## Significant Areas of Controversy and Issues to be Resolved

The key issues to be resolved by decision makers regarding the OUR VANCOUVER Comprehensive Plan Update proposal include:

- Finalization and adoption of the Comprehensive Plan Update through a public process
- Finalization and adoption of associated land use and zoning code updates
- Development and implementation of policies to address issues regarding:
    - What types of services, facilities, and infrastructure will be needed to support Vancouver's future
    - How to make Vancouver a healthier community for all people
    - How to set up infrastructure and land use to be resilient and responsive to natural disasters, threats and unexpected circumstances
    - How to provide affordable and accessible housing for everyone in a way that is well-integrated with the city's existing built and natural environment
    - How to provide equitable access to opportunity, employment, and the benefits from the plan's investments

## Benefits and Disadvantages of Delaying Implementation

If the City does not implement the Comprehensive Plan Update, growth in Vancouver would continue under the current Comprehensive Plan and zoning designations. In single-family neighborhoods, growth would also be enabled by imposition of the state model middle housing ordinance, which by law is applied when cities make no changes to their zoning code. However, this growth would generally not be consistent with GMA requirements to adopt a new Comprehensive Plan and zoning standards to accommodate new 20-year growth forecasts.

Updating the Comprehensive Plan will bring the City up to date with recent changes to state law to address housing and climate needs, land use changes, and population growth projections. The plan update will inform the City's future decisions about land use, housing, public facilities, parks and open space, economic development, historic preservation, community design, and environmental considerations to meet the needs of a growing population.

# Chapter 2: Alternatives

Note to readers: This Final Environmental Impact Statement document retains and builds upon the information presented in the Draft Environmental Impact Statement. New content in this chapter is generally denoted with underlined text, while changes to information are denoted with strikethrough text. Updates focus on adding the new analysis of the Preferred Alternative, as well as minor corrections and clarifications to the analysis presented in the Draft EIS. Some changes are denoted with footnotes and table notes when further explanation was warranted.

This chapter provides a more detailed description of the proposal location, study area, and ~~three~~ four alternatives studied in this ~~Draft~~ Final EIS, including figures showing their major features.

## Proposal Location and Study Area

The proposal location and study area consist of lands within Vancouver city limits, as shown in Figure 3.

The study area contains areas across the ~~c~~City that have been identified as existing or planned growth corridors and existing or planned centers of activity.

Many of these areas are linear corridors along arterial streets or transit routes, such as Main Street, Mill Plain Boulevard, Fourth Plain Boulevard, West 39th Street, West 33rd Street, 112th Corridor, Northeast 136th Avenue, Southeast 164th Avenue, and Southeast 192nd Avenue.

Other identified growth nodes include the Port of Vancouver, Fruit Valley, Downtown, Clark College, Vancouver Mall, The Heights, Garrison Square, PeaceHealth, Section 30, Columbia Tech Center, and Vancouver Innovation Center. Slower growth is anticipated outside of these nodes.

Figure 3. Proposal Location and Study Area

## Description of Alternatives

This ~~Draft~~ Final EIS studies the potential effects of the No Action Alternative and ~~two~~ three action alternatives, Alternative 1, ~~and~~ Alternative 2 and the Preferred Alternative, as described in the next subsections.

## No Action Alternative

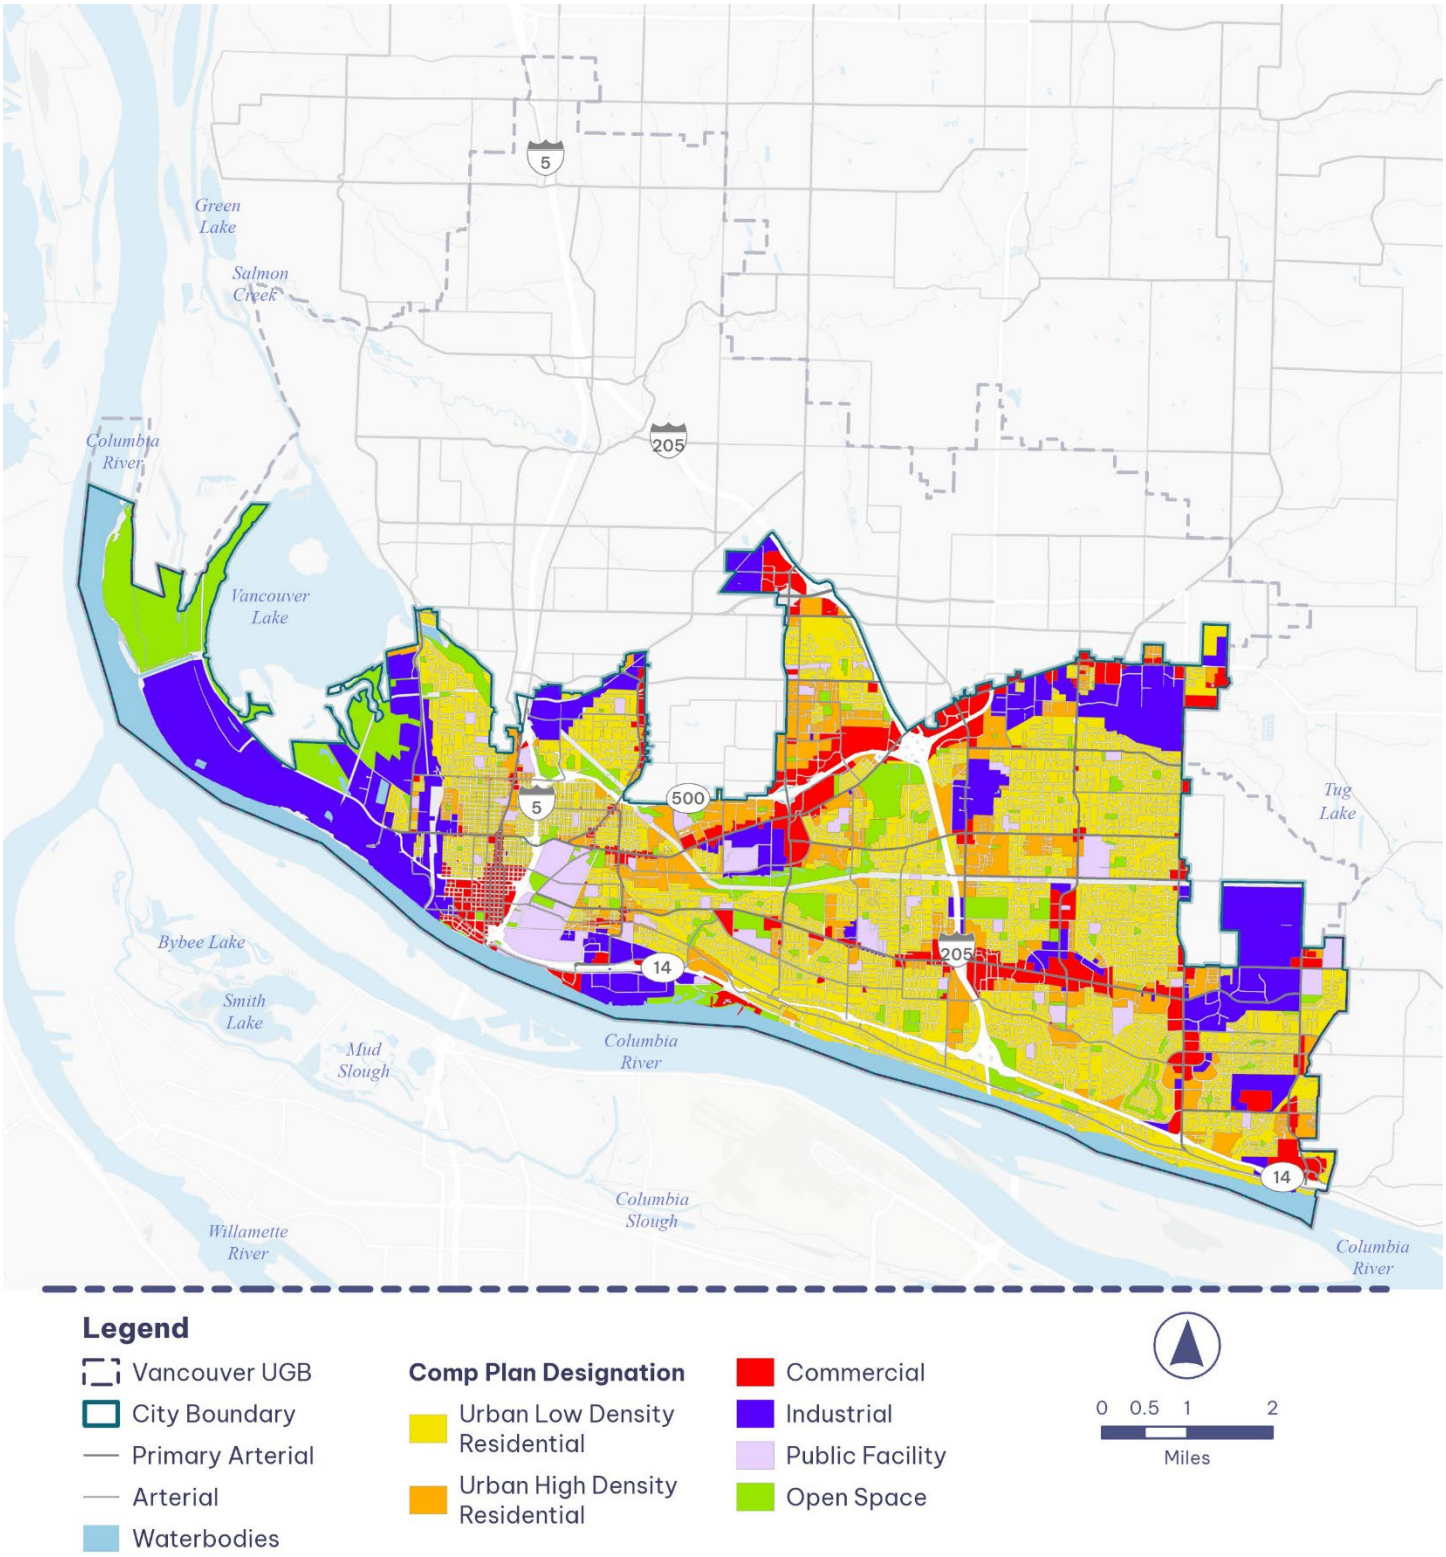
The No Action Alternative, required by SEPA, is a future scenario that assumes future growth and development would occur as allowed under current adopted City Comprehensive Plan and development regulations, and recent amendments to state statutory requirements that contain self-executing provisions.

The No Action Alternative assumes the implementation of House Bill (H.B.) 1110, which generally requires cities of at least 75,000 people to permit "middle housing" of at least four homes per residential lot, and imposes a new state model ordinance permitting middle housing in single-family zones on local jurisdictions that do not adopt their own standards allowing this practice. However, the No Action Alternative does not assume the implementation of other state laws that do not contain self-executing provisions, such as H.B. 1220, which requires planning for and accommodating housing affordable to all economic segments of the population, and H.B. 1337, which requires cities like Vancouver to allow up to two accessory dwelling units (ADUs) on a residential lot, assuming development regulations are met.

Under the No Action Alternative, the Comprehensive Plan land use designations would remain the same as they are today. The Comprehensive Plan Update and associated new zoning code and development regulations would not be adopted, although the state model ordinance permitting middle housing in single-family zones would be imposed in accordance with H.B. 1110.

Figure 4 shows a map of the Comprehensive Plan land designations for the No Action Alternative, and Figure 5 shows a map of the zoning designations for the No Action Alternative. These designations would be the same as the existing Comprehensive Plan and zoning designations. To allow for a comparison between the no action alternative and action alternatives, Table 2 summarizes the proposed future zoning districts and their corresponding current Comprehensive Plan land use and zoning designations. Table 5 in Chapter 3 provides more detailed information about current Comprehensive Plan designations and corresponding zoning designations, which would remain the same under the No Action Alternative.

Figure 4. No Action Alternative Comprehensive Plan Designations Map



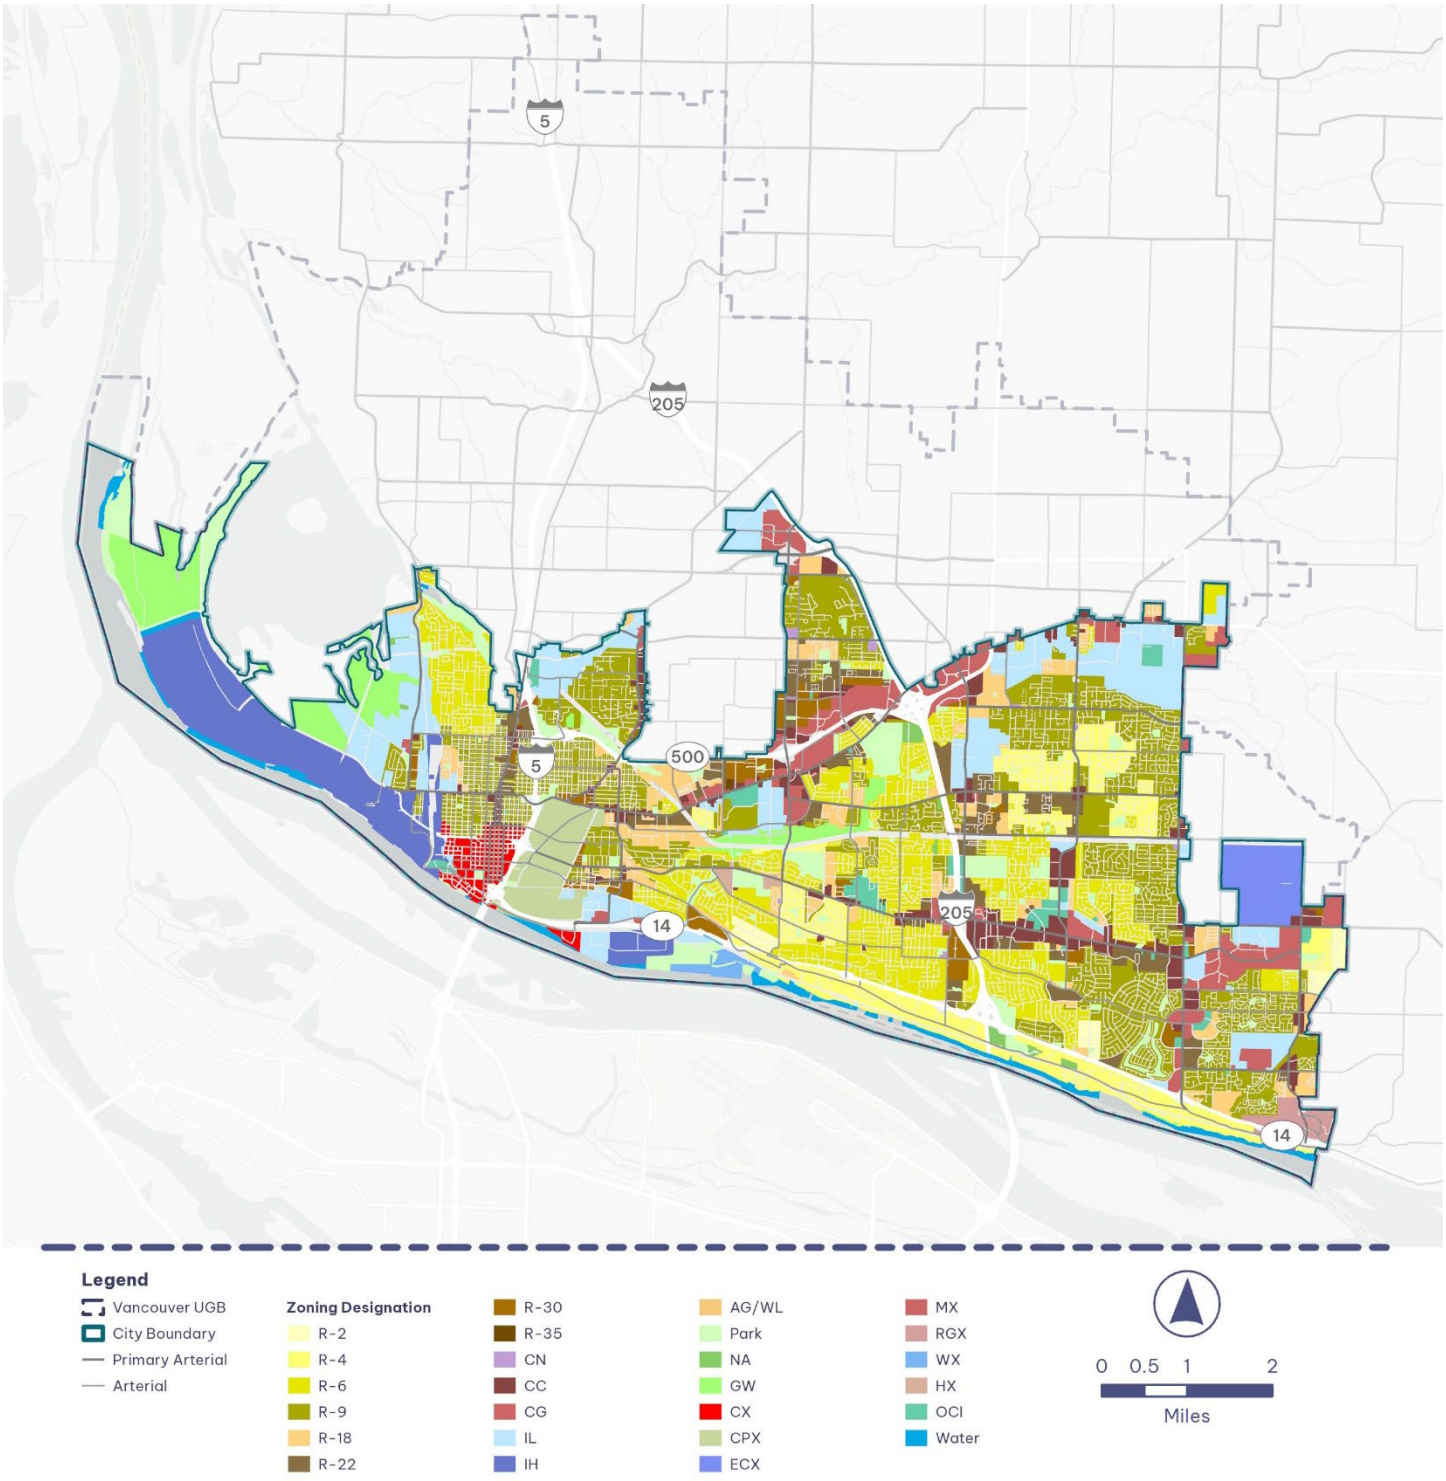


Figure 5. No Action Alternative Zoning Map

The No Action Alternative would have capacity for approximately 29,600 new housing units and 16,600 new jobs citywide by 2045. The No Action Alternative would not meet the GMA requirement to accommodate new 20-year growth forecasts, or the City's specific 2045 targets of at least 38,129 new housing units and 43,198 new jobs. Refer to Appendix B for the methods and assumptions for forecasting future housing and jobs capacity.

## Action Alternatives

~~Both~~ All action alternatives assume that future growth and development would occur in line with the proposed Comprehensive Plan Update and the associated revised zoning code and development regulations. The action alternatives assume implementation of all applicable new state laws that affect comprehensive planning and development processes, including H.B. 1110, H.B. 1220, and H.B. 1337, as described in the No Action Alternative section.

Under ~~both~~ all action alternatives, the Comprehensive Plan land use designations and associated zoning code would be updated, renamed, and simplified to a smaller set of zoning districts, as discussed in Chapter 1: Summary and described in Table 2. The Preferred Alternative would include an additional residential zoning district for manufactured homes that was not yet developed for Alternatives 1 and 2 in the Draft EIS.

The locations and sizes of the proposed zoning districts would differ ~~between~~ among the ~~two~~ three action alternatives, as would the distribution of new housing units and jobs. ~~Both~~ All action alternatives are forecasted to exceed the City's minimum 2045 targets of at least 38,129 new housing units and 43,198 new jobs.

The following subsections summarize the major features of Alternative 1, ~~and~~ Alternative 2, and the Preferred Alternative by area of the ~~e~~City (west, central, and east).

*Table 2. Proposed New Comprehensive Plan Designations/Zoning Districts and Allowances and Corresponding Current Comprehensive Plan/Zoning Designations*

| Proposed New Comprehensive Plan Designation (~~/~~Zoning District) for Action Alternatives | Proposed New Zoning Code Allowances | Corresponding Current and No Action Comprehensive Plan/Zoning Designation |
|---|---|---|
| **Residential Neighborhoods** (Low-Scale Neighborhood) | • Up to six housing units per parcel (per state law).<br>• Minimum density of eight units/acre, no maximum density.<br>• Building heights up to ~~three stories (maximum of~~ 45 feet tall~~)~~. | **Residential Urban Lower Density** R-2, R-4, R-6, R-9, R-17 |

| Proposed New Comprehensive Plan Designation (~~/~~Zoning District) for Action Alternatives | Proposed New Zoning Code Allowances | Corresponding Current and No Action Comprehensive Plan/Zoning Designation |
|---|---|---|
| | • Typical housing types: Single-family homes, townhomes ~~townhouses~~, rowhomes ~~rowhouses~~, accessory dwellings ~~buildings~~, duplexes, quadplexes, and sixplexes.<br>• Small-scale commercial activities like cafés, salons, professional services and restaurants mostly serving the surrounding neighborhood. | |
| **Residential Neighborhoods** (Medium-Scale Neighborhood) | • Minimum density of 16 units per acre, no maximum density.<br>• Building heights up to ~~five stories (maximum of~~ 75 feet tall~~)~~.<br>• Low-Scale Neighborhood housing types plus additional multifamily housing types.<br>• Civic/institutional buildings and commercial activities like cafés, restaurants, small offices, and other retail goods. | **Residential Urban Higher Density** R-18, R-22, R-30, R-35, R-50 |
| **Residential Neighborhoods** (Manufactured Home)[a] | • Applied to existing manufactured home parks to retain long-term affordability and prevent displacement of existing residents.<br>• No other uses allowed unless ongoing use as manufactured home parks is demonstrably unfeasible. | **Residential Urban Lower Density** R-2, R-4, R-6, R-9, R-17, R-18 |
| **Urban Mixed Use** (Mixed Use Neighborhood) | • Allows a broad range of housing, civic/institutional, commercial use types.<br>• Minimum density of 32 units/acre, no maximum density.<br>• Building heights ~~of 3 to 8 stories (maximum of~~ up to 110 feet tall~~)~~.<br>• Typical housing types: Multifamily and mixed-use buildings at a variety of scales. | **Commercial and Mixed Use** CC (Community Commercial) CN (Neighborhood Commercial) CG (General Commercial) |

| Proposed New Comprehensive Plan Designation (~~/~~Zoning District) for Action Alternatives | Proposed New Zoning Code Allowances | Corresponding Current and No Action Comprehensive Plan/Zoning Designation |
|---|---|---|
| | • May include multiple neighborhoods connected to an activity center by a network of pathways or walkable streets.<br>• Commercial or retail uses may include professional offices, medical providers, cafés, restaurants, small grocery stores, markets, and other retail goods. | OCI (Office-Campus-Industrial) |
| **Urban Mixed Use** (Regional Activity Center) | • Includes lands with opportunities for economic, entertainment, civic, and housing needs.<br>• Minimum density of 64 units per acre, no maximum density.<br>• No ~~M~~minimum or maximum building heights ~~of three stories, no maximum height~~.<br>• Typical housing types: mixed-use residential, ~~apartment~~ multifamily, and mid-rise~~, and podium~~ buildings.<br>• Size and makeup would vary based on location but would typically consist of compact, mixed-use development that maximizes residential, commercial, and open space opportunities. | **Commercial and Mixed Use**<br>CX (City Center intensity)<br>ECX (Employment Center Mixed Use)<br>HX (Heights District)<br>MX (Mixed Use)<br>RGX (River Gateway)<br>WX (Waterfront Mixed Use) |
| **Employment ~~Mixed Use~~& Industry** (Institutional/Campus) | • Includes lands that support academic, civic, or medical buildings.<br>• No minimum or maximum b~~B~~uilding heights ~~of up to 12 stories (maximum of 150 feet tall).~~<br>• Allowable housing types: townhouses, ~~apartments~~ multifamily, mixed-use residential, and mid-rise buildings.<br>• Buildings for athletic facilities, event spaces, equipment or other accessory uses needed to support an educational, | **Commercial and Mixed Use**<br>CPX (Central Park Mixed Use) |

| Proposed New Comprehensive Plan Designation (~~/~~Zoning District) for Action Alternatives | Proposed New Zoning Code Allowances | Corresponding Current and No Action Comprehensive Plan/Zoning Designation |
|---|---|---|
| | medical, or large institution would also be allowed. | |
| Employment ~~Mixed Use~~& Industry (Industrial/Employment) | • Includes lands typically with large-scale, single-tenant industrial, warehouse and flexible-use ~~space~~ buildings and smaller, multi-tenant industrial buildings.<br>• Building heights of up to ~~12 stories (maximum of~~ 150 feet tall~~)~~.<br>• Buildings would be grouped to support and serve one another and to provide opportunities for employment clusters.<br>• New housing not allowed. | Industrial<br>OCI (Office-Campus-Industrial)<br>IL (Light Industrial) |
| Heavy Industrial (Heavy Industrial) | • Includes lands currently zoned for heavy industrial uses and would remain unchanged.<br>• New housing not allowed. | Industrial<br>HI (Heavy Industrial) |
| Parks/Open Space (Parks) | • Includes lands currently zoned as public community and neighborhood parks.<br>• Civic and institutional buildings would be allowed with height limit of 45 feet.<br>• Housing not allowed. | Parks/Open Space<br>P (Parks) |
| Parks/Open Space (Natural Areas) | • Includes lands currently zoned for greenways and natural areas, which are generally undeveloped lands managed for both natural and ecological value and light-impact recreational use.<br>• Housing not allowed. | Parks/Open Space<br>GW (Greenway)<br>NA (Natural Area) |

a The Manufactured Home zoning district was still in development at the time of the Draft EIS and is therefore only included in the Preferred Alternative analysis for this Final EIS.

## Alternative 1

Alternative 1 would allow greater intensity and density of development in more areas of the ~~e~~City than the No Action Alternative but in fewer areas of the ~~e~~City than Alternative 2. Figure

6 shows the proposed Comprehensive Plan designations map, and Figure 7 shows the proposed zoning map for Alternative 1.

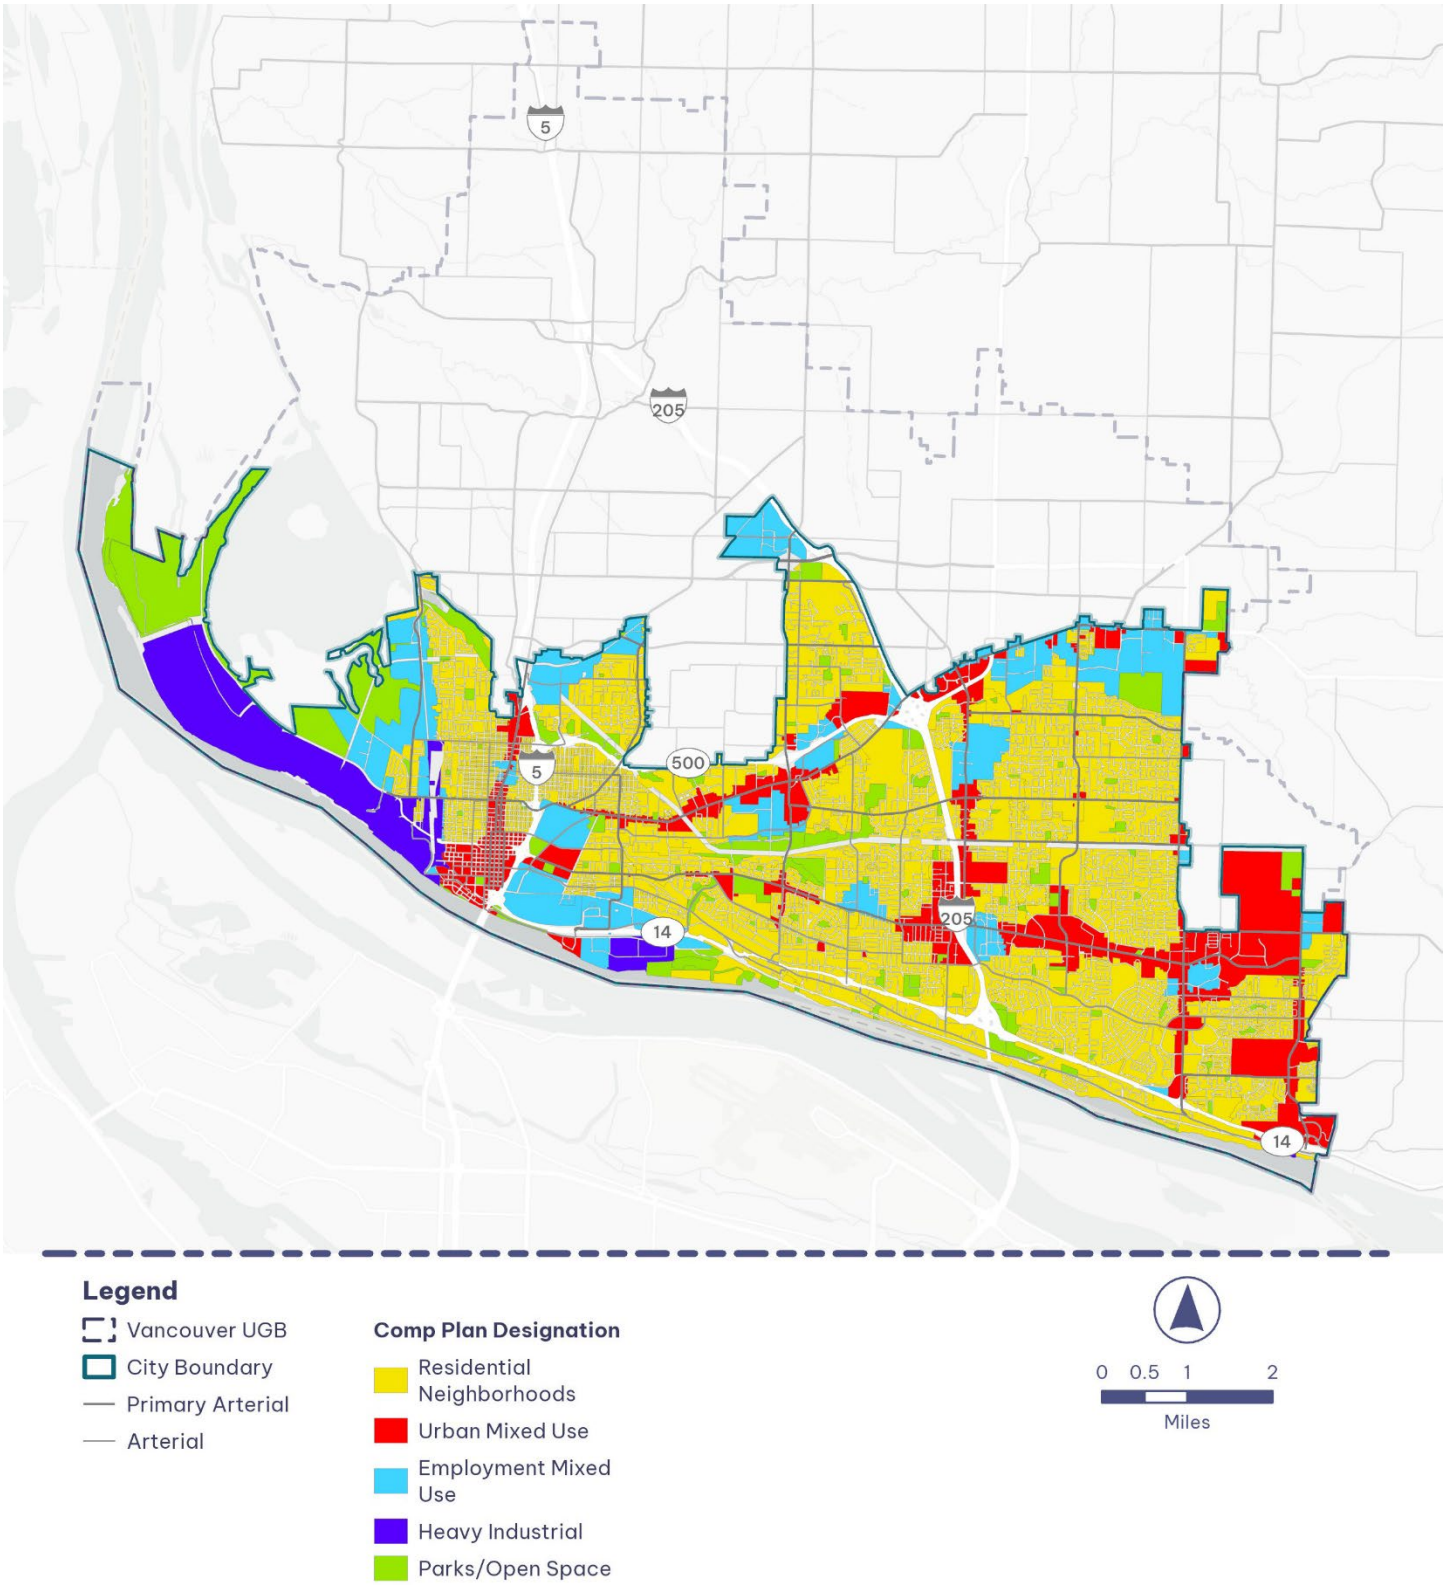
In West Vancouver (western city limits to west of I-5), large areas of Heavy Industrial and Industrial/Employment lands would remain. The existing Commercial areas of downtown Vancouver would be designated as Regional Activity Center, allowing for continued development of housing, office, civic, and entertainment uses. Existing commercial and residential corridors along Main Street would be designated as Mixed-Use Neighborhood. Existing lower-density residential areas just north of downtown Vancouver would be designated as the denser Medium-Scale Neighborhood. Lower-density residential areas north of Fourth Plain Boulevard would be similarly designated as Low-Scale Neighborhood.

In Central Vancouver (between I-5 and I-205), the lower-density residential neighborhoods south of East Mill Plain Boulevard would be similarly designated as Low-Scale Neighborhood. There would be greater areas of denser Mixed-Use and Medium-Scale Neighborhoods along the East Mill Plain Boulevard and Northeast Fourth Plain Boulevard corridors compared to the No Action Alternative. The Vancouver Mall and adjacent areas along Northeast Fourth Plain Boulevard would be rezoned from Commercial to Industrial/Employment and Regional Activity Center, allowing for some potential job growth and denser housing development. Most of the area north of the Vancouver Mall would be designated as Medium-Scale Neighborhood, allowing for denser housing types than under the No Action Alternative.

In East Vancouver (from I-205 east to the eastern city limits), there would be expanded areas of Mixed-Use Neighborhood along Mill Plain Boulevard, 164th Avenue, and 192nd Avenue, which would allow for more housing compared to the Industrial and Commercial designations under the No Action Alternative. The vacant Section 30 site at the far east end of the ~~e~~City would be designated as Mixed-Use Neighborhood, bordered by Regional Activity Center, a change from the largely Industrial designation under the No Action Alternative.

These changes in land use designations would result in a higher capacity for new housing units and jobs than the No Action Alternative but a lower capacity than Alternative 2. Based on market feasibility and redevelopment potential, Alternative 1 would have capacity for approximately 45,100 new housing units and 46,000 new jobs citywide, which exceeds the City's minimum 2045 planning targets. Refer to Appendix B for the methods and assumptions for forecasting future housing and jobs capacity.

Figure 6. Alternative 1 Proposed Comprehensive Plan Designations Map



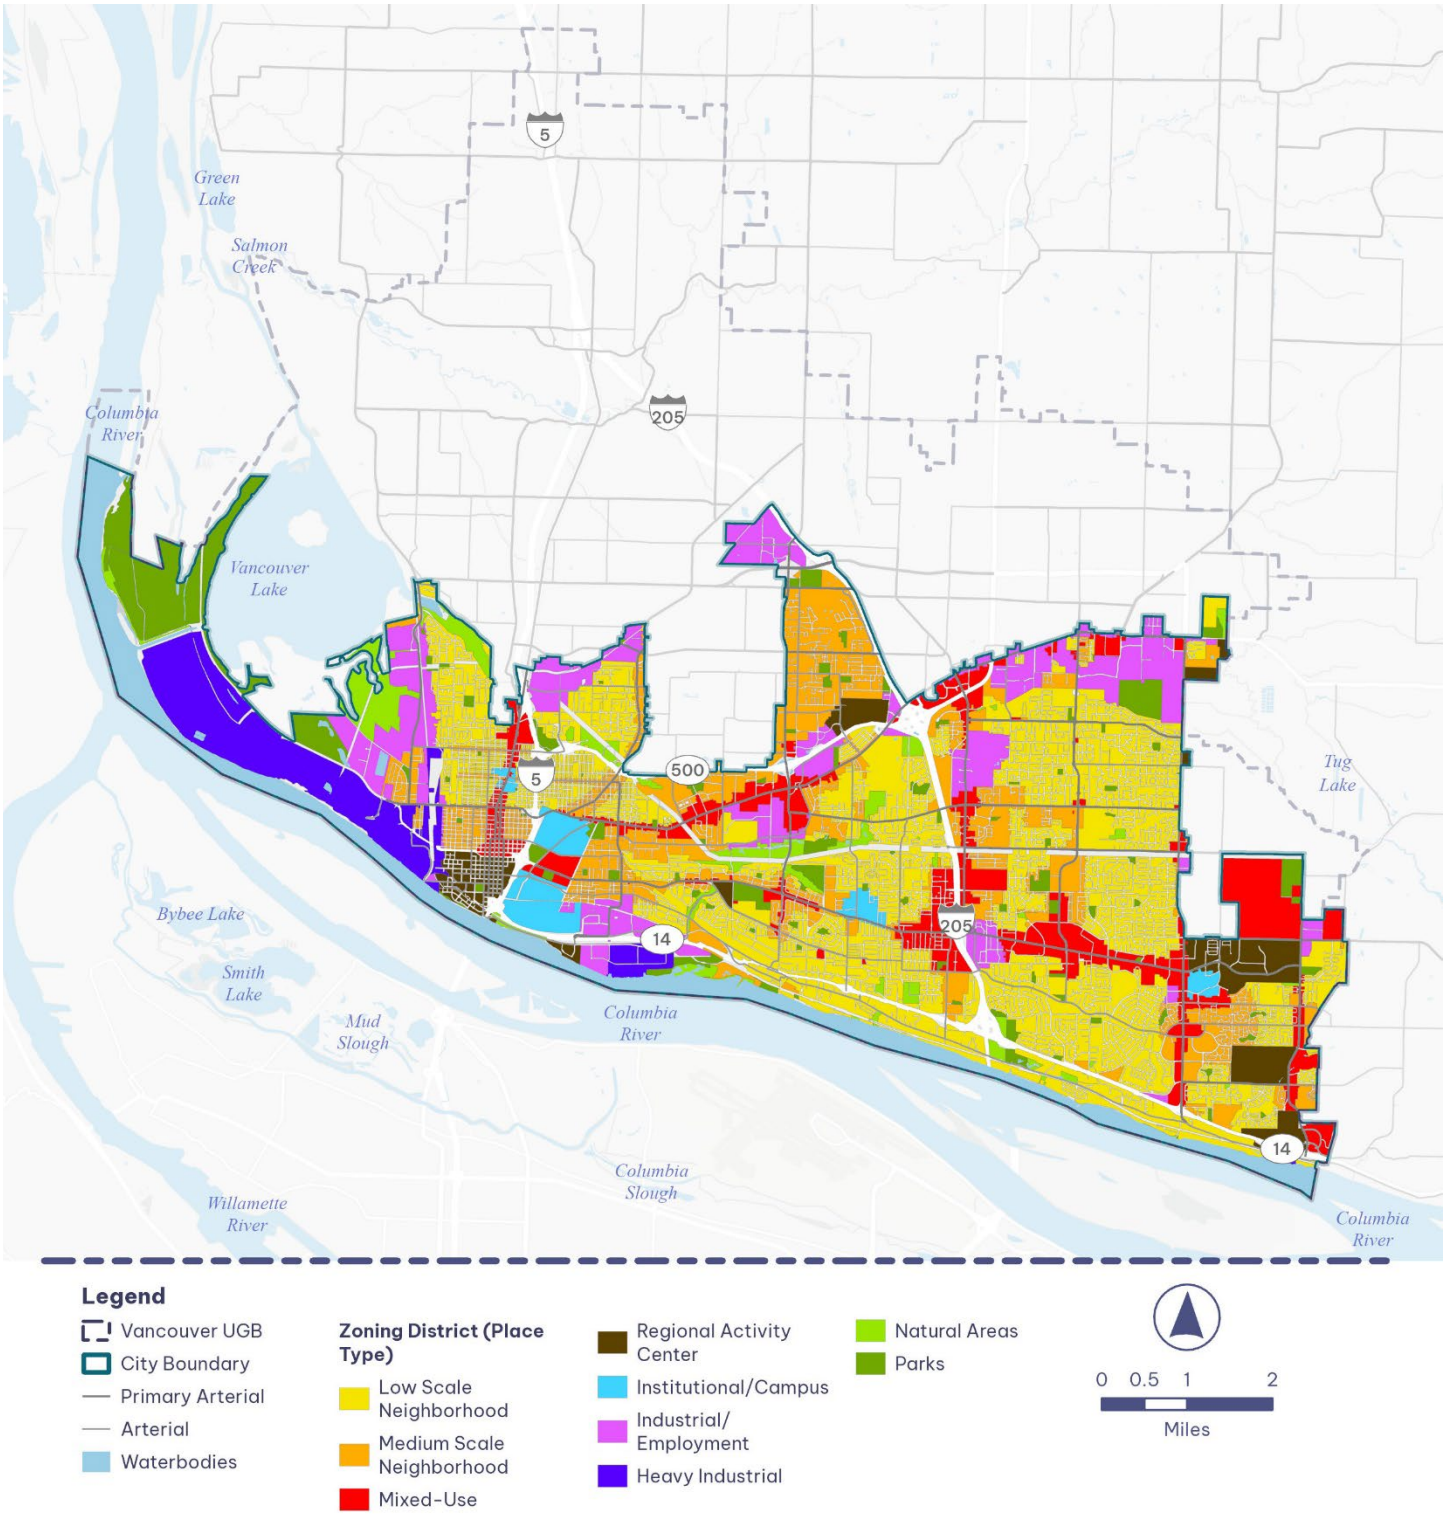


Figure 7. Alternative 1 Proposed Zoning Districts Map

## Alternative 2

Alternative 2 would allow the greatest intensity and density of development in more areas of the city. Figure 8 shows the proposed Comprehensive Plan designations map, and Figure 9 shows the proposed zoning map for Alternative 2.

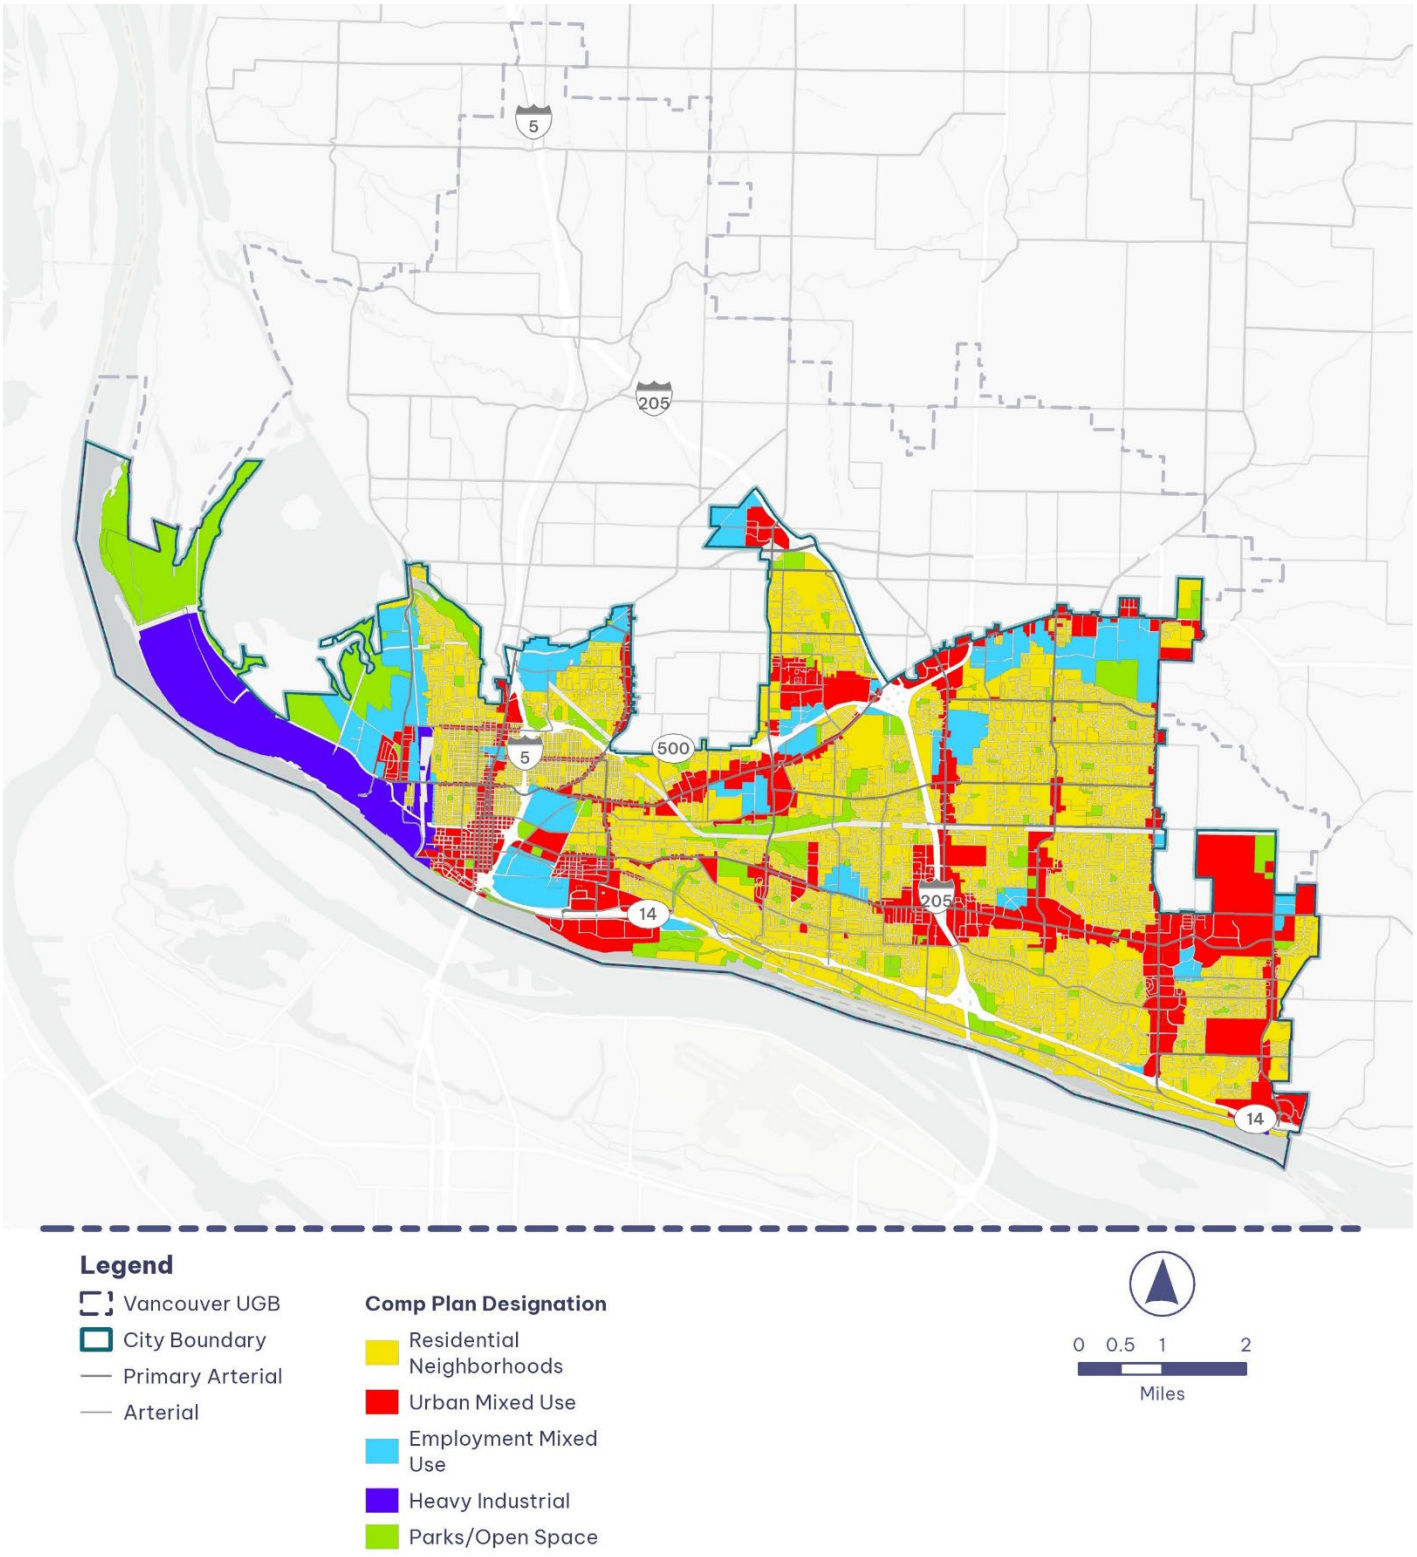
In West Vancouver, the same Heavy Industrial and Industrial/Employment lands would remain as in Alternative 1. Downtown commercial areas would be designated as Regional Activity Center, and would extend farther north on Main Street than Alternative 1. Existing commercial and residential lands north of Fourth Plain Boulevard along Main Street would be designated as Mixed-Use Neighborhood. Compared to Alternative 1, more existing residential areas just north of downtown Vancouver would be designated as Medium-Scale Neighborhood. Lower-density residential areas of Northwest Vancouver would be similarly designated as Low-Scale Neighborhood.

In Central Vancouver, similar to Alternative 1, the existing lower-density residential neighborhoods south of East Mill Plain Boulevard would be designated as Low-Scale Neighborhood. Alternative 2 would have larger areas of Mixed-Use Neighborhood, Medium-Scale Neighborhood, and Regional Activity Center zoning districts along the East Mill Plain Boulevard and Northeast Fourth Plain Boulevard corridors than Alternative 1. Similar to Alternative 1, the Vancouver Mall and adjacent areas along Northeast Fourth Plain Boulevard would be designated as Regional Activity Center, allowing for greater potential job growth and new denser housing. Larger areas north and west of the Vancouver Mall would be designated as Mixed-Use Neighborhood or Medium-Scale Neighborhood than under Alternative 1, allowing for greater potential housing density.

In East Vancouver, Alternative 2 would have larger areas of Mixed-Use Neighborhood and Regional Activity Center zoning districts along major corridors such as Mill Plain Boulevard, 164th Avenue, and 192nd Avenue compared to Alternative 1. Alternative 2 would also include larger areas of Medium-Scale Neighborhood in the neighborhoods adjacent to these corridors and smaller areas of Low-Scale Neighborhood. More land at and near the Section 30 site would be designated as a Regional Activity Center than in Alternative 1.

Alternative 2 would have the highest capacity for new housing units and jobs. Based on market feasibility and redevelopment potential, Alternative 2 would have capacity for approximately 50,700 new housing units and 49,300 new jobs citywide, which exceeds the minimum City's 2045 targets. Refer to Appendix B for the methods and assumptions for forecasting future housing and jobs capacity.

Figure 8. Alternative 2 Proposed Comprehensive Plan Designations Map



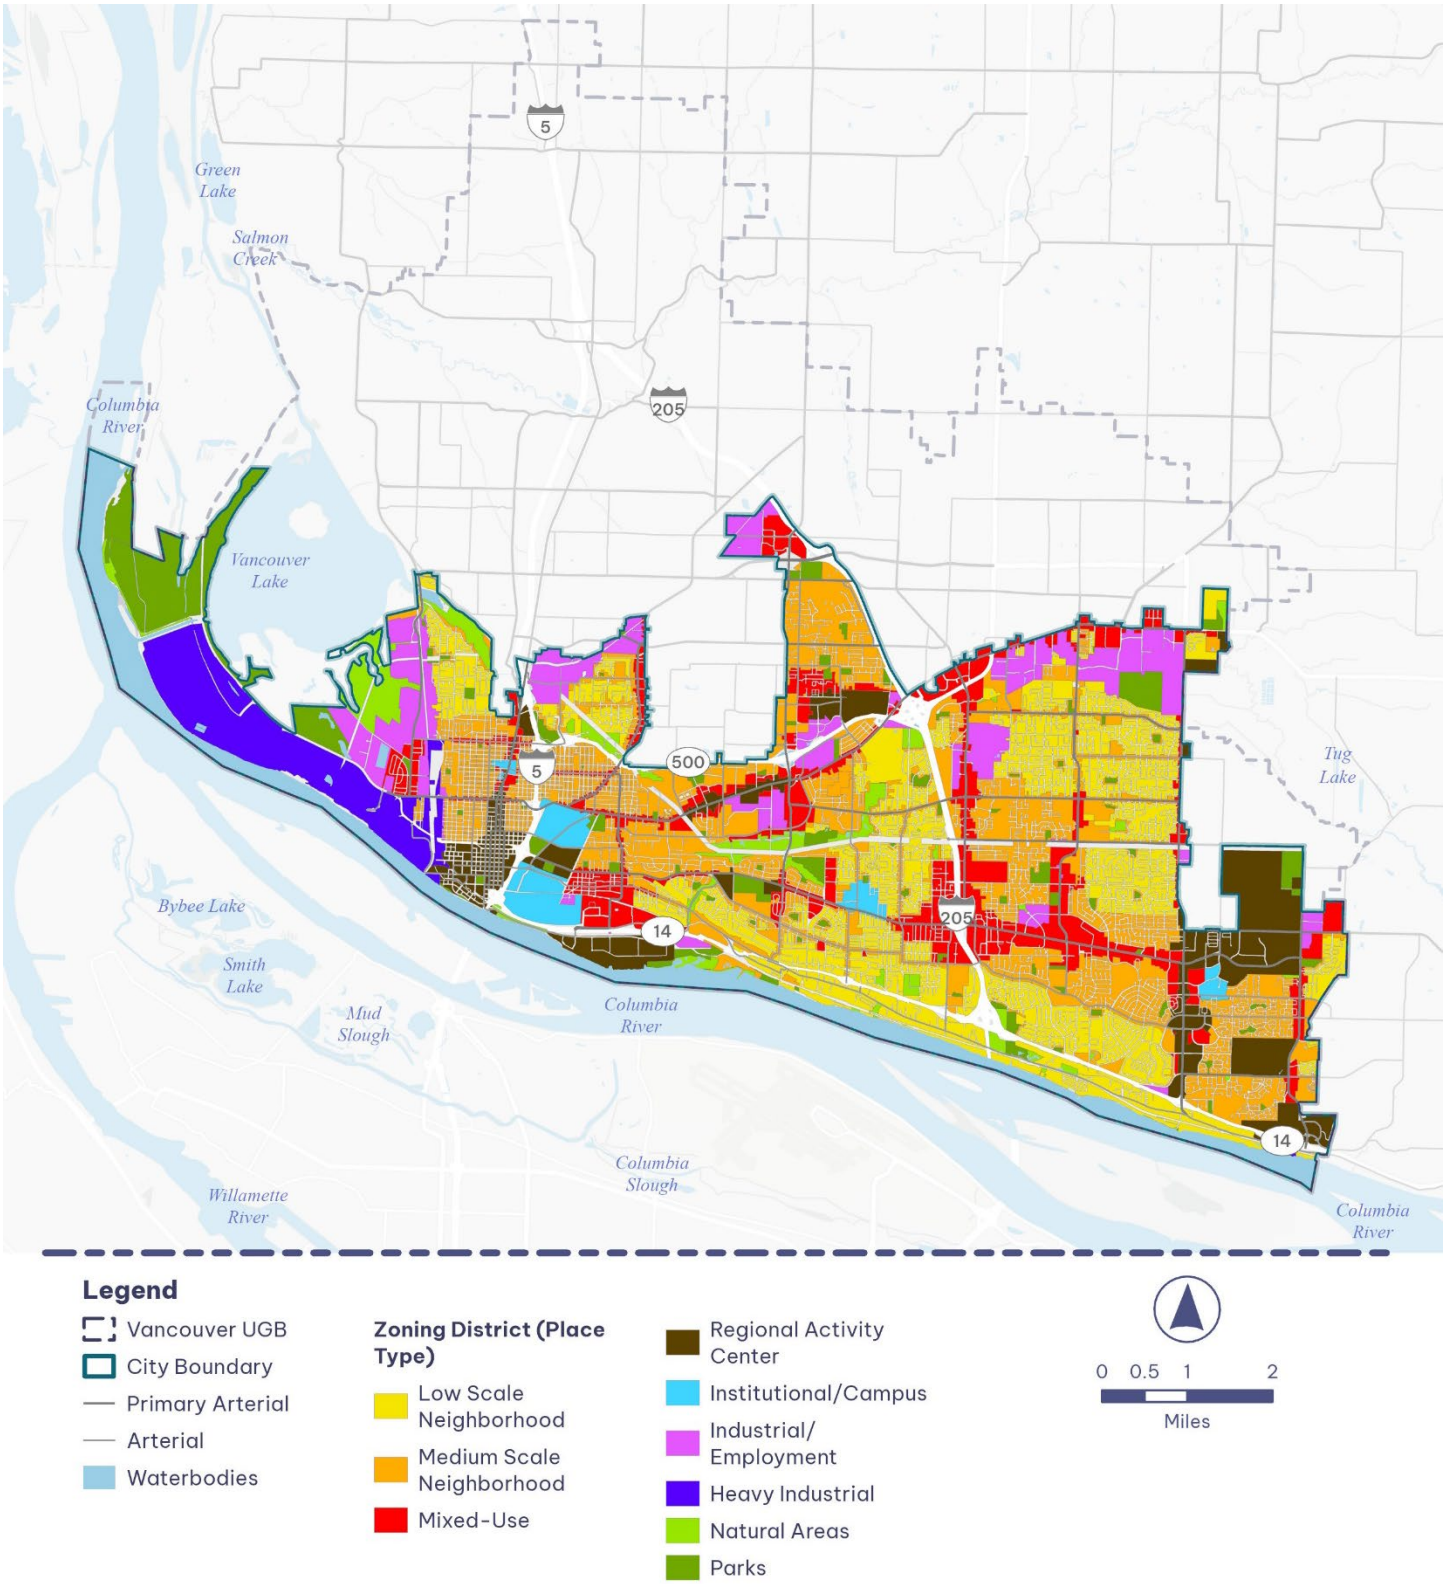


Figure 9. Alternative 2 Proposed Zoning Districts Map

## Preferred Alternative

The Preferred Alternative would allow a greater intensity and density of development in more areas of the City than the No Action Alternative and a similar mix of land uses and zoning districts compared to Alternatives 1 and 2.

Figure 10 shows the proposed Comprehensive Plan designations map, and Figure 11 shows the proposed zoning map for the Preferred Alternative. The color scheme and format of these maps differ slightly from previous alternatives presented in the Draft EIS for consistency with the proposed Comprehensive Plan Update.

In West Vancouver, large areas of Heavy Industrial and Industrial/Employment lands would remain. Similar to Alternative 2, the existing Commercial areas of downtown Vancouver would be designated as Regional Activity Center, allowing for continued development of housing, office, civic, and entertainment uses. Similar to Alternative 2, existing commercial and residential corridors along Main Street would be designated as Mixed Use Neighborhood and Regional Activity Center. Existing lower-density residential areas just north of downtown Vancouver would be designated as the denser Medium-Scale Neighborhood. This area of Medium-Scale Neighborhood would extend farther north compared to Alternatives 1 and 2. The northernmost lower-density residential areas would be designated as Low-Scale Neighborhood.

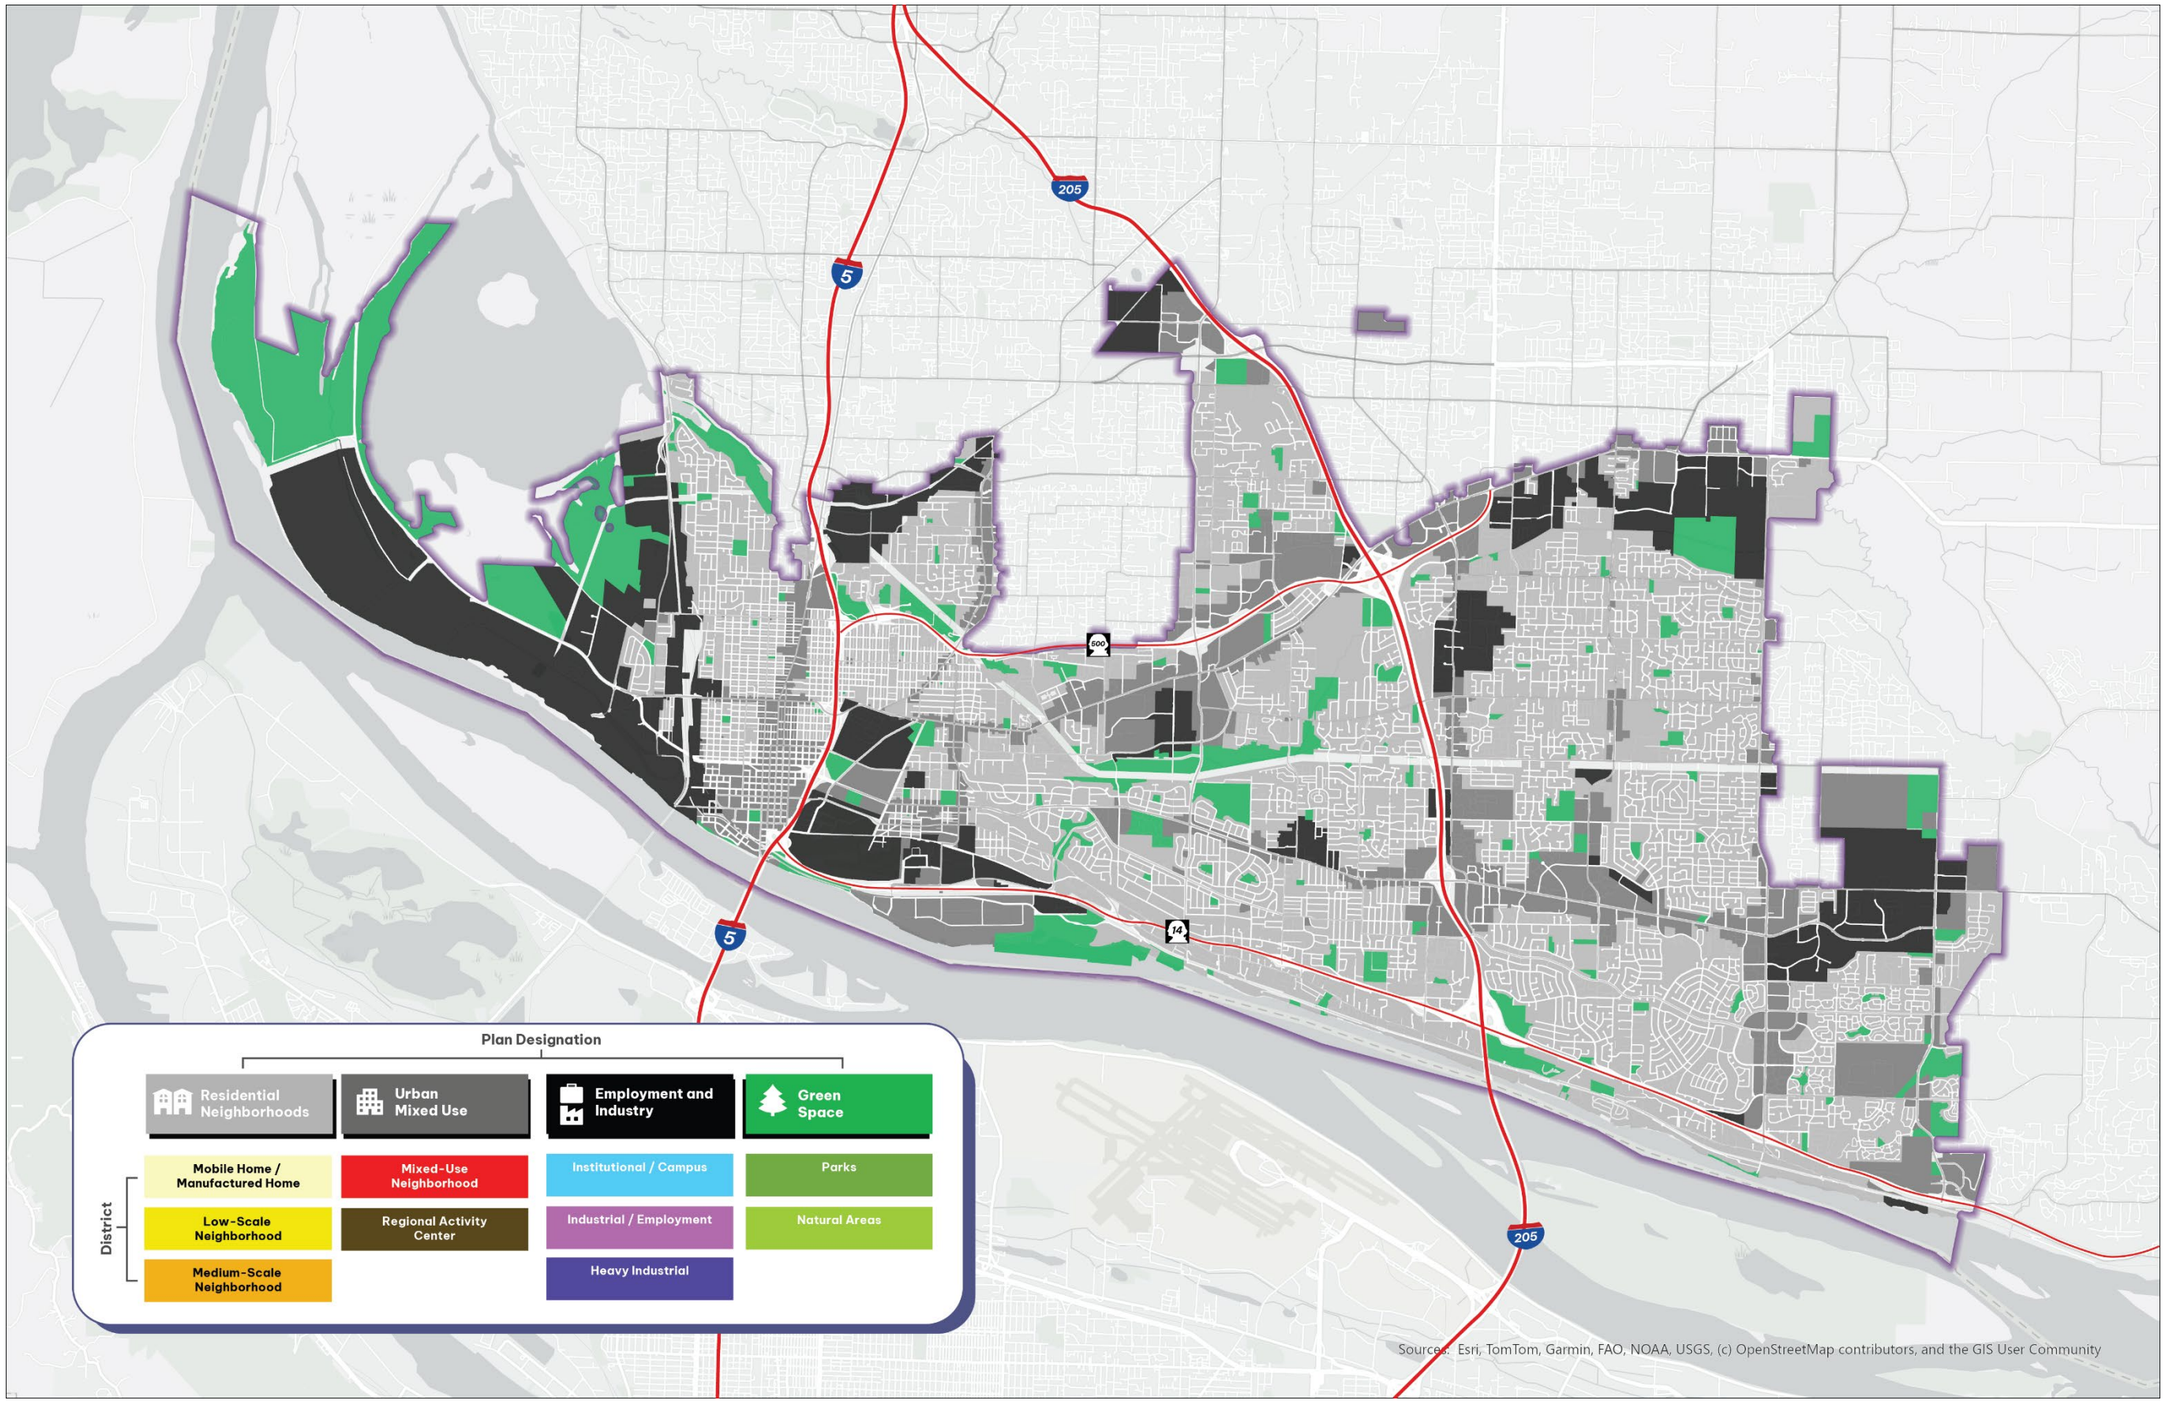
In Central Vancouver, the lower-density residential neighborhoods south of East Mill Plain Boulevard would be designated as Low-Scale and Medium-Scale Neighborhood, with more area designated for Medium-Scale Neighborhood compared to Alternatives 1 and 2. Along East Mill Plain west of the Heights area, the corridor would be designated as Medium-Scale Neighborhood, whereas in Alternatives 1 and 2 it would be designated as Mixed Use Neighborhood. Similar to Alternative 2, there would be greater areas of denser Mixed-Use and Medium-Scale Neighborhoods along the East Mill Plain Boulevard and Northeast Fourth Plain Boulevard corridors, as compared to Alternative 1. The Vancouver Mall and adjacent areas along Northeast Fourth Plain Boulevard would be rezoned from Commercial to Regional Activity Center and Mixed-Use, allowing for some potential job growth and denser housing development. The Preferred Alternative would be different from Alternatives 1 and 2 by designating the Vancouver Plaza area as Mixed Use, rather than Industrial/Employment. Most of the area north of the Vancouver Mall would be designated as Medium-Scale Neighborhood, allowing for denser housing types similar to Alternative 1.

In East Vancouver, there would be expanded areas of Mixed-Use Neighborhood and Regional Activity Center along Mill Plain Boulevard, 164th Avenue, and 192nd Avenue, similar to Alternative 2. The mostly vacant Section 30 site at the far east end of the City would be designated as Institutional/Campus, bordered by Mixed Use Neighborhood and

Industrial/Employment, a change from the largely Industrial designation under the No Action Alternative, Mixed-Use under Alternative 1, and Regional Activity Center under Alternative 2.

These changes in land use designations would result in a higher capacity for new housing units and jobs than the No Action Alternative but a lower capacity than Alternatives 1 and 2. New housing capacity would be spread more evenly throughout all areas of the city, compared to Alternatives 1 and 2, which focused a substantial portion of the potential for new housing capacity in East Vancouver. Based on market feasibility and redevelopment potential, the Preferred Alternative would have capacity for approximately 44,100 new housing units and 45,100 new jobs citywide, which exceeds the City's minimum 2045 planning targets. Refer to Appendix B for the methods and assumptions for forecasting future housing and jobs capacity.

Figure 10. Preferred Alternative Proposed Comprehensive Plan Designations Map



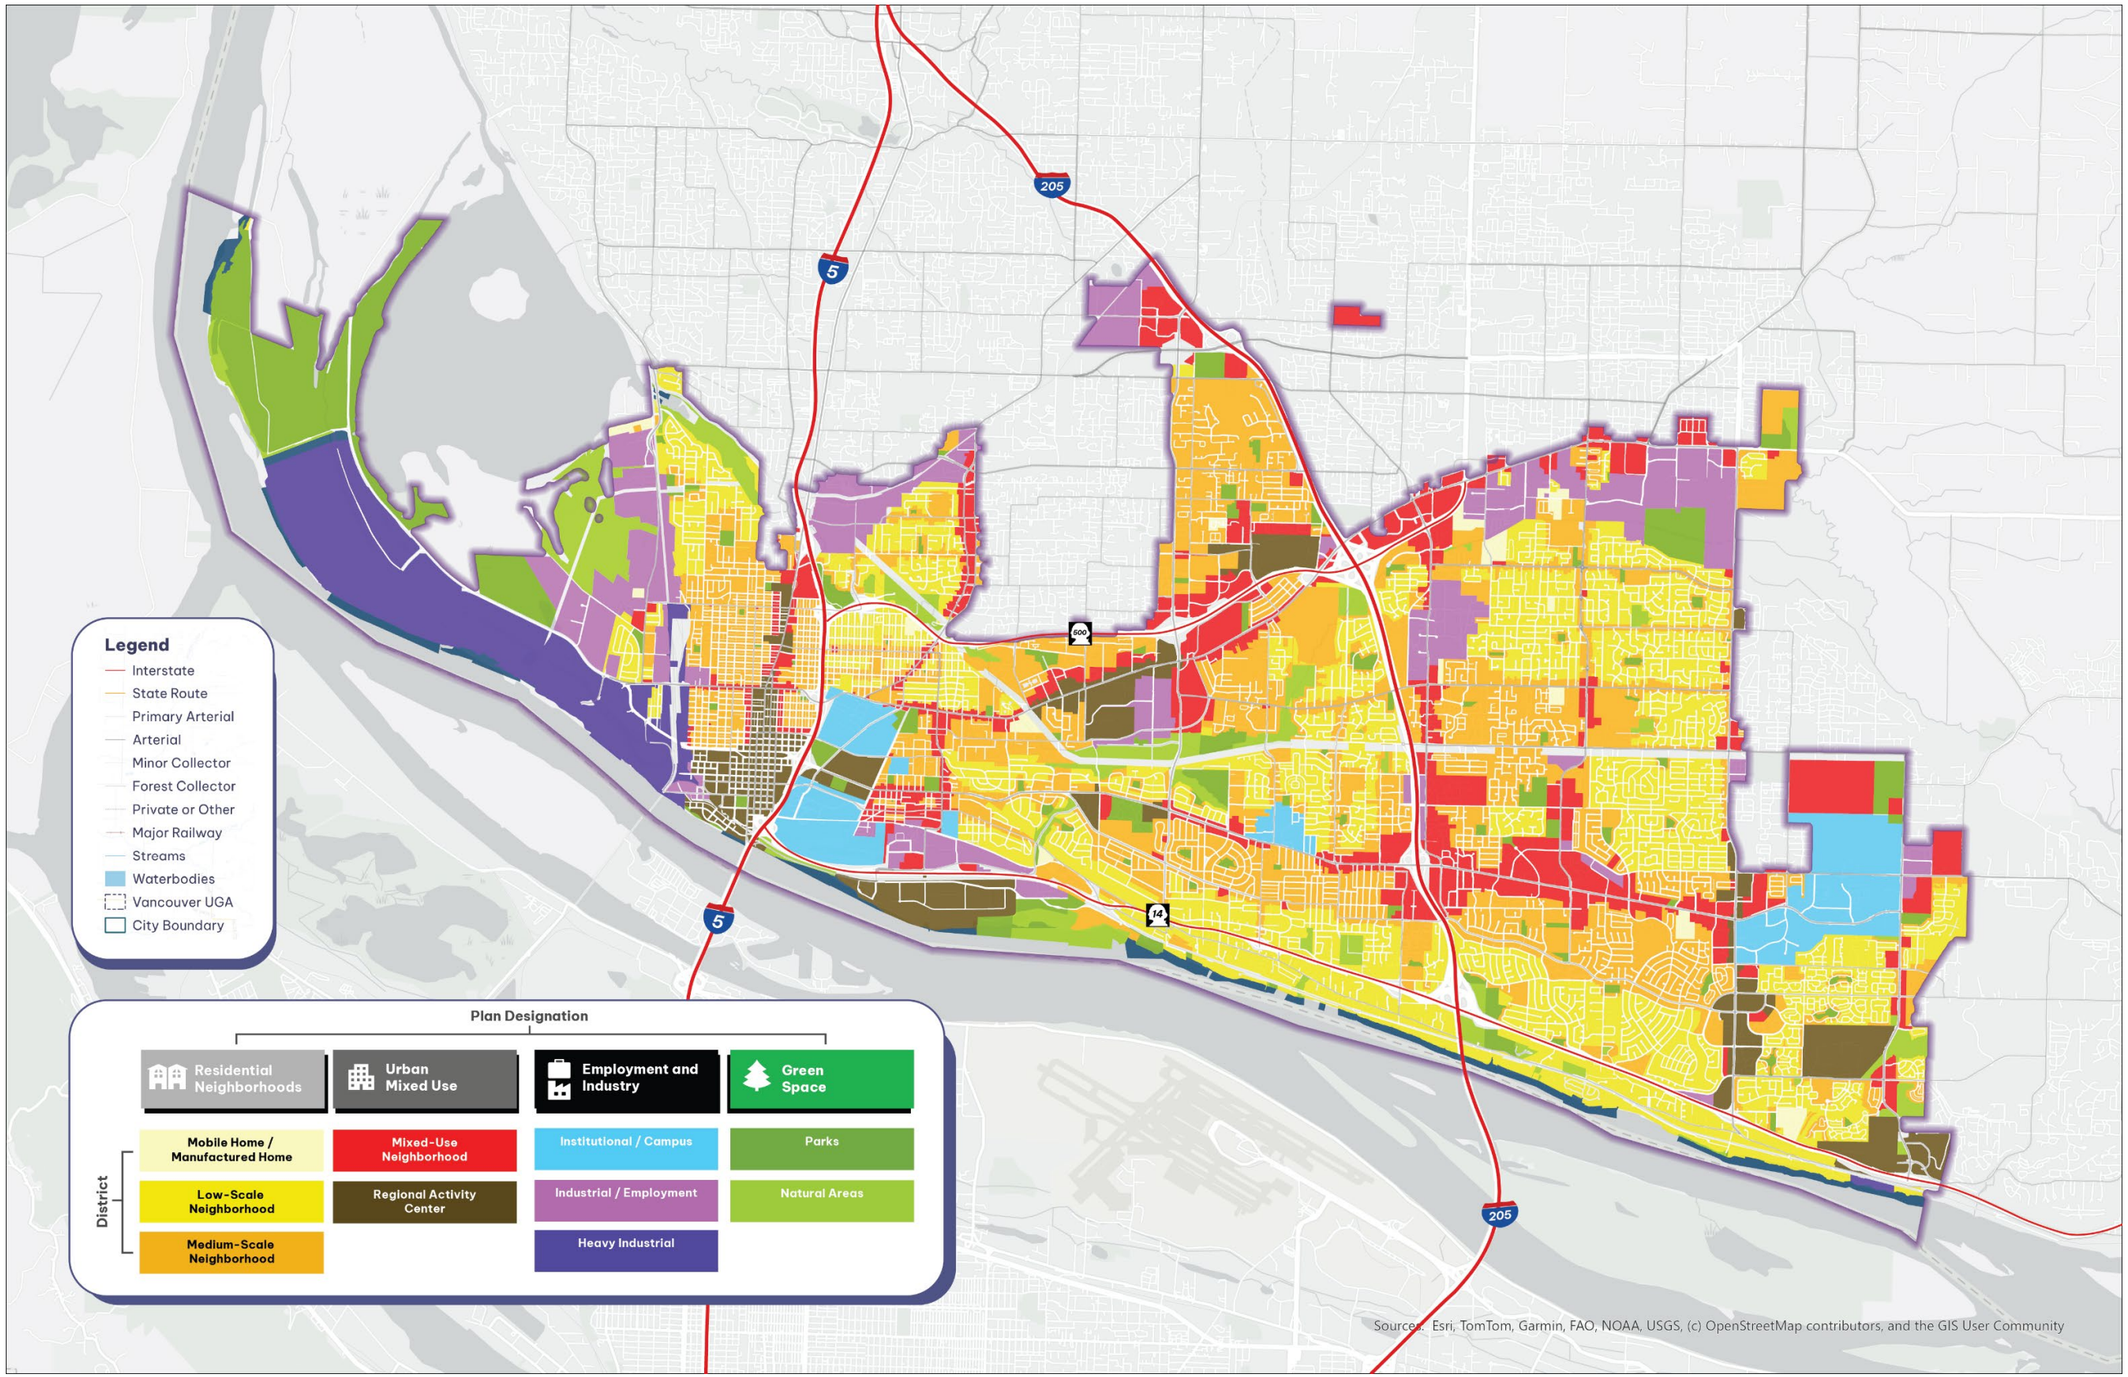


Figure 11. Preferred Alternative Proposed Zoning Districts Map

## Comparison of Alternatives

Of all the alternatives, Alternative 2 would allow the greatest density, intensity, and mix of land uses in the most areas of the city, and the No Action Alternative would allow the least. Alternative 1 would allow greater density, intensity, and mix of land uses in more areas of the ~~e~~City than the No Action Alternative but generally less than Alternative 2. The Preferred Alternative would allow greater density and intensity in more areas of the City than the No Action Alternative and would have a similar mix of land uses to Alternative 2.

Table 3 summarizes the differences in the amount of land acreage devoted to the different zoning districts proposed in the Comprehensive Plan Update.

The overall split of zoning districts by land acreage would be similar among the action alternatives. Under all alternatives, predominantly residential Low-Scale and Medium-Scale Neighborhood zoning districts would make up about half of the city's total land area. For Alternative 2 and the Preferred Alternative, the amount of land within those zoning districts would be split more equally between Medium-Scale Neighborhood and Low-Scale Neighborhood. The Preferred Alternative includes a new zoning district, Manufactured Home, that would preserve a small amount of land with existing manufactured home park developments as specifically designated for that use.

The total acreage of the Institutional/Campus zoning district (and equivalent land uses under the No Action Alternative; refer to Table 2) would be greatest under the Preferred Alternative and would be similar under ~~all~~the No Action and A~~a~~lternatives 1 and 2. There would be no meaningful difference among the alternatives in the total land area zoned as Parks and Natural Areas.

There would be slightly less Heavy Industrial and Industrial/Employment land area (and equivalent land uses under the No Action Alternative; refer to Table 2) under Alternative 2 and the Preferred Alternative than the No Action Alternative and Alternative 1. Alternative 2 would have the most land designated as Regional Activity Center and Mixed Use and would include the greatest capacity for future job growth compared to the other alternatives.

The biggest differences in zoning districts, as measured by land area, would be:

- Almost 50% more land area designated as Low-Scale Neighborhood under Alternative 1 compared to Alternative 2 and the Preferred Alternative.
- Almost 50% more land area designated as Medium-Scale Neighborhood under Alternative 2 and the Preferred Alternative compared to Alternative 1.

- More than double the land area designated as a Regional Activity Center under Alternative 2 compared to Alternative 1 and about 40% more compared to the Preferred Alternative.
- Nearly double the land area designated as Institutional/Campus under the Preferred Alternative compared to Alternatives 1 and 2 and the No Action Alternative.

*Table 3. Comparison of Acreage of Zoning Districts by Alternative*

| Zoning District | No Action Acreage (Percentage of Total Land Area)[a] | Alternative 1 Acreage (Percentage of Total Land Area) | Alternative 2 Acreage (Percentage of Total Land Area) | Preferred Alternative (Percentage of Total Land Area) |
|---|---|---|---|---|
| Heavy Industrial | ~~1,688~~ 1,771 (7%) | ~~1,688~~ 1,771 (7%) | ~~1,535~~ 1,610 (~~6~~ 7%) | 1,609 (7%) |
| Industrial/Employment | ~~2,788~~ 2,943 (~~11~~ 12%) | ~~2, 724~~ 2,866 (~~11~~ 12%) | ~~2,128~~ 2,263 (9%) | 2,274 (9%) |
| Institutional/Campus | ~~562~~ 566 (2%) | ~~591~~ 600 (2%) | ~~576~~ 589 (2%) | 1,168 (5%) |
| Low-Scale Neighborhood | ~~9,960~~ 10,149 (41%) | ~~8,648~~ 8,759 (~~36~~ 35%) | ~~5,346~~ 5,388 (22%) | 5,830 (24%) |
| Medium-Scale Neighborhood | ~~2,872~~ 2,911 (12%) | ~~3,915~~ 4,003 (16%) | ~~6,321~~ 6,469 (26%) | 6,304 (25%) |
| Manufactured Home[b] | N/A | N/A | N/A | 205 (1%) |
| Mixed Use | ~~1,955~~ 1,970 (8%) | ~~2,611~~ 2,636 (11%) | ~~2,984~~ 3,015 (12%) | 2,718 (11%) |
| Natural Areas[bc] | ~~1,368~~ 1,340 (~~6~~ 5%) | ~~993~~ 997 (4%) | ~~993~~ 996 (4%) | 1,064 (4%) |
| Parks[c] | ~~1,544~~ 1,530 (6%) | 1,990 (8%) | ~~1,990~~ 1,992 (8%) | 2,004 (8%) |
| Regional Activity Center | ~~1,536~~ 1,555 (6%) | ~~1,121~~ 1,122 (5%) | ~~2,406~~ 2,426 (10%) | 1,569 (6%) |
| Total[cd, e] | ~~24,275~~ 24,734 | ~~24,279~~ 24,744 | ~~24,279~~ 24,744 | 24,746 |

Notes:

a Acreage for the No Action Alternative zoning districts is approximate and based on converting land acreages from their existing Comprehensive Plan and zoning designations to their most similar proposed zoning districts. For example, all parcels zoned currently as R-2, R-4, R-6, and R-9, referred to as "Urban Lower Density" areas in the current Comprehensive Plan, were classified as the proposed new Low-Scale Neighborhood zoning district. All parcels currently zoned CN (Neighborhood Commercial), CC (Community Commercial), and GC (General Commercial) were classified as the Mixed-Use zoning district. These reclassifications are only for the purposes of this comparison. No reclassification would occur under the No Action Alternative.

b The Manufactured Home zoning district was still in development at the time of the Draft EIS and is therefore only included in the Preferred Alternative analysis for this Final EIS.

~~b~~c Parks and natural areas acreage includes both public and non-public land for the No Action Alternative but only public land for the action alternatives. In the action alternatives, non-publicly owned or non-publicly accessible areas that were zoned as Parks/Open Space uses are assumed to match the underlying zoning based on their relative location to other zoning districts. Effectively, there is assumed to be no difference in parks/open space acreage among the No Action and Action Alternatives. The Comprehensive Plan Update and EIS identify parks/open space needs based on future growth projections, but the proposed Comprehensive Plan designations and zoning maps do not include additional Parks or Natural Areas zoning because future acquisitions are not known at this time. Park acreage will likely increase during the 20-year planning period as additional park land is acquired to serve growth.

~~c~~d Total citywide land acreage is assumed to be the same across all alternatives but may not match due to rounding and differences in how parks/natural areas are accounted for (refer to note ~~No. 2~~c). Acreage does not include land designated as roads, easements, or water.

e The methodology to calculate acreage of zoning districts changed slightly between the Draft EIS and Final EIS to be based on zones rather than parcels. The total acreage across the City is now more consistent between the No Action and action alternatives.

Table 4 summarizes the differences in estimated capacity for future jobs and housing under the alternatives.

