendar
    - Community Presentations were advertised on the calendar on the City website
- Social media - Facebook, Instagram, LinkedIn, NextDoor
    - 10 posts on Facebook and Instagram: 2/6/2026, 2/20/2026, 2/22/2026, 2/24/2026, 3/2/2026. 2 on Linkedin. 1 on NextDoor.
    - Community Presentations were also shared as Facebook events on 1/29/2026
- Direct emails to partners and neighborhood associations.
- Flyers posted at the entrance to City Hall and on the BeHeard website and were provided to City engagement staff, Community Partners, and in direct emails to partners and neighborhood associations to share with community members.

## Summary of Questions and Feedback

This section provides an overview of community questions and feedback that emerged during Phase 3 of community engagement for the **OUR VANCOUVER** Comprehensive Plan. It includes feedback received through Community Presentations, the feedback form, the Our Vancouver email inbox, and hardcopies provided to staff.

The feedback form was created to help the public review the plan chapters and zoning district regulations and confirm they align with community input, state laws, and City priorities. It asked whether anything was missing from each chapter and whether the zoning district regulations made sense. Some people said the draft chapters and zoning districts were complete or chose not to provide specific feedback. The feedback that was submitted focused on several key topics, which are summarized below.

The summary section below quantifies feedback received by the terms "few," "some," or "many." *Few* means less than 10 comments received; *Some* or several means between 10-20 comments received; and *Many* means 20 or more comments received on a particular topic.

## Background Clarifications

Many people had questions related to how zoning works, the application of state laws, targets for population, housing, and jobs, demographics, coordination with the County, partner agencies, and nearby cities, and annexation.

## Medium-Scale Neighborhood

Many people had questions or concerns about the Medium-scale Neighborhood zoning designation, particularly in existing single-family neighborhoods while a few people responded that the district's regulations make sense or were supportive. Primary concerns included the 75-foot building height and increased densities.

## Vehicle Traffic and Parking

Many people were concerned that increased density and a greater mix of uses will lead to increases in vehicle traffic and vehicles parked on-street in those areas. The concerns were mainly that increased vehicle traffic and parking would lead to increases in noise and air pollution and decreases in safety and convenience.

## Engagement

Some people felt that they were not adequately notified of or not heard in the plan update process, while a few others expressed appreciation for engagement efforts. There was a general desire to continue to be engaged in land use and development decisions.

## Public Services and Infrastructure

Some people had questions/concerns about how public services and infrastructure (e.g., water, sewer, stormwater, sidewalks, parks, roads and emergency services) will be provided, maintained, and funded to meet the needs of an increasing population and associated development.

### Green Space and Trees

Some people expressed continued support for and desire for inclusion of green space, including support for trees, natural areas, parks, gardens, and green roofs.

### Covenants, Conditions, and Restrictions (CC&Rs)

Some people had questions/concerns about potential conflicts between a property's zoning and a property's Covenants, Conditions, and Restrictions (CC&Rs).

### Property Values and Taxes

Some people had questions/concerns about how the zoning changes will impact property values or increase property taxes, particularly for properties that are proposed to be upzoned.

### Additional Plan and Code Details

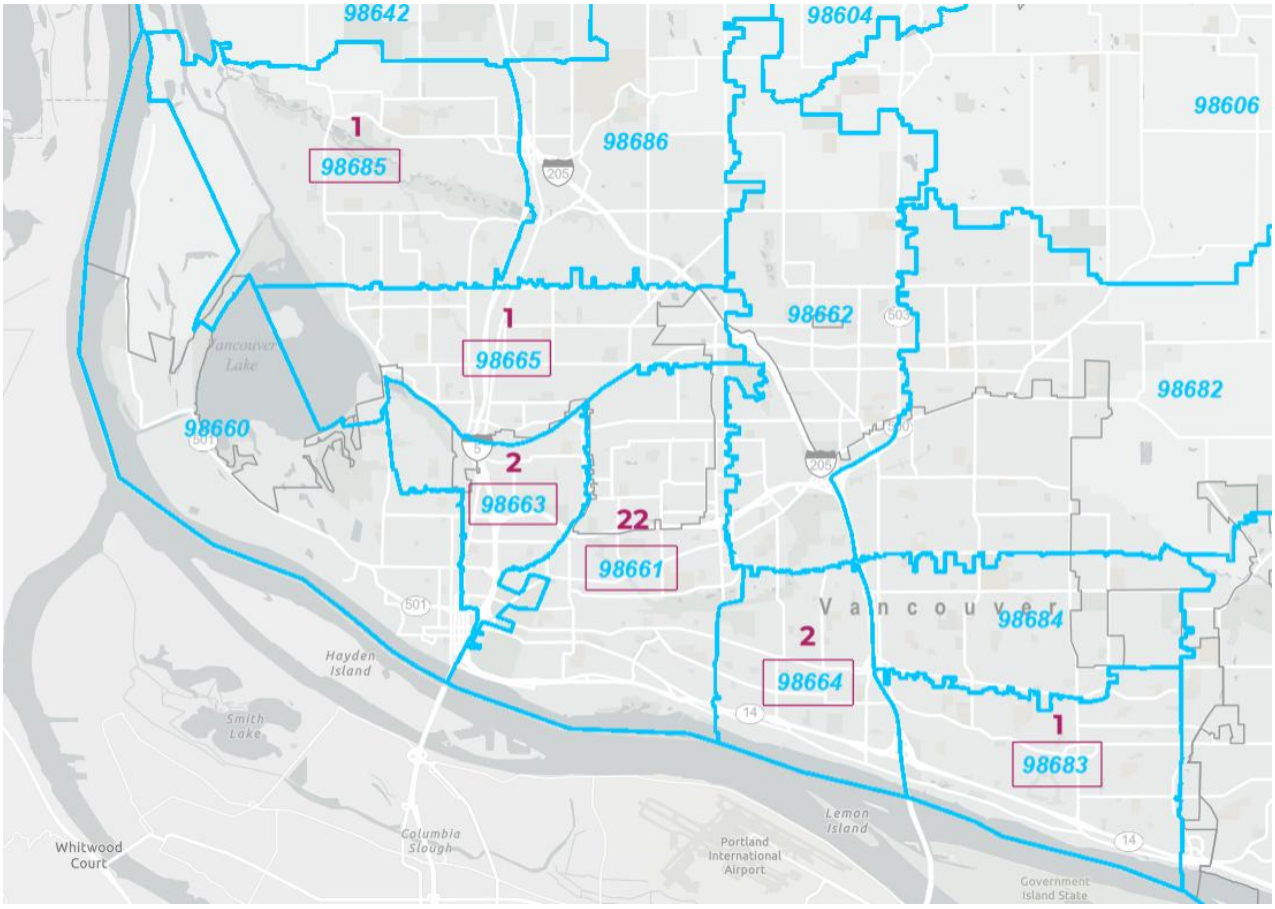
Individuals also had specific comprehensive plan and zoning code suggestions and questions that staff reviewed or responded to including those that related to:

- Solid waste,
- Lot standards (e.g., setbacks, façade articulation),
- Bicycle parking,
- Design/aesthetics,
- Easements for bicycle/pedestrian connectivity,
- Climate action and environmentalism, and
- Non-conformities.

## Next Steps

This summary and information will be shared at City Council and Planning Commission meetings. Many common questions were addressed during community presentations and discussions. Common questions will also be addressed in an updated FAQ, which will be shared through the Our Vancouver email list and posted on the Our Vancouver webpage. Feedback that aligns with state law, City priorities, and past community input will inform

revisions to the draft plan and code before they're brought through the approval process.



## Demographics of Respondents

The online feedback form contained additional optional demographic questions. The following subsections summarize demographics of individuals who chose to respond to these questions. There was a total of 33 feedback form responses and percentages below are based off this total.

### Zip Codes (30 responses)

Comments came from 7 zip codes, with most responses from 98661 (66.7%). The 98661 zip code is generally west of Andresen Road, east of Saint Johns Boulevard and I-5, and south of 78th Street. See Figure 1.

*Figure 1. Zip Codes in the Vancouver area and number of responses per zip code*

### Gender (26 responses)

The gender breakdown of respondents is as follows:

- Female, 36.4% (12)
- Male, 33.3% (11)
- Non-binary, 0.0% (0)
- Transgender, 3.0% (1)
- Prefer not to answer, 9.1% (3)
- Self-identified, 3.0% (1)
- *Skipped question*, 24.2% (8)

(Note: Percentages don't add to 100% because respondents could select more than one answer.)

### **Age** (22 responses)

One third of responses came from respondents over the age of 65. The age breakdown of respondents is as follows:

- Under 18 years, 0.0% (0)
- 18 – 24 years, 0.0% (5)
- 25 – 34 years, 3.0% (1)
- 35 – 44 years, 21.2% (7)
- 45 – 54 years, 6.1% (2)
- 55 – 64 years, 3.0% (1)
- Over 65 years, 33.3% (11)
- *Skipped question*, 33.3% (11)

### **Race/Ethnicity** (28 responses)

About half of respondents (51.1%) identified as white or European American. Responses from non-white/European American respondents was minimal. The racial/ethnic breakdown of respondents is as follows:

- American Indian or Alaska Native, 3.0% (1)
- Asian or Asian American, 0.0% (0)
- Black or African American, 3.0% (1)
- Hispanic or Latino/a/e, 0.0% (0)
- Middle Eastern or North African, 0.0% (0)
- Native Hawaiian or Pacific Islander, 0.0% (0)
- White or European American, 51.1% (17)
- Other, 3.0% (1)
- Prefer not to answer, 26.9% (9)
- *Skipped question*, 15.2% (5)

(Note: Percentages don't add to 100% because respondents could select more than one answer.)

### Language (23 responses)

Responses from people who speak a language other than English respondents was minimal. 1 respondent speaks Spanish (3.0%) and another respondent selected "Other" (3.0%). 33.3% respondents said that they do not speak a language other than English fluently and 60.6% of respondents selected prefer not to respond or skipped the question. No responses were received in a language other than English.

### Income (26 responses)

The income breakdown of respondents is as follows:

- Below $19,999, 0.0% (0)
- $20,000 – $49,999, 3.0% (1)
- $50,000 – $89,999, 6.1% (2)
- $90,000 – $129,999, 3.0% (1)
- $130,000 – $149,999, 12.1% (4)
- Above $150,000, 6.1% (2)
- Prefer not to answer, 48.5%, (16)
- *Skipped question*, 21.2% (7)

### Disability (27 responses)

Approximately 15.2% of respondents have a disability.

### Housing Situation (29 responses)

A large majority of respondents (81.8%) own their house. Only 1 respondent (3.0%) rents. 15.2% of respondents selected prefer not to answer or skipped the question.

# Executive Summary

The City of Vancouver recognizes that greenhouse gas (GHG) emissions from human activity are catalyzing profound climate change, the consequences of which pose substantial risks to the future health, wellbeing, and prosperity of our community. To respond to this crisis, the Vancouver City Council adopted the Climate Action Framework in December 2022 and set a target year of 2040 for community-wide carbon neutrality.

To monitor progress and adjust strategies to meet the goals set out in the Climate Action Framework, Council directed the City to update its Greenhouse Gas (GHG) Inventory every four years. This report provides estimates of greenhouse gas emissions resulting from activities in City of Vancouver as a whole in 2023 as well as emissions specifically from the City's government operations after one year of work under the Climate Action Framework. The latest update follows previous inventories conducted in 2019 and 2007.[1]

As of 2023, emissions community-wide are down 27% and municipal operations emissions have fallen 54% as measured relative to their respective 2007 baseline inventories (Figure 1).

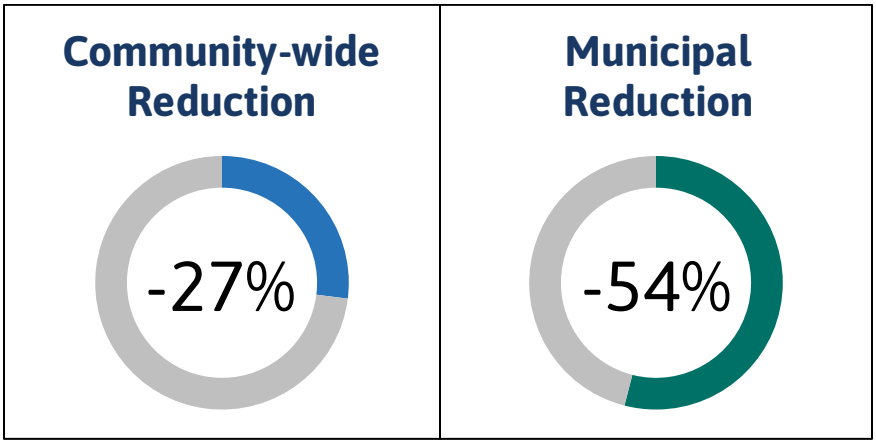

**Figure 1: Emissions Reduction from 2007 baseline to 2023**

These inventories demonstrate that ambitious goals are critical to motivate the necessary action to stem the worst impacts of climate change. The City has made significant progress on municipal emissions reduction by investing in capital projects and fuel switching in our fleet vehicles, yet more aggressive action is needed to reach our interim targets and set a leading edge pace for climate action in Vancouver.

[1] Over time, available data sources and best practices for greenhouse gas accounting have improved, which can result in changes between inventories. The 2019 and 2023 GHG Inventories were conducted using the same methodology, but the original 2007 GHG Inventory did not measure all of the same emissions sectors or use the same accounting tools and practices. More details on updates to the 2019 inventory for alignment with the 2023 inventory can be found in Appendix B.

In addition to energy efficiency and renewable energy projects to offset overall energy demand by government facilities, forecasts show that transitioning government buildings and vehicles, where appropriate, to electric power sources will put the City in a position to benefit from the rapid decarbonization of the electricity grid mandated by the Clean Energy Transformation Act (CETA). This state policy requires Washington's electric utilities to be GHG neutral by 2030 and 100% carbon-free by 2045, which will drive down emissions in buildings, water and wastewater treatment, street lights, and fleet vehicles that run on electricity.

While cleaner electricity will be a driving force in meeting municipal emissions targets, it is not enough on its own to maintain a downward trajectory for emissions community-wide. Population growth and the return to pre-pandemic travel norms are expected to push transportation sector emissions upward over time without significant interventions to shift behavior.

Many communities in the United States have started to take responsibility for addressing climate change at the local level, and the City of Vancouver has significant and direct influence over community-wide emissions through its policies that determine how land use evolves and changes over time and the standards it sets for building and road development. Reducing fossil fuel use in the community can have many benefits in addition to reducing greenhouse gas emissions. More efficient use of energy decreases utility and transportation costs for residents and businesses. Retrofitting homes and businesses to be more efficient creates local jobs. In addition, when residents save on energy costs, they are more likely to spend at local businesses and add to the local economy. Reducing fossil fuel use improves air quality, and increasing opportunities for walking and bicycling improves residents' health.

These areas are crucial for fostering sustainable community growth, but changing the existing built environment and shifting human behavior are two of the hardest challenges we face in shifting our climate future. As our community grows in its size, economy, and vibrancy, reducing emissions in the Buildings and Transportation sectors will require widespread partnership with private citizens and businesses.

This inventory marks the City's first assessment of the measurable impacts of its early climate action efforts, and these results will inform further refinement and prioritization of the most impactful community actions in the 2026 update to the Climate Action Framework.

# Key Findings

Figure 2 shows communitywide emissions by sector, which have declined 27% overall relative to the 2007 baseline inventory. The largest contributors remain On-Road Vehicles (37%) and Buildings & Energy as a sector (37%), followed by Other Emissions (11%), which include process and fugitive emissions from refrigerants, natural gas leakage, and electric power transmission losses. Actions to reduce emissions in all sectors are a key part of the City of Vancouver's Climate Action Framework. However, meeting community-wide carbon-neutrality goals will require widespread private partnership to shift behavior and retrofit existing buildings.

Figure 3 shows local government operations emissions, which have declined 54% relative to the 2007 baseline. Water & Wastewater Treatment accounts for a vast majority (47%) of these emissions. The next largest contributor is Buildings & Facilities (23%), followed by Fleet (11%) and Employee Commute (7%). Paired with the greening of our purchased electricity, there is a strong pathway to realize our municipal climate goals with continued investment in emissions reduction measures. Capital projects already planned over the next biennium and beyond will significantly cut emissions in our largest sectors.

The Inventory Results section of this report provides a detailed profile of emissions sources within Vancouver; information that is key to guiding local reduction efforts.

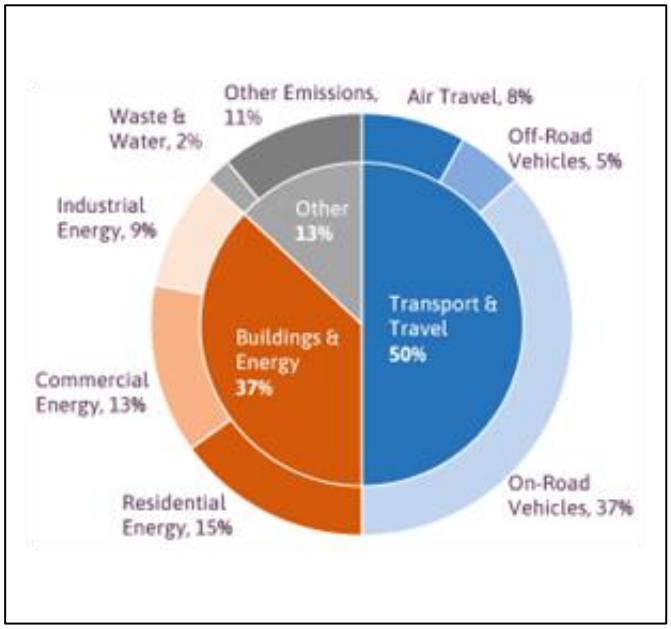

**Figure 2: Community-wide Emissions by Sector**

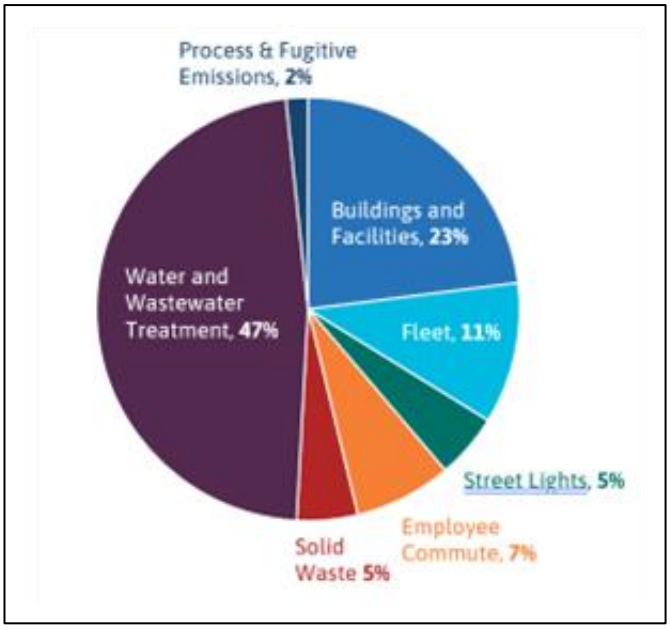

**Figure 3: Government Operations Emissions by Sector**

# Inventory Methodology

## Understanding a Greenhouse Gas Emissions Inventory

This report presents emissions from both the Vancouver community as a whole and from operations of the City of Vancouver municipal government. The government operations inventory is mostly a subset of the community inventory, as shown in Figure 4.

**Figure 4: Relationship of Community and Government Operations Inventories**

Emissions tracking and reporting serves multiple purposes. Climate targets and plans need to be reviewed regularly to bring in the necessary level of ambition to achieve net-zero emissions by 2040. Documentation of emissions sources allows transparency and accountability to the public. And trends observed year-over-year provide direction for large planning processes.

To complete this inventory, City of Vancouver utilized tools and guidelines from ICLEI - Local Governments for Sustainability (ICLEI), which provides authoritative direction for greenhouse gas emissions accounting. Over time, available data sources and best practices for greenhouse gas accounting have evolved, which can result in changes between inventories. The 2007 GHG Inventory, which was the City's first inventory and is used as a baseline for emissions reduction targets, draws on several protocols that were early iterations of what we use today but does not include all of the same sources of emissions that are accounted for in 2019 and 2023.

The 2019 and 2023 inventories use the approach and methods provided by the U.S. Community Protocol for Accounting and Reporting Greenhouse Gas Emissions (Community Protocol) and the Local Government Operations Protocol for Accounting and Reporting Greenhouse Gas Emissions (LGO Protocol), both of which are described below. For 2023, calculations were made using ICLEI's ClearPath software, and Quality Assurance/Quality Control was conducted by ICLEI.

Three greenhouse gases are included in this inventory: carbon dioxide ($CO_2$), methane ($CH_4$) and nitrous oxide ($N_2O$). Many of the charts in this report represent emissions in "carbon dioxide equivalent" ($CO_2e$) values, calculated using the Global Warming Potentials (GWP) for methane and nitrous oxide from the IPCC 5th Assessment Report.[2]

[2] The Global Warming Potential of Carbon Dioxide ($CO_2$) is 1, Methane ($CH_4$) is 28, and Nitrous Oxide ($N_2O$) is 265. (IPCC, 2014)

# Community Emissions Protocol

Version 1.2 of the U.S. Community Protocol for Accounting and Reporting GHG Emissions[3] was released by ICLEI in 2019 and represents a national standard in guidance to help U.S. local governments develop effective community GHG emissions inventories.

The community inventory in this report includes emissions from the five Basic Emissions Generating Activities required by the Community Protocol. These activities are:

- Use of electricity by the community as reported by Clark Public Utilities
- Use of fuel in residential and commercial stationary combustion equipment
- On-road passenger and freight motor vehicle travel
- Use of energy in potable water and wastewater treatment and distribution
- Generation of solid waste by the community

The community inventory also includes the following activities:

- Wastewater processing and combustion of biosolids
- Air travel within Vancouver and itinerant air traffic by Vancouver residents
- Public transit
- Off-road passenger and freight travel, including marine and rail
- Fugitive emissions from key refrigerants and natural gas leakage
- Electric power transmission losses

# Local Government Operations (LGO) Protocol

In 2010, ICLEI, the California Air Resources Board (CARB), and the California Climate Action Registry (CCAR) released Version 1.1 of the LGO Protocol.[4] The LGO Protocol serves as the national standard for quantifying and reporting greenhouse emissions from local government operations.

The following activities are included in the LGO inventory:

- Electricity and natural gas consumption from buildings, facilities, and street lights
- Use of energy in potable water and wastewater treatment and distribution
- Wastewater treatment processes, including combustion of biosolids
- On-road transportation from employee commute and vehicle fleet
- Solid waste generated at government facilities
- Fugitive emissions from key refrigerants and natural gas leakage

# Community Emissions Inventory Results

The City of Vancouver aims to reduce community-wide greenhouse gas emissions 80% by 2030 and become carbon neutral by 2040. Since 2019, Vancouver's community-wide greenhouse gas emissions have continued to decline and now amount to a 27% reduction relative to the 2007 baseline inventory.

This change in overall emissions appears to be driven largely by buildings being powered by cleaner electricity sources (i.e. grid decarbonization) and lingering effects of the COVID-19 pandemic on transportation patterns, as well as increased appliance and vehicle efficiency. In other sectors, improved composting is keeping emissions associated with landfilled solid waste down, while fugitive emissions from refrigerants and air conditioning have increased.

The total communitywide emissions for the 2023 inventory are shown in Table 1 and Figure 5.

**Table 1: Communitywide Emissions Inventory (2023)**

| Sector | Fuel or Source | 2023 Usage | Usage unit | 2023 Emissions ($MTCO_2e$) | % Change from 2019* |
|---|---|---|---|---|---|
| Residential Energy | Electricity (Clark Public Utilities) | 935,798,884 | kWh | 132,074 | 0% |
| | Natural gas (Northwest Natural) | 17,748,236 | Therms | 94,397 | 5% |
| **Residential Energy total** | | | | **226,471** | **2%** |
| Commercial Energy | Electricity (Clark Public Utilities) | 768,724,075 | kWh | 108,494 | -11% |
| | Natural gas (Northwest Natural) | 14,949,639 | Therms | 79,512 | 7% |
| **Commercial Energy total** | | | | **188,006** | **-4%** |
| Industrial Energy | Electricity (Clark Public Utilities) | 349,090,417 | kWh | 49,269 | 14% |
| | Natural gas (Northwest Natural) | 15,424,459 | Therms | 81,864 | 251% |
| **Industrial Energy total** | | | | **131,133** | **63%** |
| On-Road Transportation | Gasoline (passenger vehicles) | 978,284,636 | VMT | 390,148 | -15% |
| | Diesel (passenger and freight) | 101,318,961 | VMT | 145,367 | -13% |
| Transit | Diesel | 4542253 | VMT | 7,325 | -8% |
| | Gasoline | 30152 | VMT | 40 | -47% |
| Aviation | Aviation Gasoline | 11,336,811 | gal | 110,404 | -73%* |
| Off-Road | Diesel | 508,807 | MMBtu | 37,659 | 4% |
| | Gasoline | 297,668 | MMBtu | 21,420 | 15% |
| | LPG | 107,177 | MMBtu | 6,600 | 1468% |
| | CNG | 11,178 | MMBtu | 692 | 180% |
| Marine (Freight) | Diesel | 53,736 | MMBtu | 3974 | 82% |
| Rail (Freight) | Diesel | 21,909 | MMBtu | 1620 | -70% |
| **Transportation total** | | | | **725,249** | **-34%** |
| Solid Waste | Waste Generated | 128,152 | Tons | 23,634 | -10% |
| **Solid Waste total** | | | | **23,634** | **-10%** |
| Water & Wastewater | Water Treatment Energy Usage | 21,800,000 | kWh | 3,077 | 1% |
| | Wastewater Treatment Energy Usage | 17,664,192<br>3,960 | kWh<br>Therms | 2,514 | 9% |
| | Wastewater Treatment | 6,068 | million gal/yr | 205 | 6% |
| | Nitrogen Discharge | 1,258 | kg N/day | 956 | 18% |
| | Combustion of Biosolids | 21 | MT/day | 1,866 | 19% |
| **Water & Wastewater total** | | | | **8,618** | **9%** |
| Process & Fugitive Emissions | Fugitive Emissions from Natural Gas Distribution | | | 8,350 | 36% |
| | Process Emissions from Refrigerant Use (HFCs and PFCs) | | | 130,084 | 22% |
| **Process & Fugitive total** | | | | **138,434** | **23%** |
| Upstream Impacts of Activities | Electric Power Transmission Losses | | | 15,066 | -1% |
| **Upstream Impacts total** | | | | **15,066** | **-1%** |
| **Total community-wide emissions** | | | | **1,456,611** | **-17%** |

*Table 1 Note: The percent change from 2019 is based on adjusted 2019 GHG Inventory numbers reported in Appendix B. Also, much of the -73% change reported in Aviation is due to variation in how emissions were calculated in 2019 and 2023. This is the only sector where different methodologies were used between the two inventory years.

Figure 5 shows the distribution of communitywide emissions by sector. On-road vehicles are the largest contributor (37%), followed by residential (15%) and commercial (13%) buildings and fugitive emissions from refrigerants and natural gas distribution (Other Emissions, 11%). Industrial Energy (9%) and Waste & Water (2%) sectors are other areas where the City has influence to help drive down overall community emissions.

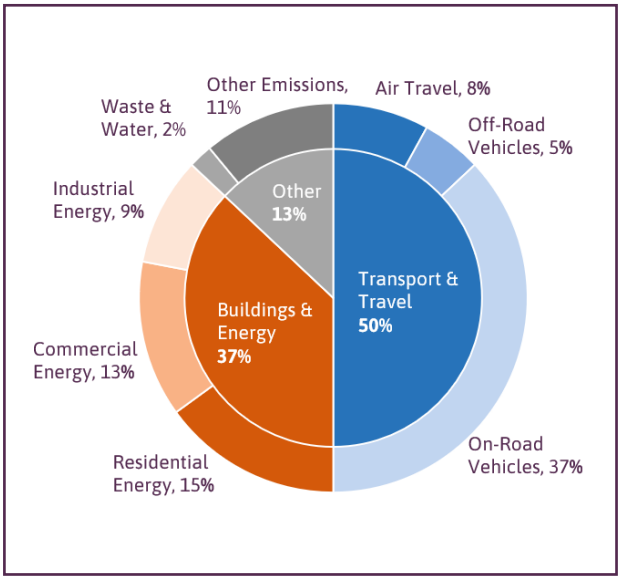

**Figure 5: Community-wide Emissions by Sector**

Even as population increased from 2019 to 2023, Transportation sector emissions have declined due in large part to lingering effects of the COVID-19 pandemic. Community-wide vehicle miles traveled increased since 2020 but still have not reached pre-pandemic levels. Additionally, a change in methodology for attributing Air Travel from Portland International Airport for Vancouver travelers is contributing to the decline in total Transportation emissions in 2023. These reductions in overall Transportation emissions were significant enough to offset smaller increases in emissions in other sectors.

In Buildings, actual energy use has increased in all three sectors, particularly residential. However, GHG emissions remained steady or went down for electric customers, despite this increasing demand. This is likely a result of increased clean energy in the Clark Public Utilities resource mix. Natural gas usage and related emissions are both increasing in parallel. The industrial sector saw a particularly large increase in natural gas usage by businesses who procure fuels themselves and transport it via NW Natural's system.

Other sectors that saw increased emissions were Water & Wastewater and Process & Fugitive emissions. Water & Wastewater energy use is directly influenced by the amount of water that requires treatment on behalf of the community, which increases along with the population. Water conservation programs are promising for helping to reduce emissions in this sector, and both utilities continue to invest in major capital projects to modernize treatment systems and reduce emissions.

Lastly, Solid Waste saw a decrease in emissions despite an increase in solid waste collected from residences and businesses in Vancouver and sent to the landfill. This is likely due to increased rates of composting. Although this inventory does not account for composting directly, the waste characterization includes much less organic material going to the landfill than in previous years.

## Next Steps

Changing the existing built environment and shifting human behavior are two of the hardest challenges we face in shifting our climate future. As our community grows in its size, economy, and vibrancy, reducing emissions in the Buildings and Transportation sectors will require widespread partnership with private citizens and businesses.

However, the City does have significant and direct influence over community-wide emissions through its policies that determine how land use evolves and changes over time and the standards it sets for building and road development. These areas are within the City's immediate control and are crucial for fostering sustainable community growth. By prioritizing emissions-reducing strategies in the upcoming Comprehensive Plan Update and Green Building Strategy, the City has two powerful and immediate opportunities to help mitigate the expected rise in community emissions.

# Government Operations Emissions Inventory Results

The City of Vancouver aims to reduce greenhouse gas emissions from local government operations 80% by 2025 and become carbon neutral by 2040.

The City has made steady progress in reducing its greenhouse gas emissions from municipal operations, which total approximately 1% of all emissions community-wide. As of 2023, there has been a 54% reduction in municipal emissions as measured relative to the 2007 baseline inventory. An additional 10,600 $MTCO_2e$ will need to be cut to reach the 80% reduction target.

Government operations emissions for inventory year 2023 are shown in Table 2 and Figure 6.

**Table 2: Local Government Operations Inventory (2023)**

| Sector | Fuel or Source | 2023 Usage | Usage unit | 2023 Emissions ($MTCO_2e$) | % Change from 2019* |
|---|---|---|---|---|---|
| Buildings & Facilities | Electricity | 19,520,695 | kWh | 2,755 | -19% |
| | Natural Gas | 299,180 | Therms | 1,591 | 17% |
| **Buildings & Facilities total** | | | | **4,346** | **-9%** |
| Street Lights | Electricity | 6,632,058 | kWh | 936 | -29% |
| **Street Lights total** | | | | **936** | **-29%** |
| Vehicle Fleet | E-10 Gasoline (on-road) | 2,859,713 | VMT | 1,984 | 2% |
| | R99 Diesel (on-road) | 785,156 | VMT | 14 | -99% |
| | Propane Autogas (on-road) | 40,055 | VMT | 31 | NA |
| | E-10 Gasoline (off-road) | 1,100 | gal | 9 | -65% |
| | R99 Diesel (off-road) | 11,842 | gal | 1 | -98% |
| | Propane (off-road) | 154 | gal | 1 | -50% |
| **Vehicle Fleet total** | | | | **2,040** | **-35%** |
| Employee Commute | Gasoline | 31,84,508 | VMT | 1213 | -35% |
| | Diesel | 329,626 | VMT | 183 | -33% |
| | Transit | 172,422 | VMT | 10 | -55% |
| **Employee Commute total** | | | | **1,406** | **-35%** |
| Solid Waste | Waste Generation | 5,315 | Tons | 877 | -6% |
| **Solid Waste total** | | | | **877** | **-6%** |
| Water & Wastewater | Water Treatment Energy Usage | 21,800,000 | kWh | 3,077 | 1% |
| | Wastewater Energy – Electricity | 17,664,192 | kWh | 2,493 | 8% |

| | | | | | |
|---|---|---|---|---|---|
| | Wastewater Energy – Natural Gas | 3,960 | Therms | 21 | 11% |
| | Wastewater Energy – Diesel | 28,663 | gal | 295 | -5% |
| | Wastewater Treatment | 7,653* | million gal/yr | 259 | 7% |
| | Nitrogen Discharge | 1,258 | kg N/day | 956 | 18% |
| | Combustion of Biosolids | 21 | MT/day | 1,866 | 19% |
| **Water & Wastewater total** | | | | **8,967** | **8%** |
| Process & Fugitive Emissions | Fugitive Emissions from Natural Gas Distribution | | | 52 | 16% |
| | Process Emissions from Refrigerant Use (HFCs) | | | 262 | 1091% |
| **Process & Fugitive Emissions total** | | | | **314** | **369%** |
| **Total government emissions** | | | | **18,886** | **-9%** |

*Note: The percent change from 2019 is based on the adjusted 2019 GHG Inventory numbers reported in Appendix B.

Figure 6 shows the distribution of emissions among the sectors included in the inventory. Water & Wastewater Treatment (47%) represents the majority of emissions, followed by Buildings & Facilities (23%) and Fleet (11%). Employee Commute (7%), Street Lights (5%), Solid Waste (5%), and Fugitive Emissions (2%) account for a smaller but not insignificant portion of emissions that will also need to be cut to achieve the City's goals.

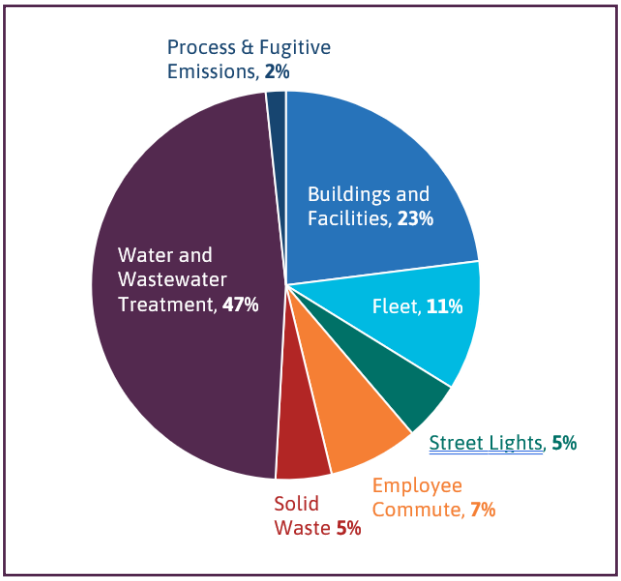

**Figure 6: Local Government Operations Emissions by Sector**

Between 2019 and 2023, significant progress was achieved through ongoing planning and projects, complemented by high-impact operational changes in 2023 and the influence of

external factors such as cleaner electricity sources. Figure 7 shows the change over time in municipal greenhouse gas emissions by sector.

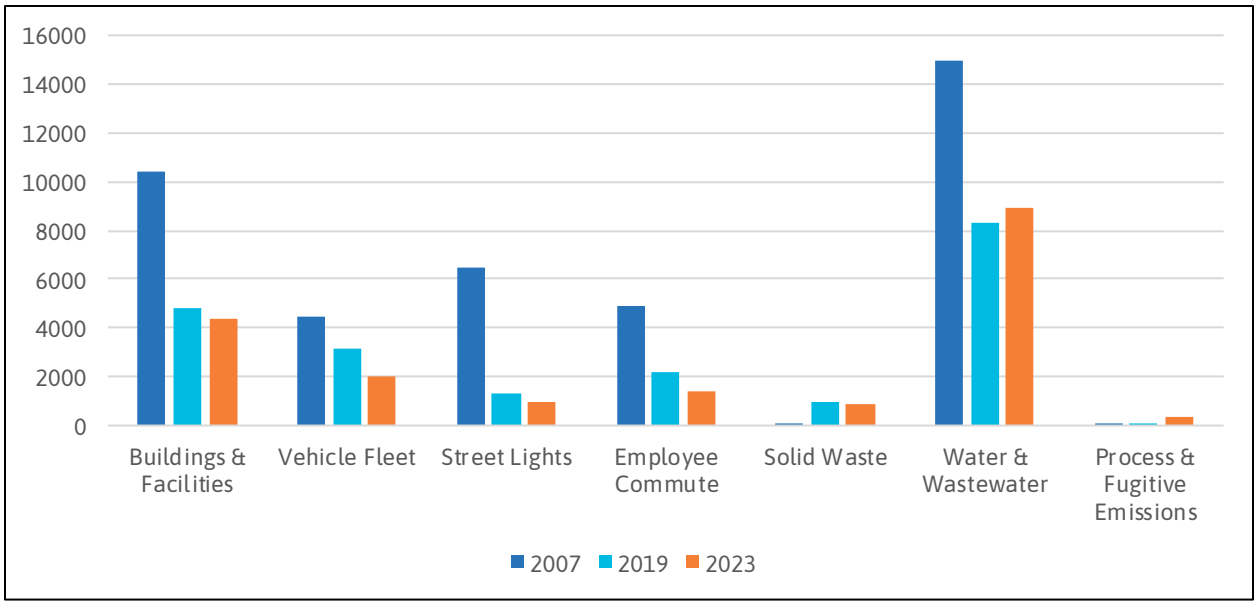

**Figure 7: Change in Municipal GHG Emissions by Sector (2007, 2019, and 2023)**

Significant factors driving recent changes in municipal emissions include:

- **Fuel Switching:** Fleet Services achieved some of the largest GHG reductions since 2019 through its innovative adoption of renewable fuels. As of 2023, all diesel vehicles and equipment used in City operations have fully transitioned from standard fossil fuel diesel to a 100% renewable, plant-based diesel fuel called R99. This change led to a significant decrease in GHG emissions and other air pollutants from the City's diesel fleet, leaving gasoline vehicles as the primary source of emissions measured in the Fleet sector of the inventory.
- **Energy Efficiency Projects:** Since 2019, Public Works upgraded 18,000 streetlights to more energy efficient LED fixtures and continued our history of regular energy efficiency improvements to our wastewater treatment systems. These projects reduced energy use and associated GHG emissions, while also saving the City more than $700,000 in energy costs annually. Projects are often developed in partnership with Clark Public Utilities and result in additional energy incentives to the City.
- **Telework Policies:** New work-from-home policies implemented during the pandemic, along with Commute Trip Reduction incentive programs, have reduced employee driving trips. Vehicle emissions also continue to trend downward due to federal fuel efficiency standards for new cars.
- **Decarbonization of the Electricity Grid:** Clark Public Utilities (CPU), following Washington's Clean Energy Transformation Act (CETA), is progressing toward its required transition to a carbon-neutral electricity supply by 2030. Cleaner electricity will help

drive down emissions from buildings, streetlights, and water and wastewater treatment over time.

- **Regional Population Growth:** The net increase in Water & Wastewater sector emissions is likely driven by increases in customers served by our municipal-owned utilities, which serve both residents of the City of Vancouver and neighboring unincorporated areas. Increased water demands community-wide will require increased energy usage by utilities to maintain high levels of service, and Water & Wastewater is expected to remain one of the City's largest emissions sectors.
- **Hotter/Colder Weather:** Without further analysis, we are unable to know how much effect to attribute to more frequent, extreme, and prolonged heat and winter storms, but we do expect that these weather events will have upward pressure on buildings-related emissions and fugitive emissions related to air conditioning refrigerants.

## Next Steps

The local government operations emissions inventory points to a need for continued investment in infrastructure, staff capacity, and capital projects that have longer planning horizons to accelerate our progress toward interim targets at a leading-edge pace. The City must continue to make progress in every sector, while also prioritizing equipment transitions to electricity sources to ensure municipal operations are on a downward trajectory as the electricity grid is decarbonized.