*Table 4. Comparison of 2045 Estimated Housing and Jobs Capacity by Alternative*

| Metric | City Target | No Action Alternative[a] | Alternative 1 | Alternative 2 | Preferred Alternative |
|---|---|---|---|---|---|
| Capacity for New Housing Units | 38,129 | 29,600 | 45,100 | 50,700 | 44,100 |
| Capacity for New Jobs | 43,198 | 16,600 | 46,000 | 49,300 | 45,100 |

Note:

a As described in the text below this table, limitations on modeling for the No Action Alternative should be considered when comparing its estimated growth capacity with the estimated growth capacities of the action alternatives. Refer to Appendix B for the full methodology used.

Alternative 1, ~~and~~ Alternative 2 and the Preferred Alternative would ~~both~~ all exceed the minimum City targets for new housing units and jobs by 2045. Alternative 2 would have the highest capacity for each. The No Action Alternative would not meet GMA requirements or minimum City targets for new housing units and jobs. The differences in the estimated growth capacities between the No Action Alternative, ~~and~~ Alternatives 1 and 2, and the Preferred Alternative reflect practical limitations in how the capacity estimates are calculated, in addition to the fact that the No Action Alternative allows for less intensive future growth, particularly outside of single-family zones.

The No Action Alternative capacity forecast is based on the Clark County Vacant Buildable Lands Model (VBLM) and existing redevelopment assumptions built into the model. The VBLM does not fully account for the feasibility of redevelopment, particularly as it relates to redevelopment to support job growth. The No Action Alternative uses the VBLM because it

would retain existing zoning classifications and their allowed densities and uses, and therefore, the assumptions related to employment density and redevelopment rate used in the action alternatives do not apply to the No Action Alternative. This results in a different capacity analysis methodology for the No Action Alternative compared to the action alternatives.

The housing and jobs capacity forecasts for Alternatives 1 and 2 and the Preferred Alternative consider market and ~~re~~development feasibility while accounting for limitations on redevelopment, including ~~and other limiting factors, such as~~ the presence of critical areas or required infrastructure. ~~, that would influence new development. They are intended to~~ The forecasts provide an analysis of feasible developments based on current market factors; therefore, the capacity numbers are lower than the maximum build-out that would be allowed by the new zoning designations in each alternative. ~~the basis for analyzing the impacts of a feasible level of potential build-out under each of the alternatives in the Draft EIS. These capacity forecasts are therefore lower than the maximum build-out that would be allowed outright by the zoning designations for each alternative.~~ During the review of Alternatives 1 and 2, additional considerations were added to the methodology for the Preferred Alternative to account for the presence of master plan and development agreements, presence of private covenants limiting development, and zoning allowances, which further limited development feasibility. Refer to Appendix B for the methods and assumptions used for forecasting future estimated housing and jobs capacity.

Under all alternatives, the actual timing and distribution of future growth would be influenced by future market conditions, decisions made by individual property owners and developers, and other factors.

# Chapter 3: Built Environment

Note to readers: This Final Environmental Impact Statement document retains and builds upon the information presented in the Draft Environmental Impact Statement. New content in this chapter is generally denoted with underlined text, while changes to information are denoted with strikethrough text. Updates focus on adding the new analysis of the Preferred Alternative, as well as minor corrections and clarifications to the analysis presented in the Draft EIS. Some changes are denoted with footnotes and table notes when further explanation was warranted.

This chapter describes the methodologies, existing conditions (affected environment), and potential impacts of the alternatives for the following environmental topic areas related to the built environment: land and shoreline use, housing, aesthetics, historic and cultural preservation, transportation, and public services and utilities.

For each topic, the chapter provides a summary of impacts common to all alternatives, impacts unique to each alternative, and a summary of potential avoidance, minimization, and mitigation measures to address potential impacts and identifies impacts that are considered to be significant and unavoidable under SEPA.

## Land and Shoreline Use

### Methodology

Analysts reviewed relevant information and policies about existing land and shoreline use and current data on citywide population and employment, including the following sources:

- **Washington State Growth Management Act (GMA)** – Passed in 1990 to require urbanizing jurisdictions to adopt comprehensive plans and to establish statewide thresholds and guides for growth. The intent of the GMA is to direct growth for sustainable development with sufficient public infrastructure and facilities to support such growth while also protecting resourcing lands. Additionally, since the establishment of the GMA, updated state level policies have been focused on promoting healthy, walkable communities; preserving natural resources; providing affordable housing opportunities; and planning for climate change and its impacts.
- **Clark County Countywide Planning Policies** – Used to establish a countywide framework for growth management, coordinate the comprehensive plans of all jurisdictions within Clark County for regional issues or issues affecting common borders, and develop and adopt county and city comprehensive plans.

- **Vancouver Comprehensive Plan 2011-2030** (City of Vancouver 2021a) – This plan envisioned the ~~e~~City for the next 20 years (through 2030) for community and economic development, housing, environment, public facilities and services, and annexation. It also provided strategies for the plan's implementation and established land use designations across the city, which are consistent with complimentary land use zones regulated by VMC Title 20. The 2011 Comprehensive Plan is the basis for the Our Vancouver Comprehensive Plan Update.
- **VMC Title 20, Land Use and Development Code** - Contains the City's zoning and development regulations, which are required to be updated and consistent with its Comprehensive Plan per GMA mandates.
- **City of Vancouver Shoreline Master Program** (City of Vancouver 2021b) – Envisions the development along the Vancouver shoreline, including how to promote public health, safety, and community welfare while ensuring no net loss of shoreline ecological functions. The SMP defines shoreline development and management practices that are in accordance with state practices and codes and provides specific guidelines regarding general requirements, exemptions and uses. The goal of the SMP is to allow for mutually compatible uses between shoreline preservation and land use development.
- **U.S. Census Bureau American Community Survey** (Census 2023a)- Provides a variety of demographic information on a yearly basis at the national, state, regional, and city levels. This EIS uses primarily ACS 2019-2023 five-year and 2023 one-year data as the basis for analysis for consistency with other recent studies completed for the Comprehensive Plan Update. 2023 is the baseline year of analysis for the Comprehensive Plan Update.
- OUR VANCOUVER **Community Atlas** (Design Workshop 2024) – Documents existing ~~e~~City conditions for a variety of topics including people; natural environment; cultural resources; built environment; economy; parks, recreation, open spaces, and trails; and a regulatory framework assessment to support the City's update of the Comprehensive Plan and VMC Title 20 per GMA requirements. The analysis is referenced in this EIS and will also be used to inform the Comprehensive Plan development.
- OUR VANCOUVER **Economic Conditions and Opportunities Analysis** (ECONorthwest 2024a) – Prepared to support the Comprehensive Plan Update and outlines the basis for the City's 2045 target of 43,198 jobs. The analysis includes findings related to economic conditions and competitiveness, including measures of employment, growth and productivity, business creation and retention, entrepreneurship, investment flows, access to capital, distribution of wealth and income, and racial and geographic inclusion. Key information from the memorandum is referenced in this EIS and will also be included in the Economic Opportunity Element of the Comprehensive Plan to inform the City's economic development through 2045.

- OUR VANCOUVER **Housing Needs Assessment** (ECONorthwest 2024b) – Establishes the City's 2045 target of 38,129 housing units through evaluation of current housing stock and supply, existing conditions and housing needs across the income spectrum, and the current and projected future demand for housing. The insights from this analysis are referenced in this EIS and will build a factual basis for updating the Housing Element of the Comprehensive Plan and its supporting policies through 2045.
- OUR VANCOUVER **Equity Analysis** (Seva Workshop 2024) - Includes context and conditions analysis that helps to identify which communities within the ~~e~~City have been historically marginalized and which communities are most vulnerable to displacement and policy changes. The City is committed to prioritizing these identified communities in the Comprehensive Plan Update process to help address past inequities.
- OUR VANCOUVER **Draft Health Impact Assessment** (BERK 2025) - Considers how the growth alternatives studied as part of the OUR VANCOUVER Comprehensive Plan periodic update may benefit and impact health in Vancouver as it relates to the built environment.

Analysts then reviewed the alternatives to determine potential adverse impacts and associated mitigation measures using the following metrics:

- Compatibility with land and shoreline use plans and policies
- Ability to accommodate adopted citywide minimum growth targets
- Compatibility with existing land uses
- Average wage of new jobs based on land use mix
- Level of commercial displacement risk

## Affected Environment

### Current Land Use

This section discusses the City's existing Comprehensive Plan land use designations and zoning, land cover, land uses, centers and corridors, commercial uses, industrial uses, and essential services. Refer to the Housing section of Chapter 3 for more information about current residential land uses.

#### Comprehensive Plan Land Use Designations and Zoning

The current Vancouver Comprehensive Plan establishes general patterns for future land use, transportation and other infrastructure needs. Subarea plans provide more detailed geographically based plans for neighborhoods, corridors, Urban Reserve areas, special districts and joint planning areas.

Citywide development is guided and allocated by zoning, codified in VMC Title 20, Land Use and Development Code. The City designates various use types within each zoning category, which include residential, commercial, and industrial zone districts in addition to specialized zone districts for mixed uses and parks and open spaces.

Table 5 provides the existing Comprehensive Plan designations, their respective descriptions, and corresponding zoning districts. Zoning establishment and requirements and development standards are regulated in VMC Chapter 20.410 as summarized in Appendix C, Land Use and Zoning Information. Figure 4 in Chapter 2 shows a map of the No Action Alternative Comprehensive Plan designations, and Figure 5 in Chapter 2 shows a map of the No Action Alternative zoning designations, which would be the same as current Comprehensive Plan and zoning designations.

Table 5. Current Comprehensive Plan Designations and Corresponding Zoning Districts

| Current Comprehensive Plan Designation | Description | Corresponding Zoning Districts/Zones | Allowed Uses |
|---|---|---|---|
| **Residential Urban Lower Density** | Predominantly lower density residential development with some allowances for middle housing types.[a] | R-2<br>R-4<br>R-6<br>R-9<br>R-17 | Single-family detached residential, duplexes, townhouse, and single-family homes on small lots using infill standards. |
| **Residential Urban Higher Density** | Predominantly higher-density residential uses. | R-18<br>R-22<br>R-30<br>R-35<br>R-50<br>Mixed Use (MX) | Apartments, condominiums, duplexes, townhouses, small-lot single-family homes, and mixed uses. |

| Current Comprehensive Plan Designation | Description | Corresponding Zoning Districts/Zones | Allowed Uses |
|---|---|---|---|
| Commercial and Mixed Use | Predominantly small to medium-scale mixed-use and/or commercial uses and services scaled to serve a neighborhood to citywide need. This designation includes specific, planned mixed-use areas within the city. | Neighborhood Commercial (CN)<br>Community Commercial (CC)<br>General Commercial (CG)<br>City Center (CX)<br>Waterfront Mixed Use (WX)<br>Vancouver Central Park (CPX)<br>Riverview Gateway (RGX)[b]<br>MX<br>The Heights (HX) | General retail, entertainment oriented, motor vehicle related uses, some office related uses, parks open space related uses, and some low intensity industrial uses. |
| Industrial | Predominantly industrial related uses, including airports. | Office Commercial Industrial (OCI)<br>Employment Center Mixed-Use (ECX)<br>Light Industrial (IL)<br>Heavy Industrial (IH)<br>Airport (A) | Basic utilities, some general retail, motor vehicle related uses, office related uses, light and heavy industrial uses, agricultural uses, airport and accessory uses, and parks and open space. |
| Open Space | Areas intended for parks, greenways, and natural areas. | Greenway (GW)<br>Natural Area (NA)<br>Park (P) | Some agricultural related uses, environmental management and education, and park and recreation facilities. |

| Current Comprehensive Plan Designation | Description | Corresponding Zoning Districts/Zones | Allowed Uses |
|---|---|---|---|
| Public Facility | Areas developed with or planned for public facilities. | All Zones | Schools, police departments, fire departments, and hospitals. |

*Source: City of Vancouver 2021a*

Notes:
a Middle housing refers to duplexes, townhouses, quadplexes, and sixplexes.
b RGX zone is also consistent with Low-Density Residential, High Density Residential, and Industrial Comprehensive Plan designations.

### Existing Land Uses

Vancouver has three loosely defined geographies with differing land uses: west (areas west of I-5), central (areas between I-5 and I-205) and east (areas east of I-205). These geographies within the ~~e~~City developed over time, generally west to east, and are reflective of different settlement patterns, regulations, and periods of growth (City of Vancouver 2023a).

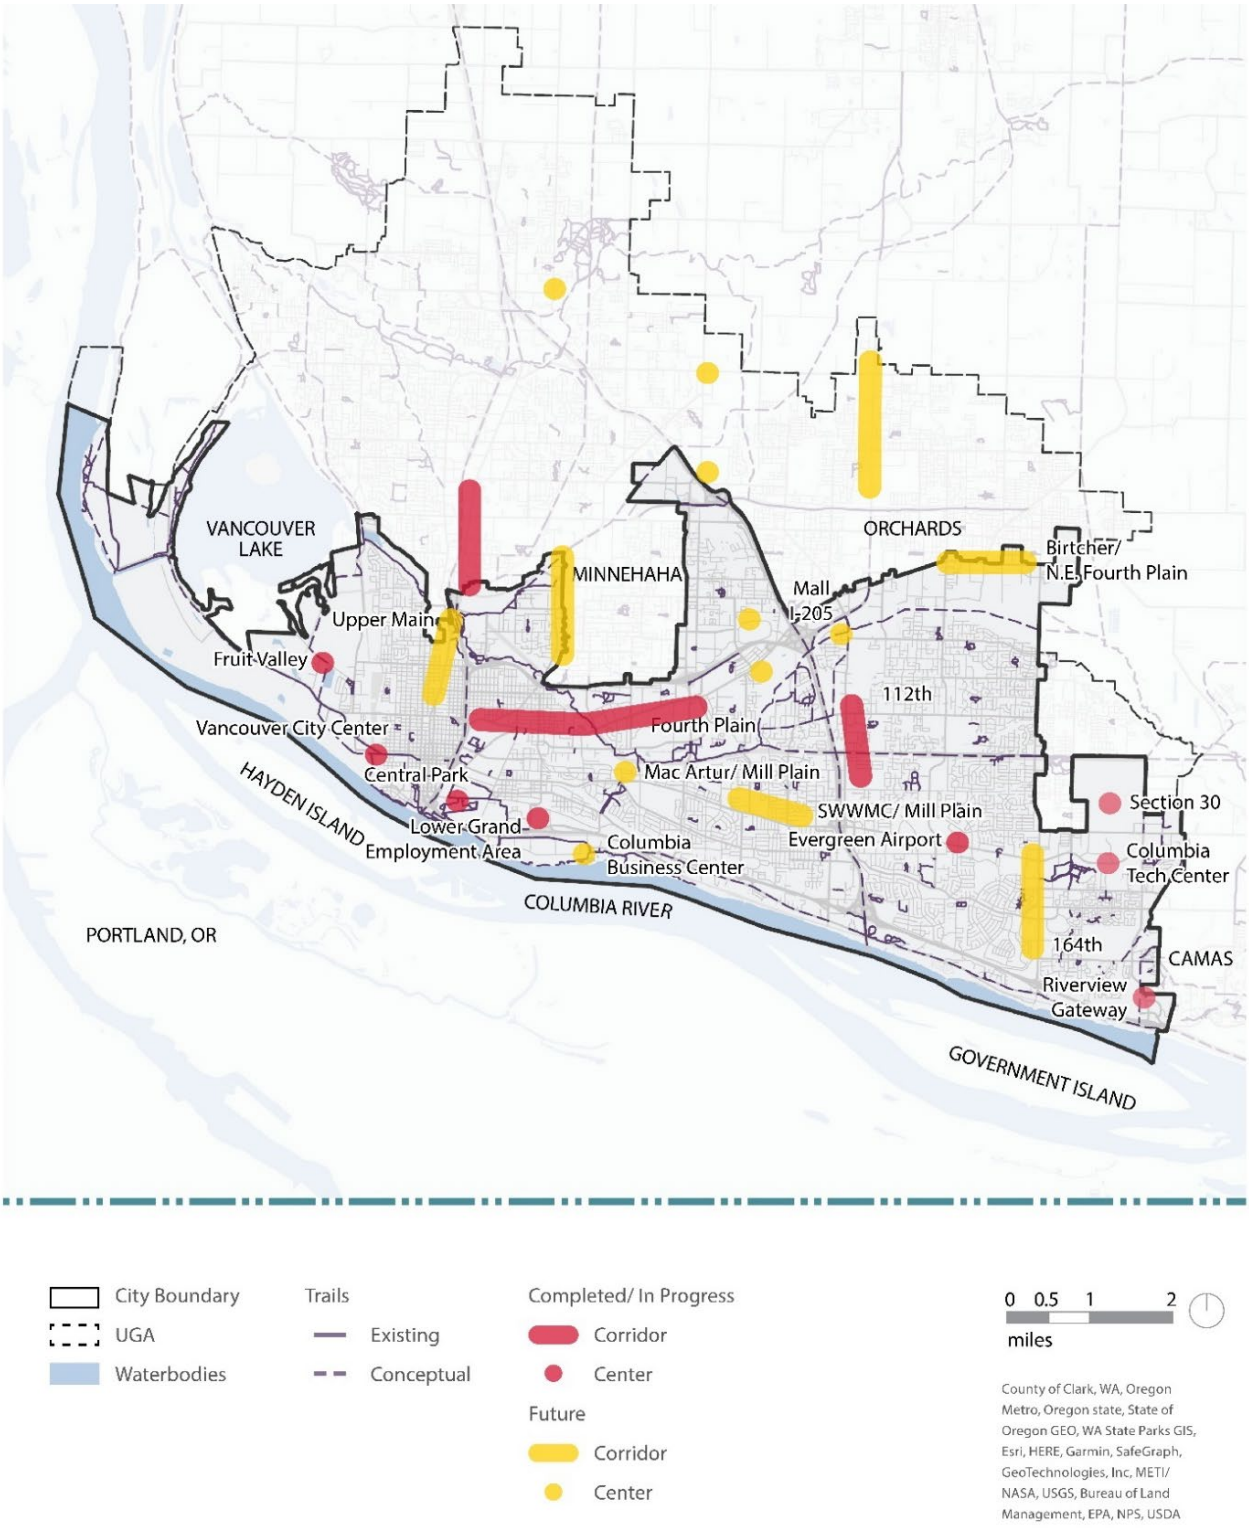
West Vancouver, including the downtown area, generally has smaller lots with denser uses such as office, retail, apartments, and vertical mixed-use. Farther west of downtown toward the Columbia River and Vancouver Lake, there are more intensive, industrial land uses such as manufacturing, gasoline storage facilities, and the Port of Vancouver. North of downtown, there are areas of traditional single-family detached housing on the historic City grid.

Central Vancouver has a more suburban character than the western areas, including postwar subdivisions and older big-box retail developments. The central portions of the ~~e~~City include the Fort Vancouver National Historic Site and Pearson Field, the City's municipal airport, as well as PeaceHealth Southwest Medical Center and surrounding medical office buildings, and the Vancouver Mall and surrounding commercial development.

Eastern areas of the City are the most suburban in land use patterns, with newer, largely detached single-family residential uses, big-box retail developments, and more recent office and mixed-use developments, such as the Columbia Tech Center and Vancouver Innovation Center.

### Centers and Corridors

The current Comprehensive Plan identifies the need to focus new growth in areas in or near urban centers and corridors rather than spreading growth uniformly throughout the ~~e~~City



(City of Vancouver 2021a). These areas are envisioned to contain a mixture of employment, housing, and cultural opportunities, and serve as community focal points, building on the unique characteristics of individual districts. The type and intensity of activities and development will vary depending on local circumstances. These areas can also provide opportunities for growth where services can be provided more efficiently.

The Community Development element of the current Vancouver Comprehensive Plan includes policies designed to "achieve the full potential of existing and emerging urban activity centers and the corridors that connect them" through strategies such as promoting or reinforcing a unique identity or function for individual areas, planning for a compact urban form with multiple uses, encouraging innovative and efficient private development, providing a range of transportation options, and investing in public facilities and amenities to serve the areas.

~~Figure 10~~ Figure 10 Figure 12 shows the location of completed and future corridors and centers envisioned by the current Vancouver Comprehensive Plan where subarea planning has occurred or is planned. Subarea plans add greater detail, guidance and predictability to future development for specific geographic areas. Completed subarea plans include:

- Vancouver Central City Vision Plan (2007)
- Fourth Plain Corridor Subarea Plan (2007)
- Central Park Plan Update (2008)
- Lower Grand Employment Area Subarea Plan (2008)
- Riverview Gateway Subarea Plan (2009)
- Section 30 Urban Employment Center Subarea Plan (2009)
- Fruit Valley Subarea Plan (2010)
- 112th Avenue Subarea Plan (2011)
- Heights District Plan (2020)

~~Figure 10~~ Figure 12. Centers and Corridors from Current Vancouver Comprehensive Plan

*Source: Design Workshop 2024*

## Current Shoreline Use

The City of Vancouver Shoreline Master Program (SMP), last updated in 2021, identifies Columbia River and Vancouver Lake as shorelines of statewide significance, which is a special category of shoreline that is considered of value to the entire state and has special rules and policies designed to preserve them for future generations (City of Vancouver 2021b). The SMP also identifies sections of Burnt Bridge Creek, Fifth Plain Creek, Lacamas Creek, Salmon Creek, Mill Creek, Curtin (Glenwood) Creek, and the Lake River as shorelines of the state, a category that includes all of the other water areas of the state and their associated shorelands.

The City assigns shoreline designations that are consistent with the Shoreline Management Act, the SMP guidelines, and the Comprehensive Plan, as described in Table 6. ~~Figure 11~~ ~~Figure 11~~ Figure 13 shows the locations of shoreline designations throughout the city.

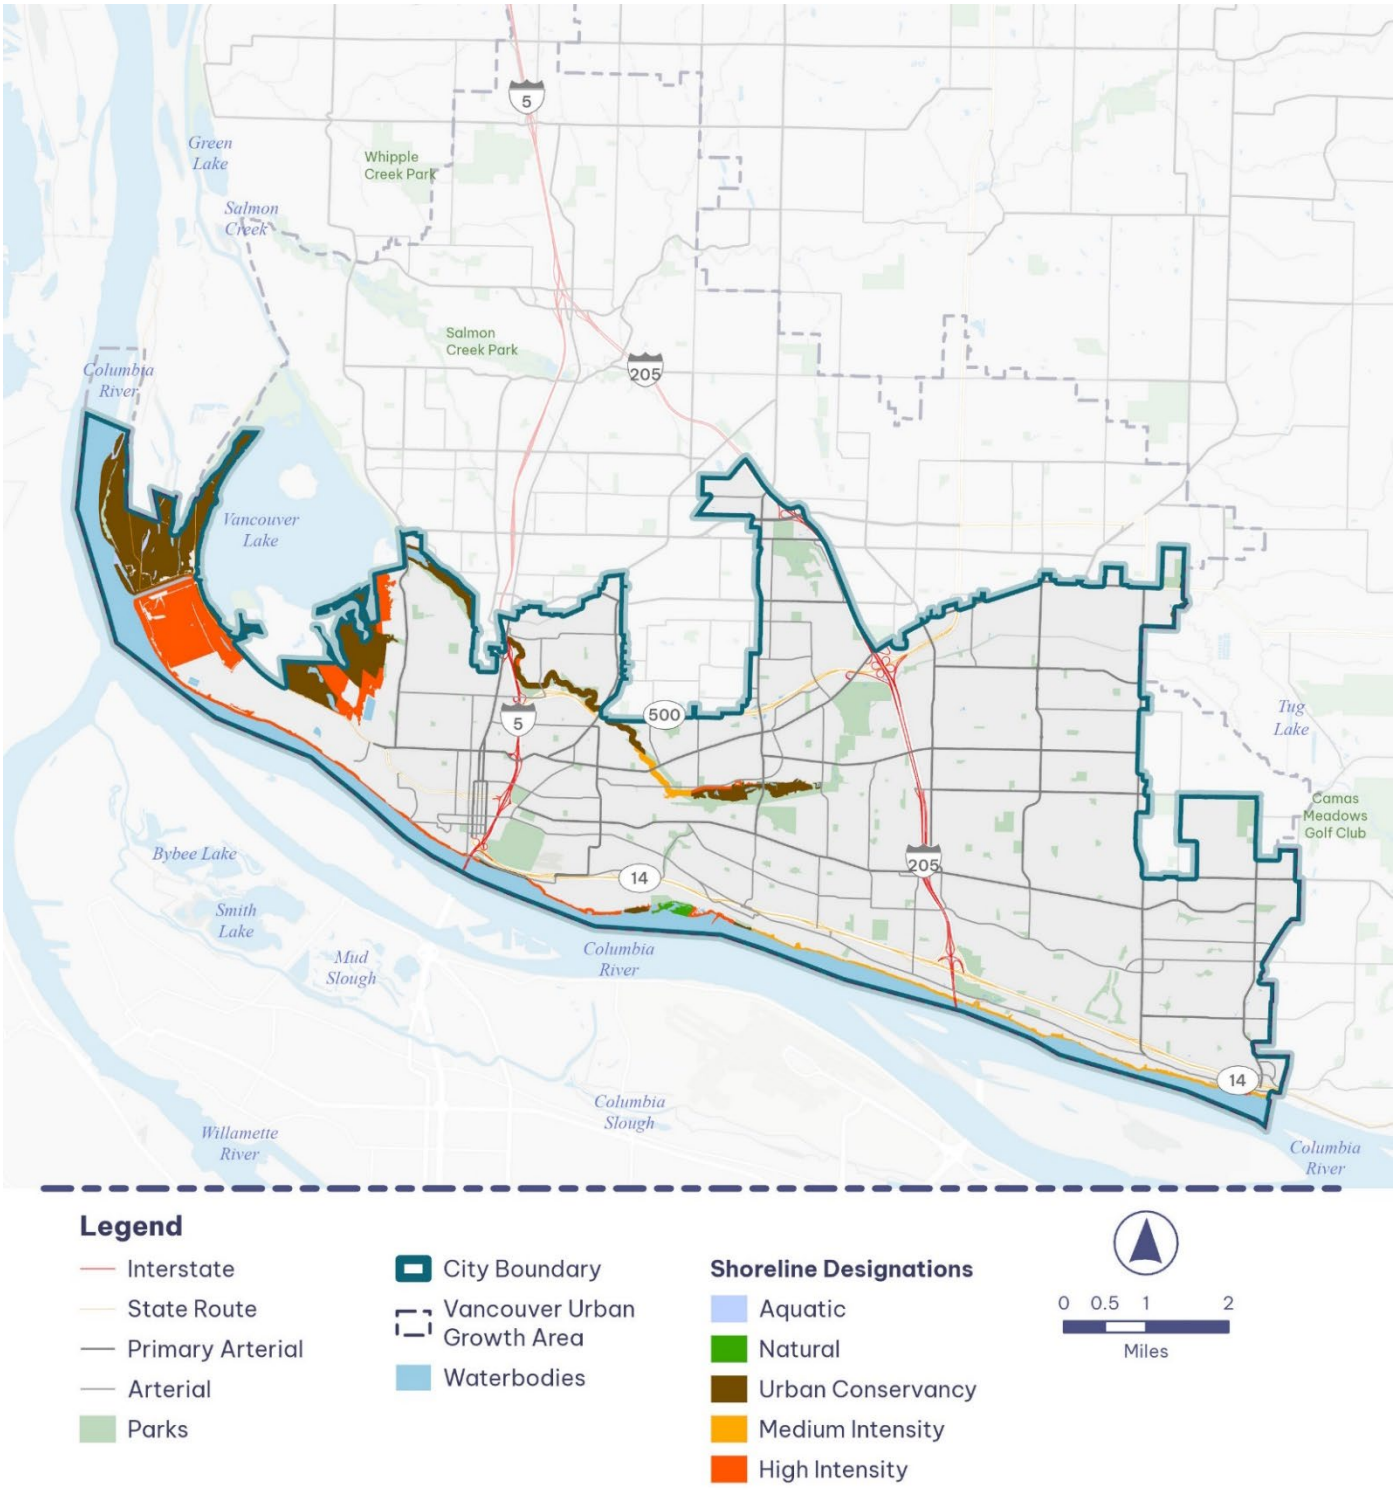


*Table 6. Shoreline Designations, Descriptions, and Allowed Uses*

| Shoreline Designations | Description | Allowed Uses |
|---|---|---|
| Aquatic | Covers lands and waters waterward of the ordinary high-water mark. | Water-dependent uses such as boat launches; aquaculture; marinas; docks, piers, and mooring buoys; floating homes, and water-dependent recreational uses |
| Natural | Covers shoreline areas that are relatively free of human influence or that include intact or minimally degraded shoreline ecological functions intolerant of human use. | Very low intensity uses, such as water-dependent recreational uses; ecological restoration, enhancement, and/or mitigation activities; and bioengineered or non-structural shoreline stabilization. |
| Urban Conservancy | Covers areas to be protected and restored shoreline ecological functions of open space, floodplains, and other sensitive lands where they exist in urban and developed settings. | Water-dependent or water-related residential uses, single-family residential, roadways and railroads, and utility uses |

| Shoreline Designations | Description | Allowed Uses |
|---|---|---|
| Medium Intensity | Generally, accommodates primarily residential development and related structures and other uses consistent with the designation criteria. | Agricultural uses, water-dependent and water-related commercial and institutional uses, recreational uses, single-family and multifamily residential, transportation, and utility uses. |
| High Intensity | Provides for high-intensity water-oriented commercial, transportation, and industrial uses while protecting the existing shoreline ecological functions and restoring ecological functions in shorelines where previously degraded. | Agricultural uses; water-dependent and water-related commercial, institutional, and industrial uses; transportation uses, and utility uses. |

~~Figure 11~~ Figure 13. Current Shoreline Designations

*Source: Clark County n.d.*

## Current Community Population and Employment

The GMA requires the City to show that it can accommodate population and employment growth as part of the Comprehensive Plan Update. The proposed update to the City's Comprehensive Plan will plan for growth of at least 38,129 new housing units and 43,198 new jobs by 2045. These minimum growth targets are based on population projections from the Washington State OFM, Clark County, recent trends, state law, and City policy to plan for long-term housing and employment needs. The Housing section of this chapter provides more information about the City's housing unit targets.

The data presented in this Affected Environment section is generally from 2023 for consistency with the baseline year of analysis for the Comprehensive Plan Update.

### Population

Vancouver has grown substantially over the past decade, increasing from a population of 161,791 in the 2010 decennial Census to 192,696 in the American Community Survey 2019-2023 five-year estimates (Census 2023a).

Table 7 summarizes demographic data for the City, including race, age, language spoken at home, income, and educational attainment (Census 2023a).

*Table 7. Existing Population Characteristics for Vancouver and Washington State (2023)*

| Characteristic | City of Vancouver | State of Washington |
|---|---|---|
| Total Population | 192,696 | 7,740,984 |
| Total Households | 79,747 | 3,020,558 |
| *Age (Table S0101)* | | |
| 19 and younger | 45,545 (24%) | 1,854,050 (24%) |
| 20 to 34 years old | 43,706 (23%) | 1,651,221 (21%) |
| 35 to 49 years old | 37,403 (18%) | 1,557,494 (20%) |
| 50 to 64 years old | 35,185 (18%) | 1,418,906 (18%) |
| 65 or older | 30,857 (16%) | 1,259,313 (16%) |
| *Race and Ethnicity (Table B03002)* | | |
| American Indian and Alaska Native | 794 (0.4%) | 63,389 (0.8%) |

| Characteristic | City of Vancouver | State of Washington |
|---|---|---|
| Asian | 10,091 (5%) | 720,927 (9%) |
| Black | 5,694 (3%) | 295,487 (4%) |
| Hispanic or Latine | 33,115 (17%) | 1,089,609 (14%) |
| Native Hawaiian and Other Pacific Islander | 3,487 (2%) | 52,674 (0.6%) |
| Other Race | 937 (0.5%) | 42,271 (0.5%) |
| Two or more races | 12,618 (7%) | 500,698 (6%) |
| White | 125,960 (65%) | 4,975,929 (64%) |
| *Language Spoken at Home by limited English Speaking Households (Table B16002)* | | |
| Russian, Polish, or other Slavic language | 679 (0.9%) | 10,325 (0.3%) |
| Spanish | 1,347 (1.7%) | 42,026 (1.4%) |
| Other Indo-European | 124 (0.2%) | 5,984 (0.2%) |
| Chinese (Mandarin and Cantonese) | 294 (0.4%) | 18,185 (0.6%) |
| Vietnamese | 187 (0.2%) | 9,101 (0.3%) |
| Tagalong | 43 (0.1%) | 2,675 (0.1%) |
| Other Asian and Pacific Island Languages | 155 (0.2%) | 8,624 (0.3%) |
| *Income and Poverty (Table DP03, B17017)* | | |
| Median Household Income | $80,618 | $94,605 |
| Household income below the poverty level | 8,878 (11%) | 294,072 (10%) |

| Characteristic | City of Vancouver | State of Washington |
|---|---|---|
| Household income at or above the poverty level | 70,869 (89%) | 2,726,486 (90%) |
| *Educational Attainment (Table DP02)* | | |
| Less than 9th grade | 4,154 (3%) | 185,425 (3%) |
| 9th to 12th grade, no diploma | 7,778 (6%) | 236,116 (4%) |
| High school graduate (includes equivalency) | 33,007 (25%) | 1,176,403 (22%) |
| Some college, no degree | 33,564 (25%) | 1,171,698 (22%) |
| Associate's degree | 13,394 (10%) | 542,351 (10%) |
| Bachelor's degree | 26,925 (20%) | 1,279,696 (24%) |
| Graduate or professional degree | 15,419 (12%) | 817,458 (15%) |

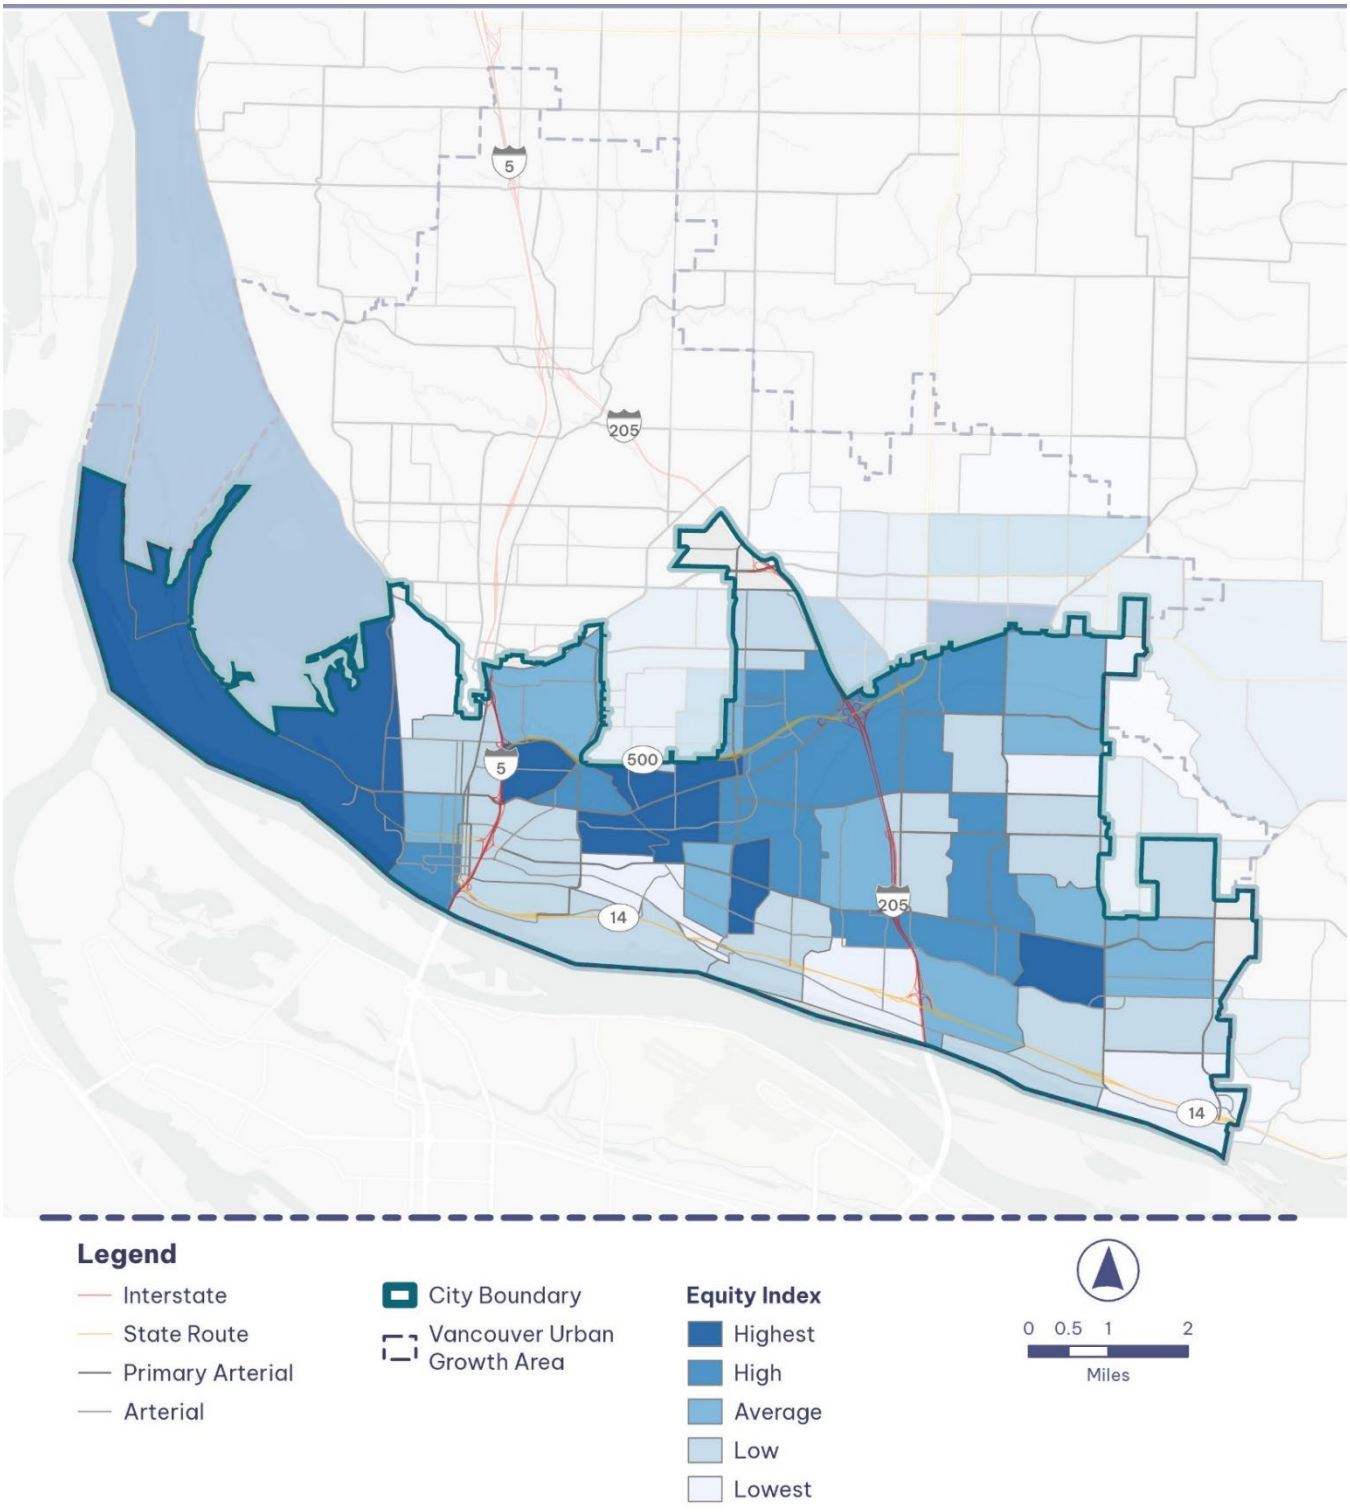
*Source: Census 2023a*

### Equity Index and Social Vulnerability Index

While developing the Comprehensive Plan Update, the City is accounting for equity considerations, including areas that may need additional investment based on current disparities. Part of this work includes identifying the locations of potentially underserved populations through an equity index, which focuses on assessing a set of metrics at the census tract level that include (City of Vancouver 2023c):

1. People of color (non-white and/or Hispanic/Latine)
2. People below 200% of the poverty level
3. Renters
4. Adults without a four-year degree
5. Households with limited English proficiency
6. People with disabilities
7. Youth under age 17
8. Older adults 65 and up

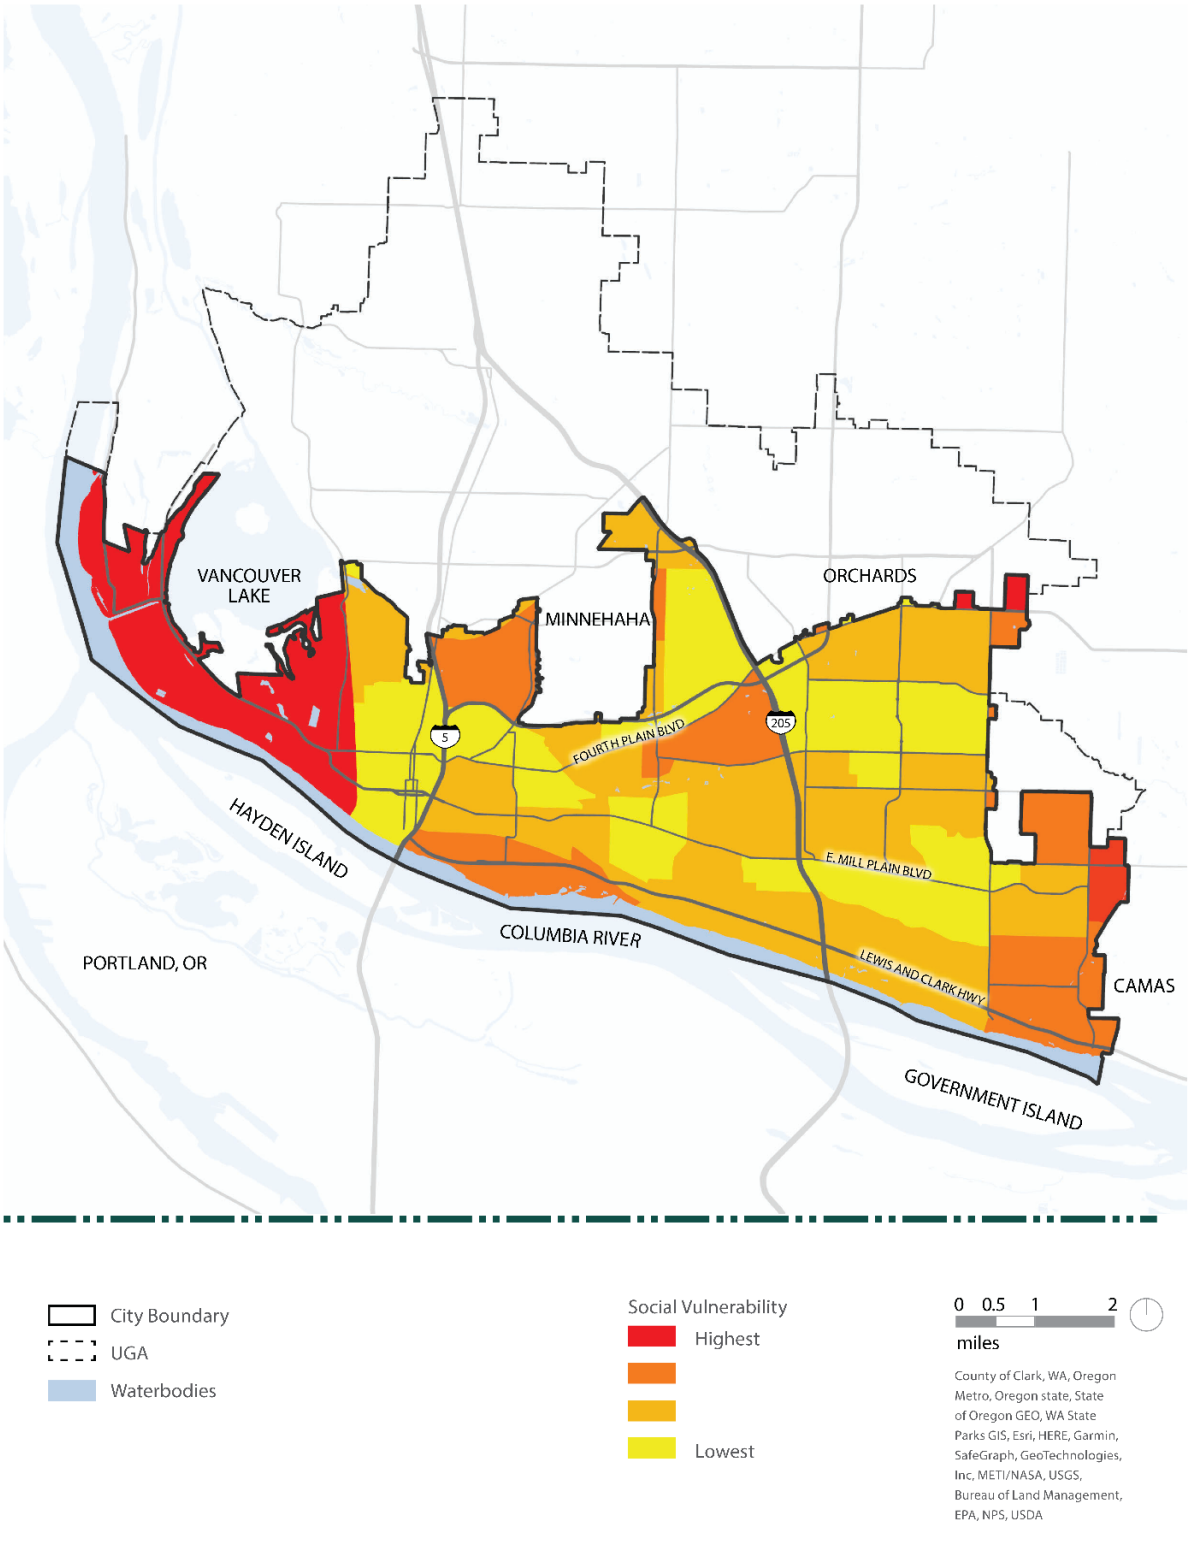
~~Figure 12~~ ~~Figure 12~~ Figure 14 identifies areas of higher equity populations (represented by higher equity index scores) to prioritize investments.



The City also uses the Social Vulnerability Index (SVI) developed by the Centers for Disease Control (CDC) and the Agency for Toxic Substance and Disease Registry (ATSDR), to assess populations most at risk during high-stakes situations like natural disasters and disease outbreaks (City of Vancouver 2023a). To determine social vulnerability, the CDC/ATSDR employs 16 factors, such as poverty, lack of vehicle access, and crowded housing, which are categorized into four themes: Socioeconomic Status, Household Characteristics, Racial and Ethnic Minority Status, and Housing Type/Vehicular Transportation Access (CDC/ATSDR 2022).

Understanding SVI is critical for emergency planners, city officials, public health authorities, state and local health departments, and nonprofit organizations. Together, they analyze municipalities at risk and provide support to the most vulnerable populations in the event of a disaster. This involves estimating the required supplies like food, water, medicine, and bedding, as well as the number of emergency personnel and shelters needed to assist people effectively (CDC/ATSDR 2022).

According to the CDC/ATSDR census tracts, the City experiences a high SVI. Areas with medium-high and high social vulnerability are concentrated along major interstates and arterial roads. The greater Vancouver area, on the other hand, displays a lower level of vulnerability, ranging from low to low-medium vulnerability.



The SVI map (~~Figure 13~~ ~~Figure 13~~ Figure 15) is intended to reflect existing conditions and does not indicate priority areas for investment. However, it can be used as a tool to identify areas that are especially susceptible to the impacts of public investment when considered alongside other factors like residential density and housing costs. Public investment and private development can bring numerous benefits, but if equity considerations are not prioritized, it can lead to impacts on vulnerable communities, including pressures on the housing market and involuntary displacement.

~~Figure 12~~ Figure 14. Equity Index Map

*Source: City of Vancouver 2023c*

~~Figure 13~~ Figure 15. Social Vulnerability Index Map

*Source: Design Workshop 2024*

### Employment

In 2023, Vancouver was home to more than 100,000 jobs (Census 2023a). The number of jobs in Vancouver increased rapidly between 2011 and 2023, growing from 77,846 jobs in 2011 to 101,285 jobs in 2023 (ECONorthwest 2024a; Census 2023a). 2023 is the baseline year of analysis for the Comprehensive Plan Update.

Service-based industries are concentrated in Vancouver and make up a large and growing share of the city's workforce (ECONorthwest 2024a). In both the ~~e~~City and the region, the health care and social assistance industry provided the largest share of jobs (almost 20%). Other industries that represented some of the largest shares of employment for the City included retail trade, educational services, manufacturing, accommodation and food services, and construction. Many of the largest employers in Clark County are based in Vancouver and represent key industry clusters in healthcare, technology, and education, including PeaceHealth, Vancouver Public Schools, the Vancouver Clinic, Bonneville Power Administration, and Hewlett-Packard.

Jobs are moving toward local employment hubs like Downtown Vancouver, the Vancouver Innovation Center, and large institutions (ECONorthwest 2024a). Employment trends at the census tract level show that employment is growing in these locations, while declining along older, suburban-style commercial areas like Fourth Plain Boulevard. While many cities (including Portland) have struggled to maintain Downtown areas post-pandemic, Vancouver is showing a stronger rebound than the region.

Land use mix can have an impact on wages due to the types of jobs that can be created in different districts. For example, a heavy industrial area would include capacity for manufacturing jobs, while a mixed-use area may include a combination of healthcare, retail, service industry, and professional services jobs. Data from the U.S. Census provides average wages for a range of industries in the Portland metropolitan area, which are assumed to occur in particular zoning districts, as shown in Table 8 (Census 2023b).

*Table 8. Average Annual Wages for Job Types and Corresponding Zoning Districts*

| Proposed Zoning District[a] | Types of Jobs | Average Annual Wages |
|---|---|---|
| Heavy Industrial | Manufacturing | $77,000 |
| Institutional/Campus | Public Administration, Education, Hospital | $85,000 |
| Industrial Employment | Warehousing, Specialty Trade Contractors | $69,000 |
| Low-Scale Neighborhood | Retail, Food/Drink Services | $39,000 |
| Medium-Scale Neighborhood | Retail, Food/Drink Services | $39,000 |
| Manufactured Home | None | N/A |
| Mixed Use | Healthcare, Retail, Food/Drink Services, Professional Services | $72,000 |
| Regional Activity Center | Healthcare, Retail, Food/Drink Services, Professional Services | $72,000 |

*Source: Census 2023b*

Note:
a Proposed zoning districts would apply only under the two action alternatives. For the No Action Alternative, existing land use and zoning designations would remain in place. The corresponding zoning districts for the No Action Alternative are shown in Table 2.

## Potential Impacts

This section discusses the potential impacts of the alternatives related to the following land and shoreline use-related metrics:

- Consistency with land and shoreline use plans and policies
- Ability to accommodate adopted citywide minimum growth targets
- Compatibility with existing land uses
- Average wage of new jobs based on land use mix
- Level of commercial displacement risk

## Impacts Common to All Alternatives

The following sections outline impacts that are expected to occur under all the alternatives. Not all metrics are addressed, as some metrics do not have impacts common to all alternatives. Impacts for each alternative are discussed in the next subsections.

### Consistency with Land and Shoreline Use Plans and Policies

Consistency with other land use plans and policies would vary among the alternatives, as discussed in the subsections for each alternative. None of the alternatives would propose changes to the Shoreline Master Program, and none of the proposed changes in the action alternatives would directly affect the SMP.

### Ability to Accommodate Adopted Citywide Minimum Growth Targets

New population and job growth is expected to occur under all the alternatives. The City's current population growth trend is expected to continue, reaching an estimated population of 281,000 by 2045 inside current City limits, based on Washington State OFM projections, under all of the alternatives. The City will likely grow further than this through annexation of land currently in the unincorporated Vancouver Urban Growth Area over the next 20 years, but the extent or timing is not known. However, the pace and distribution of growth would vary under each alternative.

Under all alternatives, the actual pace and distribution of future growth would be influenced in part by the implementation of the current (No Action) or proposed (Alternatives 1, ~~or~~ 2 or Preferred Alternative) Comprehensive Plan policies, related regulations and actions, and by decisions made by individual property owners and developers. The No Action Alternative would not be able to accommodate the adopted growth targets.

### Compatibility with Existing Land Uses

Because growth and development would occur under all alternatives, there would be some potential for compatibility issues between existing land uses where proposals for denser or more intense land uses border existing parcels with less dense, less-intense land uses. However, none of the alternatives would propose changes to land use and zoning designations that would mix uses that are clearly incompatible. For example, the location and size of heavy industrial lands would remain the same under all alternatives and would continue to prohibit incompatible uses such as housing within those zones. Likewise, heavy industrial uses would not be permitted in other zoning districts under any of the alternatives. In addition, no changes in land uses would occur on lands designated as parks and open space under any of the alternatives.

Middle housing would be allowed in single-family zones under all the alternatives, because under the No Action Alternative it would be allowed by the state imposition of a model

ordinance. Land use compatibility impacts could be more visible in the action alternatives, which propose greater density, intensity, and mixes of uses in more areas of the city. These potential impacts are further described in the Alternative 1, ~~and~~ Alternative 2 and Preferred Alternative subsections and in the Aesthetics subsection.

### Average Wage of New Jobs Based on Land Use Mix

Although Alternatives 1 and 2 and the Preferred Alternative would have capacity for more jobs than the No Action Alternative, as discussed in Chapter 2, the overall average wage of new jobs is expected to be similar among the alternatives. All alternatives would focus most of their new job growth in industrial and mixed-use or commercial land use designations, which would result in similar average wages based on the job types assumed in these land uses (refer to Table 8 for these average wages).

### Level of Commercial Displacement Risk

Commercial displacement is likely to occur to some extent under all alternatives ~~as~~ because the ~~c~~City will experience some amount of growth and development. Per the Clark County 2023 VBLM, parcels that are considered "underutilized" based on the building value per acre are considered more likely to redevelop than those that are fully "built" (Clark County 2023). Older buildings may also be more likely to redevelop based on their condition. Underutilized parcels with mixed-use, medium-density, or high-density land use designations under all of the alternatives may be more likely to redevelop into higher-density uses, which could potentially result in commercial displacements.

Alternatives 1 and 2 and the Preferred Alternative include more areas that would be designated as these zoning districts compared to the No Action Alternative and therefore may have higher potential for commercial displacement and need for mitigation. Under ~~both~~ the action alternatives, there would be ~~more than 1,000~~around 200[1] commercial buildings on parcels considered "underutilized" that are in medium/high-density residential or mixed-use/regional activity center designations (BERK 2025). However, ~~Alternatives 1 and 2~~the action alternatives would also create more opportunities for new business spaces and anti-displacement measures compared to the No Action Alternative. The subsections for each

[1] In conducting commercial displacement analysis for the Preferred Alternative, staff found that the initial data analysis for the Draft EIS double counted certain parcels and therefore the overall count of potential commercial displacement under the action alternatives was much higher. This error was corrected in the analysis for Alternatives 1 and 2 as well as the Preferred Alternative.

alternative below provide more information about areas that could be more vulnerable to commercial displacement.

## No Action Alternative

### Consistency with Land and Shoreline Use Plans and Policies

The No Action Alternative would be inconsistent with the City's proposed Comprehensive Plan Update and associated policy direction, as it assumes that no changes to the Comprehensive Plan would be implemented. The City is required by GMA to update its Comprehensive Plan every 10 years. By failing to implement updates to the Comprehensive Plan and provide land to accommodate anticipated future growth, the No Action Alternative would be inconsistent with GMA.

Because the No Action Alternative would not increase residential intensity and density along major corridors across the city, there would be fewer opportunities to locate housing units within close proximity of essential services. This approach would be inconsistent with the City's policy direction to foster connected and accessible neighborhoods, as discussed further in the Housing section.

### Ability to Accommodate Adopted Citywide Minimum Growth Targets

The No Action Alternative would not have sufficient capacity to accommodate adopted citywide growth targets of at least 38,129 new housing units and 43,198 new jobs. Based on the assessment of current land use designations citywide, the No Action Alternative would have capacity for only approximately 29,600 new housing units and 16,600 new jobs.

### Compatibility with Existing Land Uses

Because the No Action Alternative would retain existing land use and zoning designations, there would be no notable impacts to compatibility with existing land uses beyond those noted in the Impacts Common to All Alternatives section.

### Level of Commercial Displacement Risk

Commercial displacement would likely occur to a lesser extent than under Alternatives 1 and 2 and the Preferred Alternative. Parcels potentially vulnerable to displacement due to building age and land use designation would be dispersed around the city. The No Action Alternative would also create fewer new spaces for businesses and maintain existing ~~e~~City policies, which would provide less opportunity for new anti-displacement measures (BERK 2025).

## Alternative 1

### Consistency with Land and Shoreline Use Plans and Policies

Alternative 1 would be compatible with the City's proposed Comprehensive Plan Update because it assumes the proposed new land use designations and zoning code would be implemented. Notably, the zoning designation of all properties within the City limits would change from what they are today.

Allowing increased residential density and intensity, and a greater mix of uses, along major corridors across the ~~e~~City would place essential services in greater proximity to more housing units compared to the No Action Alternative. This approach would be consistent with the City's policy direction to foster connected and accessible neighborhoods, as discussed further in the Housing section.

### Ability to Accommodate Adopted Citywide Minimum Growth Targets

Under Alternative 1, proposed changes in land use and zoning designations would result in a higher capacity for new housing units and jobs than the No Action Alternative and the Preferred Alternative but a lower capacity than Alternative 2. Based on market feasibility and redevelopment potential, Alternative 1 would have capacity for approximately 45,100 new housing units and 46,000 new jobs citywide, which exceeds the City's minimum 2045 planning targets.

### Compatibility with Existing Land Uses

Alternative 1 would have a modestly higher potential for incompatibility between existing land uses compared to the No Action Alternative, as it would accommodate denser and more intense building types and growth, and a greater mix of residential and commercial land uses, in more areas of the city.

For example, existing areas of predominantly single-family residential development would be redesignated as Low-Scale Neighborhoods, which would allow small-scale commercial activities like cafés, salons, professional services, and restaurants mostly serving the surrounding neighborhood. This new mix of uses would provide benefits to neighboring residents who would have more potential opportunities for services within walking distance; however, the mix of uses would need to be managed to ensure compatibility.

In addition, Low-Scale Neighborhoods that would be adjacent to areas planned for Medium-Scale Neighborhoods under Alternative 1 could experience greater incompatibility due to the scale of development allowed under the Medium-Scale Neighborhood zoning district, as discussed further in the Aesthetics section. These changes would be most pronounced in West Vancouver just north of downtown, in Central Vancouver along East Mill Plain

Boulevard, and in East Vancouver along Mill Plain Boulevard, 164th Avenue, and 192nd Avenue.

### Level of Commercial Displacement Risk

Parcels that are potentially vulnerable to commercial displacement based on age or "underutilized" status and land use designation would be similar under ~~both~~ the action alternatives. These parcels would include older buildings dispersed across the city, as well as buildings on "underutilized" parcels located around the city, with concentrations west of I-5 in West Vancouver, around the Fourth Plain area and just north of SR 14 in Central Vancouver, and along Mill Plain Boulevard in East Vancouver. However, ~~both~~ the action alternatives would also create more opportunities for new business spaces and include anti-displacement measures (BERK 2025).

## Alternative 2

### Consistency with Land and Shoreline Use Plans and Policies

Like Alternative 1 and the Preferred Alternative, Alternative 2 would be compatible with the City's proposed Comprehensive Plan Update because it assumes the proposed new land use designations and zoning code would be implemented. Like in Alternative 1 and the Preferred Alternative, the zoning designation of all properties within the City limits would change from what they are today.

Like Alternative 1 and the Preferred Alternative, allowing for increased residential density and intensity, and a greater mix of uses, along major corridors across the ~~c~~City would place essential services in greater proximity to more housing units. This approach would be consistent with the City's policy direction to foster connected and accessible neighborhoods, as discussed further in the Housing section.

### Ability to Accommodate Adopted Citywide Growth Targets

With the proposed changes in land use and zoning designations, Alternative 2 would have the highest capacity for new housing units and jobs of all the alternatives. Based on market feasibility and redevelopment potential, Alternative 2 would have capacity for approximately 50,700 new housing units and 49,300 new jobs citywide, which exceeds the City's minimum 2045 planning targets and is about 10% higher than Alternative 1 and the Preferred Alternative.

### Compatibility with Existing Land Uses

Alternative 2 would have the most potential for incompatibility between existing land uses compared to the No Action Alternative, ~~and~~ Alternative 1 and the Preferred Alternative, as it would accommodate denser and more intense building types and growth, and a greater mix of residential and commercial land uses, in most areas of the city. Existing single-family

residential areas that would be designated as Medium-Scale Neighborhoods would experience the greatest potential changes in the mix of land uses and scale of development. More of these changes would occur throughout the city, similar to the Preferred Alternative, than under Alternative 1 or the No Action Alternative but would be most pronounced in West Vancouver north of downtown, in Central Vancouver along East Mill Plain Boulevard and Northeast Fourth Plain Boulevard, and in large parts of East Vancouver along and between the Mill Plain Boulevard, 164th Avenue, and 192nd Avenue corridors.

### Level of Commercial Displacement Risk

Under Action Alternative 2, potential commercial displacement risk impacts and opportunities would be similar to those under Alternative 1 and the Preferred Alternative (BERK 2025).

## Preferred Alternative

### Consistency with Land and Shoreline Use Plans and Policies

As with Alternatives 1 and 2, the Preferred Alternative would be compatible with the City's proposed Comprehensive Plan Update because it assumes the proposed new land use designations and zoning code would be implemented. The zoning designations of all properties within the City limits would change from what they are today.

As with Alternatives 1 and 2, allowing for increased residential density and intensity, and a greater mix of uses along major corridors across the City would place essential services in greater proximity to more housing units. This approach would be consistent with the City's policy direction to foster connected and accessible neighborhoods, as discussed further in the Housing section.

### Ability to Accommodate Adopted Citywide Growth Targets

Under the Preferred Alternative, proposed changes in land use and zoning designations would result in a higher capacity for new housing units and jobs than the No Action Alternative and a lower capacity than Alternatives 1 and 2. Based on market feasibility and redevelopment potential, the Preferred Alternative would have capacity for approximately 44,100 new housing units and 45,100 new jobs citywide, which exceeds the City's minimum 2045 planning targets.

### Compatibility with Existing Land Uses

The Preferred Alternative would have a modestly higher potential for incompatibility between existing land uses compared to the No Action Alternative and would be similar to Alternatives 1 and 2, as it would accommodate denser and more intense building types and growth, and a greater mix of residential and commercial land uses, in more areas of the city.

Similar to Alternatives 1 and 2, existing areas of predominantly single-family residential development would be redesignated as Low-Scale Neighborhoods, which would allow small-scale commercial activities like cafés, salons, professional services, small medical offices, and restaurants mostly serving the surrounding neighborhood. This new mix of uses would provide benefits to neighboring residents who would have more potential opportunities for services within walking distance; however, the mix of uses would need to be managed to ensure compatibility.

Similar to Alternatives 1 and 2, existing single-family residential areas that would be designated as Medium-Scale Neighborhoods would experience the greatest potential changes in the mix of land uses and scale of development. The Preferred Alternative would distribute Medium-Scale Neighborhoods throughout the city, whereas Alternatives 1 or 2 focused Medium-Scale Neighborhoods in more limited locations in West, Central and East Vancouver.

As with Alternatives 1 and 2, Low-Scale Neighborhoods that would be adjacent to areas planned for Medium-Scale Neighborhoods under the Preferred Alternative could experience greater incompatibility due to the scale of development allowed under the Medium-Scale Neighborhood zoning district, as discussed further in the Aesthetics section.

### Level of Commercial Displacement Risk

Under the Preferred Alternative, potential commercial displacement risk impacts and opportunities would be similar to those under Alternative 1 and 2 (BERK 2025).

## Avoidance, Minimization, and Mitigation Measures

Land and shoreline use under all alternatives would be subject to the requirements in current applicable state, county, and city land and shoreline use laws and policies, including the GMA, Clark County Countywide Planning Policies, and the City's SMP.

The No Action Alternative would remain subject to the existing Comprehensive Plan goals and policies regarding Land and Shoreline Use the City's Land Use and Development Code (VMC Title 20), including SEPA rules and policies in VMC Chapter 20.790.

The action alternatives would be subject to the City's proposed Comprehensive Plan Update Land Use and Development chapter goals and policies, and proposed revisions to VMC Title 20 with the new development and zoning code for the implementing base land use districts.

The following measures would help to avoid, minimize, and mitigate potential land and shoreline use impacts under the action alternatives:

- Adopt and adhere to the updated Comprehensive Plan Land Use and Development chapter goals and policies. The proposed goals and policies ~~under consideration~~ include:
    - Use the Growth Concept and Comprehensive Plan Land Use Designations to guide how and where growth and development occurs in the City.
    - Ensure rezoning of property is in alignment with the Land Use Designations identified in the Comprehensive Plan, and the City is able to provide adequate infrastructure and municipal services to serve the proposed use.
    - Focus the City's highest intensity of future growth in the Urban Core to reinforce it as the region's primary destination for services, amenities, nightlife and employment.
    - Develop Regional Centers as compact, high-intensity mixed-use hubs that provide a balance of housing, jobs, and services that complement the Urban Core, that are connected through the high-capacity transit network.
    - Focus growth and investment in Local Centers to create compact, mixed-use districts along key corridors and intersections that provide daily goods, services, jobs, in a manner that complements uses in Regional Centers and the Urban Core.
    - Develop Neighborhood Centers as accessible, neighborhood-serving districts that bring daily goods, services, and gathering spaces closer to where people live, supported by a mix of low- to medium-scale housing.
    - Direct new employment growth into Employment Centers with close proximity to housing, commercial activities, public services, employment and amenities.
    - Develop and update subarea plans for ~~key~~ centers identified in the plan's growth concept, facilitating the development of integrated residential, commercial, employment and community uses ~~and corridors citywide to facilitate integrated land uses~~.
    - Develop regulations that provide transitions between zoning districts to ensure compatibility of adjacent land uses.
    - Promote efficient land use by focusing new development in areas with existing infrastructure and moving toward a more compact urban form.
    - Support efforts to retrofit or repurpose underutilized buildings, structures, and infrastructure to develop new housing and commercial spaces.
    - Prioritize, f~~F~~acilitate and incentivize development on infill and underutilized ~~lands~~ lots and brownfield sites.
    - Facilitate and expand allowances for shared utilization of parking facilities, and implement strategic pricing mechanisms to regulate on-street parking availability in Mixed Use Neighborhoods and Regional Activity Centers.
    - Ensure impact fees, system development charges and utility rates are proportional to development scale.

- Foster a safe community by encouraging street level activity and thoughtful building and infrastructure design that enhance public safety and community well-being.
- Expand access to municipal and community-based services and amenities by prioritizing investment in underserved areas.
- Tailor regulations, incentives and investments to facilitate development and community resources ~~and community resources~~ near current and future transit stations, ensuring new development is accessible to ~~promoting access by~~ all community members, including historically excluded and underserved communities and those most burdened by transportation cost or reliant on public transit.
- Incentivize and remove regulatory barriers to locating grocery stores and neighborhood markets near housing and in underserved neighborhoods and ~~Incentivize and remove regulatory barriers to locating grocery stores and neighborhood markets near housing and in underserved neighborhoods.~~ support establishment of community-owned or cooperative grocery models to strengthen neighborhood food access where the private market fails to meet demand.
- Implement anti-displacement strategies and actions that protect residents and businesses in advance of public investment so communities can remain in place and benefit from improvements.
- Conserve and invest in industrial lands and other areas that provide employment for middle- and high-wage jobs.
- Utilize City-controlled real estate to provide affordable commercial leasing opportunities for small and emerging businesses.
- Support businesses that create high-quality jobs by reducing barriers to growth, streamlining development processes, and ensuring access to necessary resources and infrastructure.
- Protect existing Critical Areas within the City, and Shorelines of Statewide Significance, and ensure no net loss of ecological functions through avoidance of impacts, conservation design principles, and compensatory mitigation when loss of ecological function cannot be avoided.
- Work with Clark County and residents in the Urban Growth Area to facilitate orderly, fiscally sustainable annexations, ensuring urban level of service standards with logical boundary considerations.
- Continue to update the Comprehensive Plan and implementing regulations in response to the annual review process, state-mandated 5-year Implementation Progress Report, and 10-Year periodic review requirement that includes updates to long-term growth forecasts and regional land capacity analysis.

- Adopt and adhere to the development standards included in the proposed ~~form-based~~ new zoning code and development regulations, which would cover topics such as:
    - Base zoning district requirements, including standards for base density, height range, allowed building types, use requirements and additional requirements such as open space, overlay districts and environmental regulations.
    - Building type requirements, including applicability in each base zoning district, lot dimensions and coverage, building placement and build-out, building and story height, parking ~~ratio and location~~ regulations and other additional requirements specific to a building type.
    - Use requirements for the base zoning districts, which identifies the categories of uses allowed, types of use approvals, types of primary uses, and specific standards that are applicable to land use permits for the base zoning districts.

Future site-specific development would be subject to additional SEPA review, including an analysis of potential land and shoreline use impacts.

### Significant Unavoidable Adverse Impacts

The No Action Alternative would have significant adverse impacts to land and shoreline use because it would not provide sufficient capacity for development to comply with the GMA and meet the City's minimum 2045 housing and jobs targets. The action alternatives have the potential to create impacts on land and shoreline use as a result of changes in land use and zoning designations. The anticipated changes would occur incrementally, and with the implementation of avoidance, minimization, and mitigation measures, no significant unavoidable adverse impacts to land and shoreline use are anticipated for Alternative 1, ~~or~~ Alternative 2, or the Preferred Alternative.

## Housing

### Methodology

Analysts reviewed relevant information about the existing housing supply and types, affordability, and displacement risk, including the following sources:

- CoStar commercial real estate database (CoStar 2023)
- Housing Needs and Land Capacity Analysis (ECONorthwest 2026)
- Our Vancouver Housing Needs Assessment (ECONorthwest 2024b)
- Our Vancouver Health Impact Assessment (BERK 2025)
- Redfin (2023)
- 2020 Reside Vancouver Anti-Displacement Plan (Thread Community Planning 2020)
- US Census Bureau American Community Survey (Census 2023a)

This EIS uses primarily ACS 2019-2023 five-year and 2023 one-year data as the basis for analysis for consistency with other recent studies completed for the Comprehensive Plan Update. 2023 is the baseline year of analysis for the Comprehensive Plan Update.

Analysts then reviewed the alternatives to determine potential adverse impacts and associated mitigation measures using the following metrics:

- Level of supply, diversity, and potential cost of housing
- Amount of new housing in areas with high displacement risk
- Amount of new housing in connected and accessible neighborhoods
- Level of housing capacity for all income bands
- Consistency with housing plans and policies

## Affected Environment

The data presented in this Affected Environment section is generally from 2023 for consistency with the baseline year of analysis for the Comprehensive Plan Update.

### Current Housing Supply and Mix

In 2023 there were 90,263 total housing units in Vancouver, a more than 25% increase from 71,649 in 2011 (Census 2023a).The dominant type of housing is single-family detached housing (43,209 units), which composes nearly half (48%) of the total number of housing units in Vancouver, compared to 65% of housing units in Clark County. Single-family housing also makes up 73% of the City land area zoned for residential districts. The remaining housing stock in Vancouver includes an estimated 35% multifamily housing (31,702 units), which is housing consisting of five or more units, and 16% "plex housing" (14,092 units), which is single-family attached units, duplexes, triplexes, and fourplexes (Census 2023a).

Vancouver has a higher share of multifamily housing than Clark County, with nearly one-half (around 43%) of Vancouver residential buildings having more than one unit compared to about 25% of the county's buildings (Census 2023a). Permit data analysis shows a steady increase in multifamily development in recent years.

The predominant housing types vary from west to east depending on geographic areas of the city. West Vancouver, including downtown neighborhoods, generally have older buildings and smaller lots with denser uses, including traditional apartments and vertical mixed-use buildings. Along the Vancouver Waterfront, there are newer mixed-use high-rise buildings accommodating denser residential uses. Heading north of downtown Vancouver toward Burnt Bridge Creek, there are communities with older, low-density, single-family detached residential development.

In Central Vancouver, lower-density, single-family residential development generally dominates the housing supply, except for neighborhoods such as Harney Heights, North Garrison Heights and Columbia Way, where there are several multifamily residential developments.

In East Vancouver, the housing stock is also predominantly suburban-style, single-family detached buildings. There are pockets of medium- to high-density multifamily residential areas in the Fircrest and Fisher's Landing neighborhoods and east of I-205 along the Mill Plain Boulevard corridor.

## Housing Needs

From 2023 to 2045, the City will need a total of 38,129 new housing units to support projected growth, according to the Our Vancouver Housing Needs Assessment (ECONorthwest 2024b, ECONorthwest 2026). Overall, this means an estimated 1,733 housing units need to be built or created on average per year from 2023 to 2045 to meet the City's housing needs. As the existing City housing stock has increased by around 1,466 housing units per year over the last decade from 2012 to 2022 (per OFM data), housing production will need to increase by around 267 housing units per year.

To comply with H.B. 1220, local governments must plan for and accommodate housing affordable to all income levels. The Housing Needs and Land Capacity Analysis determined that the 2045 housing target should include the following types of units (ECONorthwest 2026):

- 2,600 ~~2,651~~ Permanent Supportive Housing units (subsidized, leased housing with no limit on length of stay that prioritizes people who need comprehensive support services)
- 4,423 ~~4,371~~ units for households below 30% area median income (AMI) (extremely low income)
- 5,890 units between 30 to 50% AMI (low income)
- 5,788 housing units between 50 and 80% AMI (low income)
- 3,351 units between 80 to 100% AMI (moderate income)
- 3,175 housing units between 100 to 120% AMI (moderate to middle income)
- 12,902 housing units over 120% AMI (high income)
- 1,405 ~~1,374~~ emergency shelter beds

The housing units needed by income category were updated since the Draft EIS to better align with the final Clark County housing allocations for Permanent Supportive Housing units and emergency shelter beds. The units needed for the other income levels do not reflect the Clark County allocations because the City completed the 2024 Housing Needs Assessment

using the Washington State Department of Commerce Housing for All Planning Tool (HAPT), prior to the City receiving the final Clark County housing allocations.

This analysis indicates that about one-third of new housing units would need to be affordable to households at or below 50% of AMI.

### Current Home Occupancy

The vacancy rate for all housing units in the ~~e~~City was 6%, slightly higher than Clark County (4%) (Census 2023a). The city's overall vacancy rate has remained stable since 2011. Vancouver has seen a recent spike in vacancy rates among two-bedroom units in multifamily housing, jumping from just under 4% in 2022 to almost double that at 7% in 2023, likely related to recent housing construction (ECONorthwest 2024b). Housing market assessments often use a 5% standard vacancy rate that implies a balance between housing supply and demand. Vancouver multifamily vacancy rates closely follow those of Clark County at 7% compared to Clark County's 8%.

### Current Home Ownership

Approximately 51% of Vancouver residents rent their homes, while the remaining 49% own their homes (Census 2023a). Vancouver's renter population is larger than Clark County (33%) and Washington State as a whole (36%).

In Vancouver, the largest share of renter households lived in multifamily buildings with five units or more (63%), "plex housing" (21%), and single detached units (15%) (Census 2023a). In greater Clark County, the distribution is similar.

Among owner households in both Vancouver and Clark County, the largest share lived in single detached units (84% and 87%, respectively), followed by "plex housing" (9% and 6%, respectively) and multifamily units (5% and 2% respectively) (Census 2023a).

Racial disparities exist in Vancouver's housing access. Asian, white, and American Indian/Alaska Native households have the highest rates of homeownership (at 64%, 52% and 48% respectively), while Hispanic/Latine, Black, and two or more race households have the lowest rates of homeownership (at 24%, 32% and 34% respectively). (Census 2023a).

### Housing Costs

Both rental and ownership costs have far outpaced income growth in the ~~e~~City, with median home prices nearly tripling and average rents increasing 60% from 2012 to 2023. The widening gap between housing costs and incomes indicates declining affordability in Vancouver's ownership and rental market (ECONorthwest 2024b).

As of June 2023, the median home sale price in Vancouver was roughly $477,000 (Redfin 2023). The ~~e~~City's median home prices were roughly $50,000 lower than the county overall ($527,000). However, city and county home prices increased at a similar rate since 2012, nearly tripling (a 174% increase) over the decade from 2012 to 2023. Additionally, while median Vancouver home prices were lower than both Hillsboro ($514,000) and Portland ($511,000), Vancouver prices have increased at a faster rate than both cities.

In 2021, the median monthly mortgage payment was $1,734, and in March 2022, the average market rent for a one-bedroom unit in Vancouver was $1,411 (CoStar 2023). As of 2023, the average rent in Vancouver was $1,673, which was similar to the average rent of $1,671 in Clark County (CoStar 2023). From 2012 to 2023, average Vancouver rents increased by more than $600, or 56%, surpassing average rents in Portland (CoStar 2023).

Cost burdening tends to disproportionately impact renters in comparison to homeowners, and this tendency holds true for the City and Clark County as a whole. Renters are nearly three times more likely to be cost burdened than homeowners. In 2023, about 53% of renters in Vancouver were cost burdened (spending more than 30% of their income on rent and utilities), including over a quarter of all renters (26%) who were severely cost burdened, spending more than 50% of their income on rent and utilities (Census 2023a).

Vancouver provides 1,243 rent-restricted affordable units sponsored by the City's Affordable Housing Fund that are either existing or currently in development (ECONorthwest 2024b). Of these units, 26% are set aside for seniors, 43% are reserved for households earning less than 60% of AMI, and 9% of the units are set aside specifically for populations with disabilities or mental health issues.

### Displacement Risk

Some Vancouver communities face displacement risks, but few areas have reached late-stage gentrification, which means a neighborhood has lost an increasingly higher share of vulnerable populations and is experiencing increasingly higher housing costs (ECONorthwest 2024b). The Image neighborhood is the only area that has reached late-stage gentrification based on the City's methodology. The Fourth Plain Village and North Image neighborhoods fall into the Dynamic typology, which are areas where focusing new anti-displacement actions can still help to prevent loss of vulnerable populations and before they reach late-stage trends.

Neighborhoods facing early-stage gentrification are concentrated in Central Vancouver, including along Fourth Plain Boulevard, I-205, and WA 500. In these areas, preserving low-cost housing and preventing loss of vulnerable populations can help keep neighborhoods from advancing further into mid- or late-stage gentrification.

The most effective anti-displacement strategies vary by what stage a neighborhood is currently experiencing. The City's 2020 Reside Vancouver plan presents recommended strategies for preventing displacement, which include citywide and geographically specific strategies for the Fourth Plain Corridor. Strategies to prevent displacement can include actions that preserve existing low-cost housing, create new affordable housing options, increase economic opportunities for residents, and support homeownership to stabilize households depending on how much low-cost housing is still available and how many vulnerable residents are still located in the area.

## Potential Impacts

This section discusses the potential impacts of the alternatives related to the following housing-related metrics:

- Level of supply, diversity, and potential cost of housing
- Amount of new housing in areas with high displacement risk
- Amount of new housing in areas with greater percentages of trips under 5 miles near active transportation networks
- Amount of new housing in connected and accessible neighborhoods
- Level of housing capacity for all income bands
- Consistency with housing plans and policies

### Impacts Common to All Alternatives

The following sections outline impacts that are expected to occur under all the alternatives. Impacts specific to each alternative are discussed in the next subsections.

#### Level of Supply, Diversity, and Potential Cost of Housing

An increase in citywide housing supply would be possible under all the alternatives to varying extents. All of the alternatives would result in a greater diversity of allowed housing types to some extent because they assume that H.B. 1110 would be implemented through the imposition of the state model ordinance allowing middle housing, if local standards are not adopted. H.B. 1110 requires cities like Vancouver to allow for at least four dwelling units per lot on all lots, up to six dwelling units per lot if within 0.25 mile of a major transit stop or if two of the units are affordable. All land currently designated as Urban Lower Density under the No Action Alternative or as Low-Scale Neighborhood under Alternatives 1 and 2 and the Preferred Alternative would have the potential for a greater diversity of housing types, such as duplexes, quadplexes, sixplexes, and townhomes, because of H.B. 1110's requirements.

Under all alternatives, the pace and location of development of future new housing units would be influenced in part by the implementation of the current (No Action) or proposed

(Alternatives 1 or 2 or the Preferred Alternative) Comprehensive Plan policies, related regulations and actions, and by decisions made by individual property owners and developers.

The cost of housing under all alternatives would be influenced by a variety of factors, including construction costs, market conditions, and government incentive programs.

### New Housing with High Displacement Risk

All alternatives are likely to have some level of residential displacement due to growth and redevelopment. Table 9 summarizes the estimated number of new housing units that would be built in areas defined as high risk in the Washington State Displacement Risk Map (Commerce 2023~~n.d.~~). Under all alternatives, at least 14% of housing unit capacity or growth would be located in these high displacement risk areas.

*Table 9. Estimated Capacity for New Housing Units in High Displacement Risk Areas*

| Metric | No Action Alternative | Alternative 1 | Alternative 2 | Preferred Alternative |
|---|---|---|---|---|
| Projected Capacity for New Housing Units in High Displacement Risk Areas | 9,400[a] | 6,500 | 8,500 | 8,900 |
| Percent of Total Projected Capacity for New Housing Units | 32%[a] | 14% | 17% | 18% |

*Source: BERK 2025*

Note:

a The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.

### Amount of New Housing in Connected and Accessible Neighborhoods

Although the ~~three~~ four alternatives would distribute new housing capacity and growth in different ways, they would all result in the potential for a substantial amount of new housing in connected and accessible neighborhoods. Connected and accessible neighborhoods are intended to support a mix of uses within a 15-minute walk to provide opportunities for shopping, entertainment, cultural amenities, and employment within proximity to housing.

As summarized in Table 10, more than 40% of the new housing capacity in each alternative is in areas with five or more services or amenities within walking distance. These services or amenities include full-service grocery stores, transit stops, parks and open spaces, trails, libraries, ambulatory healthcare services, schools, and other essential places such as higher

education institutions (Design Workshop 2024). This proximity to services would benefit resident wellbeing in terms of access to healthcare, food, and daily needs, as well as opportunities to interact with others, under all alternatives.

*Table 10. Estimated Capacity for New Housing Units in Connected and Accessible Neighborhoods*

| Metric | No Action Alternative | Alternative 1 | Alternative 2 | Preferred Alternative |
|---|---|---|---|---|
| Projected Capacity for New Housing Units in Connected and Accessible Neighborhoods | 16,100[a] | 18,700 | 21,700 | 21,500 |
| Percent of Total Projected Capacity for New Housing Units | 54%[a] | 42% | 43% | 44% |

*Source: BERK 2025*

Note:

a The No Action is based on capacity only and does not account for the feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.

### Level of Housing Capacity for All Income Bands

All of the alternatives would provide new housing units throughout the city; however, there would be varying capacity for housing that serves all income bands. In general, it is assumed that alternatives with a higher capacity for new housing units would allow for the greatest opportunity to construct different housing typologies, which in turn have the potential to be more affordable for a broader range of income levels, as discussed in the subsections for each alternative. However, as discussed in the Housing Needs Assessment, certain lower-income bands are likely unable to be served without additional subsidies for housing. Development of regulated affordable housing can face a number of challenges and typically requires sizable gap financing to make projects feasible (ECONorthwest 2024b).

### Compatibility with Housing Plans and Policies

All of the alternatives would allow for new housing units throughout the city, which is broadly compatible with the City's Housing Action Plan goal of building substantially more housing units over the next 20 years. However, the action alternatives would be more compatible with these goals, as discussed in the subsections for each alternative.

## No Action Alternative

### Level of Supply, Diversity, and Potential Cost of Housing

The No Action Alternative would not meet the City's minimum 2045 housing unit targets because it would not implement H.B. 1220 or H.B. 1337, and it would not allow denser housing typologies in as many areas of the ~~e~~City as Alternatives 1 or 2 or the Preferred Alternative ~~2~~. The No Action Alternative would have the least potential for providing adequate, affordable housing to meet identified needs. As discussed in the Housing Needs subsection, approximately 13,000 new housing units are needed for people with incomes of less than 80% AMI. To meet this need, more than 40% of new housing units under the No Action Alternative would need to be constructed for this income level. Without implementation of H.B. 1220 or H.B. 1337, the No Action Alternative would not include additional policy or zoning provisions to address the need for more diversity in housing supply throughout the ~~e~~City to accommodate more affordable housing.

Under the No Action Alternative, residents, developers, and homebuilders would not receive the benefits of the proposed zoning code update, which is designed to make requirements easier and simpler to understand, and in turn to reduce costs and barriers to housing production.

### New Housing with High Displacement Risk

The No Action Alternative would have the highest number of new housing units in areas with high displacement risk compared to Alternatives 1 and 2 and the Preferred Alternative, as shown in Table 9. This is likely because the No Action Alternative would have a larger estimated capacity for new housing units in Central Vancouver, which has large areas of high displacement risk according to the Washington State Department of Commerce mapping tool, as compared to Alternatives 1 and 2 and the Preferred Alternative (Commerce n.d.).

### Amount of New Housing in Connected and Accessible Neighborhoods

There would be a lower number of new housing units in connected and accessible neighborhoods under the No Action Alternative compared to Alternatives 1 and 2 and the Preferred Alternative ~~2~~, as shown in Table 10. Areas with capacity for new housing outside of connected and accessible neighborhoods would be distributed across the city, with larger amounts predicted in Central and East Vancouver than West Vancouver.

### Level of Housing Capacity for All Income Bands

The No Action Alternative would have the lowest level of housing capacity for all income bands because it would have the lowest capacity for new housing units in general. In addition, zoning designations would remain the same, which are currently more restrictive in housing types than the zoning districts proposed under the action alternatives.

### Compatibility with Housing Plans and Policies

The No Action Alternative would not be fully compatible with the City's housing plans and policies because it would not fully align with the Housing Action Plan, which includes strategies such as updating the ~~c~~City code to increase housing density and types.

## Alternative 1

### Level of Supply, Diversity, and Potential Cost of Housing

Alternative 1 would result in a greater potential diversity of housing types than the No Action Alternative because, based on market feasibility and redevelopment potential (see Appendix B for more information), it would have a greater capacity for new housing units citywide and would designate more land area as Medium-Scale Neighborhoods, Mixed-Use Neighborhoods, and Regional Activity Centers. These denser zoning districts allow for a broader range of housing typologies with more units. East Vancouver (between I-205 and the eastern City limits) would have the greatest capacity for new housing units.

Alternative 1 would also have a greater potential for meeting affordable housing needs compared to the No Action Alternative because of the greater capacity for new housing units. Residents, developers, and homebuilders would receive the benefits of the proposed zoning code update, which is designed to make requirements easier and simpler to understand, and in turn to reduce costs and barriers to housing production.

### New Housing with High Displacement Risk

Alternative 1 would have the lowest capacity for new housing units in areas with high displacement risk compared to the No Action Alternative, ~~and~~ Alternative 2 and the Preferred Alternative, as shown in Table 9.

### Amount of New Housing in Connected and Accessible Neighborhoods

Alternative 1 would have greater capacity for new housing units in connected and accessible neighborhoods than the No Action Alternative, but less than Alternative 2 and the Preferred Alternative, as shown in Table 10. Areas with capacity for new housing outside of existing connected and accessible neighborhoods would be located primarily in East Vancouver. Some parts of Central Vancouver, particularly near the Columbia River, would also have capacity for new housing units where there is low existing access to services. However, under the new zoning districts, some commercial and retail services would be allowed in traditionally residential-only areas, which could increase the potential for more services in those areas.