# Conclusion

The 2023 GHG Inventory marks the City's first assessment of the measurable impacts of its early climate action efforts after one year of work under the Climate Action Framework. Significant progress has been made to reduce emissions from municipal operations, and foundational policies are underway to mitigate the expected rise in community emissions.

This inventory shows that buildings as well as communitywide transportation patterns will be particularly important to focus on, which will require widespread partnership with private citizens and businesses, as well as strong policies to prioritize emissions-reducing strategies where the City has significant and direct influence. On the municipal side, reducing energy use wherever possible and transitioning to electric equipment will position the City to take the greatest advantage of the benefits of grid decarbonization.

It is also important to note that the City's greenhouse gas inventory reporting process does not reflect all priorities outlined in the Climate Action Framework nor all actions underway to adapt to and mitigate against climate change in our community and municipal operations. For example, natural systems are key to building and sustaining community and ecosystem resilience locally, but the impact of important programs implemented under the Climate Action Framework like Naturespaces and increased street tree planting by Urban Forestry are not directly represented in the GHG Inventory. As we work toward our emissions-based targets, these critical climate actions should not be overlooked or undervalued due to their absence from emissions accounting systems.

The City of Vancouver will continue to track key energy use and emissions indicators on an on-going basis, and data and methods will be improved over time to provide efficient and purposeful reporting. The next GHG inventory will be completed for the year 2027 to assess progress resulting from actions implemented in the coming years.

# Appendix A: Methodology Details

The following tables shows each activity, related data sources, and notes on data gaps.

## Energy

This inventory includes electricity and natural gas for the building sectors. Other sources that may be present in the community but are not accounted for include non-utility fuels (e.g. wood or oil heat) and other fuels used in industrial processes.

**Table 3: Energy Data Sources**

| Activity | Data Source | Data Gaps/Assumptions |
|---|---|---|
| **Communitywide** | | |
| Residential, commercial, and industrial electricity consumption | Clark Public Utilities | Electricity usage for customers within the City of Vancouver is reported by sector. |
| Residential, commercial, and industrial natural gas consumption | Northwest Natural | Weather-normalized natural gas loads for customers within the City of Vancouver are reported by sector. "Transportation" loads are included in the industrial sector. |
| **Local Government Operations** | | |
| Electricity consumption | Clark Public Utilities (CPU) | Electricity usage is calculated from consolidated bills for all City accounts provided by CPU. Street Lights electricity is based on one of the largest street lights accounts; other street lights and traffic lights are behind meters connected to building accounts and cannot be separated out from building totals. |
| Natural gas consumption | Northwest Natural (NWN) | Natural gas loads for all City accounts are provided by NWN. |

**Table 4: Emissions Factors for Electricity Consumption**

| Year | $CO_2$ (lbs/MWh) | $CH_4$ (lbs/GWh) | $N_2O$ (lbs/GWh) |
|---|---|---|---|
| 2022 | 310.6971 | 7.71 | 0.89 |

# Transportation

**Table 5: Transportation Data Sources**

| Activity | Data Source | Data Gaps/Assumptions |
|---|---|---|
| **Communitywide** | | |
| On-road vehicle miles travelled | Google Environmental Insights Explorer (EIE) | Google EIE provides origin and destination data based on cell phone location services. VMT attributed to this inventory includes 50% of inbound, 50% of outbound, and 100% of in-boundary VMT. Inventory does not account for electric vehicle adoption. |
| Off-road vehicles | US EPA National Emissions Inventory (NEI) | Population is used to scale county-level data from NEI to represent non-road equipment in the City of Vancouver. |
| Transit ridership | C-TRAN | Total VMT and fuels are reported by C-TRAN and scaled using C-TRAN ridership data on total passenger boardings vs. boardings in Vancouver. |
| Air travel | City of Portland, Port of Portland | Data provided by City of Portland on estimated actual emissions for flights leaving PDX to their first destination in 2022 is scaled using percent of travelers from Vancouver ZIP codes provided by Port of Portland traveler surveys. |
| **Local Government Operations** | | |
| Government vehicle fleet | Fleet Services | Data is tracked and reported using Fleet management software. |
| Employee commute | WSDOT Commute Trip Reduction (CTR) Employee Commute Survey (City Hall) | City Hall employee commute surveys are used as the basis for commute mode split and scaled to represent the entire employee population. This likely underreports emissions in this sector. As other City facility locations are surveyed, this method will be improved. |

For vehicle transportation, it is necessary to apply average miles per gallon and emissions factors for CH4 and N2O to each vehicle type. National default emissions factors are utilized for all vehicle types (see Table 6) except transit vehicle fuel economy where provided by C-TRAN.

**Table 6: MPG and Emissions Factors by Vehicle Type**

| Fuel | Vehicle type | MPG | $CH_4$ g/mile | $N_2O$ g/mile |
|---|---|---|---|---|
| Gasoline | Passenger car | 25.3 | 0.0084 | 0.0069 |

| | | | | |
|---|---|---|---|---|
| Gasoline | Light truck | 18.2 | 0.0117 | 0.0087 |
| Gasoline | Heavy truck | 5.383557 | 0.0719 | 0.0611 |
| Gasoline | Motorcycle | 44 | 0.0084 | 0.0069 |
| Diesel | Passenger car | 25.3 | 0.0005 | 0.0010 |
| Diesel | Light truck | 18.2 | 0.0010 | 0.0015 |
| Diesel | Heavy truck | 6.561615 | 0.0051 | 0.0048 |

# Water & Wastewater Treatment

**Table 7: Water & Wastewater Data Sources**

| Activity | Data Source | Data Gaps/Assumptions |
|---|---|---|
| **Communitywide & Local Government Operations** | | |
| Nitrogen Discharge | Wastewater Utility | In the community-wide inventory, wastewater volume of water treated and population served is scaled to City of Vancouver customers, whereas emissions related to treating water for the full service territory are accounted for in the local government inventory. A default multiplier is used for industrial commercia discharge. |
| Biosolids Combustion | Wastewater Utility | Metric tons and energy content of biosolids is reported by the utility. |
| Energy used in wastewater treatment facilities | Wastewater Utility | Annual electricity use for treatment processes, natural gas loads for the incinerator, and diesel consumption are reported by the utility. |
| Energy used in potable water treatment | Water Utility | Annual electricity use for treatment processes is reported by the utility. |

# Solid Waste

This inventory includes total landfill waste generated by the community and sent to Finley Butte Landfill in Boardman, Ore. The waste mix characterization is based on the Department of Ecology 2020-21 Waste Characterization Study. Composting is not calculated separately for community or government operations, but estimates of organics are included in the waste characterization.

**Table 8: Solid Waste Data Sources**

| Activity | Data Source | Data Gaps/Assumptions |
|---|---|---|

| | | |
|---|---|---|
| **Communitywide** | | |
| Landfilled solid waste | Solid Waste Department | Includes residential, commercial, and industrial solid waste collected by Waste Connections. |
| **Local Government Operations** | | |
| Landfilled solid waste | Solid Waste Department | Includes waste generated at City of Vancouver government facilities and ash and other special waste from the wastewater treatment facility. |

# Fugitive Emissions & Upstream Impacts

**Table 9: Fugitive Emissions & Upstream Impacts Data Sources**

| Activity | Data Source | Data Gaps/Assumptions |
|---|---|---|
| **Communitywide** | | |
| Natural gas distribution | ICLEI | National defaults are used for leakage rate and emissions factors for natural gas, which is applied to total therms of natural gas used community-wide. |
| HFCs & PFCs | US EPA Inventory of U.S. GHG Emissions and Sinks 1990-2022 | Estimates were made using national data for HFCs and PFCs and scaling it using population to attribute emissions for the City of Vancouver. |
| Electric Power Transmission Losses | EPA Emissions & Generation Resource Integrated Database (eGRID) | Western Grid Gross Loss Rate for 2022 is used to estimate transmission losses for communitywide electricity usage. |
| **Local Government Operations** | | |
| Natural gas distribution | ICLEI | National defaults are used for leakage rate and emissions factors for natural gas, which is applied to total therms of natural gas used at City facilities. |
| HFCs | General Services Department | Quantity of HFC-410a refrigerant used in City facilities is tracked by General Services. |

# Inventory Calculations

The 2023 inventory was calculated following the US Community Protocol and ICLEI's ClearPath software. As discussed in Inventory Methodology, the IPCC 5th Assessment was used for global warming potential (GWP) values to convert methane and nitrous oxide to CO2 equivalent units. ClearPath's inventory calculators allow for input of the sector activity (i.e. kWh or VMT) and emission factor to calculate the final CO2e emissions.

# Appendix B: Adjusted 2019 GHG Inventory

Over time, available data sources and best practices for greenhouse gas accounting can change and improve, which may result in discrepancies between inventories. Some jurisdictions update data from all past inventory years when methodologies change. Others keep past inventory methods intact, recognizing that year-over-year comparisons will not be usable as direct comparisons.

In developing the 2023 GHG Inventory, some updates were made to data inputs, emissions factors, activities included, and to correct for errors. To maintain methodological consistency, improvements made for the 2023 GHG Inventory were also carried over to 2019 data for comparison purposes. The Adjusted 2019 GHG Inventory data used for analysis is presented below in Tables 11 and 12.

These adjustments increased overall emissions reported for 2019 in both the Community-wide and Government Operations inventories by 8% and 28%, respectively, shifting back the trajectory toward our first interim targets, which can be seen in Table 10.

**Table 10: Differences between originally reported 2019 emissions and 2019 adjusted**

| | Originally Reported | | 2019 Adjusted (Used in 2023 Inventory Report) | |
|---|---|---|---|---|
| **Inventory** | **Originally reported total emissions** | **Reduction relative to 2007 baseline** | **Adjusted total emissions** | **Reduction relative to 2007 baseline** |
| Community-wide Emissions | 1,627,037 $MTCO_2e$ | -19% | **1,763,768 $MTCO_2e$** | **-12%** |
| Government Operations Emissions | 16,223 $MTCO_2e$ | -61% | **20,706 $MTCO_2e$** | **-50%** |

In the Community-wide Inventory, increased emissions were primarily driven by the change to a new data source for vehicle miles traveled (VMT) to improve accuracy. Previously, a projected value based on a 2015 model had been used to estimate 2019 VMT, and that method could not be recreated for 2023. Instead, both inventories were updated using origin and destination data based on cell phone location services available through Google Environmental Insights Explorer. This tool provides high-quality data annually for our jurisdiction and will provide a more accurate and consistent data source into the future that is representative of the on-road travel we can influence. This tool is vetted and recommended by ICLEI.

Increases in reported municipal emissions were primarily driven by the addition of wastewater treatment process activities identified as missing by the ICLEI Quality Assurance/Quality Control team. Calculators for process N2O emissions from wastewater treatment and effluent discharge to rivers, as well as combustion of biosolids from the wastewater solids incinerator at the Westside treatment plant, contributed an additional 2,620 $MTCO_2e$ to the adjusted 2019 Municipal Inventory. Smaller increases and decreases in 2019 emissions also resulted from new data inputs for buildings and street lights electricity usage and fleet vehicles. In both cases, reports pulled for the original 2019 inventory were not able to be recreated and new data was pulled for both inventory years to maintain consistency.

Additionally, in the Municipal Inventory, changes were made to how water and wastewater emissions are allocated, which increased the representation of Water & Wastewater Treatment in the inventory results but did not change overall municipal emissions totals (see Figures 8 and 9). Previously, all electricity-related emissions from water and wastewater treatment and distribution were allocated under the Buildings & Facilities sector. Separating these emissions out from other types of government buildings and facilities allows the City to better define and prioritize strategies and resources based on the types of activities driving emissions.

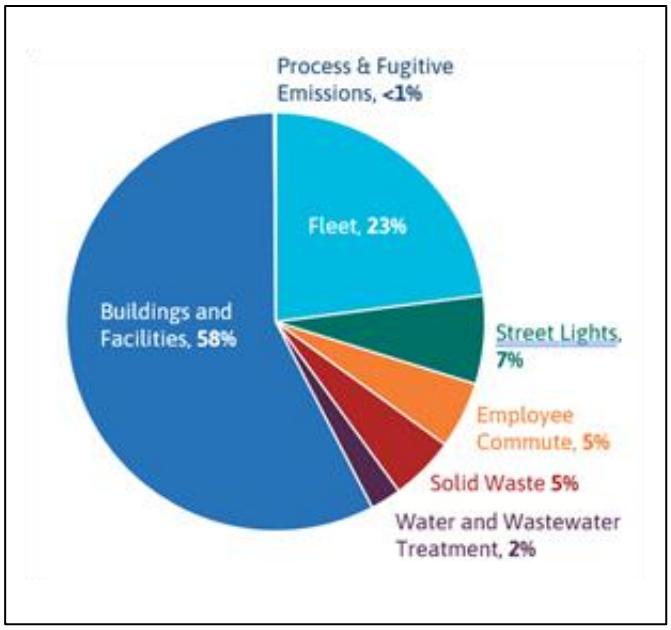

**Figure 8: Original 2019 Reported Government Operations Emissions by Sector**

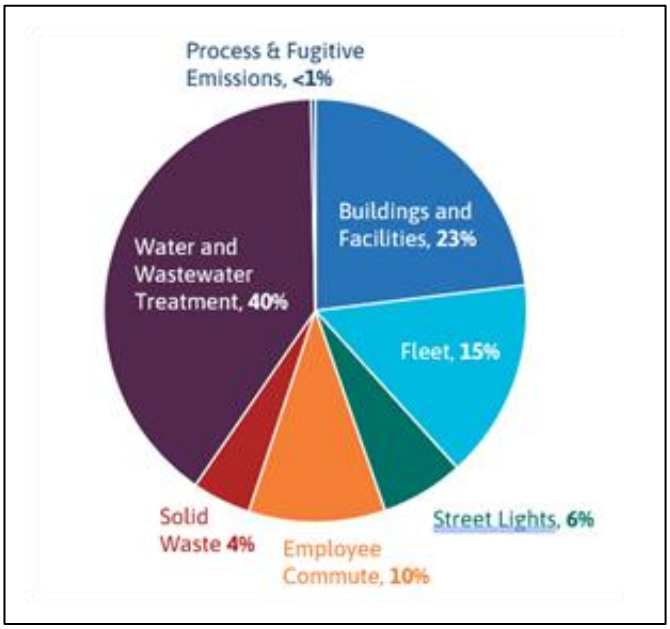

**Figure 9: Adjusted 2019 Government Operations Emissions by Sector**

As greenhouse gas inventory best practices evolve and data sources improve over time, changes to our methodologies and overall rate of progress-to-goal are expected. As stewards of these data, the City is responsible to maintain the most accurate accounting in order to inform programmatic investments. Both the 2019 and 2023 GHG inventories are based on the best available science for greenhouse gas accounting by local governments, and City Climate Program staff will continue to improve these data and methods in future years to provide efficient and purposeful reporting of emissions for decision making and public transparency.

**Table 11: Communitywide Emissions Inventory (2019 Adjusted)**

| Sector | Fuel or source | 2019 Usage | Usage unit | 2019 Emissions ($MTCO_2e$) |
|---|---|---|---|---|
| Residential Energy | Electricity (Clark Public Utilities) | 849,728,564 | kWh | 132,277 |
| | Natural gas (Northwest Natural) | 16,939,928 | Therms | 90,097 |
| **Residential Energy total** | | | | **222,374** |
| Commercial Energy | Electricity (Clark Public Utilities) | 780,129,152 | kWh | 121,442 |
| | Natural gas (Northwest Natural) | 13,974,309 | Therms | 74,325 |
| **Commercial Energy total** | | | | **195,767** |
| Industrial Energy | Electricity (Clark Public Utilities) | 367,445,960 | kWh | 57,200 |
| | Natural gas (Northwest Natural) | 4,399,622 | Therms | 23,351 |
| **Industrial Energy total** | | | | **80,551** |
| On-Road Transportation | Gasoline (passenger vehicles) | 1,110,039,495 | VMT | 461,178 |
| | Diesel (passenger and freight) | 113,818,824 | VMT | 167,554 |
| Transit | Diesel | 4,655,032 | VMT | 7,926 |
| | Gasoline | 60,030 | VMT | 75 |
| Aviation | Aviation Gasoline | | | 403,489 |
| Off-Road | Diesel | | | 36,210 |
| | Gasoline | | | 18,546 |
| | LPG | | | 421 |
| | CNG | | | 247 |
| Marine (Freight) | Diesel | 72,620 | MMBtu | 2,189 |
| Rail (Freight) | Diesel | 29,608 | MMBtu | 5,371 |
| **Transportation total** | | | | **1,103,206** |
| Solid Waste | Waste Generated | 116,943 | Tons | 26,373 |
| **Solid Waste total** | | | | **26,373** |
| Water and Wastewater | Water Treatment Energy Usage | 19,614,585 | kWh | 3,053 |
| | Wastewater Treatment Energy Usage | 14,763,395<br>3,590 | kWh<br>Therms | 2,317 |
| | Wastewater Treatment | 5,427 | million gal/yr | 193 |
| | Nitrogen Discharge | 1,063 | kg N/day | 808 |
| | Combustion of Biosolids | 18 | MT/day | 1,570 |
| **Water and Wastewater total** | | | | **7,941** |
| Process & Fugitive Emissions | Fugitive Emissions from Natural Gas Distribution | | | 6,127 |
| | Process Emissions from Refrigerant Use (HFCs and PFCs) | | | 106,248 |
| **Process & Fugitive total** | | | | **112,375** |
| Upstream Impacts of Activities | Electric Power Transmission Losses | | | 15,181 |
| **Upstream Impacts total** | | | | **15,181** |
| **Total community-wide emissions in 2019** | | | | **1,763,768** |

**Table 12: Local Government Operations Inventory (2019 Adjusted)**

| Sector | Fuel or source | 2019 Usage | Usage unit | 2019 Emissions ($MTCO_2e$) |
|---|---|---|---|---|
| Buildings & Facilities | Electricity | 21,928,099 | kWh | 3,414 |
| | Natural Gas | 256,492 | Therms | 1,364 |
| **Buildings & Facilities total** | | | | **4,778** |
| Street Lights | Electricity | 8,433,374 | kWh | 1,313 |
| **Street Lights total** | | | | **1,313** |
| Vehicle Fleet | Gasoline (on-road) | 2,828,043 | VMT | 1,938 |
| | Diesel (on-road) | 117,811 | gal | 1,143 |
| | Gasoline (off-road) | 2,990 | gal | 26 |
| | Diesel (off-road) | 4,260 | gal | 44 |
| | Propane (off-road) | 320 | gal | 2 |
| **Vehicle Fleet total** | | | | **3,153** |
| Employee Commute | Gasoline | 4,713,795 | VMT | 1,870 |
| | Diesel | 473,508 | VMT | 274 |
| | Transit | 384,679 | VMT | 22 |
| **Employee Commute total** | | | | **2,166** |
| Solid Waste | Waste Generation | 4,445 | Tons | 930 |
| **Solid Waste total** | | | | **930** |
| Water & Wastewater | Water Treatment Energy Usage | 19,614,585 | kWh | 3,053 |
| | Wastewater Energy – Electricity | 14,763,395 | kWh | 2,298 |
| | Wastewater Energy – Natural Gas | 3,590 | Therms | 19 |
| | Wastewater Energy – Diesel | 30,037 | gal | 309 |
| | Wastewater Treatment | 5,427 | million gal/yr | 242 |
| | Nitrogen Discharge | 1,063 | kg N/day | 808 |
| | Combustion of Biosolids | 18 | MT/day | 1,570 |
| **Water & Wastewater total** | | | | **8,299** |
| Process & Fugitive Emissions | Fugitive Emissions from Natural Gas Distribution | | | 45 |
| | Process Emissions from Refrigerant Use (HFCs) | | | 22 |
| **Process & Fugitive Emissions total** | | | | **67** |
| **Total government emissions in 2019** | | | | **20,706** |

Table 13 provides a list of updates that were made to the 2019 GHG Inventory during the development of the 2023 GHG Inventory to align methodologies.

**Table 13: Updates to the 2019 GHG Inventory**

| Sector | Data/Methods Updated |
|---|---|
| **Community-wide Inventory** | |
| Transportation | New data inputs: VMT data updated to accurately compare to 2023.<br>Corrections: Scaling factor for marine and rail emissions updated for accuracy; corrected local attribution of emissions from Pearson Field Airport. |
| Solid Waste | Corrections: Landfill characteristics updated for location in Eastern Oregon. |
| Upstream Impacts | Corrections: Formula to calculate electric power transmission losses updated for accuracy. |
| **Municipal Operations Inventory** | |
| Buildings & Facilities; Street Lights | New data inputs: Electricity usage data updated to parallel reports pulled in 2023. |
| Vehicle Fleet | New data inputs: Data for on-road gasoline and on-road diesel vehicles updated to parallel reports pulled in 2023.<br>Correction: Percent biofuel in fuel blends updated for accuracy. |
| Solid Waste | Updated methodology: An improved calculator in ClearPath was used to account for landfill characteristics and align with 2023. |
| Water & Wastewater | Updated methodology: Added three missing calculators for wastewater treatment emissions, effluent discharge, and combustion of biosolids. |
| Process & Fugitive Emissions | Updated methodology: Added missing calculator for fugitive emissions from natural gas distribution attributed to natural gas usage by municipal operations. |
| Electricity Grid Emissions Factors | Correction: Emissions factors for grid electricity were updated for accuracy. This change impacts multiple sectors across both inventories. |

# Memorandum

To: Rebecca Kennedy, City of Vancouver (COV)

From: Nicole McDermott, WSP; Sam Rubin, WSP; and Tyler Bump, ECOnorthwest

CC: Bryan Snodgrass, COV; and Chim Chune Ko, COV

Subject: Market and Land Capacity Analysis Methodology and Process for the Preferred Alternative

Date: February 9, 2025

## Introduction

This memorandum (memo) outlines the methodology for modeling the estimated housing and employment capacities for the Preferred Alternative studied in the OUR VANCOUVER Comprehensive Plan Update State Environmental Policy Act Final Environmental Impact Statement (FEIS). This methodology memo serves as an addendum to the previously issued methodology memo issued for the Draft Environmental Impact Statement (DEIS), which included analysis of Alternative 1, Alternative 2, and the No Action Alternative. This Preferred Alternative represents the proposed future land use and zoning map for the Comprehensive Plan Update and informs future infrastructure and capital facilities planning required as part of the Comprehensive Plan. This memo follows the same outline as the previous methodology memo but includes additional sections where additional analysis was conducted.

This memo is divided into the following five sections that outline the process for modeling estimated housing and job capacity:

1. Prototype Development and Map Creation: details the creation of the Preferred Alternative.
2. Land Capacity Analysis Deductions (Preferred Alternative): covers the assumptions made for the initial land use capacity analysis and acreage deductions for the Preferred Alternative.
3. Housing Feasibility Analysis: describes the process for modeling the number of new housing units that the Preferred Alternative has the capacity to support.

4. Parcel-Level Modeling of Housing and Job Capacity (Action Alternatives): describes the process of modeling the number of housing units and jobs that the Preferred Alternative has the capacity to support.
5. Model Outputs for Housing and Jobs Capacity: summarizes the housing and jobs capacity numbers used in the FEIS analysis.

## 1. Prototype Development and Map Creation

The Comprehensive Plan Update proposes to rename and simplify the current land use designations and associated zoning codes to focus on 10 zoning districts:

- Low Scale Neighborhood (LSN)
- Medium Scale Neighborhood (MSN)
- Mixed Use Neighborhood (MU)
- Manufactured Home (MH)
- Regional Activity Center (RAC)
- Institutional/Campus (IC)
- Industrial/Employment (IE)
- Heavy Industrial (HI)
- Parks (POS)
- Natural Areas (NA)

Five of the eight zoning districts (LSN, MSN, MU, RAC, and IC) developed for the Comprehensive Plan Update would allow for a mix of employment and housing types at varying scales and densities. For example, the MSN zoning district would allow housing prototypes with a higher density than single-family housing, but a lower density than podium or tower developments allowed in MU and RAC zoning districts. The Manufactured Home zone is applied to existing mobile home parks in Vancouver and does not permit redevelopment except for in limited cases to comply with HB 1220 and requirements to allow permanent supportive housing and emergency shelters in all zones that allow housing or hotels. The HI, IE, POS, and NA zones do not allow housing development.

Analysts used the steps described below to develop the Preferred Alternative for the FEIS.

### Preferred Alternative Development Steps:

1. Develop Prototypes: EcoNorthwest created eighteen housing prototypes that are likely to develop in Vancouver (see Table 1). Prototypes reflect current development trends within the city and the potential for different housing types based on recent

changes in state legislation. The prototypes cover a variety of housing types from single-family homes and four-story walk-ups to towers and podiums. Each prototype has an estimated dwelling-units-per-acre (DUA) value. Prototype allowances were updated for the Preferred Alternative to reflect updated zoning language and density allowances.

2. **Assign Prototypes to Zoning Districts:** Housing prototypes that were identified are those most likely to occur in the different zoning districts that will allow housing (LSN, MSN, MU, RAC, and IC). See Table 1**Error! Reference source not found.**.

   *Note: No housing prototypes were identified in IE, HI, MH, POS, or NA because no housing will be allowed.*

3. **Prepare Preferred Land Use Alternative:** Finalized Preferred Alternative Map that shows zoning districts throughout the city. This step was developed over many iterations and was prepared with multiple rounds of review with community partners, city staff, the planning commission, and city council.

   Refinement of the alternatives was informed by comments on the DEIS, extensive public input, best planning practices, existing city council policy guidance, existing and planned enhanced transit corridors, locations of parks/open space and schools, and locations of growth nodes/corridors/centers.

## Table 1. Housing Prototypes by Zone

| Housing Prototypes | Dwelling Units Per Acre | Manufactured Home Park* | Low-Scale Neighborhood | Medium-Scale Neighborhood | Mixed-Use Neighborhood | Regional Activity Center | Institutional/ Campus | Industrial/ Employment* | Heavy Industrial* | Parks/Open Space/ Natural Areas* |
|---|---|---|---|---|---|---|---|---|---|---|
| Single Family | 7.3 | | | | | | | | | |
| Duplex (side by side) | 14.5 | | | | | | | | | |
| Duplex (stacked) | 14.5 | | | | | | | | | |
| 3 Townhouses | 21.8 | | | | | | | | | |
| Quadplex | 28.5 | | | | | | | | | |
| 4 Townhouses | 29.0 | | | | | | | | | |
| Sixplex | 43.0 | | | | | | | | | |
| 6 Townhouses | 43.6 | | | | | | | | | |
| Cottage Cluster | 29.0 | | | | | | | | | |
| Courtyard (attached) | 28.5 | | | | | | | | | |
| Small Single Stair | 58.1 | | | | | | | | | |
| Small Multiunit | 43.6 | | | | | | | | | |
| Small Multiunit (taller) | 58.1 | | | | | | | | | |
| Medium Multiunit | 34.8 | | | | | | | | | |
| Medium Multiunit (taller) | 52.3 | | | | | | | | | |
| 3-story wood frame | 65.3 | | | | | | | | | |
| 4-story wood frame | 84.4 | | | | | | | | | |
| Podium | 152.5 | | | | | | | | | |
| Tower | 217.8 | | | | | | | | | |
| Microunits 1 | 273.8 | | | | | | | | | |
| Microunits 2 | 342.3 | | | | | | | | | |

*No housing prototypes are allowed

## 2. Land Capacity Analysis Deductions (Preferred Alternative)

Table 2 identifies the deductions used in the land capacity analysis model for the Preferred Alternative. As noted in the table, some deductions are different in the housing capacity analysis, which estimates the capacity for new housing units, compared to the employment capacity analysis, which estimates the capacity for new jobs. Table 2 also identifies different deductions for the land categories (Vacant, Underutilized, and Built) included in the Clark County Vacant Buildable Lands Model (VBLM).[1]

[1] The parcel dataset used in the model is the 2022 Clark County Vacant Buildable Lands Model (VBLM) data output.

## Table 2. Deductions

| Deduction | Zoning District | | | | | | |
|---|---|---|---|---|---|---|---|
| | LSN | MSN | MU | RAC | IC | IE | HI |
| **Land Use Split per Zoning Districts[a]** | | | | | | | |
| Residential | 95% | 90% | 65% | 60% | 25 % | 0% | 0% |

| Residential Capacity Analysis | N/A (embedded in market feasibility analysis, see Section 3). | | | | | | |
| Employment Capacity Analysis Market Factor | 10% of Vacant and Underutilized lands will not develop given market conditions. | | | | | | |
| Employment Capacity Analysis Redevelopment Rate (only applies to Build land)[e] | 0% | | 12.8% | 27.4% | 0% | | |
| Job loss deduction[f] | | | 13 jobs/net acre | | | | |
| **Small Parcels, Easements, and Tax Value** | | | | | | | |
| Exclude small parcels less than 1,000 SF | Applies to all zoning districts. | | | | | | |
| Exclude roads and easements | Applies to all zoning districts. | | | | | | |
| Exclude parcels given a zero value in Clark County's VBLM output[g] | Applies to all zoning districts. | | | | | | |

Notes:

(a) The residential/non-residential splits are model assumptions based on likely development trends for new zoning districts. These are not intended to reflect future codified requirements.

(b) Employment represents any non-residential use that is assumed to produce jobs instead of housing units.

(c) Critical areas/constrained lands were identified per the 2022 Clark County VBLM dataset

(d) Infrastructure deductions for IE are lower than the 25% used in the 2022 Clark County VBLM for Industrial to account for the more urban context in Vancouver.

(e) Redevelopment from employment uses to different employment uses in Low Scale Neighborhood (LSN), Medium Scale Neighborhood (MSN), Institutional/Campus (IC), and Industrial/Employment (IE) zones is unlikely and, therefore, no redevelopment rate is assumed for these zoning districts. However, an "intensification or refill" factor is applied to IE and Heavy Industrial (HI) zoning districts to establish the employment need (see Section 4 for details on the intensification factor). Redevelopment rates for Mixed Use Neighborhood (MU) and Regional Activity Center (RAC) were calculated by determining the feasibility of the four-story mixed-use prototype across all MU/RAC zones and its rate of feasibility.

(f) The job loss deduction applies to Built land in the MU and RAC zoning districts that is assumed to be redeveloped. This assumption accounts for a loss of existing jobs on the redeveloped parcels.

(g) The county assessor will flag a property as zero-value if appraisers determine the legally created tax lot does not have market value or is deemed exempt from taxes.

Key: HI = Heavy Industrial; IC = Institutional/Campus; IE = Industrial/Employment; LSN = Low Scale Neighborhood; MSN = Medium Scale Neighborhood; MU = Mixed Use Neighborhood; N/A = not applicable; RAC = Regional Activity Center; SF = square feet; VBLM = Vacant Buildable Lands Model

## 3. Housing Feasibility Analysis

The housing capacity analysis for the preferred alternative relies on a parcel-level feasibility analysis. The feasibility analysis examined the zoning district for each parcel, which prototypes are assumed to be allowed by future zoning, and which prototype is the most feasible option based on market conditions and available assessors' data.

Generally, the feasibility analysis examined the following factors:

- Total value per square foot of each parcel, which is equal to the total market value (land and buildings) divided by assessed acres.
- Price per square foot required to develop each building prototype.

If the total value per square foot is less than the prototype price to develop, then the prototype is considered feasible.

The feasibility analysis identified which prototypes would be considered feasible from a market perspective, which can result in multiple prototypes being viable. The model for the Preferred Alternative assigns the prototype that is considered the most feasible, or the prototype that is the most likely to develop because it is the most affordable to develop. Ultimately, this process looks at every parcel across the city and models the potential for a property to develop/redevelop. Only parcels identified as feasible with a corresponding prototype are included in the capacity analysis in Step 4 below. An overview of the feasibility analysis is included as Attachment .

# 4. Parcel-Level Modeling of Housing and Job Capacity (Action Alternatives)

Once the feasibility analysis (Section 3) was complete, analysts modeled housing and job capacity for the preferred alternative, applying the assumptions identified in Table 1. The following subsections identify the modeling process for the housing capacity analysis and job capacity analysis. A detailed process of this section is included as Attachment .

## Housing Capacity Analysis

The first step in the housing capacity analysis model applied the deductions for critical areas, infrastructure, and residential versus employment allocation at the parcel level (see Table 2). The model then removed parcel fragments (1,000 square feet or smaller), roads/easements, and zero-value parcels.

Once all land reductions were applied, the model used the remaining net acreage to apply housing densities based on the most feasible prototype per the feasibility analysis (see Section 3). If a parcel was not determined to have a feasible prototype, then housing density was not applied to the parcel.

### Housing Unit Yield Equation

Gross Acreage of a parcel – land reductions = net acreage

Net acreage X DUA (prototype DUA) = housing unit output per parcel

### Post-Processing Deductions

#### Homeowner Association Deduction

The City sampled properties in different subdivisions across Vancouver to determine the possible existence of a homeowner association (HOA) that might limit densification or redevelopment potential. Then, using property titles obtained through a title company, analysts reviewed language in homeowner association bylaws to identify which areas may have language that could restrict the implementation of Washington State House Bill (HB) 1110. HOAs that had some degree of restrictive language were identified and the redevelopment capacity that was modeled in those areas was reduced by 70%. The 70% housing capacity reduction assumes that some of the redevelopment potential of parcels within HOAs with restrictive language would not occur because of a lack of enforcement of HOA policies. At the time of this analysis in early 2026, HB 1110 does not include retroactive application to pre-existing governing documents adopted by HOAs.

### Master Plan Deduction

In areas where the city has adopted Master Plans or approved Development Agreements (DAs), the housing units and jobs projected in those documents was used instead of the model output. This requires an override where the existing master plan geography is allocated the projected number of housing units and/or jobs identified in the adopted plan or DA. At the time of this analysis in early 2026, the following master plan or DAs were identified:

- Vancouver Heights
- Vancouver Innovation Center
- Columbia Palisades
- Section 30
- Waterfront
- HQ Vancouver

### Existing Unit Deduction

Clark County assessor data was used to identify the number of existing units on lots that include feasible housing development per the feasibility analysis. Existing units were then deducted to avoid double counting the total number of units per lot.

### Model Output

Total number of housing units assumed in the preferred alternative based on market feasibility, land capacity, and HOA, Master Plan or DA, and existing unit adjustments. These housing unit numbers are used for the Preferred Alternative in the FEIS analysis.

## Employment Capacity Analysis

The employment capacity analysis was similar to the housing analysis, but as identified in Table 2, some of the model assumptions were different. Additionally, the employment capacity analysis did not use the feasibility analysis to determine redevelopment potential, but instead applied a redevelopment rate, as noted in Table 2.

### Employment Target

An additional step in the employment capacity analysis was the establishment of an employment target that accounts for "work-from-home" jobs and "intensification" or "refill," which relates to a percentage of new jobs occurring within existing employment space through an intensification of the number of jobs per square foot. These two factors reduce the amount of land needed to support anticipated job growth and are an important consideration when determining whether the employment capacity of an alternative will meet the anticipated employment growth. At a summary level, the process for determining the employment target was as follows:

- Start with the anticipated employment growth of 43,198 jobs, as detailed in the Economic Opportunity Analysis.
- Separate potential job growth by industry sector based on two-digit North American Industry Classification System (NAICS) codes and assign jobs/NAICS codes to zoning districts.
- Apply a 13% deduction for "work from home" to all job sectors except transportation, food/services, manufacturing, and construction.[2]
- Apply a 23% deduction for jobs in HI and IE zoning districts because these districts may see an intensification of jobs within existing heavy industrial or employment developments. This means more jobs per acre may be produced in the future on heavy industrial or employment lands than currently exists, and a reduction is applied to the employment target because additional land would not be needed to support these jobs.[3]

This process resulted in a net employment need of 38,792, which reflects the number of new jobs that will need to be supported within the land capacity of the Preferred Alternative. The deductions above account for new jobs that could be accommodated within existing developments or from work from home and therefore, additional land capacity is not needed for those jobs.

### Employment Land Capacity Analysis

Similar to the housing capacity analysis, the employment capacity analysis was conducted at the parcel level. The first step in the employment capacity analysis model applied the deductions for critical areas, infrastructure, and residential versus employment allocation, as identified in Table 2. The model then applied the market factor for Vacant and Underutilized land and redevelopment rate for Built land, as detailed in Table 2. *Note: the redevelopment rate does not apply consistently across the zoning districts.*

Once all the land reductions were applied, the model applied the employment densities (jobs per acre) listed below for each zoning district.[4]

---

[2] Work-from-home deduction is based on 2023 American Community Survey estimates, table B038601, work from home percentage for Vancouver. Clark County is at 21.8% per the same data.

[3] The intensification factor is based on data from Portland vetted with industrial stakeholders as part of Portland's EOA (Economic Opportunity Analysis)Industrial Land Committee process. Longitudinal point-level Quarterly Census of Employment Wage data for Vancouver are not available. Intensification is essentially "refill," indicating an amount of land that will intensify in job density.

[4] The employment densities are based on recent development trends in similar contexts and professional judgment.

- LSN: 6
- MSN: 6
- MU: 48
- IC: 46
- RAC: 54
- IE: 30
- HI: 9

The final step in the employment capacity analysis is intended to avoid double counting existing jobs when a property is assumed to redevelop. Washington Employment Security Department Quarterly Census of Employment Wage data was used to determine the average jobs per acre within future MU and RAC zoning districts. Only the MU and RAC zoning districts were used because those are the only zones where a redevelopment rate is applied (see Table 3 footnotes for additional details). The average number of jobs per acre was estimated at 13, which was applied as a deduction to the output of jobs on built parcels in MU and RAC zoning districts.

Employment Yield Equation:

Gross Acreage of a parcel – land reductions X market factor/redevelopment rates = net acreage

Net acreage X jobs/acre – 13 jobs/acre on Built Mixed Use Neighborhood and RAC parcels = jobs output per parcel

Model Output: Total number of jobs assumed in the preferred alternative based on vacancy status and redevelopment potential.

## 5. Model Outputs for Housing and Jobs Capacity

Table 3 below shows the model output for the DEIS action alternatives, the No Action Alternative, and the Preferred Alternative.

## Table 3. Model Outputs for Housing Yields and Employment Yields

| Alternative (City Only) | Methodology | Housing Yields | Employment Yields |
|---|---|---|---|
| No Action | Clark County VBLM (refer to DEIS methodology memo) | 29,600 units | 16,600 jobs |
| Alternative 1 | Feasibility/Redevelopment potential (refer to DEIS methodology memo) | 45,100 units | 46,000 jobs |
| Alternative 2 | Feasibility/ Redevelopment potential (refer to DEIS methodology memo) | 50,696 units | 49,300 jobs |
| Preferred Alternative | Feasibility/Redevelopment Potential (Refer to Section 4) | 44,111 units | 45,145 jobs |

Key: VBLM = Vacant Buildable Lands Model

| **DATE:** | May 27th, 2025 |
| **TO:** | Nicole McDermott and Sam Rubin, WSP |
| **FROM:** | Tyler Bump and Michelle Anderson, ECOnorthwest |
| **SUBJECT:** | Vancouver Comp Plan Update – Market Feasible Capacity Analysis |

# Overview

WSP partnered with ECOnorthwest to assess the potential housing capacity for two different EIS alternatives for the comprehensive plan update for the City of Vancouver. ECOnorthwest worked with WSP to complete this analysis, referred to as the *market-feasible housing capacity,* given the potential land use intensities of the different place types of the alternatives. The difference between the alternatives was the place type designated to each parcel, which could result in different citywide totals for market-feasible housing capacity.

For the capacity analysis, ECOnorthwest completed a financial analysis that models a developer's decision-making process and cash flow equation. We created pro forma models to test the financial feasibility of various housing densities that might be allowed in different place types. We estimated the market feasible capacity of multiple prototypical developments, or *housing prototypes*. These prototypes reflect theoretical development profiles that could potentially comply with proposed zoning standards to understand what the market was most likely to deliver if zoning was a constraint.

**Why is development feasibility and pro forma analysis important?**

Development can be costly and risky. Getting funding to construct new development requires lenders and investors to be reasonably confident they will earn enough financial return to justify the risks and attract equity to a project.

Economic or market feasibility is generally assessed by comparing the expected revenues (home sales, net income from rents, room rates) against the costs of development. If a development is not feasible, it will not be built, contrary to a city's housing goals.