### Level of Housing Capacity for All Income Bands

Alternative 1 would have higher levels of housing capacity for all income bands than the No Action Alternative because it would have a much higher capacity for new housing units in

general. The new zoning designations and associated development regulations under Alternative 1 would allow for a greater diversity of housing types than the No Action Alternative. The level of housing capacity for all income bands would be similar to Alternative 2 and the Preferred Alternative but would be slightly lower because of the relatively lower capacity for new housing units.

### Compatibility with Housing Plans and Policies

Alternative 1 would be compatible with the City's housing plans and policies because its proposed land use and zoning designations would provide sufficient capacity to exceed the City's 2045 housing target and would align with the Housing Action Plan, which includes strategies such as updating the ~~city code~~ Vancouver Municipal Code to increase housing density and types.

## Alternative 2

### Level of Supply, Diversity, and Potential Cost of Housing

Alternative 2 would result in the greatest potential diversity of housing types of all the alternatives because it would have the highest capacity for new housing units and would designate the most land area as Medium-Scale Neighborhoods, Mixed-Use Neighborhoods, and Regional Activity Centers. As with Alternative 1 and the Preferred Alternative, East Vancouver (between I-205 and the eastern City limits) would have the greatest capacity for new housing units.

Alternative 2 would have the highest potential for increasing the housing market supply and thus potentially lowering the cost of housing because it would have the largest amount of land zoned for denser housing types. Residents, developers, and homebuilders would receive the benefits of the proposed zoning code update, which is designed to make requirements easier and simpler to understand, and in turn to reduce costs and barriers to housing production.

### New Housing with High Displacement Risk

Alternative 2 would have a higher capacity for new housing units in areas identified as high displacement risk than Alternative 1 but a lower capacity than the No Action Alternative and the Preferred Alternative, as shown in Table 9.

### Amount of New Housing in Connected and Accessible Neighborhoods

Alternative 2 would have more capacity for new housing units in connected and accessible neighborhoods than the No Action Alternative, ~~and~~ Alternative 1 and the Preferred Alternative, as shown in Table 10. Areas with capacity for new housing outside of connected and accessible neighborhoods would be in similar areas of Central and East Vancouver as Alternative 1 and the Preferred Alternative. Unlike Alternative 1 but similar to the Preferred

Alternative, there would be capacity for new housing units near I-205 and NE Padden Parkway, at the north end of Central Vancouver, where there is lower existing access to services. ~~However,~~ S~~s~~imilar to Alternative 1 and the Preferred Alternative, the new zoning districts included in Alternative 2 would support a variety of uses, which could support more commercial or retail services and amenities in areas traditionally dominated by residential development.

### Level of Housing Capacity for All Income Bands

Alternative 2 would have the highest potential for housing capacity for all income bands of the alternatives because it would have the highest capacity for new housing units in general. As with Alternative 1 and the Preferred Alternative, the new zoning designations and associated development regulations under Alternative 2 would allow for a greater diversity of housing types than the No Action Alternative. There would be more areas of the ~~c~~City that allow for a greater variety of housing types under Alternative 2 than Alternative 1 and the Preferred Alternative.

### Compatibility with Housing Plans and Policies

Like Alternative 1 and the Preferred Alternative, Alternative 2 would be compatible with the City's housing plans and policies because its proposed land use and zoning designations would provide sufficient capacity to exceed the City's minimum 2045 housing targets and would align with the Housing Action Plan, which includes strategies such as updating the ~~city code~~ Vancouver Municipal Code to increase housing density and types.

## Preferred Alternative

### Level of Supply, Diversity, and Potential Cost of Housing

The Preferred Alternative would result in a greater potential diversity of housing types than the No Action Alternative. Based on market feasibility and redevelopment potential (see Appendix B for more information), it would have a greater capacity for new housing units citywide and would designate more land area as Medium-Scale Neighborhoods, Mixed-Use Neighborhoods, and Regional Activity Centers compared to the No Action Alternative. These denser zoning districts allow for a broader range of housing typologies with more units. East Vancouver (between I-205 and the eastern City limits) would have the greatest capacity for new housing units.

The Preferred Alternative would also have a greater potential for meeting affordable housing needs than the No Action Alternative, because of the greater capacity for new housing units and more allowances for smaller housing types. Residents, developers, and homebuilders would receive the benefits of the proposed zoning code update, which is designed to make requirements easier and simpler to understand, and in turn to reduce costs and barriers to housing production.

The effects of the Preferred Alternative on the level of supply, diversity and potential cost of housing would be most similar to Alternative 1 because both would have a similar capacity for new housing units.

### New Housing with High Displacement Risk

The Preferred Alternative would have a higher capacity for new housing units in areas identified as high displacement risk than Alternatives 1 and 2 but a lower capacity than the No Action Alternative, as shown in Table 9.

### Amount of New Housing in Connected and Accessible Neighborhoods

The Preferred Alternative would have more capacity for new housing units in connected and accessible neighborhoods than the No Action Alternative and Alternative 1, and similar capacity compared with Alternative 2, as shown in Table 10. Similar to Alternatives 1 and 2, the Preferred Alternative would have capacity for new housing outside of connected and accessible neighborhoods in similar areas of Central and East Vancouver. Similar to Alternative 2, there would be capacity for new housing units near I-205 and NE Padden Parkway, at the north end of Central Vancouver, where there is lower existing access to services. Similar to Alternatives 1 and 2, the new zoning districts included in the Preferred Alternative would support a variety of uses, which could support more commercial or retail services and amenities in areas traditionally dominated by residential development.

### Level of Housing Capacity for All Income Bands

The Preferred Alternative would have higher levels of housing capacity for all income bands than the No Action Alternative because it would have a much higher capacity for new housing units in general. The new zoning designations and associated development regulations under the Preferred Alternative would allow for a greater diversity of housing types than the No Action Alternative. The Preferred Alternative would include the Manufactured Home Park zone, which intends to preserve existing affordable manufactured home park developments and prevent displacement. The effects of the Preferred Alternative on the level of housing capacity for all income bands would be most similar to Alternative 1 because both would have a similar capacity for new housing units. The Housing Needs and Land Capacity Analysis demonstrates Vancouver's capacity within the Preferred Alternative to meet the housing need by income band using either the HAPT tool or the County allocation methodology (ECONorthwest 2026).

### Compatibility with Housing Plans and Policies

Like Alternatives 1 and 2, the Preferred Alternative would be compatible with the City's housing plans and policies because its proposed land use and zoning designations would provide sufficient capacity to meet and exceed the City's minimum 2045 housing targets and

would align with the Housing Action Plan and underlying housing access goals, which includes strategies such as updating the City code to increase housing density and types.

## Avoidance, Minimization, and Mitigation Measures

Housing development under the No Action Alternative would be subject to applicable state and county laws and the City's Land Use and Development Code (VMC Title 20).

The action alternatives would be subject to the City's proposed Comprehensive Plan Update Land Use and Development chapter goals and policies and proposed revisions to VMC Title 20 with new development and zoning code for the implementing base land use districts. The City is also working to develop and enact additional policies and actions designed to reduce costs and burdens for new housing development and to support a variety of housing types.

Implementation of the following proposed goals and policy measures ~~currently under consideration~~ for the Comprehensive Plan Update would help to avoid, minimize, and mitigate potential housing impacts identified for the action alternatives:

- Add a minimum of 38,~~000~~ 129 new housing units by 2045.
- Provide a wide range of new housing types to fit a variety of household sizes, cultures, incomes, abilities, and stages of life. Increase housing diversity by allowing a range of missing middle housing types (duplexes, triplexes, townhomes, cottage clusters, and courtyard apartments) in low- and medium-intensity residential areas to expand affordability and accessibility. Incentivize development of housing types suitable for multigenerational living.
- Work with partners to facilitate and fund housing that reflects the cultures, identities and needs of Vancouver's unique population groups.
- Provide adequate transitional, permanently supportive, and affordable housing so that all residents have access to safe and stable housing. Expand the availability of permanently supportive housing and emergency shelter beds with integrated services for people with disabilities, houseless individuals, and at-risk populations.
- Work to prevent displacement of community members due to direct impacts and market forces by providing resources to support stable and secure housing. Implement anti-displacement strategies and actions that protect residents and businesses in advance of public investment so communities can remain in place and benefit from improvements. Analyze and mitigate for displacement pressures and risks prior to making large scale public investments.
- Provide connected and accessible neighborhoods with a diverse mix of community and open spaces, services, retail, fresh food, healthcare, and educational opportunities within

15 minutes (0.25 mile) or less of housing. Site new accessible and attainable housing close to existing and future parks.

- Enable homeownership for people across the income spectrum. Broaden access to homeownership in the community for first-time owners, low-income residents, and other groups frequently priced out of homeownership through alternative ownership methods.

Provide access to affordable housing regardless of income. Preserve the most affordable and accessible housing options in the ~~c~~City and discourage conversion to more expensive housing or commercial uses. Develop incentives to integrate below-market housing as part of new market-rate housing projects.

- Facilitate homeownership opportunities through assistance programs, grants, and other methods that reduce barriers to entry for low- and moderate-income households.
- Explore and develop additional funding methods and resources to support affordable housing and community ownership opportunities.
- Facilitate development of income-based housing in connected and accessible neighborhoods, and ~~generally~~ in areas with ~~good~~ access to transit, resources and services.
- Develop mechanisms to integrate community benefits into private development that requires discretionary land use review and City-led redevelopment projects.
- Pursue strategic acquisition and utilize existing City-owned land for affordable housing.
- Simplify the development review process where feasible and as needed to reduce housing ~~costs~~ permitting timelines and improve housing costs.
- Promote and remove regulatory barriers to new and innovative construction methods such as modular, panelized, 3d printed, or other methods.
- Develop incentives to integrate below market housing as part of new market rate housing projects.
- Provide financial support to help at-risk households remain in their homes, preventing eviction and displacement.
- Explore models and opportunities for existing residences and businesses to have voluntary right of first refusal to purchase qualifying properties when sold or build an equity stake in the property over time.

## Significant Unavoidable Adverse Impacts

The No Action Alternative would have significant adverse impacts on housing because it would not provide sufficient capacity for development to meet the City's minimum 2045 housing targets, and would not comply with state housing requirements of the GMA.

The anticipated changes under the action alternatives would occur incrementally, and with the implementation of avoidance, minimization, and mitigation measures, no significant

unavoidable adverse impacts to housing are anticipated for Alternative 1 or Alternative 2 or the Preferred Alternative.

# Aesthetics

## Methodology

Aesthetics refers to the scale and visual quality of the study area, including building heights, views, shading conditions, and overall visual and architectural character. Analysts reviewed relevant information and policies about the city's existing urban form and character, viewsheds, shadows, and light and glare, including the following sources:

- Vancouver Municipal Code:
    - Existing VMC 20.925, Landscaping
    - Existing VMC 20.935, Off-site Impacts,
    - VMC 20.770, Tree, Vegetation, and Soil Conservation
    - VMC 20.500, Overlay Districts
    - VMC 20.600, Plan Districts
- Design guidelines and manuals for subareas and districts
- City of Vancouver Shoreline Master Program (City of Vancouver 2021b)

Analysts reviewed the alternatives to determine potential adverse impacts and associated mitigation measures using the following metrics:

- Compatibility with desired urban form and character as expressed in existing and future planning documents
- Level of general visual impacts (e.g., shadows, light, and glare)

Any analysis of aesthetic impacts is inherently subjective and can vary based on individual preferences. This analysis is based on assumptions that increased growth and density can lead to additional larger or taller buildings that cast longer shadows and have the potential to add to light and glare impacts.

## Affected Environment

### Existing Urban Form and Character

Existing urban form and character vary by location in Vancouver. Western areas of the ~~e~~City generally have older buildings, smaller lots with denser uses, and a more walkable environment with a traditional grid-patterned street network. This area also has a large industrial center, which includes the Port of Vancouver, along the Columbia River west of the

Vancouver Waterfront. Key corridors and sites include Mill Plain Boulevard/SR 501, downtown (see ~~Figure 14~~ ~~Figure 14~~ Figure 16), the waterfront, and Vancouver Lake.

~~Figure 14~~ Figure 16. Downtown Vancouver

*Source: City of Vancouver*

Central Vancouver has a more suburban character than the western areas, including postwar subdivisions and older big-box retail developments. Key corridors and sites include Fourth Plain (see ~~Figure 15~~ ~~Figure 15~~ Figure 17), Evergreen and Grand Boulevards, Fort Vancouver, Clark College, and The Heights Subarea.

~~Figure 15~~ Figure 17. East Fourth Plain Boulevard

*Source: City of Vancouver*

East Vancouver has the most suburban character and urban form, with newer residential and big-box retail developments. Key corridors and sites include Mill Plain Boulevard and SE 164th Avenue, as shown in ~~Figure 16~~ ~~Figure 16~~ Figure 18.

~~Figure 16~~ Figure 18. Aerial View of SE 164th Avenue and Mill Plain Boulevard Vicinity

*Source: City of Vancouver*

Vancouver's landscape reflects efforts to preserve existing trees and other vegetation and to add new vegetation (City of Vancouver 2021). Historic trees in the City help preserve its character and are identified and protected as "heritage trees" in VMC 20.770. VMC 20.925 outlines landscaping requirements for all new or substantially remodeled buildings, accessory uses, and parking lots for multiple reasons, including aesthetic value.

The Our Vancouver Goals Framework identifies harmony between the built and natural environment as a desired community outcome (City of Vancouver 2023b).

In addition to these citywide regulations and policies, many subareas and districts within the ~~e~~City are guided by design guidelines that have been adopted to guide housing type and character specifically in those areas.

## Viewsheds

Most of Vancouver today is dominated by views of the built environment, including existing commercial and residential areas. Vancouver is situated in a natural landscape that is characteristic of the Pacific Northwest region of the United States, with rivers, creeks and lakes, and urban forests. Views of Mt. St. Helens, Mt. Adams, and Mt. Hood are also available

from certain corridors and locations within the city, with one example shown in ~~Figure 17~~ ~~Figure 17~~ Figure 19.

~~Figure 17~~ Figure 19. Views of Mt. Hood at Vancouver Lake

*Source: City of Vancouver*

Views of the Columbia River are available in some areas of the city, including the Vancouver Waterfront and various businesses and homes along the shoreline. The City's SMP identifies goals and policies around views and aesthetics "to assure that the public's opportunity to enjoy the physical and aesthetic qualities of shorelines of the state, including views of the water, is protected to the greatest extent feasible" (City of Vancouver 2021). The SMP restricts new or expanded buildings that would obstruct the views of a substantial number of residences on areas adjacent to shorelines unless "overriding considerations of the public interest will be served."

### Shadows

Shadows refer to the blockage of direct sunlight falling on a given area. Some land uses are more sensitive to shading than others, where access to periods of direct sunlight is important for their primary function. Examples include parks and outdoor recreational facilities, community gardens, and buildings that rely on solar power panels.

Shadows in the ~~e~~City are typically influenced by building heights and sizes, which are regulated by the zoning code and vary by zone. Downtown Vancouver, the waterfront, and other mixed-use and commercial zones typically have taller buildings that cast longer

shadows. Lower-density neighborhoods with shorter buildings have fewer building-shaded areas.

### Light and Glare

Light and glare impacts tend to be concentrated in higher-density areas with more street lights, reflective surfaces, and vehicle traffic, compared to lower-density areas. VMC 20.935.030(D) provides limitations for off-site impacts from light and glare that apply to any development, redevelopment, or use of a property in the City, both during and after construction.

Light pollution refers to the alteration of outdoor light levels from those occurring naturally, and can affect our ability to see the night sky. Light pollution is caused by outdoor lights from various sources that remain on (or are on periodically) between sunset and sunrise. Examples include streetlights, exterior lights on buildings, and headlights from vehicles. Light pollution in Vancouver is greater closer to Portland and gradually reduces over distance (Radiance Light Trends 2024).

## Potential Impacts

This section discusses the potential impacts of the alternatives related to the following aesthetics-related metrics:

- Compatibility with desired urban form and character as expressed in existing and future planning documents
- Level of general visual impacts (e.g., shadows, light and glare)

### Impacts Common to All Alternatives

The following sections outline impacts that are expected to occur under all the alternatives. Impacts specific to each alternative are discussed in the next subsections.

#### Compatibility with Urban Form and Character

All of the alternatives would allow development of new housing units and other structures throughout the city, which has the potential to directly affect aesthetics in the surrounding areas. Existing and planned regulations and policies aimed at protecting views and reducing the effects of light and glare would apply to all alternatives and would help facilitate compatibility with area-specific urban form and character in a changing environment.

#### Level of General Visual Impacts

All alternatives would have the potential for impacts to aesthetics through specific future development projects. Future development, regardless of alternative, may alter the visual character of an area and create new sources of shading, light and glare.

All alternatives would have similar amounts of land designated for Hheavy iindustrial, Industrial/Employment, ~~Institutional/Campus,~~ and Parks/Open Space uses. Therefore, impacts to aesthetics, including building heights, views, shading conditions, and overall visual and architectural character, would likely be neutral in these areas.

### No Action Alternative

The No Action Alternative assumes the lowest level of citywide growth and development of all the alternatives and no changes to existing land use and zoning designations. Larger-scale buildings and higher building heights would be allowed in fewer areas of the ~~e~~City than under the action alternatives, as detailed in Appendix C. Therefore, it would have the lowest potential for altering the existing visual setting of the ~~e~~City and for introducing new sources of shadow, light, and glare. Development would continue to occur under the existing land use and zoning regulations, as well as state-imposed allowances for new middle housing in single-family neighborhoods, and impacts to aesthetics would likely be modest. Middle housing would also be allowed in single-family neighborhoods under the No Action Alternative, because state law automatically imposes a model ordinance allowing middle housing if local jurisdictions do not take action to allow these housing types. Some aspects of aesthetics would continue to be regulated in the limited select areas that have design guidelines.

### Alternative 1

Alternative 1 would allow denser development patterns and larger-scale, taller buildings in more areas of the ~~e~~City compared to the No Action Alternative and in fewer areas of the ~~e~~City compared to Alternative 2.

Because Alternative 1 would have a smaller amount of land area dedicated to Medium-Scale Neighborhood and~~,~~ Mixed Use ~~,and Regional Activity Center~~ zoning districts than Alternative 2, there would be slightly less potential for development of larger-scale buildings that are taller than three stories (45 feet). Alternative 1 would have a similar amount of land dedicated to the Regional Activity Center zoning district as the Preferred Alternative, which would allow for development of larger-scale buildings (no height maximum). ~~However, t~~The proposed zoning code updates would allow for higher maximum building heights in Low-Scale Neighborhoods under ~~both~~ all action alternatives than in equivalent low-density residential zoning districts under the No Action Alternative (45 feet maximum under the action alternatives as compared to 30 feet maximum under the No Action Alternative). These changes could result in localized light, glare, shadow, and other visual impacts if some parcels redevelop to taller building types than their neighboring parcels.

There would be a slightly higher likelihood of redevelopment of existing parking lots, vacant lots and structures under Alternative 1 compared to the No Action Alternative because of the implementation of denser land use designations and zoning in more parts of the city. The light, glare and visual impacts from existing parking lots and vacant lots and structures would be improved by redevelopment of these sites consistent with the new Comprehensive Plan and code.

### Alternative 2

Alternative 2 would allow for higher-density zoning districts and larger-scale, taller buildings in the most areas of the ~~c~~City of all the alternatives. Therefore, overall, Alternative 2 would have the highest potential for associated impacts to aesthetic resources, including changes in visual character resulting from taller allowed buildings and new sources of shadows, light and glare.

The amount of land devoted to Regional Activity Center, ~~Campus/Institutional,~~ Medium-Scale Neighborhood~~,~~ and Mixed-Use development would be higher than under Alternative 1 and the Preferred Alternative, which could result in a modestly greater number of taller buildings (75 feet or taller). The increased number of taller, larger-scale buildings would have the potential to result in slightly greater light, glare, shadow, and visual impacts under Alternative 2 compared to Alternative 1, the Preferred Alternative and the No Action Alternative. As with Alternative 1 and the Preferred Alternative, there would also be aesthetic improvements associated with the redevelopment of parking lots and vacant lots and structures.

### Preferred Alternative

The Preferred Alternative would allow for higher-density zoning districts and larger-scale, taller buildings in more areas of the City than the No Action Alternative, similar to Alternatives 1 and 2. The Preferred Alternative would have a higher potential for associated impacts to aesthetic resources than the No Action Alternative, including changes in visual character resulting from allowances for taller buildings and new sources of shadows, light and glare.

The amount of land devoted to Institutional/Campus would be the highest under the Preferred Alternative, which would allow for development of taller, larger-scale buildings with a range of commercial and residential uses. Unlike Alternatives 1 and 2, the Preferred Alternative would designate the Section 30 area as Institutional/Campus rather than Mixed Use (Alternative 1) or Regional Activity Center (Alternative 2).

The amount of land devoted to Medium-Scale Neighborhood and Mixed-Use would be similar to Alternative 2, which could result in a modestly greater number of taller buildings (75

feet or taller). This increased number of taller, larger-scale buildings would have the potential to result in slightly greater light, glare, shadow, and visual impacts under the Preferred Alternative compared to Alternative 1 and the No Action Alternative. There would be a similar amount of land dedicated to the Regional Activity Center zoning district as Alternative 1 and slightly less than Alternative 2, which would allow for development of larger-scale buildings (no height maximum). As with Alternatives 1 and 2, there would also be aesthetic improvements associated with the redevelopment of parking lots and vacant lots and structures.

## Avoidance, Minimization, and Mitigation Measures

Regardless of alternative, all future development projects will be required to comply with ~~e~~City and state policies for protecting views of the shoreline and reducing off-site impacts, including light and glare. In addition, compliance with ~~e~~City and state requirements for the protection of natural resources, open space, and historic sites would contribute to the preservation of aesthetic resources in the city.

The City's development review process will ensure compliance with current VMC 20.935, carried forward in the proposed new code under VMC 20.450.007, which requires any development, redevelopment, or use of a property to have minimal adverse off-site impacts from light and glare, both during and after construction. The development review process will also ensure compliance with citywide standards for landscaping and tree conservation, as well as any applicable design guidelines or standards that may be in effect at that location.

Development standards included in the proposed form-based zoning and development regulations would also help to avoid, minimize and mitigate impacts to aesthetics. Topics ~~under consideration for~~ included in the code updates include:

- Requirements for minimum open space and maximum impervious areas, building placement and lot build-out (setbacks from property lines), building heights, access points, landscaping (including incentives for maintaining large trees and adding more trees than required), and connectivity.
- Requirements for certain frontage types (i.e., how a building interacts with the street and shapes the overall character of the streetscape), such as awnings, balconies, bay windows, cafés, common yards, courtyards, porches, stoops, and terraces. The City ~~is considering~~ will require form and dimensional requirements for these elements as they relate to the public right-of-way ~~and prohibiting use of exterior materials that could promote glare~~.
- Regulations that provide transitions between zoning districts to ensure compatibility.

Implementation of the following policy measures ~~currently under consideration~~ for the Comprehensive Plan Update would also help to avoid, minimize, and mitigate potential aesthetics impacts identified for the action alternatives:

- Ensure medium- to high-scale residential, mixed-use, and commercial development is human-scale, street-oriented, and integrated with surroundings to enhance comfort, accessibility, and visual interest for people walking, biking, or rolling.
- Develop standards for public spaces and buildings that incorporate culturally specific design principles and art installations and reflect the diverse history and heritage of Vancouver communities.

### Significant Unavoidable Adverse Impacts

All alternatives have the potential to create impacts to aesthetics as a result of new development patterns and building forms. The anticipated changes would occur incrementally, and with the implementation of avoidance, minimization, and mitigation measures, no significant unavoidable adverse impacts to aesthetics are anticipated for any of the alternatives.

## Historic and Cultural Preservation

### Methodology

Analysts reviewed relevant information and policies about citywide historic and archaeological resources, including the following sources:

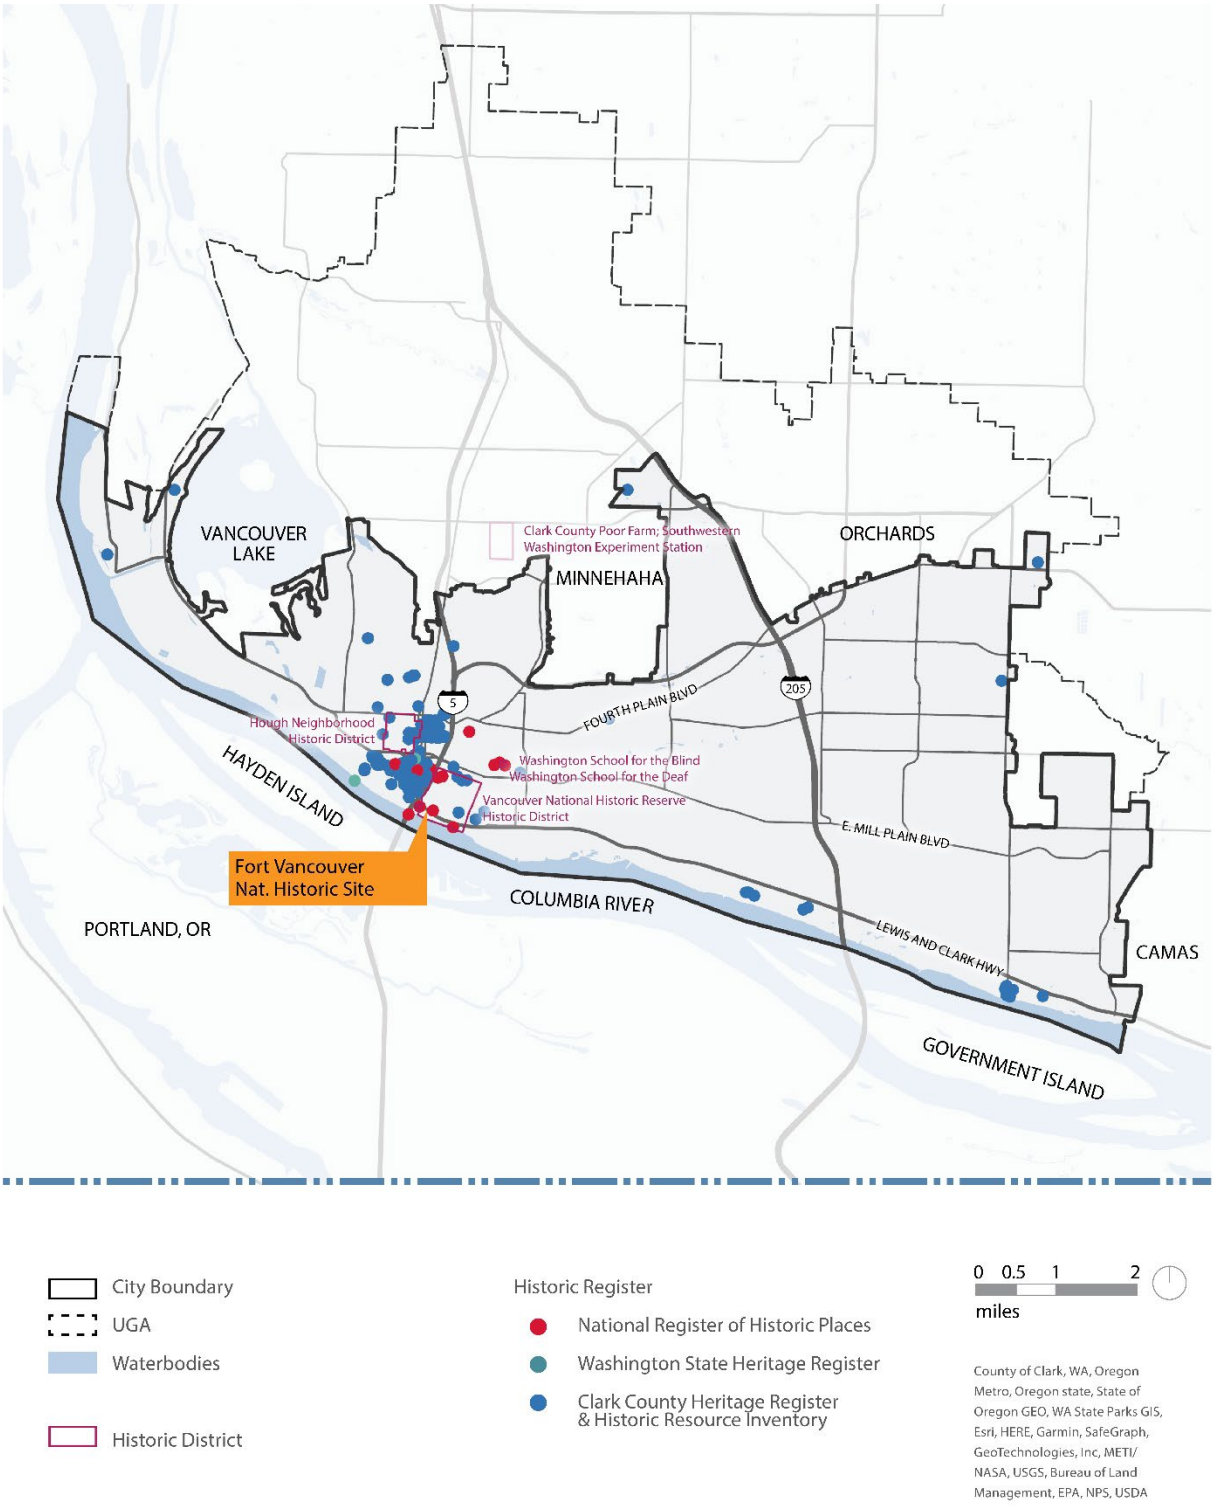
- National Register of Historic Places (NRHP)
- RCW Chapter 27.34, State Historical Societies – Historic Preservation
- RCW Chapter 27.44, Indian Graves and Records
- RCW Chapter 27.48, Preservation of Historical Materials
- RCW Chapter 27.53, Archeological sites and resources
- Washington State Heritage Register (WSHR)
- VMC Chapter 17.39, Historic Preservation
- VMC Chapter 20.710, Archaeological Resource Protection
- VMC Chapter 20.770.120, Heritage Trees
- Community Atlas (Design Workshop 2024)

Analysts then reviewed the alternatives to determine potential adverse impacts and associated mitigation measures using the following metrics:

- Level of potential impacts to historic sites
- Level of risk of uncovering archaeological resources at proposed development sites

## Affected Environment

### Historic Sites



VMC 17.39 applies to properties in Vancouver and includes eligibility criteria for historic and cultural resources in Clark County, in addition to the NRHP and WSHR. Many historic sites and buildings have been revitalized to preserve their unique architectural characteristics and embrace Vancouver's history. The City is commonly recognized for its historic site, Fort Vancouver, which served as a major trading post in the 19th century and an Army post during World War II.

~~Figure 18~~ ~~Figure 18~~ Figure 20 shows a map of sites in Vancouver that are listed on the NRHP, WSHR, or Clark County Heritage Register and Historic Property Inventory, and Table 11 lists NRHP sites in Vancouver. These historic sites are primarily clustered just west and east of I-5 in West and Central Vancouver, near downtown. A few county historic sites are designated along the Columbia River and at the far eastern and western edges of the city limits.

Vancouver has two designated federal and/or state historic districts:

- In West Vancouver, the Hough Neighborhood Historic District, located west of Vancouver's central business district, has been listed on the Washington Heritage Register since 2003 (Clark County 2024a). It hosts a variety of architectural styles and buildings constructed primarily between circa 1890 and 1945 and is the largest collection of existing pre-World War II housing in Vancouver.
- In Central Vancouver, the Vancouver National Historic Reserve Historic District, bounded by Evergreen Boulevard on the north, I-5 on the west, the Columbia River on the south and East Reserve Street on the east, covers about 252 acres of the 366-acre Historic Reserve created by Congress in 1996 (Clark County 2024b). It includes several nationally significant sites that contribute to its status on the NRHP, including Fort Vancouver National Historic Site, the Officer's Row National Historic District, the Vancouver Barracks National Historic District, Pearson Air Museum, the Jack Murdock Aviation Center, Pearson Airfield, Old Apple Tree Park, and Waterfront Park.

## Archaeological Resources

~~Figure 19~~ ~~Figure 19~~ Figure 21 shows the probability of encountering archaeological resources throughout the ~~c~~City based on data from the state's predictive model. Most of the city's perimeter, including sites along Vancouver Lake and the Columbia River, is identified as having a higher probability of having archaeological significance. Central and East Vancouver north and south of Fourth Plain Boulevard and SR 500 are also identified as higher probability areas.

~~Figure 19~~ Figure 21. Archaeological Predictive Risk Probability Map

*Source: Clark County n.d.*

## Potential Impacts

This section discusses the potential impacts of the alternatives related to the following historic and cultural preservation-related metrics:

- Level of potential impacts to historic sites
- Level of risk of uncovering archaeological resources at proposed development sites

### Impacts Common to All Alternatives

The following sections outline impacts that are expected to occur under all the alternatives. Impacts specific to each alternative are discussed in the next subsections.

#### Level of Potential Impacts to Historic Sites

All alternatives could potentially lead to redevelopment projects that would demolish, physically alter, or change the setting of existing historic properties. They could also potentially introduce new elements into culturally or historically significant viewsheds of historic properties.

West Vancouver, particularly downtown, would have the highest potential for impacts to historic sites under all of the alternatives because it has the largest concentration of identified historic properties in the city, as well as the state-designated Hough Neighborhood Historic District (see ~~Figure 18~~ ~~Figure 18~~ Figure 20).

Central Vancouver would have capacity for more projected new housing units and jobs relative to West Vancouver but fewer than East Vancouver. It has fewer identified historic sites than West Vancouver but more than East Vancouver, so it would have moderate potential for impacts to these properties. Although the associated zoning designations would change under the action alternatives, it is assumed that no new development would occur within the Vancouver National Historic Reserve Historic District under any of the alternatives.

East Vancouver would have capacity for the most projected new housing units and jobs and also has the fewest identified historic sites. It would therefore have the lowest potential for impacts to historic sites under all of the alternatives.

The City's identified need to meet future minimum housing and jobs targets, regardless of alternative, could result in increased pressure to redevelop sites that have historic buildings or potential cultural or archaeological resources; however, this would be less of an issue in East and Central Vancouver under all alternatives based on the locations of identified historic sites.

### Level of Risk of Uncovering Archaeological Resources at Proposed Development Sites

All alternatives could potentially lead to redevelopment projects that could uncover archaeological resources during construction. Risks of encountering archaeological resources would be highest along most of the city's perimeter, including sites along the Columbia River and Vancouver Lake, and in Central and East Vancouver north and south of Fourth Plain Boulevard and SR 500.

Because land use and zoning designations would remain similar for sites along the Columbia River and Vancouver Lake under all of the alternatives, potential impacts to archaeological resources are also expected to be similar.

### No Action Alternative

In general, there would be minimal additional impacts under the No Action Alternative aside from those described in the Impacts Common to All Alternatives section. The No Action Alternative would allow for the lowest level of citywide growth and redevelopment of all the alternatives. Therefore, it would likely have the lowest potential for individual site disturbance and potential associated impacts to cultural, archaeological, and historic resources. However, the No Action Alternative would encourage continuation of a less dense, more dispersed style of urban development. In the longer term, this type of development pattern could potentially increase pressure to develop more individual sites, which could result in additional cumulative impacts to historic and cultural preservation over time.

### Alternative 1

In general, there would be minimal additional impacts under Alternative 1 aside from those described in the Impacts Common to All Alternatives section. Due to the amount of land zoned for Medium Scale Neighborhood, Mixed Use, and Regional Activity Center, Alternative 1 would allow for more intense levels of citywide development compared to the No Action Alternative and lower levels compared to Alternative 2 and the Preferred Alternative ~~and lower levels compared to Alternative 2~~. Higher-density development would be allowed in fewer areas of the ~~c~~City than in Alternative 2 and the Preferred Alternative, as discussed in the Land and Shoreline Use section. Overall, more sites would have the potential for disturbance and associated impacts to cultural, archaeological, and historic resources under Alternative 1 than the No Action Alternative and fewer sites would experience these impacts under Alternative 2.

In West Vancouver, the Hough neighborhood, a designated historic district, would be designated as Medium-Scale Neighborhood under ~~both~~ the action alternatives, which would create potential pressure to redevelop historic properties into denser housing types and allow a greater mix of land uses in the area. Although the Hough neighborhood already

contains multifamily housing units, the medium-scale buildings allowed in this new zoning district could have impacts on neighboring historic properties if they resulted in changes to their setting. However, West Vancouver is also identified as having the lowest capacity for new housing units based on market feasibility and redevelopment studies compared to Central and East Vancouver under Alternative 1, as discussed in the Land and Shoreline Use section.

In Central and East Vancouver, there would be greater potential risk of encountering archaeological resources under Alternative 1 than the No Action Alternative because Alternative 1 would allow for higher-density development in higher probability areas north and south of Fourth Plain Boulevard and SR 500.

Overall, because Alternative 1 would allow for denser development patterns than the No Action Alternative, it would potentially result in less pressure to develop individual historic sites than the No Action Alternative, which could lead to fewer cumulative impacts on historic and cultural preservation over time.

### Alternative 2

In general, there would be minimal additional impacts under Alternative 2 aside from those described in the Impacts Common to All Alternatives section. Alternative 2 would allow for the highest intensity of citywide development of all the alternatives, and there would be more areas designated for potential high-density development than under Alternative 1 and the Preferred Alternative.

Similar to Alternative 1 and the Preferred Alternative, Alternative 2 has the potential to create pressure to redevelop historic properties in the Hough neighborhood in West Vancouver into denser housing types as allowed in the Medium-Scale Neighborhood zoning district.

In Central ~~and East~~ Vancouver, there would be a greater potential risk of encountering archaeological resources under Alternative 2 than the No Action Alternative and Alternative 1, but about the same as the Preferred Alternative because of proposed higher-density and intensity development (Medium Scale Neighborhood, Mixed Use, Regional Activity Center) in higher probability areas north and south of Fourth Plain Boulevard and SR 500.

In East Vancouver, Alternative 2 would have the greatest potential risk of encountering archaeological resources because it would have the largest amount of land zoned for Medium Scale Neighborhood, Mixed Use and Regional Activity Center, which allow for taller buildings and may require more excavation.

Overall, Alternative 2 would have the highest potential for site disturbance and associated impacts to cultural, archaeological, and historic resources at individual sites because of the higher levels of potential disturbance to existing land and buildings to accommodate new, denser development. However, because Alternative 2 would allow for the densest development patterns, it would potentially result in less pressure to develop historic sites than the No Action Alternative, ~~and~~ Alternative 1, and the Preferred Alternative, which could lead to fewer cumulative impacts on historic and cultural preservation over time.

## Preferred Alternative

In general, there would be minimal additional impacts under the Preferred Alternative aside from those described in the Impacts Common to All Alternatives Section. The Preferred Alternative would allow for a higher intensity of citywide development than the No Action Alternative, similar to Alternatives 1 and 2. There would be more areas designated for potential high-density development than under Alternative 1 and slightly fewer of these areas than under Alternative 2.

Similar to Alternatives 1 and 2, the Preferred Alternative would have the potential to create pressure to redevelop historic properties in the Hough neighborhood in West Vancouver into the denser housing types allowed in the Medium-Scale Neighborhood zoning district.

In Central Vancouver, there would be a greater potential risk of encountering archaeological resources under the Preferred Alternative than the No Action Alternative and Alternative 1 and about the same amount of risk compared to Alternative 2 because of proposed higher-density and intensity development in higher probability areas north and south of Fourth Plain Boulevard and SR 500.

In East Vancouver, the Preferred Alternative would have a greater potential risk of encountering archaeological resources compared to Alternative 1, but less risk than Alternative 2 because there would be less land zoned for Medium Scale Neighborhood, Mixed Use and Regional Activity Center.

Overall, the Preferred Alternative would have a higher potential for site disturbance and associated impacts to cultural, archaeological, and historic resources at individual sites because of the higher levels of potential disturbance to existing land and buildings to accommodate new, denser development. However, because the Preferred Alternative would allow for denser development patterns in more areas of the city, similar to Alternative 2, it would potentially result in less pressure to develop historic sites than the No Action Alternative, which could lead to fewer cumulative impacts on historic and cultural preservation over time.

## Avoidance, Minimization, and Mitigation Measures

Regardless of the alternative, all future development projects will be required to comply with ~~e~~City and state requirements for identification and preservation of cultural, archaeological, and historic resources.

The City's development review process will ensure compliance with VMC 20.710, which requires an archaeological study (or predetermination): (1) when any part of the area to be disturbed is in an area with a high probability for archaeological resources, (2) when the development is 5 acres or more in size and wholly within an area with moderate-high and moderate probability for archaeological resources, (3) when any land to be disturbed, regardless of size or predictive model probability level, is within 0.25 mile of a recorded archaeological site. All areas that have not been previously included in an archaeological study are recommended for a predetermination-level study.

In addition, implementation of the following goals and policy measures ~~currently under consideration~~ for the Comprehensive Plan Update would also help to avoid, minimize, and mitigate potential impacts to historic and cultural preservation identified for the action alternatives:

- Support a thriving cultural landscape for residents and visitors by investing in public art, cultural centers and facilities, historic preservation, and supporting community-centered initiatives and opportunities for creative expression that reflect the city's diverse identities and historic roots.
- Develop standards for public spaces and buildings that incorporate culturally specific design principles and art installations and reflect the diverse history and heritage of Vancouver communities.
- Foster meaningful partnerships with tribal communities and land stewards, integrating their knowledge, priorities, and cultural perspectives into local decision-making processes.
- Engage community organizations and individuals representing diverse lived and cultural experiences in the planning, design, and programming of community spaces.
- Protect and preserve significant cultural, historic, archaeologic, and ecologic community resources. Promote preservation, restoration, and rehabilitation of historic and architecturally significant structures.
- Improve access to arts, cultural, and heritage programs by reducing barriers to participation, prioritizing underserved and historically marginalized communities, and investing in related programs.
- Strengthen Vancouver's cultural sector by investing in capacity building across arts, culture and heritage organizations as an economic and cultural driver of the community.

- Protect and promote Fort Vancouver and the Historic Reserve as nationally significant cultural and historic assets. Support public investment, inclusive programming, and heritage-based economic development. Oppose efforts to reduce funding or public accessibility.
- Ensure publicly funded art projects and installations reflect and incorporate the experiences of historically excluded and underrepresented voices in the physical and cultural landscape of the City.

### Significant Unavoidable Adverse Impacts

All alternatives have the potential to create impacts to historic and cultural preservation as a result of expected population and job growth and development. The anticipated changes would occur incrementally, and with the implementation of avoidance, minimization, and mitigation measures, no significant unavoidable adverse impacts to historic and cultural preservation are anticipated for any of the alternatives.

## Transportation

### Methodology

Analysts reviewed relevant information and policies to qualitatively describe existing citywide conditions for vehicular, active, water, rail, and airborne transportation, as well as parking and safety conditions, including the following sources:

- Clark County Regional Transportation Plan (RTC 2024)
- City of Vancouver Transportation System Plan (TSP) 2024-2044 (City of Vancouver 2024a)
- C-TRAN 2025~~1-2026~~ 2030 Transit Development Plan (C-TRAN ~~2021~~2025)
- Community Atlas: Existing Conditions Report (Design Workshop 2024)
- Southwest Washington Regional Transportation Council (RTC) regional travel demand model outputs (RTC 2025, 2026)

In coordination with the City, RTC refined and ran the regional travel demand model for the alternatives described in Chapter 2 to estimate transportation conditions in 2045 (RTC 2025, 2026). The model used 2023 households and jobs data to represent existing conditions for consistency with the baseline year for the Comprehensive Plan Update and to be consistent with other jurisdictions in Clark County. Using the outputs from the model, analysts reviewed the alternatives and determined potential adverse impacts and associated mitigation measures for the following performance metrics:

- Vehicle miles traveled (VMT)
- Level of mode shift

- Mobility units by transportation analysis districts
- Potential for increases in fatal/severe crashes

## Affected Environment

### Vehicular Transportation

Vancouver's street network consists of highways, arterials, and collectors, as shown in ~~Figure 20~~ ~~Figure 20~~ Figure 22. Few streets connect directly across the ~~c~~City (City of Vancouver 2024a). Interstate 5 (I-5) runs north–south through Western-Central Vancouver and provides connectivity to nearby Portland, Oregon, as well as the whole West Coast. Interstate 205 (I-205) serves as a bypass for I-5, running north–south and terminating in Salmon Creek, WA at the north end and in Tualatin, Oregon at the south end.

State Route (SR) 14 runs east–west, starting at I-5 in Vancouver, running through the Columbia River Gorge, and ending at I-82/US 395 in Plymouth, Washington. SR 14 is a key connector to Camas and Washougal, located east of Vancouver. SR 500 is an auxiliary route of I-5, running east–west and connecting I-5 to I-205.

The city's arterial network, including Mill Plain Boulevard, 112th Avenue, and Andresen Road, has major destinations, transit service, higher speed limits, wider roadways, and the greatest number of crashes.

The City's transportation system is guided by the TSP, which provides policy direction on transportation infrastructure investments in the City and considers regional transportation needs (City of Vancouver 2024a). The 2024-2044 TSP proposes a framework for future transportation investment intended to reduce car dependency and improve mobility and safety for all, regardless of age, ability or travel mode.

While the 2024 TSP largely focuses on working within the existing roadway system to expand safe transportation options for all users, the City also plans to invest in upgrading and building out the primary arterial roadway system. These large-scale capital projects are designed to bring major roadways up to urban standards; add turn lanes, mobility lanes (a renaming of "bike lanes" to account for their use by bikes, e-bikes, and other small mobility devices such as scooters) and sidewalks; improve safety; and reduce congestion by accommodating recent and future developments along arterial streets.

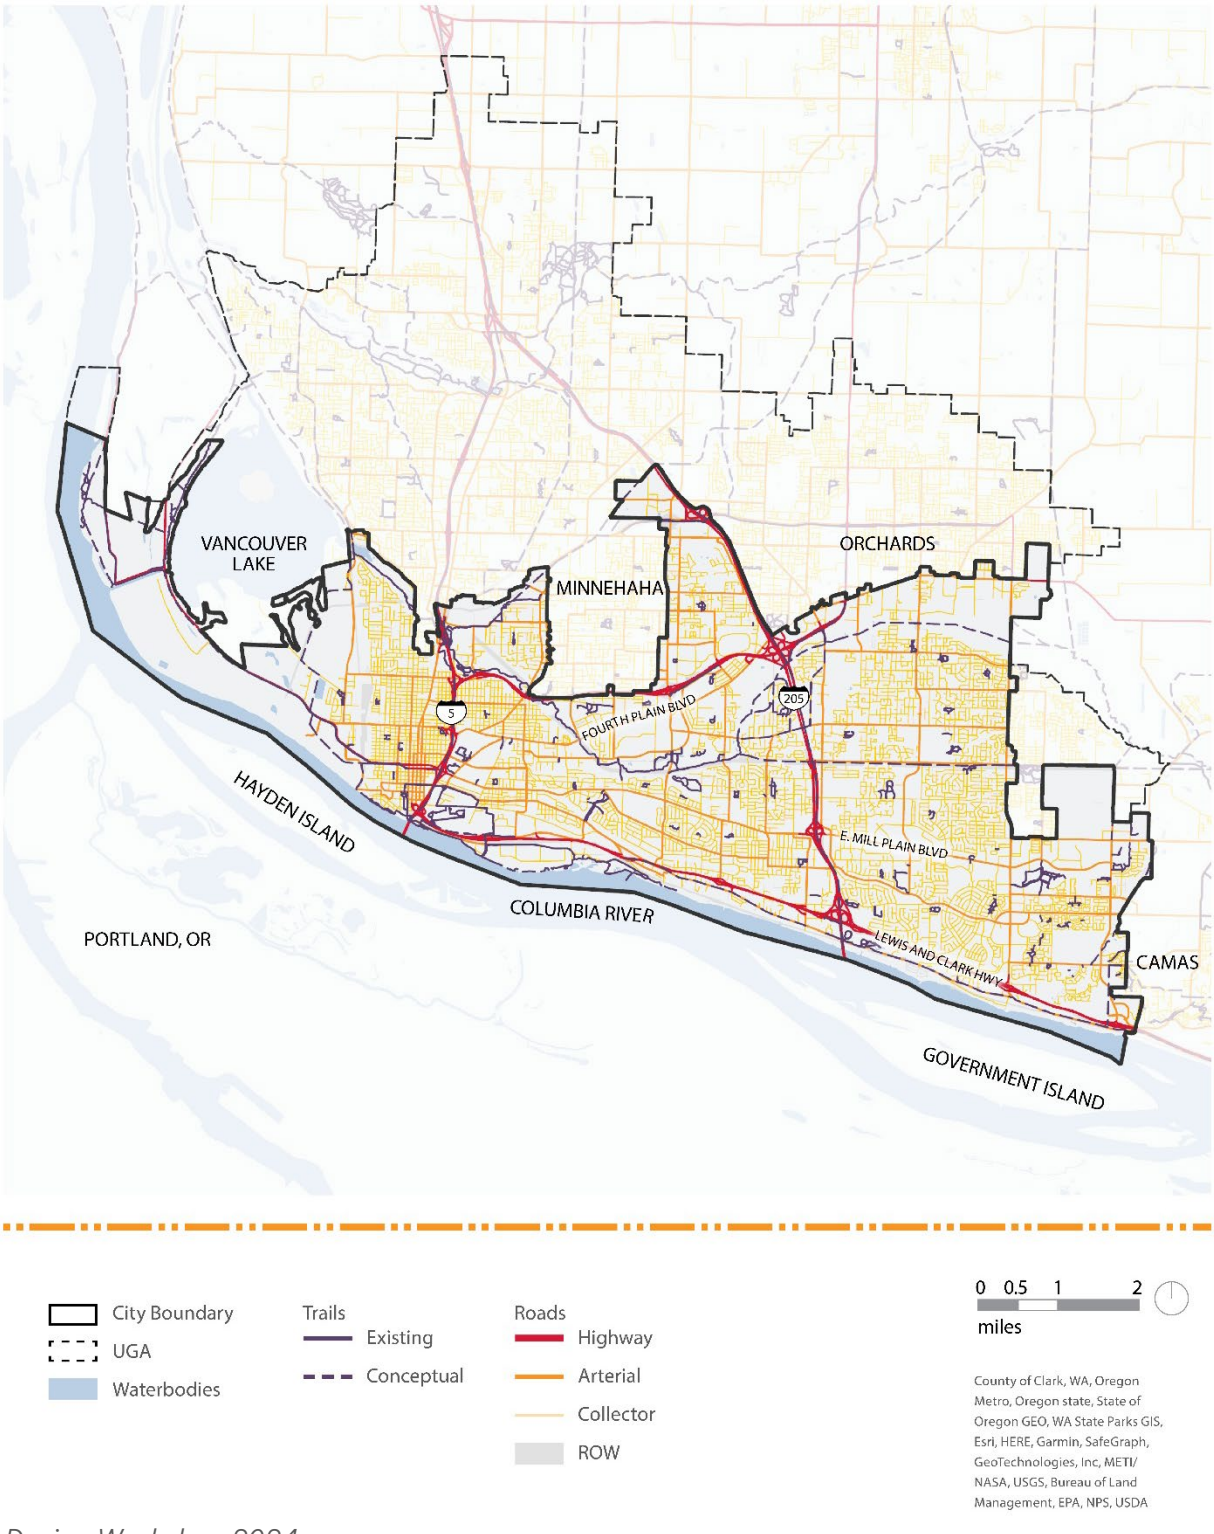
Table 12 shows modeled existing citywide daily VMT, and Table 13 shows modeled existing mode split.

### Safety

From 2010 to 2019, the number of crashes in the City increased 29% while the population grew by 13%. During the pandemic, crashes declined 5% from 2019 to 2022 (City of Vancouver 2024a).

The TSP found that long distances between crossings, lack of sidewalks on nine miles of arterial streets, and bicycling and small mobility facilities that end abruptly contribute to feelings of unsafe conditions. Distraction and inattention make up the top two factors contributing to crashes across all crash types. ~~Figure 21~~ ~~Figure 21~~ Figure 23 provides a map of collisions by type in 2020.

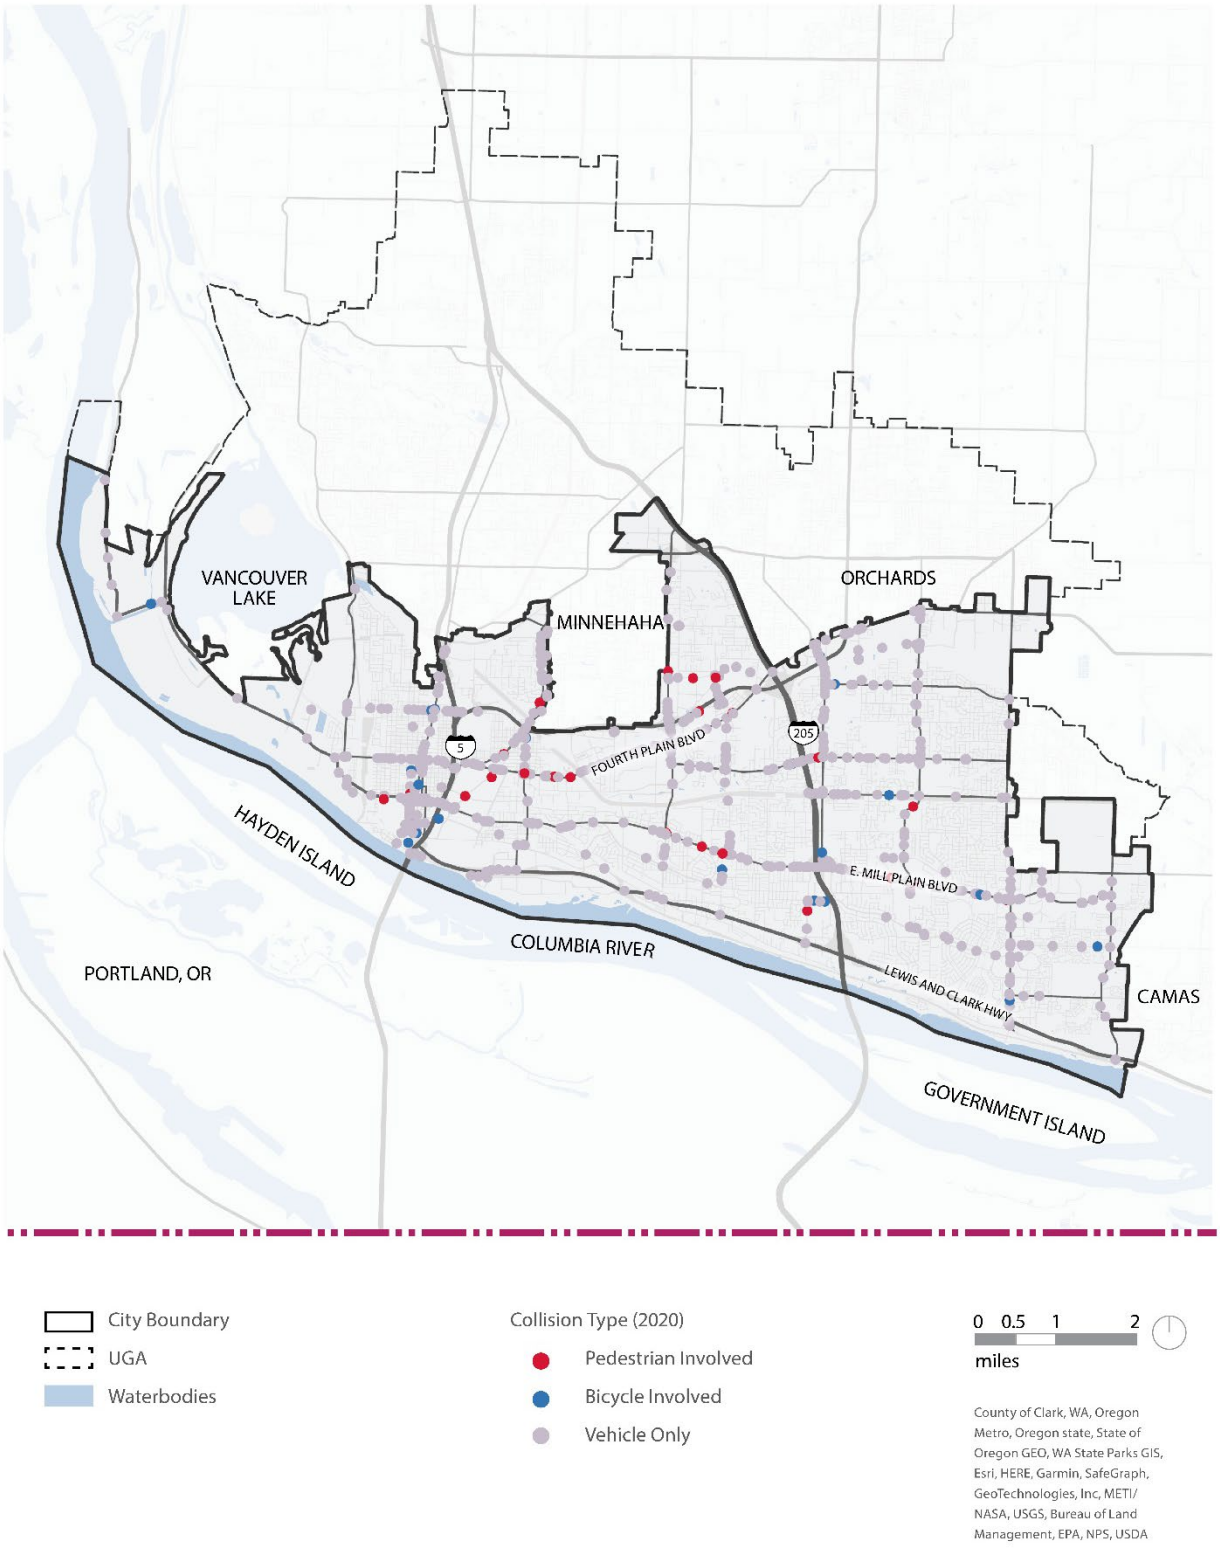
### Freight



Freight is critical to the City's economy (City of Vancouver 2024a). The City works to integrate design and policy treatments so freight and vulnerable users can navigate the same streets.

The 2024 TSP calls for development of a freight network classification that designates where freight movements are expected and planned to occur. The City uses freight categories that align with state, regional, and national designations, including:

- Critical corridors. These are important for through truck traffic to maintain mobility for regional or national connections. Within this category, the two subcategories are (1) National Highway Freight Network, and (2) Truck Freight Economic Corridors.
- Freight access streets. Trucks must use streets throughout the ~~e~~City for deliveries. The freight network recognizes these local-access streets based on actual truck usage.



~~Figure 22~~ Figure 22 Figure 24 shows the City's future freight network, which includes I-5, I-205, SR 14, SR 500, SR 501, SR 503, Fourth Plain Boulevard, Mill Plain Boulevard, and others.

~~Figure 20~~ Figure 22. Road Classification Map

*Source: Design Workshop 2024*

~~Figure 21~~ Figure 23. Citywide Locations of Traffic Collisions in 2020

*Source: Design Workshop 2024*

~~Figure 22~~ Figure 24. Citywide Critical Freight Corridors

*Source: City of Vancouver 2024a*

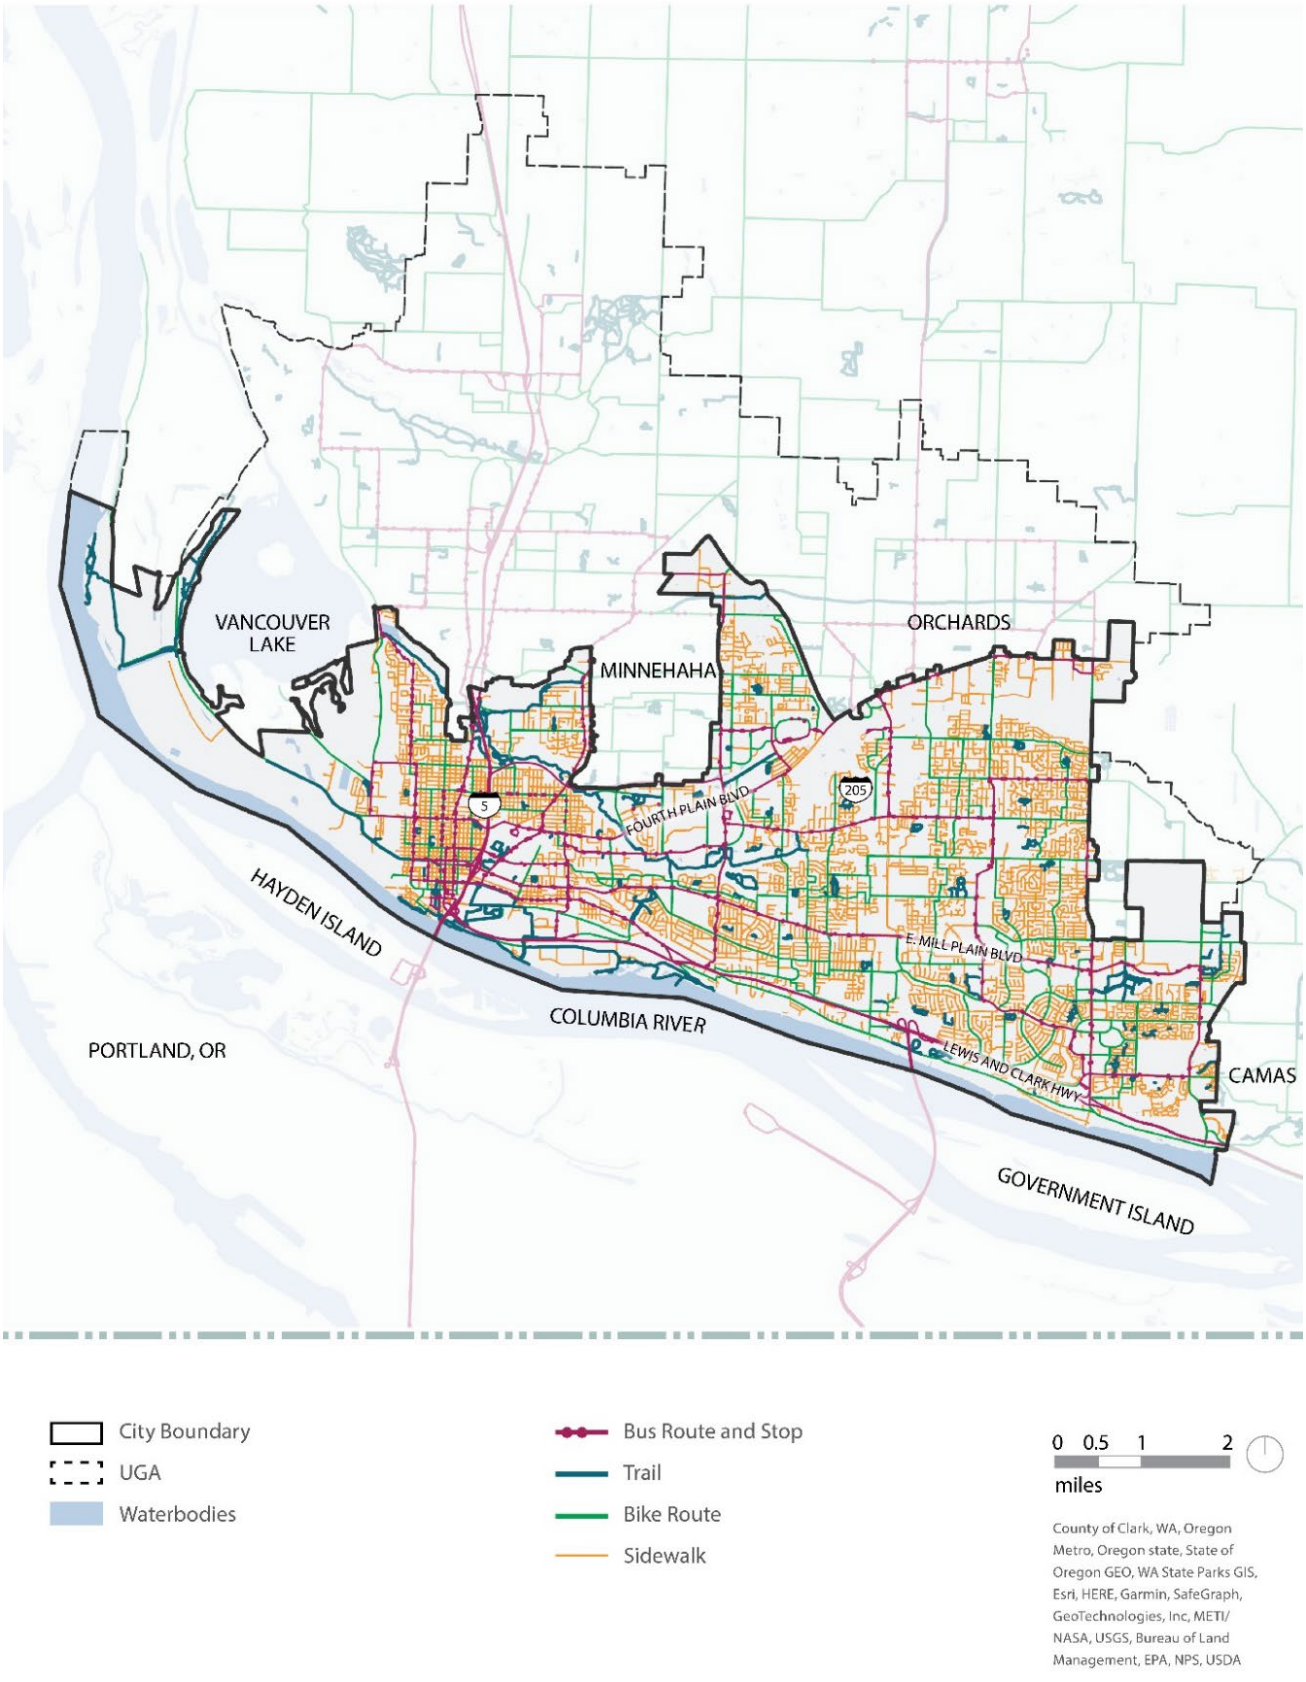
## Parking

Nearly half of ~~e~~City -managed off-street parking spaces are unoccupied on a typical weekday (City of Vancouver 2024a). Over one-third of on-street parking spaces are unoccupied on the average weekday (City of Vancouver 2024a). Updates to accommodate growth present an opportunity to right-size parking, balancing vehicle accessibility with the need to preserve valuable land for housing, recreation, and other uses.

## Transit

C-TRAN operates bus routes of varying frequency that connect residents to destinations within the City and to Portland and neighboring municipalities. ~~Figure 23~~ ~~Figure 23~~ Figure 25 shows current bus routes and stop locations in the city.

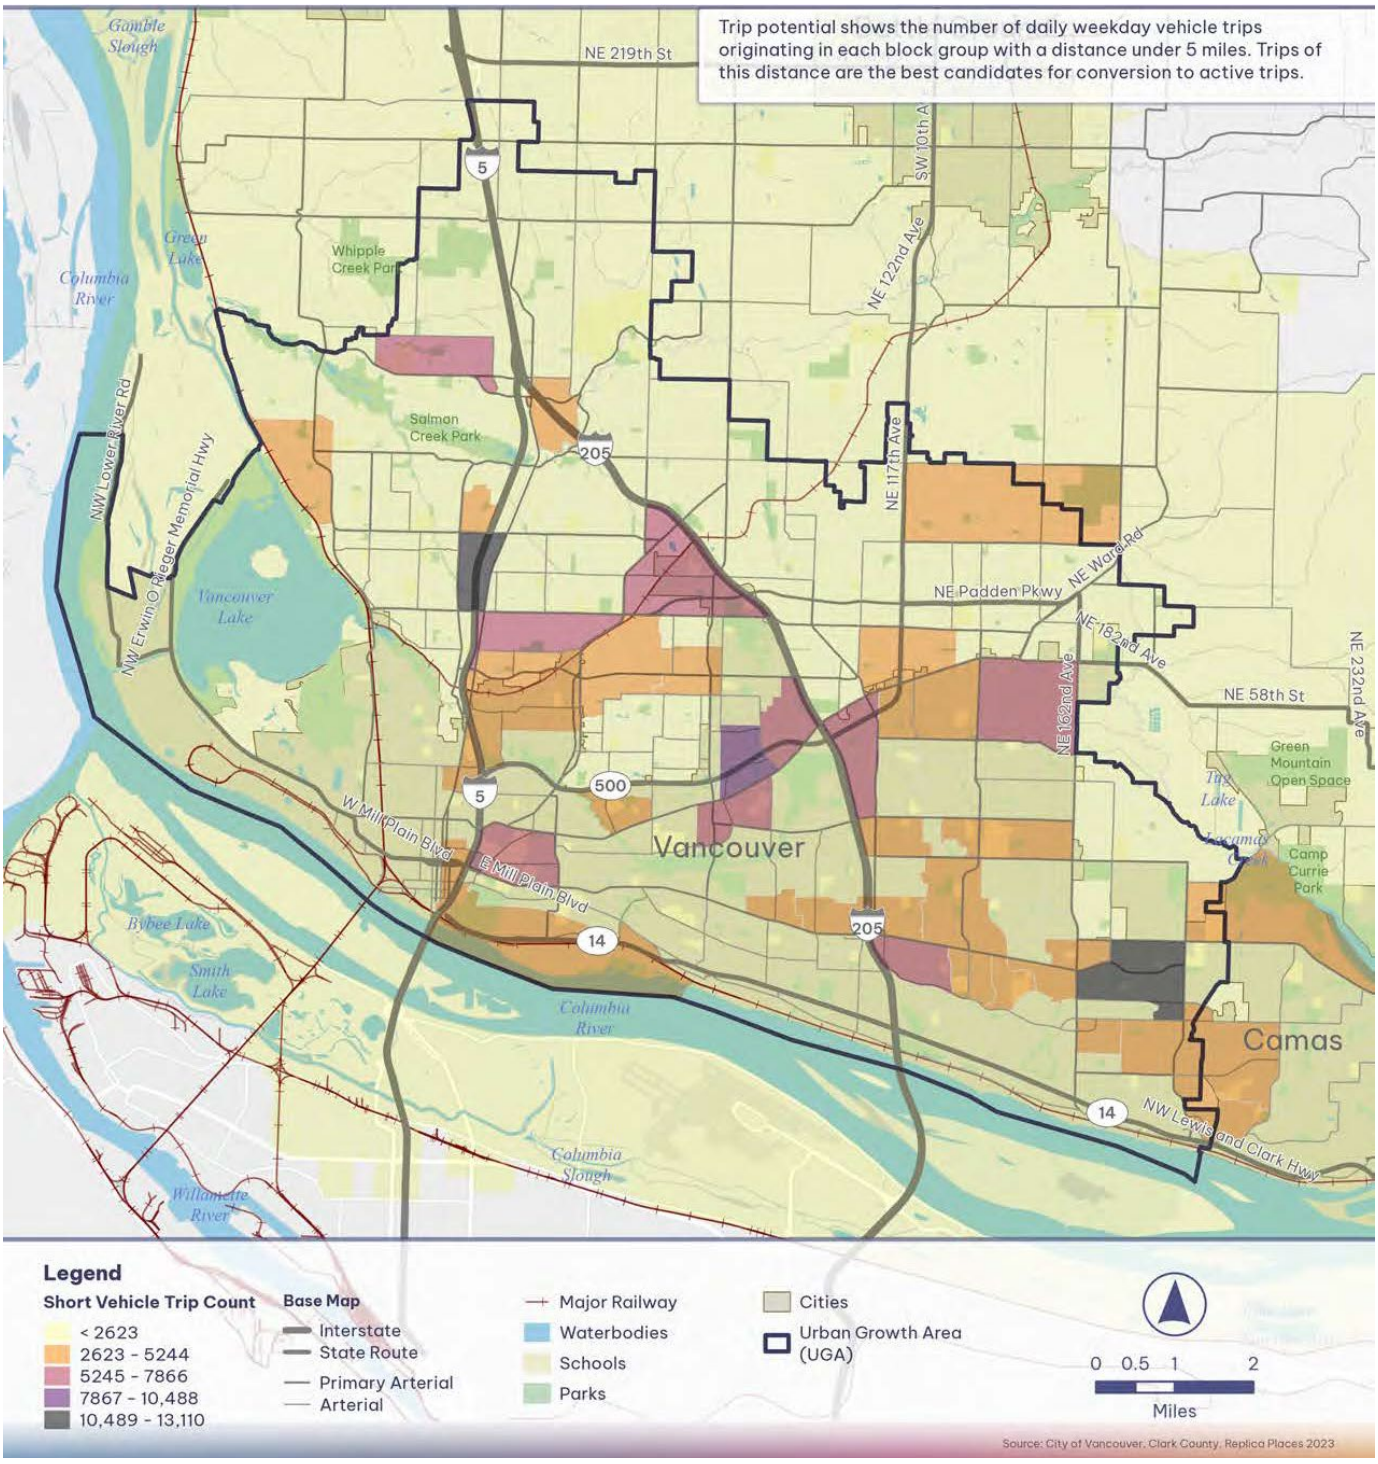
Vancouver is home to the region's first bus rapid transit (BRT) system. The Vine BRT provides frequent daily service, every 15 minutes or better, along the Fourth Plain and Mill Plain corridors. Since opening in 2017, the Vine BRT has decreased travel times for riders by 12%, with up to 10 minutes saved per trip. Bus ridership has increased by 45% while per-passenger cost decreased by 21% (City of Vancouver 2024a). Approximately 25% of Vancouver residents live within a quarter mile of the Vine BRT lines (City of Vancouver 2024a).



The C-TRAN ~~2021–2016~~2025-2030 Transit Development Plan calls for ~~a 10% increase in~~ increased service hours and frequency for various types of transit service and identifies capital needs to prepare for long-term growth (C-TRAN 2025).

### Active Transportation

The City currently has 628 sidewalks, 10,630 curb ramps, and 129 miles of mobility lanes, including 29 miles of multi-use trails (City of Vancouver 2024a). Nine miles of arterial streets are currently lacking sidewalks (City of Vancouver 2024a). The TSP identifies nearly 230 planned small mobility and pedestrian projects and their priority level to help address these gaps. ~~Figure 23~~ ~~Figure 23~~ Figure 25 shows current active transportation facilities in the city.



Looking to the future, there is strong potential for increasing active transportation trips in every part of the ~~c~~City and region (Alta 2024). Over one-third of vehicle trips in Vancouver ~~are~~ cover a distance of less than 4 miles and are therefore potential candidates for conversion to active trips (Alta 2024). To convert the most motor vehicle trips to active trips and achieve greenhouse gas emission reduction, implementing land use and transportation strategies in the areas surrounding Clark College, the Vancouver Mall, Walnut Grove, the Hazel Dell Towne Center, the Hewlett-Packard campus/Columbia Tech Center, the Salmon Creek Park and Ride, and the eastern end of SE Mill Plain Boulevard would likely yield the most benefits (Alta 2024). ~~Figure 24~~ ~~Figure 24~~ Figure 26 shows the concentration of short vehicle trips by location, with areas with more of these trips indicating a higher potential for future conversion to active trips throughout the city.

~~Figure 23~~ Figure 25. Existing Citywide Transit and Active Transportation Facilities

*Source: Design Workshop 2024*

~~Figure 24~~ Figure 26. Active Trip Potential in Clark County by Census Block Group Origin

*Source: Alta 2024*

## Potential Impacts

This section discusses the potential impacts of the alternatives related to the following transportation metrics:

- VMT
- Level of mode shift
- Mobility units
- Potential for increases in fatal/severe crashes

## Impacts Common to All Alternatives

The following sections outline impacts that are expected to occur under all the alternatives. The regional transportation model outputs used for this analysis consider assumptions about future population and employment growth, expected changes in land use, and reasonably foreseeable future transportation projects. Therefore, the transportation effects analysis accounts not only for potential direct effects but also potential indirect and cumulative effects resulting from the Comprehensive Plan Update. Because of the comparative nature of the transportation analysis, impacts for all of the alternatives are discussed in this section to allow for an easier comparison across alternatives.

### Vehicle Miles Traveled

All of the alternatives would increase VMT to some degree in 2045 as compared to existing conditions because of expected growth and development.

In comparison to the No Action Alternative, overall daily VMT for all vehicles would be about 10% higher under Alternative 1 and the Preferred Alternative, and about 12% higher under Alternative 2. There would be minimal to no difference in daily VMT for trucks between the ~~three~~ four alternatives.

Daily VMT per household would be similar to existing conditions for all of the alternatives. However, VMT per household is projected to be slightly lower under Alternatives 1 and 2 and the Preferred Alternative than the No Action Alternative, likely because they propose more areas with a mix of residential and commercial land uses, which could reduce the length and frequency of vehicle trips.

*Table 12. Modeled Existing and Future Daily Vehicle Miles Traveled in Vancouver*

| Vehicle Type | Existing (2023) | No Action Alternative[a] (2045) | Alternative 1 (2045) | Alternative 2 (2045) | Preferred Alternative (2045) |
|---|---|---|---|---|---|
| All Vehicles Except Trucks | 3,949,553 | 4,783,852 | 5,343,949 | 5,465,254 | 5,356,110 |
| Trucks (in Passenger Car Equivalent) | 215,391 | 544,077 | 541,923 | 541,302 | 549,024 |
| **Total** | **4,315,718** | **5,327,928** | **5,885,872** | **6,006,556** | **5,905,133** |
| **VMT Per Household (average miles per day)[b]** | **45.6** | **44.9** | **42.5** | **41.9** | **42.6** |

*Source: RTC 2025, 2026*

Notes:

a The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.

b VMT per household under existing conditions (2023) based on assumption of 94,587 households. For 2045, VMT per household is based on assumptions of 118,607 households in the No Action Alternative, 138,517 households in Alternative 1, ~~and~~ 143,473 households in Alternative 2, and 138,686 households in the Preferred Alternative, calculated by adding estimated new housing unit capacity to 2023 estimated household data from Clark County.

### Level of Mode Shift

Mode shift refers to whether people change the way they choose to travel (e.g., from driving alone to walking or bicycling). There would be minimal to no difference in mode split among the alternatives in 2045 compared to existing conditions, indicating no mode shift resulting from the action alternatives, as shown in Table 13. The RTC model used to analyze mode shift does not completely account for shifts to active modes and only captures mode shift to transit. Additional mode shift to active transportation would be expected from short vehicle trips if active transportation infrastructure improves, allowing more people to have access to and feel comfortable walking or biking instead of driving for trips under three miles (Alta 2026).

Vehicular travel would remain the dominant transportation mode citywide, representing nearly 90% of trips, while transit and bike would have the lowest share of trips. Transit trips are projected to increase slightly, and single-occupancy vehicle trips are projected to decrease slightly, as a share of all transportation modes between existing and future conditions.

*Table 13. Modeled Existing and Future Mode Split in Vancouver*

| Transportation Mode | Existing (2023) | No Action Alternative[a] (2045) | Alternative 1 (2045) | Alternative 2 (2045) | Preferred Alternative (2045) |
|---|---|---|---|---|---|
| Single-occupancy vehicles | 49.0% | 47.8% | 47.9% | 47.8% | 47.7% |
| High-occupancy vehicles | 39.7% | 40.0% | 39.8% | 39.9% | 39.9% |
| Transit | 1.7% | 2.7% | 2.4% | 2.4% | 2.5% |
| Walk | 7.4% | 7.3% | 7.6% | 7.7% | 7.6% |
| Bike | 2.2% | 2.2% | 2.2% | 2.2% | 2.2% |

*Source: RTC 2025, 2026*

Note:
a The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.

The average trip length across all transportation analysis zones within the City was projected to be about 4 miles under all of the alternatives (RTC 2025, 2026). This trip length of less than 5 miles indicates a similar potential for conversion of vehicle trips to active transportation trips under all alternatives.

### Mobility Units by Transportation Analysis Districts

A mobility unit is a standardized measure used to quantify the transportation demand generated by a development or project. It is a broader way of looking at transportation demand than traditional vehicle trips because it represents the number of trips or movements (as measured in person miles) made by individuals using various modes of transportation, including walking, cycling, driving, and public transit. The concept of a mobility unit enables a more complete comparison and assessment of multimodal transportation impacts across different developments as well as the full range of multimodal system solutions (City of Vancouver 2024a).

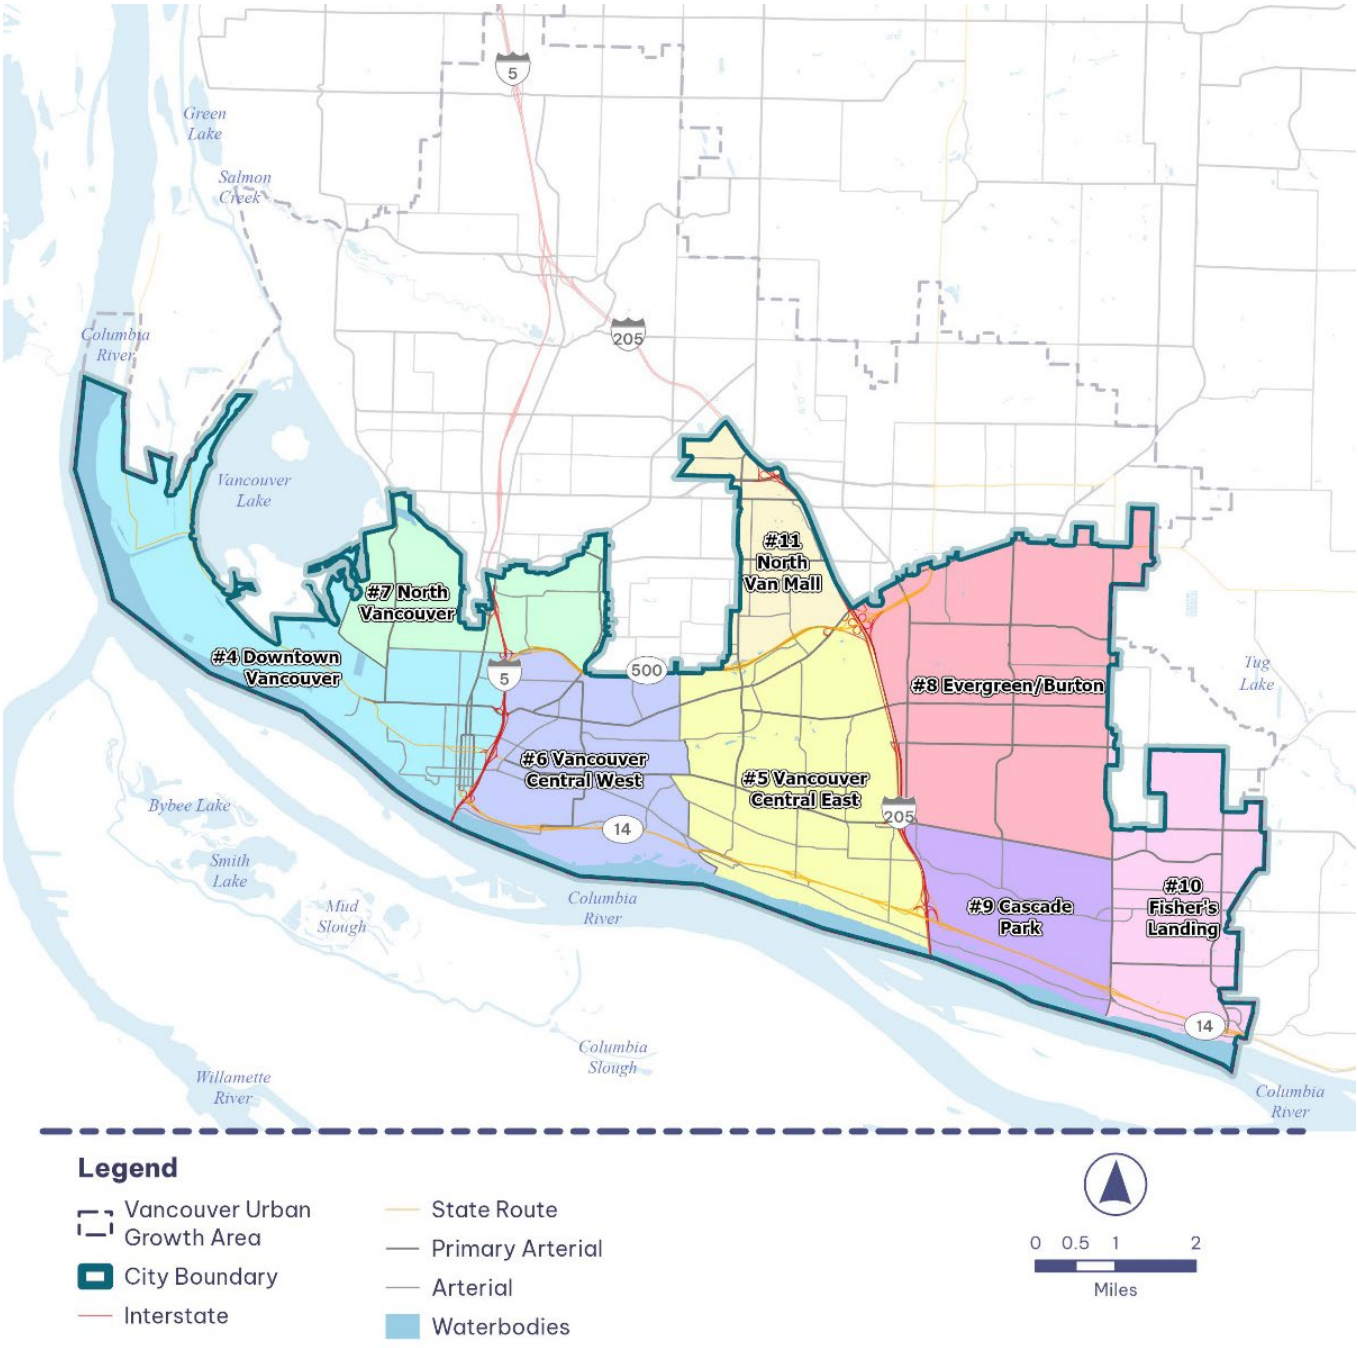
Estimated mobility units were calculated for 2045 based on the new person trips originating in each district and the average trip length. Table 14 shows the relative differences in mobility units (as measured in person miles) between Alternative 1, Alternative 2, the Preferred Alternative and the No Action Alternative. ~~Figure 25~~ ~~Figure 25~~ Figure 27 shows the locations of the districts analyzed in the regional model.

The higher mobility units in most areas of the ~~e~~City under ~~both~~ the action alternatives, compared to the No Action Alternative, reflect the greater number of person trips by all modes within these districts. This is because of proposed land use changes that would generate greater concentrations of housing units and jobs, particularly in areas of East Vancouver like Evergreen/Burton and Fisher's Landing. Under Alternative 1, some areas, such as the Vancouver Central East and Vancouver Central West districts of West Vancouver, would experience no meaningful difference in mobility units compared to the No Action Alternative based on the projected lower new capacity for jobs and housing units in those areas.

Alternative 2 would generate higher mobility units in all districts than Alternative 1. The largest differences would be in Central Vancouver (North Van Mall district) and East Vancouver (in the districts of Evergreen/Burton, Cascade Park, Fisher's Landing), where denser or more intense land uses are proposed under Alternative 2 compared to Alternative 1 and the No Action Alternative (refer to the Land and Shoreline Use section of Chapter 3 for more details).

The Preferred Alternative would have a different distribution of mobility units across City districts than Alternatives 1 and 2. Similar to Alternative 1, the Preferred Alternative would result in no meaningful difference in mobility units for the Vancouver Central West district of West Vancouver compared to the No Action Alternative. It would generate higher mobility units in Downtown Vancouver, North Vancouver, and North Vancouver Mall than Alternative 1 and Alternative 2 because there would be a relatively greater capacity for new housing units in those areas. In contrast to Alternatives 1 and 2, Evergreen/Burton and Fisher's Landing would generate fewer mobility units because there would be less capacity for new housing units in those areas. Mobility units in Vancouver Central East and Cascades Park would be lower than Alternative 2 but higher than Alternative 1 because of the difference in new housing capacity.