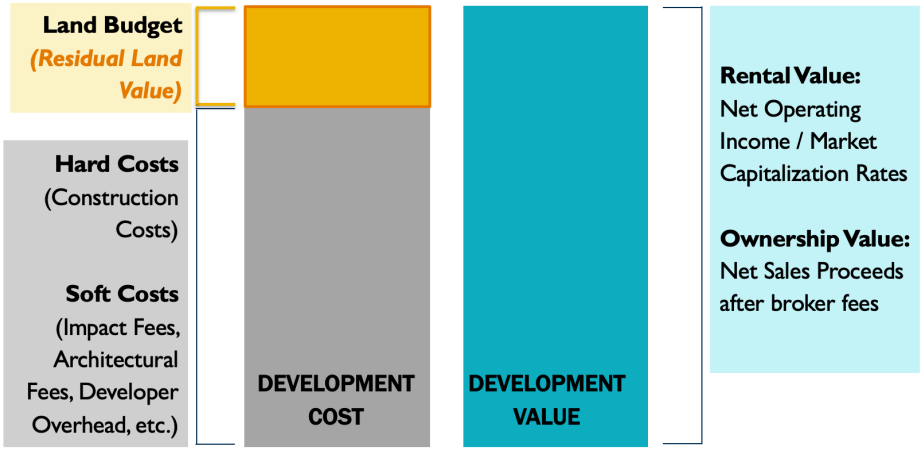
# Approach

## Prototypes and Assumptions

ECOnorthwest analyzed nearly 20 housing prototypes that were of various configurations and resulting densities, including general forms such as single-family, townhome, lowrise, garden-style, and midrise apartment developments. We based the prototypes on recent existing developments throughout the City of Vancouver as well as potential scales of housing that might be allowed in the future given legislative changes at the state level. Though the scale of development ranges substantially throughout the city, we developed approximate prototypes that could be possible in Vancouver.

We drew our initial market and construction cost insights from third-party sources such as the American Community Survey (ACS), Costar, Redfin, and Craftsman, and then vetted

those assumptions with local developers and brokers through various interviews. Though cost assumptions typically stay consistent throughout a city, we created a model to help differentiate the revenue assumptions (i.e., rent and sales prices) by census tract This model used rent and sales data from ACS, to interpolate what revenue assumptions might be for each census tract in the city.[1]



We then aligned similar block groups, based on rent and sales prices, into newly-defined market areas. We took those results and compared them to the city-wide average to understand how each market area related to the city-wide average (expressed as a ratio). We then applied that ratio as an input to each rent or sales price on a prototype level with the most up-to-date market data from CoStar and Redfin. This revenue model allowed us to refine our pro forma results spatially. The model therefore considered that different areas across Vancouver would have varying demand for different types of housing, which impacts the resulting feasibility of housing development.

## Pro Forma Financial Analysis Methods

The pro forma model used a residual land value (RLV) metric to evaluate feasibility. RLV measures the land budget a developer would have to purchase land after accounting for potential development costs and revenues.

**Exhibit 1: Example of Feasible Development using Residual Land Value (RLV) Model**

Source: ECONorthwest

[1] ACS has two notable limitations we try and correct for: 1) there are many instances of tracts with missing (or "NA") estimates for rents, due to low rates of survey response or simply because there are no observations of a given type of apartment in that tract and 2) we often see unusually low rents because the ACS conflates market rate apartments with other structures like informal rental arrangements. We interpolated missing rent values by using an inverse-distance weighted average smoothing function, so that tracts with missing values take the average of their neighbors, ordered by proximity. We then cluster census tracts together into market areas (approximately 10 total areas) based on adjacency and similarity of rents and tenure splits.

Generally, if the RLV is equal to or above land prices in the potential development area, the development is considered feasible at market rate. If the RLV is zero dollars, the development could be feasible if land were donated for free. However, if the RLV is less than zero, the development is likely infeasible unless a developer receives additional subsidies or incentives, including free land. Results from this method describe a general analysis of prototypes and does not consider the many potential unique conditions that could be factors in development feasibility (e.g., increased predevelopment costs, low land basis from longtime land ownership). For these reasons, residual land value analyses should be thought of as a strong indicator of the relative likelihood of development, rather than an absolute measure of return to the investor or developer for any specific site.

In our feasibility analysis, we used key financial data like rent, operating costs, and development expenses for each prototype. To evaluate rental prototypes, we determined the leasable square footage, calculated revenue, deducted vacancy and operating costs (such as taxes, insurance, maintenance, management, select utilities) and arrived at the annual net operating income (NOI). For the ownership prototypes, we calculated gross sales price and subtracted commissions.

We calculated development costs by applying the cost per square foot values to different product types (e.g., residential, retail) and adding parking costs. We then summed those values to a total hard cost and calculated the soft cost, contingency, and developer fees to arrive at the total development cost.

To evaluate rental prototypes, we derived the value for each prototype by either dividing the NOI by a market-driven return on cost threshold (for higher-density prototypes) or by determining the loan capacity given debt service assumptions and NOI (for lower density prototypes). Return on cost is an important metric because it establishes the threshold where the potential returns offset project risks. Developers compete for capital in a market against other real estate and non-real estate investments. If return on cost is too low, a developer will not be about to attract capital, and the project will not move forward – this is most relevant for higher density prototypes that tend to attract institutional capital that is mobile across markets and investment products. We then summed those values to arrive at a total value for each prototype. We then calculated the land budget (the RLV) by subtracting the total development cost from the total value.

For lower-density rental prototypes, relating NOI to debt service requirements is more appropriate given that these projects are smaller and therefore tend not to attract institutional capital, but they are similar to larger projects in that debt is typically the largest source of funding for a project and if return requirements for debt can't be met, the development will not be able to attract the capital and the project won't move forward. For these prototypes, we solved for the land budget (the RLV) that was possible given the NOI on the project and potential terms, interest rates, and debt service coverage ratio

requirements. For the ownership prototype, we determined the land budget by subtracting total development costs from gross sales less commission and a spread on cost to account for profit.

For both rental and ownership prototypes we divided the total land budget by site square footage, arriving at a residual land value per square foot of land for each market area – this was the key variable for inclusion in the site specific analysis we conducted with the help of WSP.

## Site-Specific Capacity Analysis

We delivered two key outputs for comparison to site-specific data and to finalize the market-feasible capacity analysis. For each prototype, we delivered both the calculated dwelling units per acre as well as the residual land value (RLV) per square foot of land for each market area. The units of these outputs (normalized by land area) allowed us to take the data and apply it to each site.

For each parcel, WSP and ECOnorthwest:

1. Exported a GIS csv with each parcel's market area, placetype, and key assessor data such as parcel area and total value (based on land and improvement value).
2. Calculated the total value per square foot of land (land + improvement value, divided by site area). This approach does not attempt to make adjustments to assessor's land value to values that are more reflective of real market value. We typically find that assessor data can lag behind market value. Therefore, this approach will result in an optimistic estimate of capacity
3. Subtracted total value per square foot of land from the RLV per square foot of each prototype for the corresponding market area to arrive at the remaining value.
4. Identified the feasible prototypes that were allowed by the placetype applied to the parcel – the prototype with remaining value greater than $0.
5. For parcels where the RLV was zero or negative (where the total value based on assessor data exceeded the RLVs of the allowed prototypes), the market-feasible capacity analysis resulted in no feasible housing prototype.

**Land Use Model – Step-by-Step Process**

The land use model for the Our Vancouver Comprehensive Plan was developed using Python in ArcGIS Pro. Instead of estimating land capacity based on broad citywide acreage, the analysis is conducted at the parcel level scenario, making it easier to show where housing and jobs are likely to be located across Vancouver. Housing and employment analyses are done separately, relying on the same data but with different assumptions about redevelopment, infrastructure, and critical areas.

**1. Starting Datasets**

- 2022 Vacant Buildable Lands Model (VBLM) dataset. Only parcels within the City of Vancouver are used in the land capacity analysis.
- Parcel-level feasibility analysis based on zoning. This analysis determines if a parcel is considered feasible for development and what prototype is most feasible by parcel.

**2. Land Capacity Analysis**

- Start with the 2022 VBLM dataset that has been updated to reflect the zoning or comprehensive plan designation assigned to the various alternatives.
- Apply filters to exclude land types **not eligible for development**:
    - **Infrastructure rights-of-way and easements**: roads, rail, utility corridors, etc.
    - **Public ownership exclusions**: parks and other tax-exempt lands unless redevelopment is anticipated. Coordination with the parks department is needed to update the inventory.
    - **Parcels below minimum size thresholds** or lacking infrastructure access may be excluded.
        - Parcels less than 1,000 square feet are excluded.
- **Split the remaining land by intended use**:
    - Allocate percentage of parcel acreage to either **residential or employment uses** (jobs/housing split) based on zoning.

        - From this point in the analysis, only the assigned acreage is used for either residential or employment analysis.

- Apply further deductions:
    - **Critical areas**: Critical areas identified by the County's VBLM process and are considered 'constrained' in the dataset.
        - Development in critical or constrained areas is limited. For housing analysis, lands in critical areas are counted at half their total area. For employment analysis, vacant or underutilized constrained lands are reduced by 20%, while built constrained lands are reduced by 50% in the calculation.
    - **Market factor for Employment**: proportion of land that will realistically be developed within the planning timeframe.
        - 10% of Vacant or Underutilized lands will not develop given market conditions. 10% reduction in total acreage by parcel is deducted.
    - **Redevelopment Rate for Employment:** 12.8% of lands zoned Mixed Use are anticipated to be redeveloped. 27.4% of lands zoned Regional Activity Center are anticipated to be redeveloped.
    - **Infrastructure:** proportion of land within a parcel that would be allocated for infrastructure placement.
        - 31.5% deduction in total acreage of a parcel for residential analysis
        - 31.5% deduction in total acreage of a parcel for employment analysis for all zones except Industrial/Employment (IE) and Heavy Industrial (HI). IE has a reduction of 12.5% and HI has a reduction of 25%.

**3. Apply Density/Intensity Ratios**

- Assign densities to each parcel based on their zoning. Density ratios are applied to the acreage remaining after deductions.
    - Residential: units per acre based on typology identified during feasibility analysis.
    - Employment: jobs per acre based on zoning.

**4. Apply loss of existing jobs on redeveloped parcels**

- The job loss deduction applies to Built (as determined by the Vacant Buildable Lands Model) land in the MU and RAC place types that are assumed to be redeveloped. This assumption accounts for a loss of existing jobs on the redeveloped parcels.
    - Reduce the number of jobs by parcel by 13 jobs/net acre.
- This analysis was done post-processing and is not included in the python notebook.

| **DATE:** | April 2, 2026 |
| **TO:** | Nicole McDermott, WSP |
| **FROM:** | Tyler Bump and Josie Rademacher, ECOnorthwest |
| **SUBJECT:** | Housing Needs and Land Capacity Analysis |

This analysis was conducted to evaluate how the Our Vancouver, Vancouver's 2045 Comprehensive Plan Update, Preferred Alternative performs relative to the identified housing needed in the City of Vancouver by income category through 2045. This housing need and capacity analysis indicates that the City of Vancouver through the Comprehensive Plan, new zoning designations, and new zoning map meets all housing needs by income category identified in the City of Vancouver Housing Needs Assessment. This analysis indicates the Preferred Alternative results in a net capacity surplus of 5,983 units across Vancouver. Additionally, the Preferred Alternative results in a capacity surplus for all income levels of housing need.

## Housing Need

The Washington State Department of Commerce Housing for All Planning Tool (HAPT) identifies a total housing need in Vancouver of 43,198 housing units from 2020 to 2045. To account for a 2023 base planning year, the project team subtracted 5,069 housing units built from 2020 to 2023 in the city. Overall, this indicates a total need of 38,129 housing units from 2023 to 2045.[1] The breakdown in housing need by income is approximately as follows[2]:

- 2,600 Permanent Supportive Housing (PSH) units
- 4,423 non-PSH units for households below 30% AMI (extremely low income)
- 5,890 units between 30 to 50% AMI
- 5,788 housing units between 50 and 80% AMI (low income).
- 3,351 units between 80 to 100% AMI (moderate income)
- 3,175 housing units between 100 to 120% AMI (moderate to middle income)
- 12,902 housing units over 120% AMI (high income)

The HAPT estimate also shows 406 emergency living units (in the form of beds providing temporary housing) available and 1,405 emergency shelter beds needed as identified by Clark County by 2045.

[1] Washington State Department of Commerce. (March 1, 2023). This analysis relied on Allocation Method A.
[2] The City of Vancouver completed their Housing Needs Assessment prior to Clark County allocating housing need. Therefore, the need identified through the HAPT tool is different from the allocation from the County. The section at the end of this memorandum "Aligning Vancouver Housing Needs with County Allocation" demonstrates Vancouver's capacity to meet the need by income band using either the HAPT tool or the County allocation.

## Land Capacity by Zone

Exhibit 1 summarizes land capacity by zone for the 2045 Comprehensive Plan Update Preferred Alternative. Technical documentation on assumptions and methodology can be found in the February 2026 Market and Land Capacity Analysis Methodology and Process for the Preferred Alternative Memorandum. This summary includes total land area, developable land, assumed achieved densities (from prototype feasibility analysis), gross residential capacity, existing housing on developable land, and net residential capacity. This table summarizes total net residential capacity for all zoning designations.

**Exhibit 1. Development Capacity by Zoning Designation, Preferred Alternative**

Source: City of Vancouver, Clak County Assessor, WSP, ECOnorthwest

| Development Capacity by Zone | | | | | | |
|---|---|---|---|---|---|---|
| Zoning Designation | Total Land Area | Developable Land (acres) | Assumed Achieved Density (units/acre) | Gross Residential Capacity | Existing Housing on Developable Land | Net Residential Capacity (units) |
| Manufactured Home | 211 | 0 | 0 | 0 | 1,439 | 0 |
| Low-Scale Neighborhood | 5,830 | 686 | 29 | 8,525 | 1,252 | 7,273 |
| Medium-Scale Neighborhood | 6,304 | 825 | 47 | 18,994 | 3,167 | 15,827 |
| Mixed-Use Neighborhood | 2,707 | 276 | 61 | 6,842 | 243 | 6,599 |
| Regional Activity Center | 1,569 | 97 | 84 | 10,639 | 14 | 10,625 |
| Institutional/Campus | 1,168 | 357 | 49 | 3,805 | 17 | 3,788 |

Exhibit 2 indicates that while there are 53,269 lots that are eligible lots where ADUs can be built across Vancouver, the anticipated amount of ADUs that are likely to get built is much less. For the sake of this capacity analysis, the project team evaluated recent trends in ADU production and forecasted future ADU production at similar rates while accounting for multiple ADUs allowed on eligible lots. Over the past three years, there were on average 32 ADUs built annually. Assuming an adjustment for new two ADU allowances per primary residential unit, this analysis assumes that 64 ADUs per year is a reasonable assumption given past trends and new ADU allowances. This indicates that there is a reasonable ADU capacity of 1,280 units through 2045.

**Exhibit 2. ADU Development Capacity, Preferred Alternative**

Source: City of Vancouver, WSP, ECOnorthwest

| ADU Capacity | | | | | |
|---|---|---|---|---|---|
| ADU-Eligble Lots | Assumed ADU Production per Year | Assumed Long-Term Housing Percentage | ADU Production Long-Term Housing | ADU Production Greater than Eligible Lots? | Total ADU Capacity |
| 53,269 | 64 | 2.8% | 1280 | No | 1,280 |

## Affordability Levels by Zoning Designation

To inform the affordability of housing within each zoning designation, price data was gathered for housing types within each zoning designation. These housing prices were derived from 18-month price trends that were collected to inform the rent and sales price assumptions for the relevant housing types in the pro formas used to support the development capacity analysis.

**Exhibit 3. Affordability Level and Housing Type by Zoning Designation**

Source: Clark County Assessor, CoStar, Redfin, ECOnorthwest

| Zoning Designation | Typical Housing Types Allowed | Lowest Potential Income Level Served | | Assumed Affordability Level of Capacity Analysis |
|---|---|---|---|---|
| | | Market Rate | With Subsidies | |
| Manufactured Home | Manufactured Homes | Low to Moderate Income (30-80% AMI) | Very Low to Low Income (0% AMI - 50% AMI) | Low Income (0-80% AMI) |
| Low-Scale Neighborhood | Single-family Residential Building, Townhouse/Rowhouse, Stacked Multi-Plex Building, Multi-Cluster Building, and Cottage Court Building | High Income (100->120% AMI) | Moderate Income (80-120% AMI) | Higher Income (100% AMI - >120% AMI) |
| Residential Neighborhoods | Single-family Residential Building, Townhouse/Rowhouse, Stacked Multi-Plex Building, Multi-Cluster Building, Cottage Court Building, and Multifamily Building | Moderate to High Income (80% AMI-120% AMI) | Moderate Income (50% AMI-120% AMI) | Moderate Income (80% AMI-120% AMI) |
| Urban Mixed-Use | Townhouse/Rowhouse, Stacked Multi-Plex Building, Multi-Cluster Building, Cottage Court Building, Multifamily Building, Mid-Rise Residential Building, and Mixed-Use Residential Building | Moderate Income (>80% AMI-120% AMI) | Low to Moderate Income (0% AMI-80% AMI) | Low to Moderate Income (0% AMI-100% AMI) PSH |
| Urban Mixed-Use | Multifamily Building, Mid-Rise Residential Building, and Mixed-Use Residential Building | Moderate Income (>80% AMI-120% AMI) | Low to Moderate Income (0% AMI-80% AMI) | Low to Moderate Income (0% AMI-100% AMI) PSH |
| Employment Mixed Use | Townhouse/Rowhouse, Stacked Multi-Plex Building, Multi-Cluster Building, Multifamily Building, Mid-Rise Residential Building, and Mixed-Use Residential Building | Moderate Income (>80% AMI-120% AMI) | Low to Moderate Income (0% AMI-80% AMI) | Low to Moderate Income (0% AMI-100% AMI) PSH |
| ADUs | Accessory Dwelling Units on developed residential lots | Moderate Income (50% AMI-120% AMI) | N/A | Moderate Income (50% AMI-120% AMI) |

## Affordability Data Sources by Zoning Designation and Housing Type

ECOnorthwest analyzed over 20 housing prototypes that were of various configurations and resulting densities. We based the prototypes off recent actual developments throughout the City of Vancouver as well as potential scales of housing that might be allowed in the future given legislative changes at the state level. Though the scale of development ranges substantially throughout the city, we triangulated approximate prototypes that might be possible in Vancouver.

We drew our initial market and construction cost insights from third-party sources such as the American Community Survey (ACS), Costar, Redfin, and Craftsman, and then vetted those assumptions with local developers and brokers. Though cost assumptions typically stay consistent throughout a city, we created a model to help differentiate the revenue assumptions (i.e., rent and sales prices) by census tract This model used rent and sales data from ACS, to interpolate what revenue assumptions might be for each census tract in the city.

We then aligned similar block groups, based on rent and sales prices, into ten newly defined market areas across the City of Vancouver. We took those results and compared them to the city-wide average to understand how each market area related (expressed as a ratio) which we could then apply as an input to each rent or sales price on a prototype level with the most up-to-date market data from CoStar and Redfin. This revenue model allowed us to refine our pro forma results spatially – different areas of Vancouver have different demand for different types of housing, which impacts the resulting feasibility of housing development.

**Exhibit 4. Housing Needs and Capacity by Income Level**

| Zoning Designation | Typical Housing Types Allowed | Data Sources |
|---|---|---|
| **Manufactured Homs** | Manufactured Homes | Redfin |
| **Low-Scale Neighborhood** | Single-family Residential Building, Townhouse/Rowhouse, Stacked Multi-Plex Building, Multi-Cluster Building, and Cottage Court Building | Redfin, CoStar, Clark County Assessor, Pro-Forma Analysis |
| **Residential Neighborhoods** | Single-family Residential Building, Townhouse/Rowhouse, Stacked Multi-Plex Building, Multi-Cluster Building, Cottage Court Building, and Multifamily Building | Redfin, CoStar, Clark County Assessor, Pro-Forma Analysis |
| **Urban Mixed-Use** | Townhouse/Rowhouse, Stacked Multi-Plex Building, Multi-Cluster Building, Cottage Court Building, Multifamily Building, Mid-Rise Residential Building, and Mixed-Use Residential Building | Redfin, CoStar, Clark County Assessor, Pro-Forma Analysis |
| **Urban Mixed-Use** | Multifamily Building, Mid-Rise Residential Building, and Mixed-Use Residential Building | Redfin, CoStar, Clark County Assessor, Pro-Forma Analysis |
| **Employment Mixed Use** | Townhouse/Rowhouse, Stacked Multi-Plex Building, Multi-Cluster Building, Multifamily Building, Mid-Rise Residential Building, and Mixed-Use Residential Building | Redfin, CoStar, Clark County Assessor, Pro-Forma Analysis |
| **ADUs** | Accessory Dwelling Units on developed residential lots | Interviews |

## Reconciling Housing Needs and Capacity by Income Level

Exhibit 5 summarizes the reconciliation of housing needs and housing capacity by income level and by Comprehensive Plan and Zoning Designations. This analysis indicates the Preferred Alternative results in a net capacity surplus of 5,983 units

across Vancouver. Additionally, the Preferred Alternative results in capacity surpluses for all income levels.

**Exhibit 5. Housing Needs and Capacity by Income Level**
Source: City of Vancouver, WSP, ECOnorthwest

| Income Level (% AMI) and Special Housing Needs | Allocated Housing Need | Comp Plan Desingations (Zoning District) Serving These Needs | Aggregated Housing Need | Total Capacity | Capacity Surplus |
|---|---|---|---|---|---|
| 0-30% AMI (PSH) | 2,600 | Residential Neighborhoods (Manufactured Home)*; Urban Mixed-Use (Mixed-Use Neighborhood); Urban Mixed-Use (Regional Activity Center); Employment Mixed Use (Institutional/Campus) | 18,701 | 21,012 | 2,311 |
| 0-30% AMI (Other) | 4,423 | | | | |
| >30-50% AMI | 5,890 | | | | |
| >50-80% AMI | 5,788 | | | | |
| >80-100% AMI | 3,351 | Residential Neighborhoods (Medium-Scale Neighborhood)* | 6,526 | 6,647 | 121 |
| >100-120% AMI | 3,175 | | | | |
| >120% AMI | 12,902 | Residential Neighborhoods (Low-Scale Neighborhood); Residential Neighborhoods (Medium-Scale Neighborhood); | 12,902 | 16,453 | 3,551 |
| **Total** | **38,129** | - | **38,129** | **44,112** | **5,983** |

* 42% of Medium-scale neighborhood capacity assumed in 80-120% AMI and 58% of capacity in >120% AMI capacity

## Planning for Below Market Rate Housing Needs

While this analysis, and the related development capacity analysis and housing needs assessment, indicate the land use and zoning in the Preferred Alternative meet the City of Vancouver's housing needs, additional financial subsidies will be required to meet the need for housing at 0-80% AMI levels. While not required to satisfy requirements of HB1220, this analysis was conducted to identify what level of subsidy would be required on an annual basis to build below market rate housing that is needed across the city using the two most available funding sources for affordable and middle-income housing: the Multifamily Tax Exemption Program and the Low Income Housing Tax Credit program. The subsidies needed per unit for these income levels was identified through the pro-forma analysis by identifying the funding gap necessary to target affordability at these income levels.

**Exhibit 6. Annual Subsidy Needed to Deliver Below Market Rate Housing**
Source: ECOnorthwest

| | 0-50% AMI | 50-80% AMI |
|---|---|---|
| **Total Units Needed By Income Depth** | 12,913 | 5,788 |
| **Estimated Number of Units Needed Annually** | 646 | 289 |
| **Applicable Funding Program For Respective Unit Depth** | Tax Credits | MFTE |
| **Estimated Number of Units Delivered Annually by Applicable Program** | 130 | 195 |
| **Estimated Share of Potential Units Covered by Applicable Program** | 20% | 67% |
| **Estimated Remaining Annual Units Not Funded** | 516 | 94 |
| **Estimated Subsidy Needed Per Unit** | $400,000 | $325,000 |
| **Total Subsidy Needed Annually** | **$206,260,000** | **$30,680,000** |

## Funding for Below Market Rate Housing

The City of Vancouver is committed to increasing affordable housing throughout the community and utilizing all available tools to achieve its housing goals. Alongside regulatory changes, permitting fee reductions, and process improvements, the city supports income-restricted affordable housing development through the following programs and funding sources.

- **Affordable Housing Fund.** Local voter approved property tax levy provides $10M annually through 2033 direct investments toward the acquisition, construction or preservation of affordable housing for households making 50% Average Median Income (AMI) or below (rental units) or 80% AMI or below (homeownership units).
- **HOME Investment Partnerships program.** Federal Department of Housing and Urban Development (HUD) entitlement funding supports rental assistance, housing construction, preservation, acquisition, and homeowner/homebuyer assistance for households making 60% AMI or below (rental assistance/units) or 80% AMI or below (homeownership assistance/units).
- **Community Development Block Grant (CDBG) program.** Federal HUD entitlement supports homeowner/homebuyer assistance for households making 60% AMI or below (rental assistance) or 80% AMI or below (home ownership).
- **Multifamily Tax Exemption (MFTE) incentive.** The city deploys state authorized property tax exemption for market rate and income restricted multifamily housing projects. Projects offering 20% of units at or below 80% AMI receive 12-year property tax exemption. Market rate projects pay into a Fee-in-Lieu Fund.

- **Affordable Housing Fee-in-Lieu Fund**. Funded by contributions from MFTE market rate projects, supports development of affordable housing and property acquisition for future development for households making 60% AMI or below (rental units) or 80% AMI or below (homeownership units).
- **Impact Fee Waivers.** These waive up to 80% of park and traffic impact fees for new affordable housing developments affordable to households making up to 80% of AMI.
- **Construction Sales Tax Deferral (CSTD).** Defers sales and use taxes for new construction of multifamily housing on public parking lots for 10 years, for projects affordable at 80% AMI (rental units) and 115% AMI for (homeownership units).
- **Affordable Housing Sales Tax and Sales Tax Credit.** Vancouver has implemented both state enabled sales tax revenue streams to fund affordable and supportive housing.
- **Dedication of $10M from the American Rescue Fund Act** to acquire properties for future affordable housing development.
- **Real Estate Excise Tax (REET).** Historically, the City has utilized Real Estate Excise Tax (REET) to acquire land for future affordable housing development.
- In addition, the City actively supports project utilization of State programs and funding for affordable housing in Vancouver and southwest Washington, including WSHFC tax credits, the Housing Trust Fund, the Connecting Housing to Infrastructure Program (CHIP) to cover water and sewer infrastructure and connection fees, and legislative appropriations.

## Considerations for Emergency Housing

Emergency housing, emergency shelters, and transitional housing are allowed uses by right in all zones across Vancouver that allow residential and lodging uses. Changes to the zoning map and new designations create allowances for these housing types across the applicable zones that allow residential and hotel uses across Vancouver. Clark County identified the need for approximately 1,405 emergency shelter beds in Vancouver. The table below summarizes the total acres of zoned capacity by zone where emergency housing, emergency shelters, and transitional housing are allowed.

**Exhibit 7. Zoned Capacity by Zoning Designation Where Emergency Housing and Shelters Are Allowed Uses**

Source: WSP

| Zoning Designation | Acres |
|---|---|
| Manufactured Home | 205 |
| Low-Scale Neighborhood | 5,830 |
| Medium-Scale Neighborhood | 6,304 |
| Mixed-Use Neighborhood | 2,707 |
| Regional Activity Center | 1,569 |
| Institutional/Campus | 1,168 |

## Aligning Vancouver Housing Needs with County Allocation

The housing needs assessment and subsequent findings in this analysis utilized the Housing for All Planning (HAPT) tool and relied on Allocation Method A. Using these housing needs assessment findings, the City of Vancouver is planning for 1,601 more units over the planning horizon than Clark County has allocated to Vancouver during the county allocation process. Applying a consistent methodology to reconcile housing needs across both the Vancouver HNA and the Clark County allocation with the Vancouver Comprehensive Plan Land Capacity analysis indicates that the development capacity achieved through the 2045 Vancouver Comprehensive Plan Update meets total housing need and housing needs by income level of both methodologies. Exhibit 8 below summarizes housing needs and total capacity for the Clark County Housing Needs Allocation method which indicates that the Draft 2045 Vancouver Comprehensive Plan also meets housing needs by income category allocated by Clark County.

**Exhibit 8. Housing Needs and Capacity by Income Level – Clark County Allocation Method**

Source: Clark County, City of Vancouver, WSP, ECOnorthwest

| Income Level (% AMI) and Special Housing Needs | Allocated Housing Need | Comp Plan Desingations (Zoning District) Serving These Needs | Aggregated Housing Need | Total Capacity | Capacity Surplus |
|---|---|---|---|---|---|
| 0-30% AMI (PSH) | 2,600 | Residential Neighborhoods (Manufactured Home)*; Urban Mixed-Use (Mixed-Use Neighborhood); Urban Mixed-Use (Regional Activity Center); Employment Mixed Use (Institutional/Campus) | 13,833 | 21,012 | 7,179 |
| 0-30% AMI (Other) | 4,641 | | | | |
| >30-50% AMI | 5,227 | | | | |
| >50-80% AMI | 1,365 | | | | |
| >80-100% AMI | 1,459 | Residential Neighborhoods (Medium-Scale Neighborhood)* | 6,340 | 6,647 | 307 |
| >100-120% AMI | 4,881 | | | | |
| >120% AMI | 16,355 | Residential Neighborhoods (Low-Scale Neighborhood); Residential Neighborhoods (Medium-Scale Neighborhood) | 16,355 | 16,453 | 98 |
| **Total** | **36,528** | - | **36,528** | **44,112** | **7,584** |

* 42% of Medium-scale neighborhood capacity assumed in 80-120% AMI and 58% of capacity in >120% AMI capacity

# Capital Facilities Plan

## 6- and 20-Year Project Lists

The projects included in this document list known capital projects for the short- and long-term planning period (2026-2045). The projects will provide capacity to serve anticipated growth over the planning period, consistent with the adopted land use map.

Updated: April 6, 2026

| Wastewater Management Capital Improvement Plan (2026-2045) | | |
|---|---|---|
| **Project Facility** | **Timeframe (1-6y)** | **Cost Estimate** |
| Main St - 5th to 15th Transpo* | 2026-2031 | $100,000 |
| Heights District Redevelopment | 2026-2031 | $1,550,000 |

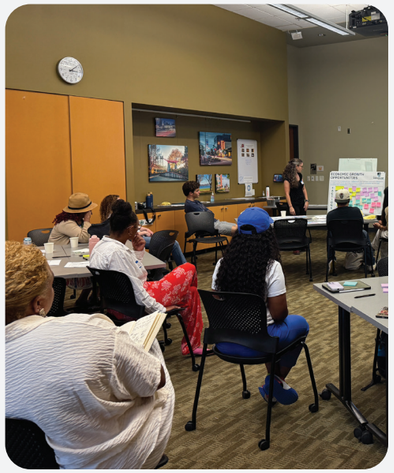
# INTRODUCTION



# INTRODUCTION

Vancouver stands at a pivotal moment in its growth. As one of the fastest-growing cities in Southwest Washington, Vancouver has experienced significant population increases, demographic shifts, and escalating pressures on housing, infrastructure, and neighborhood stability. While growth has brought opportunity and investment, it has not been experienced evenly. Long-standing inequities rooted in disinvestment and systemic racism continue to shape who benefits from growth and who bears its burdens.

The Equitable Development Strategy is the first citywide framework designed to respond directly to these conditions. It builds upon and explicitly aligns with the City of Vancouver's Equity Analysis (March 2024), the Equity Chapter of the Our Vancouver 2045 Comprehensive Plan, and place-based efforts such as the Fourth Plain for All Investment Strategy (2023) and The Heights Equitable Development Strategy (2023). Collectively, these efforts demonstrate that equitable development must be intentional, data-informed, community-driven, and embedded across City departments and investment decisions. This strategy will act as a coordinating framework that aligns policy, investment, and implementation around a shared commitment: ensuring that Vancouver's growth improves quality of life for those who have been historically marginalized, while preventing displacement, strengthening community stability, and expanding access to opportunity across the city.

Vancouver's history reveals how public policy has shaped unequal outcomes across neighborhoods. This has contributed to persistent disparities in housing access, wealth-building, health outcomes, and environmental exposure. Neighborhoods such as Fruit Valley, Bagley Downs, Maplewood and Meadow Homes, among the city's most culturally diverse areas, have also experienced some of the highest concentrations of poverty, renter households, and displacement risk. Recent demographic and market trends have heightened the urgency for action. Vancouver has become increasingly diverse, with communities of color now comprising over 30 percent of the population. At the same time, housing costs have risen rapidly, renter households face disproportionate cost burdens, and redevelopment pressures are accelerating along key corridors. Without targeted intervention, these trends risk repeating patterns seen in other growing cities, where reinvestment leads to displacement rather than shared prosperity.

**Grounding the Strategy in Data, Policy, and Lived Experience**

This Strategy is grounded in both quantitative analysis and community knowledge, drawing from the City's Equity Index and Displacement Risk Map to provide a data-driven decision-making foundation for this Strategy. The Equity Index identifies where structural inequities and social vulnerability are most concentrated. The Displacement Risk Map explains how those inequities intersect with housing market pressures over time. When viewed together, these tools move the City beyond a one-size-fits-all approach and toward targeted, place-sensitive responses.

Data alone, however, cannot capture lived experience. Community engagement conducted across multiple initiatives has consistently elevated shared priorities: housing stability, affordable commercial space for small businesses, safe and accessible transportation, culturally responsive public spaces, and meaningful inclusion in decision-making. This Strategy treats community knowledge as expertise and positions residents and community-based organizations as essential partners in implementation.

**Equity as an Operational Lens**

At its core, the Equitable Development Strategy operationalizes equity as a decision-making lens across City functions, consistent with the City's adopted Equity Framework and its application throughout the Our Vancouver 2045 Comprehensive Plan update. Our Vancouver 2045 is the first comprehensive plan in Vancouver's history to have a direct, intentional focus on equity within its policy work. The goals and actions within this Equitable Development Strategy will implement Our Vancouver 2045's Equity and Inclusion chapter. This Strategy aligns with Our Vancouver and the City's Equity Framework, emphasizing:

- Acknowledgment of historical harms and their present-day impacts
- Prioritization of communities farthest from opportunity
- Transparency and accountability in implementation
- Shared power through sustained community engagement
- Cross-departmental responsibility for equitable outcomes

The Equitable Development Strategy establishes the foundation for coordinated action over time. It is intended to guide how the City prioritizes investments, aligns departmental work, partners with community-based organizations, and evaluates outcomes related to displacement, stability, and access to opportunity. Implementation will require ongoing collaboration, adaptive learning, and continued investment. Success will be measured not only by projects delivered, but by whether residents can remain in their neighborhoods, build wealth, access opportunity, and see themselves reflected in the future of Vancouver.

# INTRODUCTION

## Community Engagement Process

The City of Vancouver committed to a community-driven engagement process to inform the Equitable Development Strategy and ensure that community priorities directly shaped the goals, actions, and implementation framework of the Strategy. Consistent with equity-centered engagement practices, the City focused on creating meaningful opportunities for participation and prioritizing voices that are often underrepresented in traditional planning processes.

### Internal Engagement

In addition to engaging the community, the project team conducted an extensive internal engagement process to ensure the Equitable Development Strategy was both actionable and aligned with departmental expertise, capacity, and responsibilities. Over the course of several months, the project team collaborated with departments across the City of Vancouver to facilitate in-depth conversations about equitable development goals, existing initiatives, and opportunities for alignment. These discussions focused on understanding how equity considerations intersect with departmental work and identifying where policy, programs, and investments could be strengthened or refined.

Following these initial conversations, the project team developed a preliminary outline of the Equitable Development Strategy, including draft goals and proposed actions. This draft was shared with internal departments to:

- Identify actions or perspectives that may be missing;
- Flag areas of duplication or misalignment; and
- Recommend refinements to improve clarity, feasibility, or impact.

### External Engagement

External engagement was conducted through a series of facilitated workshops that brought together approximately 40 community champions, including executive directors, community-based organization leaders, educators, tenant advocates, youth participants, and other community members from across Vancouver, Washington. These participants represented a wide range of lived experiences and professional expertise directly connected to housing stability, economic opportunity, education, and community well-being.

The engagement process consisted of two separate three-hour workshops, both facilitated by the project team from the City of Vancouver. Each workshop was structured to support collaborative learning, dialogue, and action-building across all major categories of the Equitable Development Strategy. Participants worked collectively to identify community needs, elevate lived experiences, and propose actionable solutions aligned with the Strategy's equity goals.

During the workshops, participants were asked to:

- Identify challenges and inequities affecting their communities.
- Propose actions and strategies to address those challenges.
- Prioritize actions based on community impact, urgency, and feasibility.

Following the workshops, City staff synthesized all input gathered from participants. This synthesis process identified:

- High priority actions that rose to the top across both workshops.
- Additional community-identified priorities that, while not ranked as top-tier, were recognized as critical to long-term equitable outcomes.

The results of this process directly informed the structure, goals, and actions of the Equitable Development Strategy. The approach used was not treated as advisory alone, but as foundational to the Strategy's development and implementation framework.

# INTRODUCTION

**Final Engagement and Document Refinement**

Feedback from all engagement was used to draft the Strategy, ensuring that community-identified actions and priorities, along with internal expertise meaningfully shaped the document. Once a draft was completed, the project team re-engaged City staff and community workshop participants to ensure the draft Strategy successfully reflected collective input.

This final engagement phase focused on implementation readiness, including:

- Ensuring all input was accurately captured in the draft Strategy.
- Identifying departmental leads or co-leads for all actions.
- Ensuring alignment between the Strategy and existing work plans.

This collaborative approach emphasized shared ownership, cross-departmental accountability, and long-term implementation success. The result is an Equitable Development Strategy that is not only community-informed but institutionally embedded and positioned for sustained action.

As Vancouver continues to grow, this Strategy affirms a clear commitment to growth with intention, guided by data, informed by community experience, and grounded in equity and shared prosperity.

The Equitable Development Strategy responds to this moment by explicitly linking growth management, equity analysis, and implementation. It recognizes that neutrality in policy is not sufficient when starting conditions are unequal. Instead, equity requires intentionally directing resources, attention, and decision-making power toward communities with the greatest need.

# INTRODUCTION

## How to Use This Document

This document is organized into distinct chapters, each focused on a key area of equity and community development. Each chapter begins with a vision statement and is followed by strategies designed to support that vision. Each action item consists of four parts — the task itself, the relevant Equity Chapter goals it advances, the lead department(s), and its priority level. Where available, definitions, case studies, and exhibits provide additional context and examples to help readers understand the strategies and actions. This structure allows City staff, stakeholders, and community members to easily identify and track relevant strategies and progress as the City of Vancouver moves forward with implementing the Equitable Development Strategy.

---

## Document Chapters

**City Best Practices**

**Equitable Engagement**

**Place-Based Investments**

**Economic Development**

**Housing Equity**

**Transportation Justice**

**Sustainability & Climate**

## Our Vancouver Comprehensive Plan Equity Chapter Goals

**Equitable Community:** All community members have equitable and inclusive access to opportunities and resources, including communities most impacted by past and present exclusionary practices.

**Universal Design & Access:** Public spaces, public infrastructure, and public and private buildings are universally designed and meet best practices for accessibility and inclusion.

**Focus on Youth & Aging Population:** The built environment supports community members from childhood through later life, with families and caretakers benefiting from robust youth programs and accessible childcare, enabling children to excel and parents to actively participate in the workforce. Aging populations benefit from accessible infrastructure, inclusive urban design, accessible housing, and opportunities for social connection.

**Transparent and Inclusive Governance:** Community members have trust in city government, built and sustained through equitable and inclusive community engagement, equitable access to programs, technology and resources, an emphasis on building trust-based relationships with partners and community members, regular reporting of progress and outcomes, and co-creative and transparent decision-making processes.

# CHAPTER KEY

Strategy #

## Strategy to support the chapter vision

| Actions | Goals | Lead Department | Priority |
|---|---|---|---|
| Actions to implement the strategy | Equity Chapter goals the Action advances | Who will be leading or helping to implement this action | Action priority and whether they are community-identified<br>High |

If you see this, there's a further explanation of the action on the page, such as a definition, case study, or exhibit.

These actions were identified directly from community members during external engagement.

Community Identified

High

High Priority if Indicated

Actions that were identified by community members and/or City staff as particularly high priorities are marked as "High."

CHAPTER 1

# CITY BEST PRACTICES

**VISION**

The City will build capacity and provide resources for staff to identify areas of inequity within the city and understand the factors contributing to disparities, so they can design programs and projects that close the gap.