*Table 14. Mobility Units Originating from Transportation Analysis Districts as Compared to No Action Alternative in 2045*



| Map Reference | District | Alternative 1 (person miles per day) | Alternative 2 (person miles per day) | Preferred Alternative (person miles per day) |
|---|---|---|---|---|
| 4 | Downtown Vancouver | 11,963 | 16,654 | 68,146 |
| 5 | Vancouver Central East | 0[a] | 31,188 | 17,836 |
| 6 | Vancouver Central West | 0[a] | 5,348 | 0[a] |
| 7 | North Vancouver | 30,897 | 39,287 | 51,773 |
| 8 | Evergreen/Burton | 201,130 | 224,963 | 108,300 |
| 9 | Cascade Park | 35,022 | 61,481 | 58,262 |
| 10 | Fisher's Landing | 444,765 | 495,245 | 361,182 |
| 11 | North Van Mall | 33,959 | 53,712 | 108,687 |

*Source: RTC 2025, 2026*

Note:

a. 0 value represents that new person trips generated were lower in comparison to the No Action Alternative. The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.

~~Figure 25~~ Figure 27. Locations of Transportation Analysis Districts

*Source: RTC 2025*

### Potential for Increases in Fatal/Severe Crashes

Safety impacts were assessed based on projected future traffic volume differences between the No Action and Action Alternatives. The city's top 10 roadway segments as ranked by crash weight (based on the cost by injury level) from 2016 to 2020 were analyzed to determine how volume changes could affect safety at safety corridors identified in the City of Vancouver's Local Road Safety Plan, 2022–2026.

~~Both~~ Alternative 1, ~~and~~ Alternative 2, and the Preferred Alternative would have higher daily traffic volumes compared to the No Action Alternative across most safety corridors in 2045, as shown as percentage differences in Table 15. Compared to the No Action Alternative, there would be notably higher differences in traffic volumes on the SE Chkalov Drive, E Mill Plain Boulevard, Grand Boulevard and NE St. James Road segments under Alternative 2 than Alternative 1 because of more intense levels of development proposed near those roadways under Alternative 2. Alternative 2 would have marginally higher traffic volumes than Alternative 1 at most other locations. Under ~~both alternatives~~ Alternatives 1 and 2, the largest difference in traffic volumes compared to the No Action Alternative would be on the SE 164th Avenue segment in East Vancouver, which is near the Section 30 area that is proposed for redevelopment. However, traffic volumes at this location would be comparatively lower under the Preferred Alternative because there would be less capacity for new development in this area.

At most locations, the Preferred Alternative would have similar or lower traffic volumes than Alternatives 1 and 2, which reflects that new housing capacity would be spread more evenly throughout all areas of the city. One exception is NE St. James Road in Central Vancouver, which is forecast to have greater increases in traffic volumes than Alternatives 1 and 2.

An increase in volume does not necessarily indicate an increase in fatal or severe crashes. However, increases in traffic volumes can increase the number of crashes due to greater volumes of vehicles on the road and increased exposure to vehicles by all roadway users.

*Table 15. Modeled Daily Volume Differences between No Action Alternative and Action Alternatives for Safety Corridors in 2045*

| Safety Corridor | Alternative 1 | Alternative 2 | Preferred Alternative |
|---|---|---|---|
| SE Chkalov Drive: SE Mill Plain Boulevard – SE 7th Street | 9% | 20% | 13% |
| E Fourth Plain Boulevard: Falk Road – Stapleton Road | 0% | 3% | 0% |
| NE Fourth Plain Boulevard: NE 121st Avenue– 127th Avenue | 14% | 14% | 11% |
| SE 164th Avenue: SE 1st Street to SE Mill Plain Boulevard | 45% | 46% | 17% |
| SE Mill Plain Boulevard: Chkalov Drive – 123rd Avenue | 2% | 3% | 2% |
| E Mill Plain Boulevard: Grand Boulevard – Brandt | 7% | 14% | 10% |
| NE 112th Avenue: 39th Street– 28th Street | 6% | 8% | 2% |
| Grand Boulevard: Fourth Plain Boulevard – 33rd Street | 1% | 15% | 16% |
| E Mill Plain Boulevard: Andresen Road – Garrison Road | 4% | 8% | 7% |
| NE St. James Road: NE 49th Street - Petticoat | -9% | 5% | 19% |

*Source: RTC 2025, 2026*

Note: The No Action is based on capacity only and does not account for the feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.

## Avoidance, Minimization, and Mitigation Measures

Under all alternatives, future growth and associated increased demand for transportation facilities will be addressed as part of the City's regular capital project planning efforts and

updates to its six-year Transportation Improvement Program (TIP) (Table 16). The ~~current~~ latest adopted TIP identifies several large capital improvement projects, identified for completion during the six-year period between 2026~~5~~ and 2031~~0~~ (City of Vancouver 2025a).

*Table 16. Planned Large Capital Transportation Improvement Projects, 2026-2031*

| Project | Focus |
|---|---|
| NE 137th Ave. from NE 49th to NE Fourth Plain Blvd. | Corridor upgrades to enhance safety, manage access and minimize delays now caused by turning vehicles. |
| NE 18th St. from NE 97th Ave. to NE 107th Ave. | New urban arterial and upgrade of existing segments to current arterial standards, including multimodal facilities. |
| Jefferson St. from W Evergreen Blvd. to W Mill Plain Blvd. | Urban arterial upgrade of existing roadway to two vehicle lanes with separated multi-use path. |
| NE 192nd Ave. from SE 1st St. to NE 18th St. | Urban upgrade of existing two-lane street to improve system, safety, mobility, and accessibility. |
| Fruit Valley Freight Access and Safety Improvements | New north–south freight corridor, including multimodal facilities. |
| NE 112th Ave. from E Mill Plain Blvd to NE 28th St. | Corridor improvements to bring NE 112th Ave. up to urban arterial standards, and address safety and accessibility issues for all modes. |
| NE 28th St. from 142nd Ave. to NE 162nd Ave. | Upgrade of existing two-lane former rural road to urban 3-lane minor arterial with multimodal facilities to address capacity and improve pavement and safety conditions. |
| NE 49th St. from NE 122nd Ave. to NE 137th Ave. | Upgrade of existing two-lane street to three-lane urban minor arterial with multimodal facilities to improve safety and capacity. |
| NE 18th St. from NE 164th Ave. to NE 192nd Ave. | Upgrade of two-lane principal arterial to increase safety and improve service levels. |

| Project | Focus |
|---|---|
| NE 18th St. from NE 142nd Ave. to NE 162nd Ave. | Upgrade of two-lane road to principal arterial standards. |
| NE 59th St. from NE 147th Ave. to NE 162nd Ave. | New three-lane minor arterial street with multimodal facilities to address circulation needs, improve safety, mobility, accessibility, and stormwater management. |

*Source: City of Vancouver 2025a*

Specific measures to avoid, minimize, and mitigate impacts could potentially include developing infrastructure for active transportation such as walking and cycling, implementing intelligent transportation systems (ITS) for more efficient traffic management, and enhancing public transportation. These strategies aim to address increased travel demand and improve overall transportation capacity and efficiency.

In addition, implementation of the following policy measures ~~currently under consideration~~ for the Comprehensive Plan Update would also help to avoid, minimize, and mitigate potential transportation impacts identified for the action alternatives:

Provide a reliable, frequent, and accessible transportation system that seamlessly connects residents to key areas of the ~~e~~City and region.

- Provide community members with access to low-carbon travel options, including walking, cycling, small mobility, and transit, to connect important destinations while reducing reliance on single-occupancy vehicles. Improve active transportation infrastructure particularly in areas with inadequate pedestrian and micromobility infrastructure, to increase the share of trips made by foot, bike, or other small mobility devices.
- Adopt street standards that create comfortable, inviting multimodal streets. Adopt connectivity standards to improve pedestrian and small mobility safety and accessibility.
- Apply standards to development, capital, maintenance, and planning projects including maximum block length, unconnected streets, cul-de-sac connections, linkages between land uses, and multiple access points.
- Implement the citywide low-stress bicycle and small mobility network that prioritizes safety and comfort for people of all ages and abilities.
- Designate and enhance freight corridors to facilitate efficient movement of goods and reduce congestion. Improve infrastructure and connectivity to and from the Port of Vancouver to streamline freight operations.
- Eliminate traffic-related fatalities and serious injuries and create a safe and comfortable travel environment for all users.

- Implement strategic pricing mechanisms to regulate the availability of on-street parking in Mixed-Use and Regional Activity Centers.
- Implement land use patterns that reduce VMT, traffic congestion, and greenhouse gas emissions per capita, ~~and~~ while improving~~e~~ safety and air quality.
- Tailor regulations, incentives, and investments to facilitate development and community resources near current and future transit stations, ensuring new development is accessible to historically excluded and underserved communities and those most reliant on public transit.
- Prepare for emerging technologies by updating City policies and operational requirements for shared mobility and emerging mobility vendors, including Autonomous Vehicles. Create data sharing agreements and vendor requirements.
- Develop guidance and encouragement for community use of the right-of-way, including plazas, parklets, "streateries," open streets events, public art, and demonstration projects.
- Ensure transportation systems meet universal design standards, prioritizing mobility solutions for disabled, senior, youth, and low-income residents across all modes.
- Work with nonprofit and private partners, Clark County and adjacent cities to build out the regional trail network for recreation and active transportation purposes.
- Coordinate closely with Clark County, other cities, and other government entities such as C-TRAN, the RTC, and school districts to sustainably manage urban growth areas, efficiently deliver urban services, expand regional transit and multimodal connectivity, and coordinate on shared goals and responsibilities, in accordance with adopted countywide planning policies.
- Update regulations and design guidance to reflect multimodal level of service (LOS) standards that require private development and capital projects to advance multimodal safety and support shifts to non-drive-alone modes.
- Create safe walking connections through programs that identify and invest in Safe Routes to Schools and Community Safe Routes that link people to transit and other important community destinations.
- Invest in infrastructure that supports reliable, frequent, and accessible transit service as outlined in the Enhanced Transit Network, while adapting to localized climate impacts. Prioritize improvements in underserved communities and areas with high climate vulnerability. These investments should expand mobility options, improve neighborhood access, and deliver health, economic, and social benefits.
- Work with local, state, federal and tribal partners to ensure that new construction or replacement of critical infrastructure is programmed to avoid community harm and maximize social, environmental, and cultural value.

## Significant Unavoidable Adverse Impacts

All alternatives have the potential to create impacts to existing transportation infrastructure as a result of expected population and job growth and development, with greater potential impacts under Alternatives 1 and 2 and the Preferred Alternative than the No Action Alternative. The anticipated changes would occur incrementally, and with the implementation of avoidance, minimization, and mitigation measures, no significant unavoidable adverse impacts to transportation are anticipated for any of the alternatives.

# Noise

## Methodology

Analysts reviewed relevant information sources and policies to qualitatively describe existing citywide noise conditions, including the following sources:

- WAC 173-60, Maximum Environmental Noise Levels: Establishes maximum permissible noise levels for three classes of environmental designations for noise abatement (EDNA): residential (generally known as Class A in the WAC), commercial (Class B), and industrial (Class C) noise, as shown in Table 17, along with construction noise limits.
- VMC 20.935, Off-Site Impacts (VMC 20.450.007 in proposed code): Includes mitigation requirements where potential impacts to adjacent uses from a proposed land use or development are identified. Outdoor construction, including construction staging, is limited to 7:00 a.m. to 8:00 p.m. seven days a week.
- VMC 20.520, Noise Impact Overlay District: Recognizes that certain areas of the ~~e~~City experience greater levels of transportation noise through establishment of a Noise Impact Overlay District. This district covers the part of the ~~e~~City determined to be most affected by noise from Portland International Airport, Burlington Northern Railroad, I-5, and Pearson Airport. The code regulates and places limits on new construction, expansion, and reconstruction of residential structures within this district.
- U.S. Department of Transportation National Transportation Noise Map (USDOT 2020).

Analysts then reviewed the alternatives to determine potential adverse impacts and associated mitigation measures using the following metrics:

- Potential for construction noise impacts in residential/noise-sensitive areas
- Potential for increased transportation noise impacts in residential/noise-sensitive areas
- Capacity for new housing in areas with high transportation noise

Analysts estimated potential changes in noise levels from transportation sources based on outputs from the RTC regional transportation demand model, as described in the Transportation section.

*Table 17. Maximum Washington State Permissible Noise Levels*

| EDNA of Noise Source | EDNA of Receiving Property (dBA) Class A[a] | EDNA of Receiving Property (dBA) Class B | EDNA of Receiving Property (dBA) Class C |
|---|---|---|---|
| Class A | 55 / 45 | 57 | 60 |
| Class B | 57 / 47 | 60 | 65 |
| Class C | 60 / 50 | 65 | 70 |

*Source: WAC 173-60-040*

Note:
a Limits for noise received in Class A EDNA are reduced by 10 dBA during nighttime hours (10 p.m. to 7 a.m.).
Key: EDNA = environmental designations for noise abatement

## Affected Environment

As with most urbanized environments, the most common sources of environmental noise in Vancouver come from transportation and heavy industrial uses.

The primary noise sources in the area include vehicles traveling on I-5, I-205, SR 14, SR 900, and arterial roads. While not as consistent as noise from various roadways located in the comprehensive plan area, aircraft noise from Portland International Airport and Vancouver Pearson Field, and railway noise along the BNSF Railway paralleling I-5 and SR 14 and the Portland Vancouver Junction Railroad contribute to overall noise levels.

Noise from industrial facilities located along the Vancouver Waterfront and near the railways and from a variety of ongoing construction projects in and around downtown Vancouver influence noise levels in these localized areas.

The National Transportation Noise Map identifies areas with existing exposure to aviation, highway, and rail noise (USDOT 2020). Table 18 summarizes current ranges of transportation noise levels throughout Vancouver. ~~Figure 26~~ Figure 26 Figure 28 shows a map of the distribution of existing transportation noise levels throughout the Vancouver area, which indicates higher noise levels near highways and major arterials.

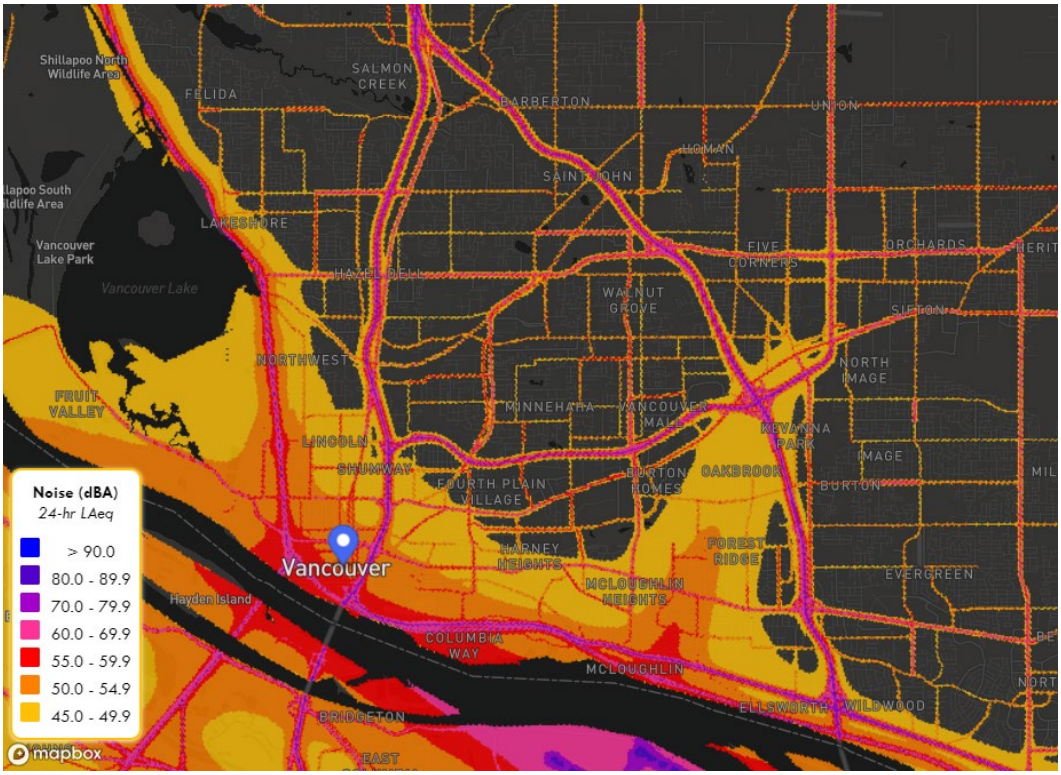


*Table 18. Existing Transportation Noise Levels in Vancouver*

| Mode | Existing Noise Level (dBA) | Location |
|---|---|---|
| Aviation | 45.0 to 59.9 | Increases with proximity and extends farthest directly north of the Portland airport. |
| Road | 50.0-89.9<br>40.0-59.9 | Along I-5, I-205, SR 14, and SR 500<br>Arterial roads |
| Rail | 45.0 to 89.9 | Along the BNSF Railway (paralleling I-5 and SR 14) and the Portland Vancouver Junction Railroad |

*Source: USDOT 2020*

Key: dBA = A-weighted decibels; I = Interstate; SR = State Route

~~Figure 26~~ Figure 28. Distribution of Existing Transportation Noise Levels in Vancouver Area

*Source: USDOT 2020*

## Potential Impacts

This section discusses the potential impacts of the alternatives related to the following noise metrics:

- Potential for construction noise impacts in residential/noise-sensitive areas
- Potential for increased transportation noise impacts in residential/noise-sensitive areas
- Capacity for new housing in areas with high transportation noise

The regional transportation model outputs that informed this noise analysis consider assumptions about future population and employment growth, expected changes in land use, and reasonably foreseeable future transportation projects. Therefore, the noise effects analysis accounts not only for potential direct effects but also potential indirect and cumulative effects resulting from the Comprehensive Plan Update.

### Impacts Common to All Alternatives

All alternatives would include new development of residential (referred to in the WAC as Class A source and receiving properties), commercial (Class B source and receiving properties), and industrial (Class C source and receiving properties) lands. As shown in Table 17, a Class B noise source affecting Class A receiving properties is restricted to a sound level of 57 A-weighted decibels (dBA) during daytime hours (7 a.m. to 10 p.m.) and 47 dBA during nighttime hours (10 p.m. to 7 a.m.). A Class C noise source affecting Class A receiving properties is restricted to a sound level of 60 dBA during daytime hours and 50 dBA during nighttime hours.

The following sections outline impacts that are expected to occur under all the alternatives. Impacts specific to each alternative are discussed in the next subsections.

#### Potential for substantial construction noise impacts in residential/noise-sensitive areas

All alternatives would include construction activities associated with future growth and development, which would increase short-term noise levels at noise-sensitive areas, such as residences, schools, and nursing homes. Because of the requirements of H.B. 1110, all of the alternatives would allow for new housing development on ~~e~~City lands currently designated as Urban Lower Density, which could potentially result in construction activities immediately adjacent to existing noise-sensitive residential properties.

The level of these temporary impacts would depend on the proximity to construction activities, and other local context such as topography, the extent of existing ambient noise from roadways and other nearby sources. Construction of taller buildings and/or structures with underground parking would have the greatest potential for temporary noise impacts

because these building types would likely require use of louder construction equipment, such as pile drivers, for foundation work.

### Potential for increased transportation noise impacts in residential/noise-sensitive areas

After construction of individual developments, additional operational noise is anticipated under all alternatives because of projected increases in volumes of vehicles traveling on existing and future roadways, increases in rail and aircraft activity associated with future growth and development, and potential increases in industrial noise due to increased demand to carry passengers and goods in and out of the area.

New roadways, buildings, and typical activities associated with an increased population in an area all contribute to higher noise levels and a greater likelihood of disturbance caused by noise. The changes in noise levels between existing and future conditions would not be noticeable in most areas included in the City's proposed changes to the Comprehensive Plan because similar levels of transportation noise and noise associated with nearby development are part of the existing noise environment.

Minor increases in noise levels would be most noticeable at residences and other land uses sensitive to noise, such as schools, nursing homes, churches, parks, and other outdoor use areas located near planned development corridors where construction and increased use of transportation facilities would be most pronounced. Noise level increases under all alternatives compared to existing noise levels would not likely be noticeable year by year but would be noticeable over decades of more expansive local and regional development.

Based on traffic data developed for each alternative from the regional transportation model, as described in the Transportation section, future (2045) vehicle traffic volumes would not vary between the No Action and Action Alternatives to the degree that would result in a noticeable change in future traffic noise levels.

Any minor increase in long-term operational noise levels with the future alternatives compared to existing noise levels would fall below the threshold of human perception, which is 2 to 3 dBA for most individuals. Increases in noise would result from minor increases in transportation vehicle volumes and temporary increases in construction noise from future growth and planned development. A doubling of traffic volume is generally needed to result in a noticeable change (approximately 3 dBA) in traffic noise levels per Federal Highway Administration noise regulations (23 Code of Federal Regulations 772).

### Capacity for new housing in areas with high transportation noise

All alternatives would provide limited capacity for building new housing units in areas with existing transportation noise above 55 dBA, based on mapping from the U.S. Department of Transportation (refer to ~~Figure 26~~ Figure 28). The U.S. Department of Housing and Urban Development has established 55 dBA as the maximum average day-night level for exterior noise at residences (HUD 1977). Details of varying levels of housing in areas with high transportation noise are described in each alternative below.

~~Based on the modeled locations of new housing units, as described in the Housing section, about 6% of the new housing unit capacity under each alternative would be located in higher transportation noise areas in East, Central, and West Vancouver, primarily near existing transportation corridors such as I-5, I-205, SR 14, and Mill Plain Boulevard. This percentage translates to about 1,600 to 3,100 housing units depending on the alternative (lowest capacity under No Action, highest capacity under Alternative 2).~~

## No Action Alternative

### Potential for substantial construction noise impacts in residential/noise-sensitive areas

No additional construction noise impacts were identified for the No Action Alternative beyond those discussed in the Impacts Common to All Alternatives section. The No Action Alternative would have the lowest potential for substantial construction noise impacts of all the alternatives because it would have the lowest capacity for new housing units, jobs, and associated new development.

### Potential for increased transportation noise impacts in residential/noise-sensitive areas

No additional effects were identified for the No Action Alternative beyond those discussed in the Impacts to All Alternatives section. Noise levels under the No Action Alternative would increase at a similar rate as they have in recent years with future growth and development planned in line with the current adopted City Comprehensive Plan and development regulations.

### Capacity for new housing in areas with high transportation noise

Based on the modeled locations of new housing units, as described in the Housing section, about 6% of the new housing unit capacity under the No Action Alternative would be located in higher transportation noise areas in East, Central, and West Vancouver, primarily near existing transportation corridors such as I-5, I-205, SR 14, and Mill Plain Boulevard. This percentage translates to about 1,600 housing units. ~~No additional effects were identified for the No Action Alternative beyond those discussed in the Impacts to All Alternatives section.~~

## Alternative 1

### Potential for substantial construction noise impacts in residential/noise-sensitive areas

Construction noise associated with Alternative 1 would potentially be more frequent and extend for longer periods than construction resulting from the No ~~Build~~ Action Alternative because of the higher capacity for new development anticipated under Alternative 1. However, localized construction noise levels are anticipated to be similar to No ~~Build~~ Action Alternative construction noise levels because the activities and equipment required would be similar and would occur in accordance with City noise ordinances.

### Potential for increased transportation noise impacts in residential/noise-sensitive areas

The proposed increase in density under Alternative 1 would result in moderately higher noise levels along growth corridors identified in the study area compared to the No Action Alternative because of a marginally higher number of vehicles traveling on existing and future roadways. There would also be moderately higher noise levels from other transportation sources including rail, aircraft, and industrial noise, because of higher expected demand to transport passengers and goods and services in and out of the area compared to the No Action Alternative.

### Capacity for new housing in areas with high transportation noise

Similar to the No Action Alternative, about 6% of the new housing unit capacity under Alternative 1 would be located in higher transportation noise areas in East, Central, and West Vancouver. This percentage translates to about 2,800 housing units. ~~No additional effects were identified for Alternative 1 beyond those discussed in the Impacts to All Alternatives section.~~

## Alternative 2

### Potential for substantial construction noise impacts in residential/noise-sensitive areas

Construction noise associated with Alternative 2 would be more frequent and extend for longer periods than construction resulting from the No ~~Build~~ Action Alternative because of the higher capacity for new development. Alternative 2 would allocate the most land area for zoning districts such as Regional Activity Center and Mixed Use that allow for taller buildings, which could result in higher construction noise levels because of the heavy equipment (e.g., pile drivers) needed.

### Potential for increased transportation noise impacts in residential/noise-sensitive areas

The higher-intensity development under Alternative 2 would result in slightly higher noise levels along growth corridors identified in the study area compared to Alternative 1 and the

Preferred Alternative because of a marginal projected increase in the number of vehicles traveling on existing and future roadways. There may be slightly higher noise levels from other transportation sources including rail, aircraft, and industrial noise because of potentially greater demand to transport passengers and goods and services in and out of the area compared to the other alternatives.

### Capacity for new housing in areas with high transportation noise

Similar to the No Action Alternative and Alternative 1, about 6% of the new housing unit capacity under Alternative 2 would be located in higher transportation noise areas in East, Central, and West Vancouver. This percentage translates to about 3,100 housing units. ~~No additional effects were identified for Alternative 2 beyond those discussed in the Impacts to All Alternatives section.~~

## Preferred Alternative

### Potential for substantial construction noise impacts in residential/noise-sensitive areas

Short term construction noise associated with the Preferred Alternative would potentially be more frequent and extend for longer periods than construction resulting from the No Action Alternative because of the higher capacity for new development anticipated under the Preferred Alternative. However, localized construction noise levels are anticipated to be similar to the No Action Alternative construction noise levels because the activities and equipment required would be similar and would occur in accordance with City noise ordinances.

Construction noise related to new housing development would be more similar to Alternative 2 because the Preferred Alternative would have a similar split of land zoned for Low-Scale and Medium-Scale neighborhoods. Construction noise related to Mixed Use and Regional Activity Center developments would be more similar to Alternative 1, which has less land allocated for these higher-intensity uses and taller buildings than Alternative 2 and therefore would have fewer areas with these louder anticipated construction noise levels.

### Potential for increased transportation noise impacts in residential/noise-sensitive areas

The higher-intensity development under the Preferred Alternative would result in slightly higher noise levels along growth corridors identified in the study area compared to Alternative 1 and slightly lower noise levels in the same areas compared to Alternative 2. The slight difference in noise levels is because of a marginally higher numbers of vehicles traveling on existing and future roadways compared to Alternative 1 and marginally lower numbers of vehicles compared to Alternative 2. There may be slightly higher noise levels from other transportation sources including rail, aircraft, and industrial noise because of potentially

greater demand to transport passengers and goods and services in and out of the area compared to the other alternatives.

**Capacity for new housing in areas with high transportation noise**

The Preferred Alternative would have the highest potential for new housing unit capacity located in higher transportation noise areas, with about 11% in East, Central, and West Vancouver. This percentage translates to about 5,200 housing units. The capacity for housing units in these areas would be higher than Alternatives 1 and 2 because the Preferred Alternative analysis was updated to account more accurately for master plans across the city, which are predominantly located in areas with high transportation noise corridors. These master plans, covering areas such as Waterfront, The Heights, the area located at the intersection of 192nd Ave. and State Route 14 known as HQ, Columbia Palisades, Section 30, and Vancouver Innovation Center, were approved for development prior to the Comprehensive Plan update process.

## Avoidance, Minimization, and Mitigation Measures

Temporary construction noise will be managed through best management practices, which include requiring contractors to follow all state and local restrictions on construction timing and maximum noise levels. Additional measures can be used to reduce temporary construction impacts at noise-sensitive locations. These measures could include requiring contractors to locate their loudest equipment farther from noise-sensitive locations and provide shielding around the loudest equipment.

No substantial increases in noise are expected to occur under the alternatives; therefore, no mitigation measures are proposed. All environmental noise would continue to be regulated by WAC 173-60 and VMC 20.935.

In areas where development is planned near existing or future sources of higher noise levels, the City may consider whether to require implementation of noise reduction methods such as locating noise-sensitive areas further from noise sources, including walls or other barriers to shield noise from noise-sensitive use locations; and designing interior spaces with noise-reducing building materials.

In addition, implementation of the following policy measures ~~currently under consideration~~ for the Comprehensive Plan Update would also help to avoid, minimize, and mitigate potential noise impacts identified for the action alternatives:

- Reduce and mitigate noise pollution from major stationary and mobile sources (air travel, vehicles, freight, ~~and~~ railroads, high-intensity industrial uses), prioritizing vulnerable populations and reducing the impact in residential, commercial, and natural areas.

- Mitigate the impacts of air, water, heat, noise, and light pollution, with a focus on areas with high environmental health disparities.

### Significant Unavoidable Adverse Impacts

All alternatives would have the potential to increase short-term and long-term noise levels to some extent because of expected growth and development. The anticipated growth would occur incrementally, and with the implementation of avoidance, minimization, and mitigation measures, no significant unavoidable adverse impacts to noise are anticipated for any of the alternatives.

## Public Services and Utilities

### Methodology

Analysts reviewed relevant information and policies to describe existing citywide conditions for public services and utilities (fire, police, schools, parks and recreation, water, wastewater, sewer, electricity, other energy utilities, and solid waste), including the following sources:

- Community Atlas (Design Workshop 2024)
- City of Vancouver Comprehensive Water System Plan (City of Vancouver 2015)
- City of Vancouver Parks, Recreation, and Cultural Services Comprehensive Plan 2022-2031, updated for 2023-2032 (City of Vancouver 2022a)
- City of Vancouver 2025-2030 Capital Improvement Program for Water, Wastewater, Sewer Connection Incentive Program, Surface Water (City of Vancouver 2024c)
- Clark Public Utilities Integrated Resource Plan (CPU 2024)
- Evergreen School District Capital Facilities Plan (EPS 2019)
- Vancouver Fire Department 2024 Annual Report (VFD 2024)
- Vancouver Public Schools Capital Facilities Plan (VPS 2022)

Analysts then reviewed the alternatives to determine potential adverse impacts and associated mitigation measures using the following metrics:

- Increased demand for services or utilities that exceeds levels of service or capabilities beyond mitigatable levels
- Consistency with capital improvement plans (CIP)

## Affected Environment

### Fire

The Vancouver Fire Department (VFD) provides fire protection and emergency medical services (EMS) to the City and Clark County (Fire District 5), covering 89.2 square miles, including 22 miles of shoreline along the Columbia River. In addition to fire and EMS, they provide marine response, fire prevention, and fire investigation. Regionally, they provide hazardous materials and technical rescue responses (VFD 2024).

VFD has 11 stations, operated by 245 VFD and 190 American Medical Response (AMR) personnel, which serve the city limits and urban growth area. VFD uses a metric of firefighters per 1,000 people as one way of projecting future needs to maintain or improve levels of service to the community. The current ratio is 0.83 firefighters per ~~person~~ 1,000 people.

VFD is planning to relocate and construct new facilities for Station 3 in The Heights in Central Vancouver and Station 6 in Burton Ridge in East Vancouver over the next five years to address growing needs in these areas, and to complete seismic retrofits of Fire Stations 4 and 8 in the next 6 years. The City also plans to rebuild Fire Station 5 in the next 10 years. The City is also considering construction of new fire stations downtown and/or in the St. Johns area to accommodate future ~~e~~City growth and ensure adequate emergency response times and serviceability.

VFD provided 1,536 fire suppression responses, 40 technical rescues, 24 maritime responses, and 234 responses to hazmat situations in 2023 (VFD 2024). Since 2015, the City has contracted with AMR to provide ambulance services within the city. Both AMR and VFD use the same standard operating procedures. (City of Vancouver and AMR 2023). Table 19 and Table 20 provide the VFD and EMS response times by alarm type and what percent met established standards. These tables also indicate the number of calls received in 2023 by alarm type.

*Table 19. Vancouver Fire Department Response Times*

| Alarm Type | Standard Response Time (minutes) | 2023 Average Response Time (minutes) | 2023 % met Standard | Number of Calls Received in 2023 | % Change over 2022 |
|---|---|---|---|---|---|
| Priority 1 and 2 Except Marine | 7:59 | 8:38 | 86.2% | 15,806 | 5.8% |
| Priority 3 and 4 Except Marine | 10:59 | 9:10 | 95% | 8,642 | -23.3% |
| Priority 5 Non-Medical | 15:59 | 11:05 | 97.58% | 5,051 | 1% |
| Priority 5 Emergency Medical – Ambulance Only | 17:59 | 19:41 | 88.3% | 7,858 | -16.7% |
| Marine – All Calls | 19:59 | 34:02 | 45.8% | 24 | 60% |
| Fire Suppression Full Alarm | 15:59 | 15:40 | 91.7% | 84 | -12.5% |

## Police

The Vancouver Police Department (VPD) provides police services in the ~~c~~City and is authorized to employ 241 officers, with 226 sworn members as of February 2025 (VPD 2025). Similar to VFD, VPD uses a metric of officers per 1,000 people to help project future needs to maintain or enhance its services to the community. VPD currently has a ratio of 1.2 officers per 1,000 people but has identified a need to increase that number to 1.4 officers per 1,000 people to be more consistent with the national average of 1.6 officers per 1,000 people. A ballot initiative, Proposition 5, planned for fall 2025, ~~if~~ which was approved by voters, would help to fund hiring of new officers to meet that goal.

VPD serves approximately 50 square miles, divided into two precincts, east and west, which are further divided into two districts per precinct. Each district is then divided into beats, and individual patrol officers are responsible for handling calls for service within each beat. The City has identified a replacement of VPD Headquarters on its list of capital improvements

through 2036. VPD reports that its east and west precinct buildings are currently at capacity for current staff levels and have limited potential for expansion because of land constraints.

Table 21 summarizes the number of events initiated by community members and by officers in 2024, as well as the average response time for community-initiated events (VPD 2024). The event priority number refers to the level of emergency, with Priority 1, 2, and 3 indicating calls that require an immediate response and lower numbers referring to those with less immediacy.

*Table 21. Vancouver Police Department Response Times*

| Event Priority | 2024 Community-Initiated Events (% Change from 2023) | Average Response Time – Community-Initiated Events (Minutes) | 2024 Officer-Initiated Events (% Change from 2023) | Total Events (% Change from 2023) |
|---|---|---|---|---|
| 1 | 460 (-16.2%) | 5.56 | 11 (-50.0%) | 471 (-17.5%) |
| 2 | 5,968 (-4.7%) | 8.34 | 192 (6.1%) | 6,160 (-4.4%) |
| 3 | 43,034 (-7.1%) | 10.74 | 19,922 (64.4%) | 62,956 (7.7%) |
| 4 | 21,972 (-10.3%) | 13.82 | 12,413 (-6.2%) | 34,385 (-8.9%) |
| 5 | 2,307 (-21.7%) | 13.18 | 1,564 (-10.0%) | 3,871 (-17.4%) |
| 9 | 5,349 (-15.4%) | 7.46 | 19 (11.8%) | 5,368 (-15.3%) |
| **Total** | **79,090 (-9.0%)** | **10.82** | **34,121 (25.0%)** | **113,211 (-0.9%)** |

*Source: VPD 2024*

## Schools

The Vancouver school system is a mix of public, charter, private, and special schools. Two regional public school districts have facilities ~~in~~ in Vancouver: the Vancouver Public School District (VPS) and the Evergreen School District (Evergreen SD). The City also is home to the Washington School for the Deaf, the Washington School for the Blind, and Clark College, a community college offering bachelor's and associate degrees and certificates. ~~Figure 27~~ ~~Figure 27~~ Figure 29 shows the location of schools and school districts in Vancouver.

VPS is the primary provider of public education in West and Central Vancouver. The school district consists of 21 elementary, 6 middle, and 7 high schools covering a district of 58

square miles, as well as 5 specialty schools (VPS n.d.). The average student-teacher ratio is 17:1, which is less than the state average of 19.7:1.

In 2022, VPS adopted a six-year Capital Facilities Plan (CFP) that established average classroom sizes for elementary, middle, and high school grade levels (VPS 2022). The CFP guidelines suggest that average class sizes should be 21.5 students per classroom in elementary schools, 26 students per classroom in middle schools, 27 students per classroom in high schools and 10 students per classroom for special education students. The CFP projected insufficient capacity at two schools, Ogden Elementary in Central Vancouver and Sacajawea Elementary in West Vancouver, and called for adding classrooms and co-op space at both schools. All other VPS schools had reported enrollment levels below their building capacity. VPS uses standard assumptions about new student generation rates to forecast their capacity needs, as shown in Table 22.

*Table 22. Average Student Generation Rates for Vancouver Public Schools (2022)*

| School Level | Single-Family Housing Student Generation Rate | Multifamily Housing Student Generation Rate |
|---|---|---|
| Elementary School (K-5) | .183 | .103 |
| Middle School (6-8) | .076 | .046 |
| High School (9-12) | .089 | .058 |

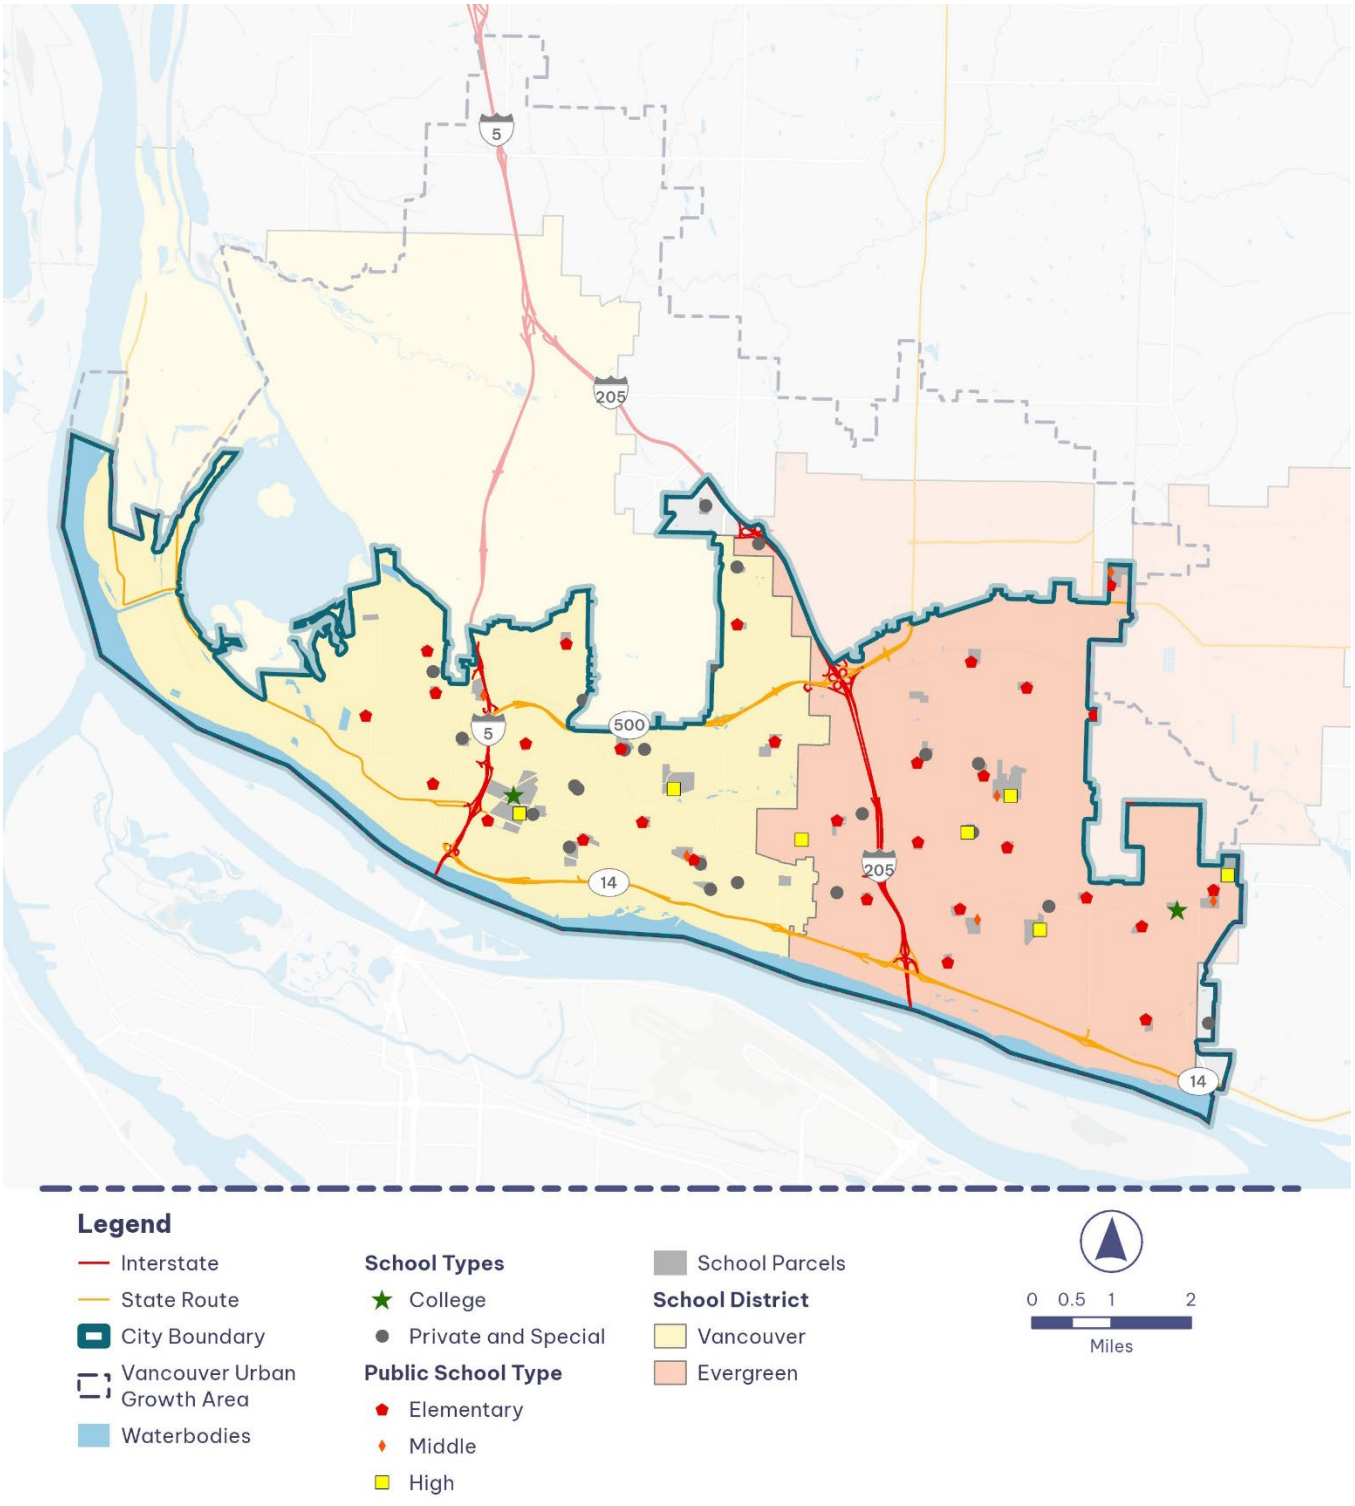
*Source: VPS 2022*

The Evergreen SD serves Clark County and the eastern part of Vancouver and consists of 22 elementary, 6 middle, and 6 high schools serving about 22,000 students (EPS n.d.). It also includes 4 specialty schools.

Evergreen SD is currently in the process of updating the six-year CFP however, according to information provided by the district in 2025, it will establish the following average classroom sizes for specific school grades (EPS 2025):

- Grades Kindergarten-3 – not to exceed 23.67 students per class
- Grades 4 -5 – not to exceed 25 students per class
- Special Education – 1 to 15 students per classroom for elementary schools
- Grades 6-8 – not to exceed 27.33 students per class
- Grades 9-12 – not to exceed 30 students per class
- Special Programs (e.g., music, art, and physical education) –20 to 70 students per class

The updated Evergreen SD CFP projects a decrease in enrollment that will level off and remain steady through 2032 (EPS 2025). One factor hindering enrollment growth has been the slow growth in the child population within Evergreen SD boundaries. The annual kindergarten-to-birth (K-to-birth) ratio is a key metric representing a combination of net migration between birth and age five and the share of five-year-old residents enrolled in district kindergarten classes, often referred to as a "capture rate."



Evergreen SD also uses standard assumptions about new student generation rates to forecast their capacity needs, as shown in Table 23. The ratios for Evergreen SD have fluctuated, recovering from the 2020-21 low of 0.75, but have not returned to pre-pandemic levels. The middle scenario assumes that K-to-birth ratios will increase slightly in the next years before stabilizing at 0.89 from 2028 through 2032.

*Table 23. Average Student Generation Rates for Evergreen School District (2023-2024)*

| School Level | Single-Family Housing Student Generation Rate | Multifamily Housing Student Generation Rate |
|---|---|---|
| Elementary School (K-5) | .164 | .066 |
| Middle School (6-8) | .072 | .03 |
| High School (9-12) | .109 | .037 |

*Source: EPS 2025*

## Parks and Recreation

The Vancouver Department of Parks, Recreation and Cultural Services (VPRCS) oversees and manages a total of 1,775 acres of parkland across 106 sites and 20 miles of trails, as shown in ~~Figure 28 Figure 28~~ Figure 30. Since 2014, the City of Vancouver has acquired nearly 50 acres of public land and developed more than 12 acres of parkland, with several additional park upgrades completed or in progress (City of Vancouver 2022a).

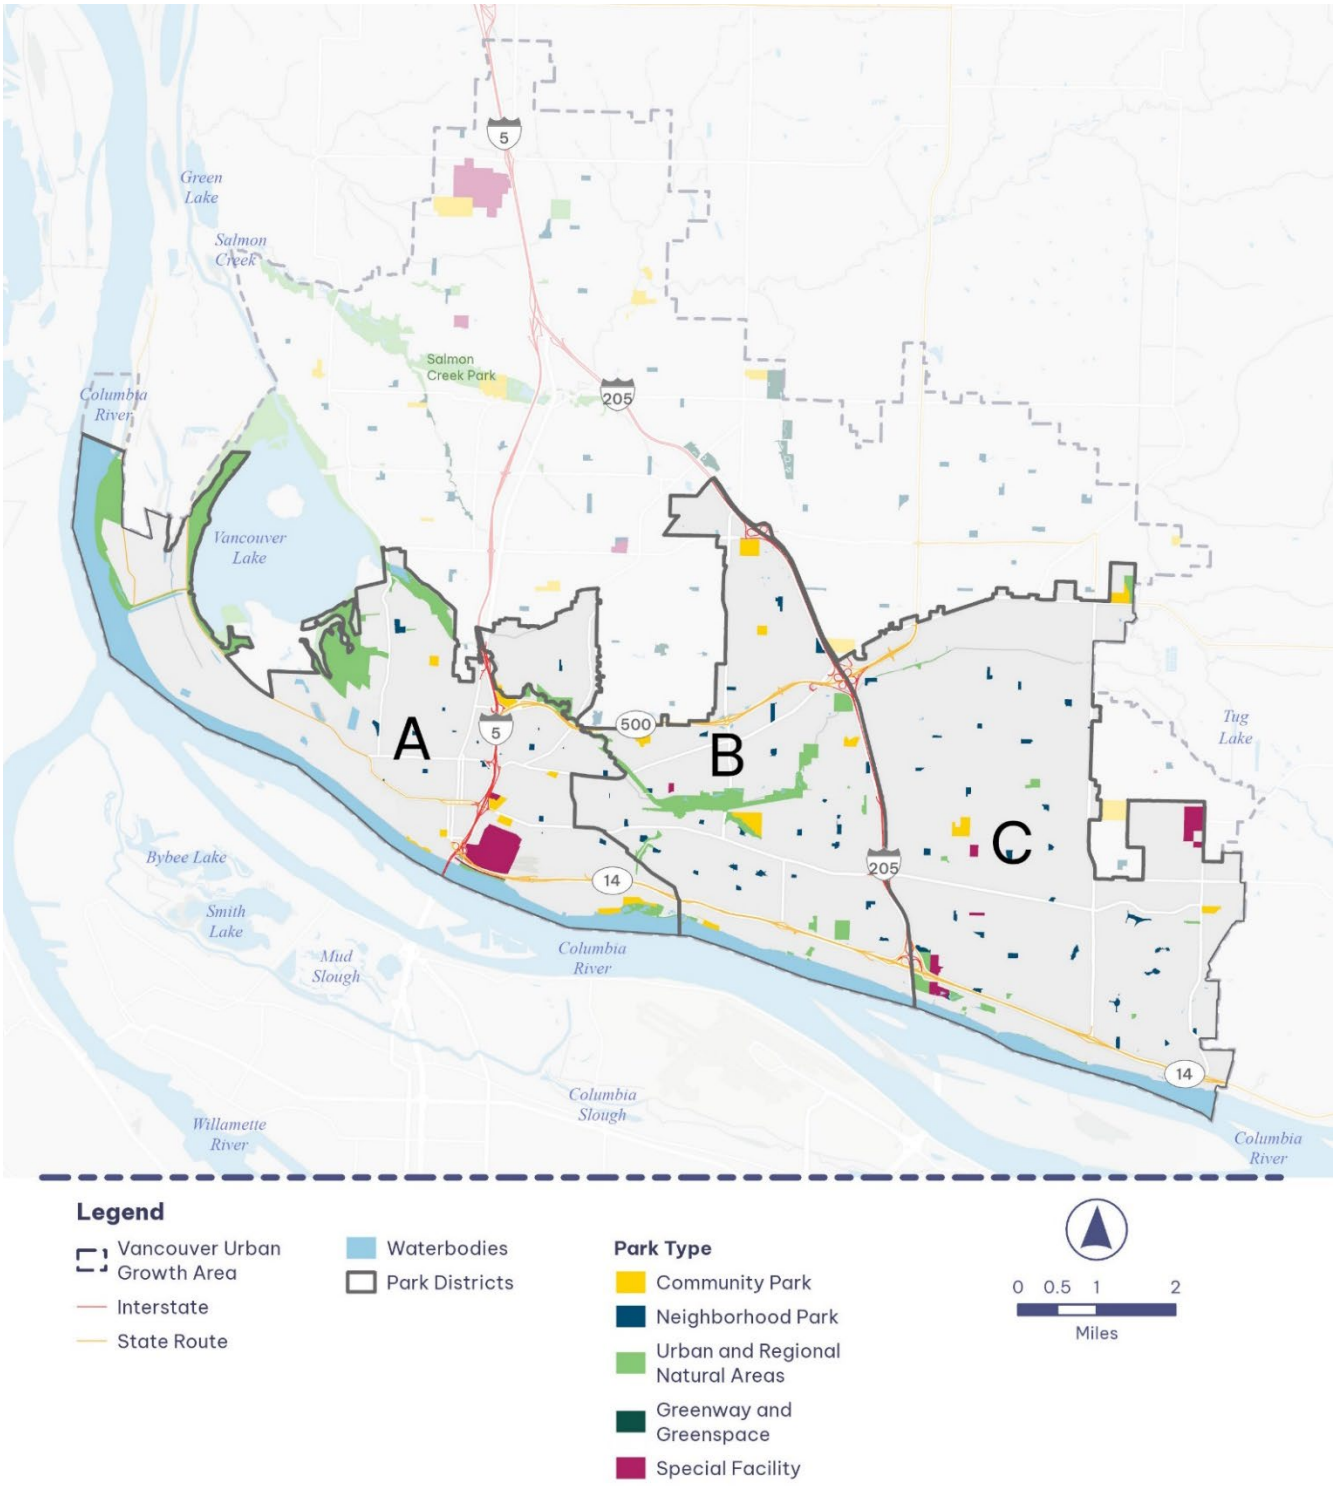
Vancouver is divided into three Park Impact Fee (PIF) Districts, each of which establishes LOS standards and assesses impact fees on new residential development to offset the cost of meeting the recreational needs of a growing population. The City of Vancouver adopted population-based standards for park land acquisition and development based on park classification in 1994 (City of Vancouver 2022a).

In 2022, VPRCS published a Park System Comprehensive Plan to analyze existing conditions and identify 10-year goals and metrics. As of 2022, the greatest number of people resided in PIF District C, which is located east of I-205 in the ~~e~~City boundaries. PIF District B, located between Grand Boulevard/Evergreen Boulevard and I-205, and PIF District A, which includes the remaining portion of the ~~e~~City west of District B, had lower levels of population and projected growth than District C.

The City currently provides 4.19 acres of parkland (including urban neighborhood and community parks and urban natural areas) per 1,000 residents citywide, which is less than the City's standard of 6 acres of acquired neighborhood/community parks per 1,000 residents and half of the national median of 10.6 acres per 1,000 residents for comparable sized cities. The City also has a standard of 4.25 acres of developed neighborhood/community parks per 1,000 residents. Citywide, about 372 more acres of park land needs to be acquired and about 383 acres needs to be developed to meet existing LOS standards, as shown in Table 24.

*Table 24. Existing (2025) City Parks and Natural Areas Demand, Inventory, and Need by District (in acres)*

| Park Impact Fee District | Acquisition Demand | Acquisition Inventory | Acquisition Need | Development Demand | Development Inventory | Development Need |
|---|---|---|---|---|---|---|
| A | 246.43 | 217.12 | 29.31 | 174.56 | 124.50 | 50.05 |
| B | 388.10 | 327.73 | 60.37 | 274.91 | 207.82 | 67.08 |
| C | 600.13 | 317.33 | 282.80 | 425.09 | 159.52 | 265.57 |
| Total | 1,234.66 | 862.19 | 372.47 | 874.55 | 491.84 | 382.71 |



*Source: City of Vancouver 2025b*

Note: Park Impact Fee District boundaries are shown in Figure 28-Figure 30. Demand calculated based on estimated 2025 population of 41,072 in PIF A, 64,684 in PIF B, and 100,021 in PIF C. Assumes LOS standard of 6 acres per 1,000 residents of acquisition need and 4.25 acres per 1,000 records for park development need. Need is calculated by subtracting the inventory (as of 2025) from the future projected demand.

Most of the park need identified in the Park System Comprehensive Plan is in East Vancouver (District C), as shown in Table 24. Based on the City's Geographic Information System modeling, 75% of all ~~c~~City residents currently live within a 10-minute walking distance (0.5 mile) of park properties; however, 15 parks remain undeveloped.

Residents living east of I-205 have expressed a desire for more parks, while residents living west of I-205 have expressed a need for updated park amenities including benches and trails (City of Vancouver 2022a).

~~Figure 28~~ Figure 30. City Parks by Type and Impact Fee District

## Water, Wastewater, and Sewer Services

### Potable Water

The potable water system is managed by the City and serves the City as well as the northern portion of the Vancouver Urban Growth Area. As of 2023, the City delivered 10.1 billion gallons of water to more than 270,000 people covering a 72-square-mile-service area (City of Vancouver n.d.[a]). The City operates and maintains an extensive water distribution system, which includes 9 water production stations, 44 wells, 52 booster pumps, more than 1,100 miles of pipes, and more than 80,000 service connections (City of Vancouver n.d.[a]).

Water pressure requirements for the system are determined by the Washington Department of Health, which establishes pressure standards of 30 pounds per square inch (Design Workshop 2024). These standards ensure that adequate water flow is maintained during peak hours when there is high demand. Compliance with these pressure standards is crucial for providing a reliable water supply to the residents.

The National Fire Protection Association (NFPA) also plays a role in ensuring the effectiveness of the water system, particularly in the event of a fire. The NFPA sets guidelines and regulations for the supply, storage, and distribution of water to meet the firefighting needs of the community. Fire flow requirements often determine the minimum size of water lines to ensure an adequate water supply is available for firefighting purposes.

One geographical challenge faced by the water system in Vancouver is the disconnect between the location of the water reservoirs in the southwest and the areas experiencing population growth in the northeast. To maintain the flow of water and meet the increasing demands, the City needs to continuously improve its transmission infrastructure and pumping systems.

Considering the future, the City may need to explore alternative water sources. The Salmon-Washougal and Lewis Watershed Management Plan, published in 2006, recommended sourcing water from the Columbia River instead of relying on flow-limited streams and sensitive aquatic habitats. This suggests that water bodies such as the Vancouver Lake lowlands and the Steigerwald Wildlife Refuge should be protected to ensure their viability as potential water sources (Design Workshop 2024).

### Sewer and Wastewater

Sanitary sewer service is provided by the City within the City limits as well as the northern unincorporated area. Clark Regional Wastewater District also serves a small portion of Central Vancouver north of the Vancouver Mall. As of 2023, the City served 244,000 residents covering 58.5 square miles (City of Vancouver n.d.[b]). The sewer system is an extensive network spanning 796 miles of pipe with 43 pump stations (City of Vancouver

n.d.[b]). These pipes transport residential, commercial, and industrial wastewater to two treatment plants: Westside Water Reclamation Facility and Marine Park Water Reclamation Facility. Both of these plants have been recognized for environmental excellence employing advanced processes to treat wastewater and remove pollutants before releasing treated effluent into the Columbia River. Sterilized residual ash from incinerated wastewater solids at the Westside Water Reclamation Facility is transferred to a landfill in Boardman, Oregon.

There are various federal and state standards to ensure the system meets former and future demands. These standards encompass factors such as water quality, air quality, environmental protection, and public health. The City of Vancouver adheres to these standards to ensure the proper functioning and compliance of the entire wastewater system.

### Stormwater

Please see the Water section of Chapter 4 for a discussion of the City's existing stormwater system.

## Energy Utilities

Efforts to transition to renewable energy sources are underway in the ~~e~~City and region, with roughly 54% of energy used in Vancouver and greater Clark County coming from renewable energy sources (CPU 2024). Clark Public Utilities (CPU) manages and operates electric, generating, and water systems. The Clean Energy Transformation Act commits the state to transition to 100% clean electricity by 2045, which CPU will be assisting and leading this effort. Currently, CPU energy sources include hydropower, natural gas, nuclear electricity, and wind power (CPU 2024).

In 2022, CPU electrical serviced 229,732 customers with 5,554,441 megawatt hours and a peak demand of 1,083 megawatts. Its generating system produced 1,695,596 megawatt hours of electricity (CPU 2022). In their 2024 Integrated Resource Plan, CPU forecast that sufficient energy resources are available to meet customer demand through 2035; however, there is already a deficit in energy capacity, which is expected to grow through 2044 (CPU 2022). CPU determined that it will need to procure new energy resources to continue meeting customer demand for the next 20 years.

NW Natural is the natural gas provider for the ~~e~~City and provides heating and other energy needs to approximately 2.5 million people across Oregon and Southwest Washington. The company serves more than 140 communities through 800,000 meters. In Washington, the typical residential customer uses an average of 57 therms per month (NW Natural 2024). NW Natural is aiming to reach carbon neutrality by 2050 by providing renewable natural gas, introducing clean hydrogen energy, and carbon capture, use and storage. (NW Natural 2024).

### Solid Waste

The City's Public Works Department oversees garbage, recycling and organics collection through a contractor, Waste Connections. The City offers a variety of waste and recycling resources to residents including information on hazardous waste removal, recyclables, and composting. The City also offers organics pickup for residents and businesses to help reduce the amount of organic materials going to landfills. This practice is in alignment with the State of Washington's Organics Management Law which is intended to divert 75% of previously disposed organic materials from the landfill by 2030, and rescue 20% of previously disposed edible food for human consumption by 2025.

The City has historically adopted Clark County's Comprehensive Solid Waste Management Plan, which has been updated for the years 2025-2030 and is pending adoption by the Washington State Department of Ecology (Ecology) (Clark County 2025). The plan describes existing conditions and outlines strategies for waste reduction, recycling, organics, moderate risk waste, miscellaneous waste, solid waste collection, transfer and disposal. The plan also discusses funding and financing of capital needs and an implementation schedule with recommendations for each of these areas of the County, including the City of Vancouver.

Columbia Resource Company, a subsidiary of Waste Connections, operates three transfer stations in Clark County (in Central Vancouver, West Vancouver, and Washougal) and is the designated processor of recyclables. These transfer stations charge fees to accept miscellaneous solid waste, organics, and recyclables. Master plans for each facility identify the investments needed to build them out to meet future growth.

## Potential Impacts

This section discusses the potential impacts of the alternatives related to the following public services and utilities metrics:

- Increased demand for services/utilities that exceeds levels of service/capabilities beyond mitigatable levels
- Consistency with CIPs
- Proximity of new housing to parks

### Impacts Common to All Alternatives

The following sections outline impacts that are expected to occur under all the alternatives. Impacts specific to each alternative are discussed in the next subsections as applicable.

### Increased Demand for Services/Utilities Exceeding Levels of Service/Capabilities beyond Mitigatable Levels

New growth is expected to occur under all alternatives; however, the projected capacity for new housing units and jobs and the location of new development would vary under each alternative. Under all alternatives, this future growth would increase the demand for fire and police services; schools; parks and recreation; water, wastewater, and sewer services; energy utilities, and solid waste services.

This increased demand could result in the need for new staff, equipment, and/or infrastructure under all alternatives. The pace and location of future development and corresponding demands on public services and utilities would be influenced in part by the implementation of the current (No Action) or proposed (Alternatives 1 or 2 or Preferred Alternative) Comprehensive Plan policies, related regulations and actions, and by decisions made by individual property owners and developers.

#### Fire

Under all alternatives, growth and development would lead to increased demand for VFD fire and EMS services, which could make it more challenging for VFD to meet its response time standards. Ability to meet response time standards is influenced by the proximity of the alarm to VFD's stations, staff availability, mobility and traffic, population density, and quantity of fire apparatus at each station. Additional staff, equipment, and potentially new fire stations may be needed to meet response time standards.

This growth would occur incrementally under all alternatives as population increases. The extent of these needs would vary by alternative, as discussed in the following subsections.

Under the action alternatives, the City may need to re-evaluate staffing levels and equipment at specific fire stations located closest to areas that would allow for greater density of housing units and associated population growth, including Station 1 in West Vancouver north of downtown, Stations 2 and 3 in Central Vancouver and Stations 6, 8, 9 and 10 in East Vancouver.

Table 25 shows the estimated number of firefighters that would be needed for each alternative to maintain existing levels of service (currently 0.83 firefighters per 1,000 people), based on the number of estimated new residents associated with the new housing unit capacity in 2045. East Vancouver would have the highest needs for new firefighters under all alternatives because it would have the highest capacity for new housing units, followed by Central Vancouver and West Vancouver. However, because the Preferred Alternative would distribute the capacity for new housing units more evenly throughout the City than Alternatives 1 and 2, there would be relatively more demand for new firefighters in West and

Central Vancouver and less demand for new firefighters in East Vancouver. ~~Demand for new firefighters in West Vancouver would be similar across all alternatives, and demand for new firefighters in Central Vancouver would be similar between the No Action Alternative and Alternative 2~~.

*Table 25. Estimated Number of New Firefighters Needed by Alternative and Area of City*

| Geographic Area of City | No Action Alternative[a] | Alternative 1 | Alternative 2 | Preferred Alternative |
|---|---|---|---|---|
| West Vancouver | 5 | 5 | 4 | 9 |
| Central Vancouver | 24 | 15 | 23 | 28 |
| East Vancouver | 27 | 66 | 70 | 48 |
| Total | **56** | **86** | **97** | **84** |

Notes:
The estimated firefighter need under the alternatives was estimated as follows: 1) multiplying the total projected number of new housing units in each area of the City by 2.3, which is the assumed average number of persons per household from the Our Vancouver Housing Needs Assessment (ECONorthwest 2024b), to derive the estimated new population in each area. 2) Dividing the total population for each area by 1,000 and multiplying by .83, which is the number of firefighters per 1,000 people that VFD has identified to maintain current service levels into the future. Totals may be affected by rounding.

a The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.

### Police

Under all alternatives, projected residential and employment growth would increase demand for VPD services. This growth would occur incrementally under all alternatives as population increases. The extent of these needs would vary by alternative, as discussed in the following subsections. VPD would need to re-evaluate staffing levels and equipment within both the east and west precincts to accommodate future demand, as it has already identified that these facilities are at capacity under existing conditions.

Table 26 shows the estimated number of new police officers that would be needed for each alternative by 2045, based on the number of estimated new residents associated with the new housing unit capacity, to meet VPD's goal of 1.4 officers per 1,000 people. East Vancouver would have the highest needs for new police officers under all alternatives, followed by Central Vancouver and West Vancouver. However, because the Preferred Alternative would distribute the capacity for new housing units more evenly throughout the City than Alternatives 1 and 2, there would be relatively more demand for new police officers in West and Central Vancouver and less demand for new firefighters in East Vancouver.

*Table 26. Estimated Number of New Police Officers Needed by Alternative and Area of City*

| Geographic Area of City | No Action Alternative[a] | Alternative 1 | Alternative 2 | Preferred Alternative |
|---|---|---|---|---|
| West Vancouver | 9 | 8 | 6 | 15 |
| Central Vancouver | 40 | 26 | 39 | 47 |
| East Vancouver | 46 | 111 | 118 | 81 |
| Total | 95 | 145 | 163 | 142 |

Notes:
The projected police officer need under the alternatives was estimated as follows: 1) multiplying the total projected number of new housing units in each area of the City by 2.3, which is the assumed average number of persons per household from the Our Vancouver Housing Needs Assessment (ECONorthwest 2024b), to derive the estimated new population in each area. 2) Dividing the total population for each area by 1,000 and multiplying by 1.4, which is the number of police officers per 1,000 people that VPD has identified as their service goal for the future. Totals may be affected by rounding.

a The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.

### Schools

All alternatives would have the potential to increase the number of new students in both VPS and Evergreen SD schools, as continued population growth under all alternatives is assumed to include school-aged children. This growth would occur incrementally under all alternatives.

Table 27 summarizes the projected number of future new students for each school district under each alternative in 2045 based on the estimated capacity for housing units and associated new school-age population. There would be more projected new students in areas served by Evergreen SD than VPS under ~~both~~ all action alternatives because more growth is forecast to occur within the Evergreen SD service area (primarily East Vancouver). Both school districts would need to account for this projected growth as part of their CFP planning processes and identify potential capacity issues. However, because the Preferred Alternative would distribute the capacity for new housing units more evenly throughout the City than Alternatives 1 and 2, the number of projected new students under the Preferred Alternative would be more similar between VPD and ESD than under Alternatives 1 and 2.

*Table 27. Future Projected New Students based on New Housing Unit Capacity by Alternative*

| School Level | VPS No Action[a] Alt | ESD No Action[a] Alt | VPS Alt 1 | ESD Alt 1 | VPS Alt 2 | ESD Alt 2 | VPS Pref Alt | ESD Pref Alt |
|---|---|---|---|---|---|---|---|---|
| Elementary School (K-5) | 1,343 | 1,311 | 744 | 2,843 | 955 | 3,062 | 1,732 | 1,986 |
| Middle School (6-8) | 593 | 592 | 328 | 1,283 | 421 | 1,382 | 764 | 896 |
| High School (9-12) | 739 | 765 | 409 | 1,658 | 525 | 1,786 | 953 | 1,158 |
| Total | 2,675 | 2,668 | 1,481 | 5,783 | 1,901 | 6,230 | 3,449 | 4,040 |

Notes:
The number of projected new students under the alternatives was estimated by multiplying the projected capacity for new housing units in each school district by the average student generation rate numbers for each school level within each district. All alternatives assume 10% of new housing capacity would be single-family, and 90% of new housing capacity would be multifamily units.
a The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.
Key: VPS = Vancouver Public School District; ESD = Evergreen School District

## Parks and Recreation

None of the alternatives would have direct impacts on existing parks or change the amount of land designated as Parks/Open Space land use. Residential growth under all of the alternatives would increase the demand on the city's existing parks and recreational areas. This growth would occur incrementally under all alternatives as population increases.

As noted in the Affected Environment section for Parks and Recreation, the City does not currently meet its LOS standard of 6 acres of acquired neighborhood/community parks and 4.25 acres of developed neighborhood/community parks per 1,000 residents. That LOS is projected to decline to about 3.1 acres per 1,000 residents citywide under all alternatives based on 2045 OFM population growth projections.

Table 28 shows the projected park acquisition and development acreage demand, inventory, and needs in each district and citywide in 2045 based on the OFM estimates of total future population. With no change to the amount of parks inventory by 2045, the park land deficit would increase to about 824 acres of new park land that would need to be acquired and

about 702 acres of park land that would need to be developed citywide. The largest need would be in PIF C, where the highest population growth is projected.

*Table 28. Future (2045) City Parks and Natural Areas Demand, Inventory, and Need by District (in acres)*

| Park Impact Fee District[a] | Acquisition Demand[b] | Acquisition Inventory | Acquisition Need | Development Demand[b] | Development Inventory | Development Need |
|---|---|---|---|---|---|---|
| A | 333.54 | 217.12 | 119.42 | 238.38 | 124.50 | 113.88 |
| B | 529.97 | 327.73 | 202.23 | 375.39 | 207.82 | 167.57 |
| C | 819.49 | 317.33 | 502.16 | 580.47 | 159.52 | 420.96 |
| **Total** | **1,686.00** | **862.19** | **823.81** | **1,194.25** | **491.84** | **702.41** |

*Source: City of Vancouver 2025b*

Notes:

a Park Impact Fee District boundaries are shown in ~~Figure 28~~ Figure 28-Figure 30.

b Demand calculated based on estimated 2045 population of 56,090 in PIF A, 88,328 in PIF B, and 136,582 in PIF C, for a total population of 281,000 citywide. Assumes LOS standard of 6 acres per 1,000 residents of acquisition need and 4.25 acres per 1,000 records for park development need. Need is calculated by subtracting the inventory (as of 2025) from the future projected demand. Note: These citywide projections assume that the 2045 population distribution would be similar to the 2025 population distribution. The projections do not account for differences between the alternatives in housing capacity distribution by PIF district. The next paragraphs and table discuss potential park needs based on new housing capacity for each future alternative, including an analysis of new housing capacity by PIF district.

As noted in the Land and Shoreline Use section of Chapter 3, although the same 2045 population is projected under all of the alternatives, the pace and distribution of new housing capacity and associated growth would vary among the alternatives. Table 29 shows the estimated amount of new park acreage that would need to be acquired and developed under each alternative to meet the current urban parks and natural areas LOS standards based on the estimated 2045 capacity for new housing units and associated new residents.

Under all alternatives, PIF District C would have the largest need for park land acquisition and development because it is projected to have the highest capacity for new growth. The No Action Alternative would have the lowest overall parks need because it would have the lowest projected level of population growth based on capacity for new housing units. Alternative 1, ~~and~~ Alternative 2, and the Preferred Alternative would have higher needs than the No Action Alternative because of their higher levels of projected new housing units and associated residents.

*Table 29. Projected Park Land Demand by Park Impact Fee District and Alternative (in acres)*

| Alternative and Park Demand Type | Park Impact Fee District[a] A | Park Impact Fee District[a] B | Park Impact Fee District[a] C | Total |
|---|---|---|---|---|
| No Action Alternative[b]: New Park Acquisition Demand[c] | 76 | 134 | 199 | **408** |
| No Action Alternative[b]: New Park Development Demand[c] | 54 | 95 | 141 | **289** |
| Alternative 1: New Park Acquisition Demand[c] | 75 | 70 | 477 | **622** |
| Alternative 1: New Park Development Demand[d] | 53 | 50 | 338 | **441** |
| Alternative 2: New Park Acquisition Demand[c] | 65 | 126 | 509 | **700** |
| Alternative 2: New Park Development Demand[d] | 46 | 89 | 361 | **496** |
| Preferred Alternative: New Park Acquisition Demand[c] | 77 | 184 | 348 | **609** |
| Preferred Alternative: New Park Development Demand[d] | 55 | 130 | 246 | **431** |

This table was reformatted from the DEIS to fit better on the page (refer to strikeout table below for previous version). The demand amounts for the No Action, Alternative 1, and Alternative 2 are unchanged from the Draft EIS. The demand amounts for the Preferred Alternative are added to this table.

a Park Impact Fee District boundaries are shown in ~~Figure 28~~ Figure 28-Figure 30.

b The No Action Alternative is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.

~~b~~ c The acreage of park acquisition demand under the alternatives was estimated as follows: 1) multiplying the total projected number of new housing units in each Park Impact Fee district by 2.3, which is the assumed average number of persons per household from the Our Vancouver Housing Needs Assessment (ECONorthwest 2024b), to derive the estimated new population in each PIF district. 2) Dividing the estimated new population by 1,000 and multiplying the resulting number by 6, based on the City's goal of 6 acres per 1,000 residents, to calculate the estimated acreage demand for this new population. Totals may be affected by rounding.

~~c The No Action Alternative is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.~~

d The acreage of park development demand under the alternatives was estimated as follows: 1) multiplying the total projected number of new housing units in each Park Impact Fee district by 2.3, which is the assumed average number of persons per household from the Our Vancouver Housing Needs Assessment (ECONorthwest 2024b), to derive the estimated new population in each PIF district. 2) Dividing the estimated new population by 1,000 and multiplying the resulting number by 4.25, based on the City's goal of 4.25 acres of developed

neighborhood/community parks per 1,000 residents, to calculate the estimated acreage demand for this new population. Totals may be affected by rounding.

| ~~Park Impact Fee District[a]~~ | ~~New Park Acquisition Demand[b] for No Action Alternative[c]~~ | ~~New Park Development Demand[b] for No Action Alternative[c]~~ | ~~New Park Acquisition Demand[b] for Alternative 1~~ | ~~New Park Development Demand[b] for Alternative 1~~ | ~~New Park Acquisition Demand[b] for Alternative 2~~ | ~~New Park Development Demand[b] for Alternative 2~~ |

| ~~Total~~ | ~~408~~ | ~~289~~ | ~~622~~ | ~~441~~ | ~~700~~ | ~~496~~ |

### Water, Wastewater and Sewer Services

All alternatives would create an increase in water and sewer demand to varying extents because of expected new population and employment growth. Increased water demand may increase stress on the city's potable water system, including maintaining applicable water pressure standards. Under all alternatives, the projected City growth may require water system improvements to increase the fire flow to meet current standards.

Development of any of the alternatives to accommodate projected residential and job growth would result in greater demands on the City's sewer and wastewater collection system and on downstream conveyance and treatment facilities. This new growth and development may require additional wastewater and sewer infrastructure investments and implementation, as well as associated staff and equipment, to meet new demand.

### Energy Utilities

New residential, commercial and industrial development across all alternatives would result in additional energy utility demand and use. Under all alternatives, energy providers would need to coordinate with the City to ensure their respective future infrastructure planning is consistent with the city's projected growth through 2045. Specific proposed projects under all alternatives would need to demonstrate that there are adequate energy sources to support their development. As noted in the Affected Environment section, CPU has already identified a potential future energy deficit and is identifying sources for additional energy needs.

### Solid Waste

All alternatives would result in increases to population density and new residential and commercial development, which would increase demand for garbage, recycling, and organics collection in areas where this growth occurs. These changes would be more pronounced under the action alternatives, where existing solid waste collection systems and practices would need to be evaluated and modified to account for new, denser development patterns in more areas of the city.

### Consistency with Capital Improvement Plans

None of the alternatives in themselves would be inconsistent with capital improvement planning efforts. However, all of the alternatives would accommodate varying levels of population and employment growth, which could lead to inconsistencies with CIPs if coordination with relevant City departments, school districts, and private utilities does not occur. All of the alternatives would require ongoing coordination with these entities as they undergo their regular capital improvement planning efforts, as described in the Avoidance, Minimization, and Mitigation Measures section.

## No Action Alternative

### Increased Demand for Services/Utilities Exceeding Levels of Service/Capabilities beyond Mitigatable Levels

Overall, the No Action Alternative would result in the lowest increase in future demand for most public services and utilities because it would continue existing lower-density development throughout the ~~e~~City and would have capacity for the lowest levels of new growth in housing units and jobs. This difference would be most pronounced in East Vancouver, which would have the lowest estimated capacity for new housing units and therefore the least demand for new police officers, firefighters, and parks, and in the Evergreen SD, which would have the lowest projected new student generation rate compared to the ~~two~~ three action alternatives.

However, the No Action Alternative could encourage continuation of a less dense, more dispersed style of urban development. In the longer term, cumulative impacts associated with this type of development pattern could include inefficient and more costly delivery of some public services, such as police, fire, and schools, compared to Alternatives 1 and 2 and the Preferred Alternative. No additional impacts were identified for the No Action Alternative related to increased demand for individual public services and utilities or consistency with CIPs, beyond those discussed in the Impacts Common to All Alternatives section.

### Consistency with Capital Improvement Plans

No additional impacts were identified for the No Action Alternative related to consistency with CIPs, beyond those discussed in the Impacts Common to All Alternatives section.

## Alternative 1

### Increased Demand for Services/Utilities Exceeding Levels of Service/Capabilities beyond Mitigatable Levels

Based on projected new housing units and jobs, as described in Chapter 2, Alternative 1 would create more demand for public services and utilities citywide than the No Action Alternative, slightly more demand compared to the Preferred Alternative, and ~~but~~ modestly less demand than Alternative 2. Because the Comprehensive Plan Update land use designations would promote denser, more compact development patterns in more areas of the ~~c~~City over time under Alternative 1, cumulative benefits could potentially include greater efficiencies in the delivery of some public services, such as police, fire, and schools, compared to the No Action Alternative. Similar to the No Action Alternative, specific impacts to public services and utilities would be dependent upon the location of future development.

Areas with larger proposed higher-density zoning districts and higher capacity for new housing units would have increased demand for utilities, including waste, wastewater, sewer, energy, and solid waste, which may require greater investments in new infrastructure and associated staff and equipment compared to the No Action Alternative. Areas with potentially higher demand under Alternative 1 would include parts of West Vancouver just north of downtown, in Central Vancouver along East Mill Plain Boulevard and near the Vancouver Mall, and in East Vancouver along Mill Plain Boulevard, 164th Avenue, and 192nd Avenue and in the Section 30 area. Required infrastructure changes could include installing larger water and sewer collection pipes and identifying new methods and approaches for solid waste collection to accommodate denser housing types.

### Consistency with Capital Improvement Plans

No additional impacts were identified for Alternative 1 related to consistency with CIPs, beyond those discussed in the Impacts Common to All Alternatives section.

## Alternative 2

### Increased Demand for Services/Utilities Exceeding Levels of Service/Capabilities beyond Mitigatable Levels

Alternative 2 would result in the highest increase in future demand for public services and utilities compared to the other alternatives. Because the Comprehensive Plan Update land use designations would promote denser, more compact development patterns in the most areas of the City under Alternative 2, cumulative benefits could include greater efficiencies in the delivery of some public services, such as police, fire, and schools, compared to the other alternatives. Similar to Alternative 1 and the Preferred Alternative, areas with larger proposed higher-density zoning districts and higher capacity for new housing units would have

increased demand for public services and utilities that may require additional infrastructure, staff, and equipment to serve.

These locations and associated needs would be similar to Alternative 1 and the Preferred Alternative but would cover more extensive amounts of land, including in West Vancouver adjacent to and north of downtown, in Central Vancouver along East Mill Plain Boulevard and near the Vancouver Mall, and in East Vancouver along Mill Plain Boulevard, 164th Avenue, and 192nd Avenue and in the Section 30 area.

### Consistency with Capital Improvement Plans

No additional impacts were identified for Alternative 2 related to consistency with CIPs, beyond those discussed in the Impacts Common to All Alternatives section.

## Preferred Alternative

### Increased Demand for Services/Utilities Exceeding Levels of Service/Capabilities beyond Mitigatable Levels

Based on projected new housing units and jobs, as described in Chapter 2, the Preferred Alternative would create more demand for public services and utilities citywide than the No Action Alternative, and modestly less demand than Alternatives 1 and 2 depending on area of the city.

Because the Comprehensive Plan Update land use designations would promote denser, more compact development patterns in more areas of the City over time under the Preferred Alternative, cumulative benefits could potentially include greater efficiencies in the delivery of some public services, such as police, fire, and schools, compared to the No Action Alternative. Similar to Alternatives 1 and 2, areas with larger proposed higher-density zoning districts and higher capacity for new housing units would have increased demand for public services and utilities that may require additional infrastructure, staff, and equipment to serve.

The locations and associated needs would be similar to Alternative 2, including in West Vancouver adjacent to and north of downtown (more Medium Scale Neighborhood similar to Alternative 2), in Central Vancouver along East Mill Plain Boulevard and near the Vancouver Mall (more Medium Scale Neighborhood, Mixed Use and Regional Activity Center, similar to Alternative 2), and in East Vancouver along Mill Plain Boulevard, 164th Avenue, and 192nd Avenue and in the Section 30 area (more Mixed Use and Regional Activity Center, similar to Alternative 2). However, because the Preferred Alternative would distribute the capacity for new housing units more evenly between West, Central and East Vancouver, there would be relatively more demand for public services and utilities in West and Central Vancouver and less demand in East Vancouver than under Alternatives 1 and 2.

### Consistency with Capital Improvement Plans

No additional impacts were identified for the Preferred Alternative related to consistency with CIPs, beyond those discussed in the Impacts Common to All Alternatives section.

## Avoidance, Minimization, and Mitigation Measures

Under all alternatives, future growth and associated increased demand for public services and utilities would be addressed as part of the City's regular capital project planning efforts. Long-term planning for these facilities consistent with the Capital Facilities Element, other city functional plans, and service provider plans will help ensure that public services and utilities are provided adequately under each alternative and meet applicable LOS standards. The school districts would continue to address changes in student enrollment through their individual planning processes.

Specific avoidance, minimization, and mitigation measures could include the following:

- The Comprehensive Plan Update promotes a more compact growth and development pattern within the existing urban framework of the City, which could reduce growth in outlying areas and result in a more efficient delivery of some public services and utilities.
- Increases in population and employment resulting from the implementation of the Comprehensive Plan Update will be reviewed annually as part of department performance evaluations and capital planning for all public services and facilities.
- Future development resulting from implementation of the Comprehensive Plan Update will be required to comply with the most current versions of the International Fire Code, the International Building Code, and Washington Department of Health and City municipal codes that require maintaining health and safety and utility service performance.
- Future development resulting from implementation of the Comprehensive Plan Update will result in additional tax revenues from construction and retail sales tax, property tax, utility tax, licenses and permits, utility ratepayer fees and system development charges, and school and PIFs. A portion of these taxes and fees will accrue to the City to offset costs associated with the increase in demand for public services and facilities.
- VPRCS will continue to explore opportunities to develop new parks, open space, and recreation facilities, especially in portions of the City with access gaps to meet LOS standards. VPRCS will also continue to work closely with the City's Transportation Department to plan and create opportunities for parks. The City's periodic updates to its Park System Comprehensive Plan would need to account for increased population and associated need for parks and recreation spaces under all the alternatives. The City collects PIFs per unit pursuant to VMC 20.915.050 by year at an increasing sliding scale value and unit type (single-family or multifamily). To fund additional parks acquisitions

and development, the City could consider changes to its impact fee structure and explore new funding sources. Other potential mitigation measures related to parks include:

  - Subarea planning to provide a comprehensive evaluation of infrastructure needs, efficient planning to serve potential growth. Related to parks in particular, this includes the identification of a centralize park focus location based on the unique resources and setting, and interconnection to serve multiple property owners and future developments/redevelopments.
  - Development code requirements for buffers between parks and adjoining land uses to minimize impacts to park resources, as well as publicly accessible open space within new developments.
  - Maximize multi-use of resources properties where compatible, such as park natural areas and stormwater properties; utility easements adopted to accommodate public access to public spaces and cross circulation.
  - Require pedestrian-level grid to facilitate interconnection at reasonable spacing standard between developments within institutional campus areas and high-density developments and existing or new parks and trails.
  - Density transfers or cluster-type development such as increased building height to preserve a signature tree, grove or grassland to protect nature resources and provide access to natural spaces.
  - Continue to use late-comer agreements for infrastructure locations.
  - Improve project development review and construction review to ensure pedestrian interconnection and resource protection, as well as identification of opportunities to locate needed public assets. Additional staffing is needed, or at minimum cross training for staffing efficiencies.

- The City uses a hydraulic network model to evaluate capacity and make determinations of water availability. Capital projects to address potential increased demand resulting from the action alternatives will be included in periodic updates to the Water, Wastewater, Surface Water CIP. Any additional gaps in the water system that result from future development will be addressed through development review. Developers are required to upgrade the existing system to meet demand of individual projects. Additionally, new development and redevelopment is required by the plumbing code to include efficient plumbing fixtures, which would reduce the overall impact to water demand resulting from the action alternatives. New development and redevelopment would also need to comply with current stormwater regulations to be approved.
- The City uses a General Sewer Plan and its CIP to track if there is adequate wastewater collections and treatment infrastructure and show capacity needs. The City would need to ensure that safe wastewater services is provided to all households in order to protect

the community's health and wellbeing. Additionally, the City would utilize the General Sewer Plan to ensure the system meets federal and state standards such as water quality, environment protection and public health.

- The City's Water, Wastewater, Surface Water CIP identifies a number of drinking water, wastewater, and surface water projects and efforts that would help prepare the Ccity for future planned growth and development under all alternatives, including:
    - Capital programs focused on rehabilitation and/or replacement of worn and obsolete water treatment facilities.
    - Capital programs focused on rehabilitation and/or replacement of worn and obsolete equipment at wastewater infrastructure.
    - Ongoing upgrade and replacement of water and wastewater collections infrastructure throughout their respective systems that have been identified as high risk and/or high maintenance
    - Production well replacement projects at multiple water stations to improve reliability.
    - Ongoing installation of transmission mains to move water from high production sources to areas of development.
    - Electrical equipment replacement at water production stations and wastewater pump stations and treatment facilities.
    - Multiple projects to improve treatment performance and capacity at Marine Park and Westside wastewater treatment facilities.
    - Ongoing individual projects within the Sewer Connection Incentive Program designed to bring more reliable wastewater collections infrastructure to properties.

- CPU will continue to evaluate efficiency measures and the need for new energy resources to continue meeting customer demand for the next 20 years.
- Clark County will continue to evaluate solid waste capital improvement needs as part of periodic updates to its Comprehensive Solid Waste Management Plan.

In addition, implementation of the following goals and policy measures ~~currently under consideration~~ for the Comprehensive Plan Update would also help to avoid, minimize, and mitigate potential impacts to public services and utilities identified for the action alternatives:

- Provide high-quality public facilities, services, and utilities that are affordable, efficient, well maintained, advance climate goals, and meet the needs of a growing population.
    - Coordinate with the VFD and VPD to plan for expected growth, provide adequate facilities to equitably serve the community, and maintain the established levels of

service. Communicate with service providers when planning transportation projects that may affect emergency vehicle access.

- Support public safety through investment in emergency services, facilities, infrastructure and coordinated preparedness efforts that strengthen community resilience and response.
- Work with local school districts to facilitate an adequate supply of schools and associated facilities. Facilitate timely and efficient siting processes which allow for assessment and mitigation of impacts.
- Establish multipurpose community centers offering social, recreational, educational, and cultural programming, especially in underserved areas.
- Prioritize programs and infrastructure that support youth and aging populations, including safe play areas, accessible housing, robust childcare, public facilities and community programs that foster multigenerational interaction.
- Encourage the use of short-term pilot projects for park, transportation, and infrastructure improvements before making long-term investments to foster innovation, test feasibility, and increase community buy-in.
- Create a network of linear parks that encourage active transportation, improve community health and wellbeing, enhance tree canopy and stormwater management, and link parks and open space with housing.
- Expand access to community gardens and incentivize urban agriculture to improve food security and increase healthy food options.
- Work with nonprofit and private partners, Clark County, and adjacent cities to build out the regional trail network for recreation and active transportation purposes.
- Provide safe, clean, quality drinking water to every Vancouver home, business, and industry. Discourage development and use of private drinking water wells. Provide water pressures and volumes necessary to support fire suppression hydrants and sprinkler systems. Ensure that the infrastructure to support water service is in place prior to or at the time of development. Support self-sustaining on-site water ~~conservation recycle~~ reuse systems where practicable.
- Encourage water-efficient technologies and practices, reuse systems, and conservation programs to reduce consumption and ensure sustainable water availability amid climate change and growing demand.
- Provide sewers and sewer service to every Vancouver home, business, and industry at an affordable and equitable cost. ~~Discourage~~ Prohibit development and use of on-site sewage treatment systems. Encourage existing development using septic systems to connect to public sewer as soon as available. Ensure that the infrastructure to support sewer service is in place prior to or at the time of development. Eliminate health hazards from domestic and industrial wastewater and return clean water to the environment.