Strategy 1

# Increase diversity, cultural competency and cultural humility of City staff.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 1.1.1 | Create recruitment and retention strategies to ensure City staff are reflective of the Vancouver community. | | Human Resources | **High** |
| 1.1.2 | Institute a compensation program for bilingual staff to reflect the additional workload, including interpretation at in-person events and document translation. | | Human Resources | |
| 1.1.3 | Incorporate City priorities and Equitable Development Strategy goals into recruiting and onboarding programs to ensure new staff enter with a foundational understanding of the City's values around equity and inclusion. | | Human Resources | |
| 1.1.4 | Improve cultural competency and cultural humility for City staff through active engagement in educational and experiential learning. | | Engagement and Access | **High** |
| 1.1.5 | Create education and training programs for City staff regarding effective engagement with community members with disabilities. | | Engagement and Access | **High** |
| 1.1.6 | Formally recognize employees who advance diversity, equity, and cultural competency to celebrate these contributions as a reflection of the City's values through programs such as the V Awards and Access in Action Award. | | Engagement and Access | |

**Goals Key:**

Equitable Community

Universal Design & Access

Focus on Youth & Aging Population

Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified

High

High Priority if Indicated

## Cultural Competency

The ability to understand, communicate with, and effectively interact with people across cultures. It encompasses an awareness of one's own cultural worldview, the ability to recognize and appreciate cultural differences, and the skills required to navigate diverse cultural contexts.[1]

## Cultural Humility

Cultural humility involves understanding the complexity of identies, incorporates a lifelong commitment to self-evaluation and self-critique, and focuses on developing authentic interactions and relationships. [2]

## Diversity

Representative of a range of backgrounds, perspectives, and life experiences.

1. Georgetown University. "Definitions of Cultural Competence." National Center for Cultural Competence. https://nccc.georgetown.edu/curricula/culturalcompetence.html.
2. Lekas, H. M., Pahl, K., & Fuller Lewis, C. (2020). Rethinking Cultural Competence: Shifting to Cultural Humility. Health services insights, 13, 1178632920970580. https://doi.org/10.1177/1178632920970580

Strategy 2

# Enhance the City of Vancouver's procurement procedures to be more equitable and inclusive.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 1.2.1 | Expand outreach to diverse suppliers, contractors and consultants - including minority-owned, women-owned, veteran-owned, and small and emerging businesses - to educate them on how to participate in the City's procurement process. | | Procurement; Economic Prosperity and Housing | |
| 1.2.2 | Expand the number of languages that the City's supplier manual and other educational materials are translated into to reduce barriers to participation. | | Procurement | |
| 1.2.3 | Include social and environmental responsibility criteria for selecting developers for City-owned developments. | | Procurement; Economic Prosperity and Housing | |
| 1.2.4 | Increase procurements with developers who are more diverse, culturally reflective, accessible and inclusive, and understand the unique needs of BIPOC communities. | | Procurement; Economic Prosperity and Housing | |
| 1.2.5 | Support mission-driven developers who are focused on equity and accessibility, especially for elderly and disabled residents. | | Procurement; Economic Prosperity and Housing | |
| 1.2.6 | Identify gaps in service and existing needs for small businesses by partnering with representatives that facilitate current procurement assistance workshops. | | Procurement; Economic Prosperity and Housing | |

**Goals Key:**

Equitable Community | Universal Design & Access | Focus on Youth & Aging Population | Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified | High Priority if Indicated

## Equitable

Fair and just, especially in a way that takes account of and seeks to account for different needs, circumstances, and historical or systematic barriers.

## Inclusive

Intentionally creating environments, processes, or decisions where people of all backgrounds and perspectives feel welcomed, respected, and able to participate.

## Public Procurements

When the local government purchases goods, services and construction using public funds. Public procurement involves specific rules and regulations to ensure transparency, fair competition, and cost-effectiveness.[3]

3. NIGP: The Institute for Public Procurement. "Dictionary of Procurement Terms." https://www.nigp.org/dictionary-of-terms?letter=p&page=13.

Strategy 3

## Use technology and information ethically and equitably.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 1.3.1 | Create a standardized checklist for evaluating technology and information systems across City departments. The checklist will be applied collaboratively across departments and assess tool alignment with program goals, examine underlying system assumptions, monitor for expected and unintended outcomes, evaluate equitable performance, and establish a regular re-evaluation cadence. | | Information Technology | |
| 1.3.2 | Implement Digital Accessibility under the Language Access Plan. | | Engagement and Access; Communications | |
| 1.3.3 | Provide artificial intelligence (AI) training to address technology bias and encourage critical engagement with emerging digital tools. | | Information Technology | |

### Digital Accessibility

Websites, tools, and technologies are designed and developed so that people with disabilities can use them. A website is accessible when it is easy to see or hear, easy to use, easy to understand, and works well with different devices and assistive tools.[4]

**Goals Key:**

Equitable Community | Universal Design & Access | Focus on Youth & Aging Population | Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified | High Priority if Indicated

Strategy 4

## Fund and create internal structures needed to implement the Equitable Development Strategy and other equity-based plans.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 1.4.1 | Every department shall create and maintain an equity team to ensure equity is integrated into every aspect of their work. | | Engagement and Access | |
| 1.4.2 | Maintain a permanent ADA Coordinator full-time employee. | | Engagement and Access | |
| 1.4.3 | Maintain permanent staff in the Community Development Department Comprehensive Planning Division to coordinate and advance Equitable Development Strategy priorities and initiatives. | | Community Development | |
| 1.4.4 | Fund and implement the priorities that are highlighted in the ADA Transition Plan. | | Engagement and Access; General Services | |
| 1.4.5 | Address disparities of outcomes of complaint-based systems. | | Engagement and Access | |

### The Americans with Disabilities Act (ADA)

The Americans with Disabilities Act. A federal civil rights law that prohibits discrimination against individuals with disabilities in everyday activities. The purpose of the law is to make sure that people with disabilities have the same rights and opportunities as everyone else.

4. UC Berkeley. "Digital Accessibility." Digital Accessibility Program. https://dap.berkeley.edu/web-a11y-basics/what-digital-accessibility.

Strategy 5

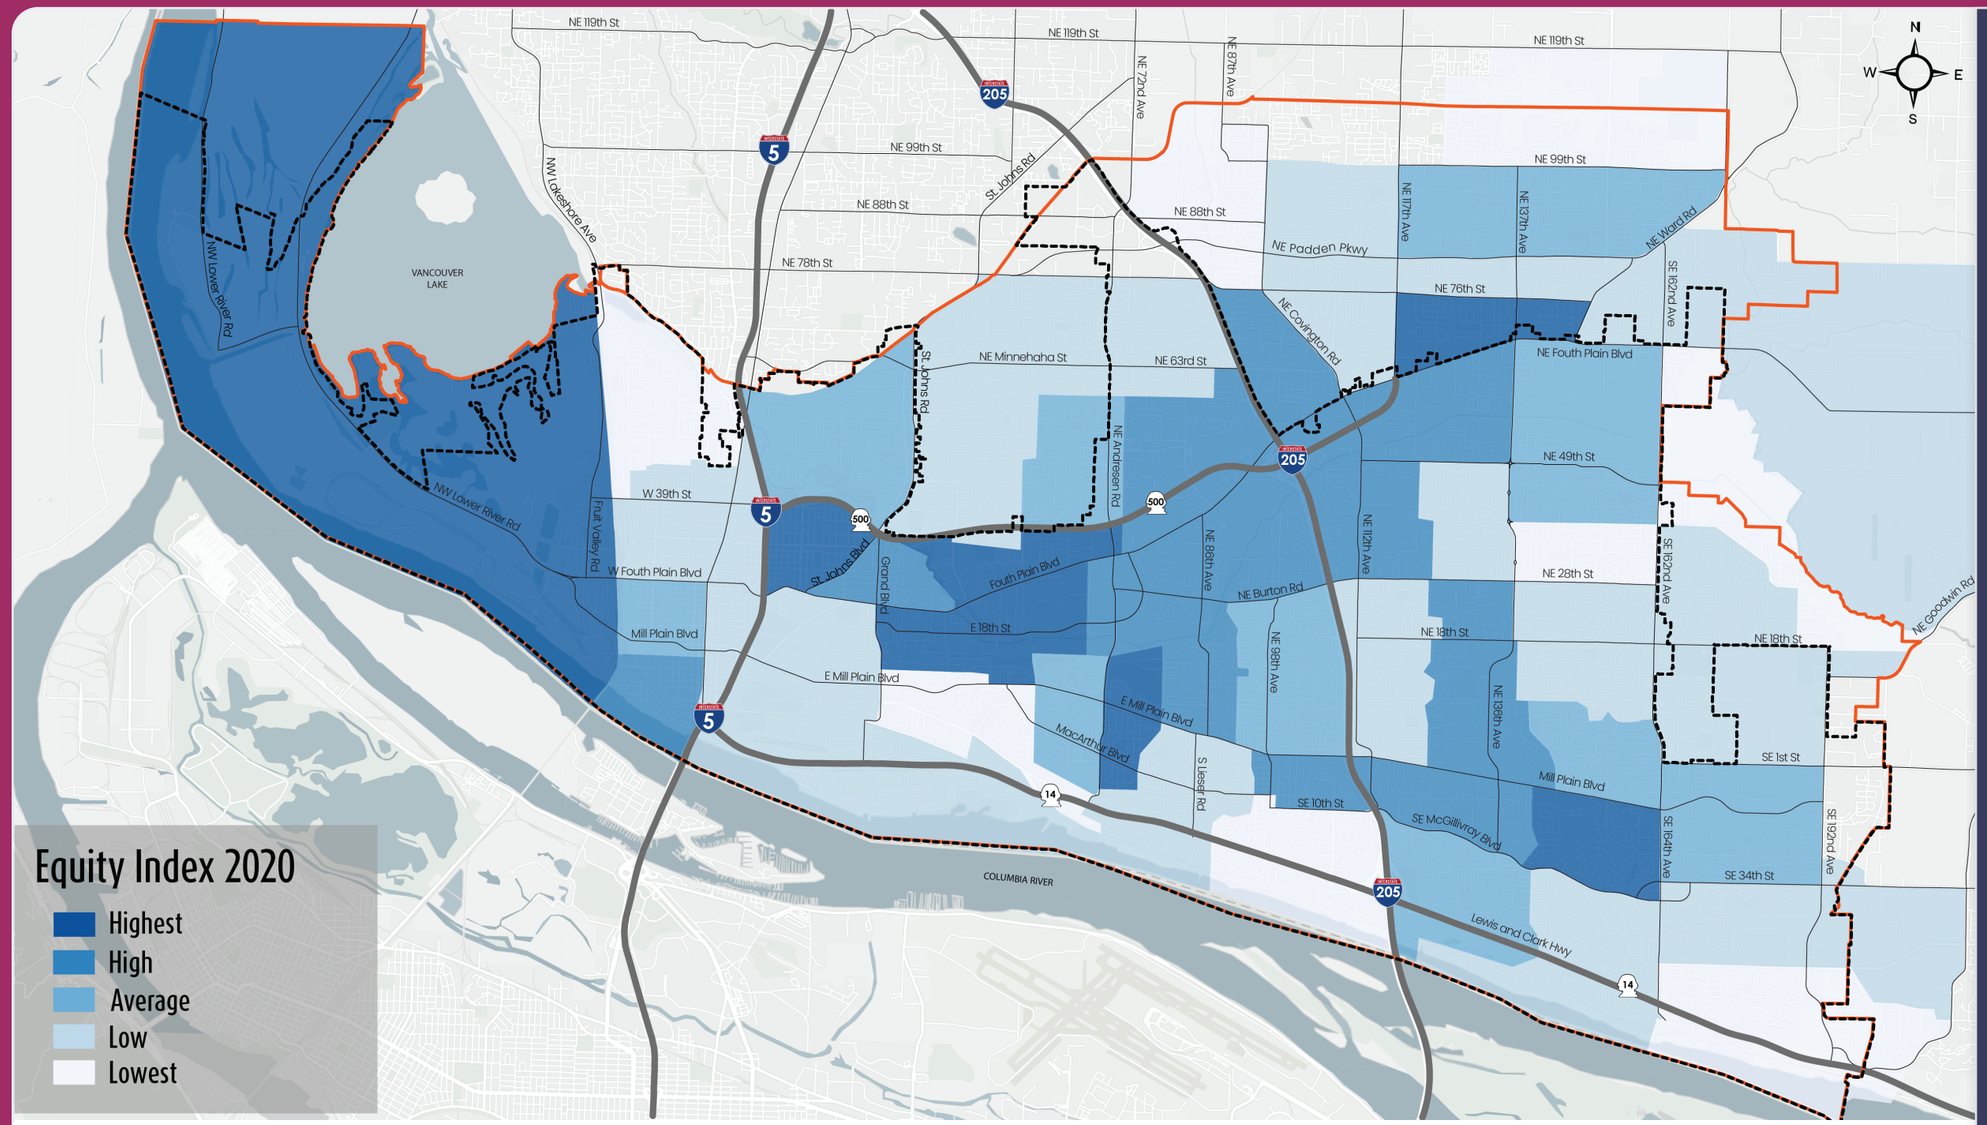
# Create a repository for all equity-based data and maps to be publicly accessed.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 1.5.1 | Create an equity atlas to compile all spatial, demographic information and equity-based data. This should initially include the Equity Index Map, Displacement Risk Map, Transit Dependency Map, and other maps referenced in this strategy. Other relevant maps will be added as they are created. | | Community Development | **High** |
| 1.5.2 | Utilize GIS to map geographic disparities in income, housing, healthcare access and other key indicators as needed. | | Community Development; Engagement and Access | **High** |
| 1.5.3 | Develop and maintain a database of housing availability, market costs, and community need based on household income distribution, and expected cost to deliver units to inform housing policy, incentives, and priorities as market conditions change. | | Economic Prosperity and Housing | **High** |
| 1.5.4 | Maintain a citywide dashboard to track and display key performance indicators that are updated at regular intervals and show progress over time. | | Community Development; Information Technology | **High** |

**Goals Key:**

Equitable Community | Universal Design & Access | Focus on Youth & Aging Population | Transparent and Inclusive Governance

**Community & Priority Key:**

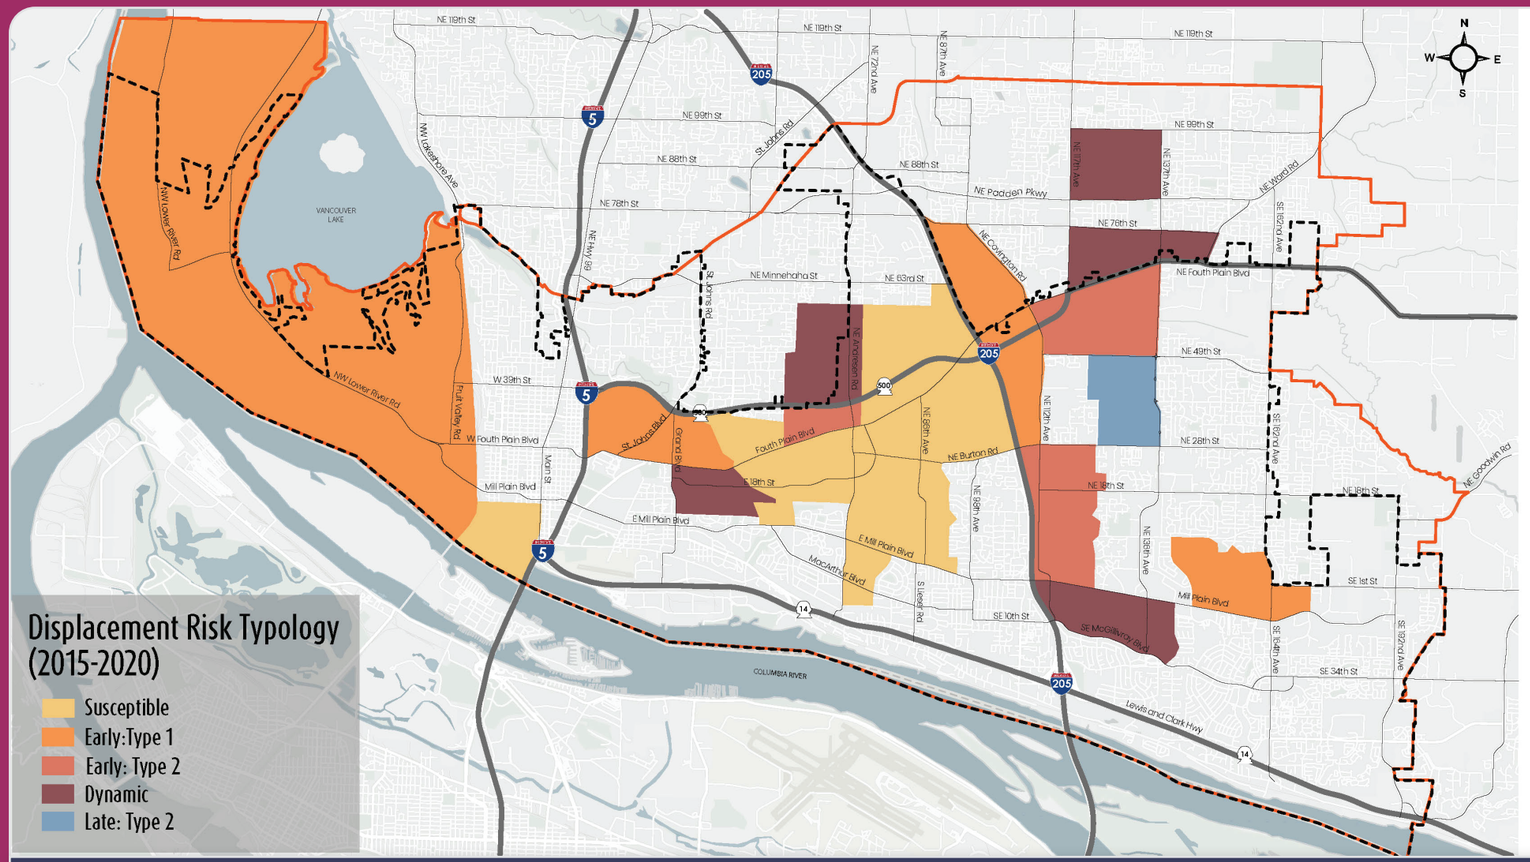


Community Identified | High Priority if Indicated

## Geographic Information System (GIS)

A computer system that analyzes and displays geographically referenced information. It uses data that is attached to a unique location.[5]

5. USGS. "What is a Geographic Information System (GIS)?." USGS. Last updated January 29, 2025. https://www.usgs.gov/faqs/what-a-geographic-information-system-gis.



# Equity Index Map

The City of Vancouver's Equity Index Map highlights equity priority areas in the city based on concentrations of multiple indicators such as race, income, housing status, age, disability, education, and English proficiency. The City will use this map to identify priority investment areas, tailor program offerings for specific communities, and better understand opportunities to advance social and economic equity across the city. These maps are most powerful when paired with authentic community engagement that integrates community values, priorities, and lived experiences to holistically inform policy and funding decisions.

This map highlights neighborhoods in darker blue areas, referred to as equity priority areas, where targeted investments and resources could have the greatest impact on building community resilience and equity.

6. "Vancouver Equity Risk Weighting Tool." City of Vancouver. October 1, 2022. https://city-of-vancouver-wa-geo-hub-cityofvancouver.hub.arcgis.com/documents/00e816c210d540b686e64cdaa9ff02dc/about

## Seven Displacement Risk Neighborhood Typologies

| Typology | Vulnerable Population? | Demographic Change? | Housing Market Condition |
|---|---|---|---|
| Susceptible | Yes | No | Adjacent |
| Early: Type 1 | Yes | No | Accelerating |
| Early: Type 2 | Yes | Yes | Adjacent |
| **Dynamic** | **Yes** | **Yes** | **Accelerating** |
| Late: Type 1 | Yes | Yes | Appreciated |
| Late: Type 2 | Used to be in 2000 or in year 1 | Yes | Accelerating |
| Continued Loss | Used to be in 2000 or in year 1 | Increasing share of white residents and adults with a four-year degree | Appreciated |

# Displacement Risk Map

A Displacement Risk Map identifies where communities may be most vulnerable to being forced out of their homes or neighborhoods due to economic or social pressures. It combines multiple indicators such as changes in housing costs, income levels, and demographic changes to highlight areas at higher risk of displacement. It does not predict neighborhood outcomes, but reveals patterns and concentrations of risk across a geographic area. Displacement risk maps are often used to guide planning and policy decisions such as where to prioritize tenant protections, affordable housing investments, and anti-displacement policies to promote more stable, inclusive, and resilient neighborhoods.

The Displacement Risk Map shown above indicates census tracts that may be experiencing accelerated patterns of displacement that could potentially be mitigated through anti-displacement measures and interventions.

Strategy 6

# Assess impacts of projects and programs.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 1.6.1 | Create a standard impact assessment framework that equips City staff to evaluate the effects of policies and development initiatives on all community groups. This framework will support the Vancouver for All initiative by guiding decision-making with the aim of eliminating barriers and promoting opportunities for all residents. | | Engagement and Access | **High** |
| 1.6.2 | Conduct impact assessments on all new projects and programs once a standard impact assessment framework is created. | | All Departments | **High** |
| 1.6.3 | Periodically evaluate ongoing projects and programs to assess their effectiveness and impact across all community groups, ensuring benefits are broadly shared and unintended consequences are identified and addressed. | | All Departments | **High** |
| 1.6.4 | Create and implement a neighborhood-specific survey to help us understand the nuances that exist within our community and identify ways to make our programs and services more welcoming and accessible for everyone. | | Engagement and Access | **High** |

**Goals Key:**

Equitable Community | Universal Design & Access | Focus on Youth & Aging Population | Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified | **High** High Priority if Indicated

Case Study:

## Vancouver for All Initiative

Vancouver for All is a transformative initiative designed to create a connected community where all residents feel a sense of belonging and where barriers to participation and success are removed. This approach aligns with the City's core values of collaboration, innovation, and empowerment.

- **Collaboration:** Vancouver for All emphasizes working together to integrate varying perspectives and ensure that the voices of all groups, especially those underserved, are considered in the decision-making process.
- **Innovation:** Recognizing a one-size-fits-all approach does not work when addressing the diverse needs of community, this initiative will utilize innovative strategies tailored to the specific challenges faced by different groups.
- **Empowerment:** The City will establish goals that will be measurable, allowing for transparency and accountability. Regular assessments and feedback loops will be built into the initiative to monitor progress and make necessary adjustments.

Three approaches will be taken to implement Vancouver for All:

- **Targeted professional development** to provide staff with the knowledge and skills to equip them to recognize and address barriers within their team's work environments to better serve all communities throughout the city.
- **Tailored resources and support**, such as mentorship programs, accessibility enhancements for community services, and targeted outreach initiatives that aim to eliminate barriers and promote opportunities for all residents.
- **Community engagement and feedback** through surveys, focus groups, and town hall meetings will be central to Vancouver for All. This will help identify specific barriers faced by all community groups, allowing the city to adapt its strategies effectively.

CHAPTER 2

# EQUITABLE ENGAGEMENT & RELATIONSHIP BUILDING

**VISION**

City staff will engage community stakeholders early and often to ensure that projects and initiatives reflect the needs, concerns and aspirations of all city residents.

Strategy 1

# Provide City staff with education and resources to build capacity for authentic, equitable community engagement.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 2.1.1 | Create a framework to guide City staff in building ongoing, relationship-based community engagement that goes beyond project-specific outreach. The framework will at a minimum include stakeholder mapping, a needs assessment, and best practices. | | Engagement and Access; Communications | **High** |
| 2.1.2 | Use stakeholder mapping to identify key stakeholders from diverse community segments, including marginalized groups, to ensure broad representation. | | Engagement and Access; Communications | **High** |
| 2.1.3 | Create a toolkit for staff regarding inclusive engagement with the disability community. | | Engagement and Access | |

**Goals Key:**

Equitable Community | Universal Design & Access | Focus on Youth & Aging Population | Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified | **High** High Priority if Indicated

### Stakeholder Mapping

The process of identifying individuals, groups, and organizations affected by or influential to a project and analyzing their interests, power, and relationships to inform approaches to engagement and communications.[7]

7. John Hopkins University. "Stakeholder Mapping." Resources. https://imagine.jhu.edu/resources/stakeholder-mapping/.

Strategy 2

## Create and maintain relationships with communities that have been historically underserved.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 2.2.1 | Engage the community early in the process of developing any project, program, or policy. | | All Departments | |
| 2.2.2 | Equitably engage the community to better understand community needs. Conduct surveys, focus groups, and community meetings to gather community input. Prioritize inclusivity by providing interpretation services and holding meetings at accessible times and locations. | | All Departments | |
| 2.2.3 | Create community liaison positions within the city to build and maintain deep relationships through collaboration with community leaders. | | Engagement and Access | |
| 2.2.4 | Rotate City staff schedules and locations to meet communities where they are, increasing visibility and accessibility. | | All Departments | |
| 2.2.5 | Advance equity and transparency by hosting inclusive community connection events with City staff. | | All Departments | |
| 2.2.6 | Improve accessibility of City communications and digital platforms, aiming to meet or exceed web accessibility standards. | | Communications | |

**Goals Key:**

Equitable Community | Universal Design & Access | Focus on Youth & Aging Population | Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified | High Priority if Indicated

Case Study:

## Community Liaison Program at the City of Seattle

The Community Liaison Program is run by the Department of Neighborhoods and was created to help the City do a better job of engaging with and serving historically underserved communities in Seattle.[8]

Community Liaisons are independently contracted and act as a neutral bridge between historically underserved communities and city government, ensuring these groups have access to information, resources, and decision-making power.[9]

8. City of Seattle. "Community Liaisons." Neighborhoods. https://www.seattle.gov/neighborhoods/community-connections/community-engagement/community-liaisons.
9. City of Seattle. "Celebrating 15 years of the Community Liaison Program and honoring those who have served since the beginning." Front Porch. https://frontporch.seattle.gov/2024/09/18/celebrating-15-years-of-the-community-liaison-program-and-honoring-those-who-have-served-since-the-beginning/.

Strategy 3

## Increase diversity of Boards and Commissions to better reflect the community as a whole.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 2.3.1 | Increase outreach about Boards and Commissions to more intentionally engage with underrepresented residents. | | City Manager's Office | |
| 2.3.2 | Address barriers to participation and create ways to build individual capacity for residents to step into Board and Commission roles. | | City Manager's Office | |
| 2.3.3 | Actively recruit Board and Commission members from underrepresented communities when vacancies arise to ensure Boards represent the community. | | City Manager's Office | |
| 2.3.4 | Provide community education around Boards and Commissions and their role in developing policies and large investments. | | City Manager's Office | |

**Goals Key:**

Equitable Community

Universal Design & Access

Focus on Youth & Aging Population

Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified

High

High Priority if Indicated

### Boards and Commissions

Formal groups appointed or created by a government or organization to provide guidance, oversight, or decisions on specific policy areas, programs, or community issues.[10]

10. Priya Elangovan. "The Importance of Boards and Commissions." All In Together. https://aitogether.org/the-importance-of-boards-and-commissions/.

Strategy 4

# Build the capacity of neighborhood associations to reflect and engage all Vancouver residents.

**Goals Key:**

Equitable Community | Universal Design & Access | Focus on Youth & Aging Population | Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified | High Priority if Indicated | High

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 2.4.1 | Encourage community building outside of formal neighborhood association meetings. | | Office of Neighborhoods | |
| 2.4.2 | Provide funding and technical assistance for neighborhood events, projects, and programs. | | Office of Neighborhoods | |
| 2.4.3 | Support neighborhood engagement across age, race, ethnicity, language, ability and religion. | | Office of Neighborhoods | |
| 2.4.4 | Facilitate partnerships between neighborhood associations and other community groups. | | Office of Neighborhoods | |
| 2.4.5 | Support neighborhood associations to find and implement creative ways to foster a sense of belonging in their neighborhoods. | | Office of Neighborhoods | |
| 2.4.6 | Update and fill-in neighborhood boundaries, so that all Vancouver community members are represented by a neighborhood association. | | Office of Neighborhoods | |
| 2.4.7 | Revamp neighborhood action plans, allowing neighborhood associations to easily document and share their hopes for the future. | | Office of Neighborhoods | |
| 2.4.8 | Develop a yearly training program to:<br>• Empower neighborhood leaders<br>• Support equitable and inclusive neighborhood engagement<br>• Improve neighborhood communication<br>• Encourage improved financial management practices<br>• Cultivate and support the next generation of neighborhood leaders | | Office of Neighborhoods | |

## Neighborhood Association

A voluntary organization of residents to advocate for local interests and improvements, address neighborhood issues, and collaborate with local governments and residents within a designated neighborhood.[11]

## Community Building

Community building is the intentional process of fostering trust, connections, and inclusive spaces where all residents, especially those historically excluded, feel a sense of belonging, shared ownership, and collective investment in one another's wellbeing.

11. The Policy Circle. "Neighborhood Associations Guide." Policy Insight. https://www.thepolicycircle.org/minibrief/neighborhood-associations/.

Strategy 5

# Engage with Tribal Community Members.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 2.5.1 | Foster meaningful partnerships with Tribal communities and original stewards of the land we currently occupy, integrating their knowledge, priorities, and cultural perspectives into local decision-making processes. | | City Manager's Office; Engagement and Access | |

**Goals Key:**

Equitable Community

Universal Design & Access

Focus on Youth & Aging Population

Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified

**High**

High Priority if Indicated

CHAPTER 3

# PLACE-BASED INVESTMENTS

**VISION**

The City will identify underserved areas where focused resources are needed to enhance quality of life.

Strategy 1

## Use the Equity Atlas to identify strategic locations where additional resources are needed to enhance quality of life.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 3.1.1 | Utilize the City's Equity Index and Displacement Risk Maps to prioritize infrastructure, housing, and public service investments in historically underserved neighborhoods. | | Community Development | |
| 3.1.2 | Update the City's Equity Index and Displacement Risk Assessment and establish equity priority areas in need of focused, place-based investments every 5 years. | | Community Development | |
| 3.1.3 | Conduct an existing conditions report on areas prioritized for place-based investments. The existing conditions report will include infrastructure, community character, social and economic conditions, comprehensive demographic analysis, land use, public facilities and services, and environmental factors at a minimum. | | Community Development | |

### Equity Priority Communities

Communities or geographic areas identified as historically underserved that would most benefit from increased support and resources.

**Goals Key:**

Equitable Community

Universal Design & Access

Focus on Youth & Aging Population

Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified

High

High Priority if Indicated

Strategy 2

## Support equitable growth in identified neighborhoods that enhances well-being without displacement.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 3.2.1 | Focus wealth building strategies from the Economic Development and Housing chapters (4 and 5) along transit corridors and in equity-priority areas. | | Economic Prosperity and Housing; Community Development | |
| 3.2.2 | Implement actions listed in the Economic Development and Housing chapters (4 and 5) in areas experiencing growth and/or large upcoming capital projects. Equitable development and anti-displacement interventions should be implemented as far in advance of large capital projects as possible to foster resilient communities and minimize displacement risk. | | Economic Prosperity and Housing | |
| 3.2.3 | Include opportunities for community ownership in City-led developments. | | Economic Prosperity and Housing | |
| 3.2.4 | Include commercial buyback options in City-led development projects to allow the City to solely purchase, or purchase with community partners, new retail to utilize or achieve other equity goals. | | Economic Prosperity and Housing | |
| 3.2.5 | Leverage City-owned land and infrastructure investments to advance economic development, housing, transit, and climate goals. | | Economic Prosperity and Housing | High |
| 3.2.6 | Target City incentives and programs to promote affordable and community benefiting development in equity priority areas. | | Economic Prosperity and Housing | |

### Commercial Buyback Option

A commercial buyback option gives the City, or a community partner, the right to purchase commercial space within a new development after it has been built. By owning the retail space, the City can prioritize social outcomes over maximum profit. Commercial buyback options also allow for a broader range of uses (small-scale manufacturing, shared distribution, retail, etc.).

Strategy 3

# Design public spaces to be safe, accessible, inclusive, and reflective of Vancouver's diversity.

## Public Spaces

Public spaces are publicly accessible places — including parks, streets, sidewalks, libraries, and commercial areas — where people gather, connect, and engage in community life.

## Community Help Hub

A community help hub is a central location where community members can easily access resources and services or get connected to where those services are available elsewhere.[12]

## Crime Prevention Through Environmental Design (CPTED)

An approach that uses thoughtful design of buildings, streets, and public spaces to reduce crime in ways that make them feel safer and help discourage crime. This can include adequate lighting, clear sight lines, and active, welcoming spaces where people naturally watch out for each other.[13]

**Goals Key:**

Equitable Community | Universal Design & Access | Focus on Youth & Aging Population | Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified | High Priority if Indicated

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 3.3.1 | Involve local residents and community organizations in the design of public spaces to help meet the needs of diverse communities and affirm their history, present and future in the city. Public spaces shall incorporate cultural assets, history, and placemaking that reflect the communities they serve. | | Community Development; Economic Prosperity and Housing; Parks, Recreation and Cultural Services; General Services | |
| 3.3.2 | Identify capital and infrastructure investments to advance multiple goals and benefit the local community, including through strategic partnerships. | | Community Development; Economic Prosperity and Housing; General Services; Public Works | |
| 3.3.3 | Engage impacted communities in the planning and implementation of large City-funded redevelopment, park, and public space projects through inclusive and culturally responsive engagement processes. | | Community Development; Economic Prosperity and Housing; Parks, Recreation and Cultural Services; General Services | |
| 3.3.4 | Facilitate universal design, pedestrian safety, and other accessibility criteria for public spaces, such as streets, sidewalks, parks, and commercial areas. | | Community Development; Economic Prosperity and Housing; Parks, Recreation and Cultural Services; Public Works | |
| 3.3.5 | Create a Community Help Hub in central Vancouver. This action had the strongest support during workshops with community. | | Community Development; Economic Prosperity and Housing | High |
| 3.3.6 | Integrate Crime Prevention Through Environmental Design (CPTED) to improve safety outcomes of public spaces. Hostile architecture should not be included as CPTED design elements. | | Community Development, Economic Prosperity and Housing, Parks, Recreation and Cultural Services | |

12. Laurie Pferr. "Community Care Hubs: What Evidence-Based Program Providers Need to Know. "National Council on Aging." https://www.ncoa.org/article/community-care-hubs-what-evidence-based-program-providers-need-to-know/.
13. National Crime Prevention Council. "Crime Prevention Through Environmental Design Guidebook." Readiness and Emergency Management for Schools. https://www.humanitarianlibrary.org/sites/default/files/2020/09/SNCPC%202003%20Crime%20prevention%20thru%20environmental%20design.pdf.

Strategy 4

## Enhance accessibility of services.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 3.4.1 | Conduct Service Mapping to identify areas lacking essential services and prioritize improvements in identified “service deserts”. | | Community Development; Economic Prosperity and Housing | **High** |

### Service Mapping

Mapping existing services to see where there are gaps, sometimes called “service deserts”, to guide decision making and prioritize improvements. Service mapping can also be used to help the public navigate services.[14]

**Goals Key:**

Equitable Community | Universal Design & Access | Focus on Youth & Aging Population | Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified | High Priority if Indicated

Strategy 5

## Advance health equity by broadening access to essential health services in underserved neighborhoods to address environmental causes of place-based health disparities.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 3.5.1 | Incentivize affordable and healthy food businesses, and other businesses that support healthy living, to locate in equity priority areas. | | Economic Prosperity and Housing | |
| 3.5.2 | Work with non-profit organizations, by-for organizations, and local healthcare providers to expand healthcare access and culturally competent healthcare, including mental health services, prioritizing facilities in equity priority areas for accessible and inclusive care. | | Community Development; Economic Prosperity and Housing | |

### Health Equity

When everyone has a fair and just opportunity to attain their full potential for health and well-being regardless of social, economic, demographic, geographic, or other differences.[16]

14. Australian Government. Service Mapping 101. Policy Projects and Taskforce Office. https://www.apsacademy.gov.au/sites/default/files/2024-07/Service%20Mapping%20101%20Guide%20-%20accessible%20version.pdf.
15. National Digital Inclusion Alliance. “Digital Inclusion 101.” https://www.digitalinclusion.org/digital-inclusion-101/.
16. World Health Organization. “Health Equity.” Health Topics. https://www.who.int/health-topics/health-equity#tab=tab_1.

CHAPTER 4

# ECONOMIC DEVELOPMENT & WORKFORCE EMPOWERMENT

**VISION**

The City will create a thriving, dynamic business environment where entrepreneurs from all backgrounds, including those historically underserved, can reach their full potential and create living-wage jobs throughout Vancouver.

Strategy 1

# Support underrepresented businesses from start to sustainability.

### Community Investment Trust (CIT)

CITs allow neighborhood residents and other community members–often with low or moderate incomes–to buy small, affordable shares in a commercial or community-owned property. They are for-profit organizations that help people invest in their own neighborhood, build wealth, strengthen local ownership, and keep economic benefits within a neighborhood.[17]

### Neighborhood Business Incubators (NBIs)

NBIs help businesses launch and grow by providing free or low-cost workspace, training, mentorship, access to investors, and in some cases, working capital.[18]

**Goals Key:**

Equitable Community | Universal Design & Access | Focus on Youth & Aging Population | Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified | High Priority if Indicated

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 4.1.1 | Utilize City-controlled real estate to provide affordable commercial leasing opportunities for small and emerging businesses. | | Economic Prosperity and Housing | |
| 4.1.2 | Support the growth and expansion of culturally specific businesses to help increase access to cultural goods and services for all residents. | | Economic Prosperity and Housing | |
| 4.1.3 | Improve accessibility of small business programs through equitable outreach and multilingual implementation. | | Economic Prosperity and Housing | |
| 4.1.4 | Facilitate affordable commercial space to support small or locally owned businesses and increase economic opportunities. This may include code changes, negotiated development agreements, master leasing arrangements, supports for tenant improvements, shared amenities, etc. | | Economic Prosperity and Housing; Community Development | |
| 4.1.5 | Reframe the narrative around historically underserved neighborhoods by actively promoting their strengths and culture. | | Economic Prosperity and Housing; Communications | |
| 4.1.6 | Support Community Investment Trusts (CIT) and other opportunities for commercial ownership. Give local small businesses collective ownership over their physical location and provide an investment opportunity for individuals with low incomes. | | Community Development; Economic Prosperity and Housing | |
| 4.1.7 | Help small businesses and microenterprises access capital and build assets. Activities could include forming a partnership with a microfinance organization, facilitating low-cost loans, or encouraging small business owners to set up Individual Development Accounts (IDAs). | | Economic Prosperity and Housing | |
| 4.1.8 | Explore creative funding options to fund CBOs, anti-displacement strategies, community events, equitable community development programs, etc. This could include taxing high risk retail clusters. | | Community Development; Economic Prosperity and Housing | |
| 4.1.9 | Expand the Fourth Plain for All (FPFA) small business revolving loan fund citywide. | | Economic Prosperity and Housing | |
| 4.1.10 | Direct technical assistance and business support resources to underrepresented businesses, including skill-building opportunities and other tailored services. | | Economic Prosperity and Housing | |
| 4.1.11 | Fund Neighborhood Business Incubators. NBIs are a type of affordable shared commercial space that provide both a physical location and programmatic business development support for entrepreneurs. | | Economic Prosperity and Housing | |

17. Anti-Displacement Network. "Community Investment Trusts." About. https://antidisplacement.org/tool/community-investment-trusts/.
18. Anti-Displacement Network. "Neighborhood Business Incubators." About. https://antidisplacement.org/tool/neighborhood-business-incubators/.

Case Study:

# Fourth Plain For All (FPFA)

**Fourth Plain For All** is a community-driven investment strategy approved by Vancouver City Council in November 2023, co-created with Fourth Plain residents, workers, and students to reflect a shared vision for central Vancouver neighborhoods.[19]

**Vision statement:** *Through continued investment, the people who live, work, and go to school in our community are healthy, safe, and have greater access to opportunities. Our ties to one another are strengthened through spaces to celebrate diverse cultures. People feel safe and are safe — whether walking, taking the bus, or visiting a park. Our neighborhoods are not only a local hub, but an international district that people love to visit — a Fourth Plain For All.*

**A 10-Year Strategy with Immediate Action** [20]

The FPFA strategy was born out of a rare and significant opportunity: $25 million in American Rescue Plan Act (ARPA) funding dedicated to central Vancouver neighborhoods. Rather than determining how to spend those dollars without community input, the City worked with Fourth Plain community members to identify near-term priorities for ARPA investment while simultaneously developing a broader 10-year roadmap to guide future investment in the area.

Together, the community identified more than 40 actions — spanning Housing, Community Building & Public Health, Parks & Public Space, Transportation & Safety, and Economic Development — prioritizing those most urgent for immediate ARPA funding while charting a course for long-term investment in the years ahead.

Case Study:

# Fourth Plain Community Commons Project

- Fourth Plain Community Commons is a mixed-use development located on Fourth Plain Boulevard that is designed to serve the community with flexible event spaces, commercial kitchen incubators, office spaces, and more.[21]
- The building opened in September 2023, and includes affordable housing on the upper floors and flexible community-serving spaces on the ground floor. Community space elements include:
  - A commercial kitchen incubator to launch and support emerging food-based businesses;
  - A shared office space to co-locate services to make it easier for residents and businesses to access resources;
  - A community event space that can be rented for festivals, birthdays, etc.; and
  - A public plaza with infrastructure to support a market, food trucks, or other events.
- The development was funded though federal, state, and local fundings sources and partnerships.

21. City of Vancouver. "Fourth Plain Community Commons." Equitable Development Planning. https://www.cityofvancouver.us/business/planning-development-and-zoning/equitable-development-planning/fourth-plain-community-commons/.

Strategy 2

## Extend small business support to home-based microenterprises.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 4.2.1 | Invest time and resources in community outreach to engage home-based businesses. | | Economic Prosperity and Housing | **High** |
| 4.2.2 | Review City's Development Code for barriers to establishing or operating home-based businesses. | | Community Development | **High** |

**Goals Key:**

Equitable Community

Universal Design & Access

Focus on Youth & Aging Population

Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified

**High**

High Priority if Indicated

Strategy 3

## Support workforce development programs to increase access to quality jobs.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 4.3.1 | Bring together employers, labor representatives, workers, job training partners, funders, and workforce development boards that specialize in a specific industry to address local workforce needs. | | Economic Prosperity and Housing | |
| 4.3.2 | Increase access to existing job training, entrepreneurial services, and technology for under-represented communities. This should include hiring a workforce navigator to improve utilization of existing job training services in a specific area that is tailored to that community. | | Economic Prosperity and Housing | |
| 4.3.3 | Partner with area schools to support people in gaining skills needed to access jobs. | | Economic Prosperity and Housing | |
| 4.3.4 | Attract and support industries and companies to boost the number of living wage jobs at multiple levels of education and/or experience. | | Economic Prosperity and Housing | |

Strategy 4

# Increase access to childcare.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 4.4.1 | Provide specialized support for home-based childcare businesses. | | Economic Prosperity and Housing | **High** |
| 4.4.2 | Address City regulations that make developing childcare facilities difficult and/or more expensive. | | Community Development | **High** |
| 4.4.3 | Explore funding mechanisms, support programs and partners, and utilize City-owned properties to increase the number of childcare facilities and improve their affordability and accessibility for all Vancouver residents. | | Community Development; Economic Prosperity and Housing | **High** |
| 4.4.4 | Research and adapt strategies from other cities to improve childcare workforce recruitment, retention, and wages, and better support working families and caregivers. | | Community Development; Economic Prosperity and Housing | |

**Goals Key:**

Equitable Community

Universal Design & Access

Focus on Youth & Aging Population

Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified

**High**

High Priority if Indicated

CHAPTER 5

# HOUSING EQUITY & DISPLACEMENT RISK

**VISION**

All residents have access to safe, affordable housing and protections against displacement.

Strategy 1

# Expand protections and programs aimed at improving housing safety, security, and reducing displacement.

### Displacement

Involuntary relocation of households and businesses from their neighborhoods due to rising costs, redevelopment, or changing neighborhood conditions. For instance, displacement can happen when rents or housing costs become too high for existing residents to afford, forcing them to leave the neighborhood, often far away from jobs, services, and culturally-specific amenities in order to find more affordable housing.[22]

### Rental Assistance Programs

Programs that provide temporary financial aid to help with rent and utility payments. These programs are typically for residents with low-income who face a threat of eviction.[23]

### Community-Based Organizations (CBO)

Local organizations, often nonprofits, that provide services, advocacy, and resources to meet the specific needs and priorities of a particular community for issues like housing, education, health, environment, etc.[24]

### Tenant Protection Enhancements

New policies that increase tenant protections. These policies can include protections like limits on the reasons for which a landlord can evict a tenant or laws strengthening code enforcement and habitability standards.[25]

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 5.1.1 | Improve distribution of emergency rental assistance programs to provide greater access for BIPOC and immigrant communities. Build capacity of culturally specific community-based organizations (CBOs) to administer available funding. | | Economic Prosperity and Housing | |
| 5.1.2 | Enhance tenant protections by expanding legal protections for renters to reduce and mitigate high costs of displacement. The City should eliminate junk fees and other cost barriers that drive up rental prices and create inequitable access for residents with lower income. | | Economic Prosperity and Housing | **High** |
| 5.1.3 | Support tenants facing eviction. This may include incorporating pre-eviction mediation when feasible, tracking eviction actions to inform policy decisions and identify patterns of concern, and developing programs and partnerships to connect tenants with resources, support and information throughout the eviction process - recognizing that an eviction filing can affect a renter's record regardless of outcome. | | Economic Prosperity and Housing | **High** |
| 5.1.4 | Reduce emissions within residential buildings. This could include incentivizing the installation of ventilation systems or building air intake away from street-level pollution sources and planting large form trees between the building and street. | | Community Development | |
| 5.1.5 | Disperse transitional housing throughout the City and offer grants to offset complexities for specific populations. | | Economic Prosperity and Housing | |

**Goals Key:**

Equitable Community | Universal Design & Access | Focus on Youth & Aging Population | Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified | High Priority if Indicated

Strategy 2

# Preserve the existing stock of affordable housing to maintain the available housing options for residents of lower economic means.

### Rental Registration Program

A program that requires all rental properties to register with the City and receive a permit demonstrating habitability of the unit and code compliance. The program would create a database of all rental properties in the city.[26]

### Manufactured Home Parks (MHPs)

A site containing spaces that are leased for the long-term placement of manufactured homes. These are commonly known as Mobile Home Parks, but are also referred to as Manufactured Dwelling Parks due to changes in federal regulations around mobile and manufactured homes.[27]

### Right of First Refusal Program

This program gives certain groups the first chance to buy a property before it is on the open market. For example, a Community Land Trust could get the first opportunity to purchase a home. The owner must offer the property to the CLT before offering it to anyone else.[28]

### Transitional Housing

Temporary housing with supportive services to individuals and families experiencing homelessness with the goal of providing stability and support as the individual or family successfully moves to and maintains permanent housing.[29]

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 5.2.1 | Continue implementation of the Rental Registration Program by maintaining a comprehensive database of rental properties and landlords, and conducting inspections to ensure rental units meet basic health and safety standards. | | Economic Prosperity and Housing | |
| 5.2.2 | Maintain affordability of Manufactured Home Parks (MHPs). This can include zoning to protect existing mobile home parks that provide naturally affordable housing units, supporting nonprofit organizations who work with residents to help them purchase manufactured dwelling parks under a cooperative model, and supporting residents with low-income to maintain properties in manufactured dwelling parks. | | Community Development; Economic Prosperity and Housing | |
| 5.2.3 | Explore opportunities to preserve single-family homes for long-term affordability. This could include voluntary Right of First Refusal programs, engaging Community Land Trusts, and gathering input from homeowners, tenants, and nonprofit partners to understand interest, feasibility, and potential incentives for participation. | | Economic Prosperity and Housing | |
| 5.2.4 | Support transitional housing for people experiencing homelessness. | | Economic Prosperity and Housing | |
| 5.2.5 | Support Community Land Trusts. The City should work to help local CLTs build capacity to increase the number of CLT units in Vancouver, particularly neighborhood-specific CLTs. | | Economic Prosperity and Housing | |
| 5.2.6 | Enhance programs to provide home repair loans and grants to stabilize and assist homeowners with low to moderate income by making improvements to their homes. | | Economic Prosperity and Housing | |
| 5.2.7 | Preserve multi-family housing. Fund critical repairs or rehabilitation through grants or low-interest loans, support acquisition by mission-driven developers or nonprofits, monitor expiring affordability covenants, and intervene early. Identify and prioritize at-risk properties for preservation. | | Economic Prosperity and Housing | |

**Goals Key:**

Equitable Community | Universal Design & Access | Focus on Youth & Aging Population | Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified | High Priority if Indicated

Case Study:

## Community Land Trusts (CLTs)

A Community Land Trust is a shared equity model that helps ensure long-term affordability through deed restrictions that require a portion of equity to be reinvested as a subsidy to reduce the sale price for future buyers.

**Example CLT: Proud Ground**

- Proud Ground's mission directly addresses housing equity by utilizing the CLT model to achieve two goals for households with low- and moderate-income:
  - **Permanent affordability:** By retaining ownership of the land and selling only the home structure to the buyer, Proud Ground drastically reduces the initial purchase price.
  - **Wealth Building:** Unlike rental assistance, the CLT model allows homeowners to build equity. The standard Proud Ground resale formula ensures the homeowner earns back their principal plus a set percentage of the appreciation in the home's value when they sell.[30]
- Proud Ground project example: Proud Ground partnered with the Portland Clean Energy Community Benefits Fund (PCEF) on projects to create climate-resilient, affordable homes:
  - **Design:** Development of net-zero energy townhomes that feature solar panels, high-performance windows, and advanced insulation.
  - **Financial Impact:** Due to the CLT model and PCEF funding, homes that would typically sell for over $400,000 were offered to income-qualified buyers for less than $300,000.
  - **Long-Term Benefit:** Homeowners benefit from a permanently reduced purchase price and super low utility bills (or even no bills) due to the net-zero design, further increasing their long-term financial stability and equity.[31]

Case Study:

## Affordable Housing Fund (AHF)

The City of Vancouver has an AHF that is funded through a local property tax levy. First approved in 2016, it was renewed for an additional $100 million for 2024-2033. The AHF supports people experiencing very low-income in Vancouver through affordable housing development, rental assistance, and homelessness services. [32]

- The City has funding available to community partners for projects and programs that:
  - Build and preserve long-term affordable housing in Vancouver;
  - Provide temporary shelter to people experiencing homelessness; or
  - Provide rental assistance and services to help households avoid an eviction or access a rental unit.
- The funding aims to increase affordable housing for individuals and families experiencing low incomes within the City of Vancouver, with a focus on:
  - Households earning below 50% of the Area Median Income (AMI) for rental units.
  - Households earning below 80% of the AMI for homeownership opportunities.
  - AMI is the midpoint of a region's household incomes and is used to determine what counts as affordable housing for different income levels.

30. Proud Ground. "Our Organization." About Us. https://www.proudground.org/our-organization
31. City of Portland. "Proud Ground and PCEF collaborate on building efficient, climate-resilient and affordable housing." Planning and Sustainability. https://www.portland.gov/bps/cleanenergy/news/2025/2/6/proud-ground-and-pcef-collaborate-building-efficient-climate.
32. City of Vancouver. "Affordable Housing Fund." Economic Prosperity and Housing. https://www.cityofvancouver.us/economic-prosperity-and-housing/affordable-housing-fund/.

Strategy 3

# Support production of affordable housing.

### Transit-Oriented Development (TOD)

Development that concentrates housing, jobs, and amenities within a walkable area around transit services. It aims to create compact, walkable, mixed-use neighborhoods that reduce car dependence and support vibrant, sustainable communities.[33]

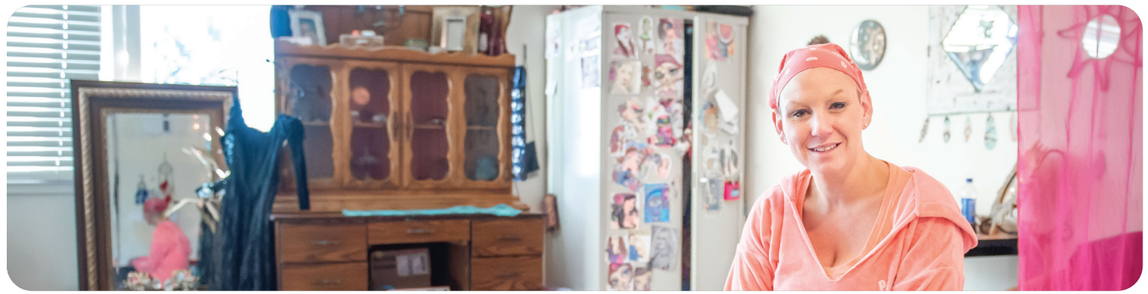
### Community Housing Development Organization (CHDO)

A private, non-profit community based organization that has staff with the capacity to develop affordable housing for the community.[34]

**Goals Key:**

Equitable Community | Universal Design & Access | Focus on Youth & Aging Population | Transparent and Inclusive Governance

**Community & Priority Key:**



Community Identified | High Priority if Indicated

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 5.3.1 | Support production of affordable housing by implementing the City's Housing Action Plan, which outlines specific actions to promote affordable and market-rate development. | | Economic Prosperity and Housing | |
| 5.3.2 | Create a Land Acquisition and Management Strategy to acquire land for the development and preservation of affordable housing. | | Economic Prosperity and Housing | |
| 5.3.3 | Advocate to increase funding to support affordable housing development at the state and federal levels. | | City Manager's Office | |
| 5.3.4 | Incentivize inclusive transit-oriented developments (TODs). Incentives can include targeting the MFTE program to add transit-supportive requirements, providing the option of Type 1 development review to expedite the application process, and facilitating low-interest financing for projects with significant community benefit. | | Economic Prosperity and Housing; Community Development | |
| 5.3.5 | Support public partnerships (private, nonprofit, or VHA) that further equity and housing goals.<br>• Support and partner with mission-aligned organizations, including CHDOs, to build local capacity for equitable and affordable housing development.<br>• Identify strategies to financially support public partnerships using non-traditional financing tools (i.e. revolving loan fund or philanthropic investment fund). | | Economic Prosperity and Housing | |
| 5.3.6 | Provide guidance and resources to support equitable community engagement in affordable housing projects. Offer tools such as equity-based planning, community benefit frameworks, advanced engagement feedback, and clear suggestions for how input can be incorporated, so developers can incorporate inclusive practices without needing to do their own engagement or delaying production. Maintain a list of trusted CBOs and tenant groups that developers can contact to host engagement conversations. | | Economic Prosperity and Housing | |
| 5.3.7 | Support non-traditional housing: Promote and remove regulatory barriers preventing non-conventional methods of constructing housing, such as modular, panelized construction, 3d printing, or other methods that have the potential to reduce construction costs. | | Community Development; Economic Prosperity and Housing | |

33. Transit-Oriented Development Institute. "TOD." Transit-Oriented Development. http://www.tod.org/.
34. HUD. "Home CHDO." HUD Exchange. https://www.hudexchange.info/programs/home/topics/chdo/#policy-guidance-and-faqs.

Strategy 4

# Support programs and projects that help residents with lower-income enter and/or stay in the housing market to begin building generational wealth.

### Limited Equity Cooperative (LEC)

A housing model where residents own a share in the building instead of their individual unit, and any profit from selling their share is capped to keep the home affordable for future residents. It's collectively owned and democratically run by the members.[35]

### Individual Development Account (IDA)

A matched savings account designed to help individuals with low-income build assets for specific goals such as homeownership. Funds are matched by government agencies or non-profits.[36]

**Goals Key:**

Equitable Community | Universal Design & Access | Focus on Youth & Aging Population | Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified | High Priority if Indicated

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 5.4.1 | Fund programs that help homeowners with low income maintain and remain in their homes. This may include energy conservation, utilities assistance and home repair programs. Help residents reduce energy consumption to lower utility costs by creating pathways to weatherize their homes and learn sustainable energy use techniques. | | Economic Prosperity and Housing | |
| 5.4.2 | Develop limited equity housing models with lower financial risk to support ownership opportunities for households with low income. | | Economic Prosperity and Housing | |
| 5.4.3 | Create and/or fund programs that help households with low to moderate income enter the housing market affordably. Fund down payment assistance and financial literacy programs to help residents with moderate-income achieve homeownership. | | Economic Prosperity and Housing | |
| 5.4.4 | Encourage and support models of homeownership to maintain long-term affordability. This includes supporting organizations using Community Land Trust (CLT) and Limited Equity Cooperative (LEC) shared equity models and deed-restricted homeownership to ensure long-term affordability for homebuyers with low to moderate income. | | Economic Prosperity and Housing | |
| 5.4.5 | Support programs that increase household financial stability to increase housing security. See Economic Development and Workforce Empowerment (Chapter 4) for action items. | | Economic Prosperity and Housing | |
| 5.4.6 | Create and fund a new Individual Development Account (IDA) program to help more people enter into the housing market to begin building generational wealth. Advocate for greater state funding to support IDAs. | | Economic Prosperity and Housing | |
| 5.4.7 | Support cooperative housing where members pool resources to build or buy property together. | | Economic Prosperity and Housing | |

35. Housing Solutions Lab. "Limited Equity Cooperatives." Housing Policy Library. https://www.localhousingsolutions.org/housing-policy-library/limited-equity-cooperatives/.
36. Oregon IDA Initiative. "About the Oregon IDA Initiative." Overview. https://oregonidainitiative.org/overview/.

Strategy 5

## Support the use of universal design principles to enhance accessibility for people of all ages and abilities.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 5.5.1 | Require universal design principles in new housing, commercial development, and public spaces. | | Community Development | |
| 5.5.2 | Encourage affordable housing options tailored to multigenerational living, aging in place, and a wide range of abilities. | | Economic Prosperity and Housing | |
| 5.5.3 | Provide financial assistance (grants or low interest loans) to home owners with low income to retrofit existing homes with accessibility features. | | Economic Prosperity and Housing | |
| 5.5.4 | Support the retrofitting of existing public spaces and commercial developments to enhance accessibility. | | Economic Prosperity and Housing | |

### Retrofit

A modification or upgrade performed after the building has been completed and occupied. Retrofitting existing homes to make them more accessible could include installing wheelchair ramps, widening doors and hallways to accommodate wheelchairs, lowering kitchen appliances to make them reachable from a seated position, or installing smart technology to assist with lights or doors.[37]

**Goals Key:**

Equitable Community | Universal Design & Access | Focus on Youth & Aging Population | Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified | High Priority if Indicated

Strategy 6

## Ensure that residents have access to services that support multigenerational living and aging in place.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 5.6.1 | Support programs that connect older adults with caregivers, including family caregivers and professional services. | | Economic Prosperity and Housing | |
| 5.6.2 | Create intergenerational community spaces and programming that encourage interactions between seniors, children, and working-age adults. | | Economic Prosperity and Housing; Parks, Recreation and Cultural Services | |
| 5.6.3 | Work with partners to develop resources and trainings for family members caring for aging relatives. | | Economic Prosperity and Housing | |
| 5.6.4 | Explore options to expand property tax relief programs for senior homeowners and multigenerational households with low-income. | | Economic Prosperity and Housing | |

### Universal Design

The design of products or environments to be usable by all people, to the greatest extent possible, without the need for adaptation or specialized design regardless of age, ability, or physical condition.[38]

37. Cinnamon Janzer. "The Unaffordability of Accessibility: The Challenge of Retrofitting American Homes." Shelter Force. https://shelterforce.org/2023/06/22/the-unaffordability-of-accessibility-the-challenge-of-retrofitting-american-homes/.
38. National Association of Home Builders. "What is Universal Design?." Consumer Resources. https://www.nahb.org/other/consumer-resources/what-is-universal-design.

Strategy 7

# Support identity-based and culturally-specific housing needs.

### Culturally-Specific Housing Needs

Refers to the design, location, and management of housing that reflects and supports the unique social, religious, lifestyle, and general practices of a specific cultural, ethnic, or demographic group. Culturally-specific housing needs ensure housing validates and sustains the residents' way of life rather than forcing them to adapt their culture to a standard housing model.[39]

### Identity-Based Housing Needs

Identity-based housing needs refer to the distinct housing challenges, barriers, and preferences experienced by individuals based on aspects of their social identity — including race, ethnicity, gender identity, sexual orientation, disability, age, religion, national origin, and familial status.

### Permanent Supportive Housing (PSH)

Combines affordable housing with supportive services to help people achieve long-term housing stability. PSH is a Housing First principle and is designed to build independent living skills as a solution to homelessness. Housing First is an approach to ending homelessness that focuses on providing permanent and unconditional access to housing before other supportive services. Supportive services can include health care, mental health counseling, job training and employment support.[40]

**Goals Key:**

Equitable Community | Universal Design & Access | Focus on Youth & Aging Population | Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified | High Priority if Indicated

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 5.7.1 | Work with partners to facilitate and fund housing that meets the needs of different households based on age, sex, gender identity, culture, disability, and other factors. | | Economic Prosperity and Housing | |
| 5.7.2 | Facilitate collaboration and partnerships between community-based organizations and affordable housing providers. This will help affordable housing units to be reflective of community needs when disaggregated by race, disability, sex, gender identity, and other factors. | | Community Development; Economic Prosperity and Housing | |
| 5.7.3 | Accommodate identity-based needs in Permanent Supportive Housing (PSH), Temporary Housing, and Shelter Space. | | Economic Prosperity and Housing; City Manager's Office | |
| 5.7.4 | Do not require citizenship status or government-issued IDs for shelter access at City-funded facilities. An exception can be made only where alternative funding source requirements expressly prohibit this standard. | | City Manager's Office | |
| 5.7.5 | Support housing models that reflect cultural traditions, such as multi-generational living spaces, communal kitchens, shared common spaces, or extended family accommodations. | | Community Development; Economic Prosperity and Housing | |
| 5.7.6 | Support mixed-income housing developments. | | Community Development; Economic Prosperity and Housing | |
| 5.7.7 | Support culturally responsive property management and tenant support services, including providing information in different languages. | | Community Development; Economic Prosperity and Housing | |
| 5.7.8 | Develop shelters that offer adequate services to address barriers and help residents transition into permanent housing. Ensure funding is adequate to provide needed programming or support services. | | City Manager's Office | |

39. Minnesota Housing Partnership. "Towards Culturally Sensitive Housing." https://mhponline.org/toward-culturally-sensitive-housing/.
40. National League of Cities. "What is Permanent Supportive Housing?." https://www.nlc.org/article/2024/01/31/what-is-permanent-supportive-housing/.

CHAPTER 6

# TRANSPORTATION JUSTICE

**VISION**

The City's transportation system is equitable, sustainable, accessible and affordable, and barriers to mobility are eliminated for all residents.

Strategy 1

# Make walking and rolling, small mobility, and transit options convenient for neighborhood travel.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 6.1.1 | Develop and implement a Vancouver Safe Routes to School (SRTS) program. The City will work with schools to understand student travel patterns, identify barriers to safe walking, rolling, and biking, and take action to address those challenges. | | Community Development | |
| 6.1.2 | Prioritize areas for improvement using the Equity Atlas to make walking and rolling, small mobility, and transit options safe and accessible for neighborhood travel. | | Community Development; Public Works | |
| 6.1.3 | Increase street tree canopy in partnership with Urban Forestry and Parks, focusing on equity priority areas first. This can serve as a form of traffic calming, provide more enjoyable and comfortable routes, and provide needed cooling during extreme heat events. | | Community Development; Parks, Recreation and Cultural Services; Public Works | |

**Goals Key:**

Equitable Community | Universal Design & Access | Focus on Youth & Aging Population | Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified | High Priority if Indicated

Case Study:

## Safe Routes to School

- Safe Routes to School is a movement to create safe, convenient, and fun opportunities for children to walk and bike to and from school. The concept is to address the decline in children walking or biking to school by improving safety and reducing traffic around schools.[41]
- Portland's SRTS program features:
  - Dedicated funding specifically to SRTS.
  - Infrastructure focused changes such as high-visibility crosswalks, building new sidewalks and filling sidewalk gaps, and implementing traffic calming measures like speed bumps, raised crosswalks, and refuge islands near schools.
  - Equity-focused approach prioritizes schools located in areas with high poverty rates and where there is a disproportionate number of traffic crashes involving pedestrians and cyclists.
  - Encouragement and education programs that work with neighborhood associations and schools to host events, provide free bicycle education, and distribute helmets and bike equipment to students.[42]
- Portland's SRTS initiatives have increased the number of children walking and biking to school and reduced speed and traffic volume on critical school routes.[43]

41. Safe Routes Partnership. "Impact of Safe Routes to School Program on Walking and Bicycling." Resource. https://saferoutespartnership.org/resource/impact-srts-walking-biking/.
42. City of Portland. "Fixing Our Streets and Safe Routes to School." Transportation. https://www.portland.gov/transportation/walking-biking-transit-safety/safe-routes/fixing-our-streets-and-safe-routes-school.
43. City of Portland. "Safe Routes to School Program Summary 2023-24." Transportation. https://www.portland.gov/transportation/walking-biking-transit-safety/safe-routes/safe-routes-school-program-summary-2023-24.

Strategy 2

# Create transportation corridors that connect growth areas, support business, serve transit, and maximize safety and accessibility.

## Transportation Improvement Program (TIP)

Every year, the City of Vancouver prepares a Six-Year Transportation Improvement Program (TIP). The TIP lists all future projects with detailed project information and funding status. Projects in the TIP include studies, plans, and major street, bicycle, pedestrian, and traffic signal improvements. Each annual update to the TIP includes a public outreach process and requires City Council approval.[44]

## Vision Zero

A strategy to eliminate all traffic fatalities and severe injuries, while increasing safe, healthy, and equitable mobility for all.[45]

**Goals Key:**

Equitable Community | Universal Design & Access | Focus on Youth & Aging Population | Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified | High Priority if Indicated

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 6.2.1 | Program projects into the TIP with a set of criteria based on equity, safety, climate, and transportation choice. Elevate projects that are in equity priority areas, serve transit stops, are near a school, are in an identified critical walking and rolling or bicycling gap, or are along a high-crash corridor. | | Community Development; Public Works | **High** |
| 6.2.2 | Prioritize corridors for repaving based on equity, transit use, and pavement condition. | | Public Works | |
| 6.2.3 | Adopt a Vision Zero policy committing to end traffic fatalities and serious injuries on Vancouver streets by 2040. | | Community Development | |
| 6.2.4 | Create a process for regular updates to the Local Roads Safety Plan by analyzing existing collision data to identify the city's "high-crash corridors." Regularly update the online dashboard of the high-crash roads and apply the City's equity index to determine where historically underserved communities are at greater risk of death and injury while traveling in their neighborhood. Use this information to prioritize investments, outreach and education to improve safety and reach our Vision Zero goals. | | Community Development; Public Works | **High** |
| 6.2.5 | Make parking and other signage highly legible and easy to understand from the user perspective, particularly for non-native English speakers and people with disabilities. Use technology, information, wayfinding, or other strategies so people can easily find their destination. | | Community Development; Public Works | |
| 6.2.6 | Improve public education and outreach around how to use public transportation, including campaigns that empower both youth and parents to take the bus, to debunk negative perceptions of public transit, and increasing bus stop coverage and amenities across neighborhoods citywide. | | Community Development | |

44. City of Vancouver. "Transportation Improvement Program." Public Works. https://www.cityofvancouver.us/government/department/public-works/transportation-improvement-program/
45. Vision Zero Network. "What is Vision Zero?." About. https://visionzeronetwork.org/about/what-is-vision-zero/.

Strategy 3

## Fill sidewalk gaps, add safe crossings, and support speed and reliability projects that keep transit moving efficiently.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 6.3.1 | Prioritize sidewalk and crosswalk gaps adjacent to transit stops, schools, parks, and other City facilities, particularly along transit equity corridors. Identify first/last mile barriers to major transit stops and address on a rolling basis. | | Community Development | |
| 6.3.2 | In coordination with C-TRAN, build a network of Enhanced Transit Corridors where higher levels of transit service (frequency, hours of operation, stop amenities) are desired based on existing and future density and equity needs. | | Community Development | **High** |
| 6.3.3 | Ensure that roadway configurations and design support transit travel time and reliability on enhanced transit corridors. | | Public Works | |
| 6.3.4 | Designate transit equity corridors based on equity priority areas and residential areas with high reliance on transit. Use as a criterion in project prioritization. | | Community Development | |
| 6.3.5 | Integrate shared and emerging mobility technology and tools with C-TRAN microtransit zones to provide a suite of mobility options, especially in lower-density areas without high-frequency transit. | | Community Development | |

**Goals Key:**

Equitable Community | Universal Design & Access | Focus on Youth & Aging Population | Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified | High Priority if Indicated

### Transit Equity Corridors

Public transportation routes or areas designed to ensure all communities, especially underserved or low-income communities, have fair and just access to reliable, affordable, and efficient public transportation.[46]

### Microtransit

Microtransit is a flexible, on-demand public transportation service that uses smaller vehicles to connect passengers to destinations within a defined service area. C-TRAN launched The Current that provides door-to-door service that can be scheduled through a mobile app or over the phone. [47]

46. City of Vancouver. "Equitable Transportation Investment Strategy." https://www.cityofvancouver.us/wp-content/uploads/2023/07/cov_equitable_transportation_investment_strategy_22_05_26.pdf.
47. C-TRAN. "Introducing The Current: C-TRAN's New On-Demand Service." https://mail.c-tran.com/about-c-tran/news/news-releases/876-introducing-the-current-c-tran-s-new-on-demand-service.

Strategy 4

# Make the walking, rolling, bicycling, and small mobility networks inviting for all ages and abilities.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 6.4.1 | Build a citywide low-stress Bike and Small Mobility (BSM) network that prioritizes safety and comfort for people of all ages and abilities. Target a density of low-stress facilities every half-mile. | | Community Development; Public Works | |
| 6.4.2 | Create safe routes to community destinations such as parks and schools. Identify the specific needs of seniors and develop safe routes for these users. | | Community Development | |
| 6.4.3 | Explore the creation of an E-bike rebate program focused on increasing access to E-bikes for individuals in households with low- and moderate-income. | | Community Development | |

### Bicycle and Small Mobility (BSM) Network

A connected system of bike lanes, paths, and routes for small, non-motorized or low-speed mobility devices like e-scooters and e-bikes to provide safe, accessible, and convenient travel options.[48]

**Goals Key:**

Equitable Community

Universal Design & Access

Focus on Youth & Aging Population

Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified

High

High Priority if Indicated

Case Study:

## E-bike rebate program

- An e-bike rebate program is a financial incentive offered by a government entity to encourage residents to purchase an electric bicycle. The goal of these programs is to encourage residents to switch from car trips to e-bike use.
- The City of Tacoma's E-Bike Rebate Pilot Program is focused on communities impacted by pollution.
  - Tacoma's program was funded from the Department of Ecology with funding from Washington's Climate Commitment Act.
  - Because it focused on air quality, the e-bike rebates were available specifically in neighborhoods highly impacted by air pollution.
- The e-bike rebates were tiered based on household income ranging from $300 to $1,200.
  - 95% of Tacoma's e-bike rebates went to lower-income residents and were for the full $1,200.
- Community Outreach
  - The City partnered with Community Ambassadors (local leaders that were compensated) to deliver culturally relevant outreach in their communities and were fluent in Spanish, Cambodian, and Vietnamese.
  - The City also hosted E-Bike Community Parties at neighborhood parks to answer questions about e-bikes and encourage residents to apply.
  - The City partnered with a local cycling group to offer free Adult Learn To Ride classes to participants.[49]

48. City of Vancouver. "Transportation System Plan 2024-2044." https://www.cityofvancouver.us/wp-content/uploads/2024/01/Van-TSP-Book-202402-Reduced.pdf.
49. City of Tacoma. "E-Bike Programs." Public Works. https://tacoma.gov/government/departments/public-works/mobility-options/bicycling/e-bike-programs/.

Strategy 5

## Embed equity at all levels when developing policies and programs relating to new transportation technologies.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 6.5.1 | Create City policies for how shared mobility and emerging mobility vendors can operate in Vancouver. Integrate equity through reduced costs for people with low incomes. | | Community Development | |
| 6.5.2 | Pilot a small mobility and scooter share program. Focus station placement in equity priority areas and subsidize membership for people with low incomes. | | Community Development | |

**Goals Key:**

Equitable Community

Universal Design & Access

Focus on Youth & Aging Population

Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified

High

High Priority if Indicated

CHAPTER 7

# SUSTAINABILITY & CLIMATE JUSTICE

**VISION**

All residents live in environments free from pollution and have access to resources during extreme climate events.

Strategy 1

# Address health exposure and climate vulnerability.

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 7.1.1 | Identify areas where health exposure and climate vulnerability are high. Utilize the state's environmental justice analysis, Comprehensive Plan data, Clark County Heat Watch 2024 Report, and other related data. | | City Manager's Office; Community Development | **High** |
| 7.1.2 | Review Climate Adaptation Strategy with an equity lens and create equity-based action items to be implemented. | | City Manager's Office; Community Development | **High** |
| 7.1.3 | Reduce and remediate soils contaminated from industrial and building processes. | | Economic Prosperity and Housing | |

## Climate Vulnerability

The degree to which a community is susceptible to harm and able to prepare, endure, and recover from the impacts of climate change, including extreme weather events, sea-level rise, or temperature changes.[50]

## Health Exposure

Health exposure is the degree to which people are subjected to environmental conditions that negatively impact wellbeing, such as air pollution, extreme heat, noise, or toxic substances.

**Goals Key:**

Equitable Community

Universal Design & Access

Focus on Youth & Aging Population

Transparent and Inclusive Governance

**Community & Priority Key:**

Community Identified

**High**

High Priority if Indicated

50. Climate Vulnerability Index. "About." The U.S. Climate Vulnerability Index. https://climatevulnerabilityindex.org/about/.

Strategy 2

# Prioritize green infrastructure investments in equity priority areas.

## Green Infrastructure

Green infrastructure uses plants, soils, and other media to capture and treat stormwater at its source. It manages stormwater by letting it soak into the ground, be absorbed by plants, or evaporate naturally. Examples include rain gardens, bioswales, and green roofs.[51]

## Heat Island Effect

Heat islands occur when a developed area experiences higher temperatures than nearby rural areas, or when areas experience hotter temperatures within a city due to human activities, dense buildings, lack of trees and green spaces, and paved surfaces that absorb and retain heat.[52]

## Ecosystem Benefits

Ecosystem benefits are the positive contributions that natural systems provide to people, plants, and animals, such as clean air and water, climate regulation, flood protection, wildlife habitat, food production, and mental well-being.[53]

## Bioswales

Bioswales are vegetated, landscape channels that capture, treat, and filter stormwater runoff.[54]

| | Actions | Goals | Lead Department | Priority |
|---|---|---|---|---|
| 7.2.1 | Invest in green infrastructure, including parks, urban forests, and stormwater management systems to improve environmental quality and resilience in equity priority areas. Include green infrastructure elements in all capital investments where feasible. | | Parks, Recreation and Cultural Services; Urban Forestry; Public Works | |
| 7.2.2 | Combat the impacts of the heat island effect by increasing biodiversity and offering quick access to nature, prioritizing equity priority areas. Incentivize long-lived, large form, drought-tolerant, and/or climate-resilient native plantings and retention in existing and new developments. Reach 28% tree canopy citywide by focusing on areas with the largest disparities in tree cover. | | Parks, Recreation and Cultural Services; Urban Forestry | |
| 7.2.3 | Keep natural lands intact to ensure that vegetation continues to capture carbon from the atmosphere and provide ecosystem benefits and access to nature. | | Parks, Recreation and Cultural Services; Community Development | |
| 7.2.4 | Widen planting strips to accommodate medium to large street trees, prioritizing areas most affected by extreme heat and air pollution, in order to maximize shade and reduce both air pollution and the heat island effect. | | Community Development; Public Works | |
| 7.2.5 | Screen highways with vegetation that provides high levels of carbon capture to reduce air pollution and provide a visual buffer. | | Community Development, Public Works | |
| 7.2.6 | Support green activation of rooftops and vertical walls to help reduce the urban heat island effect, prioritizing equity priority areas and areas with the greatest disparities of green infrastructure. Utilize rooftops for edible rooftop gardens with small trees and vegetated walls and spaces to reduce urban heat islands. | | Community Development; Economic Prosperity and Housing | |
| 7.2.7 | Implement green infrastructure solutions in areas prone to localized flooding, including storage basins, ponds, bioswales, rain gardens, and stormwater trees, to reduce stormwater impacts. | | Community Development; Public Works | |

**Goals Key:**

Equitable Community | Universal Design & Access | Focus on Youth & Aging Population | Transparent and Inclusive Governance

MEMORANDUM

To: City of Vancouver

From: Alta Planning + Design

Date: April 2026

Re: Multimodal Evaluation and Active Trip Potential

---

# Preferred Alternative Modeling

## Introduction and Background

This memo summarizes the results of the project team's scenario modeling analysis as part of the Vancouver Comprehensive Plan Update. The evaluation focuses on the modeled changes in travel behavior related to short trip taking, multimodal travel, and changes in VMT per modeled household and job.

This analysis compares two scenarios: The No Action and Preferred Alternative in 2045, as modeled by the Southwest Washington Regional Transportation Council (RTC). The Preferred Alternative assumes densification in many neighborhoods throughout the city. Findings compare outcomes under the Preferred Alternative with those under the No Action Alternative.

This analysis is completed at the Transportation Analysis Zone (TAZ) level. TAZs are geographic areas RTC uses to analyze and predict travel patterns and demand in the RTC transportation forecasting model. Data for this analysis included 304 TAZs that were fully or partially within the City of Vancouver.

## Results

### Summary of Findings

- Residents and workers in Vancouver will contribute **fewer Vehicle Miles Traveled (VMT) per household** under the Preferred Alternative than under the No Action. While total daily VMT rises by over 524,000 (9.7%) due to population and job growth, VMT *per household* drops 6.2% and VMT *per household and job* drops 10%. Very few TAZs within city limits see an increase in VMT per household and job.

- The drop in VMT per household and job reflects the **increased mix of housing and jobs** in the Preferred Alternative, allowing for more mode shift because people can live closer to jobs and other destinations. VMT changes are summarized in **Table 1.**

- Average **daily trips per household** are expected to increase very slightly from 5.16 in the No Action to 5.28 in the Preferred Alternative. Most of these trips are expected to convert to active modes, which are captured by the model to only a limited extent.

*Table 1: Summary of VMT changes*

| Metric | No Action | Preferred | Difference (#) | Difference (%) |
|---|---|---|---|---|
| Daily VMT[1] | 5,380,954 | 5,905,133 | 524,179 | 9.7% |
| VMT per household | 45.4 | 42.6 | -2.8 | -6.2% |
| VMT per job | 43.7 | 38.0 | -5.7 | -13.2% |
| VMT per household + job | 22.3 | 20.1 | -2.2 | -10.0% |

- **Trip lengths** on average do not appear to be a major driver in the reduction of VMT per household and job. Modest decreases in trip length are seen in East Vancouver and around Fruit Valley (due to co-location of jobs and housing), with slight increases near regional destinations like Pearson Field, the VA Hospital, and Clark College. Overall, average trip lengths remain relatively stable between the two scenarios because the Preferred Alternative sees gains in trips of all lengths. However, new short trips bring new opportunities for mode shift.
- Multimodal infrastructure that makes biking and walking more comfortable can attract new users to **shift away from private vehicles** at rates higher than what is modeled. New short trips, spurred by new development and growth, are projected to be taken by private vehicles but have the potential to capture users who are interested in biking or walking but concerned about safety or other factors. This work can begin by focusing on areas identified as having high existing active trip potential in the Active Trip Potential Technical Memo.
- There is limited opportunity to quantify **mode shift** in this report because the Southwest Washington Regional Transportation Council (RTC) model is not sensitive to changes in mode share except for transit. However, increases in trip making likely reflect induced demand for active modes. As described in the Active Trip Potential Technical Memo, additional mode shift would be expected from short vehicle trips if active transportation infrastructure improves, allowing more people to have access to and feel comfortable walking or biking instead of driving for trips under three miles.

### Job and Household Growth

Job and household growth are the key drivers of changes to modeled travel behavior in Vancouver and provide context for differences in projected outcomes across the city. In the Preferred Alternative, shown in **Figure 1**, job growth will be concentrated mostly along the periphery of Vancouver city limits, including Columbia Tech Center/Mill Plain, Pearson Field, Fruit Valley, and along Fourth Plain Boulevard. Moderate jobs growth is expected in most of the rest of the city. When job growth by TAZ is normalized by acre, as shown in the **Appendix**, it is less pronounced in Fruit Valley but still concentrated in Mill Plain and near Pearson Field.

Household growth, shown in **Figure 2**, will be concentrated in southeastern Vancouver along the Columbia River and Highway 14, along Mill Plain Boulevard, in West Minnehaha, and west of downtown. Normalizing household growth per acre, shown in the **Appendix**, has little effect on these patterns.

These job and household growth projections set the stage for understanding changes to VMT, modes, trip flows, and trip lengths, which are explained more in subsequent sections.