  - Encourage new renewable energy infrastructure and promote development of storage systems to ensure a stable, resilient, and sustainable energy grid.
  - Increase waste diversion rates through a system that minimizes landfill reliance, reduces greenhouse gas emissions, prioritizes composting and encourages resource recovery. Properly ensure waste that cannot be recycled is diverted to landfills.
  - Use green materials and practices when procuring materials and services, and while carrying out maintenance functions. Employ materials transformation and reuse programs from Ceity activities (i.e., turning woody debris into mulch or soil amendments).

- Consider water, sewer, stormwater management, solid waste, police, fire and schools as necessary public facilities and services. Ensure that facilities are sufficient to support planned development. Establish service standards or planning assumptions for estimating needed public facilities, based on service capabilities, local land use designations and nationally recognized standards.
- Plan, site, and design essential public facilities through coordinated, equitable, and transparent processes that support regional planning goals, minimize community impacts, and ensure long-term benefit to all Vancouver residents.
- Assure consistency of overall land use and CFPs by reevaluating Vancouver's land use plan if funding is inadequate to provide necessary public facilities and services to implement the plan.
- Maintain a prioritization process that aligns CIP projects to the goals and policies of the Comprehensive Plan. Use the CIP, as amended annually, to prioritize the financing of capital facilities within projected funding capacities and ensure that capital budget decisions conform with the Comprehensive Plan.
- Provide safe infrastructure that remains functional during disruptive natural and manmade events, maintain access for emergency vehicles and services, and ~~support responsive, equipped and community led fire and police departments~~ ensure efficient and responsive emergency services.
- Ensure impact fees and system development charges and utility rates are proportional to development scale, ensuring affordability for smaller projects while allowing the Ceity to recover costs from overall development impacts on resources and services.
- Expand access to municipal and community-based services and amenities by prioritizing investment in underserved areas. Utilize the City's Equity Index, ~~and~~ Displacement Risk Assessment tool and climate vulnerability assessment to guide public investments and infrastructure improvements. Prioritize infrastructure improvements using risk and resiliency criteria as well as economic value.

- Design and maintain infrastructure to reduce long-term maintenance costs per capita and per trip traveled. Consider life cycle costs, emerging technologies, and the impacts of facility design and material choices in both capital and operating budgets.

## Significant Unavoidable Adverse Impacts

All alternatives have the potential to increase demand on public services and utilities as a result of expected population and job growth and development. The anticipated growth would occur incrementally, and with the implementation of avoidance, minimization, and mitigation measures, no significant unavoidable adverse impacts to public services and utilities are anticipated for any of the alternatives.

# Chapter 4: Natural Environment

Note to readers: This Final Environmental Impact Statement document retains and builds upon the information presented in the Draft Environmental Impact Statement. New content in this chapter is generally denoted with underlined text, while changes to information are denoted with strikethrough text. Updates focus on adding the new analysis of the Preferred Alternative, as well as minor corrections and clarifications to the analysis presented in the Draft EIS. Some changes are denoted with footnotes and table notes when further explanation was warranted.

This chapter describes the methodologies, existing conditions (affected environment), and potential impacts of the alternatives for the following environmental topic areas related to the natural environment: earth, air quality, water, and plants and animals.

For each topic, the chapter also provides a summary of potential avoidance, minimization, and mitigation measures to address potential impacts and identifies impacts that are considered to be significant and unavoidable under SEPA.

## Earth

### Methodology

Analysts reviewed relevant information and policies to describe existing conditions related to topography, soils, and geologic hazard areas including the following sources:

- Community Atlas (Design Workshop 2024)
- Clark County geologic maps (Clark County n.d.)
- U.S. Department of Agriculture Web Soil Survey (USDA NRCS 2001)
- U.S. Geological Survey geologic maps (USGS 2024)
- VMC Critical Areas Ordinance, Chapters 14.26 and 20.740, including 20.740.130, Geologic Hazard Areas
- Washington Department of Natural Resources geologic maps (WDNR 2014, 2023)

Analysts then reviewed the alternatives to determine potential adverse impacts and associated mitigation measures using the following metrics:

- Consistency with City regulations for geologic hazard areas (VMC 20.740.130)
- Potential for increased exposure to geologic hazard risks at existing and future development sites
- Potential for increased risk of erosion at future development sites

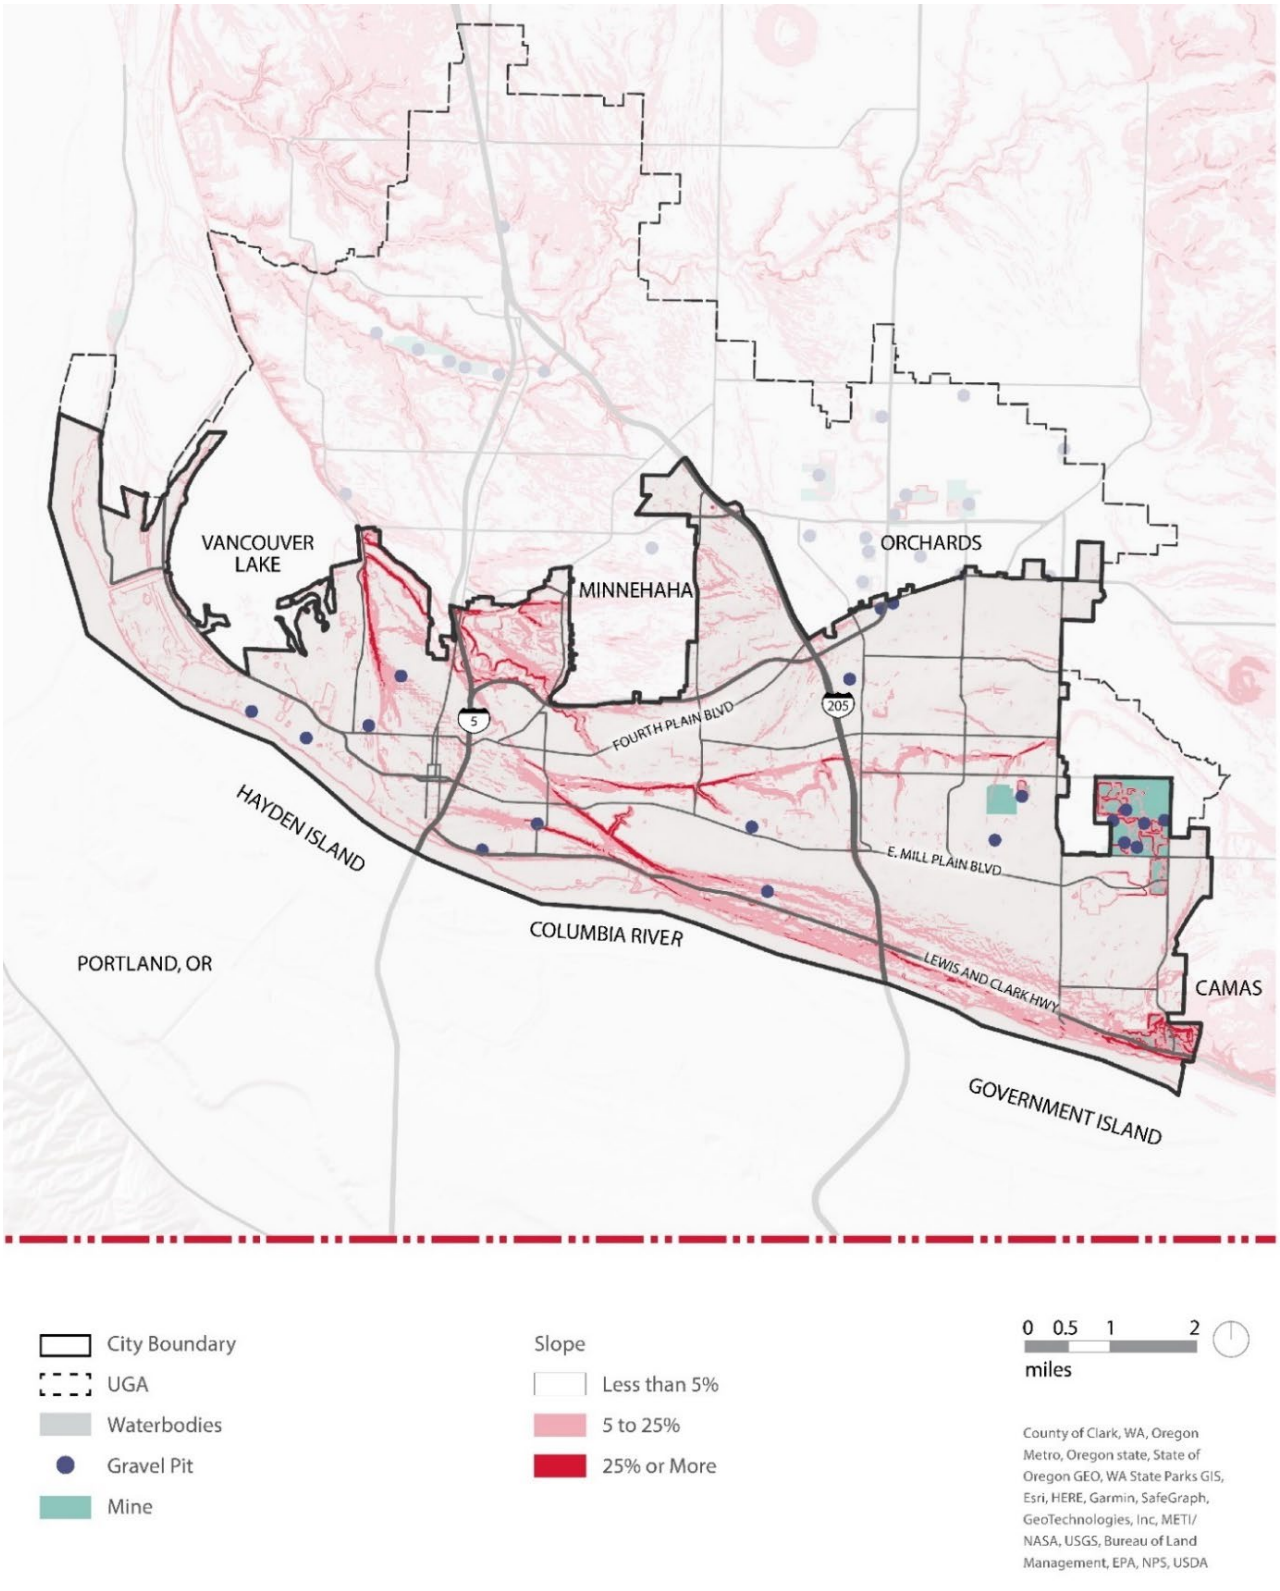
# Affected Environment

## Topography and Geologic Features

The Columbia River and ancient glacial flooding have sculpted much of Vancouver's landscape by depositing clay, silt, sand and gravel onto its banks over tens of thousands of years (City of Vancouver 2021a). The City is generally flat or terraced, but there are steep slopes along portions of the Columbia River, Burnt Bridge Creek and Vancouver Lake.

Sites with steep slopes may be more difficult to develop due to possible instability, erosion or drainage challenges. Approximately 20% of the City has a slope above 5%. Slopes of around 5% to 25% are highly prevalent on the southeast side of Vancouver adjacent to the Columbia River. Slopes of 25% or more, which are defined in the City code as landslide and erosion areas, are prevalent closer to the center of the City, as shown in ~~Figure 29 Figure 29~~ Figure 31.

Gravel pits are located sporadically throughout the City but are highly prevalent on the east side of Vancouver alongside steep slopes (above 25%) and mines, as shown in ~~Figure 29 Figure 29~~ Figure 31.



## Geologic Hazard Areas

Vancouver is vulnerable to geologic hazards such as erosion, landslides, seismic hazards (earthquakes and ground shaking), and volcanic activity (City of Vancouver 2022a; WDNR 2024).

Erosion hazard areas in Vancouver are lands underlain by soils identified by the U.S. Department of Agriculture Natural Resource Conservation Service as having "severe" or "very severe" erosional hazards including, the following groups of soils when they occur on slopes of 15% or greater: Hillsboro series, Larchmount series, Lauren series, Olympic series, and Wind River series (USDA NRCS 2001). The most severe erosion hazards within the C~~e~~ity primarily occur along the north bank of Lake River leading into Vancouver Lake, the northeast shore of Vancouver Lake, and along both sides of Burnt Bridge Creek Park (Clark County n.d.). ~~Figure 30 Figure 30~~ Figure 32 shows the locations of identified severe erosion hazard areas.

Landslide hazard areas are defined as those with slopes greater than 25%, excluding engineered slopes, and areas of historic or active landslides, potential instability, or older landslide debris (VMC 20.740.130). Areas of severe landslide hazard generally follow the north side of Lake River and occur in isolated areas throughout North and Central Vancouver (USGS 2024). ~~Figure 31 Figure 31~~ Figure 33 shows the location of landslide hazards, including active and potential unstable slopes.

~~Figure 29~~ Figure 31. Steep Slopes, Gravel Pits, and Mines

*Source: Design Workshop 2024*

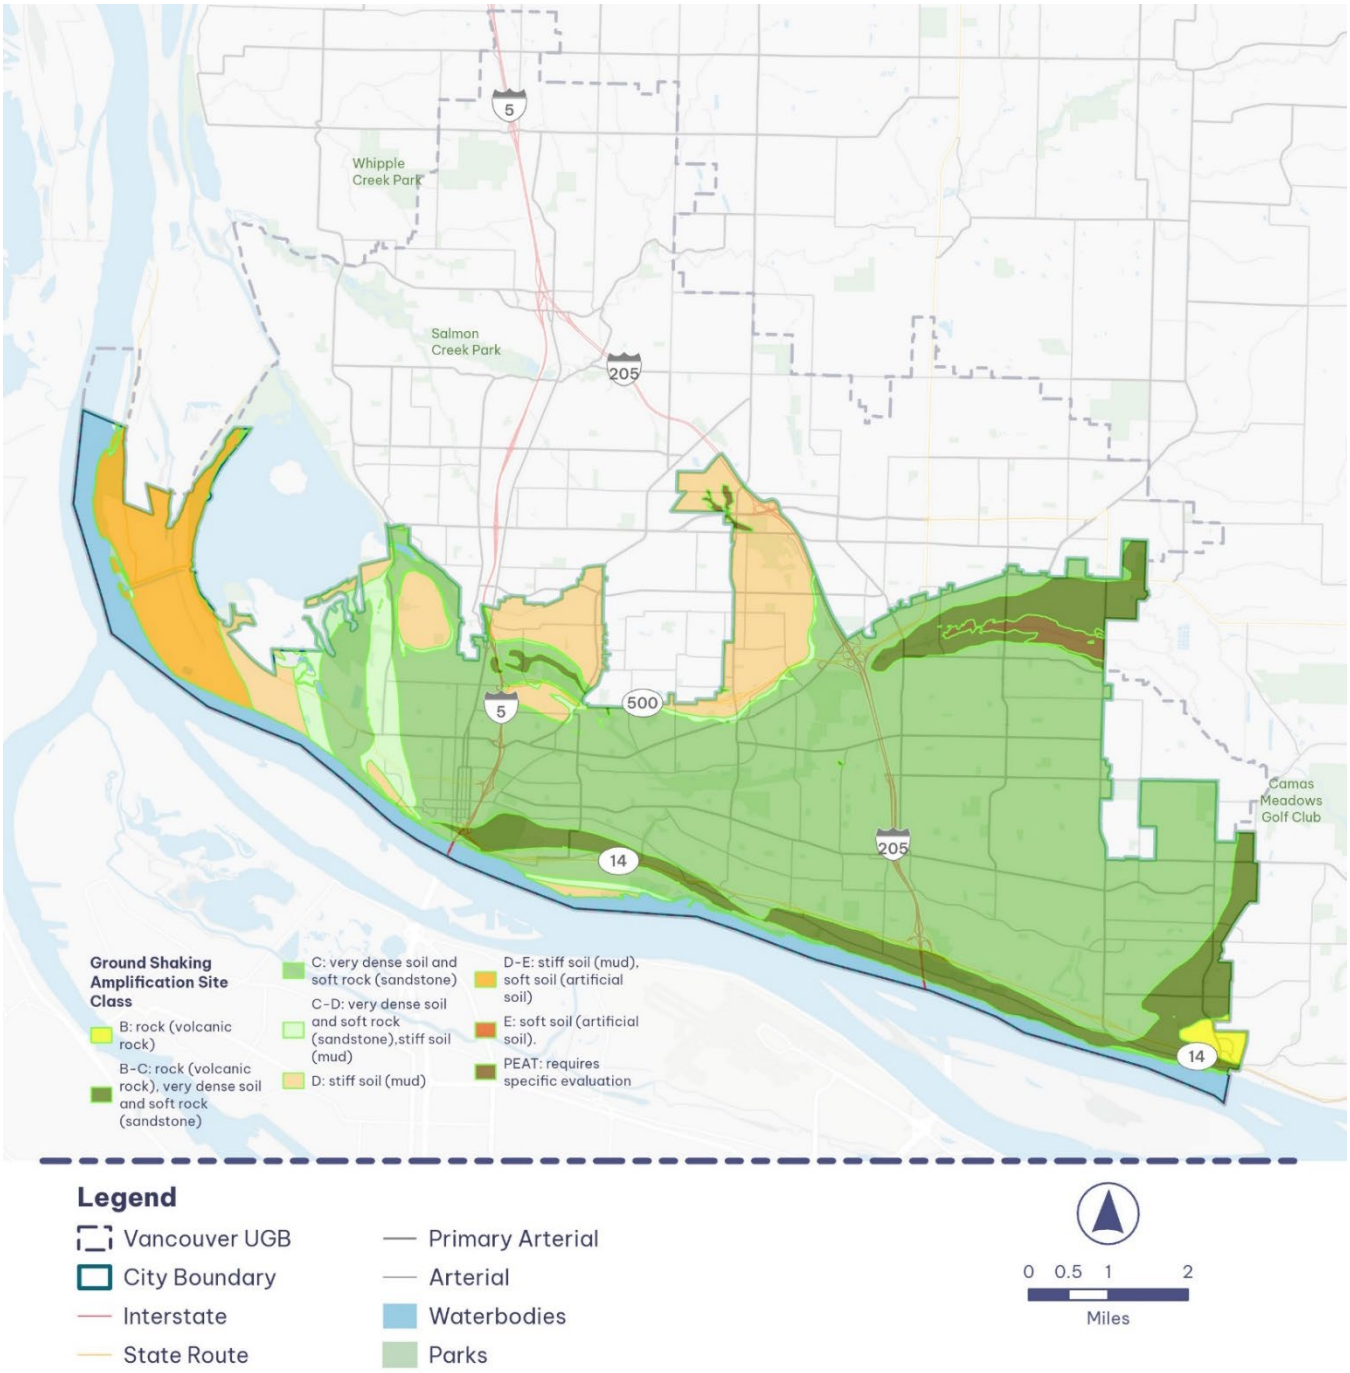
~~Figure 30~~ Figure 32. Severe Erosion Hazard Areas

*Source: Clark County n.d.*

~~Figure 31~~ Figure 33. Landslide Hazard Areas

*Source: Clark County n.d.*

Vancouver contains a range of seismic hazards. Hazards from earthquakes include liquefaction, ground shaking, slope failure, and fault rupture (VMC 20.740.130). The Lacamas Lake Fault occurs in East Vancouver, running northwest to southeast from SR 500 to the Columbia River (WDNR 2014). Areas with the greatest relative seismic hazard are located along the Columbia River in southwest Vancouver north toward Vancouver Lake. Areas with



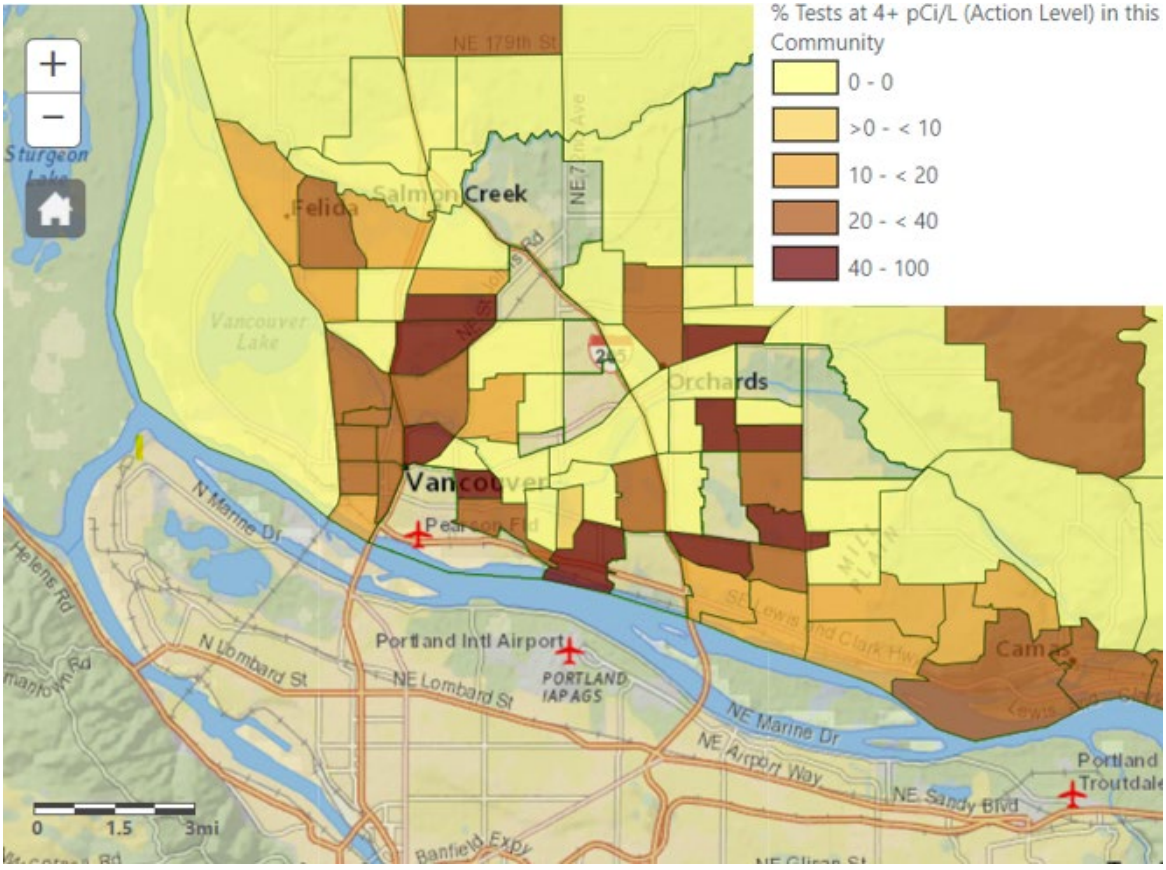
moderate to least relative seismic hazard are located throughout Central and East Vancouver. There is an additional band of greater relative risk at and north of SR 500. Liquefaction susceptibility hazards are "low to moderate" in the majority of the city, with a small band of "very low" along the Columbia River. Liquefaction hazards are mapped as "moderate to high" surrounding Vancouver Lake (WDNR 2024).

Seismic hazard areas in Vancouver include ground shaking amplification hazard areas. Ground shaking amplification is a phenomenon where surface-level shaking during an earthquake can be more intense based on local soil conditions. For example, when seismic waves travel through softer soils that vibrate more intensely than harder bedrock, there can be greater shaking at the surface.

Ground shaking amplification site class is determined by the National Earthquake Reduction Program of the Federal Emergency Management Agency. Ground Shaking amplification and earthquake damage risk is lowest with Site Class A soils and highest with Class F soils. VMC 20.740.130 designates ground shaking amplification hazard areas as Site Classes C to D, D, D to E, E and F as indicated on the Site Class Map of Clark County, Washington. The City is mostly classified as Site Class D (moderate), with some areas in north Vancouver classified as Site Class C to D (low to moderate), and areas in West Vancouver classified as Site Class D and D to E (moderate), as shown in ~~Figure 32 Figure 32~~ Figure 34 (Clark County n.d.).

Vancouver is within a volcanic hazard zone due to the proximity of Mount Saint Helens to the north, Mount Adams to the northeast, and Mount Hood to the southeast. The Washington State Department of Natural Resources has identified that Vancouver exists within areas of regional lava flows from Mount Saint Helens and Mount Adams (WDNR 2023).

~~Figure 32~~ Figure 34. Earthquake Hazards, Liquefaction Areas, and Volcanic Hazard Zones



*Source: Clark County n.d.*

Clark County is classified by the U.S. Environmental Protection Agency (EPA) as a Zone 1 area, which has the highest potential risk for radon exposure (Clark County Public Health n.d.). Radon is a colorless, tasteless, and odorless radioactive gas that is released naturally from soil containing granite rock. Clark County and Vancouver have higher levels than some other parts of the state because of granite rock deposited naturally in this region 18,000

years ago. Radon testing in Vancouver has reported varying results in different parts of the city, with clusters of higher risk areas (defined as levels greater than 4 picocuries per liter of air) bordering the Columbia River and near the west, south, and east edges of the city, as shown in ~~Figure 33 Figure 33~~ Figure 35.

Radon is the leading cause of lung cancer among nonsmokers and contributes to higher rates of lung cancer for smokers (DOH n.d.). Radon can seep into homes from the ground through cracks in floors or walls, construction joints, gaps around pipes, and other means, and become trapped and concentrated. All types of homes can be affected, regardless of age or whether they contain a basement, and every home should be tested. However, there is a lower risk in homes above the third floor, and therefore the EPA recommends testing all residences below the third floor (National Center for Healthy Housing 2025).

~~Figure 33~~ Figure 35. Radon Exposure Test Levels in Vancouver Area Census Tracts

## Potential Impacts

This section discusses the potential impacts of the alternatives related to the following earth-related metrics:

- Consistency with City regulations for geologic hazard areas (VMC 20.740.130)
- Potential for increased exposure to geologic hazard risks at existing and future development sites
- Potential for increased risk of erosion at future development sites

## Impacts Common to All Alternatives

The following sections outline impacts that are expected to occur under all the alternatives. Impacts specific to each alternative are discussed in the next subsections.

### Consistency with City Regulations for Geologic Hazard Areas

None of the alternatives would conflict with City regulations for geologic hazard areas, as all of the alternatives would remain subject to the City's Critical Areas Ordinance (CAO), which regulates geologically hazardous areas under VMC 20.740.130. Please see the Avoidance, Minimization, and Mitigation Measures section for more information about the CAO requirements.

### Potential for Increased Exposure to Geologic Hazard Risks at Existing and Future Development Sites

Existing and future development sites would experience some degree of risk for long-term geologic hazards under all alternatives. Some risks, such as landslide and erosion hazards, would be localized to sites in certain areas of the city, as described in the Affected Environment section and shown in ~~Figure 30 Figure 30~~ Figure 32 and ~~Figure 31 Figure 31~~ Figure 33. However, with the updated CAO, more areas of the ~~c~~City would likely be considered to be geologic hazard areas, which would potentially lead to limitations on development in these areas under all alternatives and thus reduce exposure to geologic hazard risks. Most of the ~~c~~City would be at low to moderate risk for ground shaking amplification hazards, as shown in ~~Figure 32 Figure 32~~ Figure 34. All citywide development would be at risk of volcanic hazards.

When modeling the potential future capacity for new housing units and jobs under all alternatives, analysts assumed that development would be constrained on parcels of land designated as critical areas, which include geologic hazard areas. These constraints could potentially limit exposure to geologic hazard risks. However, because all alternatives would have capacity for some level of housing and job growth, more people would potentially be exposed to these risks regardless of the alternative.

Under all alternatives, with the adoption of the updated CAO, there are additional requirements for development in geologic hazard areas, which would benefit health and safety, as discussed in the Avoidance, Minimization, and Mitigation Measures section. In addition, all alternatives would result in development of new buildings of three or more

stories. Units at or above the third story may better protect from radon exposure (BERK 2025).

### Potential for Increased Risk of Erosion at Future Development Sites

All alternatives would lead to new construction or redevelopment, which could create increased risks of erosion at specific sites because of removal of vegetation on a temporary or permanent basis. The amount of new impervious surfaces, which include rooftops, driveways, sidewalks, parking lots, and compacted soils, would increase under all alternatives to some extent because of this new growth and development. Impervious surfaces in urban areas reduce infiltration of water into soils and increase surface water runoff, which can change the way that water and pollutants travel to urban streams and lead to increased erosion (EPA 2024a).

All alternatives would maintain the same amount of existing land designated as Parks/Open Space. Retaining these vegetated Parks/Open Space areas would help limit erosion risk at those sites. Under all alternatives, the land use designations would remain the same in areas with the greatest erosion hazards, which include the north bank of Lake River leading into Vancouver Lake, the northeast shore of Vancouver Lake, and along both sides of Burnt Bridge Creek Park.

Under all alternatives, with the adoption of the updated CAO, there would be additional planting requirements in geologic hazard areas to help support the stability and natural resilience of these areas.

### No Action Alternative

In general, there would be minimal additional impacts under the No Action Alternative aside from those described in the Impacts Common to All Alternatives section. The No Action Alternative would be consistent with City regulations and would apply the updated CAO provisions for geologic hazard areas.

There would potentially be fewer construction impacts to earth resources under the No Action Alternative than Alternative 1, ~~and~~ Alternative 2 and the Preferred Alternative because the No Action Alternative would retain the existing land use and zoning designations, which generally allow for less density citywide. Because the No Action Alternative would have less capacity for new housing and jobs, it may result in lower levels of new construction and/or redevelopment and the associated ground disturbances, potential erosion, and increases in impervious surfaces, compared to Alternatives 1 and 2 and the Preferred Alternative. The differences in impacts between the No Action Alternative, ~~and~~ Alternatives 1 and 2, and the Preferred Alternative would generally be greatest outside of single-family neighborhoods. Within single-family neighborhoods, new GMA requirements to allow middle housing will be

imposed by the state if local jurisdictions do not take action to change their regulations to allow them.

### Alternative 1

In general, there would be minimal additional impacts under Alternative 1 aside from those described in the Impacts Common to All Alternatives section. Alternative 1 would be consistent with City regulations and would apply the updated CAO provisions for geologic hazard areas. Compared to the No Action Alternative, Alternative 1 would have a substantially greater capacity for new buildings in zoning districts that allow three or more stories, which may better protect from radon exposure (BERK 2025).

Alternative 1 would allow for more dense development and would have greater capacity for new housing units and jobs, which would likely result in higher levels of new construction and/or redevelopment and the associated ground disturbances, potential erosion, and increases in impervious surfaces, compared to the No Action Alternative, particularly outside of single-family zones. However, Alternative 1 would have modestly fewer earth-related impacts than Alternative 2, which has the highest capacity for new housing units and jobs.

### Alternative 2

In general, there would be minimal additional impacts under Alternative 2 aside from those described in the Impacts Common to All Alternatives section. Alternative 2 would be consistent with City regulations and would apply the updated CAO provisions for geologic hazard areas. Alternative 2 would have the highest capacity for new buildings in zoning districts that allow three or more stories, which may better protect from radon exposure (BERK 2025).

Alternative 2 would have similar impacts to Alternative 1 and the Preferred Alternative related to geologic hazard and erosion risks. However, because Alternative 2 would have options for more density and larger-scale buildings in more areas of the city, it would have greater potential than Alternative 1, the Preferred Alternative and the No Action Alternative to increase impervious surface areas and decrease vegetation, which could increase the potential for erosion. However, because Alternative 2 would allow for the densest development patterns, it would potentially result in less pressure to develop existing undeveloped sites, including those in or near erosion or landslide hazard areas than the No Action Alternative, ~~and~~ Alternative 1 and Preferred Alternative, which would lead to reduced risk exposure for people and property.

### Preferred Alternative

In general, there would be minimal additional impacts under the Preferred Alternative aside from those described in the Impacts Common to All Alternatives section. The Preferred Alternative would be consistent with City regulations and would apply the updated Critical Areas Ordinance (CAO) provisions for geologic hazard areas. Compared to Alternative 1 and the No Action Alternative, the Preferred Alternative would have a greater capacity for new buildings in zoning districts that allow three or more stories, which may better protect from radon exposure (BERK 2025). However, this capacity for buildings with three or more stories would be lower than under Alternative 2.

Similar to Alternatives 1 and 2, the Preferred Alternative would allow for more dense development and would have greater capacity for new housing units and jobs, which would likely result in higher levels of new construction and/or redevelopment and the associated ground disturbances, potential erosion, and increases in impervious surfaces, compared to the No Action Alternative, particularly outside of single-family zones. The Preferred Alternative would have modestly fewer earth-related impacts than Alternative 2, which has the highest capacity for new housing units and jobs.

## Avoidance, Minimization, and Mitigation Measures

Regardless of alternative, all future development projects will be required to comply with ~~e~~City and state requirements for geologically hazardous areas. The City's development review process will ensure compliance with the geologically hazardous areas requirements under VMC 20.740.130.

The City updated the CAO in December 2024 with the objective to better protect natural areas and, in the case of geologic hazard areas, reduce risks to public health and safety, while providing clearer and more flexible guidelines for property owners and developers (City of Vancouver 2024e).

All alternatives would be required to comply with these CAO changes, which include:

- Designation of Hazard Areas: Uses updated data sources for identifying liquefaction, ground shaking amplification, and fault rupture hazard areas to ensure designated areas are based on the most current and reliable geological information.
- Detailed Requirements for Critical Areas Reports: Specifies additional requirements for Critical Areas Reports for development proposals in potential geologic hazard areas to help ensure a comprehensive assessment of the site's geologic risks.

- Performance Standards and Buffers: Defines specific performance standards for development in geologic hazard areas, including buffer widths from hazard areas, to mitigate risks and ensure safety.
- Prohibition of Critical Facilities: Allows critical facilities in landslide, bank erosion, and fault rupture hazard areas only there is no other feasible location, a mitigation proposal must be included, and a Critical Areas Report demonstrates that the area is safe for the type of facility proposed.
- Prohibitions and Conditions During Wet Season: Adds stricter prohibitions on clearing, grading, and other activities that could destabilize soil during the wet season (November 1 to May 1), except under certain permits.
- New Planting Requirements: Requires new plantings in geologic hazard areas to consist of native vegetation and prohibits alterations to buffers that involve clearing vegetation without an approved erosion control plan.

During construction of future development projects under all alternatives, adherence to best management practices approved by Ecology and the appropriate provisions of the VMC would minimize erosion risks. Site-specific projects under all of the alternatives would be required to comply with applicable temporary erosion and sedimentation control measures as required by the City and the National Pollutant Discharge Elimination System Construction Stormwater General Permit's Storm Water Pollution Prevention Plan.

### Significant Unavoidable Adverse Impacts

All of the alternatives have the potential to create impacts to earth resources as a result of expected population growth and development. The anticipated changes would occur incrementally, and with the implementation of avoidance, minimization, and mitigation measures, no significant unavoidable adverse impacts to earth resources are anticipated for any of the alternatives.

## Air Quality, Greenhouse Gases and Climate

### Methodology

Analysts reviewed relevant information sources and policies to describe existing conditions related to emissions of criteria air pollutants, mobile source air toxics, and greenhouse gases (GHG) including the following sources:

- EPA's AirData outdoor monitor values reports (EPA 2024b)
- Washington State Greenhouse Gas Emissions Inventory: 1990-2019 (Ecology 2022)
- City of Vancouver Climate Action Framework (City of Vancouver 2022b)

- City of Vancouver 2023 Inventory of Community and Government Operations Greenhouse Gas Emissions (City of Vancouver 2024d)
- Our Vancouver Health Impact Assessment (BERK 2025)

Analysts then reviewed the alternatives to determine potential adverse impacts and associated mitigation measures using the following metrics:

- Long-term air pollutant and GHG emissions
- Capacity for new housing in areas with air pollutant exposure risks
- Capacity for new housing and jobs in areas with high temperatures
- Air quality and GHG considerations during construction

For the air pollutant and GHG emissions analysis, estimated daily VMT from the regional transportation model, as discussed in the Transportation section, were multiplied by pollutant emission factors developed with EPA's Motor Vehicle Simulator (MOVES5) that represent an average vehicle within Clark County in 2045. The MOVES5 tool models emissions for carbon monoxide (CO), oxides of nitrogen ($NO_x$), particulate matter 10 microns or less in diameter ($PM_{10}$), particulate matter 2.5 microns or less in diameter ($PM_{2.5}$), and GHG carbon dioxide equivalent ($CO_{2e}$).

## Affected Environment

### Air Quality

Vancouver is located in a regional airshed bounded on the south by Eugene, Oregon, on the north by Chehalis, Washington, on the west by the Coast Range, and on the east by the Cascade Mountains (City of Vancouver 2021a).

Air quality is monitored in Clark County by the Southwest Clean Air Agency, which was created in response to the Washington Clean Air Act of 1967. Clark County is currently classified by EPA as in attainment for all pollutants and averaging periods, based on its history of monitored concentrations in the region (EPA 2024b). Despite the area's EPA designation, air quality is an ongoing challenge for Vancouver and Clark County. Primary sources of air pollution in Vancouver include wildfire smoke, wood burning, cars, trucks, trains, and port activity.

Multiple governmental agencies operate air quality monitors throughout the states of Washington and Oregon that monitor concentrations of air pollutants according to EPA protocols. Within Vancouver, Washington, Ecology operates monitors for ozone and fine $PM_{2.5}$, a type of air pollution that consists of very small particles that are 2.5 micrometers or less in diameter. Oregon Department of Environmental Quality (DEQ) monitors CO, $PM_{10}$, $PM_{2.5}$, and ozone concentrations in Portland, Oregon, about 9 miles south of Vancouver, and

there is an additional $PM_{2.5}$ monitor location in Portland, about 4 miles south of Vancouver. Concentrations measured by these DEQ monitors are reported to the EPA as part of the Portland-Vancouver-Hillsboro core-based statistical area.

Table 30, Table 31, Table 32, and Table 33 summarize the criteria pollutant monitor data for the three most recent years of validated measurements for CO, $PM_{10}$, $PM_{2.5}$, and ozone respectively. Concentrations of CO, $PM_{10}$, and $PM_{2.5}$ did not exceed the National Ambient Air Quality Standards (NAAQS) during the period of 2021 through 2023. Although there were individual days when monitored ozone concentrations exceeded the NAAQS daily threshold, these instances did not constitute a violation of the standard. Under the NAAQS, a violation occurs when the annual fourth-highest daily maximum 8-hour ozone concentration, averaged over three years, is greater than 0.070 parts per million.

*Table 30. Carbon Monoxide Measured Concentrations in Parts per Billion*

| Monitor Location: CO | Value | 2021 | 2022 | 2023 |
|---|---|---|---|---|
| 5824 SE Lafayette Street, Portland, OR | 1-hour Maximum | 2.6 | 2.1 | 4.1 |
| 5824 SE Lafayette Street, Portland, OR | 1-hour 2nd Maximum | 2.1 | 1.9 | 1.8 |
| 5824 SE Lafayette Street, Portland, OR | No. of 1-hour Exceedances | 0 | 0 | 0 |
| 5824 SE Lafayette Street, Portland, OR | 8-hour Maximum | 1.7 | 1.7 | 1.2 |
| 5824 SE Lafayette Street, Portland, OR | 8-hour 2nd Maximum | 1.4 | 1.5 | 1.2 |
| 5824 SE Lafayette Street, Portland, OR | No. of 8-hour Exceedances | 0 | 0 | 0 |

*Source: EPA 2024b*

Notes: One hour CO standard of 35 parts per million is not to be exceeded more than once per year. Eight-hour carbon monoxide standard of 9 parts per million is not to be exceeded more than once per year.
Oregon Department of Environmental Quality (DEQ) monitors CO, $PM_{10}$, $PM_{2.5}$, and ozone concentrations in Portland, Oregon, about 9 miles south of Vancouver, and there is an additional $PM_{2.5}$ monitor location in Portland, about 4 miles south of Vancouver. Concentrations measured by these DEQ monitors are reported to the EPA as part of the Portland-Vancouver-Hillsboro core-based statistical area.
Key: CO = carbon monoxide.

*Table 31. $PM_{10}$ Measured Concentrations in Micrograms per Cubic Meter*

| Monitor Location: $PM_{10}$ | Value | 2021 | 2022 | 2023 |
|---|---|---|---|---|
| 5824 SE Lafayette Street, Portland, OR | 24-hour Maximum | 31 | 83 | 32 |
| 5824 SE Lafayette Street, Portland, OR | 24-hour 2nd Maximum | 29 | 39 | 27 |
| 5824 SE Lafayette Street, Portland, OR | No. of Exceedances | 0 | 0 | 0 |
| 4915 N Gantenbein Avenue, Portland, OR | 24-hour Maximum | 27 | 89 | 21 |
| 4915 N Gantenbein Avenue, Portland, OR | 24-hour 2nd Maximum | 24 | 39 | 19 |
| 4915 N Gantenbein Avenue, Portland, OR | No. of Exceedances | 0 | 0 | 0 |

*Source: EPA 2024b*

Note: 24-hour $PM_{10}$ standard of 150 micrograms per cubic meter is not to be exceeded more than once per year on average over three years.
Key: $PM_{10}$ = particulate matter less than or equal to 10 microns in diameter.

*Table 32. $PM_{2.5}$ Measured Concentrations in Micrograms per Cubic Meter*

| Monitor Location: $PM_{2.5}$ | Value | 2021 | 2022 | 2023 |
|---|---|---|---|---|
| 5824 SE Lafayette Street, Portland, OR | 24-Hour 98th percentile | 16 | 27 | 17 |
| 5824 SE Lafayette Street, Portland, OR | Mean Annual | 6.4 | 8 | 6.5 |
| 2722 NE 84th Avenue, Vancouver, WA | 24-Hour 98th percentile | 16 | 29 | 25 |
| 2722 NE 84th Avenue, Vancouver, WA | Mean Annual | 5.7 | 7.7 | 6.4 |

*Source: EPA 2024b*

Note: 24-hour $PM_{2.5}$ standard is exceeded when the 98th percentile, averaged over three years, is greater than 35 µg/m$^3$. Annual $PM_{2.5}$ standard is exceeded when the annual mean, averaged over three years, is greater than 9 µg/m$^3$.
Key: µg/m$^3$ = micrograms per cubic meter; $PM_{2.5}$ = particulate matter less than or equal to 2.5 microns in diameter

*Table 33. Ozone Measured Concentrations in Parts per Million*

| Monitor Location: Ozone | Value | 2021 | 2022 | 2023 |
|---|---|---|---|---|
| 5824 SE Lafayette Street, Portland, OR | 1st Highest | **.072**[a] | **.08**[a] | .067 |
| 5824 SE Lafayette Street, Portland, OR | 2nd Highest | .066 | .07 | .064 |
| 5824 SE Lafayette Street, Portland, OR | 3rd Highest | .066 | .057 | .062 |
| 5824 SE Lafayette Street, Portland, OR | 4th Highest | .06 | .056 | .056 |
| 5824 SE Lafayette Street, Portland, OR | No. of days above standard | 1 | 1 | 0 |
| 1500 SE Blairmont Drive (Mountain View High School), Vancouver, WA | 1st Highest | .068 | .062 | **.086**[a] |

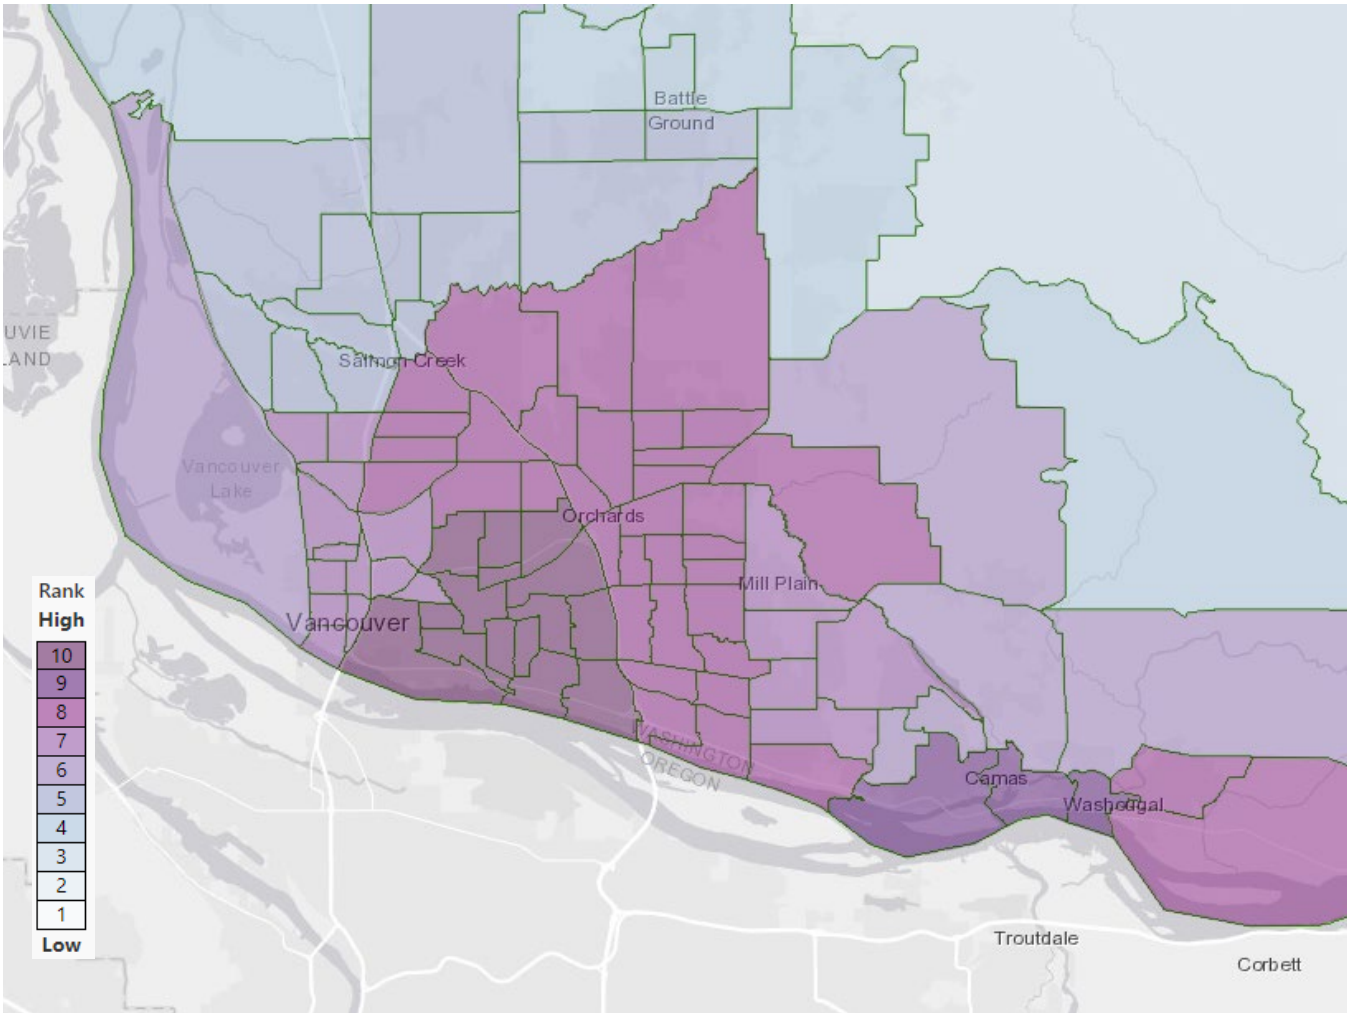
| 1500 SE Blairmont Drive (Mountain View High School), Vancouver, WA | 3rd Highest | .057 | .057 | .065 |
| 1500 SE Blairmont Drive (Mountain View High School), Vancouver, WA | 4th Highest | .057 | .056 | .062 |
| 1500 SE Blairmont Drive (Mountain View High School), Vancouver, WA | No. of days above standard | 0 | 0 | 1 |

*Source: EPA 2024b*

Notes:

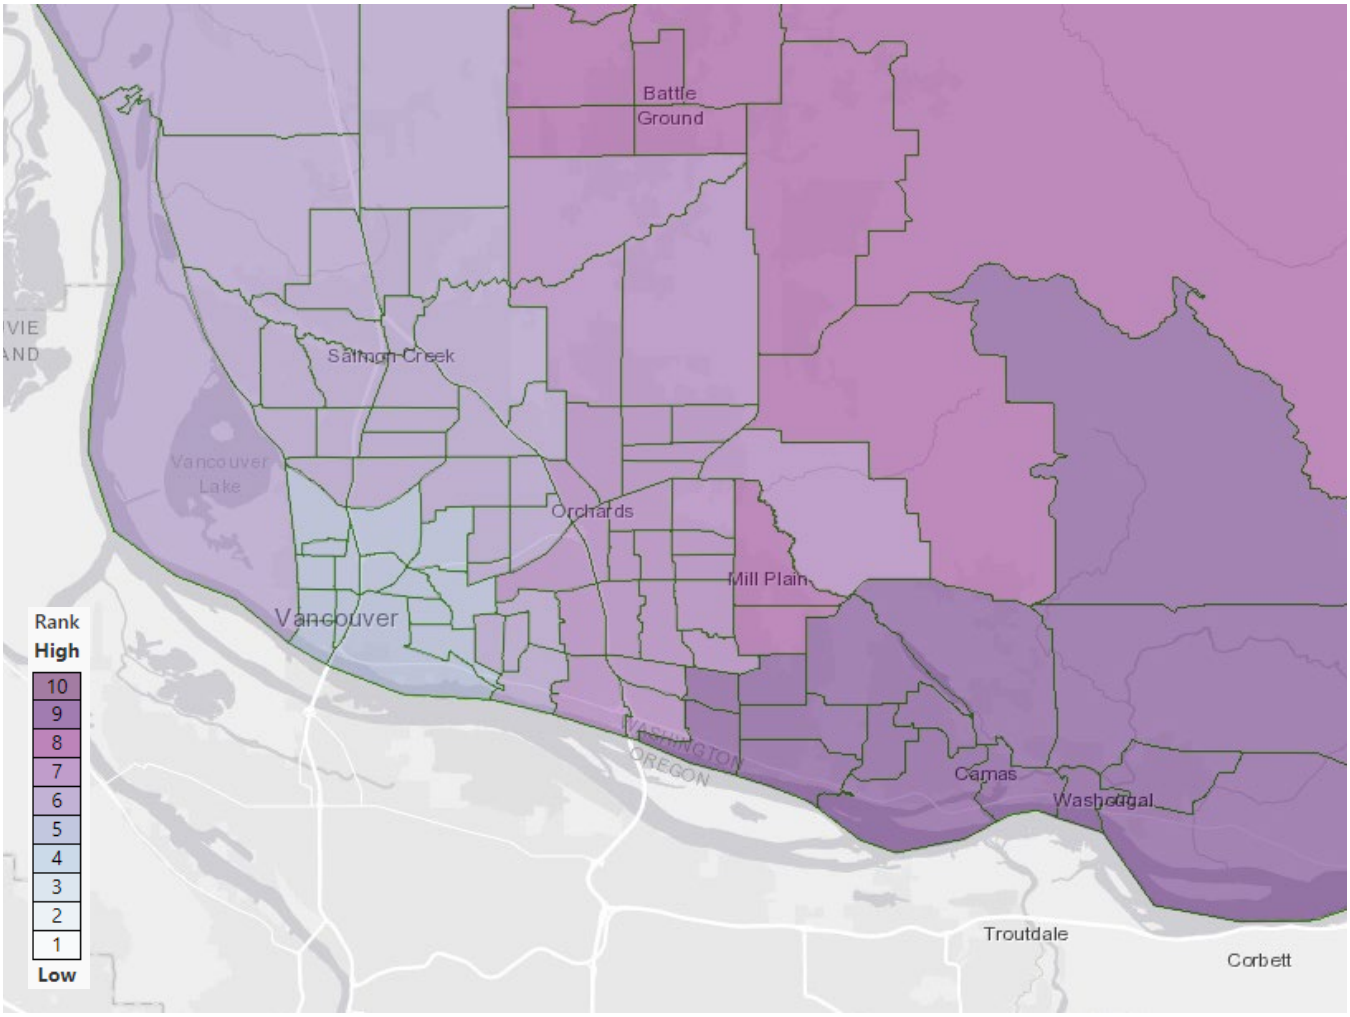
a **Bold numbers** in the table indicate daily concentration above the ozone standard. Note that a daily concentration above the ozone standard does not necessarily indicate an exceedance of the NAAQS.
Ozone standard is exceeded when the annual fourth-highest daily maximum 8-hour concentration, averaged over three years, is greater than 0.070 parts per million.



Section 107 of the 1977 Clean Air Act Amendments requires that the EPA publish a list of all geographic areas in compliance with the NAAQS, plus those not attaining the NAAQS. Areas not in NAAQS compliance are deemed nonattainment areas. Maintenance areas are areas that were previously designated as nonattainment for a particular pollutant but have since demonstrated compliance with the NAAQS for that pollutant. An area's designation is based on the data collected by the state monitoring network on a pollutant-by-pollutant basis.

As summarized in Table 32 and Table 33, concentrations of $PM_{2.5}$ and ozone are approaching the NAAQs. In 2024, Clark County received an "F" grade from the American Lung Association's State of the Air Report, based on elevated $PM_{2.5}$ concentrations from the period 2020-2022 (Design Workshop 2024). However, Clark County received a "C" grade in 2025, based on improved $PM_{2.5}$ concentrations in the period 2021-2024 (American Lung Association 2025).

Vancouver was identified as a community that is overburdened and highly impacted by air pollution by Ecology because of the elevated levels of $PM_{2.5}$ compared to the rest of the state, and the vulnerability of the community to air pollution impacts due to poverty, linguistic isolation, and unaffordable housing (Ecology 2025). This designation was determined based on monitored concentrations of air pollutants, results of state mapping tools that compare communities across the state for environmental health disparities, and federal mapping tools that evaluates the combination of environmental health risks and demographic data.

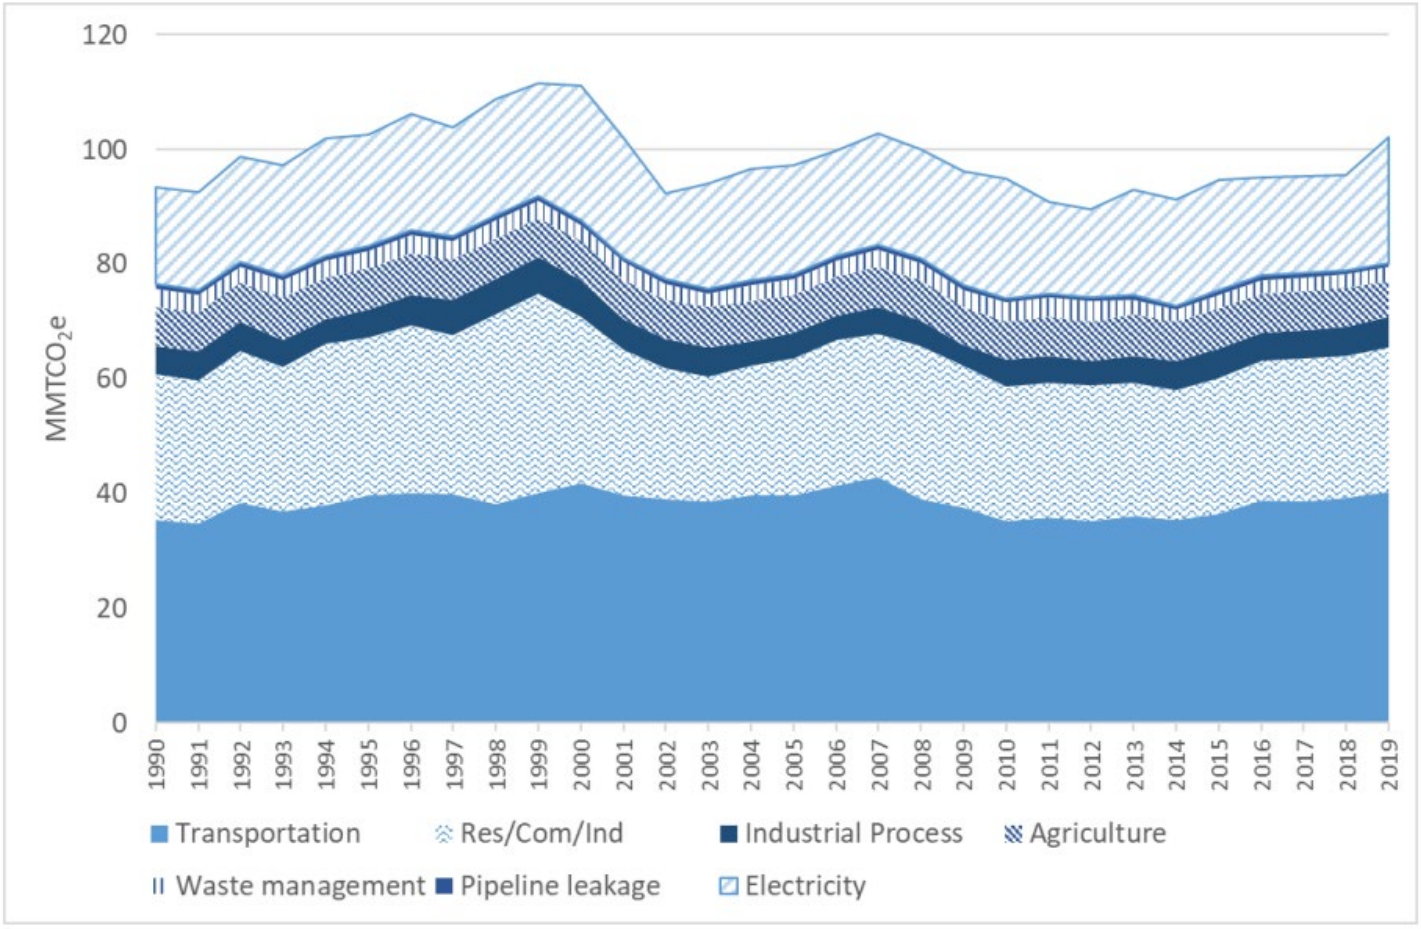


The Washington Department of Health (DOH) assigns rankings from 1 to 10, where 10 is the highest risk, for various categories of potential health risk, including exposure to $PM_{2.5}$ and ozone. The risk rankings for $PM_{2.5}$ exposure range from 7 to 10 throughout the ~~e~~City and are highest in Central and East Vancouver. The risk rankings for ozone are generally lower citywide, with higher risk levels in East Vancouver. The results of the DOH mapping tool for Vancouver and the surrounding area are shown in ~~Figure 34~~ ~~Figure 34~~ Figure 36 and ~~Figure 35~~ ~~Figure 35~~ Figure 37 (DOH 2022).

~~Figure 34~~ Figure 36. $PM_{2.5}$ Exposure Ranking Compared to Other Census Tracts in Washington

*Source: DOH 2022*

~~Figure 35~~ Figure 37. Ozone Exposure Ranking Compared to Other Census Tracts in Washington

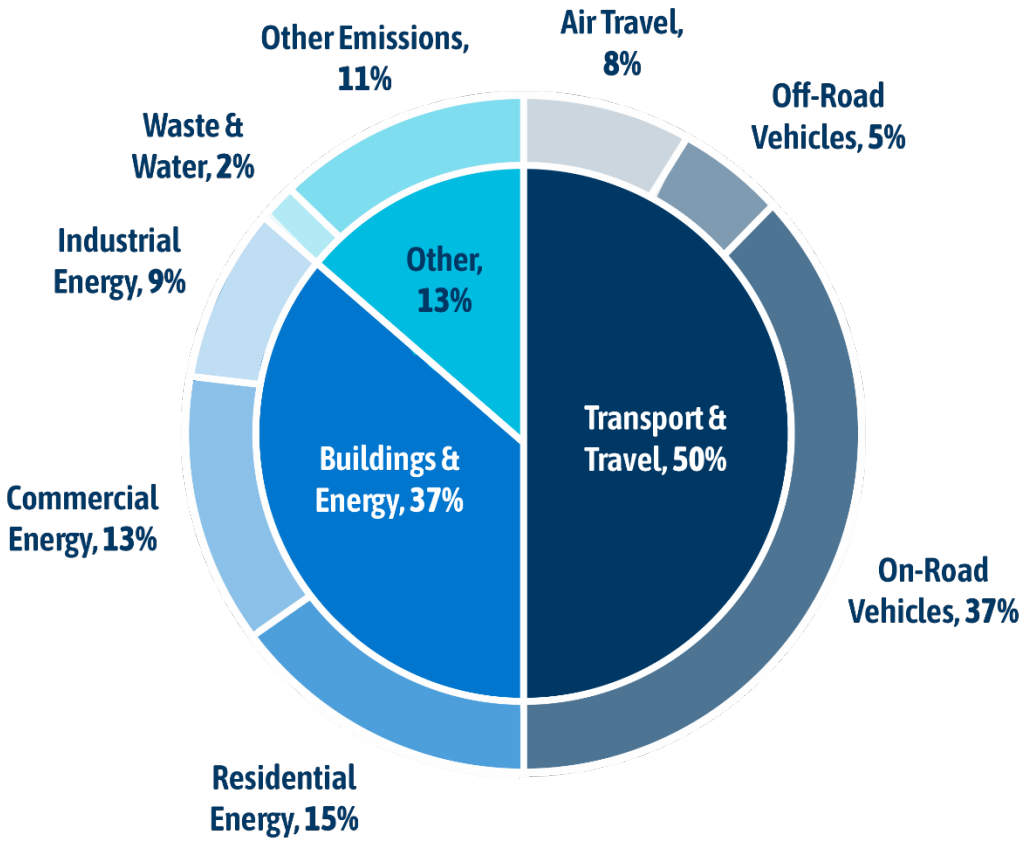


*Source: DOH 2022*

## Greenhouse Gas Emissions

Greenhouse gases are evaluated by estimating the emissions from multiple sectors in units of $CO_2e$. The most recent Washington State Greenhouse Gas Emissions Inventory evaluates the trends in GHG emissions by sector from 1990 to 2019 (Ecology 2022). As shown in ~~Figure 36~~ ~~Figure 36~~ Figure 38, the state has seen a rise in total GHG emissions since 2016, with a majority of the emissions from the transportation and energy sectors.

~~Figure 36~~ Figure 38. Washington's Total Greenhouse Gas Emissions 1990-2019



*Source: Ecology 2022*

Note: In the chart above, Electricity refers to all electricity consumption, and Res/Com/Ind refers to energy consumption other than electricity by residential, commercial, and industrial sources. $MMTCO_2e$ is million metric tons of carbon dioxide equivalent.

In 2023, about 87% of Vancouver's emissions came from transport and travel and building energy (City of Vancouver 2024d). 2023 is the baseline year of analysis for the Comprehensive Plan Update. As summarized in ~~Figure 37~~ ~~Figure 37~~ Figure 39, major emissions sources included on-road vehicles (37%), followed by residential (15%) and commercial (13%) buildings, with other emissions sources ranging from 2% to 11% of the total.

~~Figure 37~~ Figure 39. City of Vancouver 2023 Greenhouse Gas Inventory by Sector

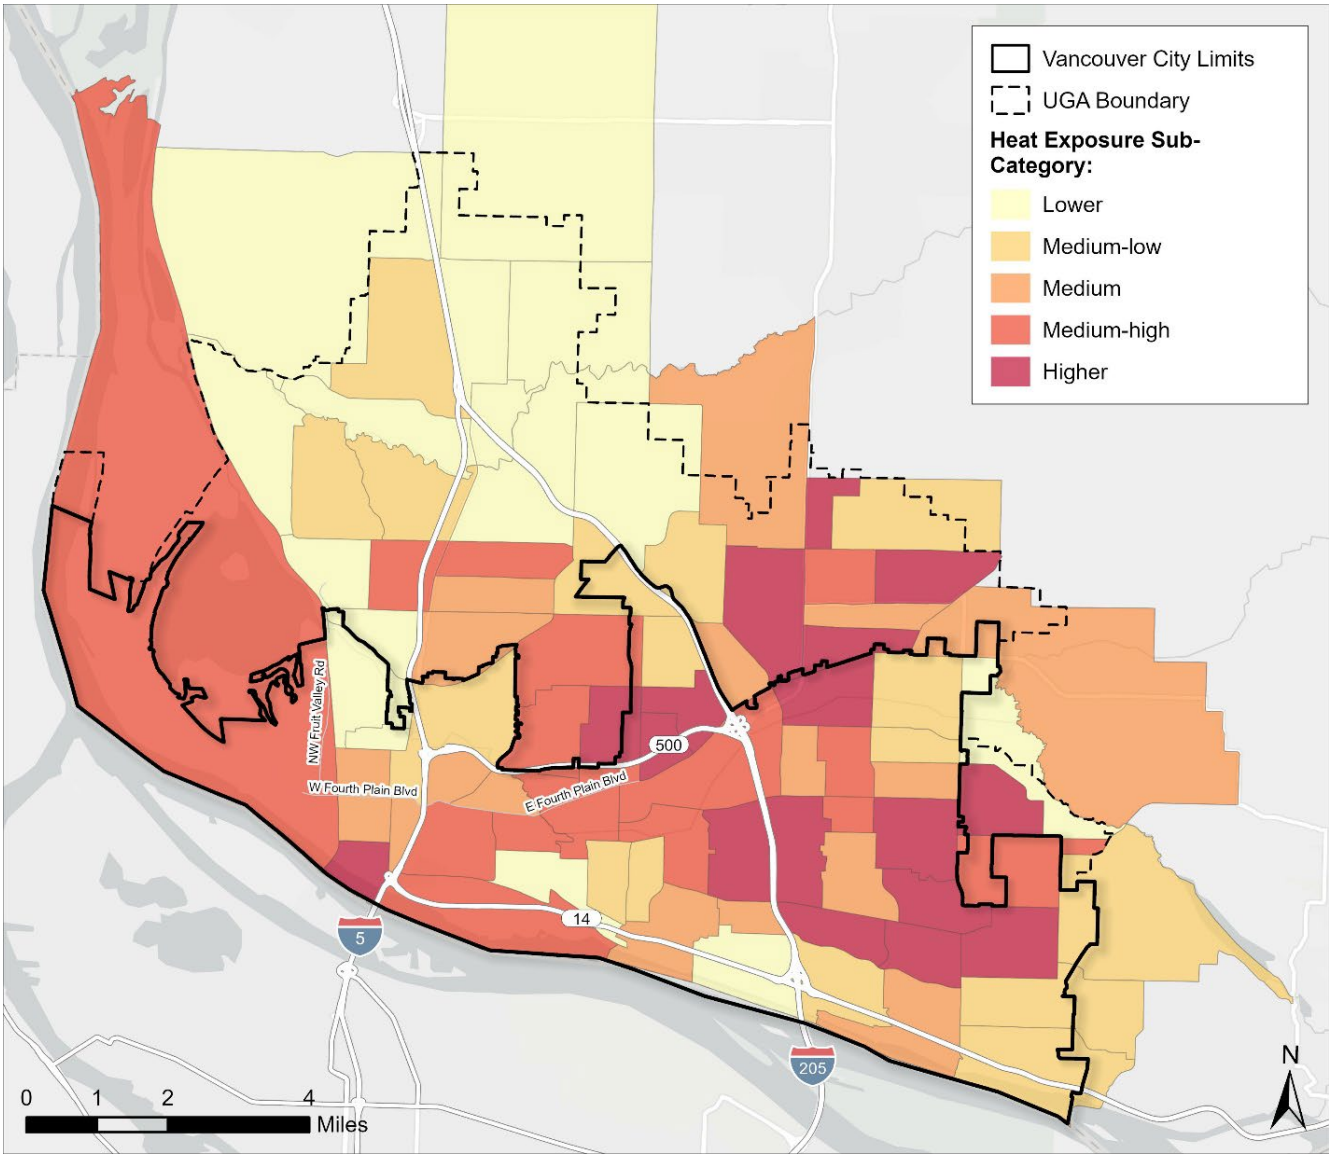
*Source: City of Vancouver 2024d*

Vancouver's Climate Action Framework sets a goal of achieving carbon neutrality by 2040 by reducing and nearly eliminating carbon pollution from homes, business, vehicles, and City services while enriching parks, green spaces, and other natural systems (City of Vancouver 2022b). Vancouver's GHG emissions declined 27% between 2007 and 2023, despite a growing population and economy (City of Vancouver 2024d). The decreased emissions were a result of the decarbonization of the local electrical grid as well as strengthened fuel efficiency standards for vehicles and increased energy efficiency of buildings and appliances.

Looking toward the future, the Climate Action Framework identifies key focus areas and associated visions, as well as strategies and actions:

- Equity and Green Economy: Vancouver will be a city that embeds equity in climate action, with regular assessments of community vulnerability, a comprehensive anti-displacement policy, and climate strategies and actions that prioritize an equitable distribution of costs

and benefits. Through a just transition, Vancouver will be a city that educates and trains its workers for careers in clean technology, renewable energy, and zero-emission vehicles.



- Buildings and Energy: Vancouver will transition to 100% clean energy and significantly reduce per capita energy use.
- Transportation and Land Use: Vancouver's residents will be able to reach their destinations safely, reliably, and efficiently, however they choose to travel. Zero-emission vehicles will be affordable, common, and easy to charge or fuel. Our neighborhoods will be walkable, mixed-use, and higher-density, with secure affordable housing for current residents.
- Natural Systems and Water Resources: Vancouver's parks, trails, and green spaces will store carbon, connect our neighborhoods, and preserve sensitive land and wildlife. The community will manage water consumption wisely.
- Solid Waste and Wastewater: We will reduce per capita waste by diverting food to those who need it, and by reusing, repairing, recycling, and composting more. We will reduce per capita water usage and operate our wastewater treatment more efficiently.
- City Governance: Vancouver will be a city that embeds climate change in everything we do. We will ensure that staff are knowledgeable and empowered to make sustainable decisions and there is adequate permanent funding to make our low-emissions, resilient vision a reality.

## Climate

Vancouver has wet, mild winters and warm, dry summers. Government researchers project that Washington temperatures could increase an average of 4.7 to 10 degrees Fahrenheit by the 2080s due to global climate change, along with a 10% increase in winter precipitation levels, increased frequency and intensity of extreme precipitation events, and more frequent unusually hot summer days (City of Vancouver 2021a; U.S. Global Change Research Program 2023).

As part of climate change resilience work in 2024, a heat exposure index was created to understand summer heat differences across Vancouver and presented in ~~Figure 38~~ Figure 38 Figure 40 (BERK 2025). Block groups with greater heat exposure occur across the city, generally in areas with more impervious (paved) surfaces, such as industrial parks, office parks, shopping centers, and hospitals. The Our Vancouver Health Impact Assessment provides additional information about potential climate risks to health throughout the ~~e~~City (BERK 2025).

~~Figure 38~~ Figure 40. Heat Exposure Index

## Potential Impacts

This section discusses the potential impacts of the alternatives related to the following air quality, greenhouse gases, and climate metrics:

- Air pollutant and GHG emissions
- Capacity for new housing in areas with air pollutant exposure risks
- Capacity for new housing and jobs in areas with high temperatures
- Air quality considerations during construction

## Impacts Common to All Alternatives

The following sections outline impacts that are expected to occur under all the alternatives. Impacts specific to each alternative are discussed in the next subsections.

### Long-term air pollutant and GHG Emissions

Existing sources of air pollutant and GHG emissions within Vancouver include on-road vehicle exhaust, non-road equipment exhaust (including construction equipment, marine vessels, and rail), residential wood burning, and industrial facilities. On-road vehicle and non-road equipment activity are the highest source of GHG and a major contributor to emissions of CO and $NO_x$. These emissions typically increase with population and commercial growth, which could occur under all alternatives. However, they are expected to be offset to a degree in the future as stricter vehicle and fuel economy standards are phased in, as well as through the continuing transition to electricity and alternative fuels.

Table 34 summarizes the results of modeled 2023 and 2045 daily air pollutant and GHG emissions. The regional transportation model outputs used for the air quality and GHG analysis consider assumptions about future population and employment growth, expected changes in land use, and reasonably foreseeable future transportation projects. Therefore, the air quality and GHG effects analysis accounts not only for potential long-term direct effects but also potential long-term indirect and cumulative effects resulting from the Comprehensive Plan Update.

Although VMT would be higher under all alternatives in 2045 than in 2023, air pollutant and GHG emissions for all alternatives would be substantially lower because of regulations for vehicles and engines that are expected to continue to phase in over time. Daily air pollutant and GHG emissions are expected to be ~~46~~71% lower under the No Action Alternative, ~~41~~68% lower under Alternative 1 and the Preferred Alternative, and ~~39~~67% lower under Alternative 2 compared to existing conditions.[2] VMT would be slightly higher under Alternative 1, ~~and~~ Alternative 2, and the Preferred Alternative than the No Action Alternative, resulting in 10.5% to ~~11.5~~12.7% higher emissions of air pollutants and GHG under the action alternatives compared to the No Action Alternative. Differences in GHG emissions could be offset by the

[2] Note: The percent differences between the alternatives and existing conditions, as well as between the No Action Alternative and Alternative 2, have been updated since the Draft EIS to correct mathematical errors.

climate benefits associated with higher-density development and other actions the City is taking under its Climate Action Framework.

The transportation modeling results, as discussed in the Transportation section of Chapter 3, indicated minimal differences in transportation mode choices between alternatives, with active transportation modes continuing to compose a small share (approximately 10%) of trips in the future. However, Alternatives 1 and 2 and the Preferred Alternative would encourage a walkable, compact, and mixed-use style of development in more areas of the ~~e~~City than the No Action Alternative. Therefore, over time, Alternatives 1 and 2 and the Preferred Alternative would be more likely to shift vehicle trips to zero-emission modes, facilitate shorter vehicle trips, and support further reductions of air pollutants and GHG emissions.

*Table 34. Modeled 2045 Daily Air Pollutant and GHG Emissions from Vehicle Exhaust*

| Alternative/ Topic | VMT (miles/ day)[a] | CO Emissions (pounds/day) | $NO_X$ Emissions (pounds/day) | $PM_{10}$ Emissions (pounds/day) | $PM_{2.5}$ Emissions (pounds/day) | GHG Emissions (metric tons $CO_{2e}$/day) |
|---|---|---|---|---|---|---|
| Existing Conditions | 4,315,718 | 16.86 | 3.34 | 0.23 | 0.11 | 2,467 |
| No Action[b] | 5,327,928 | 4.86 | 0.44 | 0.13 | 0.04 | 1,326 |
| Alternative 1 | 5,885,872 | 5.37 | 0.49 | 0.14 | 0.04 | 1,465 |
| Alternative 2 | 6,006,556 | 5.48 | 0.50 | 0.14 | 0.04 | 1,495 |
| Preferred Alternative (2045) | 5,905,133 | 5.39 | 0.49 | 0.14 | 0.04 | 1,470 |
| Difference between Alternative 1 and No Action | 10.5% | 10.5% | 10.5% | 10.5% | 10.5% | 10.5% |
| Difference between Alternative 2 and No Action | 12.7% | 12.7% | 12.7% | 12.7% | 12.7% | 12.7% |
| Difference between Preferred Alternative and No Action | 10.8% | 10.8% | 10.8% | 10.8% | 10.8% | 10.8% |

Notes: This table was reformatted to better fit the page and updated since the Draft EIS to include Preferred Alternative data and correct errors in percentage changes between Alternative 2 and the No Action Alternative. Refer to the strikeout table below for the previous version.

a VMT provided by RTC regional travel demand model outputs (RTC 2025, 2026)

b The No Action Alternative is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 and the Preferred Alternative include assumptions related to market feasibility and redevelopment.

Key: CO = carbon monoxide, $CO_2e$ = carbon dioxide equivalent, GHG = greenhouse gases, $NO_X$ = oxides of nitrogen, $PM_{2.5}$ = particulate matter 2.5 microns or less in diameter, $PM_{10}$ = particulate matter 10 microns or less in diameter

| Metric | Existing Conditions (2023) | No Action[b] (2045) | Alternative 1 (2045) | Alternative 2 (2045) | Difference between Alternative 1 and No Action | Difference between Alternative 2 and No Action |
|---|---|---|---|---|---|---|
| VMT (miles/day)[a] | 4,315,718 | 5,327,928 | 5,885,872 | 6,006,556 | 10.5% | 11.5% |
| CO Emissions (pounds/day) | 16.86 | 4.86 | 5.37 | 5.48 | 10.5% | 11.5% |
| $NO_x$ Emissions (pounds/day) | 3.34 | 0.44 | 0.49 | 0.50 | 10.5% | 11.5% |
| $PM_{10}$ Emissions (pounds/day) | 0.23 | 0.13 | 0.14 | 0.14 | 10.5% | 11.5% |
| $PM_{2.5}$ Emissions (pounds/day) | 0.11 | 0.04 | 0.04 | 0.04 | 10.5% | 11.5% |
| GHG Emissions (metric tons $CO_2e$/day) | 2,467 | 1,326 | 1,465 | 1,495 | 10.5% | 11.5% |

Anticipated new growth and development would require increased energy use of natural gas and electricity under all alternatives. There are no direct emissions of GHG from electricity use; however, there are emissions associated with the generation of that electricity. Although overall electricity use is expected to increase with future growth, overall GHG emissions from electricity generation are expected to decline in the future as Washington transitions to a carbon-free electricity supply by 2045. Quantifying the potential increase in GHG emissions associated with new buildings would require specific details about proposed residency types and commercial square footage for each alternative, which are not available at the planning level of this analysis. Future analyses would be conducted as applicable through project-specific SEPA analysis.

### Capacity for new housing in areas with air pollutant exposure risks

Based on the projected distribution of growth and development across the city, all alternatives would include capacity for new housing units in areas with a higher risk for

exposure to air pollutants, as shown in Table 35 and Table 36. However, as noted in the previous section, emissions of $PM_{2.5}$ for all alternatives would be substantially lower because of regulations for vehicles and engines that are expected to continue to phase in over time. Therefore, the future risk exposure may not be as high.

*Table 35. Estimated Capacity for New Housing Units in Areas with High $PM_{2.5}$ Exposure Risk*

| Metric | No Action Alternative | Alternative 1 | Alternative 2 | Preferred Alternative |
|---|---|---|---|---|
| Projected Capacity for New Housing Units in Areas with High $PM_{2.5}$ exposure risk | 10,100[a] | 8,000 | 9,700 | 8,200 |
| Percent of Total Projected Capacity for New Housing Units | 34%[a] | 18% | 19% | 17% |

*Source: BERK 2025*

Note:
a The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.

*Table 36. Estimated Capacity for New Housing Units in Areas with Ozone Concentration Risk*

| Metric | No Action Alternative | Alternative 1 | Alternative 2 | Preferred Alternative |
|---|---|---|---|---|
| Projected Capacity for New Housing Units in Areas with Ozone Concentration Risk | 4,800[a] | 15,100 | 16,700 | 14,900 |
| Percent of Total Projected Capacity for New Housing Units | 16%[a] | 33% | 33% | 31% |

*Source: BERK 2025*

Note:
a The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.

### Capacity for new housing and jobs in areas with heat islands

All alternatives would also include capacity for new housing units and jobs in heat islands, defined as areas with Medium-High or Higher heat exposure scores in the City's Climate Index

(refer to ~~Figure 38~~ ~~Figure 38~~ Figure 40). Table 37 summarizes the capacity across alternatives (BERK 2025).

*Table 37. Estimated Capacity for New Housing Units and Jobs in Heat Islands*

| Metric | No Action Alternative | Alternative 1 | Alternative 2 | Preferred Alternative |
|---|---|---|---|---|
| Projected Capacity for Housing Units in Heat Islands | 14,400[a] | 22,400 | 20,800 | 17,100 |
| Percent of Total Projected Capacity for New Housing Units | 49%[a] | 50% | 41% | 35% |
| Projected Capacity for New Jobs in Heat Islands | 11,500[a] | 27,600 | 30,700 | 23,800 |
| Percent of Total Projected Capacity for New Jobs | 39%[a] | 61% | 61% | 53% |

*Source: BERK 2025*

Note:
a The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.

### Air quality and GHG considerations during construction

Under all alternatives, some construction work activities (particularly those involving paving operations using asphalt) could result in short-term odors, which could be detectable to some people near construction sites and would be diluted as distance from the site increases.

All alternatives would lead to new construction or redevelopment, which would result in short-term emissions of GHG and air pollutants from worker commutes and construction vehicle exhaust. Particulate matter could also be generated where soil would be disturbed by ground clearing and preparation, stockpiling of materials, and by construction vehicles tracking soil from sites onto area streets where other vehicles could stir up and release fugitive dust. Construction of any stationary sources of air emissions, including industrial facilities or services that require industrial-scale combustion equipment will be regulated by Southwest Clean Air Agency and complete their own SEPA process.

Construction activities are also likely to require temporary diesel-fired generators to provide power for electric equipment, which produce emissions of air pollutants and GHG. Southwest

Clean Air Agency should be consulted when construction projects that require the use of temporary generators to determine whether any air permits are required. Disruption of traffic during construction (such as a temporary reduction of roadway capacity and increased queue lengths) could result in short-term, elevated concentrations of pollutants from slowed or idling vehicles. Although emissions from construction projects would be temporary, it is anticipated that varying levels of construction would occur under all of the alternatives that could cumulatively contribute to construction-related air pollutant and GHG emissions citywide.

## No Action Alternative

### Long-term air pollutant and GHG Emissions

No additional effects were identified for the No Action Alternative beyond those discussed in the Impacts to All Alternatives section. The No Action Alternative is modeled to have slightly lower emissions than Alternative 1 and 2 and the Preferred Alternative because of lower projected VMT (associated with lower growth capacity) and about ~~46~~71% lower emissions than existing conditions. However, the No Action Alternative would retain lower-density zoning districts and a less compact, walkable urban form. Therefore, the No Action Alternative would be less likely than Alternatives 1 and 2 and the Preferred Alternative to shift trips to zero-emission modes over time and facilitate shorter vehicle trips, and would not help to support further reductions of air pollutant and GHG emissions.

### Capacity for new housing in areas with air pollutant exposure risks

No additional effects were identified for the No Action Alternative beyond those discussed in the Impacts to All Alternatives section. There would be a slightly higher capacity for new housing units in areas with high $PM_{2.5}$ than ~~the action alternatives~~ under Alternatives 1 and 2 and the Preferred Alternative and a lower capacity for new housing units in areas with ozone exposure risk than under Alternatives 1 and 2 and the Preferred Alternative.

### Capacity for new housing and jobs in areas with heat islands

No additional effects were identified for the No Action Alternative beyond those discussed in the Impacts to All Alternatives section. Consistent with the lower overall capacity for housing units and jobs under the No Action Alternative, there would be lower capacity for new housing units and jobs in areas with heat islands than under Alternatives 1 and 2 and the Preferred Alternative.

### Air quality and GHG considerations during construction

No additional effects were identified for the No Action Alternative beyond those discussed in the Impacts to All Alternatives section. The No Action Alternative would have the lowest potential for construction-related air quality impacts of all the alternatives because it would have the lowest capacity for new housing units, jobs, and associated new development.

## Alternative 1

### Long-term air pollutant and GHG Emissions

No additional effects were identified for Alternative 1 beyond those discussed in the Impacts to All Alternatives section. Emissions for Alternative 1 are modeled to be slightly higher than the No Action Alternative and similar to Alternative 2 and the Preferred Alternative because of higher projected VMT but about ~~41~~71% lower than existing conditions. However, Alternative~~s~~ 1 would encourage a more walkable, compact style of development than the No Action Alternative but proposes fewer high-density areas than Alternative 2. Therefore, Alternative 1 would be more likely to shift vehicle trips to zero-emission modes, facilitate shorter vehicle trips, and support further reductions of air pollutant and GHG emissions over time than the No Action Alternative but less likely to do so than Alternative 2.

### Capacity for new housing in areas with air pollutant exposure risks

No additional effects were identified for Alternative 1 beyond those discussed in the Impacts to All Alternatives section. There would be a similar capacity for new housing units in areas with high $PM_{2.5}$ across all alternatives. Alternative 1 would have a higher capacity for new housing units in areas with high ozone exposure risk than the No Action Alternative, ~~and~~ a lower capacity than Alternative 2, and similar capacity compared to the Preferred Alternative.

### Capacity for new housing and jobs in areas with heat islands

No additional effects were identified for Alternative 1 beyond those discussed in the Impacts to All Alternatives section. Alternative 1 would have a higher capacity for new housing units in urban heat islands than the No Action Alternative, ~~and~~ Alternative 2 and the Preferred Alternative, ~~but~~ and a lower capacity for new jobs in these areas than Alternative 2.

### Air quality and GHG considerations during construction

No additional effects were identified for Alternative 1 beyond those discussed in the Impacts to All Alternatives section. Alternative 1 would have a higher potential for construction-related air quality and GHG emissions impacts than the No Action Alternative because it would have a higher capacity for new housing units, jobs, and associated new development. These impacts would be similar to Alternative 2 and the Preferred Alternative.

## Alternative 2

### Long-term air pollutant and GHG Emissions

No additional effects were identified for Alternative 2 beyond those discussed in the Impacts to All Alternatives section. Emissions for Alternative 2 are modeled to be ~~11.5~~12.7% higher than the No Action Alternative and similar to Alternative 1 and the Preferred Alternative because of higher projected VMT. However, Alternative 2 would encourage a walkable, compact, and

mixed-use style of development in the most parts of the ~~c~~City compared to the No Action Alternative and Alternative 1. Therefore, Alternative 2 would be the most likely to shift vehicle trips to zero-emission modes, facilitate shorter vehicle trips, and support further reductions of air pollutant and GHG emissions.

### Capacity for new housing in areas with air pollutant exposure risks

No additional effects were identified for Alternative 2 beyond those discussed in the Impacts to All Alternatives section. There would be a similar capacity for new housing units in areas with high $PM_{2.5}$ across all alternatives. Alternative 2 would have the highest capacity for new housing units in areas with high ozone exposure risk.

### Capacity for new housing and jobs in areas with heat islands

No additional effects were identified for Alternative 1 beyond those discussed in the Impacts to All Alternatives section. Alternative 2 would have a lower capacity for new housing units in urban heat islands than ~~the No Action Alternative and~~ Alternative ~~2~~1, but ~~a~~the highest~~r~~ capacity for new jobs in these areas.

### Air quality and GHG considerations during construction

No additional effects were identified for Alternative 2 beyond those discussed in the Impacts to All Alternatives section. Alternative 2 would have the highest potential for construction-related air quality and GHG emissions impacts because it would have the highest capacity for new housing units, jobs, and associated new development. However, these impacts are likely to be similar to Alternative 1.

## Preferred Alternative

### Long-term air pollutant and GHG Emissions

No additional effects were identified for the Preferred Alternative beyond those discussed in the Impacts to All Alternatives section. Emissions for the Preferred Alternative are modeled to be slightly higher than the No Action Alternative and similar to Alternatives 1 and 2 because of higher projected VMT but about 68% lower than existing conditions. The Preferred Alternative would encourage a more walkable, compact style of development than the No Action Alternative but would propose modestly fewer high-density areas than Alternative 2. Therefore, the Preferred Alternative would be more likely to shift vehicle trips to zero-emission modes, facilitate shorter vehicle trips, and support further reductions of air pollutant and GHG emissions over time than the No Action Alternative but would be modestly less likely to do so than Alternative 2.