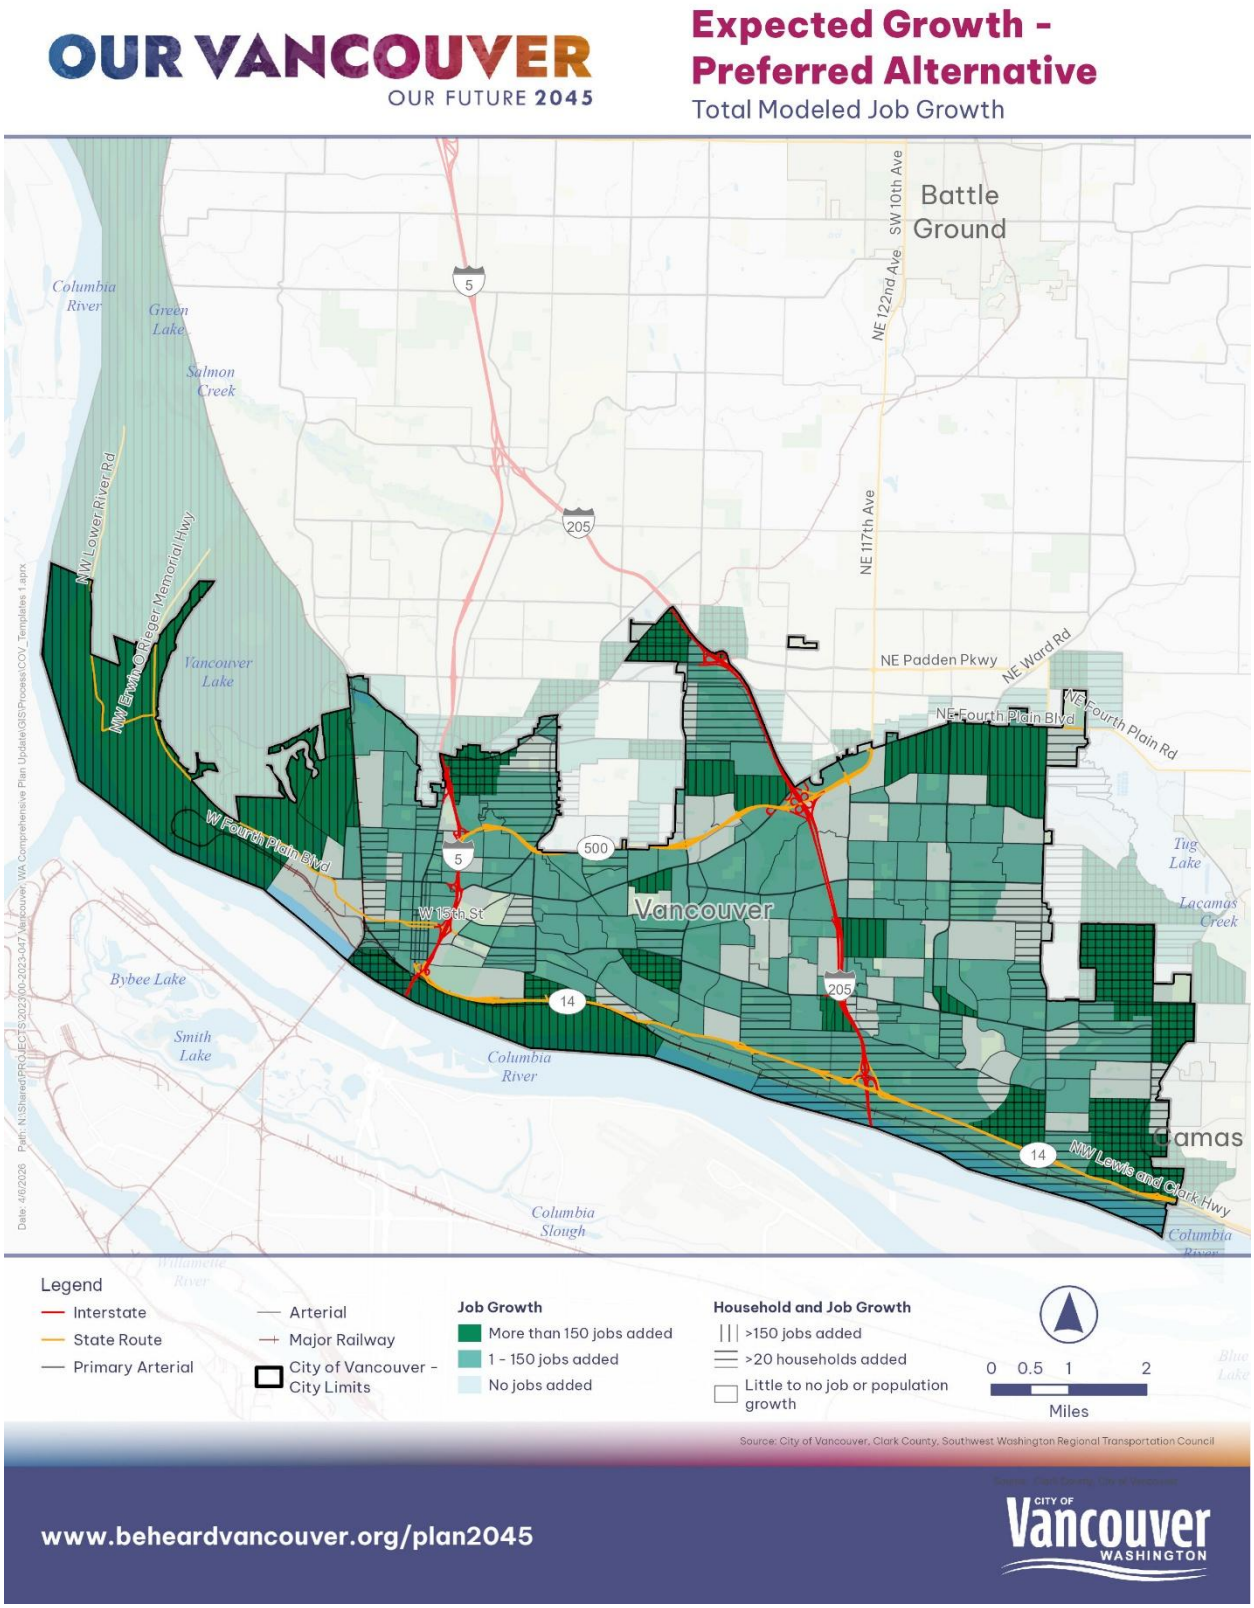

*Figure 1: Preferred alternative total job growth*

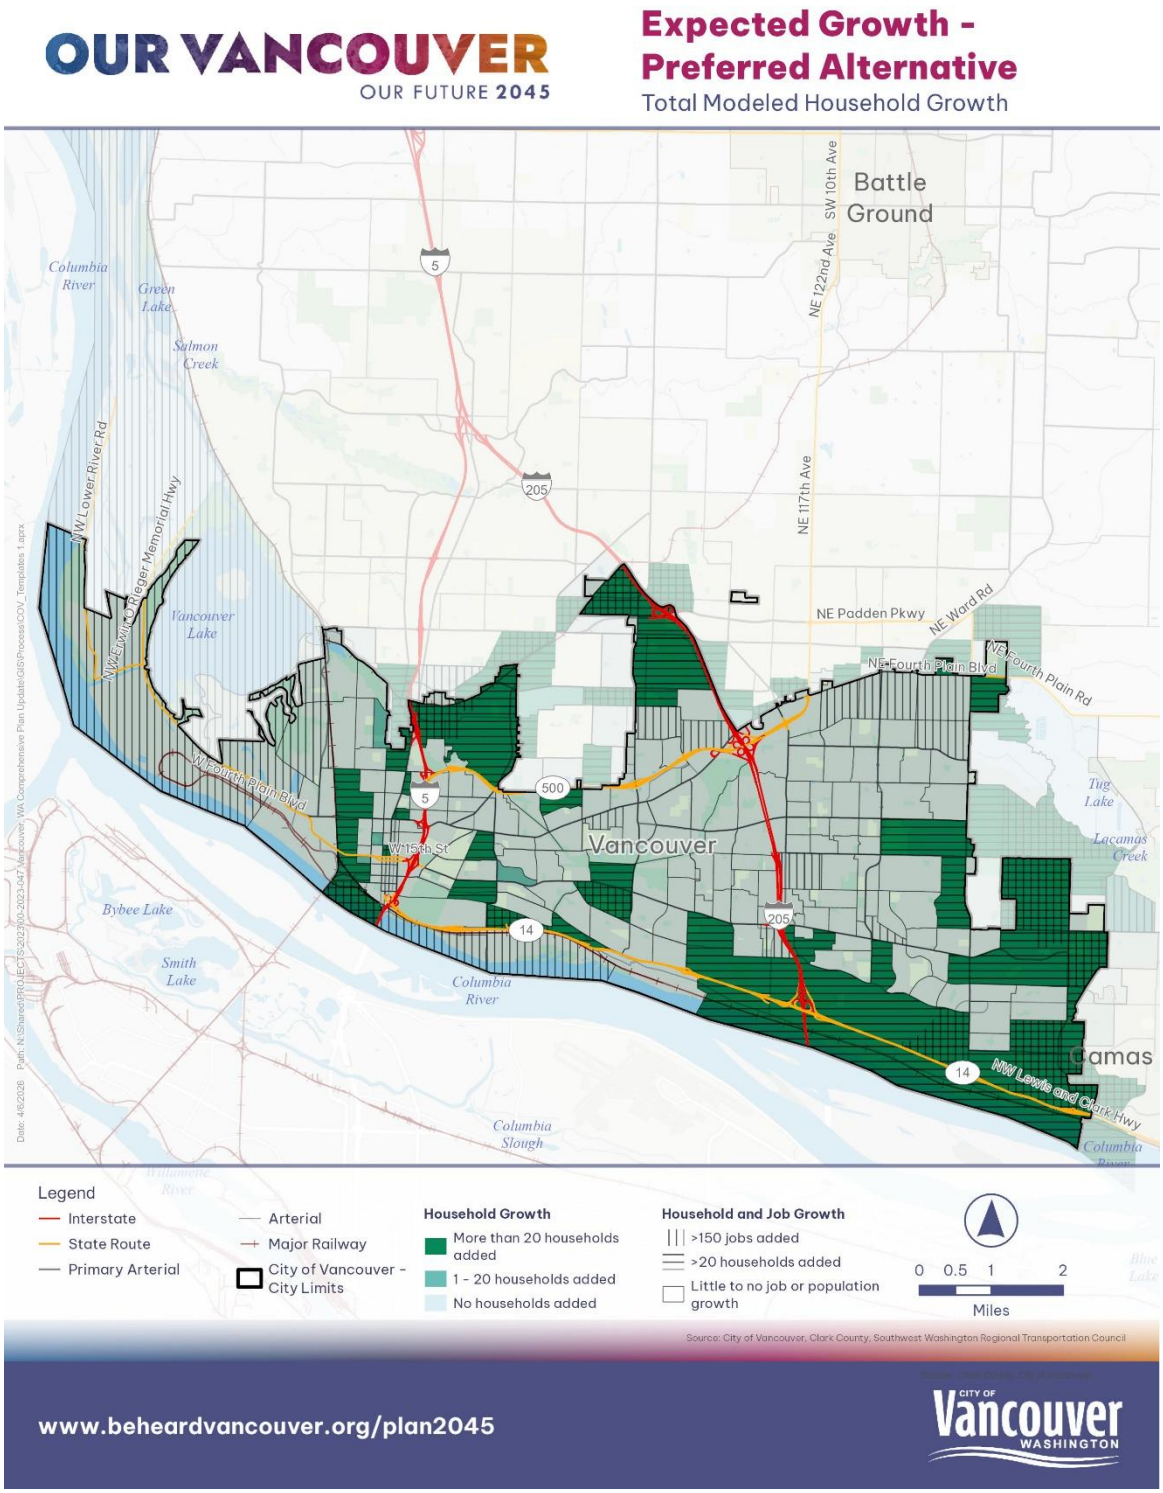

*Figure 2: Preferred alternative total household growth*

### Vehicle Miles Traveled Changes

Changes in Vehicle Miles Traveled (VMT) between the No Action and Preferred Alternative differ throughout the city and intuitively, reflect whether the areas are adding jobs, housing, or both. Overall, VMT is projected to decline in relation to activity levels and growth in the City under the Preferred Alternative. While total VMT will increase by 9.7%, as would be expected with any new growth, what is important for climate and emissions modeling is how VMT will change *relative to expected growth*, which means it must be normalized. Changes in population and jobs somewhere in the region are inevitable, but land use policies that dictate where those changes occur can have wide-ranging impacts on VMT and therefore, greenhouse gas emissions and climate and emissions goals.

VMT changes are often normalized by household. This is useful in areas gaining housing, such as Old Evergreen Highway and Mill Plain, as it typically shows that a VMT per household decreases as residential density increases. However, on a TAZ level, the metric is misleading in job-rich industrial areas with little housing, such as Fruit Valley, because most VMT there is produced not by residents, but workers, leading to an inflated estimate. To account for this, VMT per job can also be used. This is useful for areas adding jobs, such as Fruit Valley and Mill Plain, but can produce the opposite effect in mainly residential areas. To account for growth in both jobs and housing and their impact on VMT, this analysis also normalized VMT by the *sum of jobs and households* in each TAZ.

On a citywide scale, VMT per household/job is projected to decrease under the Preferred Alternative regardless of how it is normalized. **Table 2** includes various ways to quantify the VMT impacts of the Preferred Alternative on a citywide scale.[2] The total citywide increase in daily VMT expected from the Preferred Alternative compared to the No Action is 524,179. This is largely because this model assumes a growth in population and jobs in the city and does not account for reduced population elsewhere as people move to denser areas. This should be understood not as a negative impact for the city, but as a shift in VMT from other areas that are not gaining jobs or population. On the contrary, VMT *per household* decreases by 2.8 miles per household (-6.2%) compared to the No Action, and VMT per household and job combined decreases by 2.2 miles (-10%).

[2] TAZs with no jobs or households assumed in the model were not included in this analysis. This includes certain TAZs on the periphery that had slight overlap with the city boundary but were not included in the model because they had no parcels with population or jobs inside the city limits. Where this was the case, it was not possible to calculate a percent growth or a VMT per household and these TAZs were shown as null.

*Table 2: Summary of VMT Changes*

| Metric | No Action | Preferred | Difference (#) | Difference (%) |
|---|---|---|---|---|
| Daily VMT[3] | 5,380,954 | 5,905,133 | 524,179 | 9.7% |
| VMT per household | 45.4 | 42.6 | -2.8 | -6.2% |
| VMT per job | 43.7 | 38.0 | -5.7 | -13.2% |
| VMT per household + job | 22.3 | 20.1 | -2.2 | -10.0% |

On a TAZ level, VMT per job and household shows the most balanced picture of how density will contribute to the City's policy objectives. Changes by TAZ are illustrated in **Figure 3**. From this, it is easier to see that across the city, VMT typically decreases relative to the amount of development planned, indicating that the average worker or resident will travel by car less, even though there will be more workers and residents. Most of the city sees little change, while most of East Vancouver experiences a decrease. Only seven TAZs within city limits see an increase in VMT (shown in purple) when normalized this way; several of these TAZs contain K-12 schools, which attract trips that are not always reflected in population or job counts. Understanding VMT increases relative to development can help avoid penalizing an area for adding jobs or housing in dense areas and recognizes the benefits that denser development brings to society.

These findings are consistent with other industry research. The California Air Resources Board (CARB) Handbook (2021) reports that increasing residential and/or job density reduces both the length and number of vehicle trips by shortening commutes and putting more destinations within easy reach, thereby reducing VMT. GHG emissions are expected to mirror reductions in VMT. Although the length of trips was shown to have less influence in Vancouver, the model shows that the number of vehicle trips per person will decrease, leading to an overall decrease in VMT.

Maps that show only VMT change per job and VMT change per household are provided in the **Appendix.**

[3] Direct RTC model output for general vehicular traffic, including trucks

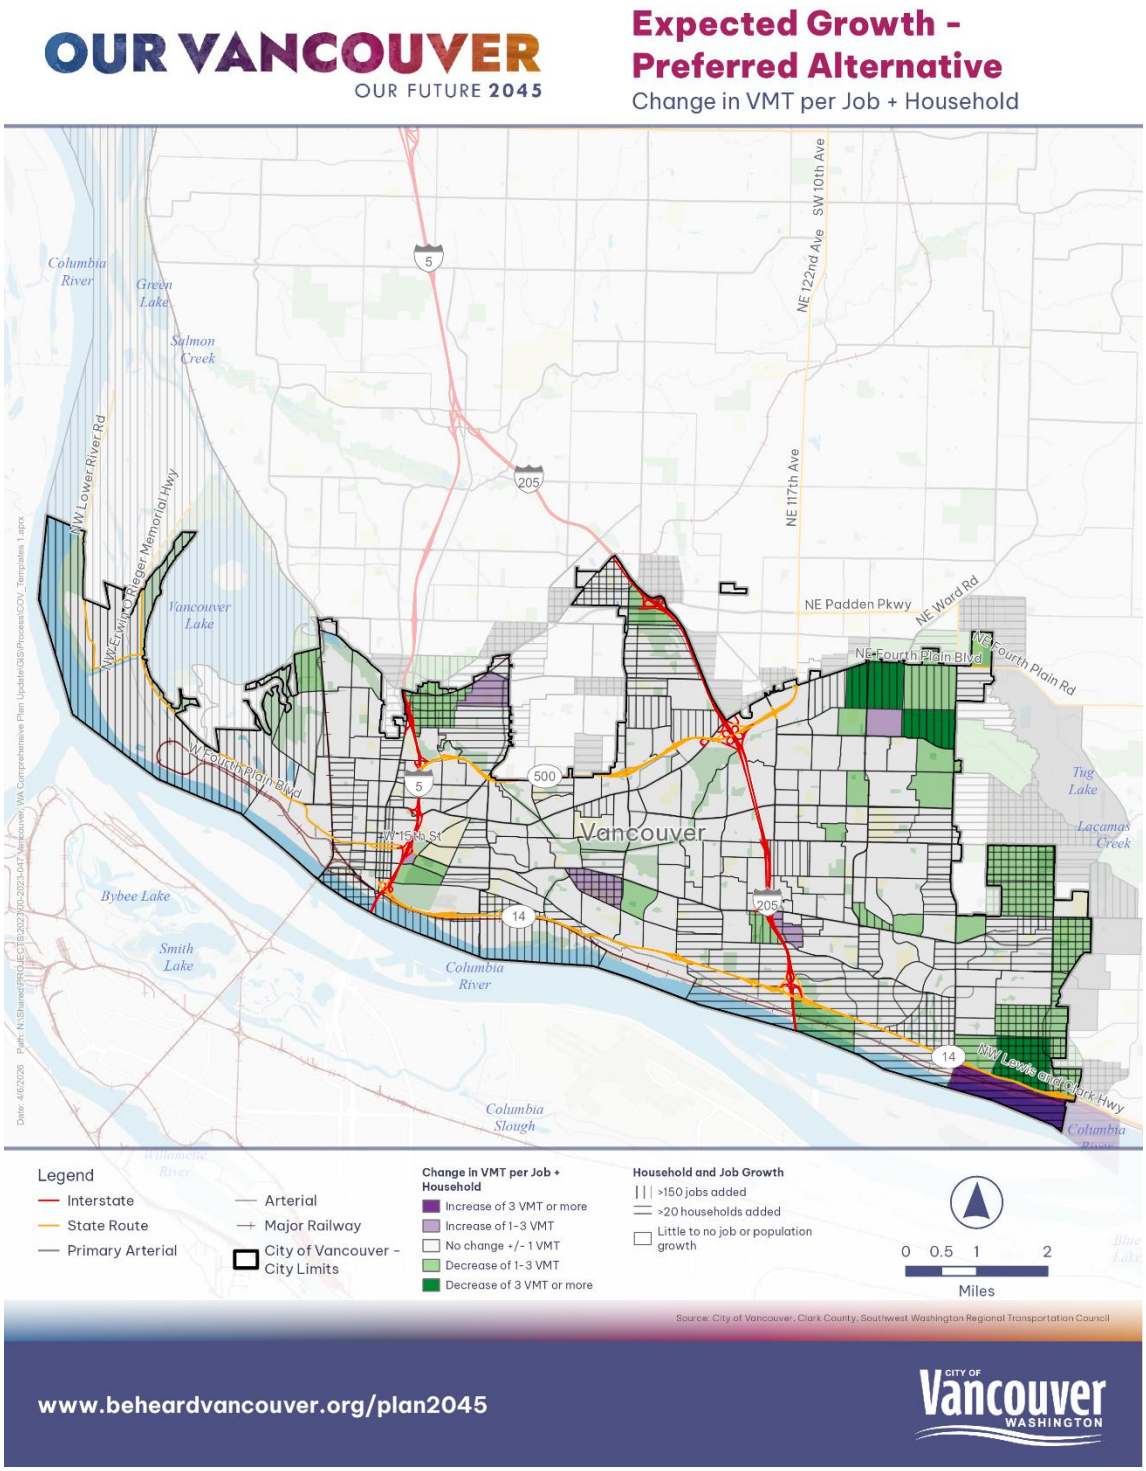

*Figure 3: VMT per job and household*

### Factors Influencing VMT Changes

The expectation that VMT per job and household will decrease overall is the most important finding for climate and emissions modeling. However, it can also be useful to understand why these VMT changes occur – whether in people making shorter trips, fewer trips, or some combination. The following sections explore the factors that influence VMT change and posit that mode shift is the primary factor explaining this shift.

### Changes in Trip Flows and Trip Counts

The project team analyzed trip counts and trip flows across the city and found that the number of daily trips per household is expected to increase only slightly, from 5.16 trips per household to 5.28 trips. This is to be expected, because density will put more destinations within reach of more people, but it means that the reduction in VMT per household cannot be attributed to fewer trips per day.

Although residents may take as many or more trips in the Preferred Alternative, what is most important for emissions outcomes is how long the trips are and if they are taken by vehicle. These factors are explored more below.

### Changes in Trip Lengths

Average trip lengths in the Preferred Alternative are projected to change slightly compared to No Action. The average trip length decreases only slightly, from 4.24 miles to 4.16 miles. Meanwhile, the share of trips that are under three miles increases only slightly between the No Action and Preferred Alternative, from 53.5% to 53.6%. However, the higher number of trips overall means that there are still more short trips expected to occur in the Preferred Alternative.

**Figure 4** shows how average trip lengths originating in each TAZ are expected to change with the Preferred Alternative. Most of the city shows relatively stable projected trip lengths under the Preferred Alternative, despite projected household and job growth in many areas causing more trips overall.

Lengths of trips originating in East Vancouver and Fruit Valley are expected to decrease moderately. These areas have notable job growth, and combined with growth in housing nearby, they may attract more local workers. Conversely, trip lengths are expected to increase slightly around Pearson Field, the VA Hospital, and Clark College, the same area with decreases in short trips, in spite of household growth in some of those areas. New density in other parts of the city may draw slightly longer vehicle trips to these areas, even as other trips decrease in length. Overall, these variations by neighborhood do little to nudge the average overall trip length downward.

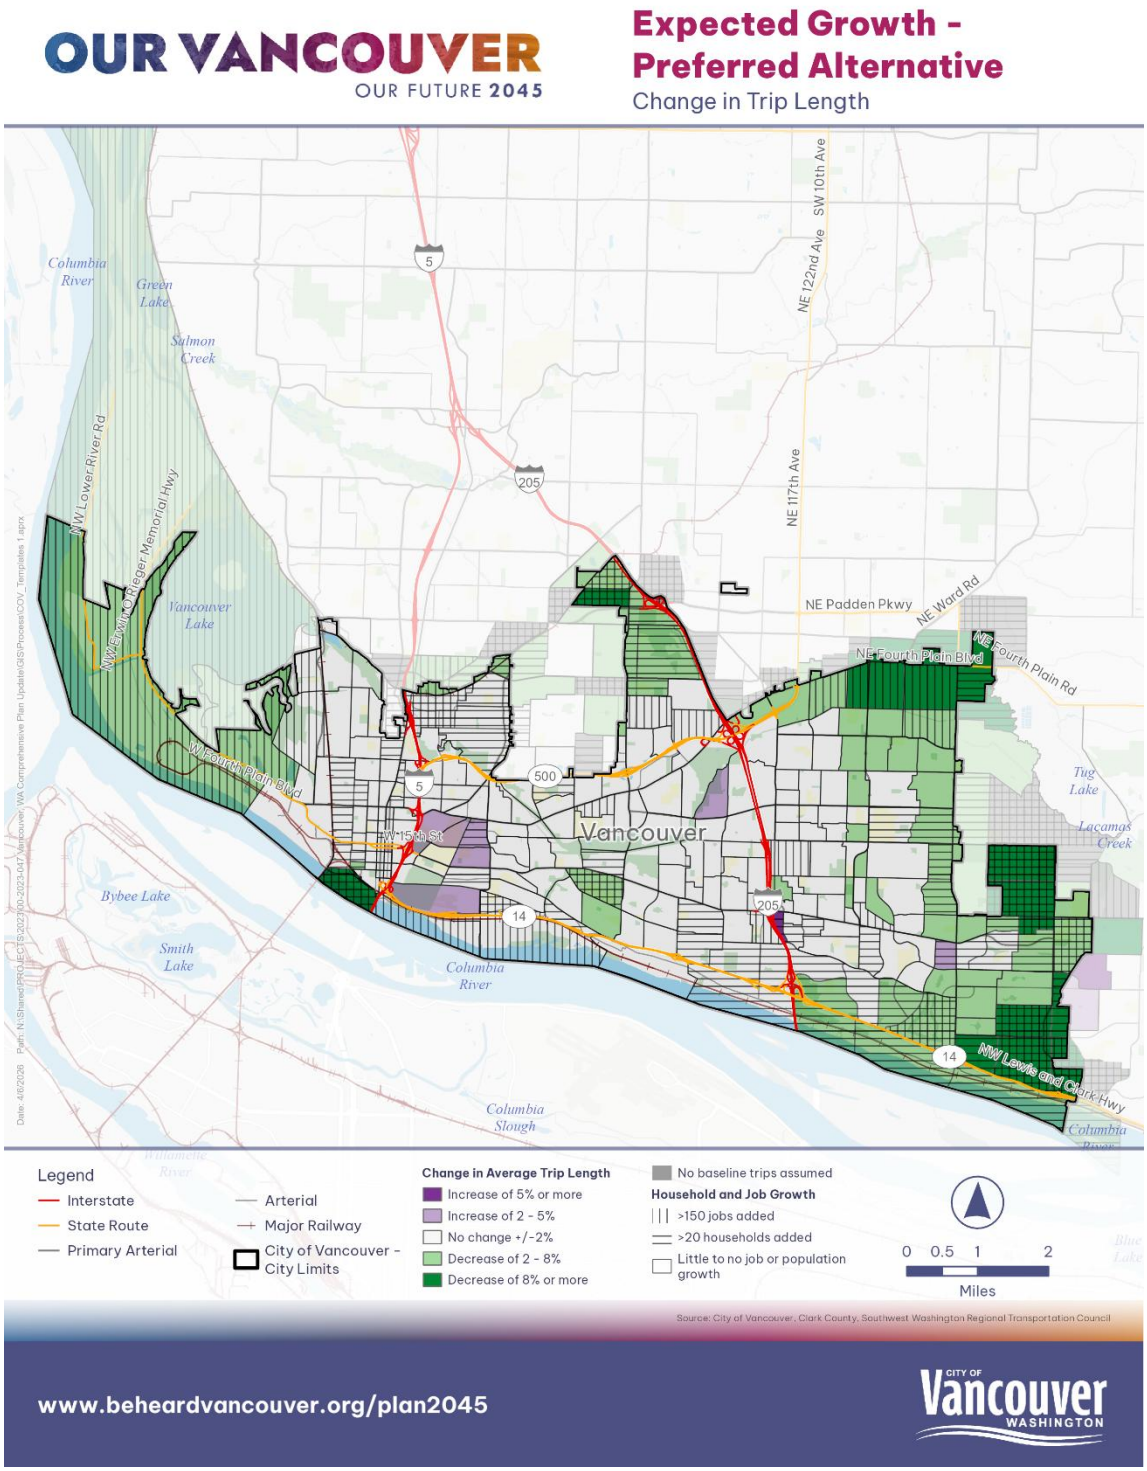

*Figure 4: Changes in trip lengths*

### Changes in Short Trips

The project team also created flow maps of origin-destination lines of modeled trips under three miles of all modes for the No Action and Preferred Alternative as well as the difference between the two. Although the share of trips that are under three miles is expected to change very little, from 53.6% to 53.5%, and trip lengths themselves will also change only minimally, more trips overall will translate to more short trips. The Flow Map, linked here and previewed in **Figure 8**, shows trip flows in three views: No Action, Preferred Alternative, and Difference. The Difference map shows where these short trips are expected to increase (in red) and decrease (in blue) with the Preferred Alternative compared to No Action. Clustering can be adjusted in the Settings at the bottom left to provide more or less detail by changing the degree to which trip flows are aggregated into lines.

The Differences map shows a net increase in short trip flows between most origin-destination pairs. Increases are especially pronounced in and around Fisher's Landing, Columbia Tech Center, Burnt Bridge Creek, and Sunnyside-Walnut Grove. Net decreases are expected primarily around Fort Vancouver, the VA Hospital, and Clark College area, as well as Fourth Plain Village and some residential areas in central Vancouver. The former are all regional destinations that are likely to attract trips from beyond the neighborhood, so new density in other parts of the city may cause a shift to longer trips.

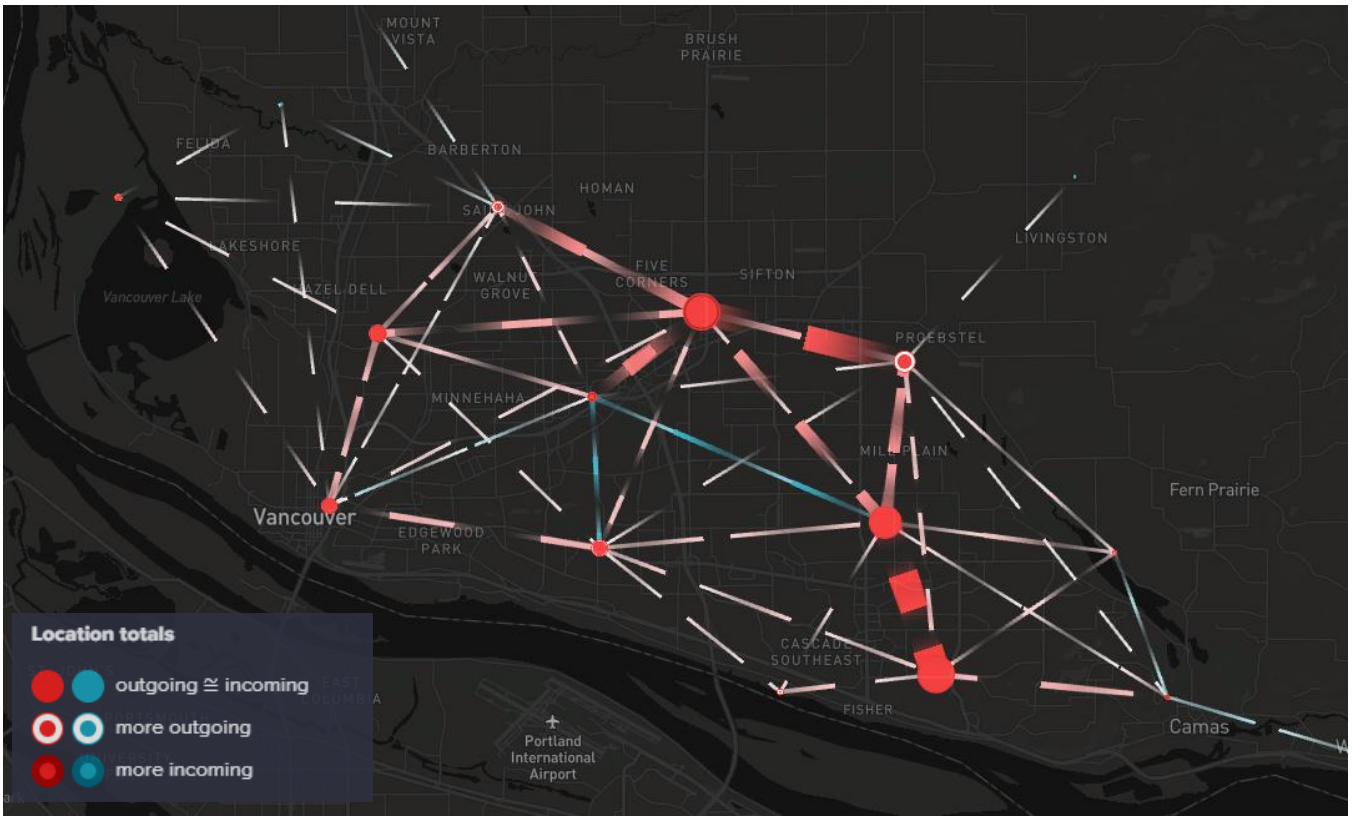

*Figure 5: Differences in trip flows show flows with more net short trips (red) and fewer net short trips (blue)*

This analysis can be thought of as a Preferred Alternative Active Trip Potential to complement the current Active Trip Potential completed earlier in the Comprehensive Plan Update process. Many of the short trips shown here, which are primarily by vehicle, can be converted to active mode trips if supportive infrastructure is provided. These findings can be examined alongside the current Active Trip Potential analysis to paint a more complete picture of where the most latent demand for active trips exists. While modeled flows show where people in 2045 will benefit from supportive infrastructure to shift to active modes, the current analysis shows where existing residents could benefit today. Focusing infrastructure investments in areas where both current and projected active trip potential are high will ensure that these new facilities can be the most useful to both current and future residents. **Table 3** samples different areas with different Active Trip Potential outcomes. Areas showing both high or moderate current potential and a projected increase under the Preferred Alternative should be prioritized for multimodal infrastructure improvements.

*Table 3: Active Trip Potential - Current and Expected Change*

| TAZ Location[4] | Current Active Trip Potential | Change in Active Trip Potential Expected in Preferred Alternative |
|---|---|---|
| Columbia Tech Center | **High** | **Increase** |
| Burnt Bridge Creek | **High** | **Increase** |
| Downtown | **Moderate** | **Increase** |
| Fisher's Landing | **Moderate** | **Increase** |
| Vancouver Mall | **High** | **Varies**[5] |
| Clark College | **High** | **Decrease** |

### Changes in Modes

Density changes under the Preferred Alternative are expected to change mode share and trip counts across the City by allowing some short vehicle trips to be replaced by walking or biking in areas where new housing, jobs or amenities are added. Because trip lengths and frequencies are projected to change little with the Preferred Alternative, the project team expects that mode shift is primarily responsible for the modeled decrease in VMT per household and job.

However, the model does not accurately account for shifts to active modes, so data on mode shift from the model has been evaluated qualitatively. Model outputs are described below for context.

The model shows that overall, the areas expecting increases in walking and biking trips are also expecting increases in total trips; the same is true for areas expecting decreases. However, the mode share estimates show that the *share* of people choosing each mode is expected to change little even as the total number of trips fluctuates.

[4] Major landmarks are included for reference, but this analysis was completed at the TAZ level.
[5] Short trips to some destinations are projected to increase while trips to other destinations are expected to decrease.

Of all the net trip increase from walking, biking and driving expected with the Preferred Alternative, 87.8% of the increase is driving trips, 2.7% is biking trips, and 9.4% is walking trips. In reality, new trips would likely show a higher percentage of active modes due to densification. The expected shift to active modes is attributable to the increased mix of housing and jobs under the Preferred Alternative, allowing people to live closer to jobs and destinations.

## Methodology

### Data Inputs

This analysis used trip generation and travel output data from two travel demand model runs from the Southwest Washington Regional Transportation Council (RTC):

- RTC 2045 No Action – Assumes regional growth as defined under the current comprehensive plan, with less densification and fewer zoning changes.
- RTC 2045 Preferred Alternative – Reflects the Preferred land use and policy/infrastructure assumptions for the Comprehensive Plan update and will be evaluated relative to the 2045 No Action.

These outputs were extracted at the TAZ level.

### Analysis Steps

The project team used tables on mode split, trip production by TAZ, person trip matrices between TAZs, and trip length by TAZ to summarize data by TAZ and then joined it to the TAZ shapefile for mapping. Key calculations and data preparation steps are described below.

- **Jobs and Household Growth**: The difference in No Action and projected jobs and No Action and projected households was computed from a shapefile with No Action and projected data by TAZ.
- **Changes in trip lengths**: Trip lengths by TAZ were accessed from a Trip Length by Zone table and joined to the TAZ shapefile. The percentage change between the No Action and Preferred Alternative was plotted.
- **Changes in Modes**: No Action and Preferred trips by mode were accessed from the Production Mode Split table. Mode share was calculated as the percentage of each mode's production trips out of all production trips at a TAZ level. Percent growth was calculated from the No Action and Preferred production trips by mode.
- **Changes in Flows**: The matrix of person trips by TAZ pair was reformatted to a longer table. For each TAZ pair, a trip distance was calculated using straight-line distances between block group centroids. In general, we expect that real-world distances would be longer, because they would be routed on the street network. The project team then input this table into a Flow Map to represent flows between origin-destination pairs and used the computed trip distances to create interactive filters. These trip distances were not used for VMT calculations.
- **VMT Changes:** Total VMT per TAZ was calculated by multiplying the average trip length by the number of produced or intrazonal person-trips driving alone or driving with a passenger for each scenario. This total VMT was then divided by household or job counts.

## Conclusion

### Considerations & Limitations[6]

This approach compares two RTC model runs to understand how the Preferred Alternative differs from the 2045 No Action. While this improves internal consistency relative to mixing data sources, the approach still has key limitations which are described below.

### Model Assumptions

Scenario differences reflect the assumptions embedded in the RTC model. Results should be interpreted as model-based estimates rather than observed travel behavior.

One such assumption is an increase in jobs and households for the Preferred Alternative but no change in population. This is because population projections are provided by the WA Office of Financial Management separately from the modeling process. The DEIS demonstrated that while alternatives would result in more VMT overall because of more households, the VMT per household would decrease with added density because more trips are within reach of short trips or active modes. For the purpose of emissions reduction modeling, it is important to understand that an increase in VMT in the region would be accompanied by a decrease in VMT in other regions as households shift to urban areas. Thus, density provides a net benefit to the climate, but it must be viewed comprehensively.

The RTC model necessarily makes other assumptions about the network, travel costs, behavioral parameters, and land use inputs. If these factors deviate from what is assumed, results will likely change. RTC can provide more information about these assumptions.

Finally, the average trip lengths by TAZ provided by the model were not mode-specific; the estimates therefore reflect all modes combined. Therefore, this analysis assumed that the average vehicle trip length is equivalent to the average trip length. In reality, walking and biking trips are typically shorter than average and vehicle trips are longer, so this may lead to an underestimation of vehicle miles traveled. However, given the dominance of vehicle travel in most TAZs, this bias is unlikely to have much effect on estimating vehicle miles traveled.

[6] Claude Chat 1.1.9 was used to help draft the summary of findings and to brainstorm limitations for this memo. Final limitations were written and edited by Alta Planning + Design staff.

### Geographic Extent

Boundary effects could cause a bias in this analysis. The analysis only models trips in Vancouver, so impacts to areas outside of Vancouver are not considered, but travel behavior does not respect city boundaries.

### Model Sensitivity

The RTC model is not sensitive to mode shift. Vehicle trips that seem to disappear in the Preferred Alternative are assumed to shift to active modes, but the extent of mode shift is difficult to quantify for this reason.

Regional models may have limited sensitivity to fine-grained land use mix and urban design changes within a small number of zones. In addition, short-trip identification depends on the model's skim distances and how well they represent short local travel conditions.

### Analysis Exclusions

This analysis did not evaluate changes in transit mode share in the Preferred Alternative, but the model accounted for transit and any expected transit shifts would be reflected in changes to vehicle, bicycle or walk trips.

### Next Steps

This analysis illuminates how the Preferred Alternative will reduce VMT per household and job in Vancouver based on model assumptions. Although total VMT will increase due to higher population and jobs, those new residents will contribute less to VMT in a densified Vancouver than they likely would in another, more sprawling community or in the No Action Alternative. Allowing greater density of jobs and people will help reach climate and emissions goals primarily by reducing the number of trips an average household takes in a day by 1.1 trips, which in turn reduces VMT. If additional strategies are added that encourage more mode shift or make shorter trips possible, this could improve climate and emissions outcomes still more.

## Appendix

The appendix provides additional context about job and household growth as well as changes in VMT:

- **Figure 10**: **Household growth per acre** complements the household growth map in **Figure 2** to normalize household growth per acre in the Preferred Alternative. Areas in southeast Vancouver and west of downtown will see the most growth in housing density.
- **Figure 11: Preferred Alternative Job growth** per acre complements the job growth map in **Figure 1** to normalize job growth per acre in the Preferred Alternative. Areas in East Vancouver and Fruit Valley will see the most growth in job density.
- **Figure 12: Change in VMT per Job** highlights areas where job growth leads to a decline in VMT per job in the Preferred Alternative.
- **Figure 13: Change in VMT per Household** highlights areas where household growth leads to a decline in VMT per household in the Preferred Alternative.

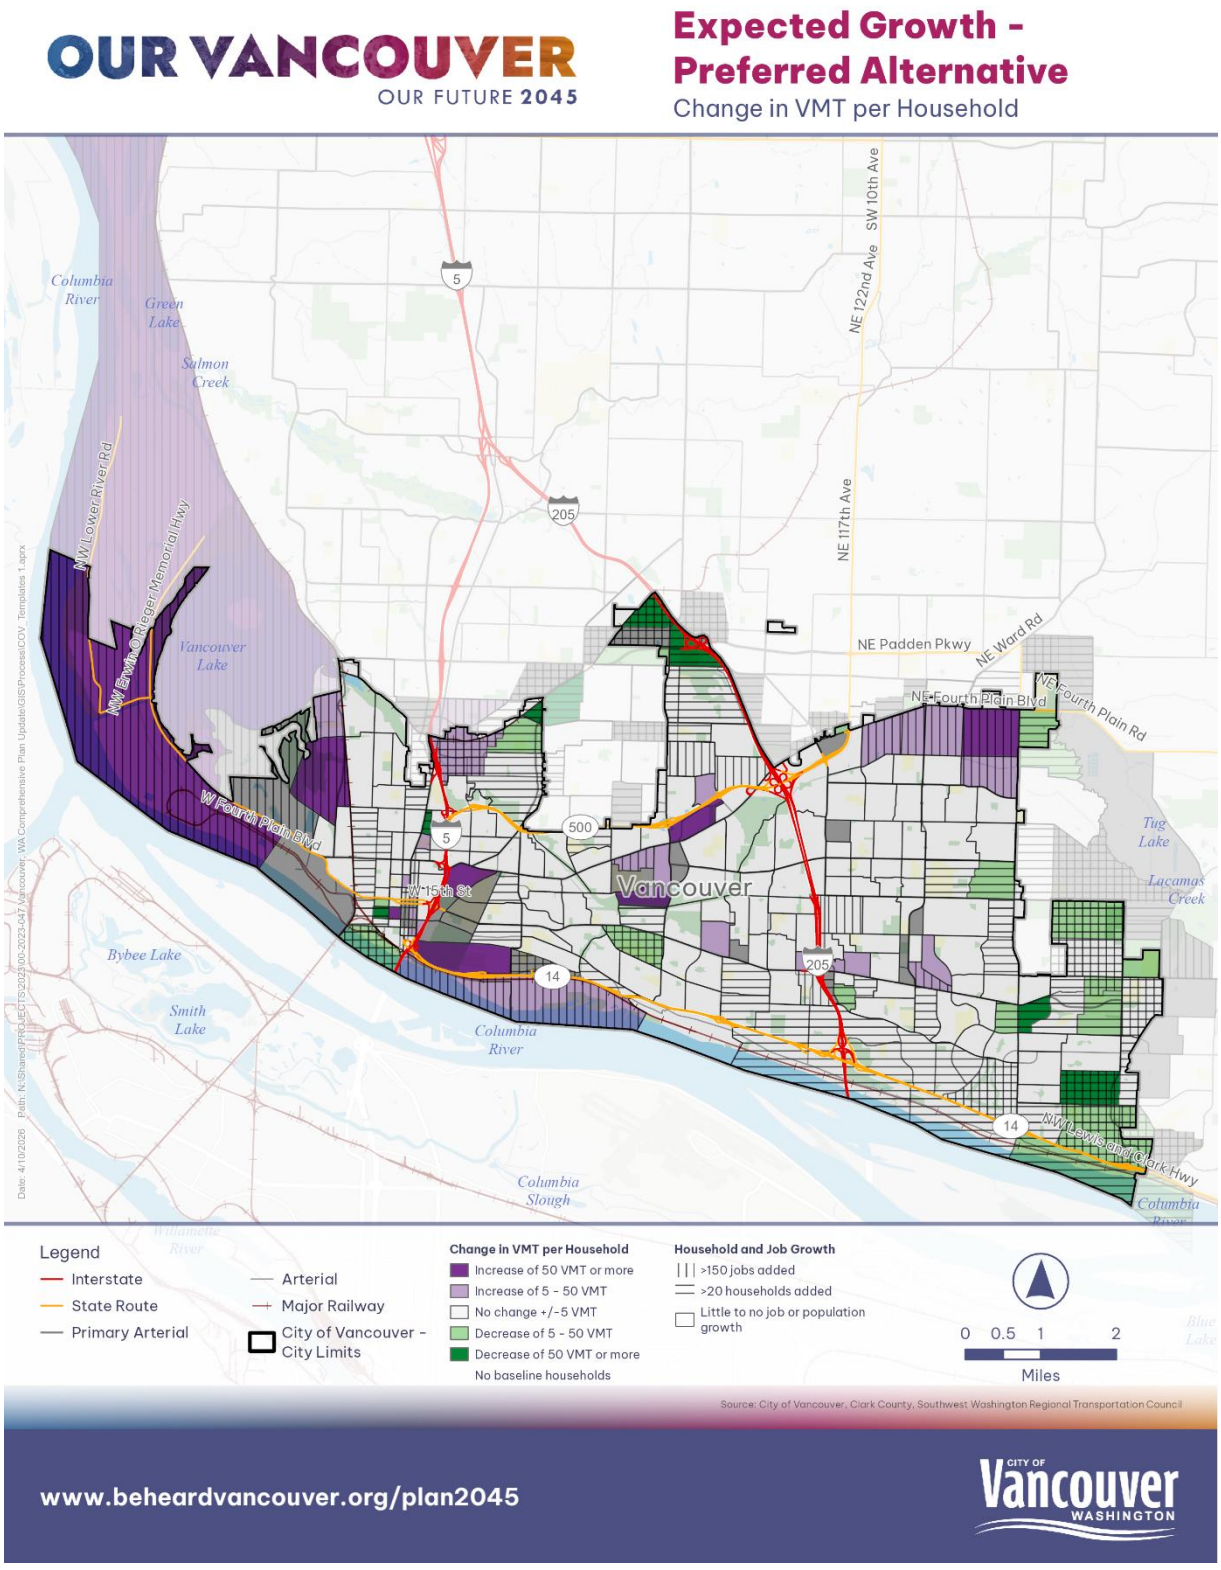

*Figure 10: Change in VMT per Household*

# Appendix U – Full List of Plan Policies

| Policy Name | Description | No | Associated Goal(s) |
|---|---|---|---|
| **Access to Arts and Cultural Programs** | Improve access to arts, cultural, and heritage programs by reducing barriers to participation, prioritizing underserved and historically underserved communities, and investing in related programs. | **1** | EI-1, PR-4 |
| **Access to Education and Employment** | Reduce barriers to accessing education and employment opportunities, so all community members can reach their full potential. | **2** | EI-1, EO-1 |
| **Access to Non-Traditional Homeownership Methods** | Broaden access to homeownership for first time owners, low-income residents, and other groups frequently priced out of through alternative ownership methods. | **3** | EI-1, H-4, H-5, H-6, |
| **Access to Services and Amenities** | Expand access to essential services and amenities through regulation and public investment and increase access in underserved areas. | **4** | PFS-1, EI-1, LU-1 |
| **Accessible Mobility for All** | Promote universal design standards and mobility solutions for disabled, senior, youth, and low-income residents across all modes. | **5** | EI-2, EI-3, TM-1, |
| **Acquire land for affordable housing development** | Pursue strategic acquisition and utilize existing City-owned land for affordable housing. | **6** | H-6 |
| **Acquire Land for Public Parks** | Acquire and reserve land for the development of parks for public use and recreation in areas experiencing growth, prioritizing underserved neighborhoods and areas currently not meeting parks service standards. | **7** | LU-3, PR-2 |
| **Adapt Infrastructure to Climate Change** | Retrofit existing infrastructure, parks and natural spaces, and construct new facilities to adapt to the localized impacts that will occur in the community due to climate change. | **8** | CL-1, PFS-1, PFS-3 |
| **Adaptive Reuse** | Support efforts to retrofit or repurpose underutilized buildings, structures and infrastructure for the development of new housing and commercial spaces. | **9** | LU-2, CL-3 |
| **Affordable Commercial Space** | Utilize City-controlled real estate to provide affordable commercial leasing opportunities for small and emerging businesses. | **10** | EO-4, EI-1, EO-2 |

| | | | |
|---|---|---|---|
| **Affordable Homeownership** | Facilitate homeownership opportunities through assistance programs, grants, and other methods that reduce barriers to entry for low- and moderate-income households. | **11** | H-5, H-6 |
| **Aging Populations** | Ensure that residents have support for aging within community and downsizing through diverse housing options near accessible services and reliable transit to ensure long-term livability and independence. | **12** | EI-3, H-2 |
| **Airfield Compatibility and Airspace Protection** | Ensure land uses, development patterns, and building heights in areas surrounding Pearson Airfield and PDX flight path are compatible with aviation operations and do not interfere with active airspace. | **13** | LU-4 |
| **Align Capital Improvement Program (CIP) with Comprehensive Plan** | Maintain a prioritization process that aligns the Capital Improvement Program (CIP) with the goals and policies of the Comprehensive Plan and other relevant long term planning documents. | **14** | PFS-2 |
| **Align Place Based Investment with the Growth Concept** | Align City investments, incentives, and programs to reinforce key centers identified in the growth concept as points for local economic development efforts and community investment. | **15** | CE-5, EO-4 |
| **Allow middle housing** | Increase housing diversity by allowing a range of missing middle housing types (duplexes, triplexes, townhomes, cottage clusters, and courtyard apartments) in low- and medium-intensity residential areas to expand affordability and accessibility. | **16** | H-2 |
| **Analyze and Mitigate Displacement Risk** | Analyze and mitigate for displacement pressures and risks prior to making large scale public investments. | **17** | E-1, H-2, H-4, PFS-1 |
| **Annexation Agreements Prior to Service Extensions** | Continue to require developing or developed unincorporated areas to agree to future annexation as a precondition of the extension of City services. | **18** | AN-1, PFS-1 |

| | | | |
|---|---|---|---|
| **Annexation Appropriateness** | Evaluate potential annexations to ensure they support the City's ability to provide and maintain adopted levels of service. Annexations should proceed only when they do not result in a reduction of service levels for existing residents and when necessary urban services can be provided in a timely, efficient, and financially sustainable manner. | **19** | AN-1 |
| **Annexation Boundaries** | Annexation agreements should promote large annexations, efficient service delivery, the provision of necessary infrastructure, and clear jurisdictional boundaries. This includes contiguous areas and both sides of roads and streets and associated rights-of-way. Individual property owners should not be prevented from pursuing annexation, and requests should be facilitated when immediately adjacent to Vancouver city limits. | **20** | AN-1, AN-2 |
| **Asset Management** | Manage City assets to balance full life cycle costs, performance, risk, and service levels, using best management practices and data. Public infrastructure and facility investments will leverage existing investments to support efficient and equitable growth. | **21** | PFS-2, TM-1, PR-1 |
| **Boards and Commissions** | Ensure boards and commissions reflect community demographics, consist of diverse voices, and provide a meaningful role in decision-making and policy development. | **22** | EI-4 |
| **Broaden Equitable Access to Natural Spaces and Parks** | Increase equitable access to natural spaces and parks by investing in new and improved facilities in underserved neighborhoods and siting new accessible housing close to existing and future parks. | **23** | CL-4, PR-3, H-1, EI-2 |
| **Build a resilient economy** | Encourage business growth, retention, and expansion, with an emphasis on family-wage jobs and foster resilience within Vancouver's economy. | **24** | LU-2 CL-1, EO-3 |
| **Campuses** | Support the growth and evolution of major institutional campuses as integrated community anchors that expand access to education, healthcare, and employment while maintaining strong physical, functional, | **25** | LU-1 |

| | | | |
|---|---|---|---|
| | and social connections to surrounding neighborhoods. | | |
| **Center Impacted Voices in the Development of Community Spaces** | Engage community organizations and individuals representing diverse lived and cultural experiences in the planning, design and programming of community spaces. | **26** | CE-1, CE-5 EI-1, EI-4, PR-4 |
| **City-Led Redevelopment** | Invest in current and future City-led redevelopment efforts through property acquisition, community engagement, master planning, parks and infrastructure funding, and investment in affordable housing. Priority areas for City-led redevelopment include existing projects at Waterfront Gateway, the Heights, and the Fourth Plain Ops Center, and future projects at Library Square, and historically compatible investments at City-owned properties inside the Historic Reserve. | **27** | LU-1, EO-4 |
| **City-Supported Redevelopment** | Participate in future public private partnerships to promote redevelopment on privately owned land in key areas around the City, including Downtown/Uptown Village/West Downtown, Van Mall, Columbia Business Center, Evergreen and Grand, the Mill Plain Corridor, and 136th near Firstenburg, and at Clark College, as well as other strategic locations around the City. | **28** | LU-1, EO-4 |
| **Climate Resilient Infrastructure** | Incorporate elements of climate resiliency into new public spaces, buildings, and infrastructure. | **29** | CL-1, CE-1, PR-1, PFS-3, LU-3 |
| **Community Centers** | Establish multipurpose community centers offering social, recreational, educational, and cultural programming, especially in underserved areas. | **30** | PR-3, PFS-1 |
| **Community Food Enterprises** | Explore opportunities for community-owned and cooperative grocery store models to strengthen neighborhood food access where the private market fails to meet demand. | **31** | PR-3, LU-1 |
| **Community Gardens** | Expand access to community gardens and incentivize urban agriculture to improve food security and increase healthy food options . | **32** | PR-3 |

| | | | |
|---|---|---|---|
| **Community Safe Routes** | Create safe walking connections through programs that identify and invest in Safe Routes to Schools and Community Safe Routes that link people to transit and other important community destinations. | **33** | TM-1, TM-2, PFS-3, PR-2 |
| **Community Streets** | Develop guidance and encouragement for community use of the right-of-way, including plazas, parklets, "streateries," open streets events, public art, converting some low volume roadways into pedestrian only thoroughfares, and other demonstration projects. | **34** | TM-1, TM-4, PR-2 |
| **Conserve Land For Open Space and Environmental Preservation** | Acquire environmentally sensitive land with ecological benefits for the purpose of conservation. | **35** | PR-2, CL-2 |
| **Conserve Lands Providing Employment** | Conserve and invest in industrial lands and other areas that provide employment opportunities and family-wage jobs. | **36** | LU-2, EO-2 |
| **Conserve Water Resources** | Encourage water-efficient technologies and practices to reduce consumption and ensure sustainable water availability amid climate change and growing demand. | **37** | CL-1, CL-4, PFS-1 |
| **Coordinate with Fire and Police** | Coordinate with the Vancouver Fire Department and Vancouver Police Department to plan for expected growth, equitably serve the community, and facilitate emergency response. | **38** | CE-3, PFS-3 |
| **Cost Efficient Infrastructure** | Design and maintain infrastructure to reduce long term maintenance and replacement costs. Consider lifecycle costs, emerging technologies, and the impacts of facility design and material choices in both capital and operating budgets. | **39** | PFS-1, TM-1 |
| **Crime Prevention Through Environmental Design (CPTED)** | Foster a safe community by encouraging street level activity and thoughtful building and infrastructure design that enhance public safety and community well-being. | **40** | CE-3, LU-2 |
| **Culturally Responsive Design** | Develop standards for public spaces and buildings that incorporate culturally-specific design principles and art installations and reflect the diverse history and heritage of Vancouver communities. | **41** | CE-5, CE-2, PR-4 |

| | | | |
|---|---|---|---|
| **Culturally Specific and Identity-Based Housing** | Work with partners to facilitate and fund housing that reflects the cultures, identities and needs of Vancouver's unique population groups, and for the equity priority communities identified in this plan. | **42** | H-2, CE-2, EI-1, H-4 |
| **Disaster Recovery and Emergency Response** | Develop plans and resources to ensure effective emergency response and recovery efforts in the event of natural disasters, climate-related hazards, and social disruptions. | **43** | CE-3, CL-1, PFS-3 |
| **Embodied Carbon** | Prioritize local source materials, low carbon materials and material reuse in City-led infrastructure and redevelopment projects. | **44** | CL-3, EO-3 |
| **Emergency Rental Assistance** | Provide financial support to help at-risk households remain in their homes, preventing eviction and displacement. | **45** | H-4, EI-1, H-3 |
| **Emerging Mobility** | Prepare for emerging technologies by updating City policies and operational requirements for shared mobility and emerging mobility vendors, including Autonomous Vehicles. Create data standards, data sharing agreements, and vendor requirements. | **46** | TM-2, CE-4 |
| **Employment Centers** | Direct new employment growth into Employment Centers with close proximity to housing, commercial activities, public services, employment and amenities. | **47** | LU-1, EO-2 |
| **Energy Efficient and Climate Resilient Buildings** | Ensure that buildings contribute to the City's greenhouse gas reduction goals and protect occupants from pollution, extreme weather and other climate hazards. | **48** | CL-1, CL-3 |
| **Engage with Tribal Community Members** | Foster meaningful partnerships with tribal communities and land stewards, integrating their knowledge, priorities, and cultural perspectives into local decision-making processes. | **49** | EI-4, CL-2 |
| **Enhance Port Access and Multimodal Freight Solutions** | Improve infrastructure and connectivity to and from the Port of Vancouver to streamline freight operations. | **50** | LU-2, TM-3, EO-2 |
| **Environmentally Conscious Procurement and Maintenance** | Include criteria related to the use of environmentally sustainable materials and practices in procurement processes and maintenance contracts. | **51** | PFS-1, CL-3 |

| | | | |
|---|---|---|---|
| **Equitable Transit Oriented Development** | Tailor regulations, incentives and investments to facilitate development near current and future transit stations and make this development accessible to transit-reliant and historically excluded and underserved communities. | **52** | LU-1, LU-2, TM-2 |
| **Equitably Expand Tree Canopy** | Utilize canopy assessment data and the City's Equity Index to prioritize areas for tree planting and greening investments. | **53** | CL-2 |
| **Equity and Climate Data** | Incorporate the City's Equity Index, Displacement Risk Assessment tool, and climate vulnerability assessment in public investment and infrastructure improvement decisions. | **54** | EI-1, PFS-1, CL-1 |
| **Essential Public Facilities** | Plan, site, and design essential public facilities through coordinated, equitable, and transparent processes that support regional planning goals, minimize community impacts, and ensure long-term benefit to all Vancouver residents. | **55** | PFS-2 |
| **Ethical and Fair City Processes** | Promote ethical and fair governance by embedding accountability in City processes, ensuring access for historically excluded communities, mitigating bias, and fostering ethical use of technology and digital practices. | **56** | EI-4, CE-4 |
| **Event Programming** | Continue to support and expand local gatherings, festivals and special events that uplift community, reflect diverse histories and lived experiences, and create a sense of civic pride. | **57** | CE-1, CE-5, PR-4 |
| **Expand Representation in Public Art** | Ensure publicly funded art projects and installations reflect and incorporate the experiences of historically excluded and underrepresented voices in the physical and cultural landscape of the City. | **58** | CE-5, CE-2, PR-4 |
| **Facilitate Job-Creating Business Growth and Investment** | Support businesses that create high-quality jobs by reducing barriers to growth, streamlining development processes, and ensuring access to necessary resources and infrastructure. | **59** | EO-2, EO-4, CE-4 |

| | | | |
|---|---|---|---|
| **Fiscal Sustainability of Annexation** | Evaluate proposed annexations to ensure they are fiscally sustainable and support the City's ability to provide, operate, and maintain adopted levels of service over time. Annexations should proceed only when they do not reduce service levels for existing residents and when required urban services can be delivered in a timely, efficient, and financially sustainable manner. | **60** | AN-2 |
| **Fort Vancouver and the Historic Reserve** | Protect and promote Fort Vancouver and the Historic Reserve as nationally significant cultural and historic assets. Support public investment, inclusive programming, and heritage-based economic development. Oppose efforts to reduce funding or public accessibility. | **61** | PR-4 |
| **Future Updates** | Continue to update the Comprehensive Plan and implementing regulations in response to the annual review process, state mandated 5-year Implementation Progress Report, and 10-Year periodic review requirement that includes updates to long-term growth forecasts and regional land capacity analysis. | **62** | EI-4 |
| **Growth Concept** | Use the Growth Concept and Comprehensive Plan Land Use Designations and updated zoning map to guide how and where growth and development occurs in the City. | **63** | |
| **Habitat and Species Under Stress from Climate Change** | Take inventory of and protect climate refugia, and fish and wildlife habitat needs for species under stress from climate change. | **64** | CL-2, CL-4 |
| **Health Access** | Broaden access to essential healthcare and services for underserved populations and address built environment causes of health disparities. | **65** | EI-1, PR-3 |
| **Historic and Culturally Significant Resources** | Protect and preserve significant cultural, historic, archeologic, and ecologic community resources. Promote preservation, restoration, protection, and rehabilitation of historic and architecturally significant structures, and heritage trees. | **66** | CE-5, CL-1, CL-2, PR-4 |

| | | | |
|---|---|---|---|
| **Housing Innovation** | Promote and remove regulatory barriers to new financing methods, homeownership models and design and construction techniques. | **67** | H-1, CE-4 |
| **Improve Connectivity Between Parks and Open Spaces** | Create an expansive network of linear parks that encourage active transportation, improve community health and wellbeing, enhance tree canopy and stormwater management, and link parks and open space with housing. | **68** | PR-2, PFS-1, |
| **Inclusive Engagement** | Foster inclusive, community engagement rooted in inclusion, trust, and long-term relationship-building. Center the voices of those who are most directly impacted by outcomes of City processes. | **69** | EI-4, CE-1 |
| **Inclusive Use of Technology** | Utilize an equity lens to evaluate, assess, develop, and implement use of smart technologies to reduce embedded biases and provide inclusive and accessible access. | **70** | EI-4, CE-4 |
| **Income-Restricted Housing** | Facilitate development of income-restricted housing, particularly in areas near transit and services. | **71** | H-2, EI-1, LU-1 |
| **Climate Resilient Development** | Integrate climate resiliency best practices into the City's review of new development. | **72** | CL-1, CL-2, PFS-1 |
| **Incorporate Community Benefits into Development** | Integrate community benefits into private developments involving discretionary land use approval or City redevelopment efforts while maintaining project feasibility. | **73** | H-4, EI-4 |
| **Incorporate Universal Design Principles** | Incentivize universal design principles in private development. Support accessibility retrofits for existing homes and prioritize affordable housing options tailored to multi-generational living, aging in place, and a wide range of abilities. | **74** | EI-2, PR-1, H-2 |
| **Increase Access to Community Spaces** | Facilitate and provide access to e community spaces, with a focus on populations vulnerable to social isolation. | **75** | CE-1, EI-2, LU-1 |
| **Increase Access to Space for Artists and Creatives** | Establish partnerships that increase access to shared, affordable spaces serving artists and arts and cultural organizations. | **76** | CE-1, PR-4, CE-5 |

| | | | |
|---|---|---|---|
| **Increase Cultural Capacity** | Strengthen Vancouver's cultural sector by investing in capacity building across arts, culture and heritage organizations as an economic and cultural driver of the community. | **77** | PR-4 |
| **Increase Food Access** | Incentivize and remove regulatory barriers to locating grocery stores and neighborhood markets near housing and in underserved neighborhoods. | **78** | PR-3, LU-1 |
| **Indoor Air Quality** | Improve indoor air quality for residents most susceptible to negative impacts from exposure to particulates, carbon monoxide, nitrogen dioxide, and lead. | **79** | CL-4 |
| **Intergovernmental Coordination of Annexation** | Work with Clark County to facilitate annexation of the unincorporated Vancouver Urban Growth Area in a coordinated and orderly manner. Coordination should include County adoption of development regulations and infrastructure standards for the VUGA that are consistent with those of the City of Vancouver, agreements to maintain existing infrastructure prior to annexation, community engagement in annexation planning and implementation, and generally advance Vancouver as a provider of urban services and Clark County as a provider of social and regional services. | **80** | AN-1 |
| **Invest in Underserved Areas** | Prioritize infrastructure, housing, and public service investments in underserved neighborhoods and areas of the City that have not benefitted from past investments. | **81** | PFS-1, EI-1 |
| **Language Access and Culturally Responsive Services** | Ensure all City services are accessible in high impact languages spoken throughout the city and delivered with cultural competency. | **82** | CE-2, EI-4, |
| **Limit UGA Expansions** | Rigorously review any requests for future VUGA expansions to those clearly necessary to address forecasted population growth and associated housing and job needs, to reduce future annexation burdens, and to foster efficient long-term urbanization given finite countywide land supplies. Modeling of growth and associated land capacity needs should utilize generally acceptable best | **83** | AN-1, AN-2 |

| | | | |
|---|---|---|---|
| | practices and reflect reasonable assumptions. | | |
| **Local Centers** | Focus growth and investment in Local Centers to create compact, mixed-use districts along key corridors and intersections that provide daily goods, services, jobs, in a manner that complements uses in Regional Centers and the Urban Core. | **84** | LU-1 |
| **Low Carbon Fuels** | Work with transportation, industry and utility partners to support the transition to low-carbon fuels. | **85** | CL-3, CL-4 |
| **Low Carbon Transportation Alternatives.** | Adopt new technologies and invest in supportive infrastructure to increase the adoption of electric, hybrid, and alternative fuel vehicles to reduce community emissions. | **86** | CL-3 |
| **Low-Stress Bicycle and Small Mobility Network** | Implement the city-wide low-stress bicycle and small mobility network that prioritizes safety and comfort for people of all ages and abilities. | **87** | TM-1, TM-2, TM-4 |
| **Maximize the utilization of existing on street parking** | Implement strategic pricing mechanisms to regulate the availability of on-street parking in mixed use and regional activity centers. | **88** | TM-2, LU-4 |
| **Mitigate Noise Pollution** | Reduce and mitigate noise pollution from major stationary and mobile sources, including air travel, vehicles, freight, railroads and high intensity industrial uses. | **89** | EI-1, CL-4 |
| **Mixed Income Housing** | Develop incentives to integrate below market housing as part of new market rate housing projects. | **90** | H-5, H-6, LU-4 |
| **Monitoring Progress** | Regularly review progress towards implementation of the Vancouver Comprehensive Plan goals and policies using the metrics identified for each policy, and update regulations and policies as needed to reflect changing conditions. | **91** | EI-4 |

| | | | |
|---|---|---|---|
| **Multigenerational Households** | Incentivize development of housing types suitable for multigenerational living. | **92** | EI-3, H-2 |
| **Multimodal Level of Service** | Update regulations and design guidance to reflect multimodal level of service standards that require private development and capital projects to advance multimodal safety and support shifts to non-drive-alone modes. | **93** | TM-2 |
| **Native Landscapes** | Incorporate native plantings, food forests, and agroforestry into parks and public spaces to support food security, ecological health, and cultural knowledge sharing | **94** | PR-3, CL-2, EO-3 |
| **Neighborhood Centers** | Develop Neighborhood Centers as accessible, neighborhood-serving districts that bring daily goods, services, and gathering spaces closer to where people live, supported by a mix of low- to medium-scale housing. | **95** | LU-1 |
| **New funding methods for affordable housing** | Explore and develop additional funding methods and resources to support affordable housing and community ownership opportunities | **96** | H-1, H-6 |
| **Open Government** | Ensure transparent and equitable access to government data by maintaining open, user-friendly platforms that allow community members to understand, engage with, and influence public decisions and investments. | **97** | EI-4, PFS-2 |
| **Optimize Freight Corridors** | Designate and enhance freight corridors to facilitate efficient movement of goods and reduce congestion. | **98** | LU-2, TM-3, EO-2 |
| **Pedestrian Oriented Design** | Ensure ground floor building facades, public spaces, and streets are designed at a human scale and provide comfort, accessibility and visual interest for pedestrians. | **99** | LU-1, TM-1 |
| **Periodically Reassess Land Use** | Assure consistency of overall land use and capital facilities plans by reevaluating Vancouver's land use plan and code to ensure regulations are facilitating intended outcomes and the City is able to provide necessary public facilities and services to implement the plan. | **100** | PFS-1, LU-4 |

| | | | |
|---|---|---|---|
| **Permanently Supportive Housing** | Expand the availability of permanently supportive housing and emergency shelter beds with integrated services for people with disabilities, houseless individuals, and at-risk populations. | **101** | H-3 |
| **Pilot Projects** | Encourage the use of short-term pilot projects for park, transportation, and general infrastructure improvements before making long-term investments to foster innovation, test feasibility, and increase community buy-in. | **102** | CE-4, PR-2, TM-2, CL-1 |
| **Pollinator Habitats** | Support a healthy urban ecosystem by embedding pollinator habitat into public and private development, prioritizing pesticide free landscaping, removal and reducing use of invasive species, enhancing biodiversity, and connecting natural spaces across the City though pollinator-friendly plantings. | **103** | CL-2, PR-2, PR-3, CL-4 |
| **Preserve and Protect the Columbia River** | Manage the built and natural environment to protect and restore the water quality and habitat of the Columbia River basin, reflecting its central role in the City's identity, economy, history, and future. | **104** | CL-2, CL-4, CE-5, EO-2, PR-2, PFS-1 |
| **Preserve Existing Affordable Housing** | Preserve the existing stock of affordable housing and discourage conversion of income-based housing to more expensive market rate housing when affordability restrictions end. | **105** | H-3, H-4, LU-1 |
| **Program Underutilized Spaces** | Encourage the thoughtful reuse and activation of underutilized lands —such as space beneath freeway viaducts, oddly shaped parcels, utility corridors, temporarily vacant lots - and other non-developable remnants typically under 1 acre—by establishing public private partnerships to program them to serve community, cultural, and environmental needs | **106** | CE-1, CE-4, LU-4, PR-2 |
| **Proportional Fees** | Establish proportional impact fees and system development charges based on size of unit for residential uses while ensuring cost recovery. | **107** | PFS-1, LU-4 |
| **Protect and Restore Critical Areas and Shorelines** | Protect critical areas, shorelines and other ecologically significant areas, ensure no net loss of ecological function through avoidance and mitigation of impacts, and apply | **108** | CL-2 |

| | | | |
|---|---|---|---|
| | conservation design principles to restore and enhance degraded areas. | | |
| **Public Safety** | Support public safety through investment in emergency services, facilities, infrastructure and coordinated preparedness efforts that strengthen community resilience and response. | **109** | CE-3, PFS-3 |
| **Reduce Built Environment Emissions** | Reduce emissions from buildings, structures, and, infrastructure in the community. | **110** | CL-3, PFS-1 |
| **Reduce climate impact exposure to Vancouver's neighborhoods.** | Establish development regulations that incorporate best practices for reducing the risk of wildfire, extreme heat, flooding, and other climate-exacerbated hazards. | **111** | CL-1 |
| **Reduce displacement in the face of new growth** | Implement anti-displacement strategies and actions that protect residents and businesses in advance of public investment so communities can remain in place and benefit from improvements. | **112** | H-4, EI-1 |
| **Reduce Environmental Health Disparities** | Focus on areas with high environmental health disparities when mitigating the impacts of air, water, heat noise, and light pollution. | **113** | EI-1, CL-4 |
| **Reduce Food Waste** | Reduce food waste in the community, and ensure surplus food supply is directed to underserved communities without fresh food access. | **114** | CL-3, EO-3 |
| **Reduce Heat Island Effect** | Minimize impacts of the urban heat island effect, reduce geographic temperature disparities, and safeguard vulnerable populations from the adverse effects of extreme heat. | **115** | CL-1, CL-2, CL-4 |
| **Reduce Impacts of Point Source Pollution on Housing** | Avoid siting new housing near known stationary sources of air, water, heat and light pollution, and facilitate site and building design that mitigates impacts from stationary pollution sources for both new and existing housing. | **116** | CL-4 |
| **Reduce Solid Waste** | Increase waste diversion rates through a system that minimizes landfill reliance, reduces greenhouse gas emissions, prioritizes composting and encourages resource recovery. | **117** | CL-1, CL-3, CL-4, EO-3, PFS-1 |

| | | | |
|---|---|---|---|
| **Reduce VMT and GHG Per Capita** | Implement land use patterns that reduce vehicle miles traveled, traffic congestion, and associated greenhouse gas emissions per capita, while improving safety and air quality. | **118** | CL-3, CE-3, TM-2 |
| **Redundancy in Infrastructure** | Design, construct, and maintain capital infrastructure systems with resiliency and redundancy to minimize the risk of system failure during natural hazards, climate-related events, or other disruptions. Prioritize investments that diversify supply sources, strengthen backup systems, and enhance adaptive capacity so essential services can be maintained or restored quickly in the event of a failure. | **119** | PFS-3, CL-1 |
| **Regional Centers** | Develop Regional Centers as compact, high-intensity mixed-use hubs that provide a balance of housing, jobs, and services that complement the Urban Core, that are connected through the high-capacity transit network. | **120** | LU-1 |
| **Regional Infrastructure** | Work with local, state, federal and tribal partners to ensure that new construction or replacement of critical infrastructure is planned and designed to avoid community harm and maximize social, environmental, and cultural value. | **121** | TM-1, PFS-1 |
| **Regional Planning** | Coordinate closely with Clark County, other cities, and other government entities such as C-TRAN, the Regional Transportation Council (RTC), and school districts to sustainably manage urban growth areas, efficiently deliver urban services, expand regional transit and multimodal connectivity, and coordinate on shared goals and responsibilities, in accordance with adopted countywide planning policies. | **122** | LU-4, CL-3, TM-2, TM-1 |
| **Regional Trail and Open Space Networks** | Work with nonprofit and private partners, Clark County and adjacent cities to build out the regional trail network for recreation and active transportation purposes. | **123** | TM-1, PR-2 |

| | | | |
|---|---|---|---|
| **Resilient, Transit-Supportive Infrastructure** | Invest in infrastructure that supports reliable, frequent, and accessible transit service as outlined in the Enhanced Transit Network, while adapting to localized climate impacts. Investments should xpand mobility options, improve neighborhood access, and deliver health, economic, and social benefits. | **124** | TM-2, PFS-3, EI-2 |
| **Resources for Youth and Aging Populations** | Prioritize programs and infrastructure that support youth and aging populations, including safe play areas, accessible housing, robust childcare, public facilities and community programs that foster multigenerational interaction. | **125** | EI-3, PFS-1 |
| **Resources Near Transit** | Locate community resources near current and future transit routes to ensure access for those most reliant on public transit. | **126** | LU-1, TM-2 |
| **Right of First Refusal and Sweat Equity** | Explore models and opportunities for existing residences and businesses to have right of first refusal to purchase property when it's being sold, or build an equity stake in the property over time. | **127** | H-4, EO-1 |
| **Schools** | Work with local school districts to provide adequate school facilities, including timely and efficient review processes for new facilities. | **128** | PFS-2 |
| **Service Areas** | Work with Clark County, utility districts, and other regional service providers to ensure reasonable, efficient and fiscally sustainable service area boundaries and provide urban levels of service throughout planned annexation areas. Explore regional district service provision models that could lead to greater efficiency. | **129** | AN-1 |
| **Service Availability and Standards** | Consider water, sewer, stormwater, solid waste, police, and schools as necessary public facilities and services. Ensure levels of service sufficient to serve planned development. Establish service standards and planning assumptions for estimating needed public facilities and services based on service capabilities, land use designations, and best management practices. | **130** | PFS-1 |

| | | | |
|---|---|---|---|
| **Service Transition** | Identify strategies for facilitating phased transition of urban services, particularly public safety, transportation, parks, utilities, and land use review. This should include exploration of early application of land use regulations and infrastructure standards to ensure urban level of service in areas developed to urban densities within the VUGA. | **131** | AN-1, PFS-1 |
| **Sewer Service** | Provide safe and sustainable sewer service throughout the City, connect remaining existing development served by septic to the public sewer system, and manage domestic and industrial wastewater to reduce health hazards and environmental impacts. | **132** | PFS-1 |
| **Shared Parking and Redevelopment of Existing Parking** | Encourage shared parking strategies to improve land efficiency and reduce redundant parking supply. Incentivize the redevelopment of large, underutilized surface parking areas into more productive uses that support redevelopment and other community-serving needs. | **133** | LU-4, CE-1 |
| **Solar Access** | Expand residential, commercial and industrial access to solar power to meet energy needs. | **134** | CL-1, CL-3 |
| **State Level Housing Reform** | Advocate for state legislation, regulatory reform, and sustained funding that support condominium development, expand homeownership opportunities, and increase resources for the production and preservation of affordable housing across income levels. | **135** | H-1, H-2 |
| **Stormwater Management** | Improve water quality, protect watersheds and reduce flood risks by promoting groundwater infiltration, reducing runoff, and advancing effective stormwater best management practices. | **136** | CL-1, PFS-1 |
| **Strategic Reuse of Excess Right-of-Way** | Analyze suitability of excess and unneeded ROW for adding tree canopy, native planting, nature spaces, and stormwater management systems. | **137** | CL-1, CL-2, LU-3, CL-4, PR-2 |
| **Streamline the Development Process** | Simplify the development review process where feasible and as needed to reduce permitting timelines and improve housing costs. | **138** | H-1, LU-4 |

| | | | |
|---|---|---|---|
| **Street Connectivity** | Adopt connectivity standards to improve pedestrian and small mobility safety and accessibility. Apply standards to development, capital, and planning projects including maximum block length, unconnected streets, cul-de-sac connections, linkages between land uses, and multiple access points. | **139** | TM-1, TM-2, TM-4, LU-3 |
| **Street Standards** | Adopt updated street standards that facilitate evolution to a safe, comfortable, and accessible multimodal transportation system. | **140** | TM-1, TM-2, TM-4 |
| **Strengthen Neighborhood Business Districts** | Ensure neighborhood business districts are safe, vibrant, and accessible hubs of economic activity through strategic public and private investment, and reflect a sense of community identity. | **141** | EO-4, CE-5 |
| **Subarea Plans** | Develop subarea plans for centers identified in the Growth Concept and areas called out in the Equitable Development Strategy to facilitate the development of integrated residential, commercial, employment and community uses, including in the following areas: Central Mill Plain (Heights to Peace Health), 136th/137th Corridor, Vancouver Mall, St. Johns/St. James couplet, Fourth Plain Corridor, Downtown, Upper Main Street and Walnut Grove, 164th Corridor, and 192nd Corridor. | **142** | LU-1, EO-4 |
| **Support Access to Childcare** | Support the development of new childcare facilities in the City and eliminate regulatory barriers preventing their creation. | **143** | EI-3, EO-1 |
| **Support Active Transportation Investments** | Improve active transportation in areas with inadequate mobility infrastructure to increase the share of trips made by foot, bike and other small mobility options, and transit, including better integrating parks and trails into the active transportation network. | **144** | TM-1, PFS-1 |
| **Support Decentralized Infrastructure Systems** | Support decentralized local energy and water solutions while strengthening community adaptability to environmental, social, and economic changes. | **145** | PFS-1, CE-4, PFS-3 |
| **Support Local Business Transition to the Green Economy** | Support local businesses in adapting to the localized impacts of climate | **146** | EO-3, LU-3 |

| | | | |
|---|---|---|---|
| | change, and reduce their overall carbon impact. | | |
| **Support Locally Made Products and Art** | Support and elevate Vancouver's local makers, artisans, and creative production sectors by promoting the use of locally sourced and recycled materials, strengthening small-scale manufacturing, and advancing a circular economy that contributes to community pride and place-based identity. | **147** | CE-5, EO-3, PR-4 |
| **Support Mental Health Access** | Explore partnerships to expand access to culturally inclusive mental health, behavioral health, and physical health resources. | **148** | PR-3, EI-1 |
| **Support Neighborhood Organizations** | Support the growth and stability of neighborhood associations as key partners in establishing local pride, connection, and representation within Vancouver's distinct neighborhoods. | **149** | CE-1, CE-5, EI-4 |
| **Support Small Businesses** | Foster inclusive economic growth through education and resources that support small business owners, entrepreneurs and members of historically excluded and underserved communities. | **150** | EO-4, EO-1, EI-1 |
| **Support the Use of Renewable Energy** | Encourage new renewable energy infrastructure and promote development of storage systems to ensure a stable, resilient, and sustainable energy grid. | **151** | CL-3, PFS-1 |
| **Sustainable Parks Funding** | Identify and implement new funding strategies to support robust parks and natural area investments, ongoing maintenance and operation costs, and provide equitable access and level of service to all community members. | **152** | PR-2 |
| **Timing of Annexation** | Coordinate with Clark County to establish annexation sequencing, agreements and timelines that facilitate annexation of the full Vancouver Urban Growth Area within the 20-year time horizon anticipated in the Growth Management Act. | **153** | AN-1 |
| **Tracking Progress and Reporting Back** | Build transparency and accountability with the community through regular tracking of plan implementation and consistently reporting out on progress in an accessible manner. | **154** | EI-4 |

| | | | |
|---|---|---|---|
| **Transitions Between Zones** | Develop regulations that provide transitions between zoning districts to ensure compatibility of adjacent land uses. | **155** | LU-4 |
| **Trauma-informed Services** | Ensure City programs and policies are designed and delivered using trauma-informed care principles. | **156** | CE-2, CE-3, EI-2 |
| **Underdeveloped Lots and Brownfields** | Prioritize, facilitate, and incentivize development on infill and underutilized lots, and clean up of brownfield sites. | **157** | LU- 3, LU-4, LU-1, PFS-1, CL-4 |
| **Urban Core** | Focus the City's highest intensity of future growth in the Urban Core to reinforce it as the region's primary destination for services, amenities, nightlife and employment. | **158** | LU-1 |
| **Vancouver as an Innovation Hub** | Position Vancouver as a center for innovation, technology, and entrepreneurship through public investment and attracting entrepreneurial talent. | **159** | CE-4, EO-2 |
| **Values Driven Budgeting** | Ensure biennial budget decisions are guided by adopted policy priorities, with programs, projects, and services evaluated and prioritized based on their contribution to achieving those priorities. Require budget narratives and reporting to clearly demonstrate alignment with the City's mission, values, and community benefit, and to transparently document and publish outcomes and impacts. | **160** | EI-4, PFS-2 |
| **Water Service** | Provide safe, clean, quality drinking water to every home and business, ensure water pressure and volumes necessary to support fire suppression systems. Encourage on-site water reuse systems where practicable. | **161** | PFS-1, PFS-2, PFS-3 |
| **Welcoming and Supportive Community** | Build a community that welcomes and invites all community members to participate in civic life through inclusive practices, programs and public spaces. | **162** | CE-2, EI-1 |
| **Workforce Development and Career Pathways** | Expand access to career pathways, workforce training, and entrepreneurship opportunities that lead to living-wage jobs and wealth creation, with a focus on underrepresented communities. | **163** | EO-1, EI-1, CE-4 |

**Subject:** OUR VANCOUVER Comprehensive Plan Update Final Environmental Impact Statement

Dear Community Members,

The City of Vancouver invites you to read the OUR VANCOUVER Comprehensive Plan Update State Environmental Policy Act (SEPA) Final Environmental Impact Statement (EIS). This document is a key part of the City's ongoing process to update its Comprehensive Plan and development regulations, which will establish a vision that guides our growth and development for the next 20 years, from 2026 to 2045.