### Capacity for new housing in areas with air pollutant exposure risks

No additional effects were identified for the Preferred Alternative beyond those discussed in the Impacts to All Alternatives section. There would be a similar capacity for new housing

units in areas with high $PM_{2.5}$ across all alternatives. The Preferred Alternative would have a higher capacity for new housing units in areas with high ozone exposure risk than the No Action Alternative and a lower capacity than Alternatives 1 and 2.

### Capacity for new housing and jobs in areas with heat islands

No additional effects were identified for the Preferred Alternative beyond those discussed in the Impacts to All Alternatives section. The Preferred Alternative would have a higher capacity for new housing units and jobs in urban heat islands than the No Action Alternative. However, the Preferred Alternative would have a lower capacity for new housing units and jobs in urban heat islands than Alternatives 1 and 2.

### Air quality and GHG considerations during construction

No additional effects were identified for the Preferred Alternative beyond those discussed in the Impacts to All Alternatives section. The Preferred Alternative would have a higher potential for construction-related air quality and GHG emissions impacts than the No Action Alternative because it would have a higher capacity for new housing units, jobs, and associated new development. These impacts would be similar to Alternatives 1 and 2.

## Avoidance, Minimization, and Mitigation Measures

Future air pollutant emissions under all alternatives are expected to be lower than existing emissions due to improvements in vehicle technology and stricter fuel and engine regulations. Although Alternatives 1 and 2 and the Preferred Alternative would produce more air pollutant and GHG emissions than the No Action Alternative, the EPA has not established thresholds for determining significant air quality impacts in attainment areas. Therefore, no specific mitigation measures are required. Strategies to minimize vehicle emissions include actions that continue Vancouver's efforts to encourage mode shift away from driving alone (e.g., transit improvements, active transportation infrastructure, carpooling incentives) and actions that encourage the transition to alternative fuels (e.g., electric vehicle charging stations).

Similarly, future GHG emissions under all alternatives would be lower than existing conditions due to the ongoing decarbonization of the electricity supply. Although Alternatives 1 and 2 and the Preferred Alternative would result in slightly higher GHG emissions from energy use as compared to the No Action Alternative, there are no established thresholds to define a significant impact to GHG emissions. Therefore, no specific mitigation measures are required. Strategies to minimize energy-related emissions include actions that encourage energy efficiency and the transition away from natural gas.

Vancouver's Climate Action Plan outlines specific actions to minimize emissions from transportation sources, buildings and energy use, as described in the Affected Environment subsection.

In addition, implementation of the following policy measures ~~currently under consideration~~ for the Comprehensive Plan Framework would also help to avoid, minimize, and mitigate potential air quality, greenhouse gases, and climate impacts identified for the action alternatives:

- Improve indoor air quality for residents most susceptible to negative impacts from exposure to particulates, CO, nitrogen dioxide, and lead.
- Reduce emissions from buildings, structures, and infrastructure in the community.
- Avoid siting new housing near known stationary sources of air, water, heat and light pollution, and facilitate site and building design that mitigates impacts from stationary pollution sources for both new and existing housing.
- Minimize impacts of the urban heat island effect, reduce temperature disparities for equity priority neighborhoods, and safeguard vulnerable populations from the adverse effects of extreme heat through proactive measures.
- Prioritize integrating green infrastructure into new development, redevelopment, replacement of existing infrastructure, and development of public spaces within the City to reduce urban heat island effect.
- Ensure that buildings contribute to the City's greenhouse gas reduction goals, protect occupants from climate hazards and extreme weather, and minimize harm to wildlife and natural ecosystems.
- Expand community solar access for low-income homeowners and renters.
- Retrofit existing infrastructure, parks and natural spaces, and construct new facilities to adapt to the localized impacts that will occur in the community due to climate change.
- Improve active transportation infrastructure ~~particularly~~ in areas with inadequate pedestrian and micromobility infrastructure~~,~~ to increase the share of trips made by foot, bike, or other small mobility devices.
- Adopt new technologies and invest in supportive infrastructure to increase the adoption of electric, hybrid, and alternative fuel vehicles to reduce community emissions.
- Implement land use patterns that reduce VMT, traffic congestion and associated ~~, and~~ greenhouse gas emissions, ~~and~~ while improvinge ~~e~~ safety and air quality.
- Incorporate elements of climate resiliency into new privately and publicly developed public spaces.
- Establish development regulations that incorporate best practices for reducing the risk of wildfire, extreme heat, flooding, and other climate-exacerbated hazards.

- Develop plans and resources to ensure effective emergency response and equal access to emergency services and recovery resources, mitigating risks from ~~extreme weather~~ natural disasters, climate-related hazards, and social ~~hazards~~ disruptions. Build resilience through strong community relationships and trusted local networks.

### Significant Unavoidable Adverse Impacts

All of the alternatives have the potential to create impacts to air quality and GHG emissions as a result of expected population growth and development. The anticipated changes would occur incrementally, and with the implementation of avoidance, minimization, and mitigation measures, no significant unavoidable adverse impacts to air quality or GHG emissions are anticipated for any of the alternatives.

## Water

### Methodology

Analysts reviewed relevant information and policies to describe existing citywide surface water, flood plains, and groundwater conditions, including the following sources:

- City of Vancouver Shoreline Master Program (City of Vancouver 2021b)
- United States Fish and Wildlife Service (USFWS) National Wetlands Inventory (USFWS 2024)
- EPA Clean Water Act, Clean Water Rule
- Washington State Department of Ecology Water Quality Atlas (Ecology 2024)
- VMC 14.24, Erosion Control
- VMC 14.25, Stormwater Control
- VMC 14.26, Water Resources Protection
- VMC 20.740.120, Frequently Flooded Areas
- VMC 20.740.140, Wetlands

Analysts then reviewed the alternatives to determine potential adverse impacts and associated mitigation measures using the following metrics:

- Potential for increased runoff to surface water bodies and wetland areas
- Potential for increased impacts to groundwater hydrology
- Potential for flooding in areas identified for new growth and development

### Affected Environment

Vancouver has an abundance of water resources typical of western Washington, including rivers, streams, lakes, and wetlands. The ~~c~~City contains approximately 2,500 acres of

wetlands and 2,500 acres of water, as shown in ~~Figure 39~~ ~~Figure 39~~ Figure 41 (Design Workshop 2024).

### Surface Water

Major surface waters include the Columbia River, Vancouver Lake, and the adjacent lowlands, and Burnt Bridge Creek (City of Vancouver 2021a). These three main waterbodies (Columbia River, Burnt Bridge Creek, and Vancouver Lake) are all considered impaired by pollutants by Ecology (Ecology 2024). The total area subject to the City's SMP is approximately 32,000 acres (50 square miles) (City of Vancouver 2021b). The two primary watersheds within the Vancouver city limits are Burnt Bridge Creek and Columbia Slope; with Vancouver Lake basin at the western boundary, Lacamas Creek watershed to the east, and Salmon Creek watershed to the north. All Vancouver watersheds ultimately drain into the Columbia River (City of Vancouver n.d.[a]).

### Frequently Flooded Areas

Frequently flooded areas are areas of special flood hazard identified by the Federal Insurance Administrator and the Federal Emergency Management Agency (FEMA) (VMC 20.740.120). FEMA maintains flood maps that help to inform where locations of flood hazard occur. In Vancouver, flood hazards predominately exist along the banks of the Columbia River and its associated floodplain, surrounding Vancouver Lake and its associated floodplain, and within the floodplain of Burnt Bridge Creek, as shown in ~~Figure 39~~ ~~Figure 39~~ Figure 41 (Design Workshop 2024). Vancouver's floodplain is concentrated at the western edge of the city. The alluvial floodplain contains mostly marshes and hardwoods, while the upland floodplain includes various substantial woodlands of 20 to 30 acres or more (City of Vancouver 2022a).

### Groundwater

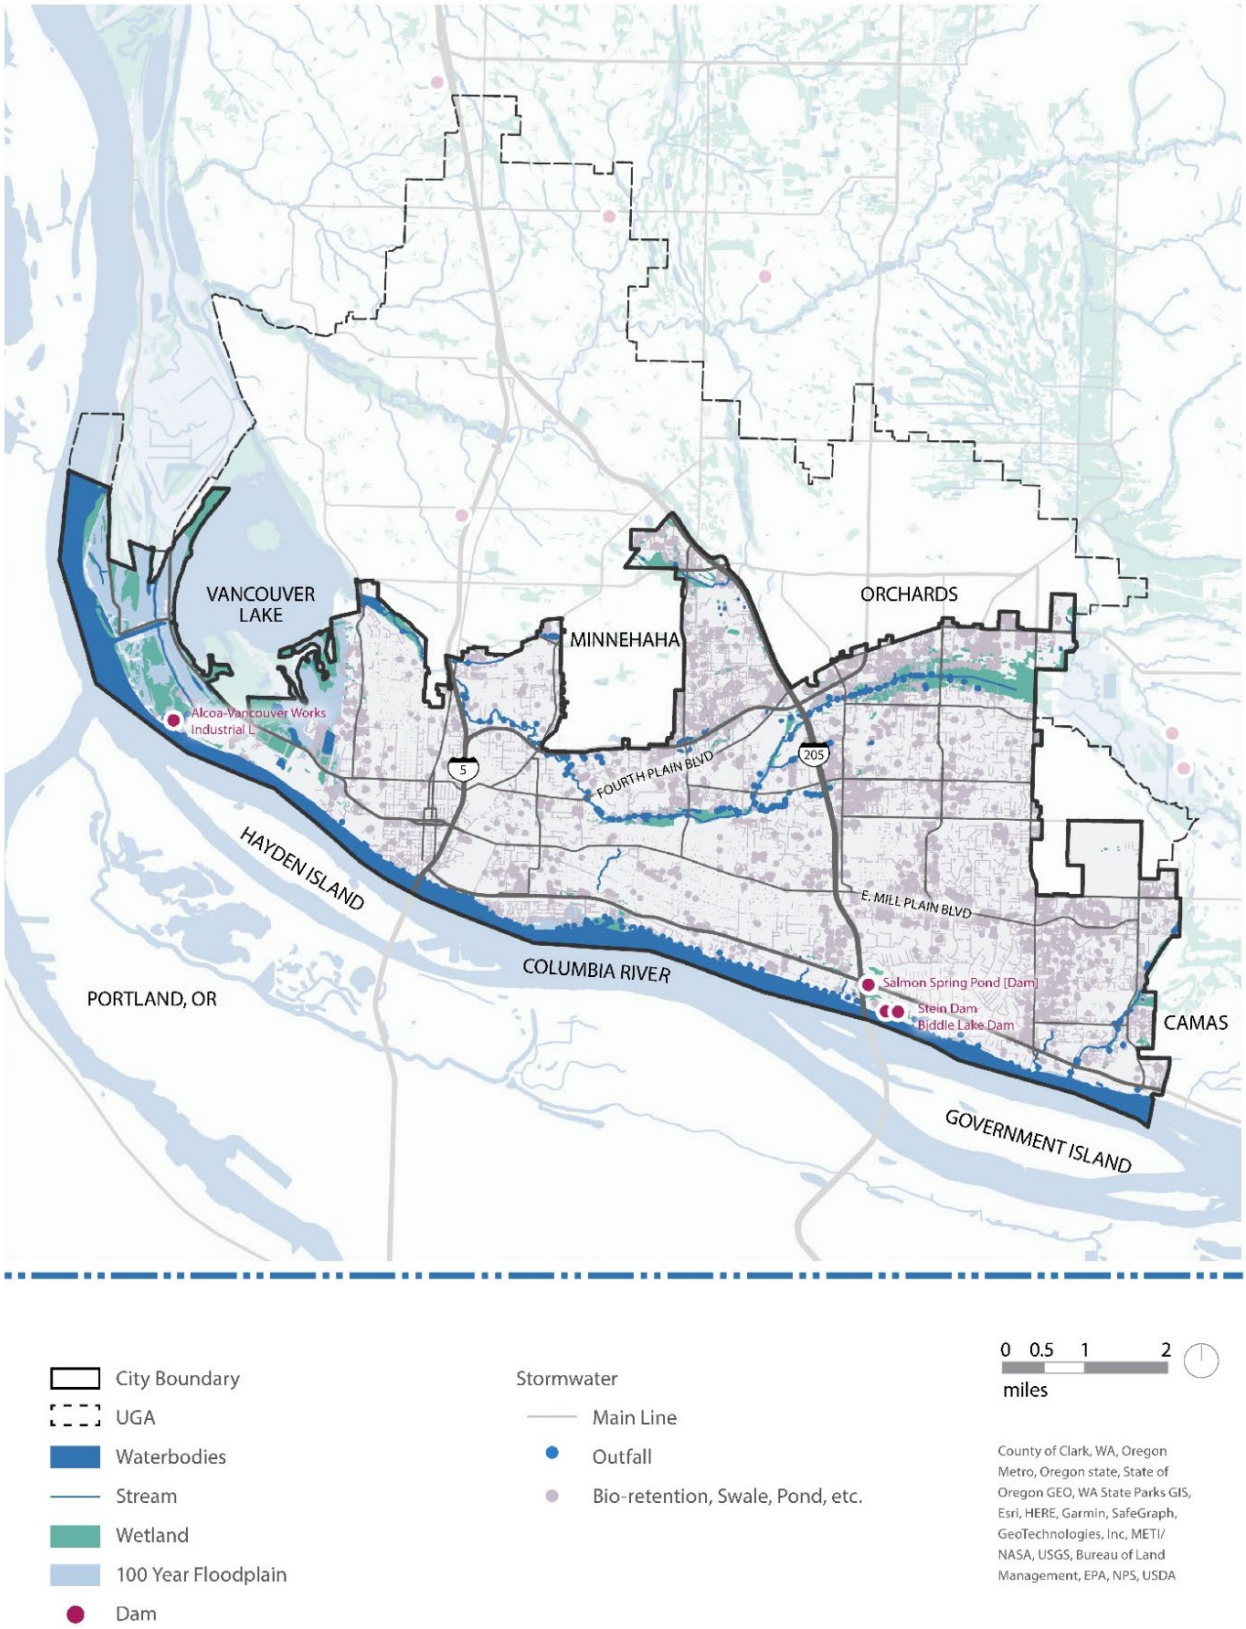
All Vancouver drinking water comes from local groundwater (City of Vancouver n.d.[b]). Vancouver gets its drinking water, or potable water, from wells tapping three distinct regional underground aquifers – the Orchards, Troutdale and Sand-and-Gravel aquifers. These aquifers make up the Troutdale Aquifer System, which covers most of Clark County. The groundwater system was designated a sole source aquifer in 2006 (City of Vancouver n.d.[b]). EPA defines a sole source aquifer as one where (a) the aquifer supplies at least 50% of the drinking water for its service area and (b) there are no reasonable alternative drinking water sources if the aquifer becomes contaminated (EPA n.d.[a]).

### Critical Aquifer Recharge Areas

Per VMC 14.26, the entire area within the boundary of Vancouver is designated as a Critical Aquifer Recharge Area. This designation recognizes the importance and vulnerability of Vancouver's drinking water aquifers and serves to protect and preserve the municipal water supply.

### Stormwater

Vancouver's overall goal is to promote stormwater drainage designs that help maintain or improve surface and groundwater quality. In general, stormwater runoff drains to catch basins, storm drains, and roadside ditches. ~~Figure 39~~ ~~Figure 39~~ Figure 41 shows the location of stormwater lines, outfalls, and features throughout the city. The preferred approach to stormwater management is to require property owners to retain stormwater on site and treat it, often utilizing vegetated areas to filter and absorb pollutants (City of Vancouver 2021a). Runoff is collected and conveyed into larger storm drains within the major streets, and discharges into local creeks and drainage tributaries or infiltrates into the soils on site. Stormwater facilities are distributed throughout the ~~e~~City (City of Vancouver 2023d). The geology for most of the ~~e~~City allows stormwater to infiltrate on site, allowing sites to develop and provide water quality treatment and discharge to stand-alone infiltration systems.



### Wetlands

Wetlands are among the most productive ecosystems in the world, comparable to rain forests and coral reefs, and include areas where water covers soil for all or part of the year such as marshes, swamps, bogs, and fens (EPA n.d.[b]) Wetland functions are influenced by physical, chemical, and biological processes that occur within a wetland and the surrounding landscape. They provide essential ecological services including water filtration, shoreline stabilization, groundwater recharge, and climate resiliency. Wetland processes can alleviate flooding, improve stormwater control, provide erosion protection, and improve water quality valuable to the conservation and preservation of aquatic resources.

Wetland habitats are protected by several laws overseen by federal, state, and local agencies, and tribes. VMC, SEPA, and federal National Environmental Policy Act establish environmental regulations and procedures to regulate the development and use of land.

Vancouver contains over 2,467 acres of area mapped as wetlands according to the USFWS National Wetlands Inventory (USFWS 2024). Notable wetlands include the Water Resources Education Center Wetlands along the Columbia River, the restored wetlands in the Burnt Bridge Creek Greenway, and those surrounding Vancouver Lake, as shown in ~~Figure 39~~ ~~Figure 39~~ Figure 41.

~~Figure 39~~ Figure 41. Water Resources

*Source: Design Workshop 2024*

## Potential Impacts

This section discusses the potential impacts of the alternatives related to the following water-related metrics:

- Potential for increased runoff to surface water bodies and wetland areas
- Potential for increased impacts to groundwater hydrology
- Potential for flooding in areas identified for new growth and development

### Impacts Common to All Alternatives

The following sections outline impacts that are expected to occur under all the alternatives. Impacts specific to each alternative are discussed in the next subsections.

#### Potential for Increased Runoff to Surface Water Bodies and Wetland Areas

All alternatives would lead to new construction or redevelopment, which would increase the amount of new impervious surfaces, including rooftops, driveways, sidewalks, parking lots, and compacted soils. Impervious surfaces in urban areas reduce natural infiltration of water into soils and increase surface water runoff, which can change the way that water and pollutants travel to urban streams and lead to increased erosion (EPA 2024a). Incremental development over time could also result in direct, indirect, and cumulative impacts to wetland hydrology, degradation during construction, and temporary or permanent loss of wetland habitat.

New development under all alternatives would be subject to current and future proposed regulations that may require improvements to stormwater management or critical area restoration as new development occurs. These requirements could have cumulative benefits for water resources, especially in areas of the City where stormwater management and other water resources protections do not meet current standards.

#### Potential for Increased Impacts to Groundwater Hydrology

Under all alternatives, increased impervious surface area and soil compaction could decrease opportunities for infiltration and groundwater recharge, affect natural drainage patterns, and prevent precipitation from recharging groundwater aquifers.

Groundwater could be impacted during standard construction activities, such as excavation, grading, and placement of foundations. Contaminated soil and/or groundwater could be encountered during excavation when properties are redeveloped under any of the alternatives. Some land uses are known to have a higher risk of groundwater contamination than other land uses, such as automotive facilities, dry cleaning facilities, municipal landfills, and some industrial or agricultural uses.

### Potential for Flooding in Areas Identified for New Growth and Development

None of the alternatives would directly encourage new development in areas identified as frequently flooded areas. However, increases in the amount of impervious surfaces, as discussed in the previous sections, and more extreme weather events related to climate change could lead to increased flooding in the future under all alternatives.

### No Action Alternative

In general, there would be minimal additional impacts under the No Action Alternative aside from those described in the Impacts Common to All Alternatives section. The No Action Alternative would be consistent with City regulations and would apply the updated CAO provisions for water resources.

Because the No Action Alternative would have less capacity for new housing and jobs, it may result in lower levels of new construction and/or redevelopment and associated increases in impervious surfaces, compared to Alternatives 1 and 2 and the Preferred Alternative. However, the No Action Alternative would encourage continuation of a less dense, more dispersed style of urban development. In the longer term, this type of development pattern could potentially increase pressure to develop more individual sites, which could result in increased impervious surfaces.

### Alternative 1

In general, there would be minimal additional impacts under Alternative 1 aside from those described in the Impacts Common to All Alternatives section. Alternative 1 would be consistent with City regulations and would be subject to the updated CAO provisions for water resources.

Alternative 1 would allow for more dense development and would have greater capacity for new housing units and jobs, which would likely result in higher levels of new construction and/or redevelopment and the associated increases in impervious surfaces that affect runoff and water resources, compared to the No Action Alternative. However, this development would be more concentrated in higher-density zoning districts, which could result in lower levels of impervious surfaces throughout the ~~e~~City than the No Action Alternative.

### Alternative 2

In general, there would be minimal additional impacts under Alternative 2 aside from those described in the Impacts Common to All Alternatives section. Alternative 2 would be consistent with City regulations and would be subject to the updated CAO provisions for water resources.

Alternative 2 would have similar impacts to Alternative 1 and the Preferred Alternative related to water resources. However, because Alternative 2 would have options for more density and larger-scale buildings in more areas of the city, it would have greater potential than Alternative 1, the Preferred Alternative and the No Action Alternative to increase impervious surface areas, which could affect runoff to water resources. However, like Alternative 1 and the Preferred Alternative, this development would be more concentrated in higher-density zoning districts, which could result in lower overall impervious surface areas throughout the ~~c~~City than the No Action Alternative.

### Preferred Alternative

In general, there would be minimal additional impacts under the Preferred Alternative aside from those described in the Impacts Common to All Alternatives section. The Preferred Alternative would be consistent with City regulations and would be subject to the updated Critical Areas Ordinance (CAO) provisions for water resources.

The Preferred Alternative would have similar impacts to Alternatives 1 and 2 related to water resources. Similar to Alternatives 1 and 2, the Preferred Alternative would allow for more dense development and would have greater capacity for new housing units and jobs, which would likely result in higher levels of new construction and/or redevelopment and the associated increases in impervious surfaces that affect runoff and water resources, compared to the No Action Alternative. However, this development would be more concentrated in higher-density zoning districts, which could result in lower levels of impervious surfaces throughout the City than the No Action Alternative.

## Avoidance, Minimization, and Mitigation Measures

Regardless of alternative, all future development projects will be required to adhere to local, state, and federal policies and regulations that protect surface water and groundwater resources, as well as protect public health and safety from flood hazards.

Development in frequently flooded areas and floodplains, such as those located along the Columbia River and in West Vancouver, will remain subject to VMC 20.40.120.

New development will also be required to comply with the City's Water Resources Protection Ordinance (VMC 14.26). This ordinance is currently being updated to address provisions of the Critical Aquifer Recharge Area regulations.

All development projects will be required to provide stormwater capture and conveyance on site in accordance with VMC 14.25 and 14.26.

New development will also be subject to the wetland regulations under VMC 20.740.140, including revised wetland buffer width requirements. With the December 2024 updates to VMC 20.740.140, about 4% more of the City's land area would be regulated as wetlands and subject to additional protections under all alternatives, which would benefit these water resources.

In addition, implementation of the following policy measures ~~currently under consideration~~ for the Comprehensive Plan Update would also help to avoid, minimize, and mitigate potential impacts to water resources identified for the action alternatives:

- Improve ~~local~~ water quality and reduce flood risk by reducing stormwater ~~runoff~~ flows, promoting natural groundwater infiltration ~~to groundwater~~, reducing runoff, and advancing effective stormwater management system that protect watersheds. ~~and restoring riparian areas.~~
- Provide safe, clean, quality drinking water to every Vancouver home, business, and industry. Discourage development and use of private drinking water wells. Provide water pressures and volumes necessary to support fire suppression hydrants and sprinkler systems. Ensure that the infrastructure to support water service is in place prior to or at the time of development. Support water conservation recycle systems where practicable.
- Prioritize integrating green infrastructure into new development, redevelopment, replacement of existing infrastructure, and development of public spaces within the City to improve stormwater quality.
- Protect existing Critical Areas within the City, and Shorelines of Statewide Significance, and ensure no net loss of ecological functions through avoidance of impacts, conservation design principles, and compensatory mitigation when loss of ecological function cannot be avoided.
- Support restoration and enhancement of Critical Areas by private landowners, or through City/nonprofit acquisition and other initiatives.

The proposed updates to zoning and development regulations would also help to avoid, minimize and mitigate impacts to water through elements such as minimum open space requirements and maximum impervious area requirements based on building types.

## Significant Unavoidable Adverse Impacts

All of the alternatives have the potential to create impacts to water resources as a result of expected population growth and development. The anticipated changes would occur incrementally, and with the implementation of avoidance, minimization, and mitigation measures, no significant unavoidable adverse impacts to water resources are anticipated for any of the alternatives.

# Plants and Animals

## Methodology

Analysts reviewed relevant information and policies to describe existing citywide conditions for plants, fish, and other wildlife, including the following sources:

- City of Vancouver Urban Forestry Management Plan (City of Vancouver 2023e)
- Clark County Maps Online Geographic information system Mapping Tool
- Endangered Species Act
- Our Vancouver Health Impact Assessment (BERK 2025)
- USFWS Information for Planning and Consultation mapping tool (USFWS 2024)
- VMC 12.04, Street Trees
- VMC 20.740.100, Habitats of Local Importance
- VMC 20.740.110, Fish and Wildlife Habitat Conservation Areas
- VMC 20.740.140, Wetlands
- VMC 20.770, Tree, Vegetation, and Soil Conservation
- Washington Department of Fish and Wildlife (WDFW) Priority Habitat and Species List (WDFW 2024)
- WDFW Anadromous and Resident Salmonid Distribution Maps in the Salmon and Steelhead Habitat Inventory Assessment Program

Analysts then reviewed the alternatives to determine potential adverse impacts and associated mitigation measures using the following metrics:

- Potential impacts to fish, wildlife, or plant populations and habitat
- Potential impacts to tree canopy and vegetation

## Affected Environment

### Wildlife Habitat and Priority Species

The City identifies Fish and Wildlife Habitat Conservation Areas (VMC 20.740.110) as:

- Habitat used by any life stage of state or federally designated endangered, threatened, and sensitive fish or wildlife species
- Priority habitats and areas associated with priority species
- Water bodies including lakes, streams, rivers, and naturally occurring ponds
- Habitats of Local Importance, which are not designated as Priority Habitats and Species by the state but are designated as locally significant by the City
- Riparian Management Areas and Riparian Buffers, which are regulated areas that include the land from the ordinary high-water mark to a specified distance as measured horizontally in each direction. The Riparian Management Area is adjacent to a lake, stream or river, and the Riparian Buffer is adjacent to the Riparian Management Area.

WDFW identifies priority habitats and species to ensure protection and management. Priority habitats in Vancouver include biodiversity areas and corridors, riparian areas, freshwater wetlands, caves or cave-rich areas, and Oregon white oak woodlands (WDFW 2024).

According to the WDFW's priority habitat and species mapping tool, priority species that may occur within the City include (WDFW 2024):

- Coho salmon (*Oncorhynchus kisutch*)
- Winter steelhead (*Oncorhynchus mykiss*)
- Bull trout (*Salvelinus confluentus*)
- Green sturgeon (*Acipenser medirostris*)
- Spring Chinook (*Oncorhynchus tshawytscha*)
- Fall chum (*Oncorhynchus keta*)
- Great blue heron (*Ardea herodias*)
- Bald eagle (*Haliaeetus leucocephalus*)
- Vaux's swift (*Chaetura vauxi*)
- Waterfowl concentrations

The USFWS Information for Planning and Consultation system identifies the following Endangered Species Act-listed species that may occur within the City (USFWS 2024):

- Columbian white-tailed deer (*Odocoileus virginianus leucurus*)
- Northern spotted owl (*Strix occidentalis caurina*)
- Yellow-billed cuckoo (*Coccyzus ameicanus*)
- Northwestern pond turtle (*Actinemys marmorata*)
- Bull trout (*Salvelinus confluentus*)
- Monarch butterfly (*Danaus Plexippus*)

Approximately 14% of the ~~e~~City is considered riparian habitat, priority habitat area, or priority species area based upon existing county, state, and federal data (Design Workshop 2024). Priority habitat areas are located primarily in the center of the ~~e~~City along Burnt Bridge Creek as well as on the far east side of the ~~e~~City adjacent to Camas. Most of the priority species areas are located along the west side of the ~~e~~City.

Riparian habitat areas are situated adjacent to aquatic habitat and are transitional areas that contain elements of both aquatic and upland ecosystems, which mutually influence each other. Riparian habitat areas are located along Burnt Bridge Creek and the Columbia River. Freshwater wetland areas are mapped throughout the city. Biodiversity areas and corridors are areas of habitat that are relatively important to various species of native fish and wildlife. A biodiversity area and corridor is mapped within the ~~e~~City associated with Burnt Bridge Creek, as shown in ~~Figure 40~~ ~~Figure 40~~ Figure 42.

The City also has provisions in its code for identifying habitats of local importance (VMC 20.740.100), which are critical areas for fish and wildlife habitat that are not designated as priority habitats and species by the state but are designated as locally significant. These are determined by a need for protection due to existing high diversity of fish or wildlife species, declining populations, habitat scarcity, areas sensitive to disturbance from human activity or development, or other unique local habitat functions. Designated areas also need to be sufficient in size to support the species or habitat functions, and this designation will not compromise the ability of the City to achieve Comprehensive Plan goals. A habitat of local importance must also have a proposed management strategy that describes how the functions of the habitat will be protected after designation. The City has not designated any habitats of local importance.

### Aquatic Resources

As discussed further in the Water section and shown on ~~Figure 39~~ ~~Figure 39~~ Figure 41, major aquatic resources in and near Vancouver include Burnt Bridge Creek, the Columbia River, and Vancouver Lake, as well as smaller rivers, streams, and wetlands. There are approximately 2,467 acres of wetland areas and 2,524 acres of water, which includes rivers, streams, and lakes, within the ~~c~~City (Design Workshop 2024).

Portions of the ~~c~~City that have prevalent wetland areas are along the banks of the Columbia River, Vancouver Lake, Burnt Bridge Creek, Fisher Creek, and Love Creek; areas between Vancouver Lake and the Columbia River; Curtin Springs Wildlife Habitat; Vancouver Lake Park; Centerpointe Park; areas west of Northeast Padden Parkway and Northeast Andresen Road; areas in the Port of Vancouver; and other mapped areas (Clark County n.d.).

~~Figure 40~~ Figure 42. Biodiversity Areas and Corridors

*Source: Clark County n.d.*

## Fish or Wildlife Migration Routes

The ~~e~~City is an important stop for birds traveling along the Pacific Flyway and fish traveling along the larger Lower Columbia region fish migration route (WDFW 2024).

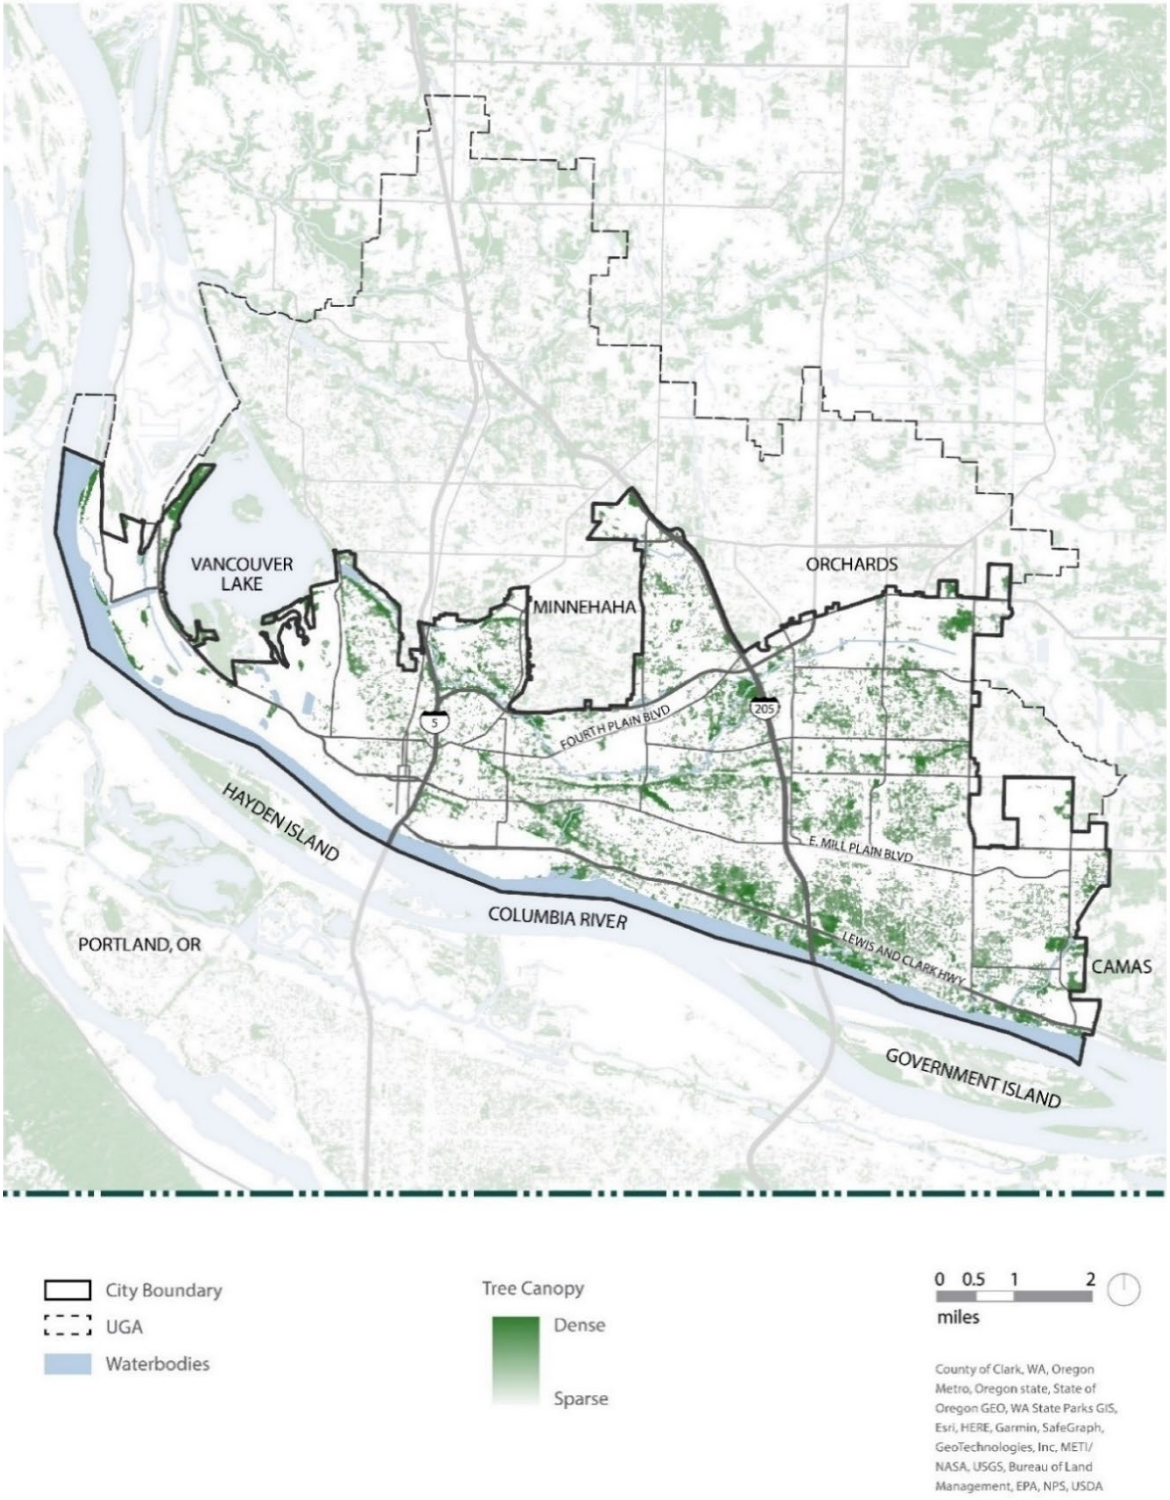
The Pacific Flyway is the major north–south route for migratory birds that extends from Patagonia to Alaska, and migratory birds may use a variety of habitats within the City for resting, feeding, and breeding.

In general, due to the number of species that rely on the Columbia River as a migratory corridor, and the variety of life history strategies among these species, both adult and juvenile salmonids are likely to be present in portions of the Columbia River and other rivers and streams within or near the ~~e~~City year-round.

### Tree Canopy

Trees offer structural diversity that provides habitat for a wide range of species; areas in the ~~e~~City with extensive tree canopy cover are likely to support comparatively diverse plant and animal communities. Vancouver's 6,000 acres of tree canopy is composed primarily of Douglas fir (*Pseudotsuga menziesii*), western red cedar (*Thuja plicata*), western hemlock (*Tsuga heterophylla*), bigleaf maple (*Acer macrophyllum*), and red alder (*Alnus rubra*) (City of Vancouver 2021a).

With continuously updated data on tree canopy cover and impervious surfaces, the City can make informed decisions about tree planting and preservation, stormwater management, land use and the benefits trees provide. The ~~e~~City has continuously been recognized as a Tree City USA by the National Arbor Day Foundation, in partnership with the U.S. Forest Service and Washington State Department of Natural Resources Urban and Community Forestry Program. This recognition reflects Vancouver's commitment to effective management and care for its urban tree canopy (Vancouver's Downtown Association n.d.).



The 2011 Comprehensive Plan established a goal of 28% tree canopy cover by the year 2030 (City of Vancouver 2021a). As of October 2023, the City reported 20% tree canopy cover, representing a small increase from 2010 (City of Vancouver 2023e).

Tree canopy ranges from 40% in the Dubois Park neighborhood to 9% in the Esther Short neighborhood (City of Vancouver 2023e). As shown in ~~Figure 41~~ ~~Figure 41~~ Figure 43, the densest tree canopy is concentrated in the southeast near the banks of the Columbia River. There are substantial gaps in tree canopy moving west along the river. Tree canopy is more prevalent between the center and the east of the city. Dense tree canopy is concentrated along SR 14 and Burnt Bridge Creek. Tree canopy is sparser in residential and industrialized neighborhoods.

The Urban Forestry Management Plan, published in October 2023, outlines a long-term framework to preserve Vancouver's urban forest, achieve tree canopy coverage goals and address environmental injustice (City of Vancouver 2023e). In addition, the City's December

2024 CAO update outlines new requirements for protection of priority Oregon white oak habitat and associated mitigation measures for development.

~~Figure 41~~ Figure 43. Tree Canopy Concentration

## Potential Impacts

This section discusses the potential impacts of the alternatives related to the following plants and animals metrics:

- Potential impacts to fish, wildlife, or plant populations and habitat
- Potential impacts to tree canopy and vegetation

### Impacts Common to All Alternatives

The following sections outline impacts that are expected to occur under all the alternatives. Impacts specific to each alternative are discussed in the next subsections.

#### Potential Impacts to Fish, Wildlife, or Plant Populations and Habitat

All alternatives would permit development that could impact plants and animals directly, indirectly, or cumulatively. Over time, loss of wildlife habitat and/or fragmentation could occur under all alternatives because of cumulative increases in impervious surface areas and removal of native vegetation, although many areas that would experience redevelopment are already fully or partially developed today. The extent of impacts to plants and animals would depend on the location and intensity of development, and the existing size of habitat and connectivity across the landscape.

Future site-specific development projects under all alternatives could result in adverse impacts on vegetation and wildlife habitat, threatened and endangered species, and aquatic resources and wetlands. However, those projects will be subject to existing federal, state, and local regulations that protect plant and animal habitat, threatened and endangered species, and aquatic resources and wetlands, as discussed in the Avoidance, Minimization, and Mitigation Measures section.

#### Potential Impacts to Tree Canopy and Vegetation

Under all alternatives, future development activities would require removal of vegetation to varying extents. Loss of vegetation would result in direct, indirect and cumulative impacts to plant and animal species through changes in habitat. These changes would be incremental over time as development occurs.

Overall tree canopy coverage within the ~~e~~City has the potential to decrease to some extent under all alternatives because of tree removal associated with new development. All alternatives would maintain the same amount of existing land designated as Parks/Open Space, which would preserve the tree canopy and prevent vegetation loss in those areas.

All of the alternatives would provide the majority of their capacity for new housing units in areas with low existing tree canopy cover, defined as census tracts with less tree canopy than the current ~~c~~City average, as shown in Table 38.

*Table 38. Estimated Capacity for New Housing Units in Areas with Low Existing Tree Canopy Cover*

| Metric | No Action | Alternative 1 | Alternative 2 | Preferred Alternative |
|---|---|---|---|---|
| Projected Capacity for New Housing Units in Areas with Low Existing Tree Canopy | 16,800[a] | 27,800 | 31,000 | 28,100 |
| Percent of Total Projected Capacity for New Housing Units | 57%[a] | 62% | 61% | 58% |

*Source: BERK 2025*

Note:
a The No Action is based on capacity only and does not account for feasibility of redevelopment, whereas Alternatives 1 and 2 include assumptions related to market feasibility and redevelopment.

### No Action Alternative

In general, there would be minimal additional impacts under the No Action Alternative aside from those described in the Impacts Common to All Alternatives section. The No Action Alternative would be consistent with City regulations and would apply the updated CAO provisions related to plants and animals.

Because the No Action Alternative would have less capacity for new housing and jobs, it may result in lower levels of new construction and/or redevelopment and associated direct, indirect, and cumulative impacts to habitat areas compared to Alternatives 1 and 2 and the Preferred Alternative.

### Alternative 1

In general, there would be minimal additional impacts under Alternative 1 aside from those described in the Impacts Common to All Alternatives section. Alternative 1 would be consistent with City regulations and would apply the updated CAO provisions related to plants and animals.

Alternative 1 would allow for more dense development and would have greater capacity for new housing units and jobs, which would likely result in higher levels of new construction and/or redevelopment and associated vegetation removal, compared to the No Action Alternative. However, this development would be more concentrated in higher-density zoning districts, which could help to reduce the need for vegetation removal throughout the ~~e~~City compared to the No Action Alternative and have potentially greater direct, indirect, and cumulative benefits for plants and animals. Because Alternative 1 would accommodate more new development and/or redevelopment than the No Action Alternative, more projects would be subject to the new additional regulations for wetland buffers, riparian areas, and preservation of priority habitats in the December 2024 CAO update, which could result in greater benefits for plants and animals.

### Alternative 2

In general, there would be minimal additional impacts under Alternative 2 aside from those described in the Impacts Common to All Alternatives section. Alternative 2 would be consistent with City regulations and would apply the updated CAO provisions for water resources.

Alternative 2 would have similar impacts to Alternative 1 and the Preferred Alternative related to plants and animals. However, because Alternative 2 would have options for more density and larger-scale buildings in more areas of the city, it would have greater potential than Alternative 1, the Preferred Alternative and the No Action Alternative to increase impervious surface areas and remove vegetation, affecting habitat. This increased growth in more areas, particularly in Central and East Vancouver, could place more development near Fish and Wildlife Habitat Conservation Areas, including state priority species and habitats. Denser development patterns, including Medium-Scale and Mixed-Use Neighborhoods, would be allowed near Burnt Bridge Creek and its Biodiversity Area in West and Central Vancouver under Alternative 2 compared to Alternative 1 and the No Action Alternative.

However, those projects will be subject to existing regulations that protect plant and animal habitat, threatened and endangered species, and aquatic resources and wetlands. Because Alternative 2 would accommodate the greatest amount of new development and/or redevelopment, more projects would be subject to the additional regulations for wetland buffers, riparian areas, and preservation of priority habitats in the December 2024 CAO update, which could result in the greatest direct, indirect, and cumulative benefits for plants and animals.

### Preferred Alternative

In general, there would be minimal additional impacts under the Preferred Alternative aside from those described in the Impacts Common to All Alternatives section. The Preferred Alternative would be consistent with City regulations and would apply the updated CAO provisions for water resources.

Similar to Alternatives 1 and 2, the Preferred Alternative would allow for more dense development and would have greater capacity for new housing units and jobs, which would likely result in higher levels of new construction and/or redevelopment and associated vegetation removal, compared to the No Action Alternative. The Preferred Alternative would have similar impacts to Alternatives 1 and 2 related to plants and animals, depending on area of the city. Citywide, impacts under the Preferred Alternative would be more similar to Alternative 1 than Alternative 2 based on anticipated growth levels.

Similar to Alternative 2, denser development patterns, including Medium-Scale and Mixed-Use Neighborhoods, would be allowed near Burnt Bridge Creek and its Biodiversity Area in West and Central Vancouver under the Preferred Alternative compared to Alternative 1 and the No Action Alternative. However, those projects will be subject to existing regulations that protect plant and animal habitat, threatened and endangered species, and aquatic resources and wetlands. Because the Preferred Alternative would accommodate more new development and/or redevelopment than the No Build Alternative, more projects would be subject to the additional regulations for wetland buffers, riparian areas, and preservation of priority habitats in the December 2024 CAO update, which could result in greater direct, indirect, and cumulative benefits for plants and animals.

## Avoidance, Minimization, and Mitigation Measures

Regardless of alternative, all future development projects will be required to comply with city, state, and federal requirements for protecting plants, animals, and their resources and resulting in no net loss of functions and values in critical areas. These existing regulations include the Endangered Species Act, Clean Water Act and Stormwater Regulations, state regulations protecting Waters of the State, the Shoreline Management Act, the Shoreline Master Program, the City's CAO (VMC 20.740), the City's tree ordinance (VMC 12.04), and stormwater regulations (VMC 14.25 and 14.26).

The City's development review process will ensure compliance with the City's CAO, VMC 20.740, which requires any development, redevelopment, or use of a property to protect ecologically sensitive areas and their functions and values, while also allowing for reasonable use of property. VMC 20.740.110 focuses on protecting Fish and Wildlife Habitat Conservation Areas by designating key habitats such as riparian areas, priority Oregon white

oak habitats, and aquatic environments. VMC 20.740.140 includes buffer requirements from wetlands, which often provide critical wildlife habitats and water quality benefits that impact the ecosystem as a whole.

The City's December 2024 CAO update provides additional protections for plant and animal habitat. In addition to the additional wetland protections discussed in the Water section, there would be increased widths for riparian areas, resulting in about 1% more land (303 acres) regulated as riparian areas as compared to the previous CAO. Overall, the December 2024 CAO update decreases the amount of land available for development through these expanded buffers.

In addition, implementation of the City's Urban Forestry Management Plan will help to enhance the level of tree canopy cover citywide, which can help to reduce stormwater and flooding damage, improve air quality, provide habitat, and improve health outcomes (City of Vancouver 2023e). Continued updates to this plan under all of the alternatives will help to identify areas of the ~~e~~City that have fewer trees than others and develop strategies to help increase the tree canopy in these areas.

Implementation of the following policy measures ~~currently under consideration~~ for the Comprehensive Plan Update would also help to avoid, minimize, and mitigate potential impacts to plants and animals identified for the action alternatives:

- Meet tree canopy coverage goal of 28%, using the City's Equity Index to target investment in underserved neighborhoods lacking coverage.
- Take inventory of and protect climate refugia and fish and wildlife habitat needs for species under stress from climate change.
- Prioritize integrating green infrastructure into new development, redevelopment, replacement of existing infrastructure, and development of public spaces within the City to improve stormwater quality and reduce urban heat island effect.
- Support a healthy urban ecosystem by embedding pollinator habitat into public and private development, prioritizing pesticide-free landscaping, enhancing biodiversity, and connecting natural spaces across the ~~e~~City through pollinator-friendly plantings.
- Incorporate native plantings, food forests, and agroforestry into parks and public spaces to support food security, ecological health, and cultural knowledge sharing.
- Create an expansive network of linear parks that encourage active transportation, improve community health and wellbeing, enhance tree canopy and stormwater management, and link parks and open space with housing.

The proposed updates to zoning and development regulations would also help to avoid, minimize and mitigate impacts to plants and animals through elements such as minimum open

space requirements and maximum impervious area requirements based on building types. The City is also developing code incentives to support maintaining larger trees and planting more trees than required as part of new developments.

## Significant Unavoidable Adverse Impacts

All of the alternatives have the potential to create impacts to earth resources as a result of expected population growth and development. The anticipated changes would occur incrementally, and with the implementation of avoidance, minimization, and mitigation measures, no significant unavoidable adverse impacts to plants and animals are anticipated for any of the alternatives.

# Chapter 5: Potential Cumulative Effects

Note to readers: This Final Environmental Impact Statement document retains and builds upon the information presented in the Draft Environmental Impact Statement. New content in this chapter is generally denoted with underlined text, while changes to information are denoted with strikethrough text. Updates focus on adding the new analysis of the Preferred Alternative, as well as minor corrections and clarifications to the analysis presented in the Draft EIS.

SEPA requires a nonproject EIS to include analysis of cumulative effects, which are the impacts of a proposed action – in this case, the Comprehensive Plan Update and associated zoning code amendments – in combination with other past, present, and reasonably foreseeable future actions within a given geographic area.

The proposed Comprehensive Plan Update would lead to future site-specific residential, commercial, industrial, and mixed-use development projects throughout the City with the potential for cumulative environmental impacts over time. Because the exact nature and timing of these future projects is currently unknown, specific cumulative impacts cannot be fully anticipated.

Cumulative effects are discussed where feasible in the Potential Impacts subsections of the built and natural environmental topics in Chapters 3 and 4. The regional transportation model outputs used for the transportation, noise, and air quality analyses discussed in Chapters 3 and 4 consider assumptions about future population and employment growth, expected changes in land use, and reasonably foreseeable future transportation projects. Therefore, these effects analysis inherently account for cumulative effects resulting from the Comprehensive Plan Update.

In general, it is anticipated that projects resulting from the Comprehensive Plan Update and revised zoning and development regulations would result in cumulative impacts over time, including higher levels of traffic volumes, noise, light, glare, impervious surfaces, and demand for various public services and utilities. Alternatives 1 and 2 and the Preferred Alternative would have the greatest potential for these types of cumulative impacts compared to the No Action Alternative because they would accommodate the highest capacities for new housing and jobs and would likely generate more construction and development projects in more areas of the City.

However, Alternatives 1 and 2 and the Preferred Alternative would also have greater potential for cumulative benefits over time compared to the No Action Alternative. The action alternatives would result in greater opportunities for ~~generally~~ more housing at higher

densities with ~~greater~~ increased benefits for overall housing affordability. ~~Both~~ The action alternatives would promote a trend of denser, more compact, mixed-use development in more areas of the city, which may lead to less pressure to develop historic and archaeologically sensitive areas and/or environmentally sensitive areas, such as geologic hazard areas and wetland and stream buffers. In addition, by accommodating the greatest amount of new development and/or redevelopment, more individual projects under Alternatives 1 and 2 and the Preferred Alternative would be subject to the City's updated critical areas regulations, which are designed to enhance environmental quality, prevent natural hazards, and ensure no net loss of critical area functions. Therefore, Alternatives 1 and 2 and the Preferred Alternative could result in fewer cumulative impacts on historic and cultural preservation, earth, water, and plants and animals than the No Action Alternative. Existing regulations, including the recent CAO updates, would help to avoid, minimize and mitigate cumulative impacts under all alternatives but may not eliminate these impacts entirely. Future projects and developments would be required to conduct separate, project-specific environmental analyses and review, as appropriate (unless otherwise exempt or covered through planned action SEPA ordinances). Mitigation measures would be identified for these future projects as applicable to decrease the potential for cumulative impacts.

# Chapter 6 Draft EIS Comment Summary and Responses to Comments

Note to readers: This Final Environmental Impact Statement document retains and builds upon the information presented in the Draft Environmental Impact Statement. In previous chapters, new content is generally denoted with underlined text, while changes to information are denoted with strikethrough text. Updates focus on adding analysis of the Preferred Alternative, with minor corrections and clarifications to the analysis presented in the Draft EIS. Some changes are denoted with footnotes and table notes when further explanation was warranted. Because Chapter 6 is a new section prepared especially for the Final Environmental Impact Statement, it is presented without the underline/strikethrough formatting.

## About the Draft EIS Comment Period

The Draft EIS Comment period was open from July 8 to September 8, 2025. Comments were collected via an online comment form available in English, Chinese, Chuukese, Russian, Spanish, Ukrainian, and Vietnamese, as well as via phone, email, and mail. For a full summary of outreach conducted before and during the Draft EIS comment Period, refer to Appendix D, Draft EIS Comment Period Outreach Summary.

### Comments Received

The City received a total of 440 comments:

- 330 total comments via the online comment form, of which 24 were incomplete forms and did not contain a comment.
- 94 comments via email, 6 of which were also submitted via the online comment form or physical mail
- 15 comments via physical mail, 1 of which was also submitted via the online comment form or email
- 1 comment via voicemail

A total of 409 unique comments were received. Thirteen of these were received from agencies, businesses, or organizations.

## Comment Review Process

The project team reviewed each comment and coded responses based on the chapters of the Draft EIS. The project team also added additional codes to capture comments related to

the Draft EIS and Comprehensive Plan Update process. Comments were coded into multiple categories as overlap occurred. The City considered each comment and incorporated resulting corrections, additions, or clarifications of information into this Final EIS.

- Alternatives
- Land and Shoreline Use
- Housing
- Aesthetics
- Historic and Cultural Preservation
- Transportation
- Noise
- Public Services and Utilities
- Earth
- Air Quality, Greenhouse Gases, and Climate
- Water
- Plants and Animals
- Other – Draft EIS Information, Data, and Approach
- Other – Engagement Process
- Other – Policies and Implementation
- Other – Annexation
- Other – Unrelated to project

An additional sub-code was added for Alternatives to capture comments related to how alternatives impact a specific address, parcel, or neighborhood.

The summary section that follows may quantify comments received by the terms "few," "some," or "many." Few means less than 10 comments received; Some or several means between 10-39 comments received; and Many means 40 or more comments received on a particular topic.

## Summary of Key Themes

This section provides a high-level summary of key themes and takeaways associated with each code, as well as how many comments pertained to each code. Refer to Appendix E, Responses to Individual Draft EIS Comments, to view the full text of comments received and the City's responses.

### Alternatives: Specific Address, Parcel, Or Neighborhood (226 comments)

Many comments included suggestions for modifications to a specific address, parcel, or neighborhood in one or both alternatives. Frequently mentioned areas included the Southcliff and Fisher's Landing neighborhoods and the downtown waterfront area.

### Alternatives (114 comments)

Alternative 1 received some support from those who expressed concerns about rapid change, parking, traffic, neighborhood character, and dense development. Some comments indicated support for Alternative 2 as the best way to address housing, climate, and

transportation needs. Some comments indicated support for both alternatives. Many comments indicated opposition to both alternatives.

### Transportation (95 comments)

Many comments mentioned a desire for increased transit and connectivity, and pedestrian and bike improvements. A few comments indicated concern about parking shortages amidst higher density, opposition to MAX light rail expansion, and frustration with downtown pay-to-park policies.

### Land and Shoreline Use (82 comments)

Some comments shared support for density that creates walkable, mixed-use areas, locating jobs, services, and restaurants or grocery stores closer to neighborhoods. A few comments opposed mixing low- and medium- density zones and increasing industrial land uses; emphasized a desire for protecting farmland and open space; and highlighted conflicts between public zoning changes and private neighborhood covenants.

### Plants and Animals (43 comments)

Comments called for better protection of tree canopy, wildlife corridors, and natural habitats and indicated concern regarding vegetation loss due to increased density.

### Housing (39 comments)

Some comments indicated a desire for a variety of housing options, affordable housing, and homeownership opportunities. Some comments expressed opposition to high-density housing, citing traffic, parking, and neighborhood impacts to character and safety.

### Historic and Cultural Preservation (31 comments)

Some comments mentioned a desire to preserve older brick buildings in Downtown, Fort Vancouver, and Pearson Airfield. There were also a few suggestions to recognize the unique history of Vancouver and partner with Indigenous nations to preserve and honor their history as part of the city's story and legacy.

### Other – Draft EIS information, data, and approach (25 comments)

Some comments included concerns that the EIS analysis does not adequately evaluate combined impacts of rezoning and middle-ground options between the two Alternatives. A few questions about the analysis related to houselessness, tree canopy, Critical Areas Ordinance, and rezoning were also shared.

### Aesthetics (24 comments)

Comments emphasized the importance of neighborhood character, cohesive, high-quality development, and concerns about graffiti, trash, and homelessness.

### Public Services and Utilities (18 comments)

Comments mentioned concerns that existing public services, including schools, police, fire, emergency services, and parks, are strained and will not be able to keep up with demand as the City grows.

### Other – Engagement Process (16 comments)

Comments included concerns that engagement did not fully reach all demographics (especially renters, non-English speakers, low-income residents, and those without internet access), information shared was difficult to understand, and input was being overlooked.

### Air Quality, Greenhouse Gases, and Climate (14 comments)

Comments included support for growth along transit lines to reduce vehicle miles travelled, concern about air pollution near freeways and industrial zones, and calls to increase climate resiliency through tree canopy, open space preservation, and solar power.

### Noise (14 comments)

Comments mentioned noise concerns associated with traffic, mixed-use rezoning, and industrial traffic, and expressed a desire for noise barriers and protections.

### Water (13 comments)

Comments mentioned concerns about stormwater runoff and pollution, increasing areas of impervious surfaces, and groundwater availability in the future.

### Other – Unrelated to Project (8 comments)

Comments were unrelated to the Comprehensive Plan update, including feedback related to the Interstate Bridge Replacement Program.

### Other – Annexation (5 comments)

Comments included questions from residents outside City limits about how their areas will be managed, desire for increased communication regarding the annexation process, and concerns that annexation could result in increased congestion and taxes.

### Other – Policies and Implementation (3 comments)

Comments included skepticism about how the rezoning process will be implemented, desire for building permits to include requirements for parking and natural space, and emphasized the need for regulation of small electric vehicle use in bike lanes.

### Earth (1 comment)

Comment shared concern about whether geologic and environmental hazards related to increased housing and commercial density in Southcliff were adequately considered.

## Demographics of Commenters

The online comment form contained additional optional demographic questions. The following subsections summarize demographics of individuals who chose to respond to these questions.

### Zip Codes

Respondents (300 total responses) came from 24 zip codes, including the City of Vancouver and surrounding areas in the urban growth boundary, Camas, and Washougal.

### Gender

The gender breakdown of respondents to this question (275 total responses) is as follows:

- Female, 45.5% (125)
- Male, 40.0% (110)
- Non-binary, 0.4% (1)
- Transgender, 0.7% (2)
- Prefer not to answer, 14.0% (39)
- Self-identified, 0.7% (2)

### Age

More than half of responses to this question (255 total responses) came from respondents over the age of 55. The age breakdown of respondents is as follows:

- Under 18 years, 1.2% (3)
- 18 – 24 years, 2.0% (5)
- 25 – 34 years, 7.8% (20)
- 35 – 44 years, 16.9% (43)
- 45 – 54 years, 12.9% (33)

- 55 – 64 years, 18.4% (47)
- Over 65 years, 40.8% (104)

## Race/Ethnicity

Most respondents to this question (about 62% of 271 total responses) identified as white or European American. The racial/ethnic breakdown of respondents is as follows:

- American Indian or Alaska Native, 0.7% (2)
- Asian or Asian American, 4.4% (12)
- Black or African American, 1.9% (5)
- Hispanic or Latino/a/e, 4.4% (12)
- Middle Eastern or North African, 0.4% (1)
- Native Hawaiian or Pacific Islander, 0% (0)
- White or European American 61.6% (167)
- Other, 2.2% (6)
- Prefer not to answer, 26.9% (73)

## Language

About half of respondents to this question (223 total responses) said that they only speak English fluently, while about one-third of respondents selected prefer not to respond. The most common language spoken by participants other than English was Spanish (about 8%). No responses were received in a language other than English.

## Income

The income breakdown of respondents to this question (271 total responses) is as follows:

- Below $19,999, 0.7% (2)
- $20,000 – $49,999, 3.7% (10)
- $50,000 – $89,999, 11.1% (30)
- $90,000 – $129,999, 11.4% (31)
- $130,000 – $149,999, 4.1% (11)
- Above $150,000, 23.3% (63)
- Prefer not to answer, 45.8%, (124)

## Disability

Approximately 9% of respondents to this question (274 total responses) report have a disability.

### Housing Situation

About three-quarters of respondents to this question (275 total responses) own their home. Roughly 11% of respondents rent, and about 2% live with someone but do not pay rent.

## Responses to Common Draft EIS Comment Themes

The City prepared the following responses to common comments received on the Draft EIS. Refer to Appendix E, Responses to Individual Draft EIS Comments, for a full listing of commenters and responses to individual comments.

### Common Response #1: Selection of Preferred Alternative

The City received comments that expressed preferences for the No Action Alternative, Alternative 1, and/or Alternative 2 as presented in the Draft EIS.

Since publication of the Draft EIS, the City has developed a Preferred Alternative, which combines features of Alternatives 1 and 2 to meet projected housing and employment needs through 2045, manage long-term growth, and balance development with preservation of the natural environment. Chapter 2 of the Final EIS provides a detailed description of the Preferred Alternative, including land use maps, and compares the major features of the Preferred Alternative to Alternatives 1 and 2. Chapter 1 of the Final EIS provides a summary comparison of the potential impacts of all alternatives, with more detail for each environmental topic area in Chapters 3, 4, and 5.

The Preferred Alternative distributes growth around the City more evenly than Alternatives 1 and 2, helping to ensure that impacts are not concentrated and that different areas of the City benefit from future growth and investment. This approach includes facilitating growth in established urban areas so that agricultural and resource lands outside the City and Vancouver Urban Growth Area can be preserved for agricultural and environmental functions.

Similar to Alternatives 1 and 2, the Preferred Alternative includes increases in allowed residential density and building scale that are needed to accommodate projected population growth and state-mandated housing and jobs targets. The plan must accommodate about 38,000 new housing units, including about half at below-market levels, to meet the needs of current and future residents and to comply with state law (2021 H.B. 1220). The Land and Shoreline Use section and the Housing section in Chapter 3 of the Final EIS provide more information about the potential for the different alternatives to meet housing targets and needs.

Some growth and change are inevitable, and the City cannot prevent people from moving to Vancouver. The No Action Alternative would make no changes to the existing Comprehensive Plan goals and policies or citywide zoning regulations, with the exception that the legally mandated changes to allow four to six units on all residential lots will go into effect even if the City makes no changes because the state would override local regulations. Even with this, the absence of any other changes to accommodate long-term growth would make the City non-compliant with other housing laws under the Growth Management Act, including H.B. 1220 requirements to accommodate a set number of units affordable at various income levels. Failure to comply with state law would render the City ineligible for state grant funds and subject to other potential sanctions or penalties. Failure to allow enough housing of various types and sizes citywide would also worsen the existing housing affordability crisis for current and future residents. Thus, an updated Comprehensive Plan, land use map, and zoning code are necessary to appropriately plan for and accommodate growth and change.

The Preferred Alternative and proposed updated Comprehensive Plan and zoning code provide a framework to guide growth and change responsibly over the next 20 years (through 2045), with minor annual updates to the plan and code as needed to adapt to changing conditions or new information during that timeframe. Planning helps growth align with community values, state laws such as the Growth Management Act, and long-term City goals like climate action, opportunity for all, and community safety.

The Preferred Alternative represents the potential for substantial change in the community. However, the Preferred Alternative is a proposed citywide plan involving policy and regulatory change, not a City-led development project. Changes resulting from the plan and code updates are expected to occur incrementally over the next 20 years. Changes are expected to be gradual, localized, and informed by policies, market forces, and individual property owner choices.

The Preferred Alternative balances a range of considerations and reflects:

- Information from the Draft EIS analysis
- Community input, including comments submitted during the Draft EIS comment period in summer 2025
- State laws for growth management, housing, climate and other topics
- City priorities
- Direction from City Council

The following framework was used to draft the Preferred Alternative. See the September 15, 2025 City Council Workshop for additional information.

- **Draft Environmental Impact Statement (Draft EIS) Comments:** Incorporate comments and requests that are consistent with Council policy direction and state law.
- **Centers & Corridors:** Move from broad rules to location-specific analysis
- **Schools:** Ensure growth does not worsen school-specific capacity issues.
- **Tree Canopy:** Identify areas with significant mature tree canopy.
- **Parks & Community Services:** Prioritize additional housing capacity near parks and schools.
- **Industrial Employment Lands:** Carefully manage employment land.
- **Service Deserts:** Use the Connected & Accessible Neighborhoods map to locate areas without access to essential services.
- **Reducing vehicle miles traveled (VMT) & Emissions:** Prioritize land use strategies and mixes that reduce trip length and support different trip types.
- **Public Facilities and Services:** Leverage existing infrastructure and areas planned for capital upgrades in the future.
- **Transportation:** Leverage existing and planned transportation investments to locate growth near upgraded, multimodal facilities.
- **Health and Climate Vulnerability:** Target more intense development in areas with low health and climate vulnerability.

Staff then refined the Preferred Alternative based on direction from City Council and the Planning Commission. The Preferred Alternative was endorsed via resolution by City Council on December 15, 2025. It will be included for adoption with the updated Comprehensive Plan and Zoning Code later in May and June 2026.

The Final EIS analyzes the potential impacts of the Preferred Alternative, relative to Alternative 1, Alternative 2, and a No Action Alternative, on the built environment (Chapter 3) and natural environment (Chapter 4).

## Common Response #2: General Quality of Life Concerns

The City received comments with concerns about the potential effects of planned growth on quality of life in Vancouver.

Regardless of which alternative is selected, the pace and distribution of future growth in Vancouver would be influenced in part by the implementation of the Comprehensive Plan policies, related regulations and actions, and by decisions made by individual property owners and developers.

Growth is not expected to be uniform citywide. More intense development is focused in specific areas like urban centers and corridors. The proposed Comprehensive Plan update

intends to guide growth that aligns with community values, state laws, and long-term City and community goals like climate action, opportunity for all, and community safety. The plan update supports incremental, community-guided change, balancing continuity with the evolving needs of current and future generations.

The proposed Comprehensive Plan update discusses quality of life in more detail and includes goals and policies to support quality of life for the Vancouver community, particularly in the plan's vision statement, Community Experience chapter, Climate and Environment chapter, and Parks and Recreation chapter. The Our Vancouver Health Impact Assessment (HIA) considers how the alternatives studied as part of the Our Vancouver Comprehensive Plan periodic update may benefit and impact health in Vancouver as it relates to the built environment. Refer to the Comprehensive Plan page on the City's website for more details about the proposed Comprehensive Plan, the HIA, and other related documents.

## Common Response #3: Car Dealerships

The City received comments with concerns about car dealerships within the City, particularly when they replace other neighborhood-serving uses.

The recent motor vehicle sales development at Mill Plain Boulevard and SE 136th Avenue (Lexus dealership) is part of an approved master plan and was found to meet all zoning and environmental requirements of the existing Mixed Use zoning district in the existing zoning code. Opportunities for public input for this project occurred in October and November 2024. This development and all other developments submitted under the existing zoning code must follow the development standards in place at the time of submittal. These developments may opt into the proposed updated zoning code once adopted and if their intended use is still allowed.

The Preferred Alternative designates the property at the northeast corner of Mill Plain Boulevard and SE 136th Avenue as Mixed-Use Neighborhood zoning. This proposed new zoning district allows both commercial and residential uses, including Motor Vehicle Sales/Rental as a conditional use. In the proposed updated zoning code, future Motor Vehicle Sales/Rental uses will be required to locate vehicle parking, display, and storage behind the building to support pedestrian-oriented design. The proposed new code includes greater limits on where Motor Vehicle Sales/Rental uses can locate. They are now allowed only as a conditional use in the Mixed-Use Neighborhood district and as an allowed use in the Industrial/Employment district.

While the zoning code determines what types and sizes of developments are *allowed* in different locations across the city, property owners decide if and when changes occur.

Property owner decisions are influenced by policies, market forces, and personal preferences and choices.

To view this and other recent development projects, visit the City's development dashboard.

## Common Response #4: Vehicle Traffic Impacts

The City received comments with concerns about potential impacts on traffic related to the action alternatives.

As noted in the Final EIS, all of the alternatives, including the No Action Alternative, would increase vehicle miles traveled (VMT) to some degree in 2045 as compared to existing conditions because of expected growth and development. However, VMT per household is projected to be slightly lower under the Preferred Alternative than the No Action Alternative, likely because they propose more areas with a mix of residential and commercial land uses, which can reduce the length and frequency of vehicle trips and make different trip types more likely.

The Transportation section of Final EIS Chapter 3 addresses potential impacts of the alternatives on traffic and transportation, as well as proposed mitigation measures to offset potential impacts.

Reducing vehicle travel lanes can improve overall safety by lowering vehicle speeds and reducing the frequency and severity of crashes. Reallocating roadway space also supports walking, biking, and transit, which helps decrease vehicle miles traveled and associated greenhouse gas emissions. These changes contribute to cleaner air, safer streets, and a more accessible transportation network for all users. While some arterial street widening is planned, they are costly and limited in scope, making it essential to use existing roadway space more efficiently to move more people in more ways.

## Common Response #5: Traffic Safety

The City received comments with concerns about potential impacts on traffic safety related to the action alternatives.

The Transportation section of Final EIS Chapter 3 addresses potential impacts of the alternatives, including the potential for increases in collisions, as well as proposed mitigation measures to offset potential impacts. The Preferred Alternative would have higher daily traffic volumes compared to the No Action Alternative for most safety corridors identified in the City of Vancouver's Local Road Safety Plan, 2022–2026. At most safety corridor locations, the Preferred Alternative would have similar or lower traffic volumes than

Alternatives 1 and 2, which reflects that new housing capacity would be spread more evenly throughout all areas of the city.

An increase in volume does not necessarily indicate an increase in fatal or severe crashes. However, increases in traffic volumes can increase the number of overall crashes due to greater volumes of vehicles on the road and increased exposure to vehicles by all roadway users. To address traffic safety, the Comprehensive Plan includes implementation steps related to updating street standards to create safer, and more comfortable multimodal streets and connectivity standards to improve pedestrian and small mobility access. The City is implementing a citywide low-stress bicycle and small mobility network that prioritizes safety and comfort for people of all ages and abilities regardless of mode of travel and land use patterns that reduce vehicle miles traveled, traffic congestion, and greenhouse gas emissions, and improve safety and air quality.

The Comprehensive Plan Transportation and Mobility chapter and the Transportation System Plan include goals and policies to improve traffic safety. Refer to the Comprehensive Plan page on the City's website for more details about the proposed Comprehensive Plan.

## Common Response #6: Vehicle Parking

The City received comments with concerns about potential impacts on parking related to the action alternatives.

The Transportation section of Final EIS Chapter 3 discusses existing parking demand, as well as proposed mitigation measures to offset potential impacts in areas with more intense proposed land uses, such as expanding allowances for shared parking facilities and implementing strategic pricing mechanisms to regulate the availability of on-street parking in Mixed-Use and Regional Activity Centers.

The City currently requires property owners to build a minimum number of parking spaces, typically based on use and building size. The Comprehensive Plan Update proposes to eliminate most minimum parking requirements, allowing property owners to decide how much parking to build based on their needs. This can help reduce excessive, underused parking and large paved areas that create heat islands, reduce the cost of building housing, and increase space for housing, trees, and green space. This shift aligns with state law (2025 S.B. 5184), which requires reduced parking mandates for some uses, including housing, commercial spaces, and childcare.

This change does not prohibit parking. Owners can still build as much on-site parking as they choose in most places. Parking that is built will still need to meet development standards,

including size and access requirements and new requirements for parking to generally be located behind a building. On-street parking will continue to be a public amenity for public use and not owned by adjacent property owners.

For issues concerning parking enforcement, please visit the Neighborhood Parking and Traffic page on the City's website.

Refer to the Comprehensive Plan page on the City's website for more details about the proposed Comprehensive Plan and code updates that address parking minimums.

## Common Response #7: Sidewalks

The City received comments with concerns about pedestrian infrastructure, including incomplete sidewalk facilities in some areas of the City.

The Comprehensive Plan Transportation and Mobility chapter as well as the Transportation System Plan (TSP) include policies to address sidewalk gaps. The TSP includes 148 miles of proposed sidewalk infill. Many of these infill projects are associated with other roadway projects happening adjacent to the sidewalk.

Because public funding alone cannot cover the enormous cost of filling existing gaps, most of the City's sidewalk network is built out by private development. As part of the review and permitting process, development is typically required to build frontage including sidewalks and pay fees that help fund broader infrastructure needs. While the City pursues grants such as Safe Routes to School, these sources address only a small portion of the overall need. Ongoing and future development helps build sidewalks and reduce sidewalk deficiencies.

Refer to the Comprehensive Plan webpage on the City's website for more details about the proposed Comprehensive Plan.

## Common Response #8: Housing Affordability/Options

The City received comments with concerns about housing affordability and options.

The Housing section of Final EIS Chapter 3 discusses potential effects on housing, including the level of supply, diversity, and potential cost, as well as proposed measures to help avoid, minimize, and mitigate potential housing impacts. The Comprehensive Plan Housing chapter includes in-depth analysis of housing affordability and goals and policies to address affordability and building different types of housing to meet the needs of Vancouver residents. Refer to the Comprehensive Plan page on the City's website for more details about the proposed Comprehensive Plan.

The Preferred Alternative would result in a greater diversity of housing types than the No Action Alternative. The Preferred Alternative designates more land for higher-intensity middle housing and multifamily development types through the application of Medium-Scale Neighborhood, Mixed-Use Neighborhood, and Regional Activity Center zoning districts. These denser zoning districts allow for a broader range of housing types with more and smaller units, and more potential for lower cost units.

The proposed new zoning code standards in the Preferred Alternative are intended to be easier and simpler to understand, which may also reduce the costs and barriers to housing production. New state laws (2023 H.B. 1110) require the City of Vancouver to allow for at least four dwelling units per lot on all lots in single-family zones, and up to six dwelling units per lot if within a quarter mile of a major transit stop, or if two of the units are affordable. The Preferred Alternative goes beyond the minimum requirements established by H.B. 1110 in order to meet City and community goals, housing targets, and other state laws, including 2021 H.B. 1220, which requires the City to accommodate set numbers of housing needs at all income levels. Lands designated Low-Scale Neighborhood have the potential for a greater diversity of housing types, such as duplexes, quadplexes, sixplexes, and townhomes than current low-density zoning districts.

The higher capacity for new housing units allows for greater opportunities to construct different smaller housing types, which in turn have the potential to be more affordable for a broader range of household income levels. However, certain household income ranges will likely not be served by the private market without additional public subsidy for affordable housing.

## Common Response #9: Homeownership Opportunities

The City received comments with concerns about homeownership opportunities.

The Housing section of Final EIS Chapter 3 discusses potential effects on housing, as well as proposed measures to help avoid, minimize, and mitigate potential housing impacts and promote homeownership opportunities.

Currently, homeownership in Vancouver is primarily available through detached single family homes but can be possible through a range of types and sizes of housing. The Preferred Alternative allows for more housing and a wider variety of housing types, which can help improve the availability of housing, housing affordability, and homeownership opportunities. Middle housing types in particular open more options for attached and detached fee simple homeownership opportunities, and state level condominium reform can contribute to greater feasibility of multifamily homeownership. Increased housing production that lowers the cost

of rental housing can indirectly improve homeownership opportunities, by allowing renters to save more money towards a future home down payment.

The proposed Comprehensive Plan Housing chapter includes goal H-5 Access to Homeownership and supporting policies to make homeownership attainable for people across the income spectrum, including communities previously excluded from buying a home through racial covenants and discriminatory lending practices. Refer to the Comprehensive Plan page on the City's website for more details about the proposed Comprehensive Plan.

## Common Response #10: Businesses in Residential Zones

The City received comments with both support for and concerns about allowing businesses in residential zones.

The Preferred Alternative allows a greater mix of uses and increased housing density throughout the City than the No Action Alternative or today's conditions. Chapter 2: Alternatives of the Final EIS and Common Response #1 provide more details about the Preferred Alternative.

The Land and Shoreline Use and Housing sections in Chapter 3 of the Final EIS analyze the impacts of these zoning and land use changes, including compatibility with existing land uses and opportunities to locate housing within a 15-minute walk of shopping, entertainment, cultural amenities, education, and employment.

While allowing a greater mix of uses can improve access to services and support housing needs, the plan also recognizes that not all areas are appropriate for mixing uses due to potential conflicts with industrial activities or residential livability. The Preferred Alternative focuses higher-density and mixed-use development in designated centers and corridors, while maintaining flexibility in other neighborhoods to balance growth and change.

## Common Response #11: Property Value and Taxes

The City received comments with concerns about property values and taxes.

This topic is generally outside the scope of the EIS analysis. The proposed Comprehensive Plan and zoning code generally increases flexibility of the type and density of uses allowed, which generally increases property values over time. However, the Comprehensive Plan is not designed to control property values. It guides growth to meet long-term community needs. Property values may change for many reasons, but the plan does not speculate on the real estate market.

In Washington state, an individual's property taxes are calculated based on the budgets prepared by the jurisdictions that provide the property users with infrastructure and services. These budgets are prepared independently from property values and are typically limited to a 1% increase from one year to the next. This limit does not apply to taxes from voter-approved bonds and special levies. A property's assessed value determines the *share of these budgets* that an individual property is taxed, rather than a specific percentage of the assessed value itself.

Washington has two property tax relief programs for senior citizens and people with disabilities: a Property Tax Deferral program and a Property Tax Exemption program.

## Common Response #12: Neighborhood Character

The City received comments with concerns about changes to neighborhood character resulting from the action alternatives.

The Final EIS considers the potential impacts of the alternatives on compatibility with existing land uses, as well as aesthetics and historic and cultural preservation, in the Land and Shoreline Use, Aesthetics, and Historic and Cultural Preservation sections in Chapter 3. These sections also outline proposed measures to help avoid, minimize, and mitigate these impacts, including existing laws related to shadows, light and glare and historic preservation, development standards in the zoning code update such as transitions between zoning districts, and Comprehensive Plan goals and policies.

The EIS recognizes the potential for greater incompatibility between land uses with the Preferred Alternative as compared to the No Action Alternative, as it would accommodate more intense building types and growth, and a greater mix of residential and commercial uses, in more areas of the city. The EIS also acknowledges potential impacts to aesthetics, including compatibility with urban form and character, resulting from allowances for taller buildings and new sources of shadows, light and glare. There would also be potential aesthetic improvements associated with the redevelopment of parking lots and vacant lots and structures and infrastructure improvements required of new development.

Refer to Common Responses #1 and #2 for more information about how the potential impacts of the alternatives will occur over time and will be driven by property owner decisions.

The proposed Comprehensive Plan Community Experience chapter includes goal CE-5 Community Pride and Identity and supporting policies to support a strong community

identity. Refer to the Comprehensive Plan page on the City's website for more details about the proposed Comprehensive Plan.

## Common Response #13: Village at Fisher's Landing Neighborhood

The City received a high volume of comments from Village at Fisher's Landing Neighborhood residents with concerns about the proposed action alternatives' potential impacts related to noise and the existing sound wall, vehicle traffic, safety, plants and wildlife, quality of life, sidewalk gaps, businesses in residential areas, property values, neighborhood change, CC&Rs, and compatibility.

Since the Draft EIS, the City has developed a Preferred Alternative that combines elements of Alternatives 1 and 2 for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. The Preferred Alternative would designate the Village at Fisher's Landing as a mix of Medium-Scale Neighborhood and Low-Scale Neighborhood zoning. The Preferred Alternative directs higher-density growth to corridors, such as along 164th Avenue, and in areas with good access to transit and commercial services, such as The Village at Fisher's Landing. Additionally, Manufactured Home Park zoning was applied to the existing manufactured home park development to help preserve this affordable housing type.

The Preferred Alternative emphasizes directing higher-density growth to corridors and centers, such as the Fisher's Landing Transit Center along SE 164th Avenue, where existing infrastructure and services can help support it. This approach is consistent with community input to focus density in those areas rather than established neighborhoods.

Refer to Common Response #1, Preferred Alternative, for more information about how the Preferred Alternative was created, the need to consider alternatives for the plan, map, and code, and how the potential impacts of the alternatives will occur over time.

The Noise section of Final EIS Chapter 3 provides more information about the high-level noise analysis for the alternatives. No substantial increases in noise are expected to occur under the alternatives; therefore, no additional mitigation measures are proposed. All environmental noise would continue to be regulated by WAC 173-60 and VMC 20.935. The updated Comprehensive Plan includes goals and policies to address noise pollution. Refer to the Comprehensive Plan webpage on the City's website for more details about the proposed Comprehensive Plan.

The Preferred Alternative, proposed Comprehensive Plan, and zoning code do not propose the removal of the sound wall along 164th Avenue. In areas where development is planned near existing or future sources of higher noise levels, the City may consider whether to require implementation of noise reduction methods such as locating noise-sensitive areas further from noise sources, including walls or other barriers to shield noise from noise-sensitive use locations; and designing interior spaces with noise-reducing building materials.

Refer to Common Response #2 for more information about general quality of life concerns.

Vehicle traffic concerns are addressed in the Transportation section in Chapter 3 of the Final EIS, which identifies multimodal improvements and traffic calming to reduce potential impacts. Refer to Common Responses #4 and #5 for more information about traffic impacts and traffic safety.

Refer to Common Response #11 for more information about property values and taxes. The Historic and Cultural Preservation section of Final EIS Chapter 3 acknowledges the potential for disturbance of individual sites and associated impacts to historic resources and provides mitigation measures designed to offset these impacts. The Air Quality, Greenhouse Gases, and Climate section of Final EIS Chapter 4 considers the potential impacts of the alternatives on air pollution and indicates that there would be lower modeled air pollutant emissions than existing conditions under all of the alternatives under consideration.

Regarding any Covenants, Conditions, and Restrictions (CC&Rs) in the Village at Fisher's Landing neighborhood, CC&Rs are private contractual agreements among property owners. Preexisting CC&Rs established before new state housing laws (2023 H.B. 1110) remain valid and enforceable by the private parties involved, but the City does not evaluate or enforce CC&Rs as part of land use regulation or permitting. Enforcement or modification of CC&Rs remains the responsibility of property owners and their associations.

Refer to the Plants and Animals section of Final EIS Chapter 4 for more information on the potential impacts to plants and wildlife, as well as proposed measures to address those impacts. Mitigation strategies identified in the Final EIS include landscaping requirements and tree replacement policies to reduce impacts on wildlife habitat.

Refer to Common Response #12 for more information about neighborhood character.

Refer to Common Response #7 for more information about sidewalks.

Refer to Common Response #10 for more information about businesses in residential areas.

## Common Response #14: Southcliff Neighborhood

The City received a high volume of comments from Southcliff neighborhood residents with concerns about the proposed action alternatives' potential impacts related to quality of life, noise, vehicle traffic and parking, safety, tree canopy, plants and wildlife, sidewalk gaps, property values, and neighborhood change, CC&Rs, and compatibility.

Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. The Preferred Alternative would zone the Southcliff neighborhood as a mix of Low-Scale Neighborhood and Medium-Scale Neighborhood.

Refer to Common Response #1, Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS, the need to consider alternatives for the plan, map, and code, and how the potential impacts of the alternatives will occur over time.

The Preferred Alternative emphasizes directing higher-density growth to corridors and centers, such as the Heights District, where existing infrastructure and services can help support it. This approach is consistent with suggestions to focus density in those areas rather than established neighborhoods. Even with the additional housing provided by the Heights District development, additional housing is still needed to meet the needs of current and future residents over the next 20 years. Refer to the Land and Shoreline Use section and the Housing section in Chapter 3 of the Final EIS for more information about the potential for the different alternatives to meet housing targets and needs.

Refer to Common Response #2 for more information on general quality of life concerns.

Regarding any Covenants, Conditions, and Restrictions (CC&Rs) in the Southcliff Neighborhood, CC&Rs are private contractual agreements among property owners. Preexisting CC&Rs established before new state housing laws (2023 H.B. 1110) remain valid and enforceable by the private parties involved, but the City does not evaluate or enforce CC&Rs as part of land use regulation or permitting. Enforcement or modification of CC&Rs remains the responsibility of property owners and their associations.

Neighborhood Action Plans are community-driven documents that identify local issues and improvements specific to an individual or group of neighborhoods at a point in time. They are not binding documents and do not represent official City policy, but they can and often do inform City investments in neighborhoods related to items such as traffic calming, street improvements and investments in parks and open spaces. They provide one source of input

among many into City planning and investment decisions. Like other planning documents, their goals and recommendations need to be revisited and updated from time to time to reflect changing circumstances and new regulations.

Vehicle traffic concerns are addressed in the Transportation section in Chapter 3 of the Final EIS, which notes higher projected traffic volumes along corridors such as Mill Plain Boulevard and identifies multimodal improvements, traffic calming, and parking management tools to reduce neighborhood impacts. Refer to Common Responses #4 and #5 for more information about vehicle traffic impacts and safety and to Common Response #6 about vehicle parking.

No properties in the Southcliff neighborhood were identified as listed on federal or county historic registers during the EIS development process. The Historic and Cultural Preservation section of Final EIS Chapter 3 provides a map and list of historic sites and districts, as well as an analysis of potential impacts to historic resources, and mitigation measures designed to offset these impacts. All future development projects will be required to comply with City and state requirements for identification and preservation of cultural, archaeological, and historic resources.

Refer to Common Response #12 for more information about neighborhood character.

The Noise section of Final EIS Chapter 3 provides more information about the high-level noise analysis for the alternatives. No substantial increases in noise are expected to occur under the alternatives; therefore, no additional mitigation measures are proposed. All environmental noise would continue to be regulated by WAC 173-60 and VMC 20.935. The updated Comprehensive Plan includes goals and policies to address noise pollution. Refer to the Comprehensive Plan webpage on the City's website for more details about the proposed Comprehensive Plan.

Refer to the Plants and Animals section of Final EIS Chapter 4 for more information on the potential impacts to tree canopy, plants and wildlife, as well as proposed measures to address those impacts. Mitigation strategies identified in the Final EIS include landscaping requirements and tree replacement policies to reduce impacts on wildlife habitat. Refer to the Water section of the Final EIS Chapter 4 for more information on the potential impacts to stormwater runoff and proposed mitigation measures.

Refer to Common Response #11 for more information about property value and taxes.

## Common Response #15: Homelessness

The City received comments with concerns about homelessness and related issues. The Comprehensive Plan Housing chapter includes goal H-3 Reduce Homelessness, and three supporting policies that aim to provide adequate transitional, permanently supportive, and affordable housing in the community, so that all residents have access to safe and stable housing. Refer to the Comprehensive Plan page on the City's website for more details about the proposed Comprehensive Plan.

The Preferred Alternative provides for a greater range of housing opportunities than the No Action Alternative, including different types and sizes of housing that can be more affordable, lessening pressures on homelessness over time. Refer to Common Response #8, Housing Affordability/Options.

Along with housing initiatives, the City is addressing homelessness in Vancouver in several ways, including:

- Development of four Safe Stay communities and one Homeward Bound Safe Park site that are managed by the City and its contractors.
- A 120-bed Bridge Shelter that will provide people a safe place to stay while they work to find permanent housing, expected to be completed in fall 2026.
- The City's 9-person Homeless Assistance and Resource Team (HART) provides outreach and assistance to people experiencing unsheltered homelessness and addresses community impacts of unsheltered homelessness.
- Funding the Talkin' Trash program in partnership with local non-profit organization Share that picks up 20 tons of trash monthly.
- Funding an emergency rental assistance program that helps reduce evictions.
- Funding additional rent-restricted affordable housing through the use of the City's voter-approved Affordable Housing Fund and federal pass-through dollars, including permanently affordable housing with services on site and facilities specifically designed for people exiting homelessness.

# OUR VANCOUVER Comprehensive Plan Update

## Washington State Environmental Policy Act Determination of Significance and Request for Comments on Scope of Environmental Impact Statement

The City of Vancouver invites you to comment on the environmental topics that will be analyzed as part of its Comprehensive Plan update.