The City is required by the Washington State Growth Management Act (Chapter 36.70A RCW) to adopt an updated comprehensive plan and changes to its land use development and zoning code. The proposed update will plan for growth of at least 38,129 new housing units and 43,198 new jobs by the year 2045. The proposal would update the City's current land use map, as well as rename and simplify its land use designations and associated zoning code.

This nonproject Final EIS is an informational document required by SEPA before the City can move forward with updates to the Comprehensive Plan. The Final EIS provides community members; local, state, and federal government agencies; and tribal governments with qualitative and quantitative information to consider in the decision-making process for the Comprehensive Plan Update.

This Final EIS presents the potential impacts and benefits of four future land use alternatives for the City as a whole:

- **No Action Alternative**, required by SEPA, assumes that the Comprehensive Plan Update and associated changes to the zoning code and development regulations would not be adopted. Future growth and development would occur in line with the current adopted City Comprehensive Plan and development regulations, as well as recent amendments to state law allowing new housing types in single-family zones, which will automatically take effect and override local regulations even if Vancouver does not act. The No Action Alternative would not meet the City's minimum 2045 targets for new housing units and jobs, nor would it comply with recent changes in state law affecting local land use planning.
- **Alternative 1** assumes the proposed Comprehensive Plan Update and associated changes to the zoning code and development regulations would be implemented, including new zoning districts that allow more dense housing, employment, and activity centers in more

areas across the City. Alternative 1 would allow for more dense, mixed-use development patterns than the No Action Alternative but in fewer areas than Alternative 2. Alternative 1 would exceed the City's minimum 2045 targets for new housing units and jobs.

- **Alternative 2**, like Alternative 1, assumes the proposed Comprehensive Plan Update and associated changes to the zoning code and development regulations would be implemented. Alternative 2 would allow for the highest density, intensity, and mix of uses of all the alternatives in a greater number of areas of the City. Alternative 2 would exceed the City's minimum 2045 targets for new housing units and jobs and would provide the highest capacity among the alternatives.
- **Preferred Alternative**, which combines elements of Alternatives 1 and 2, and assumes the proposed Comprehensive Plan Update and associated changes to the zoning code and development regulations would be implemented. The Preferred Alternative would allow for more dense, mixed-use development patterns compared to the No Action Alternative and would allow for similar development patterns to Alternatives 1 and 2. The Preferred Alternative would exceed the City's minimum 2045 targets for new housing units. The capacity for new housing units and jobs would be higher than the No Action Alternative and slightly lower than Alternatives 1 and 2.

The City published the Draft EIS on July 8, 2025, and invited comments through September 8, 2025. Since then, the City has used this input to develop a Preferred Alternative, analyzed its potential environmental impacts and benefits on the built and natural environment, and developed potential mitigation measures to address impacts, as presented in this Final EIS. The Final EIS also includes responses to comments on the Draft EIS. For more information about the OUR VANCOUVER Comprehensive Plan Update, please visit our website at: https://www.beheardvancouver.org/plan2045

If you have any questions, please contact Meredith Herbst, associate planner, at OurVancouver2045@cityofvancouver.us.

Thank you for your continued interest in Vancouver's future, and we look forward to continuing to work with you as the Comprehensive Plan Update proposal moves forward.

Sincerely,

Chad Eiken, AICP
Director, Community Development, City of Vancouver
SEPA Responsible Official

# Fact Sheet

## Proposal Title

OUR VANCOUVER Comprehensive Plan Update

## Proposal Description

The City of Vancouver (City) is proposing to update its Comprehensive Plan, which will establish a vision that guides the entire City's growth and development for the next 20 years, from 2026 to 2045. The City is required by the Washington State Growth Management Act to adopt an updated comprehensive plan and changes to its zoning code. The proposed update will plan for growth of at least 38,129 new housing units and 43,198 new jobs by the year 2045. The proposal would update the current land use map, as well as rename and simplify existing land use designations and the associated zoning code. This "nonproject" Final EIS reviews the potential impacts of four future alternatives at a high level for the City as a whole, rather than a detailed analysis of an individual site:

- **No Action Alternative,** required by SEPA, assumes that the Comprehensive Plan Update and associated changes to the zoning code and development regulations would not be adopted. Future growth and development would occur in line with the current adopted City Comprehensive Plan and development regulations, as well as recent amendments to state law allowing new housing types in single-family zones, which will automatically take effect and override local regulations even if Vancouver does not act. The No Action Alternative would not meet the City's minimum 2045 targets for new housing units and jobs.
- **Alternative 1** assumes the proposed Comprehensive Plan Update and associated changes to the zoning code and development regulations would be implemented, including new zoning districts that allow more dense housing, employment, and activity centers in more areas across the City. Alternative 1 would allow for more dense, mixed-use development patterns than the No Action Alternative but in fewer areas than Alternative 2. Alternative 1 would exceed the City's minimum 2045 targets for new housing units and jobs.
- **Alternative 2,** like Alternative 1, assumes the proposed Comprehensive Plan Update and associated changes to the zoning code and development regulations would be implemented. Alternative 2 would allow for the highest density, intensity, and mix of uses of all the alternatives in a greater number of areas of the City. Alternative 2 would exceed the City's minimum 2045 targets for new housing units and jobs and would provide the highest capacity among the alternatives.

- **Preferred Alternative,** which combines elements of Alternatives 1 and 2, and assumes the proposed Comprehensive Plan Update and associated changes to the zoning code and development regulations would be implemented. The Preferred Alternative would allow for more dense, mixed-use development patterns compared to the No Action Alternative and would allow for similar development patterns to Alternatives 1 and 2. The Preferred Alternative would exceed the City's minimum 2045 targets for new housing units. The capacity for new housing units and jobs would be higher than the No Action Alternative and slightly lower than Alternatives 1 and 2.

## Proposal Location

Vancouver city limits

## Proposal Proponent and Lead Agency

City of Vancouver Community Development Department
City Hall
PO Box 1995
Vancouver, WA 98668

## Proposed Date of Implementation

June 2026

## SEPA Responsible Official

Chad Eiken, AICP
Director, Community Development, City of Vancouver
City Hall
PO Box 1995
Vancouver, WA 98668
chad.eiken@cityofvancouver.us
(360) 487-7882

## Contact Person

Meredith Herbst
Associate Planner, Community Development, City of Vancouver
City Hall
PO Box 1995
Vancouver, WA 98668
OurVancouver2045@cityofvancouver.us

(360) 487-7937

## Permits, Licenses, and Approvals Likely Required for Proposal

Vancouver City Council approval, based on recommendations from the Vancouver Planning Commission, is required to implement the proposal. In addition, all Comprehensive Plan amendments and implementing regulations require a 60-day review by the Washington Department of Commerce and other state agencies. The Regional Transportation Council is also required to certify the Transportation Element of the Comprehensive Plan.

After adoption of the Comprehensive Plan Update, individual development proposals would be required to obtain applicable land use, construction, building, and right-of-way permits and conduct additional SEPA review as required by City and state law.

## Authors and Principal Contributors to the EIS

With direction from the City of Vancouver, the following consultant team prepared and/or contributed analysis to this Final EIS:

- WSP USA (prime consultant): Overall document management; Land and Shoreline Use; Housing; Aesthetics; Historic and Cultural Preservation; Transportation; Noise; Public Services and Utilities; Earth; Air Quality, Greenhouse Gases and Climate; Water; Plants and Animals
- Alta Planning + Design, Inc.: Transportation
- BERK Consulting: Land and Shoreline Use; Housing; Air Quality, Greenhouse Gases and Climate; Plants and Animals
- Design Workshop: Figures and text adapted from the Community Atlas
- ECONorthwest: Land and Shoreline Use, Housing

## Date of Issue of Draft EIS

July 8, 2025

## Draft EIS Comment Period

The City requested comments during a 60-day period between July 8 and September 8, 2025, at 11:59 p.m. Comment opportunities were provided via online comment form, email, postal mail and voicemail.

The City hosted two in-person public meetings to allow community members to learn about the Draft EIS, provide comments, and ask questions to City staff:

- July 30, 2025, at Firstenburg Community Center
- August 9, 2025, at City Hall

The City also hosted two virtual public meetings via Zoom on July 22 and August 4, 2025.

## Date of Issue of Final EIS

April 16, 2026

## Date of Final Action

June 2026

## Type and Timing of Additional Environmental Review

This EIS covers the high-level potential impacts of the Comprehensive Plan Update, which is considered a nonproject action. Additional environmental review under SEPA may be required for specific projects resulting from the Comprehensive Plan Update.

## Location of Related Environmental Documents and Data

Please visit the Be Heard Vancouver website to view related documents and data for the OUR VANCOUVER Comprehensive Plan 2045:
https://www.beheardvancouver.org/plan2045

## Availability/Purchase of Final EIS

The Final EIS, proposed Comprehensive Plan Update and updated code are available for download on the Be Heard Vancouver website:
https://engage.zencity.io/beheardvancouver/en-US/projects/project-documents

Community members may review printed copies of the Final EIS at the front desk of City Hall, 415 W. 6th Street, Vancouver, WA 98660 by appointment. Please contact Community Development staff at OurVancouver2045@cityofvancouver.us or (360) 487-7937 to request an appointment and/or a printed copy of the document for the cost of production.

# Chapter 1: Summary

Note to readers: This Final Environmental Impact Statement document retains and builds upon the information presented in the Draft Environmental Impact Statement. New content in this chapter is generally denoted with underlined text, while changes to information are denoted with strikethrough text. Updates focus on adding the new analysis of the Preferred Alternative, as well as minor corrections and clarifications to the analysis presented in the Draft EIS. Some changes are denoted with footnotes and table notes when further explanation was warranted.

This chapter provides an overview of the ~~Draft~~ Environmental Impact Statement (EIS) and its major findings, including a description of the proposal; its objectives, purpose and need, and location; the environmental review and public involvement process; a summary of the alternatives evaluated in this EIS; potential impacts and mitigation measures for each alternative; significant areas of controversy and issues to be resolved; and benefits and disadvantages of delaying implementation of the proposal.

## Description of Proposal, Purpose and Need, and Objectives

The City of Vancouver, Washington (City) is proposing to update its Comprehensive Plan, which will establish a vision that guides its growth and development for the next 20 years, from 2026~~5~~ to 2045. Since the last plan update in 2011, Vancouver has experienced substantial growth, as well as demographic, economic and social changes.

Pursuant to Revised Code of Washington (RCW) 36.70A.070, the Washington State Growth Management Act (GMA) requires that all fully planning jurisdictions, including Vancouver, update their adopted comprehensive plans and development regulations every 10 years. The GMA specifies mandatory elements that Washington cities are legally required to integrate into their comprehensive plans. These elements include land use, housing, capital facilities, utilities, transportation, economic development, parks and recreation, and climate change and resiliency. Through its visioning process, the City has elected to include additional elements that are not mandated by state law, including equity and inclusion, community experience, and annexation.

The purpose of the Comprehensive Plan Update is to set the vision and direction for Vancouver for the next 20 years, including a focus on the following key questions:

- What types of services, facilities, and infrastructure will be needed?
- How can we help make Vancouver a healthier community for all people?
- How will infrastructure and land use be resilient and responsive to natural disasters, threats and unexpected circumstances?
- How will we provide housing that is affordable and accessible to everyone?
- How will the plan's overall vision and investments inform equitable access to opportunity, employment, and the benefits from those investments?

The City has named the forthcoming comprehensive plan OUR VANCOUVER to reflect the process of co-creating the plan with the community. The Comprehensive Plan Update is needed to meet the requirements of the GMA, with ~~and must be adopted by~~ adoption scheduled for December 31, 2025, by statute. As part of this proposal, the City is currently:

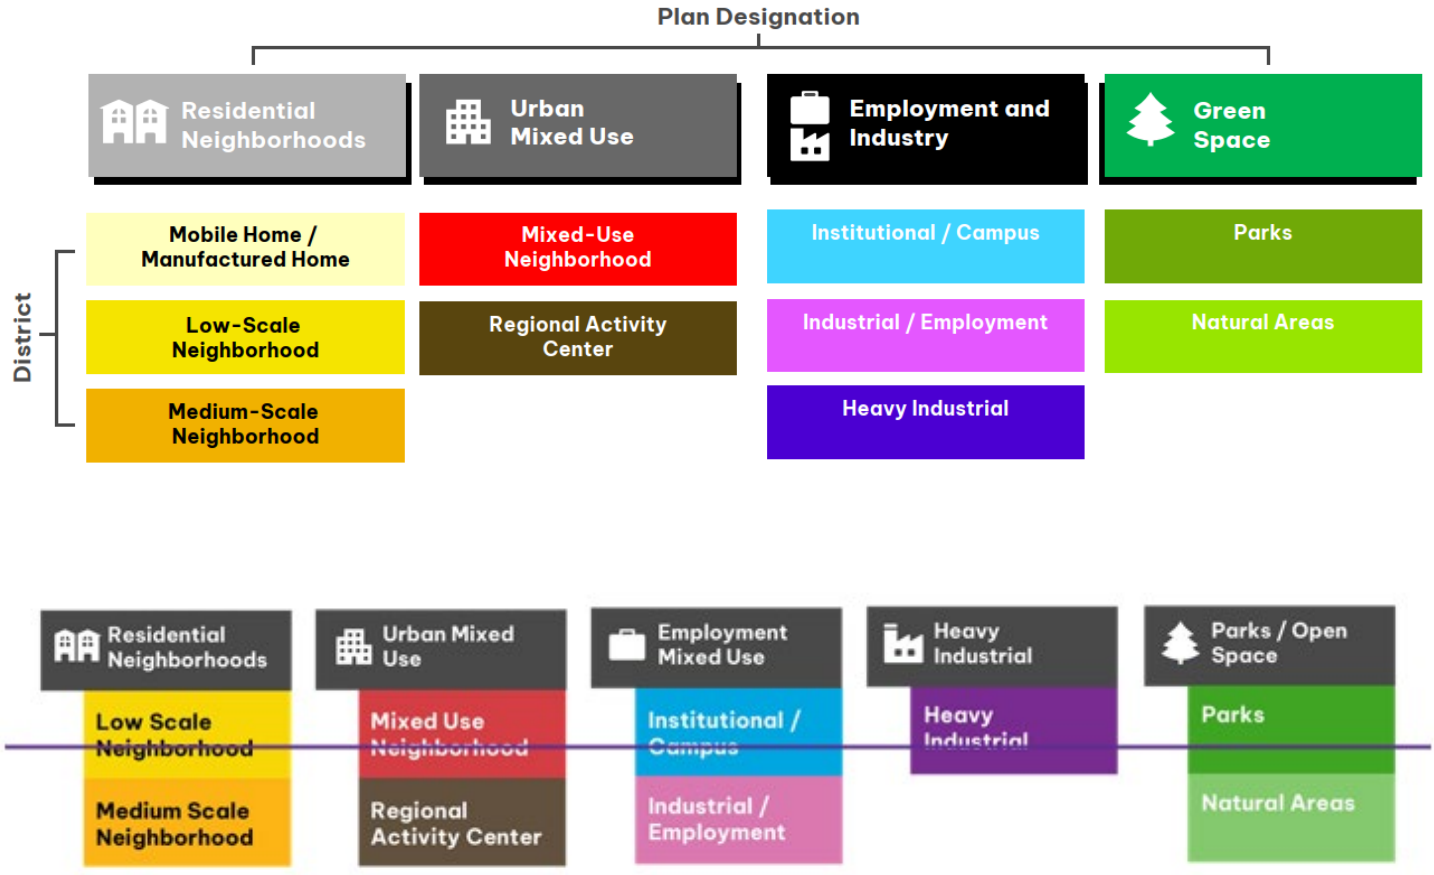
- Conducting a full rewrite of the existing Comprehensive Plan, including changes to all existing elements and the land use map.
- Developing a detailed strategy for implementing the goals, policies, and strategies outlined with the revised plan.
- Modifying the existing zoning code (Title 20 of the Vancouver Municipal Code [VMC]), which regulates the scale, size and location of buildings and uses, to reflect the goals and policies identified in the revised plan.
- Completing the EIS process outlined within the State Environmental Policy Act (SEPA).
- Establishing a process to develop and create the plan with members of the community and conduct community engagement activities in a method consistent with ~~state law~~ the GMA.

**Plan Vision Statement**

**"Vancouver is an equitable and prosperous community, which ensures that all residents, businesses and organizations benefit from the growth and advancement we make together. Vancouver will be recognized for our quality of life, as evidenced by affordable housing in vibrant, safe and walkable neighborhoods, access to jobs and economic opportunity for all, and leading-edge efforts to address climate change."**

The Comprehensive Plan Update will plan for growth of at least 38,129 new housing units and 43,198 new jobs by the year 2045. These minimum growth targets are based on population projections

from the Washington State Office of Financial Management (OFM), Clark County, recent trends, state law, and City policy to plan for long-term housing and employment needs.



The proposal would also update the current land use map that guides growth and development under the Comprehensive Plan. The Comprehensive Plan land use designations and associated zoning code would be renamed and simplified to focus on the following zoning districts and as shown on Figure 1:

- **Low-Scale Neighborhood:** Focuses on low-scale housing choices, typically with up to six units per parcel and building heights of up to ~~three stories (maximum of~~ 45 feet tall~~)~~. Any lot would be allowed to have at least four units. Housing types include single-family homes, accessory dwellings~~ buildings~~, and a range of housing types referred to as "middle housing," including duplexes (two-unit structures), ~~townhouses~~ townhomes (attached single-family homes), quadplexes (four-unit structures), and sixplexes. Small-scale commercial activities like cafés, salons, professional services, and restaurants mostly serving the surrounding neighborhood would also be allowed.
- **Medium-Scale Neighborhood:** Allows ~~Provides~~ a broad range of housing types and ~~allows~~ building heights ~~of 2 to 5 stories (maximum of~~ up to 75 feet tall~~)~~. Housing types include all of the types allowed in the Low-Scale Neighborhood plus additional multifamily building types, and~~,~~ mixed-use office buildings. ~~including courtyard buildings and multifamily mixed-use buildings.~~ Civic/institutional buildings and commercial activities like cafés, restaurants, small offices, and other retail goods would also be allowed.
- **Manufactured Home:** Applies to existing manufactured home park developments to recognize existing uses, facilitate long-term affordability and discourage displacement of existing residents; no other uses are generally allowed unless ongoing use as manufactured home parks is demonstrated to be unfeasible.
- **Mixed-Use Neighborhood:** Provides for a broad range of housing, commercial, and civic/institutional use types, with building heights ~~of 3 to 8 stories (maximum of~~ up to 110 feet tall~~)~~. Housing types include multifamily and mixed-use buildings at a variety of scales. Commercial or retail uses may include professional offices, medical providers, cafés, restaurants, small grocery stores, markets, and other retail goods and entertainment uses.
- **Regional Activity Center:** Includes lands that offer opportunities for economic, entertainment, civic, and housing needs, with ~~minimum building heights of three stories and~~ no minimum or maximum building heights. Size and makeup of this zoning district would vary based on location but would typically consist of compact, mixed-use development that maximizes residential, commercial, and open space opportunities.

Typical housing options would be mixed-use residential, multifamily ~~apartment~~, and mid-rise ~~and podium~~ buildings.

- **Institutional/Campus:** Includes lands that support academic, employment, civic, or medical buildings, with no minimum or maximum building heights ~~up to 12 stories (maximum of 150 feet tall)~~. Allowable housing types include townhouses, multifamily, and mid-rise buildings. Buildings for athletic facilities, event spaces, equipment or other accessory uses needed to support an educational, medical, or large institution and employment uses would also be allowed.
- **Industrial/Employment:** Includes lands with large-scale, single-tenant industrial, warehouse and flex space building and smaller, multi-tenant industrial buildings up to ~~12 stories (maximum of~~ 150 feet tall~~)~~. ~~The buildings would be grouped to support and serve one another and to provide opportunities for employment clusters.~~ New housing would not be allowed in this zoning district.
- **Heavy Industrial:** Includes lands that are currently zoned for heavy industrial uses, such as manufacturing and production, within the ~~c~~City and would remain unchanged. New housing would not be allowed in this zoning district.
- **Parks:** Includes lands currently zoned as ~~public community and neighborhood~~ parks and open space. Civic and institutional buildings associated with the primary parks use would be allowed, with a height limit of 45 feet. Housing would not be allowed in this zoning district.
- **Natural Areas:** Includes lands currently zoned for greenways and natural areas, which are generally undeveloped lands managed for both natural and ecological value and light-impact recreational use. Housing would not be allowed in this zoning district.

Figure 1. Proposed Comprehensive Plan Designations and Associated Zoning Districts

The proposed zoning code update would allow or require a mixing of uses, depending on the ~~zoning district~~ area; emphasize density minimums and, in some areas, maximum building height~~s and parking maximums~~; and focus on building placement as it relates to the street ~~and building types~~. A major goal of the zoning code update is to make requirements easier and simpler to understand for residents, developers, homebuilders, and staff, and in turn to reduce costs and barriers to housing production.

## Proposal Location and Study Area

The primary study area is all of the Vancouver city limits, as shown in Figure 2. The study area includes areas across the ~~c~~City that have been identified as planned growth centers or corridors.

## State Environmental Review Process

This nonproject ~~Draft~~ EIS is an informational document required by SEPA, which is regulated under Washington Administrative Code (WAC) 197-11, before the City can move forward with adopting updates to the Comprehensive Plan. A nonproject EIS covers governmental actions

involving decisions on policies, plans or programs, including the adoption or amendment of comprehensive plans, ordinances, rules and regulations. Environmental analysis at the nonproject stage is typically less detailed and is intended to form the basis for future environmental reviews and permitting processes for specific projects.

The ~~Draft~~ EIS provides the public; city, state, and federal government agencies; and tribal governments with qualitative and quantitative information to consider in the decision-making process. It also allows the public, government agencies, interested parties, and tribes to comment on the potential alternatives.

This ~~Draft~~ EIS describes the following:

- Methodology, legal framework and data sources used for the analysis
- Existing conditions (called "affected environment" in this document) of the study area
- A No Action Alternative and ~~two~~ three action alternatives, including a Preferred Alternative
- Potential significant, unavoidable, and adverse impacts
- Potential beneficial outcomes of the alternatives
- Mitigation measures, which are changes or conditions designed to avoid, minimize, or compensate for potential adverse impacts

## Community and Partner Engagement

Since early 2023, the City has been engaging in extensive community outreach and engagement to help planners address key questions about housing; land use, development and infrastructure; economic development; equity and opportunity; and climate and environment.

The first year of the process focused on raising awareness about the Comprehensive Plan update process and gathering input from the community to identify a collective vision for the future of Vancouver, as well as vision statements for each element of the Comprehensive Plan. The City met community members where they already were and sought to learn what makes them feel connected to OUR VANCOUVER. The City also invited a group of community partners to co-create the plan with the City. The City has met regularly with community partners to discuss the needs of the communities they serve and identify with, lending a voice from folks outside the typical planning process. In-language liaisons gathered community input to make sure community members could express their needs without language barriers. The City also distributed a community survey to learn more about community members' priorities and vision for future growth.

Throughout 2024, the City reviewed how its land is currently used and how it can be used more efficiently to meet the needs of a growing population. The City held community mapping workshops in the spring to help develop a series of land use possibilities, which were later refined into the two action alternatives analyzed in ~~this~~ the Draft EIS.

Throughout 2025, community engagement focused on the Draft EIS and associated comment period, including preparing the community and elected officials prior to the release of the document, and providing information on how to access the Draft EIS and how to provide comments.

The final phase of engagement in early 2026 focused on reporting back to the community and project participants what staff heard from them previously and demonstrating how input was reflected in the draft 2045 Comprehensive Plan and updated development code. The drafts of the plan and code were shared with the public in February and March 2026 to gather feedback for refining the plan and code details before initiating adoption processes with Planning Commission and City Council in late spring 2026.

## EIS Scoping Process

To start the environmental review process, the City issued a SEPA Determination of Significance (DS), which is a public notice stating that this proposal is likely to have a significant adverse impact on the environment. A DS means the proposal to update the Comprehensive Plan has a reasonable likelihood of negative effects on environmental quality that could be considered more than moderate. For proposals that fall into this category, an EIS is required under state law [RCW 43.21C.030 (2)(c)].

The City published this notice in the SEPA Register and *The Columbian* on July 12, 2024, and on the Be Heard Vancouver website for the Comprehensive Plan Update. The City also provided the notice via an email distribution list consisting of federal, state, and local agencies; tribes; community groups; and other interested parties.

The scoping notice initially requested comments during an expanded comment period of 30 days, which is greater than the SEPA-required 21 days. The comment period was originally scheduled to end on August 12, 2024. In order to provide additional opportunities for review and comment by local agencies and communities, the City extended the scoping comment period to August 23, 2024, and again to September 6, 2024. The City issued a revised scoping notice on October 22, 2024, to clarify proposed future growth levels, the number of alternatives that ~~will~~ would be analyzed in the Draft EIS, and the role of desired community outcomes and goals in the Comprehensive Plan Update and SEPA process. The deadline for

comments was November 21, 2024. The scoping notices requested comments via postal mail or email.

The notices identified the City's intent to evaluate the No Action Alternative and two to three action alternatives that outline different land use and growth scenarios in specific areas of the City. The notices also identified the following areas for discussion in the EIS in accordance with WAC 197-11-444:

- Land and shoreline use
- Housing
- Aesthetics (including light and glare)
- Historic and cultural resources
- Transportation
- Noise
- Public services and utilities (including emergency services, water, sewer, schools, parks and recreation)
- Earth (geologic hazard areas, soils, topography)
- Air quality, greenhouse gases, and climate
- Water resources
- Plants and animals

The City received eight comments during the two scoping periods covering a wide variety of topics. Appendix A, Scoping Information, provides a more detailed summary of the comments received. None of the comments included objections to the environmental elements identified in the scoping notice. Most of the comments provided detailed input or questions about specific topics of interest, including EIS elements to be studied, analysis methods, and potential mitigation measures. Based on these comments, the City determined that the topics identified in the scoping notice were appropriate and proceeded with the Draft EIS analysis.

## Public Comment on Draft EIS

~~The public comment period for this~~The City published the Draft EIS on July 8, 2025, and requested public comments during a 60-day period ~~from July 8 to~~ through September 8, 2025. Comments ~~may be provided~~ were requested via the following methods:

- Online Comment Form (preferred): https://www.surveyhero.com/c/VancouverDEIS
- Email: OurVancouver2045@cityofvancouver.us

- Postal Mail:
  Meredith Herbst
  City Hall
  PO Box 1995
  Vancouver, WA 98668
- Voicemail: 360-487-7929

The City ~~is also~~ hosted~~ing~~ two public meetings to allow community members to learn about the Draft EIS, provide comments, and ask questions to City staff:

- **Wednesday, July 30, 2025, 4 p.m. to 7 p.m.**
  East Vancouver
  Firstenburg Community Center, Community Room
  700 NE 136th Avenue
  Vancouver, WA 98684
- **Saturday, August 9, 2025, 11 a.m. to 2 p.m.**
  West Vancouver
  City Hall, Aspen Room
  415 W. 6th Street
  Vancouver, WA 98660

The City also hosted two virtual public meetings via Zoom on July 22 and August 4, 2025. The virtual public meetings included approximately 47 attendees and covered topics including state legislation, subarea planning, school capacity, integrating public health, development in the Heights, parking minimums, displacement risk, affordable housing, and senior housing. Please visit the Be Heard Vancouver website for more information about these previous outreach activities. ~~the public meetings and other informal opportunities to review and discuss the Draft EIS with City staff.~~

## Final EIS and Next Steps

After the public comment period concluded~~s~~, the City ~~will~~ reviewed the comments received and prepared ~~a~~this Final EIS that considers and responds to comments on the Draft EIS.

Chapter 6 summarizes comments received during the Draft EIS public comment period and provides responses. The City considered these comments when developing the Preferred Alternative, which underwent review by the Planning Commission and City Council during a series of public workshops and meetings held in fall 2025. The City Council endorsed the

proposed Preferred Alternative zoning map on December 15, 2025. The draft Comprehensive Plan document and draft zoning code were published in February 2026 for public review.

This ~~will~~ describes the potential impacts and benefits of the ~~a~~ Preferred Alternative, which ~~that~~ is within the range of the alternatives studied in the Draft EIS. After issuance of this ~~e~~ Final EIS, the City will submit the draft Comprehensive Plan Update and specific edits to the land use map that reflect the Preferred Alternative for review by the Planning Commission and City Council. The Planning Commission and City Council will hold additional public hearings and work sessions to review and receive further public comment on the details and implementation of the Comprehensive Plan Update. Community members will have additional opportunities to provide comments on the proposed Comprehensive Plan Update and land use and zoning code amendments as part of this process.

## Summary of Description of Alternatives

This ~~Draft~~ Final EIS evaluates the potential impacts and benefits of ~~three~~ four alternatives:

- The **No Action Alternative,** required by SEPA, is a future scenario that assumes future growth and development would occur in line with the current adopted City Comprehensive Plan and development regulations, and state statutory requirements that impose a state middle housing model zoning ordinance on local jurisdictions which do not take action to allow middle housing in single-family zones. The new zoning districts proposed for the Comprehensive Plan Update and zoning code would not be adopted. The No Action Alternative is not projected to meet the City's minimum 2045 targets for housing units and jobs because it would allow less dense development than the action alternatives.
- **Alternative 1** is a future scenario that assumes the proposed Comprehensive Plan Update and associated changes to the zoning code and development regulations would be implemented. Although many areas of the ~~c~~City would have similar land use designations under all alternatives, Alternative 1 would generally accommodate more density and greater mixes of land uses than the No Action Alternative but less density and mixes of uses than Alternative 2. The amount of land designated for Regional Activity Centers, Medium-Scale Neighborhoods, and Mixed-Use Neighborhoods would be lower than under Alternative 2. The amount of land designated as Low-Scale Neighborhoods and Industrial/Employment would be higher under Alternative 1 than Alternative 2. Alternative 1 would exceed the City's minimum 2045 targets for housing units and jobs.
- **Alternative 2** is a future scenario that assumes the proposed Comprehensive Plan Update and associated changes to the zoning code and development regulations would be

implemented. Although many areas of the ~~e~~City would have similar land use designations under all alternatives, Alternative 2 would provide the most options for higher density and greater mixing of~~ed~~ uses in more areas of the city. The amount of land designated as Regional Activity Centers, Medium-Scale Neighborhood, and Mixed-Use Neighborhoods would be the highest of the alternatives. The amount of land designated for Low-Scale Neighborhoods would be the lowest of the alternatives. Alternative 2 would exceed the City's minimum 2045 housing and jobs targets and would have the highest capacity of all the alternatives.

- Preferred Alternative is a future scenario that, like Alternatives 1 and 2, assumes the proposed Comprehensive Plan Update and associated changes to the zoning code and development regulations would be implemented. Although many areas of the ~~e~~City y would have similar land use designations under all alternatives, the Preferred Alternative would generally accommodate more density and greater mixes of land uses than the No Action Alternative and a similar mix of land uses compared to Alternatives 1 and 2. The amount of land designated for Industrial/Employment, Low Scale Neighborhood, Medium Scale Neighborhood and Mixed Use would be similar to Alternative 2. The amount of land designated for Regional Activity Center would be similar to Alternative 1. The amount of land designated for Institutional/Campus would be the highest of the alternatives. A new residential zoning district, Manufactured Home, has been added since evaluating the No Action Alternative and Alternatives 1 and 2 to preserve long-term affordability in existing manufactured home parks. The Preferred Alternative would exceed the City's minimum 2045 housing and jobs targets. The capacity for new housing units and jobs would be higher than the No Action Alternative and slightly lower than Alternatives 1 and 2.

Chapter 2 provides a more detailed description of each alternative, including figures showing their major elements and a comparison of their features.

## Summary of Impacts, Benefits and Mitigation Measures

Table 1 summarizes the impacts and benefits of each alternative studied in the EIS, as well as the proposed measures to avoid, minimize, or mitigate adverse impacts.

*Table 1. Summary of Potential Impacts and Benefits by Alternative*

| Element of the Environment | No Action | Alternative 1 | Alternative 2 | Preferred Alternative |
|---|---|---|---|---|
| Land and Shoreline Use | • Not consistent with proposed Comprehensive Plan Update and associated policies<br>• Does not meet housing and jobs growth targets<br>• Some potential for land use compatibility issues<br>• Lowest capacity for new jobs; similar average wages for new jobs among all alternatives<br>• Lowest potential for commercial displacement, fewer new spaces for businesses | • Consistent with proposed Comprehensive Plan Update and associated policies<br>• Exceeds housing and jobs growth target<br>• Some potential for land use compatibility issues<br>• Substantially higher capacity for new jobs than No Action; similar average wages for new jobs among all alternatives<br>• Moderate potential for commercial displacement, more new spaces for businesses | • Consistent with proposed Comprehensive Plan Update and associated policies<br>• Exceeds housing and jobs growth target by higher amount than Alternative 1<br>• Some potential for land use compatibility issues<br>• Highest capacity for new jobs; similar average wages for new jobs among all alternatives<br>• Similar potential for commercial displacement to Alternative 1 | • Consistent with proposed Comprehensive Plan Update and associated policies<br>• Exceeds housing and jobs growth target by lower amounts than Alternatives 1 and 2<br>• Some potential for land use compatibility issues<br>• Substantially higher capacity for new jobs than No Action; similar average wages for new jobs among all alternatives<br>• Similar potential for commercial displacement to Alternative 1 and 2 |
| Housing | • Lowest capacity for new housing units, does not meet growth targets<br>• Lowest potential for diversity of housing types and affordable housing supply<br>• Highest potential for new housing units in displacement risk areas<br>• Lowest capacity for new housing units in connected and accessible neighborhoods<br>• Least compatible with existing housing plans and policies | • Higher capacity for new housing units than No Action, exceeds growth targets<br>• Higher potential for diversity of housing types and affordable housing supply than No Action<br>• Lowest potential for new housing units in high displacement risk areas<br>• Higher capacity for new housing units in connected and accessible neighborhoods<br>• Highly compatible with existing housing plans and policies | • Highest capacity for new housing units, exceeds growth targets<br>• Highest potential for diversity of housing types and affordable housing supply<br>• Moderate potential for new housing units in high displacement risk areas<br>• Highest capacity for new housing units in connected and accessible neighborhoods<br>• Similarly compatible with existing housing plans and policies compared to Alternative 1 | • Similar to Alternative 1 in capacity for new housing units, exceeds growth targets<br>• Similar to Alternative 1 in potential for diversity of housing types and affordable housing supply<br>• Higher potential for new housing units in high displacement risk areas than Alternatives 1 and 2<br>• Similar to Alternative 2 in capacity for new housing units in connected and accessible neighborhoods<br>• Similarly compatible with existing housing plans and policies compared to Alternatives 1 and 2 |
| Aesthetics | • Some changes to visual setting through new development but overall modest impacts to aesthetics<br>• Lowest potential for aesthetic improvements associated with | • Moderate potential for larger-scale buildings and associated light, glare, shadow and visual impacts compared to No Action<br>• Moderate potential for aesthetic improvements associated with | • Moderately higher potential for larger-scale buildings and associated light, glare, shadow and visual impacts than Alternative 1 | • Moderately higher potential for larger-scale buildings and associated light, glare, shadow and visual impacts than Alternative 1 |

| Element of the Environment | No Action | Alternative 1 | Alternative 2 | Preferred Alternative |
|---|---|---|---|---|
| | redevelopment of parking lots and vacant lots and structures | redevelopment of parking lots and vacant lots and structures | • Highest potential for aesthetic improvements associated with redevelopment of parking lots and vacant lots and structures | • Moderate potential for aesthetic improvements associated with redevelopment of parking lots and vacant lots and structures |
| **Historic and Cultural Preservation** | • Lowest potential for disturbance of individual sites and associated impacts to cultural, archaeological and historic resources | • Moderate potential for disturbance of individual sites and associated impacts to cultural, archaeological and historic resources | • Similar potential for disturbance of individual sites and associated impacts to cultural, archaeological and historic resources compared to Alternative 1 | • Similar potential for disturbance of individual sites and associated impacts to cultural, archaeological and historic resources compared to Alternatives 1 and 2 |
| **Transportation** | • Lowest total daily citywide vehicle miles traveled (VMT); highest VMT per household<br>• Similar mode split (vehicle/transit/walk/bike) and average trip length for all alternatives<br>• Generally lowest mobility units (person miles per day)<br>• Generally lowest projected new traffic volumes on ~~e~~City safety corridors | • Higher total daily citywide VMT; lower VMT per household than No Action<br>• Similar mode split (vehicle/transit/walk/bike) and average trip length for all alternatives<br>• Generally higher generation of mobility units (person miles per day)<br>• Generally higher projected new traffic volumes on ~~e~~City safety corridors | • Similar total daily citywide VMT to Alternative 1; lowest VMT per household<br>• Similar mode split (vehicle/transit/walk/bike) and average trip length for all alternatives<br>• Generally highest generation of mobility units (person miles per day)<br>• Generally highest projected new traffic volumes on ~~e~~City safety corridors | • Similar total daily citywide VMT and VMT per household to Alternatives 1 and 2<br>• Similar mode split (vehicle/transit/walk/bike) and average trip length for all alternatives<br>• Generally more similar to Alternative 1 in generation of mobility units (person miles per day)<br>• Generally similar or lower traffic volumes on City safety corridors compared to Alternatives 1 and 2. |