**Date of Issuance:** July 12, 2024
**Deadline for Comments:** August 12, 2024 (no later than 11:59 p.m. Pacific time)
**Lead Agency:** City of Vancouver

**Description of Proposal:** City of Vancouver Comprehensive Plan Update

The City of Vancouver is updating its Comprehensive Plan, which will establish a vision that guides the City's growth and development for the next 20 years, from 2025 to 2045. Since the plan was last updated in 2011, Vancouver has experienced substantial growth, as well as demographic, economic and social changes.

To meet the requirements of the Washington State Growth Management Act, the City is currently conducting a full rewrite of the existing Comprehensive Plan. As part of this process, the City is developing a detailed strategy for implementing the goals, policies, and strategies outlined with the revised plan, and modifying the existing zoning code (Title 20 of the Vancouver Municipal Code [VMC]), which regulates the scale, size and location of buildings and uses, to reflect the goals and policies identified in the revised plan.

The City is engaging in extensive community outreach and engagement to help planners address key questions about housing; land use, development and infrastructure; economic development; equity and opportunity; and climate and environment. The proposed update to the City's Comprehensive Plan will plan for growth of approximately 38,000 new housing units and 43,000 new jobs by the year 2045. These growth targets are based on population projections from the Washington State Office of Financial Management, recent trends, state law, and City policy to plan for long term housing and employment needs.

The Comprehensive Plan Update must be adopted by December 31, 2025.

**Proponent:** City of Vancouver
**Location of Proposal:** Vancouver, Washington (citywide)

**Environmental Impact Statement (EIS) Required:**
The City of Vancouver has determined that this proposal is likely to have a significant adverse impact on the environment. This means the proposal has a reasonable likelihood of negative effects on environmental quality that could be considered more than moderate. An EIS is required under state law [Revised Code of Washington RCW 43.21C.030 (2)(c)] and will be prepared, including proposed mitigation measures. Mitigation measures are changes or conditions to a proposal that are intended to avoid, minimize, or compensate for potential adverse impacts.

## OUR VANCOUVER Comprehensive Plan Update

The EIS is a document that will provide information for the public, agencies, and tribal governments to consider during the decision-making process for the Comprehensive Plan Update. The EIS will describe potential alternatives, existing environmental conditions, potential significant environmental impacts, and potential measures to mitigate impacts.

The City currently plans to review a scenario of future conditions if no changes to the current Comprehensive Plan and associated plans and regulations are made, called a No Action Alternative, and up to three Action Alternatives that outline different land use and growth scenarios in specific areas of the city.

The City has identified the following elements of the built and natural environment for discussion in the EIS in accordance with Washington Administrative Code (WAC) 197-11-444:

- Land and shoreline use
- Housing
- Aesthetics (including light and glare)
- Historic and cultural resources
- Transportation
- Noise
- Public services and utilities (including emergency services, water, sewer, schools, parks and recreation)
- Earth (geologic hazard areas, soils, topography)
- Air quality, greenhouse gases, and climate
- Water resources
- Plants and animals

**Request for Comments:**
Agencies, affected tribes, and members of the public are invited to comment on the scope of the EIS. You may comment on alternatives, mitigation measures, probable significant adverse impacts, and licenses or other approvals that may be required. Licenses and approvals may include potential required permits from state, local, and federal agencies.

**Scoping comments may be provided via email or postal mail to the following addresses:**

**Email:** OurVancouver2045@cityofvancouver.us

## Revised Washington State Environmental Policy Act Determination of Significance and Request for Comments on Scope of Environmental Impact Statement

The City of Vancouver invites you to comment on the environmental topics that will be analyzed as part of its Comprehensive Plan update. The City is issuing this revised notice to clarify proposed future growth levels, the number of alternatives that will be analyzed in the Draft EIS, and the role of desired community outcomes and goals in the Comprehensive Plan update and SEPA process. ***All comments received during the previous scoping period (July–September 2024) remain valid and will be considered as part of the SEPA review process.***

**Date of Issuance:** October 22, 2024
**Deadline for Comments:** November 21, 2024 (no later than 11:59 p.m. Pacific time)
**Lead Agency:** City of Vancouver
**Description of Proposal:** City of Vancouver Comprehensive Plan Update

The City of Vancouver is updating its Comprehensive Plan, which will establish a vision that guides the City's growth and development for the next 20 years, from 2025 to 2045. Since the plan was last updated in 2011, Vancouver has experienced substantial growth, as well as demographic, economic and social changes.

To meet the requirements of the Washington State Growth Management Act, the City is currently conducting a full rewrite of the existing Comprehensive Plan. As part of this process, the City is developing a detailed strategy for implementing the goals, policies, and strategies outlined with the revised plan, and modifying the existing zoning code (Title 20 of the Vancouver Municipal Code [VMC]), which regulates the scale, size and location of buildings and uses, to reflect the goals and policies identified in the revised plan.

The City is engaging in extensive community outreach and engagement to help planners address key questions about housing; land use, development and infrastructure; economic development; equity and opportunity; and climate and environment. The proposed update to the City's Comprehensive Plan will plan for growth of at least 38,000 new housing units and 43,100 new jobs by the year 2045. These growth targets are the minimum necessary to plan for long-term housing and employment needs based on population projections from the Washington State Office of Financial Management, recent trends, state law, and City policy. The Comprehensive Plan Update must be adopted by December 31, 2025.

**Proponent:** City of Vancouver
**Location of Proposal:** Vancouver, Washington (citywide)

**Environmental Impact Statement (EIS) Required:**
The City of Vancouver has determined that this proposal is likely to have a significant adverse impact on the environment. This means the proposal has a reasonable likelihood of negative effects on environmental quality that could be considered more than moderate. An EIS is required under state law [Revised Code of Washington RCW 43.21C.030 (2)(c)] and will be prepared, including proposed mitigation measures. Mitigation measures are changes or conditions to a proposal that are intended to avoid, minimize, or compensate for potential adverse impacts.

The EIS is a document that will provide information for the public, agencies, and tribal governments to consider during the decision-making process for the Comprehensive Plan Update. The EIS will describe potential alternatives, existing environmental conditions, potential significant environmental impacts, and potential measures to mitigate impacts.

The City currently plans to review a scenario of future conditions if no changes to the current Comprehensive Plan and associated plans and regulations are made, called a No Action Alternative, and up to two Action Alternatives that outline different land use and growth scenarios in specific areas of the city. The City intends for the land use and growth scenarios analyzed in the Action Alternatives to align with the Goals Framework developed with community partners for the Comprehensive Plan Update. The Goals Framework identifies numerous desired community outcomes, including connected and accessible neighborhoods; affordable, accessible housing choices; equity and inclusion; economic opportunity; and climate adaptability, sustainability, and resiliency.

The City has identified the following elements of the built and natural environment for discussion in the EIS in accordance with Washington Administrative Code (WAC) 197-11-444:

- Land and shoreline use
- Housing
- Aesthetics (including light and glare)
- Historic and cultural resources
- Transportation
- Noise
- Public services and utilities (including emergency services, water, sewer, schools, parks and recreation)
- Earth (geologic hazard areas, soils, topography)
- Air quality, greenhouse gases, and climate
- Water resources
- Plants and animals

**Request for Comments:**
Agencies, affected tribes, and members of the public are invited to comment on the scope of the EIS. You may comment on alternatives, mitigation measures, probable significant adverse impacts, and licenses or other approvals that may be required. Licenses and approvals may include potential required permits from state, local, and federal agencies.

**Scoping comments may be provided via email or postal mail to the following addresses:**

# Memorandum

**To:** City of Vancouver

**From:** WSP USA

**Subject:** State Environmental Policy Act Environmental Impact Statement Scoping Comment Summary and Final Scoping Determination

**Date:** December 5, 2024

The purpose of this memorandum is to summarize comments received during the State Environmental Policy Act (SEPA) scoping period for the **OUR VANCOUVER** Comprehensive Plan Update Draft Environmental Impact Statement (EIS), and to recommend next steps for the Draft EIS analysis.

Based on the comments received, the range of environmental elements identified in the scoping notice remains appropriate, and the Draft EIS analysis should proceed without modifications to its scope.

## Scoping Comment Period Overview

The City of Vancouver (City) issued a SEPA Determination of Significance and request for comments on the scope of the EIS on July 12, 2024. The City published this notice in the SEPA Register, *The Columbian*, and the Be Heard Vancouver website for the Comprehensive Plan Update. The City also provided the notice via an email distribution list consisting of federal, state, and local agencies; tribes; local business organizations; local builders and real estate development professionals; neighborhood associations; environmental organizations; media outlets; and other interested parties. The scoping notice was also distributed to the **OUR VANCOUVER** project listserv that includes more than 200 individual contacts.

The scoping notice initially requested comments during an expanded 30-day period, which is greater than the 21-day minimum required by SEPA. The comment period was originally scheduled to end on August 12, 2024. In order to provide additional opportunities for review and comment by local agencies and communities, the City extended the scoping comment period to August 23, 2024, and again to September 6, 2024. The scoping notice requested comments via postal mail or email.

The City issued a revised scoping notice on October 22, 2024, to clarify proposed future growth levels, the number of alternatives that will be analyzed in the Draft EIS, and the role of desired community outcomes and goals in the Comprehensive Plan update and SEPA process. This scoping notice, which was distributed via the same methods as the previous notices, invited additional comments via postal mail or email during a 30-day period ending November 21, 2024. The notice stated that comments submitted during the previous comment period remain valid and will be considered as part of the SEPA review process.

## EIS Scope Elements

The original scoping notice identified the City's intent to evaluate a No Action Alternative, as required by SEPA, and up to three other alternatives that outline different land use and growth scenarios in specific areas of the City. The revised scoping notice reduced the number of anticipated action alternatives from three to two.

The scoping notice also identified the following elements of the built and natural environment for discussion in the EIS in accordance with Washington Administrative Code (WAC) 197-11-444:

- Land and shoreline use
- Housing
- Aesthetics (including light and glare)
- Historic and cultural resources
- Transportation
- Noise
- Public services and utilities (including emergency services, water, sewer, schools, parks and recreation)
- Earth (geologic hazard areas, soils, topography)
- Air quality, greenhouse gases, and climate
- Water resources
- Plants and animals

## Summary of Comments Received

The City received eight total comment submissions via email and no comments via postal mail during the two comment periods. Seven of the comment submissions came from private individuals, and one of the comment submissions came from the Washington Department of Fish and Wildlife.

None of the comments included objections to the environmental elements identified in the scoping notice. Most of the comments provided detailed input or questions about specific

topics of interest, including EIS elements to be studied, analysis methods, and potential mitigation measures. The following list summarizes the main themes of the comments received by topic area.

### EIS Methodology

- Interest in how EIS elements will be prioritized and assessed given potential for conflicts between elements.

### Land and Shoreline Use

- Maintain low zoning densities around high-value habitat areas to minimize habitat fragmentation and wildlife displacement.
- Limit development within the Vancouver Lake area to preserve habitats.
- Integrate green spaces into urban areas to benefit residents and provide habitat for wildlife.
- Evaluate how expected development will affect the percentage of forest cover and the effective impervious area within Vancouver's watersheds.
- Incorporate open space into high density areas, such as exploring green roofs or shared open space opportunities, particularly for access by low-income households.
- Assess the efficacy of transit-oriented development.

### Housing

- Prioritize urban density and housing affordability.
- Consider "single-room occupancy" as an affordable housing strategy.
- Include utility costs over a 15-year horizon when evaluating housing affordability.

### Aesthetics, Noise

- Examine strategies to reduce light and noise pollution in developed areas, particularly at night.

### Transportation

- Increase interconnectedness of walkways and trails for alternative transportation.

### Public Services and Utilities

- Unbundle elements within public services and utilities to discretely discuss individual topics and emphasize their importance (e.g., emergency services, including fire and police services; utilities, including water and sewer services; schools; parks and recreation; and other public services).

- Ensure that emergency services analysis includes discussion of fire and law enforcement services.
- Amend pipeline company franchise agreements to require an end-of-life plan for the pipes, require monitoring and reporting of leaks, and increase charges for easements.
- Require gasoline fueling stations to prevent and be responsible for addressing tank leaks and to carry higher insurance policy values.
- Evaluate rapid build-out of solar energy installations as an alternative to Clark Public Utilities.

### Air Quality, Greenhouse Gases, and Climate

- Investigate how Vancouver can meet its future energy needs while minimizing reliance on fossil fuels.
- Require new buildings to be constructed as solar ready and electric ready.
- Require solar and electric power in development agreements.
- Publicize emissions from Clark Public Utilities' operations and look for ways to reduce their emissions.
- Evaluate carbon offsets purchased by the City and the Port of Vancouver.
- Prioritize cooling and disaster centers.

### Water

- Evaluate the impact of stormwater facilities in or near critical areas and potential risk of impact to aquatic environments.
- Implement green stormwater infrastructure to reduce runoff and filter pollutants.
- Avoid new impervious surfaces for roads and trails.
- Assess the potential effects on watershed health, including impacts on hydrology, water quality, and fish habitat conditions.

### Plants and Animals

- Work toward 28% tree canopy identified in 2011 Comprehensive Plan, particularly in lower income areas of the city.
- Explore opportunities to incorporate native plants and establish pollinator habitats within urban landscaping.
- Require new developments to limit tree removal and work around existing trees.
- Consider wildlife overpasses or underpasses to enhance connectivity between habitats.
- Use Priority Habitats and Species list definitions as the basis for evaluating impacts to fish and wildlife.
- Assess the impact of new roads on habitat connectivity.

- Conserve national resource lands through a transfer of development rights (TDR) program, or other strategy that provides financial incentives for protecting land from development.
- Group relatively undeveloped parcels and farm and forestland to increase habitat value.
- Identify open space areas where large, connected patches of native vegetation can be preserved to maintain biodiversity and provide corridors for wildlife movement.
- Support educational programs and resources for landowners to implement wildlife-friendly practices.
- Prioritize the mitigation sequence of impact avoidance, minimization, and mitigation.
- Identify and prioritize degraded or fragmented critical areas for implementing restoration projects.
- Implement climate-resilient land use strategies, such as preserving wetlands and riparian zones, to help mitigate the effects of extreme weather events and support species adaptation.

## Final Scoping Determination

Based on the comments received during the scoping periods, the elements identified in the scoping notice remain valid for analysis in the Draft EIS, and no modifications are needed before proceeding with the analysis.

All of the high-level themes discussed by commenters will be addressed as part of the EIS analysis, including the evaluation of impacts and benefits to housing density and affordability, light and noise pollution, emissions, climate resiliency, tree canopy coverage, green spaces, stormwater runoff, and fish and wildlife habitat areas.

Some comments requested a level of specificity that is outside the scope of the EIS analysis. The City will consider these comments as appropriate in the broader context of developing the draft Comprehensive Plan and associated code amendments.

Subject: Market and Land Capacity Analysis Methodology and Process for the Preferred Alternative

Date: February 9, 2026

## Introduction

This memorandum (memo) outlines the methodology for modeling the estimated housing and employment capacities for the Preferred Alternative studied in the OUR VANCOUVER Comprehensive Plan Update State Environmental Policy Act Final Environmental Impact Statement (FEIS). This methodology memo serves as an addendum to the previously issued methodology memo issued for the Draft Environmental Impact Statement (DEIS), which included analysis of Alternative 1, Alternative 2, and the No Action Alternative. This Preferred Alternative represents the proposed future land use and zoning map for the Comprehensive Plan Update and informs future infrastructure and capital facilities planning required as part of the Comprehensive Plan. This memo follows the same outline as the previous methodology memo but includes additional sections where additional analysis was conducted.

This memo is divided into the following five sections that outline the process for modeling estimated housing and job capacity:

1. Prototype Development and Map Creation: details the creation of the Preferred Alternative.
2. Land Capacity Analysis Deductions (Preferred Alternative): covers the assumptions made for the initial land use capacity analysis and acreage deductions for the Preferred Alternative.
3. Housing Feasibility Analysis: describes the process for modeling the number of new housing units that the Preferred Alternative has the capacity to support.

4. Parcel-Level Modeling of Housing and Job Capacity (Action Alternatives): describes the process of modeling the number of housing units and jobs that the Preferred Alternative has the capacity to support.
5. Model Outputs for Housing and Jobs Capacity: summarizes the housing and jobs capacity numbers used in the FEIS analysis.

## 1. Prototype Development and Map Creation

The Comprehensive Plan Update proposes to rename and simplify the current land use designations and associated zoning codes to focus on 10 zoning districts:

- Low Scale Neighborhood (LSN)
- Medium Scale Neighborhood (MSN)
- Mixed Use Neighborhood (MU)
- Manufactured Home (MH)
- Regional Activity Center (RAC)
- Institutional/Campus (IC)
- Industrial/Employment (IE)
- Heavy Industrial (HI)
- Parks (POS)
- Natural Areas (NA)

Five of the eight zoning districts (LSN, MSN, MU, RAC, and IC) developed for the Comprehensive Plan Update would allow for a mix of employment and housing types at varying scales and densities. For example, the MSN zoning district would allow housing prototypes with a higher density than single-family housing, but a lower density than podium or tower developments allowed in MU and RAC zoning districts. The Manufactured Home zone is applied to existing mobile home parks in Vancouver and does not permit redevelopment except for in limited cases to comply with HB 1220 and requirements to allow permanent supportive housing and emergency shelters in all zones that allow housing or hotels. The HI, IE, POS, and NA zones do not allow housing development.

Analysts used the steps described below to develop the Preferred Alternative for the FEIS.

### Preferred Alternative Development Steps:

1. Develop Prototypes: EcoNorthwest created eighteen housing prototypes that are likely to develop in Vancouver (see Table 1). Prototypes reflect current development trends within the city and the potential for different housing types based on recent

changes in state legislation. The prototypes cover a variety of housing types from single-family homes and four-story walk-ups to towers and podiums. Each prototype has an estimated dwelling-units-per-acre (DUA) value. Prototype allowances were updated for the Preferred Alternative to reflect updated zoning language and density allowances.

2. **Assign Prototypes to Zoning Districts:** Housing prototypes that were identified are those most likely to occur in the different zoning districts that will allow housing (LSN, MSN, MU, RAC, and IC). See Table 1**Error! Reference source not found.**.

   *Note: No housing prototypes were identified in IE, HI, MH, POS, or NA because no housing will be allowed.*

3. **Prepare Preferred Land Use Alternative:** Finalized Preferred Alternative Map that shows zoning districts throughout the city. This step was developed over many iterations and was prepared with multiple rounds of review with community partners, city staff, the planning commission, and city council.

   Refinement of the alternatives was informed by comments on the DEIS, extensive public input, best planning practices, existing city council policy guidance, existing and planned enhanced transit corridors, locations of parks/open space and schools, and locations of growth nodes/corridors/centers.

## Table 1. Housing Prototypes by Zone

| Housing Prototypes | Dwelling Units Per Acre | Manufactured Home Park* | Low-Scale Neighborhood | Medium-Scale Neighborhood | Mixed-Use Neighborhood | Regional Activity Center | Institutional/ Campus | Industrial/ Employment* | Heavy Industrial* | Parks/Open Space/ Natural Areas* |
|---|---|---|---|---|---|---|---|---|---|---|
| Single Family | 7.3 | | | | | | | | | |
| Duplex (side by side) | 14.5 | | | | | | | | | |
| Duplex (stacked) | 14.5 | | | | | | | | | |
| 3 Townhouses | 21.8 | | | | | | | | | |
| Quadplex | 28.5 | | | | | | | | | |
| 4 Townhouses | 29.0 | | | | | | | | | |
| Sixplex | 43.0 | | | | | | | | | |
| 6 Townhouses | 43.6 | | | | | | | | | |
| Cottage Cluster | 29.0 | | | | | | | | | |
| Courtyard (attached) | 28.5 | | | | | | | | | |
| Small Single Stair | 58.1 | | | | | | | | | |
| Small Multiunit | 43.6 | | | | | | | | | |
| Small Multiunit (taller) | 58.1 | | | | | | | | | |
| Medium Multiunit | 34.8 | | | | | | | | | |
| Medium Multiunit (taller) | 52.3 | | | | | | | | | |
| 3-story wood frame | 65.3 | | | | | | | | | |
| 4-story wood frame | 84.4 | | | | | | | | | |
| Podium | 152.5 | | | | | | | | | |
| Tower | 217.8 | | | | | | | | | |
| Microunits 1 | 273.8 | | | | | | | | | |
| Microunits 2 | 342.3 | | | | | | | | | |

*No housing prototypes are allowed

## 2. Land Capacity Analysis Deductions (Preferred Alternative)

Table 2 identifies the deductions used in the land capacity analysis model for the Preferred Alternative. As noted in the table, some deductions are different in the housing capacity analysis, which estimates the capacity for new housing units, compared to the employment capacity analysis, which estimates the capacity for new jobs. Table 2 also identifies different deductions for the land categories (Vacant, Underutilized, and Built) included in the Clark County Vacant Buildable Lands Model (VBLM).[1]

[1] The parcel dataset used in the model is the 2022 Clark County Vacant Buildable Lands Model (VBLM) data output.

## Table 2. Deductions

| Deduction | Zoning District | | | | | | |
|---|---|---|---|---|---|---|---|
| | LSN | MSN | MU | RAC | IC | IE | HI |
| **Land Use Split per Zoning Districts[a]** | | | | | | | |
| Residential | 95% | 90% | 65% | 60% | 25 % | 0% | 0% |
| Employment[b] | 5% | 10% | 35% | 40% | 75 % | 100% | 100 % |
| **Critical Areas/Constrained Land Deductions** | | | | | | | |
| Residential Capacity Analysis | 50% of constrained lands are assumed to not develop. | | | | | N/A | |
| Employment Capacity Analysis | 20% of Vacant and Underutilized constrained lands will not develop.<br>50% of Built constrained lands will not redevelop. | | | | | | |
| **Infrastructure Deduction** | | | | | | | |
| Residential Capacity Analysis | 31.5% | | | | | N/A | |
| Employment Capacity Analysis | 31.5% | | | | | 12.5%[d] | 25% |
| **Market Factor and Redevelopment Rate** | | | | | | | |
| Residential Capacity Analysis | N/A (embedded in market feasibility analysis, see Section 3). | | | | | | |
| Employment Capacity Analysis Market Factor | 10% of Vacant and Underutilized lands will not develop given market conditions. | | | | | | |
| Employment Capacity Analysis Redevelopment Rate (only applies to Build land)[e] | 0% | | 12.8% | 27.4% | 0% | | |
| Job loss deduction[f] | | | 13 jobs/net acre | | | | |
| **Small Parcels, Easements, and Tax Value** | | | | | | | |
| Exclude small parcels less than 1,000 SF | Applies to all zoning districts. | | | | | | |
| Exclude roads and easements | Applies to all zoning districts. | | | | | | |
| Exclude parcels given a zero value in Clark County's VBLM output[g] | Applies to all zoning districts. | | | | | | |

Notes:

(a) The residential/non-residential splits are model assumptions based on likely development trends for new zoning districts. These are not intended to reflect future codified requirements.

(b) Employment represents any non-residential use that is assumed to produce jobs instead of housing units.

(c) Critical areas/constrained lands were identified per the 2022 Clark County VBLM dataset

(d) Infrastructure deductions for IE are lower than the 25% used in the 2022 Clark County VBLM for Industrial to account for the more urban context in Vancouver.

(e) Redevelopment from employment uses to different employment uses in Low Scale Neighborhood (LSN), Medium Scale Neighborhood (MSN), Institutional/Campus (IC), and Industrial/Employment (IE) zones is unlikely and, therefore, no redevelopment rate is assumed for these zoning districts. However, an "intensification or refill" factor is applied to IE and Heavy Industrial (HI) zoning districts to establish the employment need (see Section 4 for details on the intensification factor). Redevelopment rates for Mixed Use Neighborhood (MU) and Regional Activity Center (RAC) were calculated by determining the feasibility of the four-story mixed-use prototype across all MU/RAC zones and its rate of feasibility.

(f) The job loss deduction applies to Built land in the MU and RAC zoning districts that is assumed to be redeveloped. This assumption accounts for a loss of existing jobs on the redeveloped parcels.

(g) The county assessor will flag a property as zero-value if appraisers determine the legally created tax lot does not have market value or is deemed exempt from taxes.

Key: HI = Heavy Industrial; IC = Institutional/Campus; IE = Industrial/Employment; LSN = Low Scale Neighborhood; MSN = Medium Scale Neighborhood; MU = Mixed Use Neighborhood; N/A = not applicable; RAC = Regional Activity Center; SF = square feet; VBLM = Vacant Buildable Lands Model

## 3. Housing Feasibility Analysis

The housing capacity analysis for the preferred alternative relies on a parcel-level feasibility analysis. The feasibility analysis examined the zoning district for each parcel, which prototypes are assumed to be allowed by future zoning, and which prototype is the most feasible option based on market conditions and available assessors' data.

Generally, the feasibility analysis examined the following factors:

- Total value per square foot of each parcel, which is equal to the total market value (land and buildings) divided by assessed acres.
- Price per square foot required to develop each building prototype.

If the total value per square foot is less than the prototype price to develop, then the prototype is considered feasible.

The feasibility analysis identified which prototypes would be considered feasible from a market perspective, which can result in multiple prototypes being viable. The model for the Preferred Alternative assigns the prototype that is considered the most feasible, or the prototype that is the most likely to develop because it is the most affordable to develop. Ultimately, this process looks at every parcel across the city and models the potential for a property to develop/redevelop. Only parcels identified as feasible with a corresponding prototype are included in the capacity analysis in Step 4 below. An overview of the feasibility analysis is included as Attachment .

# 4. Parcel-Level Modeling of Housing and Job Capacity (Action Alternatives)

Once the feasibility analysis (Section 3) was complete, analysts modeled housing and job capacity for the preferred alternative, applying the assumptions identified in Table 1. The following subsections identify the modeling process for the housing capacity analysis and job capacity analysis. A detailed process of this section is included as Attachment .

## Housing Capacity Analysis

The first step in the housing capacity analysis model applied the deductions for critical areas, infrastructure, and residential versus employment allocation at the parcel level (see Table 2). The model then removed parcel fragments (1,000 square feet or smaller), roads/easements, and zero-value parcels.

Once all land reductions were applied, the model used the remaining net acreage to apply housing densities based on the most feasible prototype per the feasibility analysis (see Section 3). If a parcel was not determined to have a feasible prototype, then housing density was not applied to the parcel.

### Housing Unit Yield Equation

Gross Acreage of a parcel – land reductions = net acreage

Net acreage X DUA (prototype DUA) = housing unit output per parcel

### Post-Processing Deductions

#### Homeowner Association Deduction

The City sampled properties in different subdivisions across Vancouver to determine the possible existence of a homeowner association (HOA) that might limit densification or redevelopment potential. Then, using property titles obtained through a title company, analysts reviewed language in homeowner association bylaws to identify which areas may have language that could restrict the implementation of Washington State House Bill (HB) 1110. HOAs that had some degree of restrictive language were identified and the redevelopment capacity that was modeled in those areas was reduced by 70%. The 70% housing capacity reduction assumes that some of the redevelopment potential of parcels within HOAs with restrictive language would not occur because of a lack of enforcement of HOA policies. At the time of this analysis in early 2026, HB 1110 does not include retroactive application to pre-existing governing documents adopted by HOAs.

### Master Plan Deduction

In areas where the city has adopted Master Plans or approved Development Agreements (DAs), the housing units and jobs projected in those documents was used instead of the model output. This requires an override where the existing master plan geography is allocated the projected number of housing units and/or jobs identified in the adopted plan or DA. At the time of this analysis in early 2026, the following master plan or DAs were identified:

- Vancouver Heights
- Vancouver Innovation Center
- Columbia Palisades
- Section 30
- Waterfront
- HQ Vancouver

### Existing Unit Deduction

Clark County assessor data was used to identify the number of existing units on lots that include feasible housing development per the feasibility analysis. Existing units were then deducted to avoid double counting the total number of units per lot.

### Model Output

Total number of housing units assumed in the preferred alternative based on market feasibility, land capacity, and HOA, Master Plan or DA, and existing unit adjustments. These housing unit numbers are used for the Preferred Alternative in the FEIS analysis.

## Employment Capacity Analysis

The employment capacity analysis was similar to the housing analysis, but as identified in Table 2, some of the model assumptions were different. Additionally, the employment capacity analysis did not use the feasibility analysis to determine redevelopment potential, but instead applied a redevelopment rate, as noted in Table 2.

### Employment Target

An additional step in the employment capacity analysis was the establishment of an employment target that accounts for "work-from-home" jobs and "intensification" or "refill," which relates to a percentage of new jobs occurring within existing employment space through an intensification of the number of jobs per square foot. These two factors reduce the amount of land needed to support anticipated job growth and are an important consideration when determining whether the employment capacity of an alternative will meet the anticipated employment growth. At a summary level, the process for determining the employment target was as follows:

- Start with the anticipated employment growth of 43,198 jobs, as detailed in the Economic Opportunity Analysis.
- Separate potential job growth by industry sector based on two-digit North American Industry Classification System (NAICS) codes and assign jobs/NAICS codes to zoning districts.
- Apply a 13% deduction for "work from home" to all job sectors except transportation, food/services, manufacturing, and construction.[2]
- Apply a 23% deduction for jobs in HI and IE zoning districts because these districts may see an intensification of jobs within existing heavy industrial or employment developments. This means more jobs per acre may be produced in the future on heavy industrial or employment lands than currently exists, and a reduction is applied to the employment target because additional land would not be needed to support these jobs.[3]

This process resulted in a net employment need of 38,792, which reflects the number of new jobs that will need to be supported within the land capacity of the Preferred Alternative. The deductions above account for new jobs that could be accommodated within existing developments or from work from home and therefore, additional land capacity is not needed for those jobs.

### Employment Land Capacity Analysis

Similar to the housing capacity analysis, the employment capacity analysis was conducted at the parcel level. The first step in the employment capacity analysis model applied the deductions for critical areas, infrastructure, and residential versus employment allocation, as identified in Table 2. The model then applied the market factor for Vacant and Underutilized land and redevelopment rate for Built land, as detailed in Table 2. *Note: the redevelopment rate does not apply consistently across the zoning districts.*

Once all the land reductions were applied, the model applied the employment densities (jobs per acre) listed below for each zoning district.[4]

---

[2] Work-from-home deduction is based on 2023 American Community Survey estimates, table B038601, work from home percentage for Vancouver. Clark County is at 21.8% per the same data.

[3] The intensification factor is based on data from Portland vetted with industrial stakeholders as part of Portland's EOA (Economic Opportunity Analysis)Industrial Land Committee process. Longitudinal point-level Quarterly Census of Employment Wage data for Vancouver are not available. Intensification is essentially "refill," indicating an amount of land that will intensify in job density.

[4] The employment densities are based on recent development trends in similar contexts and professional judgment.

- LSN: 6
- MSN: 6
- MU: 48
- IC: 46
- RAC: 54
- IE: 30
- HI: 9

The final step in the employment capacity analysis is intended to avoid double counting existing jobs when a property is assumed to redevelop. Washington Employment Security Department Quarterly Census of Employment Wage data was used to determine the average jobs per acre within future MU and RAC zoning districts. Only the MU and RAC zoning districts were used because those are the only zones where a redevelopment rate is applied (see Table 3 footnotes for additional details). The average number of jobs per acre was estimated at 13, which was applied as a deduction to the output of jobs on built parcels in MU and RAC zoning districts.

Employment Yield Equation:

Gross Acreage of a parcel – land reductions X market factor/redevelopment rates = net acreage

Net acreage X jobs/acre – 13 jobs/acre on Built Mixed Use Neighborhood and RAC parcels = jobs output per parcel

Model Output: Total number of jobs assumed in the preferred alternative based on vacancy status and redevelopment potential.

## 5. Model Outputs for Housing and Jobs Capacity

Table 3 below shows the model output for the DEIS action alternatives, the No Action Alternative, and the Preferred Alternative.

## Table 3. Model Outputs for Housing Yields and Employment Yields

| Alternative (City Only) | Methodology | Housing Yields | Employment Yields |
|---|---|---|---|
| No Action | Clark County VBLM (refer to DEIS methodology memo) | 29,600 units | 16,600 jobs |
| Alternative 1 | Feasibility/Redevelopment potential (refer to DEIS methodology memo) | 45,100 units | 46,000 jobs |
| Alternative 2 | Feasibility/ Redevelopment potential (refer to DEIS methodology memo) | 50,696 units | 49,300 jobs |
| Preferred Alternative | Feasibility/Redevelopment Potential (Refer to Section 4) | 44,111 units | 45,145 jobs |

Key: VBLM = Vacant Buildable Lands Model

# Feasibility Analysis Overview

| | |
|---|---|
| **DATE:** | May 27th, 2025 |
| **TO:** | Nicole McDermott and Sam Rubin, WSP |
| **FROM:** | Tyler Bump and Michelle Anderson, ECOnorthwest |
| **SUBJECT:** | Vancouver Comp Plan Update – Market Feasible Capacity Analysis |

# Overview

WSP partnered with ECOnorthwest to assess the potential housing capacity for two different EIS alternatives for the comprehensive plan update for the City of Vancouver. ECOnorthwest worked with WSP to complete this analysis, referred to as the *market-feasible housing capacity,* given the potential land use intensities of the different place types of the alternatives. The difference between the alternatives was the place type designated to each parcel, which could result in different citywide totals for market-feasible housing capacity.

For the capacity analysis, ECOnorthwest completed a financial analysis that models a developer's decision-making process and cash flow equation. We created pro forma models to test the financial feasibility of various housing densities that might be allowed in different place types. We estimated the market feasible capacity of multiple prototypical developments, or *housing prototypes*. These prototypes reflect theoretical development profiles that could potentially comply with proposed zoning standards to understand what the market was most likely to deliver if zoning was a constraint.

**Why is development feasibility and pro forma analysis important?**

Development can be costly and risky. Getting funding to construct new development requires lenders and investors to be reasonably confident they will earn enough financial return to justify the risks and attract equity to a project.

Economic or market feasibility is generally assessed by comparing the expected revenues (home sales, net income from rents, room rates) against the costs of development. If a development is not feasible, it will not be built, contrary to a city's housing goals.

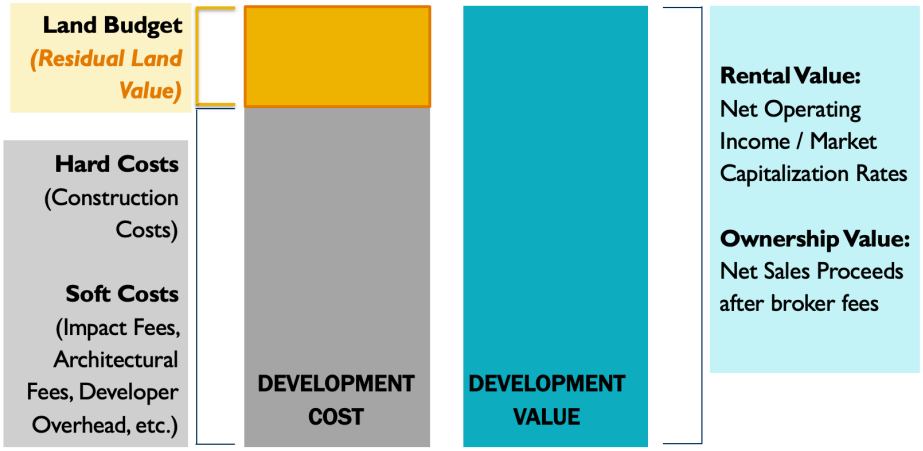
# Approach

## Prototypes and Assumptions

ECOnorthwest analyzed nearly 20 housing prototypes that were of various configurations and resulting densities, including general forms such as single-family, townhome, lowrise, garden-style, and midrise apartment developments. We based the prototypes on recent existing developments throughout the City of Vancouver as well as potential scales of housing that might be allowed in the future given legislative changes at the state level. Though the scale of development ranges substantially throughout the city, we developed approximate prototypes that could be possible in Vancouver.

We drew our initial market and construction cost insights from third-party sources such as the American Community Survey (ACS), Costar, Redfin, and Craftsman, and then vetted

those assumptions with local developers and brokers through various interviews. Though cost assumptions typically stay consistent throughout a city, we created a model to help differentiate the revenue assumptions (i.e., rent and sales prices) by census tract This model used rent and sales data from ACS, to interpolate what revenue assumptions might be for each census tract in the city.[1]



We then aligned similar block groups, based on rent and sales prices, into newly-defined market areas. We took those results and compared them to the city-wide average to understand how each market area related to the city-wide average (expressed as a ratio). We then applied that ratio as an input to each rent or sales price on a prototype level with the most up-to-date market data from CoStar and Redfin. This revenue model allowed us to refine our pro forma results spatially. The model therefore considered that different areas across Vancouver would have varying demand for different types of housing, which impacts the resulting feasibility of housing development.

## Pro Forma Financial Analysis Methods

The pro forma model used a residual land value (RLV) metric to evaluate feasibility. RLV measures the land budget a developer would have to purchase land after accounting for potential development costs and revenues.

**Exhibit 1: Example of Feasible Development using Residual Land Value (RLV) Model**

Source: ECONorthwest

[1] ACS has two notable limitations we try and correct for: 1) there are many instances of tracts with missing (or "NA") estimates for rents, due to low rates of survey response or simply because there are no observations of a given type of apartment in that tract and 2) we often see unusually low rents because the ACS conflates market rate apartments with other structures like informal rental arrangements. We interpolated missing rent values by using an inverse-distance weighted average smoothing function, so that tracts with missing values take the average of their neighbors, ordered by proximity. We then cluster census tracts together into market areas (approximately 10 total areas) based on adjacency and similarity of rents and tenure splits.

Generally, if the RLV is equal to or above land prices in the potential development area, the development is considered feasible at market rate. If the RLV is zero dollars, the development could be feasible if land were donated for free. However, if the RLV is less than zero, the development is likely infeasible unless a developer receives additional subsidies or incentives, including free land. Results from this method describe a general analysis of prototypes and does not consider the many potential unique conditions that could be factors in development feasibility (e.g., increased predevelopment costs, low land basis from longtime land ownership). For these reasons, residual land value analyses should be thought of as a strong indicator of the relative likelihood of development, rather than an absolute measure of return to the investor or developer for any specific site.

In our feasibility analysis, we used key financial data like rent, operating costs, and development expenses for each prototype. To evaluate rental prototypes, we determined the leasable square footage, calculated revenue, deducted vacancy and operating costs (such as taxes, insurance, maintenance, management, select utilities) and arrived at the annual net operating income (NOI). For the ownership prototypes, we calculated gross sales price and subtracted commissions.

We calculated development costs by applying the cost per square foot values to different product types (e.g., residential, retail) and adding parking costs. We then summed those values to a total hard cost and calculated the soft cost, contingency, and developer fees to arrive at the total development cost.

To evaluate rental prototypes, we derived the value for each prototype by either dividing the NOI by a market-driven return on cost threshold (for higher-density prototypes) or by determining the loan capacity given debt service assumptions and NOI (for lower density prototypes). Return on cost is an important metric because it establishes the threshold where the potential returns offset project risks. Developers compete for capital in a market against other real estate and non-real estate investments. If return on cost is too low, a developer will not be about to attract capital, and the project will not move forward – this is most relevant for higher density prototypes that tend to attract institutional capital that is mobile across markets and investment products. We then summed those values to arrive at a total value for each prototype. We then calculated the land budget (the RLV) by subtracting the total development cost from the total value.

For lower-density rental prototypes, relating NOI to debt service requirements is more appropriate given that these projects are smaller and therefore tend not to attract institutional capital, but they are similar to larger projects in that debt is typically the largest source of funding for a project and if return requirements for debt can't be met, the development will not be able to attract the capital and the project won't move forward. For these prototypes, we solved for the land budget (the RLV) that was possible given the NOI on the project and potential terms, interest rates, and debt service coverage ratio

requirements. For the ownership prototype, we determined the land budget by subtracting total development costs from gross sales less commission and a spread on cost to account for profit.

For both rental and ownership prototypes we divided the total land budget by site square footage, arriving at a residual land value per square foot of land for each market area – this was the key variable for inclusion in the site specific analysis we conducted with the help of WSP.

## Site-Specific Capacity Analysis

We delivered two key outputs for comparison to site-specific data and to finalize the market-feasible capacity analysis. For each prototype, we delivered both the calculated dwelling units per acre as well as the residual land value (RLV) per square foot of land for each market area. The units of these outputs (normalized by land area) allowed us to take the data and apply it to each site.

For each parcel, WSP and ECOnorthwest:

1. Exported a GIS csv with each parcel's market area, placetype, and key assessor data such as parcel area and total value (based on land and improvement value).
2. Calculated the total value per square foot of land (land + improvement value, divided by site area). This approach does not attempt to make adjustments to assessor's land value to values that are more reflective of real market value. We typically find that assessor data can lag behind market value. Therefore, this approach will result in an optimistic estimate of capacity
3. Subtracted total value per square foot of land from the RLV per square foot of each prototype for the corresponding market area to arrive at the remaining value.
4. Identified the feasible prototypes that were allowed by the placetype applied to the parcel – the prototype with remaining value greater than $0.
5. For parcels where the RLV was zero or negative (where the total value based on assessor data exceeded the RLVs of the allowed prototypes), the market-feasible capacity analysis resulted in no feasible housing prototype.

# Attachment 2

# Land Capacity Analysis Process

**Land Use Model – Step-by-Step Process**

The land use model for the Our Vancouver Comprehensive Plan was developed using Python in ArcGIS Pro. Instead of estimating land capacity based on broad citywide acreage, the analysis is conducted at the parcel level scenario, making it easier to show where housing and jobs are likely to be located across Vancouver. Housing and employment analyses are done separately, relying on the same data but with different assumptions about redevelopment, infrastructure, and critical areas.

**1. Starting Datasets**

- 2022 Vacant Buildable Lands Model (VBLM) dataset. Only parcels within the City of Vancouver are used in the land capacity analysis.
- Parcel-level feasibility analysis based on zoning. This analysis determines if a parcel is considered feasible for development and what prototype is most feasible by parcel.

**2. Land Capacity Analysis**

- Start with the 2022 VBLM dataset that has been updated to reflect the zoning or comprehensive plan designation assigned to the various alternatives.
- Apply filters to exclude land types **not eligible for development**:
    - **Infrastructure rights-of-way and easements**: roads, rail, utility corridors, etc.
    - **Public ownership exclusions**: parks and other tax-exempt lands unless redevelopment is anticipated. Coordination with the parks department is needed to update the inventory.
    - **Parcels below minimum size thresholds** or lacking infrastructure access may be excluded.
        - Parcels less than 1,000 square feet are excluded.
- **Split the remaining land by intended use**:
    - Allocate percentage of parcel acreage to either **residential or employment uses** (jobs/housing split) based on zoning.

        - From this point in the analysis, only the assigned acreage is used for either residential or employment analysis.

- Apply further deductions:
    - **Critical areas**: Critical areas identified by the County's VBLM process and are considered 'constrained' in the dataset.
        - Development in critical or constrained areas is limited. For housing analysis, lands in critical areas are counted at half their total area. For employment analysis, vacant or underutilized constrained lands are reduced by 20%, while built constrained lands are reduced by 50% in the calculation.
    - **Market factor for Employment**: proportion of land that will realistically be developed within the planning timeframe.
        - 10% of Vacant or Underutilized lands will not develop given market conditions. 10% reduction in total acreage by parcel is deducted.
    - **Redevelopment Rate for Employment:** 12.8% of lands zoned Mixed Use are anticipated to be redeveloped. 27.4% of lands zoned Regional Activity Center are anticipated to be redeveloped.
    - **Infrastructure:** proportion of land within a parcel that would be allocated for infrastructure placement.
        - 31.5% deduction in total acreage of a parcel for residential analysis
        - 31.5% deduction in total acreage of a parcel for employment analysis for all zones except Industrial/Employment (IE) and Heavy Industrial (HI). IE has a reduction of 12.5% and HI has a reduction of 25%.

**3. Apply Density/Intensity Ratios**

- Assign densities to each parcel based on their zoning. Density ratios are applied to the acreage remaining after deductions.
    - Residential: units per acre based on typology identified during feasibility analysis.
    - Employment: jobs per acre based on zoning.

**4. Apply loss of existing jobs on redeveloped parcels**

- The job loss deduction applies to Built (as determined by the Vacant Buildable Lands Model) land in the MU and RAC place types that are assumed to be redeveloped. This assumption accounts for a loss of existing jobs on the redeveloped parcels.
    - Reduce the number of jobs by parcel by 13 jobs/net acre.
- This analysis was done post-processing and is not included in the python notebook.

# Appendix D: Draft EIS Comment Period Outreach Summary

# DRAFT EIS COMMENT PERIOD OUTREACH SUMMARY

## Summary

Outreach directed people to learn about the findings in the Draft EIS, including the alternatives and potential impacts, and to provide comments.

- ~2,400 Be Heard visitors
- ~3,500 StoryMap views
- 22 total e-newsletter emails sent through three City email lists.
- 27 social media posts garnered 69,454 unique views.
- 100+ community groups, neighborhood associations, and boards/commissions directly emailed.
- 20 events:
  - Two interactive public meetings
  - Two virtual sessions
  - 11 presentations
  - One self-guided exhibit
  - Four tabling events
- Seven locations with outreach materials
- Nearly 600 promotional video views, also shown at three Movie in the Park events
- Two newspaper articles – The Columbian and the City's quarterly newsletter

## Be Heard

The Be Heard page shared information about the Draft EIS, comment period, and how to comment and directed people to the StoryMap. Additional project information, such as upcoming events, project documents, and FAQs, was also available on Be Heard.

## Vancouver Connects

Monthly citywide email list for various City-related news run by the City's Communications team.

- Comment period open – 7/9/2025
- Experience Our Vancouver 2045 - 8/8/2025
- HB 1110 info - 9/5/2025

## Office of Neighborhoods Update

Twice a month email list to neighborhood leaders run by the City's Office of Neighborhoods.

- Comment period open – 7/11/2025
- How should Vancouver grow and develop? - 7/25/2025
- Experience Our Vancouver 2045 – 8/8/2025
- HB 1110 info – 8/22/2025

## Social Media

Social media posts encouraged people to visit Be Heard and the StoryMap, then provide comments via the designated comment methods. Social media was also used to advertise the interactive public meetings and virtual sessions.

## Community Working Groups (CWGs) (7)

- Affordable housing developers
- Building Industry Association
- Business Leaders
- Climate
- Community-based organizations
- Market-rate housing developers
- Transportation

## Boards and Commissions (6)

- City Council
- Planning Commission
- Transportation and Mobility Commission
- Urban Forestry Commission

- Parks and Recreation Advisory Commission
- City Center Redevelopment Authority

## Presentations & Events

Staff presented – in-person and virtually – the findings of the Draft EIS and shared information about how to comment at the following events/groups. The interactive public meetings and virtual sessions were advertised on Be Heard and the City's website, through e-newsletters and direct emails, in canvassing and tabling materials, and during presentations.

### Interactive Public Meetings

Posterboards, maps, and other materials in both English and Spanish were displayed in a room where people could drop by to learn about Our Vancouver and the Draft EIS, provide written comments (none received at either), and speak with project staff.

- 7/30/2025 - Experience Our Vancouver 2045 at Firstenburg
  - ➡ Appx. 40 attendees
- 8/9/2025 - Experience Our Vancouver 2045 at City Hall
  - ➡ Appx. 50 attendees

### Virtual Sessions

- 7/22/2025 - Our Vancouver Virtual Session 1
  - ➡ Appx. 30 attendees
  - ➡ Presentation
  - ➡ Recording
- 8/4/2025 - Our Vancouver Virtual Session 2
  - ➡ Appx. 16 attendees
  - ➡ Presentation
  - ➡ Recording

### Group-specific Presentations

- 7/8/2025 - Planning Commission Workshop
- 7/14/2025 - City Council Workshop
- 7/17/2025 - City Center Redevelopment Authority (CCRA)
- 7/26/2025 - National Association for the Advancement of Colored People (NAACP)
- 8/4/2025 - Building Industry Association (BIA) Community Working Group
- 8/4/2025 - City Council Workshop
- 8/7/2025 - Advancing Racial Equity, Diversity & Inclusion (AREDI) Summit
- 8/13/2025 - Transportation Community Working Group
- 8/26/2025 - Business Leaders Community Working Group

- 8/30/2025 - Cycle Vancouver
- 9/2/2025 - Transportation and Mobility Commission (TMC)

To raise awareness about the Draft EIS and comment period in the months leading up to the comment period, we also presented to several groups, including:

- Urban Forestry Commission (UFC)
- Parks and Recreation Advisory Commission (PRAC)
- Downtown Stakeholders meeting
- Other project working groups
- Groups convened by Native American Youth and Family Center (NAYA), Odyssey World International Education Services (OWIES), and Southwest Washington Equity Coalition (SWEC)
- Vancouver Neighborhood Alliance and at neighborhood association meetings

### Self-guided Exhibit

Posterboards and maps from the interactive public meetings were displayed in the City Hall lobby for 12 business days, from 8/19/2025 to 9/4/2025.

### Tabling

Posterboards were displayed and handouts and postcards were distributed at the following events. Staff spoke with attendees about Our Vancouver, the Draft EIS comment period, and upcoming events.

- 6/14/2025 - Juneteenth Freedom Celebration
- 6/21/2025 - Pollinator Festival
- 7/13/2025 - Sunday Sounds Concert Series
- 7/24/2025 - Waterfront Concert Series

## Canvassing

Postcards in English, Spanish, Vietnamese, Russian, Ukrainian, Chinese (simplified), and Chuukese and handouts in English were dropped off at the following locations.

- City Hall lobby
- City Hall permit center
- Firstenburg Community Center
- Cascade Park Library
- Fourth Plain Commons
- Marshall Community Center
- Downtown Library

Additionally, by request, outreach materials were provided to:

- Central Park Neighborhood Association
- Village at Fishers Landing Neighborhood Association

## Promo Video

A 2-minute video about the comprehensive plan update and comment opportunity had 599 views, with an average view duration of 1 minute and 19 seconds.

The video was embedded in the StoryMap, added to social media posts, and played as a trailer before the following Movie in the Park events:

- 8/1/2025 - Coco at Esther Short Park
- 8/8/2025 - Moana 2 at Bagley Community Park
- 8/22/2025 - Barbie at Columbia Tech Center Park

The video was also played on CVTV. The Spanish StoryMap had the same video with Spanish captions, and both StoryMaps included a link to a transcript of the video for added accessibility.

## Print Media

### City of Vancouver quarterly newsletter

- July 2025 - COV_CityNewsletter_July-2025.pdf

### The Columbian

- 7/12/2025 - Vancouver document outlines environmental effects of 3 approaches to handling growth - The Columbian

# Appendix E: Responses to Individual Draft EIS Comments

# APPENDIX E: RESPONSES TO INDIVIDUAL DRAFT EIS COMMENTS

## Summary

The City received a total of 440 responses during the Draft EIS Comment period from July 8 to Sept. 8, 2025:

- 330 total responses from the online comment form, of which 24 responses were incomplete forms and did not contain a comment.
- 94 comments via email, 6 of which were also submitted via online comment form/physical mail.
- 15 comments via physical mail, 1 of which was also submitted via online comment form/email.
- 1 comment via voicemail.

A total of 409 unique comments were received. Thirteen of these comments were received from agencies, businesses, or organizations. Chapter 6 of the Final EIS provides a more detailed summary of the themes of comments received and demographics of commenters.

## How to View Responses to Draft EIS Comments

Table 1 provides a list of names for all comments received, alphabetized by last name. The first column provides the first and last name (as available) for the commenter, as well as associated organization or business (if applicable). The second column provides a corresponding Comment Identification number for the comment(s) submitted by that individual or organization.

- Comment IDs with numbers are those received via web form.
- Comment IDs with letters are those received using other methods (email, voicemail, mail, etc.)
- Duplicate comments that were received via multiple channels, i.e. sent via the online comment form and email, were given one Comment ID.
- Some commenters provided multiple comments and therefore have multiple comment IDs.
- Identifying information (including full addresses, email addresses, phone numbers, parcel numbers, etc.) has been removed from comment text as applicable.

Table 2 provides the full text of the comments and the City's responses. The far-left column provides the Comment ID number, which corresponds to those listed in Table 1. The comments and responses in Table 2 are provided in numerical or alphabetical order, starting with Comment IDs with numbers and followed by Comment IDs with letters.

**Note: Many of the individual comment responses point readers to responses to 15 common comment themes. Chapter 6 of the Final EIS provides these common comment responses.**

## Comment Identification Table

*Table 1. Index of Commenters, Alphabetized by Last Name*

| First and Last Name, Organization (if provided) | Comment ID |
|---|---|
| J. A. | CX |
| Marilyn Abbink | 294, 297, CK |

| 1 | The proposal in alternative 2 seems like the best choice thinking about long term growth of downtown and ensuring higher density housing near existing transit lines. | Comment noted.<br><br>Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 2 | The City is missing out on a huge opportunity in the Royal Oaks neighborhood. Zoning the golf course and underutilized residential surrounding it low density is a mistake. The site will have access to Fourth Plain, which has been a focus for commercial, affordable housing, and transit. At a minimum there should be a strip of commercial or MX along 4th plain. Better would be to rezone the area Medium Density, as the golf course and existing lots are prime for redevelopment and infill. It makes no sense why you would zone Green Meadows golf course and surrounding residential Medium when the majority of the existing lots are smaller than the Royal Oaks area and the access/transit is less enticing to development. | Comment noted.<br><br>The Preferred Alternative proposes zoning the Royal Oaks Golf Course property as Medium-Scale Neighborhood and adjacent parcels along NE Fourth Plain Boulevard as Mixed-Use Neighborhood, which is different from the lower-density approach originally proposed in Alternatives 1 and 2. Refer to the Preferred Alternative interactive map on the Our Vancouver 2045 website for more details. |
| 3 | "This message comments on the city's proposals to mix low- and medium-intensity zones within a single block. Absent a compelling reason, such as a unique geographic feature, all properties within a block should be low-intensity or medium-intensity, but not a mixture of both.<br><br>The following block serves as an example: The block in the South Cliff Neighborhood that is bounded by Umatilla Way, Oswego Drive, Manzanita Way, and Oregon Drive.<br><br>Alternative 1 would zone the parcel at the corner of Manzanita and Oregon as medium-intensity; the remainder of the block would be low-intensity. Alternative 2 would zone the parcels along Oregon Drive and Umatilla Way as medium-intensity; a minority of lots on the block would be low-intensity.<br><br>Our experience from other jurisdictions has been that mixing intensity zones in a block creates unfairness, especially for property owners whose parcels are not zoned to the higher intensity.<br><br>In our experience, residents of a low-intensity area prefer that low intensity to a higher intensity. If a parcel on the same block develops into a medium-intensity use, residents of low intensity parcels are likely to enjoy their parcels less than if the higher-intensity use had not developed. The owners of the low-intensity parcels, however, do not have the ability to develop their parcels the same way or to sell their parcels for higher intensity development. The owners, therefore, lack the economic benefit accorded neighbors who can develop their parcels or sell their more developable parcels for higher sums. The low-intensity owners also suffer potential financial detriment by having a smaller pool of potential purchasers for their low-intensity parcels because, in our experience, people who enjoy low-intensity prefer a block that is entirely low-intensity to a block that is of mixed low- and medium-intensity." | Comment noted.<br><br>Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>In developing the Preferred Alternative, the City considered land uses near and within particular blocks, along with implications for efficient long-term future growth. Similar to Alternative 2, the Preferred Alternative proposes Medium-Scale Neighborhood zoning for the eastern half of the block bounded by Umatilla Way, Oswego Drive, Manzanita Way, and Oregon Drive, primarily to allow more long-term housing near key public facilities, in this case the abutting South Cliff Park located across the street.<br><br>Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 4 | I would like to see more density and mixed use development in downtown and along the Fourth Plain and Mill Plain corridors. | Comment noted.<br><br>The Preferred Alternative designates downtown and areas along Fourth Plain and Mill Plain primarily as a mix of Regional Activity Center and Mixed-Use Neighborhood, which allow for more density and mixed-use development. Refer to the Preferred Alternative interactive map on the Comprehensive Plan page on the City's website for more details. |
| 5 | I want to avoid Vancouver becoming another Portland with tall residential buildings and rentals more than ownership. With no clear identification for the city from any other city. Want to keep the small business feel more than a corporate feel. Have plenty of outdoor green spaces with high regard to saving our climate. | Comment noted.<br><br>Some increases in allowed residential building heights are needed to accommodate state-mandated housing growth targets. Under the Preferred Alternative, most of the City's residential areas would be zoned as Low-Scale Neighborhood or Medium-Scale Neighborhood, which allows building heights of up to 75 feet (about 5 stories). The amount of land area zoned for parks and natural areas would be the same for all alternatives considered. |

| | | Refer to the Housing section of Final EIS Chapter 3 for a discussion of the potential effects of the Comprehensive Plan Update alternatives on housing diversity and supply, as well as proposed Comprehensive Plan policies to address impacts to housing and homeownership. Refer to the Aesthetics section of Final EIS Chapter 3 for more information on the potential effects of taller building heights and proposed Comprehensive Plan policies to address these impacts. |
| 6 | I live in the Waterfront region and want to become a contributing, permanent member of the community by investing in housing. The problem is that the majority of new housing in the waterfront area is all rental creating a very transient community of people continually coming and going. Shouldn't we also be focusing on ensuring we build a stable community of families that can invest in affordable permanent housing in the Waterfront are. Right now it feels like a bonanza for realty investors making money off of the location. Thank you | Comment noted.<br><br>There is an existing City requirement to include affordable housing in the adjacent Waterfront Gateway area located between existing Waterfront and City Hall.<br><br>Refer to the Housing section of Final EIS Chapter 3 for a discussion of the potential effects of the Comprehensive Plan Update alternatives on housing diversity and supply, as well as proposed Comprehensive Plan policies to address impacts to housing and homeownership. |
| 7 | "I am fully in support of Alternative 2 (Plan B), as it seems best-suited to address the climate, housing, health, and social crisis facing our city. With regards to land-use in the plan, I support the fewer zoning district types provided in alternatives one and two, as I believe that simplifying the number of building codes construction companies need to deal with will help to cut the red tape currently associated with housing construction, and expedite the process of building denser housing. I am also happy to see many of the parking-lot heavy land-use areas, characterized by large box stores which damage our community, being re-zoned into RAC or mixed-use neighborhoods. These spaces not only further car-dependence, but are a tax drain on the city and take valuable land that could otherwise be allocated to local or small businesses. While large corporations like Walmart, Costco, Target, or Fred Meyer will still have their place in Vancouver in the future, I hope (if this plan is to go into effect) that densification of these areas of our city will lead to greater abundance of choice, and lower costs of entry for entrepreneurs. Finally, while I am in support of the up-zoning of many residential neighborhoods, I feel that even in plan two, many neighborhoods remain dominated by the new low scaled neighborhood type. While not all neighborhoods can be up-zoned, I do question why neighborhoods along or near major arteries in the city, such as Vancouver Heights, Marrion, and North Garrison Heights along Mill Plain, remain low density. Unless this decision was made to calm traffic congestion near the PeaceHealth Medical Center, extending mixed-use zones along the whole of major arteries like Mill Plain Boulevard would better achieve divestment from car-dependence, as densification along major roads will help to justify re-apportioning the lanes on those roads for higher-throughput modes such as bikes or public transit.<br><br>My biggest concern isn't with the land-use map, but with the specifics of each zoning district. While specific policies were outlined in the April 7th/8th meetings, communication from the city about specific legislation that will be used to achieve policy goals remains poor in my experience. Many cities that have tried to re-zone to facilitate more housing construction have failed. While the city goal to eliminate parking minimums is a good start, I am skeptical of how that will be implemented. If parking minimums remain for many potential developments in mixed-use spaces and residential neighborhoods, development costs associated with more plots per lot may incentivize developers to continue building space-inefficient developments. Other specific issues I have not seen addressed at all. The double egress law common in almost all US cities is damaging to housing supply goals, as two staircases demand more floor space, developers need bigger lots, bigger apartment buildings, and bigger parking lots, in order to make development profitable. Reforming the double egress law to allow for egresses other than stairwells, like in cities like Seattle, New York City, and Honolulu, will help achieve greater competition between developers, a denser city overall (both of which will help drive down rent prices), and promote the creation of smaller apartment buildings which integrate more seamlessly into the facade of neighborhoods, and therefore will receive less public backlash, expediting construction speeds. Additionally, while WA HB 1110 could serve to create more housing in the city, plenty of states like California (with their SB-9 bill) have tried the same and have not seen new construction come to light (sb-9 had little to no affect on housing supply in CA, according to a report by David Garcia and Muhammad Alameldin published Jan. 18 2023 by UC Berkley). What policies will the city have to address restrictions like lot size maximums, setback laws, and lot coverage restrictions that disproportionately discriminate against missing middle housing? And will steps be taken to make developing middle housing more financially viable than single-family houses, either by cutting development costs, or subsidizing those developments through more space-inefficient developments? Much of the success of these policies depends on regulations protecting citizens while not making | Comment noted.<br><br>The Preferred Alternative, like Alternatives 1 and 2, proposes to rename and simplify the existing Comprehensive Plan land use designations and associated zoning code. Refer to Chapter 2 of the Final EIS for a description of the alternatives studied and a summary of the proposed zoning code allowances, including heights, density, and typical building types. The proposed zoning code update would allow commercial uses in all residential zones, including Low-Scale Neighborhood and Medium-Scale Neighborhood.<br><br>Refer to the Our Vancouver 2045 website for more details about the proposed Comprehensive Plan and code updates that address parking minimums, egress laws, lot size maximums, setback, and coverage restrictions.. |

|---|---|---|
| | home-ownership out-of-reach. Attention on this has spiked due to the book ""Abundance"" by Klein/Thompson as of recently, but communication seems to be focused on adding goals and policies (112 from that April meeting, infact!). What steps will the city take to tear down hurdles for developers? Will environmental protections, employment quotas, and a host of other regulations be reformed to still meet these honorable goals, while allowing for more construction to occur? Finally, another important specification that hasn't been communicated well is how mixed-use each of the new zoning districts will be. Will mixed-use be constricted to just the ""mixed-use neighborhoods"", or will commercial developments be allowed (to a lesser extent) even in low- and medium-scale neighborhoods? Mode share diversification into biking and walking is heavily dependent on everyday trips being safe (which the city has failed in through thin, un-protected bike lanes and sidewalks), and short. In 2045, will low-density neighborhoods have corner stores, or a cafe every few blocks? Will a family in one of those neighborhoods be able to start a daycare, or build a family owned business in their front yard, without heavy government oversight, heavy development restrictions/costs, and overbearing public comment periods? Those to me are indicators that mixed-use policies were a success for all residents." | |
| 8 | "I live near 136th and Mill Plain. I have enjoyed this as a walkable neighborhood: being able to access retail options on foot or by bus. Now I am very disappointed with the City.<br><br>The interactive map (for several alternatives) shows a very large red area (where the former airport landing was). This could have been a locale for local retailers, or a quaint development with trees and walking areas. Instead, valuable real estate is being paved over with 5 car dealerships. Lots of cement. More cars. Less walkable. More industrial than residential. Certain to be hotter and more congested.<br><br>Previously I applauded the City for its walkable neighborhood concept. Now that seems like a sham. And when I contacted a City Planning associate -- by name--I received an automated reply. Vancouver's notion of a walkable city has just been canceled out by promoting multiple car dealerships: and expensive cars that I usually do not see on our streets.<br><br>I usually participate in City events, but I now feel betrayed by false promises.<br><br>If this is an environmental analysis, then it removes an open grassy area (airport landing) and replaces it with cement. It discourages walking and promotes automobiles. There will be more pollution. The Lexus dealership construction already obscures the view of trees and distant mountains.<br><br>There have been two LTEs and an editorial regarding these changes.<br><br>P.S. Having reviewed several EIS's over the years, I feel this format is not useful." | Comment noted.<br><br>Refer to Common Response #3, Car Dealerships. |
| 9 | I live near Fourth Plain and Harney. I'm against Alternative #2 because there's no way that stretch of Fourth Plain can handle mixed use without huge upgrades to parking and infrastructure. No Action and Alternative #1 allow for some commercial activities, which I'm for. However, #2 screams. parking and traffic nightmare overflowing into residential neighborhoods and I see no plan to address those added variables. | Comment noted.<br><br>Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>Refer to Common Response #4 for more information about vehicle traffic impacts and Common Response #6 for more information about vehicle parking impacts. |
| 10 | "I strongly prefer Alternative 2. I am not very familiar with the east side of town, but live in the west side. Alternative 2 provides for more density, especially along arterial corridors. This is better for the overall environmental impact by reducing GHG emissions. My neighborhood (NW neighborhood) can benefit from increasing density along 39th Street, upper Main St. and within the current single family zone. It also makes it easier to maintain and improve our local streams and Vancouver Lake. I would, however, like to see better buffering between the industrial uses in Fruit Valley and the Lake and conservation areas. Also Burnt Bridge Creek is currently polluted and adds polluted and warm water to the Lake. The entire length of the creek needs improvement to the watershed so that there is clean and adequate flow all year. If we can improve density, maybe we can increase use of public transportation. | Comment noted.<br><br>Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. The Preferred Alternative, similar to Alternative 2, includes higher density zoning along 39th Street and Main Street.<br><br>Regulation of small electric vehicles is outside the scope of the EIS and the Comprehensive Plan. The comment has been shared with city decision makers. |

| ID | Full comment | Response |
|---|---|---|
| | The City and State also need to better define and regulate small electric vehicle use, i.e., scooters, electric bikes, etc. It is not clear whether they may use bike lanes or must stay out of bike lanes, causing confusion and potential accidents.<br><br>As more electric alternatives become used, clarity of how and where they can go will improve their adoption, reducing passenger car use.<br><br>Finally, once again I encourage the City to work with Ctran to create frequent free electric trams circulating from the waterfront to at least Fourth Plain, tied together with free or low cost parking or park and ride structures near freeway exits." | City staff work closely with C-TRAN on transportation improvements. The comment about trams has been shared with city decision makers. |
| 11 | *Incomplete form, no comment received* | *N/A* |
| 12 | I'm concerned that with both Alternative plans 1 and 2, include a great deal of industrial growth and increase in large scale housing, creating denser areas of Vancouver. Both of these plans take away more natural areas and undeveloped areas of green space. | All of the alternatives, including the Preferred Alternative, maintain the same percentage of citywide land zoned for Heavy Industrial. The Preferred Alternative proposes less land zoned for Industrial/Employment than the No Action and Alternative 1, and a similar amount compared to Alternative 2.<br><br>Some increases in allowed residential density and building scale are needed to accommodate state-mandated housing growth targets. Under the Preferred Alternative, most of the City's residential areas would be zoned as Low-Scale Neighborhood or Medium-Scale Neighborhood, which allows building heights of up to 75 feet (about 5 stories).<br><br>The amount of land area zoned for parks and natural areas would be the same for all alternatives considered. |
| 13 | "protect and respect history<br><br>-eliminate overhead lines and poles, put it all underground<br><br>-don't build homes near freeways, it exposes people to too many poisonous fumes and noise<br><br>-build an elevated trolley/train line like SoundTransit LINK in Seattle, with free parking at stations<br><br>-provide safe neighborhood parks and common areas with trees and fences<br><br>**Hazel Dell: get rid of all the bikini coffee carts and massage shops! They are disgusting, have inhumane working conditions, are dangerous for the women and girls. Help avoid human trafficking! Frequented mostly B18 creepy men who could make their coffee at home or go to a reputable coffee house instead of leering at barely dressed girls, alone in a box, in all kinds of weather. Make Vancouver more civilized! This is shameful and embarrassing to have these places in our community!<br><br>**No fireworks!" | Your comment was reviewed and is outside the scope of the SEPA analysis for the Our Vancouver Comprehensive Plan Update. Refer to the following sections in Final EIS Chapter 3 and 4 for more information about some of the topics in this comment: Historic and Cultural Preservation, Noise, and Air Quality, Greenhouse Gas Emissions, and Climate. |
| 14 | If I'm still here in 2045, I'd like to see a Vancouver with senior support groups. It's a very lonely place when the people you know have died. | Comment noted. Refer to the Our Vancouver 2045 website for more details about the proposed Comprehensive Plan update, including the goals and policies included in the Comprehensive Plan Community Experience chapter. |
| 15 | Please don't make Orchards too industrial. Orchards needs better walkability and local shops, NOT warehouses and industrial buildings. I hope the plans bring more culture and lifeto NE Vancouver! | Your comment was considered but it was not applicable to the EIS analysis because Orchards is outside of the City limits and therefore not included in this Comprehensive Plan Update. |
| 16 | We need a wide variety of housing. Are efforts are delivering more apartments. We need to be delivering more middle housing products and giving folks the opportunity to own their home. Overall I think the City has the same goal. | Comment noted. Refer to Chapter 2 and Chapter 3 of the Final EIS for more information about proposed housing types in the Comprehensive Plan alternatives. The Preferred Alternative allows for more housing and for housing of different types and sizes, including middle housing, in more areas of the city. |
| 17 | "Hello,<br><br>I wanted to send in a comment for the subject property at [address] Vancouver, WA 98683, which shows it will be in the Low Scale Neighborhood for Alternative 1 and Alternative 2. The subject property is 19,457 sq. ft. or 0.45 acres (per Clark GIS). | The Preferred Alternative zones this property as Low Scale Neighborhood. Refer to the Our Vancouver 2045 website for more details about the draft zoning code, including allowable units and building heights. The zoning code will be finalized and adopted with the updated Comprehensive Plan. |

| ID | Full comment | Response |
|---|---|---|
| | Both Alternative 1 and Alternative 2 appear to designate the subject property as Low Scale Neighborhood, allowing for up to 6 units per parcel, 3 stories, and a 45-foot height limit. Do you know how I can tell how many actual units I can build and what the limitations are?<br><br>In the No Change scenario, my property is shown as R-9, whereas the properties to the north and east are marked as R-18. Can the subject property show as R-18 on the No Change scenario?<br><br>Best regards,<br><br>Denny Le" | |
| 18 | I strongly support alternative two, given the community need for ample and affordable housing in the coming decades. | Comment noted.<br><br>Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 19 | "Reading the housing I wondered if this includes the homeless population and the plan to get them into housing. Are they included in the 199,??? or the 81,????<br><br>I noticed that you included unincorporated Vancouver in some of the future designs. Is that also part of the 199,000 that you had quoted. I am also wondering about if sidewalks would be put in, in those areas that do not have them right now? Some roads there are barely wide enough for two cars, it is hard to think about sidewalks in those areas, at the same time it would make people who are walking feel safer. Being a visually impaired walker that is a concern for me.<br><br>My third thing is, I know that you don't have control of C-Tran, will they be expanding any services with more population?<br><br>I noticed under the transportation you had listed that people drive a lot in the 4 miles of their homes. I have to say that the grocery store, for me is a mile a way. The pharmacy is also 3/4 of a mile away. Taking the bus to the pharmacy can be just one bus ride way. But the grocery store, is two buses, or walk half a mile, then take the bus the other half mile. There is not always room to have a folding shopping cart full of groceries, depending on other passengers and disabilities too. I have to say that half mile to the bus stops is not always the best sidewalks, and I then to walk in the street, less bumps, to get my cane stuck on or trip over." | Population data in the EIS comes from the U.S. Census Bureau American Community Survey (ACS) and includes the incorporated City of Vancouver limits only. ACS includes some people experiencing homelessness but is not considered a complete count.<br><br>Refer to the Housing section of Final EIS Chapter 3 for a discussion of the potential effects of the Comprehensive Plan Update alternatives on housing diversity and supply, as well as proposed Comprehensive Plan policies to address impacts to housing and homeownership. Refer to the Our Vancouver 2045 website for the Comprehensive Plan Housing chapter, which includes goals and policies to address homelessness.<br><br>The Transportation System Plan (as adopted by the Comprehensive Plan) includes a goal to fill sidewalk gaps. The City coordinates with C-TRAN on a variety of topics, including long-range planning. |
| 20 | "I have comments about the new interstate 5 bridge project:<br><br>Potential approaches to making the I-5 bridge project both cheaper and more cost-effective involve a combination of strategic planning, innovative design, efficient execution, and robust financial management.<br><br>Here's a breakdown of strategies that can contribute to this goal<br><br>1. Value engineering and design optimization<br><br>Focus on Essential Functions: Thoroughly analyze project requirements to distinguish essential functions from desirable but non-critical features that could be simplified or eliminated.<br><br>Explore Alternative Materials & Methods: Evaluate various material choices and construction techniques, considering their long-term performance, durability, and life-cycle costs, not just upfront expenses.<br><br>Embrace Sustainable Materials: Choosing sustainable materials can lead to cost reductions by aligning with green building trends, potentially offering energy efficiency, waste reduction, and enhanced longevity.<br><br>2. Optimized planning and procurement<br><br>Accurate Cost Estimation: Invest in detailed and reliable cost estimations during the planning phase to avoid surprises and allow for better budgeting. | Your comment was reviewed and is outside the scope of the SEPA analysis for the Our Vancouver Comprehensive Plan Update. Refer to the Interstate Bridge Program website for more information about how to comment on that project. |

|---|---|---|
| | | Large amounts of garbage in a public park or garbage blocking a street or sidewalk can also be reported using the Public Works Service Request form at: https://www.cityofvancouver.us/servicerequest<br><br>Refer to Common Response #15 Homelessness for more information on how the City is working to address homelessness.<br><br>The Transportation section in Chapter 3 of the Final EIS includes information about parking and recommends strategic pricing mechanisms to regulate the availability of on-street parking in Mixed-Use and Regional Activity Centers. It also includes policies to support access to key places by walking, bicycling/small mobility, or transit. Parking management helps ensure parking is available for residents, businesses and visitors For additional questions or comments related to parking, please refer to the Parking page on the City's website. |
| 23 | I think these plans would make our city a much better place to live in. I liked alternative two since it overall allows for the most density and more mixed use areas. I just think the area around the Amtrak station should be if possible, fully integrated with downtown Vancouver. Right now that area is surrounding by industrial buildings and is generally not appealing to go to. The lack of transit options is also an issue. A bus line, or better yet, some kind of light rail or streetcar (maybe work with TriMet to have a second MAX line run through there?) to connect the station to the rest of downtown would do wonders. But overall, I was concerned with the new designation for the residential areas. Would it not be possible to allow for some mixed use in these areas as well? People could open businesses in their garage, or have stores on every corner. While this plan definitely blurs the lines between uses somewhat, I feel like the main issue of exclusive residential zoning being the default is still present. I feel like both business and neighborhoods would benefit if it was possible to open say, small shops and restaurants in residential areas. It would also help to lessen the need to drive, since now there could be for example, a mini mart, only a quarter mile away. | Comment noted.<br><br>Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>Similar to Alternative 2, the Preferred Alternative would increase density across Vancouver and allow for mixing of residential and commercial uses in more areas. The Low- and Medium-Scale Neighborhood zoning districts would also allow for some commercial uses. |
| 24 | *Incomplete form, no comment received* | *N/A* |
| 25 | I would like to encourage development along the lines of Alternative 2. I feel the only way forward is a densified City of Vancouver, that is highly livable (prefer mixed use over straight industrial) and commutable without driving, while allowing for a maximum of natural spaces for climate mitigation, food security and last but not least quality of life. I would also like to urge the City to incorporate/change policy of building permits to no longer allow huge parking lots (think multi storey, underground, or at at the very least covered by solar panels) with new developments. Another factor that needs to be written into policy is the inclusion of small natural and planted spaces into multi family or multi use developments, again to maintain quality of life while we start living in more proximity of each other. | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>Similar to Alternative 2, the Preferred Alternative would increase density across Vancouver and allow for mixing of residential and commercial uses in more areas. Refer to Common Response #6 for more information about changes to parking minimums proposed with the Comprehensive Plan and code updates.<br><br>Refer to the Our Vancouver 2045 website for the Comprehensive Plan Parks and Recreation chapter, which has more information on goals and policies addressing parks and open space. |
| 26 | *Incomplete form, no comment received* | *N/A* |
| 27 | "I would like to strongly advocate for sidewalks along NW Lincoln Ave in the Northwest neighborhood to improve connectivity, increase access to the bus, increase safety, and reduce the need to drive. Currently there are very few areas along NW Lincoln that contain sidewalks, however the entire road is a c-tran bus line. Without sidewalks, it makes it difficult for people with mobility aids to access the bus stops- they are often in the grass. It also feels very unsafe to walk along this road because you are in the almost non-existent shoulder. I really think this area should be prioritized for complete streets or funding for sidewalk completion.<br><br>I also fully support any zoning that would welcome local businesses in our neighborhood. I realize with the way the neighborhood is currently built, this might not be possible, but even increased possible local businesses that can be walked to in Lincoln (which looks like a possibility in the alternatives) in addition to more sidewalks in our neighborhood would help to reduce car trips! I have previously lived in the Woodlawn neighborhood in Portland and | Comment noted. The Transportation section of Final EIS Chapter 3 identifies proposed measures that support street standards and infrastructure for pedestrians, such as sidewalks. Your specific comment has been shared with City decision-makers. Refer to Common Response #7 for more information about sidewalks.<br><br>The Preferred Alternative designates the Lincoln and Northwest neighborhoods primarily Low-scale Neighborhood and Medium-Scale Neighborhood, with some areas along key corridors as Mixed-use Neighborhood. These zoning designations allow both housing and business uses, including cafes, salons, professional services, and restaurants.<br><br>The Land and Shoreline Use section of Final EIS Chapter 3 identifies proposed measures that support small and emerging businesses. The Transportation section of Final EIS Chapter 3 identifies proposed measures that support walking, cycling, and taking transit. |

|---|---|---|
| | being able to walk to a corner store with some staples but also serves food like a bottega, a yoga studio, coffee shop, my acupuncturist, multiple restaurants, and a park was so lovely!<br><br>I moved to the west side of Vancouver because I wanted to be able to walk/bike/bus more, but I am still finding it difficult." | |
| 28 | "I would love to see real public transportation from Uptown to the waterfront and back. Not just an occasional bus that doesn't really connect! It would eliminate the parking hassle and current hatred of downtown and council members. A trolly? A weekend system? RYD has the model in place- just expand. W don't need to follow Portland- we can be an original. Look into other major cites and Circuit or Freebee or FRED etc!!! This is so needed and NOW!!<br><br>As for plants and trees... more green space. Stop building on the waterfront. On a hot day it's like being an ant under a magnifying glass- hotter than hell!! We need more trees there like Esther Short has. Remember Esther Shirt park? The place that used to be our living room and millions of dollars were spent to renovate it only to have Mayor A move everyone to the magnifying glass area!!!!<br><br>Our downtown needs only to look at the success of Walla Walla or Camas to see how fantastic we could be!!" | Comment noted.<br><br>The Transportation section of Final EIS Chapter 3 identifies proposed measures that support improvements to transit connections to key areas of the city. The Air Quality, Greenhouse Gases, and Climate and Plants and Animals sections of Final EIS Chapter 4 also identifies measures to mitigate the impacts of climate change, including extreme heat, and measures that support the protection of tree canopy. The amount of land area zoned for parks and natural areas would be the same for all alternatives considered. |
| 29 | "I wasn't able to use the Alternatives maps because of what seemed like a technical issue.<br><br>Mostly I just want to say that I hope that as few of the older buildings in the downtown area as possible - what's left - get torn down and replaced with boxy high rises. The buildings with the beautiful brickwork should stay. We do need affordable housing but I'm not sure that all those new apartments are affordable to most renters. While making the city more affordable to live and get around in, I hope the plan also includes making / keeping it pleasant - green spaces, trees, some sense of pleasing design about anything new being built. I live in Hough, and while I know we need multiple-unit housing, I wish the new ones weren't so ugly. Also, in residential neighborhoods of any kind there should be some sort of code regarding yards that discourages removing everything green and replacing it with concrete; it really detracts from the liveability." | We are sorry to hear about the technical issues you experienced. For further assistance, please reach out to OurVancouver2045@cityofvancouver.us.<br><br>Comment noted. The Aesthetics and Historic and Cultural Preservation sections of Final EIS Chapter 3 identify measures intended to protect historic and architecturally significant structures and ensure compliance with citywide standards for landscaping and tree conservation. The Water and Plants and Animals sections of Final EIS Chapter 4 also identify measures that support green space, trees, and limiting new impervious areas. |
| 30 | "PLEASE PLEASE PLEASE put the vehicle lanes back how they were. It takes three times as long as it used to in order for us to get to work with only having one lane. The bus only lanes are a total failed experiment. The commuters that use and pay for these lanes through car tabs, and gas taxes need them. The other problem is the fancy homeless camps using the new extra wide bike lanes to make their homes.... THANKS FOR THAT...<br><br>The other problem is the roundabouts. No one was ever trained on how to properly use them. They've already caused multiple rear ender and sideswipe accidents due to people either stopping all together until they feel ""safe"" enough to proceed. Or they try to rush in front of other cars to get one spot ahead and then sideswipe vehicles.<br><br>Yes my trucks been hit in one by a person not even rushing and not seeing me.. and hitting the rear quarter panel and rear bumper. Its a total joke how these were installed..<br><br>THE last thing is WE DONT WANT PORTLANDS CRIME RIDDEN MAX TRAINS HERE.... I have 4 relatives that drive them and they all agree the max is nothing more than a way for homeless, druggies, thieves etc to get away from PORTLAND...." | The Transportation section of Final EIS Chapter 3 addresses potential impacts of the alternatives on traffic and transportation, as well as proposed mitigation measures to offset potential impacts. Refer to Common Response #4 about vehicle traffic impacts. Your comment about the MAX line was reviewed and is outside the scope of the SEPA analysis for the Our Vancouver Comprehensive Plan Update. Refer to the Interstate Bridge Program website for more information about how to comment on that project.<br><br>Refer to Common Response #15 Homelessness for more information on how the City is working to address homelessness. |
| 31 | 10000 NW Lower River Road - This historically has had a house and believe it was recently purchased. They will want to put a house on it again and will need to give them some reasonable use. Should consider these situations in the Natural zone. | Comment noted. The Preferred Alternative designates this property as Low-Scale Neighborhood in order to reduce non-conformities and support housing production. |
| 32 | "I would like the integrity of our FISHERS LANDING single family home neighborhood maintained. Most homes in the neighborhood were built in the 1980s. I think there is value in maintaining these historic communities. These homes are valuable and well maintained. The community works together in a neighborhood association to keep it aesthetically pleasing. | Comment noted.<br><br>Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |

|---|---|---|
| | The proposed plans would expose my home to significantly more noise, pollution and traffic. I understand growth in the city, but can see other opportunities for expansion. What impact will the VIC on SE34 th have on density? It would seem that development of commercial and multi family housing could satisfy the growth needs.<br><br>I'm hoping you will reconsider disturbing this fine, historic neighborhood." | Some increases in allowed residential density and building scale are needed to accommodate state-mandated housing growth targets. The Preferred Alternative would zone the Village at Fisher's Landing as a mix of Medium-Scale Neighborhood, Low-Scale Neighborhood, and Manufactured Home zoning. Refer to Common Response #2, General Growth and Quality of Life Concerns, for more information about how growth is being distributed throughout the city.<br><br>The Historic and Cultural Preservation section of Final EIS Chapter 3 acknowledges the potential for disturbance of individual sites and associated impacts to historic resources and provides mitigation measures designed to offset these impacts.<br><br>The Noise section of Final EIS Chapter 3 provides more information about the high-level noise analysis for the alternatives. No substantial increases in noise are expected to occur under the alternatives; therefore, no mitigation measures are proposed. All environmental noise would continue to be regulated by WAC 173-60 and VMC 20.935.<br><br>The Air Quality, Greenhouse Gases, and Climate section of Final EIS Chapter 4 indicates that there would be lower modeled air pollutant emissions than existing conditions under all of the alternatives under consideration.<br><br>Refer to Common Response #4 for more information about vehicle traffic impacts. |
| 33 | to enjoy peace and quiet in our homes, sidewalks and yards in Village at Fisher's Landing neighborhood, I want express my strong support for maintaining the existing sound wall between neighborhood and the 164th Ave arterial. This wall is a vital component of our neighborhood's character and plays a crucial role in preserving our quality of life. As you know, the S.E. 164th Ave arterial is a major thoroughfare, experiencing significant traffic volume, especially during peak hours. This results in substantial noise pollution that directly impacts residents living adjacent to the roadway. The sound wall acts as a critical barrier, mitigating this noise. | Comment noted. The Noise section of Final EIS Chapter 3 provides more information about the high-level noise analysis for the alternatives. No substantial increases in noise are expected to occur under the alternatives; therefore, no mitigation measures are proposed. All environmental noise would continue to be regulated by WAC 173-60 and VMC 20.935.<br><br>In areas where development is planned near existing or future sources of higher noise levels, the City may consider whether to require implementation of noise reduction methods such as locating noise-sensitive areas further from noise sources, including walls or other barriers to shield noise from noise-sensitive use locations; and designing interior spaces with noise-reducing building materials.<br><br>Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 34 | "I'd like to see the increased housing slowed down while infrastructure to support that increase is beefed up. This region is growing way to fast. There is no visible evidence the increased revenue from increased housing is supporting infrastructure to handle the influx of people. We don't see roads being widened to handle the traffic. Only corner curb replacement, which is ridiculous.<br><br>This county is becoming unbearable to live in. The roads can't handle the traffic which is getting worse by the month." | Comment noted. The Transportation and Public Services and Utilities sections of Final EIS Chapter 3 provide information about the potential impacts of the alternatives and their proposed growth in housing units, as well as potential mitigation measures, including large capital transportation improvement projects, to offset these impacts.<br><br>Refer to Common Response #4 for more information about vehicle traffic impacts. |
| 35 | I would like to see more mixed use development in the streets along Main St downtown, specifically in the Hough and Arnada neighborhoods. Like possibly an even more extreme version of alternative 1. The transportation related to alternative 1 as well is personally appealing to me, and some of the additional total city miles driven could be offset by adding high density housing along transit lines, as planned. Additionally residents along transit lines could receive an unlimited 1-2 month C-Tran pass to try it out after moving into those spots. On the higher density / additional housing note, as noted in the plan, updated city regulations are necessary for protecting plants, animals, and water runoff. While downtown has done a great job of emphasizing natural areas and art on the required man-made components (ex manhole covers), this perspective can and should be shifted around Vancouver, not just east as we are currently seeing but also north. One example of this is the city holding submissions for individuals to submit art for manhole covers, and while the budget may not allow artists to be paid for this, they can be posted on local Vancouver government pages for exposure and have the materials provided. Citizens could vote on art submissions from the competition as well, for another civic engagement angle. Things are not quite that simple in reality of course, but its one example. | Comment noted. The Preferred Alternative would designate the streets along main Street downtown Mixed-Use Neighborhood and Regional Activity Center. The Hough and Arnada neighborhoods would be zoned as Medium-Scale Neighborhood, which allows for both residential and commercial uses.<br><br>The Transportation section of Final EIS Chapter 3 identifies proposed measures that support improvements to transit connections to key areas of the city. The Plants and Animals section of Final EIS Chapter 4 notes that all alternatives would be subject to the City's December 2024 Critical Areas Ordinance update, which provides additional protections for plant and animal habitat.<br><br>Refer to the Our Vancouver 2045 website for the Community Experience chapter of the Comprehensive Plan, which provides more details on public art. |
| 36 | It has come to our attention that the EIS the City published for its new 20 year comprehensive plan reclassifies the northern row of houses in Southcliff along Mill Plain is proposed for Mixed Use (Commercial). If so, we have been | Comment noted. The Preferred Alternative would zone the properties on Mill Plain Boulevard in the Southcliff neighborhood as Medium-Scale Neighborhood. The zoning code update may create legally nonconforming |

| ID | Full comment | Response |
|---|---|---|
| | informed by an expert that if this alternative is adopted for the comp plan it would make all of those homes nonconforming uses per Vancouver Municipal Code 20.920. This is unacceptable for a neighborhood of the cultural and historic, as well as highly tree-rich nature of Southcliff. We already have the new development in the former Town Mall. We plan to inform neighbors especially those homeowners to respond. | properties due to changes in zoning districts and development standards. The proposed zoning code allows legally established nonconforming structures and uses to continue and expand. Routine repairs and maintenance for nonconforming structures are permitted, including any work required by the Building Official or Fire Marshal. If a nonconforming structure is damaged by a catastrophic event, proposed regulations will still allow it to be rebuilt within its original footprint (note that single family homes in the Medium Scale neighborhoods can be replaced within three years without meeting minimum density standards and do not have to be in the original footprint). The draft proposed code aims to provide clearer, more accommodating standards for how these properties can be maintained, rebuilt, or expanded.<br><br>Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 37 | *Incomplete form, no comment received* | *N/A* |
| 38 | "I don't want ""high density housing"".<br><br>I want better transportation corridors, especially about 3rd and 4th bridge over the Columbia River.<br><br>I don't want Portland's bankrupt TriMet and their light rail in Clark County.<br><br>I want lower taxes to make Vancouver affordable for everyone, not just the wealthy in the Waterfront Condos.<br><br>Shrink the city bureaucracy." | Comment noted. Your comment was reviewed and reflects a policy preference rather than input on the sufficiency of the environmental review. No further response is warranted. |
| 39 | "I live on NE 109th AVE, 98682. My street is a nightmare, in large part, due to the city and the plans and zoning they have allowed, against the Counties advice, since we were annexed many years ago. We lost all rights and protections, as our tiny condo community was dwarfed by what was supposed to be additional condos, until the city approved less parking, smaller units, and added 25 more. This began a years long war with the apartments. While we were able to tow cars within the property, we had to learn live with the endless cars up and down the road. It had become much better until the company across from us moved in several years ago. Now , what was once a quiet residential tiny two lane road, is engulfed with semi trucks. They make their employees park in the street, adding to the congestion, and replaced it with an never ending parade of semi trucks that do not fit.<br><br>Since they do not fit, they block 109th40 times a day, drive up on the sidewalk, destroying it, hit my fence, as they jockey into postion. They are three feet from my window. If I am outside, make that three inches. This is not a way for a human to live, and seeing you plan to create more of this situation, I wanted to take a moment to tell you, it doesn't work. it is not going to work. It was not going to work when they created the UGP using a formula that was untested, and decided it must be correct....it wasn't. I am proof of this type of housing failing.<br><br>I am told to move, call my landlord, that my home is too close to the road and needs to be demolished, call the city, no call the county, no, call VPD. I can't move, I lost my income. I own this, I AM the landlord. If my home is too close to the road to be safe, then ....shouldn't we address it? But VPD will not even come here for traffic or parking issues, they said not to bother them. To call the city. The city says call Officer Larson, who doesn't even know where Kevanna Park is. VPD told me this road is industrial and I am the one who is not supposed to be here, the semis can do whatever they want on this road. It is an endless loop that always ends with a shrug and a ""damn, that sucks"" , and the resolution is, the road belongs to the warehouses, so does the sidewalk and my backyard, apparently.<br><br>Why do we have any rules if VPD is choosing to not enforce them? Why do you have it set up so we cannot call, we just end up with a recording or dead voicemail? Calling 311 for these things is a waste of their time, and they are not doing it anyway, so why assign it to them? The city could be pulling in so much money if they were ticketing the residents, and the semis. While it may not be against the law to have industrial noise and pollution filling my home, it is wrong. It is not ok.<br><br>So, while I would love a resolution for my issue, after years of being ignored, and f lat out lied to, I gave up. Eventually I will give my home back to the bank, I have been unable to sell due to living in an industrial zone- my bank is in an uproar, they would have never approved me had they known it would change this way, and I am being threatened with fines if I don't make my condo compliant to their rules, and I cannot afford a 9 foot tall sound and safety wall to keep a semi from entering my home. And because of your changes to zoning and no code compliance, I do feel it falls on the city to address- especially since a wall cannot be built without a permit from the city and an assessment | Comment noted. The City recognizes that some of the issues raised in the comments about this specific location may be outside the scope of the Environmental Impact Statement (EIS). This comment response focuses on addressing comments as they relate to the EIS analysis for Vancouver's Comprehensive Plan Update. For a more comprehensive response on the issues and concerns raised, please refer to past City email correspondence.<br><br>The Preferred Alternative would zone the properties along NE 109th Ave between NE Burton Road and NE 39th Street as Industrial/Employment along the east side and as Medium-Scale Neighborhood along the west side, with a small amount of Mixed-Use Neighborhood on the east side along Burton Road. This zoning allows uses similar to what is allowed currently under the properties' existing Light Industrial (IL) and Higher-density Residential (R-22) zoning. The Preferred Alternative would not expand industrially zoned areas and would retain the industrial zoning along 112th Avenue and adjacent 109th Avenue because it is a developed industrial area with access to SR 500. Citywide, the Preferred Alternative avoids downzoning properties from what they are currently to support future housing production and reduce non-conformities. Thus, the Preferred Alternative zones the properties along the west side of 109th Ave as Medium-Scale Neighborhood, which most closely aligns with the current R-22 zoning. Refer to Common Response #1 for more details about the development of the Preferred Alternative.<br><br>Chapter 2 of the Final EIS provides a detailed description of the Preferred Alternative, including land use maps, and compares the major features of the Preferred Alternative to Alternatives 1 and 2. Additionally, there is an online interactive map that showed the alternatives analyzed in the Draft EIS and now shows the Preferred Alternative analyzed in the Final EIS can be found at: https://experience.arcgis.com/experience/7d801887df3a4150a9a1e46aa16fc6f6/. This is linked on the Our Vancouver webpage (https://www.beheardvancouver.org/plan2045) and PDFs of the alternatives can also be found on the site's Project Documents page (https://engage.zencity.io/beheardvancouver/en-US/projects/project-documents).<br><br>Because not all areas are appropriate for mixing uses due to potential conflicts with industrial activities or residential livability, the Industrial/Employment zoning district would allow warehouse/freight movement uses but not allow new housing to be built, similar to what the current Light Industrial (IL) district allows. The Medium-Scale Neighborhood district would allow a greater mix of commercial and residential uses but would not allow warehouse/freight movement uses and many other industrial uses. Refer to Common Response #10 about businesses in residential areas. Projects submitted under the current zoning code must |

| ID | Full comment | Response |
|---|---|---|
| | anyways. If it is only for the industrial complex, then this is not a residential road, and we need a different way to leave the complex. But I5 is there, so what do we do? Just accept that we are the ones not welcome and give the land to the city?<br><br>This is the POV of someone living in what you are building, 20 years from now. While yours are going to be mostly rentals, this also applies to all new builds in the city limits. You will create these pockets of forgotten areas that receive zero back on their tax investment into the community. And what you are building now, much like building over the creek and on top of swamp lands, is going to cause misery for the people warehoused inside. It is clear from the proposals that low income, high density housing is to be the buffer for SFH, so they can have a peaceful life. We don't even have a park we can walk to, access was walled off when the apartments went in. Nor do we have anywhere for our children to safely play. We do not have a bike lane or a safe way to walk to a bus stop, and you want everyone to use public transit? I no longer walk for exercise, I don't feel safe on this road.<br><br>Food for thought. Who knows, 20 years from now, someone might read this, like I read the pleas from the county to address zoning and code issues before the annexation. It's not like the city is unaware, they simply do not care what happens to a certain demographic they see as undesirable, but needed." | follow the zoning code requirements at the time of submittal. They may opt into the future code once adopted and if their intended use is still allowed.<br><br>The Transportation section of Final EIS Chapter 3 addresses potential impacts of the alternatives on traffic and freight, as well as proposed mitigation measures to offset potential impacts. Refer to Common Response #4 for more information on vehicle traffic impacts and #5 on traffic safety.<br><br>The Noise section of Final EIS Chapter 3 provides more information about the high-level noise analysis for the alternatives, as well as proposed mitigation measures to offset potential impacts. The Public Services and Utilities section of Final EIS Chapter 3 provides more information on potential park impacts across the alternatives, as well as proposed mitigation measures to offset potential impacts. The Air Quality, Greenhouse Gases, and Climate section of Final EIS Chapter 4 considers the potential impacts of the alternatives on air pollution, as well as proposed mitigation measures to offset potential impacts.<br><br>The proposed Comprehensive Plan Equity and Inclusion, Parks, Recreation, and Cultural Services, Transportation, and Annexation chapters include goals and supporting policies related to how the City can support low-income households, guide intentional future annexation, improve park access, and increase transportation safety. Note that the Comprehensive Plan does *not* propose any specific annexations, and land will *not* be annexed with the adoption of this plan. Annexation processes are separate from this plan update and require a robust public process and City Council approval. Refer to the Comprehensive Plan page on the City's website for more details about the proposed Comprehensive Plan. |
| 40 | "have you given any thought to the homes two feet from this industrial complex that was built for light commercial only and cannot handle semi traffick? why would you do this to humans Parcel Number: XXXXXX<br><br>XXXX NE 109TH AVE this IS NOT ENOUGH SPACE TO BE BOTH INDUSTRIAL AND RESIDENTIAL." | Please refer to the comment response to comment 39. |
| 41 | "Regarding Climate, if possible:<br><br>Assign staff to apply for grants from the Climate Commitment Act to cover the marginal cost of mandates.<br><br>Mandate efficiency in buildings and vehicles.<br><br>Stop approving new barriers to clean energy. Require new construction to be all electric ready, solar ready, and ev ready.<br><br>Work with school districts to require that if they need a permit to repair a heating system, replace the fossil fuel system with heat pumps.<br><br>Consider requiring all new construction to include solar plus batteries/<br><br>Stop increasing emissions:<br><br>No expansion of the fossil fuel industry, think Tristar at the Port/\.<br><br>No new gas hookups.<br><br>No new gasoline stations.<br><br>Discourage the sale of polluting equipment and vehicles.<br><br>Adopt the Independent Source Rule for trucks and warehouses.<br><br>Maximize efficiency.<br><br>Support the development of truck fleet charging infrastructure.<br><br>Promote the development of large solar projects on warehouses, parking lots. schools, and brownfields.<br><br>Support density within walking distance of places of employment, eg warehouses, hospitals, clinics, schools, shopping centers." | Comments noted.<br><br>Refer to the Public Services and Utilities section of Final EIS Chapter 3 and the Air Quality, Greenhouse Gases, and Climate section of Final EIS Chapter 4 for a discussion of proposed Comprehensive Plan measures intended to address climate impacts, which overlap with many of your comments. |

|---|---|---|
| 42 | Please preserve Fort Vancouver & Pierson Airfield as our cultural heritage. NO SELLING OFF OF THE LAND. | Comment noted.<br><br>Fort Vancouver and Pearson Airfield are part of the Vancouver National Historic Reserve Historic District, which is a federally protected district on the National Register of Historic Places. The Historic and Cultural Preservation section of Final EIS Chapter 3 identifies measures and regulations that protect and promote Fort Vancouver and the Historic Reserve. |
| 43 | My wife and I live in the Southcliff neighborhood and our property is close to Mill Plain ([address]). We are extremely concerned about any land use changes that would allow commercial or multi family residential in front of or near our neighborhood. We strongly vote for no changes to the development plan on either side of mill plain near SouthCliff. | Comment noted.<br><br>Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 44 | I cannot believe that you would take a neighborhood that is as old as Southcliff and allow mixed use and businesses in its backyard. Have you lost your mind? Our properties will decrease in value well below what we paid and our quiet neighborhood will be noisy, crowded and unsafe. How dare you! | Comment noted.<br><br>Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 45 | I would like to see the removal of mixed use areas along the western mill plain corridor. Specifically the areas that will negatively affect already established neighborhoods. | Comment noted. See the Preferred Alternative map for updated zones along the western Mill Plain corridor. |
| 46 | "The purpose of development is create the most affordable and efficient use of land. If this is true, then I would have you reconsider your proposed development of parcel [parcel number] (currently proposed medium scale) and parcel [parcel number] (currently proposed low scaled) to a mixed use neighborhood development.<br><br>Vancouver is a growing market. Low scale neighborhood development does not solve the affordable housing problem or the homeless population problem currently in the area. Medium scale neighborhood development may allow for more affordable housing but does not make the most efficient use of the land. Mixed use neighborhoods would allow for more affordable housing as well as allowing small businesses to grow making this the best use of the land. It would also create more walkable areas thereby reducing greenhouse gas emissions through use of public transit systems and promote energy efficiency.<br><br>My property also includes 9 acres of open space land (parcel [parcel number]). Since these areas can't be developed, a mixed use neighborhood development of the other 2 parcels could allow this area to be used as a community garden. Families living in the affordable mixed use neighborhood community could rent individual plots in half or all the 9 acres for growing vegetables, flowers, etc that would benefit not only the community but directly benefit small businesses in the area as transportation costs could be reduced. Another possible use for this open space would be build a solar farm. Solar farms reduce the reliance on fossil fuels lowering carbon emissions." | Comment noted. The Preferred Alternative would designate these properties as Medium-Scale Neighborhood and Low-Scale Neighborhood as there are Critical Areas across portions of these properties. The Low-Scale Neighborhood and Medium-Scale Neighborhood designations allow for mixing of residential, open space, and commercial uses and increased densities. If you have additional questions, please contact OurVancouver2045@cityofvancouver.us. |
| 47 | "Leadership of Portland and Vancouver have really let things spiral downward. When our family moved here 35 years ago, it was a wonderful community filled with caring people that was very community minded and little to no crime. It is a far cry from that now.<br><br>Part of it is that Portland/Vancouver let the homeless population take over our cities/area in such a negative way.... everywhere you go there is graffiti and litter plus tents and broken down campers. It looks awful.... there is no pride in the city any more. This is not true of many other cities I visit (Denver, Little Rock, Minneapolis, Houston, Dallas, San Antonio, etc... because they don't allow it. It is primarily on the West coast (CA, OR & WA) and New York (because they've allowed people to not have any pride in their city). City officials here don't care about garbage everywhere, graffiti, broken down campers and so forth.<br><br>I do have a heart for those that are homeless, but other cities manage this population much better. Portland/Vancouver have almost welcomed and encouraged the world's homeless population to camp out here because it's easy for them. There has to be ordinances to keep ""order"". When my mother was at the end of life a couple years back, I was appalled that people were camped out all over the sidewalks.... here people inside are trying to get better and their view out the window was trash and tents.<br><br>I am including Portland and Vancouver because it started out big time with the riots in downtown Portland in 2020 (the mayor was down town helping them ""trash"" the city/downtown which has never been the same..... no-one wants to go down there any more and businesses moved out by the droves and it's not safe (plus businesses can't get | Comment noted. Your comment was reviewed and reflects a policy preference rather than input on the sufficiency of the environmental review. Refer to Common Response #15 Homelessness for more information on how the City is working to address homelessness. |

| ID | Full comment | Response |
|---|---|---|
| | insured down there either). It used to be the happening place to be and everyone loved to go there with shows, shopping and restaurants!<br><br>Now Vancouver's Water Front is the ""happening place"", but so much junk has spilled over from Portland into Vancouver (along the I5 corridor) that it's nearly as bad in Vancouver. Jantzen Beach & Delta Park is an utter mess (nearly all the good restaurants left Jantzen Beach like Cracker Barrel, BJs, Stanfords, Sharis, Burrito House, etc... due to crime which is so sad). The Jantzen Beach Target has all toothpaste, deodorant and such under lock and key. You have to ask to get everything out of a case... That is so close to Vancouver.... it has already spilled out along the freeway and a matter of time before it's on the waterfront if our officials don't stop it now.<br><br>In addition, the city is just ""shoving"" housing into every nook and cranny whether it makes sense or not so everything has become a ""modge-podge"" and there is not a good flow in many neighborhoods now. Likewise they ""allow"" the builders to put in ugly and cheap fencing that looks like garbage within a couple years. Check out Kennewick, WA where they have cement fences/decorative cinder blocks that last forever and don't lose their appeal in just a couple years. There is also cohesiveness (not just all sorts of random types of building). Another area that has good management is Ridgefield, WA. They put in a lot of good ordinances/codes with the builders (both residential and business) for consistency and beauty of community (they have requirements for aesthetics such as trees, putting rock on the outside of businesses for a higher end appeal and more). For instance our same home builder has to cover home decks and they have to be a certain size in Ridgefield, but in Vancouver our builder can skimp and cut corners as much as they want (do it the cheapest way and however they want & it shows).<br><br>And you all never require enough parking when you build apartment buildings. I have heard that it is to encourage people to stop driving and used mass transit, but it isn't working. Instead people just park in the nearby neighborhoods and it increases crime and traffic. There is no thought for efficiency or what REALLY works (there is just cars lined up everywhere down streets which looks so junky).... they just ""shove"" everything in like fitting in the wrong puzzle piece.... it isn't pretty and it doesn't work!! You all are always adding apartments which brings hundreds and sometimes thousands of more cars into an area without adding any more roads, lights, etc... to accommodate the growth. Nothing is well-thought out.<br><br>My husband and I often say, the person that manages the Portland Airport should be managing the cities of Portland and Vancouver..... because they know what they are doing!! They are always expanding, but also beautifying the property (not just a half-hazard job). Their property always looks stellar (even the drive to and from the airport is beautiful and well maintained). As they've grown, they find solutions for increased traffic, parking, pick up and so forth. They do a great job of managing all the pieces which is not true of Vancouver at all (it has continued to decline, decline, decline and look worse, worse, worse.<br><br>Back when Royce Pollard was mayor, he revitalized the downtown (especially cleaning up Esther Short park). He made Padden Parkway, he make the beautiful landscape on Andreson and so forth (he was ALWAYS a step ahead versus a many steps behind as we are now). They were always improving the city.... now it seems the opposite... it is truly sad to see this city that I have loved so much (and had so much pride in) and raised our children in become a BIG OLD DUMP. I really hope there is much more thought put in building, planning for the future!! Things have got to change or it will become just a city dump (so many people that did care have now moved out of area and we think about it often ourselves.... slowing the good people are being replaced by others moving in that have no care at all)." | |

Refer to Common Responses #4 and 5 for more information about traffic impacts and safety. |
| 52 | Re-zoning our neighborhood and others like it is a disastrous plan that will lower property values and diminish the quality of life we have enjoyed for the past 40 years. Cramming 40,000 more housing units into Vancouver without expanding boundaries will lead to lower quality of life for everyone here now and in the future. I, for one, will leave my home for another state if this goes through as proposed. I am a lifelong Washingtonian and resident of Vancouver for the past 40 years, but this will be the last straw. I strongly encourage you to reconsider. | Comment noted.<br><br>Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. The Preferred Alternative distributes growth around the City more evenly than Alternatives 1 and 2, helping to ensure that impacts are not concentrated and that different areas of the City benefit from future growth and investment. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |

| 55 | "I live three feet from light industrial, which has become heavy industrial due to one specific business, that has caused damage to my home. The endless parade of semi trucks and the vibration, and being feet away from me has caused seriopus issues to my unit, which is the closest., and now is spreading to my neighbors. Not all the units on NE 109th are rentals, you know. The ones built first were condos, and it was supposed to stay that way until we were annexed and you allowed the apartments instead.<br><br>But some, like mine, are condos. I live on the street, on the actual sidewalk, right up to the street of 109th, I do not have a set back: We did not need it, we were county, and when annexed we were promised this would not become a no mans land , but it did. I do not have any protection from the semi truck traffic I already endure. If you do either of the alternatives, I'll be honest: You will have destroyed my life, and any future I might have. I will have to make the choice of whether to give up, or give up. Let me explain how bad it already IS on this road:<br><br>The business that is at this time, conducting heavy industrial does NOT have the space for these huge semi trucks, he needs to be fined for what he's doing, If you change this to heavy industrial, it will add countless semi trucks to a tiny two lane road, where over 600 people reside. That is just in the HD housing, not counting the homes back on Morrow!<br><br>It is our only way in an out. As it is, we fight the semi truck traffic, if you allow countless unchecked heavy industrial places to go in, we will not be able to leave our complexes, and the pollution is unacceptable. How dare you expect us to live in pollution and the banging, clanging, beeping crashing, screeching, that comes with heavy industrial? Have you ever even been down this street? The zone goes from industrial to residential in the middle, but officials and vpd see the whole area as industrial and that the semis can do what they want, its us humans who do not belong here. If | Please refer to the comment response to comment 39. |

|---|---|---|
| | one more 311 operator or VPD officer tells me to ask my landlord for a different unit, I will lose it. I OWN THIS CONDO. I CANNOT JUST ASK FOR A DIFFERENT ONE.<br><br>NOW FOR THE IMPORTANT PART:<br><br>As it is, the semi trucks have caused cracks in my walls, the windows are popping out, and I cannot tell my insurance, because as soon as they find out about this? They will drop me. They will not insure a condo in an heavy/industrial area! No one will! And if my condo loses insurance, the bank will move to foreclose. My home was built when the light industrial across from me was still zoned commercial. Most business use box trucks and vans, except for the one outside my bedroom window. It has been absolute hell the last 5 years trying to get the city to understand this specific business has grown too large for his space. Semi trcuks driving onto the sidewalk I legally have to maintain, crashing into the fence thatyy is my only protection from a semi barrelling into my kitchen is NOT a way to live. And if you go with either of those plans, you will make it twenty times worse. You have not maintained 109th in any way. No street lights, half has no sidewalks, no bike lane, not ONE CROSS WALK. Semis parked all up and down the road, makes it basically a one lane, and you want to make that heavy industrial? What are you thinking? Kevanna Park has zero walkability, we have no park , no greenspace, but you want us to walk to safeway, for our food and medicine, and walk it back, all while dodging semis and our food getting polluted?<br><br>Did you give any thought to the over 600 condo and apartment residents? Any to the neighborhood behind us, with another 600 plus residents? Ot the two new apartment complexes? Or the new townhouse condos? The stop sign and 4 way stop area are exactly as they were when we were county! No one removes dumped vehicles, Semis idle for 17 hours at a time, vibrating my home, at what point did anyone look at the map?<br><br>I invite you to my home, to my backyard. I invite you to see what nightmare i live with every day, and explain why it is in everyones best interest, that I lose everything I worked for? This place isnt much. No im not rich. But I was so proud to be able to buy this place something I could afford, and make my own. And that is not what I got. I do not have a home. I will never be able to sell, I can't rent it out knowing it doesn't have insurance, so I am, trapped, for the rest of my life, in a home I will never be safe in, happy in, or comfortable in. This is not ok. what you are doing to me, to others, is not ok. I know it won't make a difference, you will do what you want, regardless of how it harms people.<br><br>It's inhumane to do this to us, we are part of the most vulnerable populations in the city, low income who managed to purchase their dream....and you took it without even blinking. I don't know what to do with a condo I cannot insure. Do you have an answer for that? Since YOU CAUSED IT? What about my neighbors, who are unaware of the nightmare coming from their insurance? I have lost all faith in any leadership in this city, looking at what you have planned, it's like you want to starve us out, or smoke us out with smog. If you want the neighborhoods to demoslish, just make an offer on them. Most of us would be more than willing to sell to you and leave. You can add more bike lanes, AND we would leave, lessening the strain on the population.<br><br>I will never be ok with this, it is so wrong, and you knew we dont have an association or neighborhood liason officer. This is taking advantage of that, and us. You don't require any kind of set back or protections from the noise and pollution, just expect us to take it because its what we deserve?<br><br>I sit in my house in tears every single day because I don't know what to do, I worked so hard for this...for nothing. For something that is falling down around me, and I have to sit here and just watch it happen. Yes, I cry every single day about how I currently live, I am sobbing seeing how much worse you want me to suffer. Where contractors village went up nearby? THAT is what needed to happen on 109th. The freeway is behind us. At this point, why doesn't the city make an offer on the condos? Make me an offer, and I will gladly go, and I won't stay in vancouver. Make me an offer. I'm begging you." | |
| 56 | Traffic revision and improvement projects in Vancouver take far too long to complete and, while underway, the provisions for alternate routes are inadequate or not even a consideration during planning. One example is the improvement project taking place on 1st St between 172nd and 192nd Avenues. This project is in its third summer and the alternative east-west routes along Mill Plain or 18th Street to the north are often restricted by small projects as well. This length of time for a project of this size is completely inexcusable and could be avoided by holding Transportation and contractors accountable. Projects of this size in other parts of the US and the world take much less time to complete while achieving similar or superior results. This is an issue that is going to impact all future | Comment noted. Your comment was reviewed and is outside the scope of the SEPA analysis for the Our Vancouver Comprehensive Plan Update. |

Refer to Common Response #15 Homelessness for more information on how the City is working to address homelessness. |
| 59 | "For the maps: Yes to increasing density in CURRENT areas. That said, under no circumstances should farmland be turned into more houses, commercial, or industrial use. Given the tariffs and more imposed by the current federal government, it is our top responsibility to support small farms if we want to be able to feed our population as we grow.<br><br>For transportation: We need more protected bike lanes. I live west of 205, but it's impossible to safely bike to downtown right now. I would if there was a safe way to get across the Lieser overpass." | Comment noted. All proposed alternatives, including the Preferred Alternative, would accommodate expected growth within current city limits and do not propose expansions of the urban growth area into rural or agricultural land.<br><br>The Transportation section of Final EIS Chapter 3 and the Air Quality, Greenhouse Gases, and Climate section of Final EIS Chapter 4 identify improvements to active transportation infrastructure as proposed Comprehensive Plan policy measures. |
| 60 | I love my Southcliff neighborhood. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 61 | Please complete the walking/bike path along Evergreen Hwy to 164th. There is no sidewalk, and the shoulder disappears at some places. At one of those places, I was personally walking and was hit by a vehicle resulting in a broken arm and traumatic brain injury. I reported the injury and am describing it here so that the city is on notice this is a dangerous road. There is a neighborhood part nearby, but residents on this stretch of Everygreen (Columbia springs to 164th) have no option but to walk on the road to get there. I was simply walking around the block when I was hit and seriously injured. There is a portion of the existing plan that includes a walking/bike path on the north side of Evergreen. | Comment noted. The Transportation section of Final EIS Chapter 3 and the Air Quality, Greenhouse Gases, and Climate section of Final EIS Chapter 4 identify improvements to active transportation infrastructure as proposed Comprehensive Plan policy measures.<br><br>The Transportation System Plan (TSP) identifies SE Evergreen Hwy: MUP from Columbia Springs Park to SE 164th Ave (ID 535) and SE Evergreen Hwy: MUP from SE 164th Ave to city limits (ID 537) as locations for small mobility and pedestrian projects. See the Capital Projects List in the TSP for more information.<br><br>Refer to Common Response #7 for more information about sidewalks. |

|---|---|---|
| | ave) is another north south route with heavy development. Housing demands for the expected new arrivals will require more roads with no plans or places to build them | The Transportation section of Final EIS Chapter 3 discusses freight and addresses potential impacts of the alternatives on traffic and transportation, as well as proposed mitigation measures to offset potential impacts. Refer to Common Response #4 about vehicle traffic impacts. |
| 65 | "This is a LOT of information. Overall, I agree with the sentiment that housing growth and density are needed. What I feel this plan is lacking is an idea of creating sort of ""urban centers"". An example of this is downtown Vancouver. In downtown, one can work, live, eat, shop, have entertainment in a dense population area. Vancouver as a city has been creating more and more sprawl and I feel a neglected part of this is an opportunity to create more of these ""urban centers"" in other areas of town. I don't count developments that require you to drive to them and have a big parking lot with a set of pre-planned retail strip malls and a few restaurants and a Target. That type of development Vancouver has been doing lacks innovation, feels soulless, and requires me to drive everywhere to get to those areas. I would love to see some of those mixed use neighborhood areas be more street facing (think main street between 4th plain and mill plain) with neighborhood backbones. People that live in the neighborhoods can utilize the local areas more intensively and it allows for more small business use. Some of the proposed areas (such as 39th street in Alternative 2) just list the whole street as red. This whole area likely doesn't need to be mixed use and this would likely increase traffic and noise on this already busy street far too much. Instead, small pockets of retail or restaurants or mixed use buildings at thoughtful spots along the street could be a central community draw point without making it too dense. Overall, with all of this part of the recommendation, I would advocate for building up more urban center points rather than ""anywhere USA"" strip malls with big parking lots.<br><br>Lastly, TREES!!! I don't know if you have noticed how many trees in Vancouver have been dying the last few years (especially all the red cedar) due to all the heat, but this trend doesn't look to change and the city's goal of 28% canopy is almost impossible without a concerted effort to increase the tree plantings and replacements. All new development that removes these trees and ""replaces"" them with trees that seem to be inevitably dying within a couple years is not enough. No matter what happens, MORE TREES PLEASE!" | Comment noted.<br><br>The Preferred Alternative uses Mixed-Use Neighborhood and Regional Activity Center zoning districts to identify areas that are intended to be “urban centers” in different areas across Vancouver. Refer to the Land and Shoreline Use section of Chapter 3 for more information on identified urban centers and corridors.<br><br>The Preferred Alternative designates 39th Street as Medium-Scale Neighborhood, which allows for residential and limited commercial uses.<br><br>The Plants and Animals section of Final EIS Chapter 4 addresses potential impacts of the Preferred Alternative on trees, as well as proposed mitigation measures to offset potential impacts and enhance the level of tree canopy cover citywide. |
| 66 | "First, I’d like to share my appreciation for the hard work and thoughtfulness that went into drafting the alternatives. I especially appreciate that diversity, equity, and inclusion as well as climate are visible components of the process, despite the efforts of the current presidential administration to change that.<br><br>My home is currently just a four blocks north of Vancouver city limits, but I grew up in Ellsworth and Cascade Park; eat, drink, and play across the city and county; and I work for Burton Elementary. I’ll try to be concise in my comments.<br><br>I generally like the higher density and mixed use options of Alternative 2. I love the idea of building a variety of housing near transportation options and encouraging walking neighborhoods. I also appreciate the expansion of green space to something like 6 acres per 1,000 residents (if I remember that correctly). I think these things will be important to the quality of life and the accessibility of that quality in the future. I had a few other thoughts, questions, and concerns while looking at the maps (especially regarding the East where I live and work and play).<br><br>Impact on low income neighborhoods and the schools serving them - When I looked at the map of the East (Alternative 2), I noticed that there could be a great deal of development surrounding Burton and Endeavor elementary schools, an area that is typically home to lower income families. I’m concerned that development in this area could price the current residents out of their homes and neighborhoods and make this are less affordable. What is part of the plan to prevent (as much as possible) the gentrification of this area? I am also concerned about the increase in population density here because those two schools (unlike many schools in Evergreen Public Schools) are already full to capacity and more. The schools have been rebuilt in recent decades and aren’t likely to get any bigger any time soon. How will the city’s plan for increased density incorporate working with both school districts (Vancouver and Evergreen) to minimize school overcrowding?<br><br>While looking at the same map (Alternative 2, East), I also noticed that some neighborhoods seem spared from change. To put it bluntly, why is development most prominent in lower income areas and less so in more affluent areas | Comment noted.<br><br>Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. The Preferred Alternative distributes growth around the City more evenly than Alternatives 1 and 2, helping to ensure that impacts are not concentrated and that different areas of the City benefit from future growth and investment. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>Refer to the Public Services and Utilities section of Final EIS Chapter 3 for more information about modeled school capacity needs and student generation rates for each of the alternatives, which were developed in consultation with the Vancouver and Evergreen School Districts.<br><br>Refer to the Our Vancouver 2045 website for the Comprehensive Plan Update, which includes a Housing Chapter that addresses residential displacement, an Annexation chapter that addresses future annexation plans and policies, a Natural Environment chapter with goals around preserving natural resources, and an Equity and Inclusion chapter with more information about acknowledging historical injustices, reparative actions, and diverse identities.<br><br>Refer to the Water and Plants and Animals sections of Final EIS Chapter 4 for mitigation measures related to water quality and availability and preserving natural resources. |

| ID | Full comment | Response |
|---|---|---|
| | like Cimarron, First Place, and Cascade Park? The folks in lower income areas may bear the brunt of the changes with fewer resources to do so.<br><br>Annexation and developmental considerations of areas east of 205, north of Fourth Plain, and extending beyond Padden Parkway - Please annex neighborhoods like mine (Orchards) so that we can benefit from the city's planning as well. There are several elementary schools and at least one middle and high school in our area that are part of Evergreen Public Schools but not part of the City of Vancouver, so they won't benefit from the city's planning. This could lead to increasing inequities between schools within the same district. As a resident of this unincorporated area, I don't particularly enjoy the recent explosion of storage facilities and warehouses in my neighborhood - they don't serve me, and, frankly, they're ugly. I too would like a walkable neighborhood with food, entertainment, and other services nearby.<br><br>Water conservation and management with a growing population - How does the city's plan incorporate a growing concern over water quality and availability as we grow into a warmer future? We're very fortunate to live in an area of the world and country with a seemingly endless supply of water. Unfortunately, it is a finite resource that will require increasing levels of care and conservation as demand for it increases and supply decreases as a result of climate change.<br><br>Habitat fragmentation and urban heat islands - Finally, I think a lot about birds and plants (weird, I know). As Vancouver has grown over just my lifetime, I've seen wild and otherwise heavily vegetated areas developed for various uses. Over time, it occurs to me that we're running into a situation where we're creating a scarcity of natural areas that support wildlife, one of the incredibly valuable natural resources and treasures of the Pacific Northwest. How does the city's plan for development increase spaces specifically and thoughtfully developed to reduce habitat fragmentation so that we can ensure the longevity of our animal and plant friends and family? I also know that with an increase in spaces developed for human use, we usually experience more urban heat islands (among other issues). In what ways does the city's plan include considerations for increasing shade, decreasing the abundance of male (pollen producing) trees and shrubs typically used in city landscaping (supposedly because they're less messy), and increasing the use of indigenous plants that are both acclimated to our climate (requiring less water) and usable by our animals (including humans) for food and shelter?<br><br>I lied - I have one more question about partnering with the indigenous nations in our region - How will the city partner with our local indigenous nations in ways that honor their past and support their future? We are on occupied land, and the stewardship of that land and all of its peoples (including the tribes, recognized and unrecognized) could and should be part of the city's story and legacy." | |
| 67 | I am concerned that any plan that forces people to live in high density housing will be unfriendly to families with children. Living in close proximity to a family with infants and/or small children is going to create frustration for their neighbors. I currently live on a 1/4 acre lot and the children playing on the lot behind mine sometimes create a level of noise that is objectionable. Living with a noisy family adjacent to your apartment or above you will create even more problems. Children by definition also need their own play space outside. In our wet Mediterranean Coast climate, finding outdoor space in winter for children's play is important. Eliminating "single family residences" is a decision that will adversely impact families, especially those with infants and small children. America needs more families, not less! | Comment noted.<br><br>Under the Preferred Alternative, most of the City's residential areas would be zoned as Low-Scale Neighborhood or Medium-Scale Neighborhood. Some increases in allowed residential building density and scale are needed to accommodate state-mandated housing growth targets. While the Preferred Alternative allows for higher density housing, it continues to allow for a variety of housing types and sizes to accommodate a variety of lifestyles, including family-sized units. Detached single-family housing will still be allowed in many places across the city. |
| 68 | *Incomplete form, no comment received* | *N/A* |
| 69 | "1. I am in favor of Alternative #1.<br><br>2. Streets: Pls consider building more Intersection Round About's to mitigate hazardous driving:<br><br>- Most critical need would be ""overly large"" Intersections within residential neighborhoods; these attract high speed vehicles making ""donuts"" every other weekend starting at sunset. There are several, but typical example: T-Intersection of SE 22nd & SE 25th & SE 26th.<br><br>- if round about is not feasible, perhaps add some other type of speed-calming barrier.<br><br>Thanks." | Comment noted.<br><br>Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. The Preferred Alternative distributes growth around the City more evenly than Alternatives 1 and 2, helping to ensure that impacts are not concentrated and that different areas of the City benefit from future growth and investment. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |

| | | The City's Transportation System Plan (TSP) includes roundabouts in recommendations for some Future Large Capital Transportation System Improvement Projects. For more information, see the Transportation System Plan webpage on the City's website for more information. |
| 70 | I oppose allowing 75 ft buildings on 33rd at Franklin. This is a neighborhood of small family homes in one of Vancouver's oldest neighborhoods. The historic character will be obliterated by this upzoning, which is more appropriate in newer neighborhoods where the historic character will not be lost. | Comment noted.<br>The Historic and Cultural Preservation section of Final EIS Chapter 3 acknowledges the potential for disturbance of individual sites and associated impacts to historic resources and provides mitigation measures designed to offset these impacts. The area around 33rd and Franklin has good connectivity and access to essential services, parks, schools, and transportation options. Allowing buildings to be constructed up to 75 feet in areas with transportation options and nearby services helps focus growth where the infrastructure can support it, and can help reduce pressure to redevelop older buildings that contribute to historic character. |
| 71 | I prefer the higher density of regional activity centers and medium-scale neighborhoods presented in the Alternative 2 map. | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. The Preferred Alternative distributes growth around the City more evenly than Alternatives 1 and 2, helping to ensure that impacts are not concentrated and that different areas of the City benefit from future growth and investment. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br>Compared to Alternative 2, the Preferred Alternative would zone a similar amount of land as Medium-Scale Neighborhood. It would zone less land as Regional Activity Center compared to Alternative 2 but more than Alternative 1. |
| 72 | Prefer the proposed zoning changes in alternative 1. Alternative 2 could mean changing the existing neighborhoods too much and decrease quality of life for current residents. | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. The Preferred Alternative distributes growth around the City more evenly than Alternatives 1 and 2, helping to ensure that impacts are not concentrated and that different areas of the City benefit from future growth and investment. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br>Refer to Common Response #2, General Growth and Quality of Life Concerns, for more information about how growth is being distributed throughout the city. |
| 73 | "I support Alternative 2.<br>Please don't make reductions to our current tree protection or planting plans. Whenever people point out nice cities, one prominent theme is trees.<br>Trees make a neighborhood.<br>Keep the trees we have, replace the ones we lose, and plan places for more trees within our urban areas." | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. The Preferred Alternative distributes growth around the City more evenly than Alternatives 1 and 2, helping to ensure that impacts are not concentrated and that different areas of the City benefit from future growth and investment. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br>The Plants and Animals section of Final EIS Chapter 4 addresses potential impacts of the Preferred Alternative on trees, as well as proposed mitigation measures to offset potential impacts and enhance the level of tree canopy cover citywide. |
| 74 | "In reviewing alternative 1 I liked that there were more mixed use zones vs in alternative 2 those same spaces we're industrial/employment zones. Mixed use is key to creating walkable and sustainable communities.<br>I liked that alternative 2 had much heavier density of medium scale housing vs low scale housing density, especially in my neighborhood in South East Vancouver off of Mill plain. Increasing housing density is critical to addressing housing | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. The Preferred Alternative distributes growth around the City more evenly than Alternatives 1 and 2, helping to ensure that impacts are not concentrated and that different areas of the City benefit from future growth and investment. Refer to Common Response #1, Selection of Preferred Alternative, for more |

| | costs while minimizing environmental impact, improving the health of our community and economic success of local businesses.<br><br>I liked that alternative 2 had much heavier medium density housing in my area ( South East Vancouver off of Mill Plain) vs" | information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 75-1 | "The current plan for Mapping Vancouver Future is rife with ideas that seem fine on the surface, but terribly undervalue the people within the community. The extent of heavy industrial land use in prime areas for natural areas, parks, and even mixed neighborhood usages of both shops/housing is a terrible use of wonderful areas for prosperous development of community over monied interests.<br><br>The attempt to spread out the areas for commercial development also don't seem to align with the idea of a 15-minute city, as there doesn't seem to be any plans for transportation outside of buses, which simply clog traffic lanes. The lack of inclusion of a tram system, perhaps even elevated one, to future proof specific areas like Mill Plain and 4th plain is pretty ludicrous considered the climate migration from southern states within the U.S that will happen within the next 20 years.<br><br>The lack of green spaces, which are necessary for air quality, earth, climate and prevention of heat domes are simply lacking from the plan. Not to mention river access to the majority of Vancouver's population has been hidden behind private housing. There is a wonderful waterfront available, but now it is only accessible to people of downtown, which is soon to be blocked by continual fees on the population concerning parking, and cost of participating in the business of the area that have price points that ward off large sections of the community.<br><br>Very simply put, this plan is incredibly Neo-liberal and generates a feeling of IKEA land management/city building. There has to be a better version of the city's future that doesn't include this Gentrified-Millennial-Brutalism that is already popping up throughout the city (the new waterfront looking like an airport for example) that removes meaning and purpose from the everyday lives of community members in service of clean aesthetics. Whats the point of living here if it doesn't even LOOK like a person can afford it? IN short, please do not yuppify Vancouver to appease the influx of people trying to make it look like Colorado, California and Texas. Lets make's Vancouver its own unique place, with its own unique vision, that isn't bogged down with this idea that we need to appeal to businesses over everyone else." | Comment noted.<br><br>Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. The Preferred Alternative distributes growth around the City more evenly than Alternatives 1 and 2, helping to ensure that impacts are not concentrated and that different areas of the City benefit from future growth and investment. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>The Preferred Alternative proposes no changes to the amount of land zoned for Heavy Industrial or Parks and Open Spaces compared to the No Action Alternative or current conditions. Refer to Chapter 2 of the Final EIS for more information on the distribution of different types of land throughout the city.<br><br>The Aesthetics section of Final EIS Chapter 3 identifies measures intended to avoid, minimize and mitigate impacts to aesthetics, including ensuring compliance with citywide standards for landscaping and tree conservation. The Water and Plants and Animals sections of Final EIS Chapter 4 also identifies measures that support green space, trees, and limiting new impervious areas. |
| 76 | We absolutely must pick alternative 2, because of the mixed-use potential of uptown, Shumway, and Arnada. Think of the best walkable neighborhoods in the world, and they all include real human centered business! We need cafes, bodegas, parks, and high density infill development in order to bring people out of their homes and onto the streets. Vancouver already has so many good examples of this, why not expand the concept to more neighborhoods? | Comment noted.<br><br>Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. | 77 | I would like to comment on the proposed Southcliff, Vancouver zoning changes. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 78 | "Proposed zoning changes for the Southcliff neighborhood are all unacceptable. They would change our neighborhood from single family residential to mixed use multi family. More pavement and dwellings would cover permeable surfaces,polluting water and air. Noise would increase, heat will increase as Trees would be cut down. Traffic<br><br>Would increase on neighborhood streets as delivery trucks service the business and multifamily apartments and condos. There are no requirements for parking spaces at residences or businesses so cars would line the streets. Crime is frequent in business areas and would increase in our neighborhood. Litter would also increase. The city would need more police and fire protection and other services making taxes increase. Commercial use is not needed in our neighborhood. We are already within walking distance of restaurants, coffee shops, and other businesses. Medical facilities and grocery stores are nearby and the tower mall project will add many more services and businesses near us. Keep Southcliff single family residential only. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

|---|---|---|
| | The neighborhood is a midcentury gem and should not be destroyed by zoning that allows commercial and high rise multifamily dwellings.Thank you for your consideration." | |
| 79 | The higher densities allowed and encouraged by Alternative 2 are appropriate for Long Range planning and the future of Vancouver. Mixed-use zoning designation that does not require commercial uses on the entire ground floor is necessary, or at least a path via conditional use permit or other process is needed to allow residential uses in commercial zones, otherwise commercial zones will remain undeveloped for the next 2-3 Comp Plan update cycles. | Comment noted.<br>Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. The Preferred Alternative distributes growth around the City more evenly than Alternatives 1 and 2, helping to ensure that impacts are not concentrated and that different areas of the City benefit from future growth and investment. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br>In the proposed zoning code, ground floor commercial would be allowed with residential in Mixed-Use neighborhoods but would only be required in a few limited areas. Refer to the Our Vancouver 2045 website for more details about the proposed zoning code updates. |
| 80 | I dont believe it is beneficial to zone soany of the current single family plots to multi family ploys for multiple reasons. It seems that in doing so your increasing volume into spaces which can impact parking and traffic issues, it is also noted in the plan that there is a negative impact on vegetation, heat, and aesthetic. I.derstand ou want to be able to.make more housing, but it also takes away the opportunity for people to have their own space through ownership and creating generational wealth, which is how the average person is able to get into a house. More is not always better. So my preference would be either no change...although that map wouldn't load....and then Second choice if pressed would be alternative 1. | Comment noted.<br>Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. The Preferred Alternative distributes growth around the City more evenly than Alternatives 1 and 2, helping to ensure that impacts are not concentrated and that different areas of the City benefit from future growth and investment. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 81 | Alternative 1 seems like the best plan to address expected needs without changing so rapidly that huge apartment complexes with lack of parking are not thrown into neighborhoods thst don't have adequate roads or nearby services to accommodate them. | Comment noted.<br>Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. | 82 | Concerning aesthetics, I see many beautiful aspects about Vancouver downtown and surrounding neighborhoods. Always nearby these sites are mounds of trash, garbage, and graffiti. There are people who have the effrontery to place their tents directly on a sidewalk in areas where it should not be allowed. I understand the problem is multifaceted, but safety and sanitation are great concern. Also, the number of loud and speedy cars traversing the newer shoreline areas is concerning, especially on the street along the waterfront. Consider making it pedestrian friendly. | Comment noted. |
| 83 | "I strongly oppose the rezoning of South Cliff along Mill Plain to mixed use. Our neighborhood is already bearing the extra use/parking need for the Tower Mall development.<br>We purchased this home 2 years ago because of the neighborhood. The well preserved mid century homes with trees everywhere, a park and wide streets. For the sense of community and quiet strolls around the neighborhood. The power lines behind homes in Lady Bird Johnson style to facilitate the meeting of community in the front of homes. It would be such a shame to lose that along our street which would provide access to the Mill Plain allowed businesses if this change goes into effect. Please reconsider the zoning overlay of our beautifully preserved, historic community.<br>Thank you, Carolyn Noesen" | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 84 | "The Village of Fishers Landing is not conducive to mixed use development. There is not any vehicle entry into our area from SE 164th Ave, nor would it be safe to create one due to the proximity of Exit 8 from Highway 14, as well as our brick sound barrier wall. The traffic on SE 164th and Highway 14 create constant noise and vehicle fumes, so it is very necessary to maintain the wall and fences, along with sizeable trees in order to have a natural air and sound | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |

| 88 | I'm an 86 year old Kaiser patient. It's very difficult and expensive for me when so many facilities/services are in Oregon because Vancouver won't approve a large facility, including a hospital here. When my sister was in the hospital in Oregon she was provided with a list of nearby hotels so her family could stay near. When we have an urgent visit and go to the emergency room here we need to pay for an ambulance to a Kaiser hospital in Oregon. | Comment noted. Your comment was reviewed and is outside the scope of the SEPA analysis for the Our Vancouver Comprehensive Plan Update. We recommend you contact your insurance company to provide this feedback. |
| 89 | "I am largely in support of Alternative 1, and after meeting with City staffers I am glad to see the work put into this.<br><br>I would really like to see denser development of undeveloped areas such as Section 30 and the former Fisher's Quarry site, as well as projects along larger corridors such as Mill Plain & Fourth Plain Blvd where there are plots that are either empty or under maintained.<br><br>I am worried that the simplified zoning categories will encourage developers to build projects that do not ""fit"" with their surroundings however. I have seen several areas in the County where developers have built poorly designed higher density housing in small plots without much consideration for the neighbors or the nearby transportation infrastructure. I ask that the City consider how to provide higher density environments for those that want and need them without displacing and/or unreasonably burdening those who have made the more suburban regions of Vancouver their home. If more permissive zoning is to be approved, I ask that the City pay more attention on a case by case basis to what is built and where." | Comment noted.<br><br>Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. The Preferred Alternative proposes higher-density land uses in Section 30 and along Mill Plain and Fourth Plain Boulevard.<br><br>Refer to the Aesthetics section of Final EIS Chapter 3 for more information on the potential impacts of denser buildings and proposed Comprehensive Plan policies to address these impacts. |
| 90 | "Comments on July 2025 Vancouver City Comprehensive Plan, EIS<br><br>From Michael F. Donnelly, Ph.D, Geology (Stanford University, and former USGS, Menlo Park and Flagstaf)<br><br>Resident Southcliff 1991 to Current ([address])<br><br>I have concerns about any increase in housing or commercial density in the Southcliff Neighborhood, as represented by the all three rezoning categories (Mixed Use, Medium Scale and Low-Scale). | Comments noted.<br><br>This EIS is a non-project EIS, which means that it is required by SEPA to review the potential impacts of the alternatives at a high, qualitative level based on available mapped information. The SEPA regulations (WAC 197-11-442) note that a non-project EIS is more flexible and is not required to provide site-specific detailed analysis. Additional site-specific environmental review will occur as appropriate when other project or non-project actions are in the future. |

| | I am concerned about the model outcomes for the EIS Earth Section (pp. 143-154) in Chapter 4 (Natural Environment). Especially perplexing is how the EIS Conclusions for each of the three rezoning categories (City's Mixed and Middle Scale, and State's Low-Scale) were derived. This is especially applicable to the Significant Unavoidable Adverse Impacts (SUAI) and were compared within this neighborhood and adjoining areas.<br><br>To address these issues could you please provide me with maps at the same scale with the same boundaries and major highway shown (I-5, 205, and Mill Plain Blvd) so that we can overlay the SUAIs for each of the three rezoning plans. These maps and data are needed to verify the EIS conclusions.<br><br>In addition, could you please provide me with an explanation as to why the Geohazards (Chapter 4, pp. 144-155) for each of the three rezone human density categories for this neighborhood have no SUAIs. Did these conclusions include the City's Updated (Dec., 2024) Critical Areas Ordinance (CAO) that regulates geological hazards? If yes, how? If not, why not?<br><br>The SUAIs appear more focused on incremental development growth impact on earth resources, rather than earth hazards on human development growth.<br><br>The conclusions of the EIS are that all three rezone categories have "minimum" additional impacts and "no" SUAI due to incremental development growth. Please provide the factual and interpretive information leading to those two conclusions.<br><br>However, geologic hazards (listed here on Table 1) are common to this neighborhood and adjoining neighborhoods within this EIS boundary. Their related geologic hazard responses would be directly related to both load and strain responses of the surface and subsurface rocks within these geologic features (Table 1). Such load and strain responses would affect both building foundations and height, density and related infrastructure stability, and therefore to public health and safety.<br><br>The occurrence, frequency, and intensity of these listed geologic hazards will impact each of these rezone categories differently. Low density will have the lowest impacts, and high density (Mixed and Middle densities) will have the greatest impacts.<br><br>Please provide me (on behalf of the Southcliff Neighborhood) with the factual quantitative data, modeling inputs, and major assumptions, along with the statistical and deterministic outcomes that resulted in these interpreted "minimal" and "no" impact conclusions for Geologic Hazards, particularly as they apply to this and adjoining neighborhoods.<br><br>Potentially active volcanism near the boundaries of this EIS area and adjacent areas will likely include volcanic ash fall deposits and mud- and ash-flows. These are the most dangerous activity for human health and safety in this EIS area and globally. Higher density areas will have difficulty evacuating quickly and receiving emergency services quickly, especially on streets such at 4th Plain that in places are impacted by bike and pedestrian lanes replacing vehicle lanes. Therefore, higher density areas will suffer the impacts of volcanic activity more intensely than low density areas.<br><br>The same is true for earthquake events, which involve surface tilting/displacement and subsurface faulting. Such activity will directly impact public health and safety, with the same relative results as will volcanism in areas of increased human density.<br><br>Table 1<br><br>Identified Geologic Hazards<br><br>Earth (pp 143-175), Water (pp. 175-182)<br><br>Hazards Descriptions<br><br>Volcanism Affects both seismicity and water resources (surface and ground water) as well as wildlife/animal habitats.<br><br>Seismicity related to the type of volcanism, fault displacement, ground shaking, (especially horizontal), liquefaction, landslides/slope failure and accelerated surface erosion. | The Earth section of Final EIS Chapter 4 provides maps of existing geologic hazard areas and a high-level assessment of where impacts are more likely to occur. Parcel-specific assessment of impacts is not provided in the Final EIS. Geologic hazard data is publicly available for download via Clark County's Open GIS data portal.<br><br>As discussed in the Earth section of Final EIS Chapter 4, regardless of alternative, all future development projects will be required to comply with city and state requirements for geologically hazardous areas. The City's development review process will ensure compliance with the geologically hazardous areas requirements under VMC 20.740.130.<br><br>Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| 96 | "Subject: Comment on Proposed Mixed Use Zoning for SE 10th Circle and SE 9th Circle<br><br>Dear Planning Commission and Community Development Staff,<br><br>I am submitting comments on the OUR VANCOUVER Comprehensive Plan Update Draft EIS regarding the proposed rezoning of my property (Parcel [parcel number], SE 10th Circle) and adjacent homes on SE 9th Circle from Low-Scale Neighborhood to Mixed Use under both Alternative 1 and Alternative 2.<br><br>I have reviewed the EIS materials, attended the City's open house, and understand the broader goals of increasing housing options, supporting mixed-use nodes, and meeting state growth requirements. However, I believe this particular location is not an appropriate fit for a mixed-use designation for the following reasons:<br><br>1. Cul-de-sac Access Constraints<br><br>SE 10th Circle and SE 9th Circle are both cul-de-sacs with a single access point via SE Westridge Boulevard. There is no direct connection to SE 192nd Avenue, despite proximity on the map.<br><br>Mixed-use zoning anticipates higher-density residential (up to 8 stories/110 feet) and commercial activity, which would significantly increase vehicle trips, service traffic, and delivery activity through this constrained, dead-end street system. This is inconsistent with the City's stated emphasis on safe, connected, and accessible neighborhoods.<br><br>2. Abrupt Transition from Low-Scale to High-Scale Development<br><br>The EIS describes mixed-use areas as being most successful when integrated with walkable corridors or activity centers. In this case, the designation would be at the very end of residential cul-de-sacs, with no connecting commercial corridor.<br><br>The shift from single-family and small-scale "middle housing" to potential 8-story mixed-use buildings creates an abrupt and incompatible scale transition, which the EIS notes can cause land use compatibility issues.<br><br>3. State Law Already Allows Additional Density Without Rezoning<br><br>Under HB 1110, existing Low-Scale Neighborhood zoning will already allow up to four housing units per lot, plus additional accessory dwelling units under HB 1337. This means the state has already enabled meaningful density increases without introducing larger commercial-scale buildings in this location.<br><br>4. Alternative Locations Better Meet the Plan's Objectives<br><br>The City's Draft EIS emphasizes focusing higher-intensity mixed-use near planned growth corridors and activity nodes. This site does not function as part of such a corridor and is better suited to remain a Low-Scale Neighborhood while still benefiting from new state housing flexibility.<br><br>My Request | Comment noted.<br><br>In the proposed Preferred Alternative, properties adjacent to SE 9th Circle and SE 10th Circle are assigned Low Scale Neighborhood and Medium Scale Neighborhood zoning. The Medium Scale Neighborhood zoning is applied along the 192nd Avenue corridor and around Fisher Basin Park, in alignment with the City Council's framework for getting to a Preferred Alternative land use map. The proposed Preferred Alternative directs higher-density growth (such as Medium-Scale Neighborhood) to key corridors and areas with good access to commercial services, parks, and schools, such as the properties on SE 9th Circle and 10th Circle that are adjacent to 192nd Avenue.<br><br>Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>Zoning districts are not the only regulations that apply to any given parcel in the City. In addition to a zoning district, which every parcel has, some properties may be further encumbered by things such as site access, critical areas, private or public easements, or private contracts. If there are access constraints on the property that could prohibit or limit development, these factors would limit future building regardless of what the zoning allows. When development is proposed on a property, part of the review process includes assessing existing infrastructure like transportation and utilities to see if what is there is sufficient to serve growth, if additional improvements are needed to make them sufficient, or if site constraints limit development beyond what the base zoning allows. This includes ensuring adequate space for emergency response. If infrastructure improvements or additional access points are needed they will be required at the time of development. e If infrastructure improvements or additional access points are needed, those are required at the time of development.<br><br>The Final EIS considers the potential impacts of the alternatives on compatibility with existing land uses in the Land and Shoreline Use section in Chapter 3. This section also outlines proposed measures to help avoid, minimize, and mitigate these impacts, including having regulations that provide transitions between zoning districts to ensure compatibility of adjacent land uses, such as setbacks and step-downs between zoning districts. |

|---|---|---|
| | I respectfully request that the City retain the Low-Scale Neighborhood designation for SE 10th Circle and SE 9th Circle in the Preferred Alternative. This would allow the neighborhood to adapt to state-mandated housing changes while avoiding the safety, access, and compatibility issues that would result from a mixed-use designation at the end of cul-de-sacs.<br><br>Thank you for considering these comments.<br><br>Sincerely,<br><br>Brian & Leanne McClary<br><br>[address]" | |
| 97 | I loved the Alternative 2 map. I think more medium/mixed use all around is a good thing. I specifically think the medium use in the Lincoln area & south to downtown Vancouver is crucial. Extremely specifically, I think the land between Mill Plain/I5/Main/McLoughlin (and even up to 4th Plain) would really really benefit. There are still open, empty lots this close to downtown and that is a shame. Also, if there is any room here, please bring the MAX line to Vancouver. I think the benefits greatly outweigh the costs in the long term. | Comment noted.<br><br>Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>The Preferred Alternative proposes Medium Scale, Mixed Use Neighborhood and Regional Activity Center zoning districts in the Lincoln, Shumway, Hough and Arnada areas.<br><br>Your comment about the MAX line was reviewed and is outside the scope of the SEPA analysis for the Our Vancouver Comprehensive Plan Update. Refer to the Interstate Bridge Program website for more information about how to comment on that project. |
| 98 | "I understand and support the need to build more housing units in Vancouver to combat homelessness, and to build as infill so as not to add to sprawl. However, for various reasons, I think Southcliff should be left as is. My husband and I chose to buy this house and property in 2022 because of all the land and surrounding greenspace, and because I want to slowly convert our land from lawn to forest and trees, planting native firs and other trees. There is a lot of land to allow me to do this. We cannot afford a 5 acre property in Clark County as the price of those homes starts at well over $1 million.<br><br>There are also many large, old fir trees and other large trees in the neighborhood, and if this plan is adopted, most if not all of them will be cut down in the near future as neighbors move out and sell to developers. This neighborhood already has 47% tree cover, and I've already planted small trees that should grow large in the coming years and add to that tree cover.<br><br>When we bought this property in 2022, we knew about the proposed development in the empty Town Plaza area and that made buying here more attractive knowing there would be shops nearby that we could walk to.<br><br>I would like to suggest alternatives to rezoning Southcliff.<br><br>First, consider concentrating new commercial and housing development in the adjacent Town Plaza. This approach would create a successful business district with the infrastructure needed to help businesses thrive, it aligns with City goals for vibrant economic hubs, and protects the unique character of Southcliff.<br><br>Second, encourage Southcliff residents to replace more lawn space with native trees. Many homes have large tracts of lawn and the planting of trees would beautify those properties. If the rezoning of Southcliff is dropped, I think those owners would be happy to plant and grow more trees as an alternative.<br><br>Third, the city should offer financial incentives, such as fee waivers or faster permit reviews, for developers who choose to redevelop existing commercial properties along Mill Plain. There are many empty storefronts along Mill Plain.<br><br>Fourth, nearby on Andresen and Fourth Plain, there are huge empty parking lots and failing stores/businesses. These are eyesores. How about converting these areas to additional Regional Activity Centers with high-rise housing and businesses? The area on Fourth Plain where there's a Target and Barnes & Noble is one of them. Target and Barnes & Noble seem to be doing OK, but many of the other businesses there appear to be failing, specifically the Regal | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

|---|---|---|
| | Cinema, and old, failed restaurant, and Crunch Fitness (which I recently quit due to them failing to do necessary repairs; I'm anticipating their closing soon). And the huge parking lot on Andresen where there used to be a K-Mart would be an ideal location for an additional Regional Activity Center or high-rise housing. Please consider focusing as much housing and business redevelopment as possible on these areas, which are also near Vine bus stops. Parking lots are horrible for the environment because they are large, impermeable surfaces. If redevelopment is performed in these areas, swale areas with new trees could be added which would beautify the areas. There's another such area on 76th Street in HazelDell where many big-box stores have failed and now sit empty and there's a huge, ugly parking lot. I fully agree much more housing needs to be built, and I think these three sites should be rezoned for that.<br><br>Finally, I think all new housing needs to be townhouses, condos, or similar. It seems that all the new housing that's been developed in the last few years are single-family homes one or two feet apart. I know developers can get a lot more money for homes that sell as single-family homes, but building them that close together just doesn't make environmental sense. Personally, I'd rather own a townhome rather than a single-family home so close to my neighbor's houses." | |
| 99 | "Hello,<br><br>Could edible community gardens be included for the public? Long term food sustainability and security for citizens - especially now with the current economic times and the progressive deterioration of quality of life for everyone below a 'certain' tax bracket.<br><br>Thank you,<br><br>Sara" | Comment noted.<br><br>The Public Services and Utilities section of Final EIS Chapter 3 includes a proposed policy under consideration in the Comprehensive Plan Update that calls for expanding access to community gardens and incentivizing urban agriculture to improve food security and increase healthy food options. |
| 100 | "Transportation: your study shows people are unlikely to change their mode of transport so why is the city spending time and money changing the streets when the money may be better spent installing traffic cameras and enforcing traffic laws thereby reducing violations and accidents? One can remove parking spaces and add pedestrian/bike lanes and access to public transportation, individuals still have the right to drive and it is usually a significant time saver. (I can drive to downtown in 15-20 minutes or take the bus and spend 60-90 minutes-on travel time. My time is valuable). Until such time as we are forced to abandon driving, a reduction in available parking is most likely going to result in a decrease in traffic to the local businesses that isn't offset by an equal increase in other modes of transportation (not even those of less than 4 miles). Recommend the local college statistics and/or marketing class do a survey of the business owners located in areas where street changes have already occurred and share their results with the city and the public before any additional planned street improvements are undertaken.<br><br>Parking: If you want more people downtown why did you remove free parking on weekends? Parking-the parking analysis states 'nearly half of city managed off street parking is unoccupied during the week day""-what % of the unoccupied parking is permit only parking? As for daytime vacant street parking-what % is near commercial vs residential? What percent if free vs metered?<br><br>Parks: What is the city plan to address the current park deficit? Other than allow developers to acquire available areas, clear them and add buildings. Like we really and truly need a Lexus dealership (on Mill Plain) or an In and Out Burger at what may be seen as potentially the worst possible location (136th and Mill Plain ...136th and 4th would have been a bit better as it had the potential of moving traffic farther away from an already busy intersection.<br><br>Education: compared to the state it appears our schools are not meeting the basic educational needs of our 9-12 grade students. We need to recognize the value of well educated and trained trades people vs the belief that a 4 year degree is the answer to everything. Consider arranging well planned field trips to community and state colleges, where the college students positively engage with k-12 students. The goal is to expose the younger people to future career possibilities and motivation to stay in school. | Comments noted. The transportation, parking, and education comments were reviewed and are outside the scope of the SEPA analysis for the Our Vancouver Comprehensive Plan Update. The comments reflect policy preferences rather than input on the sufficiency of the environmental review.<br><br>Refer to the Public Services and Utilities section of Final EIS Chapter 3 for information about the City's planned approach for addressing parks needs under all alternatives. Refer to the Plants and Animals section of Final EIS Chapter 4 for more information about measures to meet the City's tree canopy goals.<br><br>Refer to Common Response # 3: Car Dealerships |

|---|---|---|
| | Tree canopy: the city states it cares for its trees yet the residents watch the developers clear cut parcel after parcel. Visually, the perspective is the city does not care to maintain any type of tree canopy. Actions speak louder that words. Yes, I have seen the educational signs on the trees in the parks. This is not enough to mitigate the impact of seeing trees and the understory clearcut for development. At minimum, require developers to include 100% PNW native flora in the landscape section of their development plans." | |
| 101 | I would like to see more affordable housing. I do not mean apartments or condos. As someone who has lived in Downtown for approximately 20 years the disaster of the "road improvements" throughout this area was grossly mishandled. The traffic has not improved only gotten worse. I cannot afford a house in the area as a single person who makes $100k+ which is ridiculous. I rent in Hough neighborhood which until recent has had a horrific issue with the homeless in the area including assaults, fires, theft and open drug use. I miss our quaint downtown, we are not Portland nor do we want to be. Along with the bridge issues and talks of tolls I am so disappointed in our government officials and city planners. I feel this city needs to catch up with the mess they've already made before planning anymore. | Comment noted. Refer to the Housing section of Final EIS Chapter 3 for a discussion of the potential effects of the Comprehensive Plan Update alternatives on housing diversity and supply, as well as proposed Comprehensive Plan policies to address impacts to housing and homeownership. Refer to Common Response #8: Housing affordability/options for more information. Refer to Common Response #15 Homelessness for more information on how the City is working to address homelessness. |
| 102 | I don't want to see any industrial development in my neighborhood or surrounding neighborhoods east of I-205, Mill Plain, Chkalov or Cascade Park area. There is so much traffic especially near I-205, it will further erode quality of life, increase noise and pollution. I would like to see more plants, trees, and esthetics like in Camas near 172nd that is visually appealing and even with traffic. | Comment noted. The Preferred Alternative proposes a mix of zones in the Fircrest and Cascade Park neighborhoods, including primarily Low-Scale and Medium-Scale Neighborhood and Mixed-Use. These zones do not allow industrial development.<br>Refer to the Aesthetics, Noise and Transportation sections of Final EIS Chapter 3 and the Air Quality, Greenhouse Gases and Climate; and Plants and Animals sections of Final EIS Chapter 4 for more information on the potential impacts to those topic areas, as well as proposed measures to address those impacts. |
| 103 | We need more housing that is affordable relative to the wages of people living here and jobs available. We need more density. We need more living wage jobs and more services close to or in neighborhoods so that people can get the things they need to live (groceries, child care, work etc.) | Comment noted. Refer to the Housing section of Final EIS Chapter 3 for a discussion of the potential effects of the Comprehensive Plan Update alternatives on housing diversity and supply, as well as proposed Comprehensive Plan policies to address impacts to housing and homeownership. Refer to Common Response #8: Housing affordability/options and Common Response #10, Businesses in residential areas, for more information. |
| 104 | "To the Our Vancouver Planning Team,<br>Thank you for the opportunity to comment on the Draft Environmental Impact Statement (EIS) for the OUR VANCOUVER Comprehensive Plan Update. I strongly support the City's vision of a vibrant, equitable, and economically resilient future — and believe that the Vancouver waterfront plays a critical role in achieving this.<br>As a stakeholder interested in investing in the waterfront, I would like to encourage the following additions and policy considerations as part of the final plan:<br>1. Flexible Zoning for Alcohol Use & Mixed-Use Nightlife<br>The waterfront should be formally recognized as a mixed-use hospitality zone that supports bars, restaurants, and social venues. I urge the City to:<br>Ensure flexible zoning allowances for alcohol-serving establishments across Mixed-Use Neighborhoods and Regional Activity Centers.<br>Clarify and expand permissible uses to include outdoor dining, rooftop patios, and entertainment spaces tied to nightlife culture.<br>2. Streamlined Liquor Licensing and Permitting<br>To encourage responsible and timely business development, please consider:<br>Establishing an expedited liquor license review process for businesses in key economic growth nodes like the waterfront.<br>Creating a dedicated "Waterfront Business Express Lane" for hospitality-related permits, inspections, and approvals. | Comments noted. Your comments were reviewed and are outside the scope of the SEPA analysis for the Our Vancouver Comprehensive Plan Update. Your suggestions were shared with City decisionmakers. |

| ID | Full comment | Response |
|---|---|---|
| | 3. Targeted Tax Credits and Economic Incentives<br>The waterfront will thrive with a balanced mix of residential and business investment. I recommend:<br>Implementing business and residential tax credits specific to the waterfront area.<br>Considering property tax abatements or startup-friendly tax incentives for new businesses that contribute to placemaking, job creation, or sustainable infrastructure.<br>4. Cultural District or Hospitality Overlay Zone<br>A designated hospitality overlay or entertainment district would allow the City to:<br>Support later operating hours, live music, and flexible outdoor uses.<br>Reduce permitting friction for special events and seasonal programming.<br>Enhance branding and tourism focused on food, beverage, arts, and riverside recreation.<br>5. Public Realm Enhancements<br>Finally, please prioritize investments in:<br>Decorative and safety lighting, clean public restrooms, and security partnerships to support a nightlife economy.<br>Public infrastructure like parking decks, signage, and walkability to improve access for both visitors and residents.<br>The waterfront represents one of Vancouver's most exciting opportunities for inclusive, experience-driven development. I hope you will consider these recommendations to make the process of building a business here more accessible, sustainable, and aligned with the City's growth targets.<br>Sincerely,<br>Carla Myers" | |
| 105 | "I own 2 parcels of land on St. John's and 44th street. A prime location coming.<br>Parcel [parcel number] .61 acres zoned CC, [parcel number] .43 acres zoned R-22. Because of the small size and different zonings it makes finding a reasonable use case very difficult.<br>I would like to have you discuss how you could make it easier for small businesses and land owners to develop small properties." | The Preferred Alternative would zone these parcels as Medium-Scale Neighborhood. Refer to the Our Vancouver 2045 website for more details about the updated zoning code and its potential effects on these parcels. |
| 106 | I'm very concerned about building higher density housing without changes to infrastructure such as widening roads. And as roads are worked on or neighborhoods are built, I think the city should invest more in putting utility lines underground. With power demands increasing, maintaining consistent access to power should be a priority. | Comment noted. Refer to the Transportation and Public Services and Utilities sections of Final EIS Chapter 3 for more information about potential impacts of the alternatives, as well as proposed measures to address these impacts. |
| 107 | Prefer Alternative 1, less dense than Alternative 2, also prefer more parks and natural areas. Prefer the less industrial next to the river, ie mixed use rather than heavy industrial. | Comment noted.<br>Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. All alternatives would have similar amounts of land zoned as parks and natural areas. |
| 108 | "Since Vancouver annexed Cascade Park in the 90's Vancouver promised great things and delivered nothing.<br>Currently the City can not take care of it citizens know and you have plans to annex Hazel Dell and Salmon creek, will turn into a disaster for both areas.<br>This current group of city council and mayor jump from one grand project to another. Once it's done the neglect begins. Cascade park is a prime example, in that they will not listen to the citizens who live in the area and refuse to show any desire to do so. | Comment noted. Your comment was reviewed and is outside the scope of the SEPA analysis for the Our Vancouver Comprehensive Plan Update. |

| ID | Full comment | Response |
|---|---|---|
| | Take care of the people who live in this citycurrently and if other areas petition and or vote to come into the city then fine, but to do a land grab is criminal and I do not support this at all." | |
| 109 | "I prefer Alternative #2.<br><br>My general feedback on the alternatives is that I would like to see:<br><br>- More residential and commercial density overall, with a focus on high quality and thoughtful design.<br><br>- Increased prioritization of non-car use and transportation across the city, especially bicycle/transit infrastructure and repurposing the vast swaths of pavement currently devoted to parked cars. I would love for Vancouver to look back in 5 years and be able to say with confidence that our peak car era is behind us.<br><br>Also, the trees in this town are spectacular. Alongside increasing density and multimodal transportation, I believe it would be both valuable and wise to preserve and improve our urban tree canopy." | Comment noted.<br><br>Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>The Transportation section of Final EIS Chapter 3 and the Air Quality, Greenhouse Gases, and Climate section of Final EIS Chapter 4 identify improvements to active transportation infrastructure as proposed Comprehensive Plan policy measures. Refer to the Plants and Animals section of Final EIS Chapter 4 for more information about measures to meet the City's tree canopy goals. |
| 110 | Opposition to the city rezoning southcliff neighborhood, to include mill plain/oregon drive. The. city is establishing many new homes in the heights project and moving neighborhoods on E. Mill Plain will diminished the. natural habitat and established neighborhood and parks. The proposed plan puts housinging zoning above those proposed in the Town Plaza Heights project, is against southcliff long-standing restrictive covenants (since 1954) where homes can build adu unless attached tot he home, etc, obliterates the historical character, increases traffic, parking, and public safety to the neighborhood, and destroys the environmental requirements that they have put in place. Current residents are required to submit land use surveys, archeology surveys, engineering assessment, tree surveys and more to do construction in the area with limitations. I seems that the respect for the neighbor hood is not the city's role, but rather to diminish our neighbors quality of life with excess vehicle, excess homes, destruction of native habitats, etc. Our family feels that rather than rezoning southcliff as "mixed use neighborhood" it allow no commercial properties, focus on the heights project with the additional housing. If an assessment must be made - it would be more beneficial to allow the current neighborhood to build unattached ADU within zoning limits, which could include above garages, for generational living. Our family is strongly against the rezoning, but would support the additional option of allowing homeowners to build ADU as long as they can accommodate vehicles on their own property. Thank you. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 111 | I am against the heights district project. | Comment noted. Your comment was reviewed and is outside the scope of the SEPA analysis for the Our Vancouver Comprehensive Plan Update. |
| 112 | *Incomplete form, no comment received* | *N/A* |
| 113 | "August 15, 2025<br><br>Points to make for the consideration of the Vancouver city planners:<br><br>Our family moved into Southcliff 20 years ago, putting us in the category of "newcomers" to this neighborhood. My husband and I raised our two children here. A number of our neighbors, many who have become friends, have lived here most of their lives.<br><br>When this neighborhood was first established in the mid 1950s, CC&Rs were set into place with guidelines set up to maintain a sense of stability and safety, ensuring that property owners would be protected from divided lots or commercial endeavors. The original residents thought ahead all those years ago. They planted many trees, which today are 75-year-old giants, creating a beautiful canopy throughout the area.<br><br>This is a wonderful, walkable area where, on the south side, grand homes rise on a bluff overlooking the Columbia River (a note: our family does not live in one of these). Our neighborhood is a spot where friends gather and chat, or get that morning walk in. Others walk their dogs, wheel their babies, bike, or play with their children in the park.<br><br>Historic Southcliff is unique in a number of ways. In terms of its layout, this cluster of approximately 100 homes sits in a heart-shaped configuration, fed by three streets sort of like arteries, each of them entering from Mill Plain on its northern border. There is no back or side way into or out of Southcliff, as it is surrounded by ravines and cliffs that drop off sharply in an arc surrounding the neighborhood. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | If I understand the task at hand correctly, the Vancouver city planners are asked to envision both housing and business opportunities for something around 80,000 new residents in Vancouver over the next 20 years, certainly no small feat. And if I understand the proposed plan correctly as it relates to Southcliff, it would be to rezone the first block of properties, from Mill Plain inward to Oregon Drive, to be mixed-use high-rise commercial/residential buildings.<br><br>Our entire neighborhood would be drastically impacted by this concept of high-rise commercial/residential buildings in a wide swath along our only entrances and exits at Mill Plain Blvd. These buildings would loom over the homes on that same street. It is hard to envision how traffic patterns would work with residents vying for space to enter or exit with a huge influx of condo residents, shoppers, and vehicles coming into and out of these three arteries onto a major thoroughfare.<br><br>Historic Southcliff is a relatively short stretch along Mill Plain Blvd in the big picture of urban planning. It would not contribute a significant number of units, while creating a big problem for current and future residents to live with.<br><br>Studies have shown that stable neighborhoods with a sense of history give back to their communities, creating connections in so many ways. I propose that your group take another look, using a scalpel instead of a wide-tipped marker, taking into account the ebb and flow of areas that are thriving and should be preserved.<br><br>And I do believe this can be done while at the same time improving and developing the vast expanses of land along Mill Plain that can easily accommodate high rise housing and businesses, to great effect for the benefit of all these future residents, and for Vancouver as a whole.<br><br>Thank you for taking the time to read this letter." | |
| 114 | "I believe our city should embrace a vision for growth centered on high-density, mixed-use neighborhoods (alternative 2). By concentrating housing, jobs, shops, and services close together, we can create walkable, vibrant districts where daily needs are within easy reach. This approach would reduce long car commutes, protect natural areas from sprawl, and give a boost to local businesses while fostering stronger community ties. If paired with thoughtfully designed public spaces, high-density development could offer both the vitality of a thriving city and the comfort of accessible green spaces.<br><br>I also urge the city to make significant investments in parks, pedestrian and bike infrastructure, and robust public transit. Safe, connected bike lanes and walkways would allow people of all ages to travel without relying on cars, while reliable and frequent transit would ensure equitable access to jobs, education, and services. Parks woven into dense neighborhoods would not only provide recreation and beauty, but also help cool our city, clean our air, and bring neighbors together. By putting people and green space at the heart of our planning decisions, we can create a city that is dynamic, inclusive, and sustainable for the next twenty years and beyond." | Comment noted.<br><br>Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>The Transportation section of Final EIS Chapter 3 and the Air Quality, Greenhouse Gases, and Climate section of Final EIS Chapter 4 identify improvements to active transportation infrastructure and transit as proposed Comprehensive Plan policy measures.<br><br>Refer to the Public Services and Utilities section of Final EIS Chapter 3 for information about the City's planned approach for addressing parks needs under all alternatives. Refer to the Plants and Animals section of Final EIS Chapter 4 for more information about measures to meet the City's tree canopy goals. |
| 115 | "Fishers Landing Rezoning<br><br>Development along 164th will increase noise throughout the area .<br><br>The rezoning of the area will ruin one of Vancouver's nicer neighborhoods." | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 116 | "My spouse and I are concerned with the proposed zoning changes that will directly affect our neighborhood of Southcliff.<br><br>Homes in Southcliff were built mainly in the 50's as a planned development. The proposed changes would conflict with our neighborhood covenants that were initially developed and approved by the city to preserve the nature of the neighborhood. The neighborhood is a treasure trove of mid-century modern and mid-century traditional homes. The proposed zoning changes would eventually destroy the character of the neighborhood. I would hope the city would want to preserve the uniqueness of our neighborhood and have it as an example of a midcentury developed neighborhood. Our neighborhood is highly desirable to own a home in, I would think the city would want to preserve it instead of making the entire city homogenous throughout. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | Also, we are believers in planting trees and expanding the tree canopy. We have over 30 varieties of Japanese maples and numerous other trees. The changes to zoning would irreparably damage the tree canopy in the neighborhood which significantly adds to Vancouver's tree canopy.<br><br>Also, why is the the height of buildings along mill plain in our neighborhood allowed to be taller than the new Heights Development. I believe the Heights Development could be higher density to help meet zoning density requirements.<br><br>I am concerned with possible 8 story buildings in our neighborhood along Mill Plain. People would have to enter our neighborhood to access these buildings and where would people park? It would destroy our neighborhood as a quiet beautiful place to walk, live, grow old in.<br><br>Thank you for the opportunity to comment." | |
| 117 | Please do not remove our sound wall. We need the sound wall along 164th (between highway 14 and 34th). It blocks the noise from the highway and from 164th. 2 extremely busy roads. It will negatively affect our wellbeing and property values! | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 118 | "I am in favor of the no action option for the Fishers Landing area. This neighborhood was built in the 1980s and is a lovely neighborhood of single family homes. It should have value as a historic housing area. There are many commercial resources nearby without having them affect the housing area.<br><br>I'm wondering why the VIC project doesn't fulfill the state mandates for more dense housing? There seems to be plenty of space available for more dense housing within the VIC without disturbing the single family neighborhood.<br><br>I think both alternatives proposed would be more detrimental to this area with noise, crime and pollution.<br><br>No action is the best option for Fishers Landing area." | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 119 | I'm against the Rezoning of The Village subdivision in Fishers Landing area. The beauty of these homes and their gardens. We bought and live here for the beautiful yards we have. Let this area remain as is. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 120 | I am strongly opposed to the scenarios being considered in the comprehensive plan concerning E Mill Plain Blvd and the long established Southcliff neighborhood. I have lived in Southcliff for over 40 years. This neighborhood was established over 70 years ago when the old WWII houses were removed. It is a heavily treed area and this project would result in significant tree canopy loss. The Town Plaza Regional Activity area is just a block away from our neighborhood that would include housing and retail with NO plans for parking of cars. Where will these cars park other than neighborhood streets? There should be no more housing and retail along this section of E Mill Plain Blvd. The proposed development would significantly affect the long established Southcliff neighborhood and cause massive parking and traffic problems for this area and the already approved but not yet built Tower Mall project. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 121 | *Incomplete form, no comment received* | *N/A* |
| 122 | I think Clark County residents, and more specifically Vancouver residents are not going to adapt to public transportation despite the City' s efforts to force it on residents. Living in Fishers landing, we already have adapted to the airport noise, but the plan to change zoning could result in tearing down the cement noise barrier along SE 164th makes no sense, especially since they spent so much money and time to build a noise barrier along Highway 14. Next there is a huge plot of undeveloped land on the other side of 164, by the transit center that would seem to be prime for commercial and multi-use housing. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 123 | Rezoning for mobile home parks | The Preferred Alternative includes a new zoning district, Manufactured Home Park, to preserve existing mobile home parks in Vancouver. |
| 124 | "Please keep the zoning at 164th and 34th street area, specifically the Villiage at Fisher's Landing zoned single family as it is now.<br><br>Sincerely,<br><br>Douglas L. Stutesman" | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |

| 125 | The rezoning of the Village at Fisher's Landing, would completely change the feeling and look of the Village. Leave it as is. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 126 | *Incomplete form, no comment received* | *N/A* |
| 127 | Why would you change zoning on an established single family neighborhood to high density development? If I wanted to live next door to an apartment complex I would have done so. Instead you propose to ruin a safe, quiet, family oriented neighborhood. There are plenty of other areas where you can do so without ruining an existing neighborhood. I would really llike to hear a response, not just silence. | Comment noted. Refer to Common Response #12: Neighborhood Character. |
| 128 | I am TOTALLY opposed to the 2 scenarios presented that affect the Southcliff neighborhood in Vancouver. Why you have plans to destroy a lovely long established neighborhood is really hard to understand. This redevelopment will cause massive traffic problems, ruin the looks of the neighborhood and decrease property values. I was recently informed that the Tower Mall project will contain 1300 units with NO parking. Those residents will be parking all over our neighborhood and if that isn't bad enough you want to make Oregon drive retail? More parking and traffic problems! Not to mention that it will destroy our neighborhood! This beautiful neighborhood has been here since the 50's and should be left alone. It has abundant large trees which supply many benefits. They combat climate change, provide oxygen, save water, prevent water pollution to mention just a few of the benefits. Removing them would be a crime. Please don't ruin our long established neighborhood and why not do something to improve Downtown Vancouver instead. I was told that the city planners involved in this were from Portland. They've already made a huge mess of Portland and need to go back there!!! | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 129 | Leave the sound wall on 164th alone or make it better. The noise of traffic and engines going up the hill is already loud for the homes along 164th. Also it's funny the city owns the property across the street and then wants to change what's existing on the side with the homes. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |

| | 10. Of the City planners and development staff who live in the City of Vancouver, is the City proposing to rezone the neighborhood where each of them lives to allow commercial activity or for buildings five to eight stories high?" | |
| 133 | "I am very concerned about the proposed zoning changes for the Village at Fishers Landing Neighborhood. We moved to this area for the quiet and tranquility and ease of access to services. We used to live in NE Portland, until our neighborhood was also rezoned and it became unbearable. The increased traffic, noise, pollution and crowds at grocery stores and local services detracted from everybody's quality of life. It also seems to me that there is plenty of new housing going in the area. Why ruin our neighborhood?<br><br>If the zoning change is approved, we would consider moving to Camas or Ridgefield, again to find the quality of life we thought Vancouver was known for. Vancouver does need to be another Portland!" | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 134 | Study the legislative history of House Bill 1110 passed in 2023. This Bill led to Vancouver's Comprehensive Plan Update. It is clear from a reading of the legislative history of this Bill that it only applies to subdivisions and neighborhoods with restrictive covenants addressing the number of homes on a single lot which are adopted after the effective date of this House Bill. Southcliff Neighborhood's CC&Rs were adopted in the mid-1950's and provides in part that "no building shall be erected, altered, placed or permitted to remain on any lot other than one detached single-family dwelling." | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 135 | "Hello,<br><br>""For these reasons we implore The City to take the No Action Alternative to maintain the character of the city that drew us here in the first place.""<br><br>As a member of this community for the last 10 years, I am proud to call Vancouver my home. The character, people, and balanced amenities are truly beyond reproach. The desire to live in the Vancouver suburban community has clearly grown exponentially. With that, the repurposing of unused land and deprecated industry (decommissioned quarries, non-agricultural land, and dilapidated structures) into new mixed use areas has done the overall community well. What has fatigued the community including myself is the militant efforts to re-develop established and thriving areas. Creating additional noise, traffic, aggravated citizens, and negative environmental impact. In brief, the traffic, noise, and aggravated citizens are hand in hand. Speaking specifically of our area, the intersection of SE 164th Ave and Highway 14 entering the freeway is routinely backed up to the tune of 50+ vehicles and increasing. During just the last 6 years the aggravated honking and yelling has increased exponentially. There have even been instances of threatened violence observed. While public transportation in an option, the reality is the majority will still choose personal transportation. With the proposed growth in dwellings, it is all but certain to increase traffic to make the situation worse. Speaking for my family and those in our locale, we didn't move here to live in NYC / an agitated metropolitan. All of which has had my family and others highly considering leaving Clark County for areas that value what made this community great, Stability and Pride. For these reasons we implore The City to take the No Action Alternative to maintain the character of the city that drew us here in the first place.<br><br>Thanks<br><br>Mitch" | Comment noted. | 137 | "Letter to City Council and City Planners regarding EIS for proposed Southcliff neighborhood zoning changes (Comprehensive Growth Plan).<br><br>I am writing to ask that the Vancouver City Council choose the “No Action” alternative for Southcliff zoning.<br><br>I have strongly supported the Heights District Plan/Regional Activity Center with the inclusion of low-income housing and commercial use. The Town Plaza area was distressed and deserted and, in my opinion, abandoned by the city for years while development focused elsewhere. I look forward to the new activity and diversity the development will bring to the area. And I would like the city to put its energy into completing the plan without so much delay.<br><br>Contrary to this, I strongly oppose the new zoning plans Alternative 1 and 2 of the Comprehensive Growth Plan. Both would negatively affect the Southcliff neighborhood with commercial and high-density zoning along Mill Plain. I have lived in Southcliff since December 1992. I am one of the team that worked on the 2001 Southcliff Neighborhood Action Plan, and the proposed zoning plans would be counter to our NAP goals of preserving the environmental and community qualities of our little neighborhood. We are proud of our 47% tree canopy cover. The proposed high-density and commercial use would mean cutting trees and disturbing wildlife. Our mid-century development has no sidewalks, so our streets are our only walking paths. The increased traffic and parking needs would create danger for pedestrians and inhibit the community interaction and gathering.<br><br>I am a believer in mixed-use development. I have seen good examples of this and bad ones. It is sad to see the well-intentioned idea of mixed-use eroded by the behemoth online retailers that dominate our current economy. When I see mixed-use areas around our neighborhood, I see tattoo or massage parlors, empty buildings with perpetual “for lease” signs, and a depressing rotation of failed shops. I believe the city planners and council need to acknowledge this reality and not set our neighborhood up for failure.<br><br>I know the city council and planners will hear and read comments from many of the Southcliff neighbors about their opposition to the rezoning plans of Alternatives 1 and 2. Please choose the “No Action” option.<br><br>Thank you,<br><br>Patricia Douglass<br><br>[address]<br><br>Vancouver, Washington 98661" | Comment noted. | 141 | I would like to see more information available for affordable housing for senior | Comment noted. Refer to the Our Vancouver 2045 website for more details about the Comprehensive Plan Housing Chapter, which includes discussion of affordable housing for seniors. |
| 143 | The village at Fisher's Landing is an established single family neighborhood that will be negatively impacted by the proposed zoning changes. I moved here 20 years ago and raised my family in this house. I do not understand why anyone would consider ruining a beautiful neighborhood to create more housing. There is plenty of apartments along 164 and zero lot line condominium clusters near by. It creates nice diversity for the area. It does not all have to be dense living. Also, create a clean and efficient transit system and maybe more people will use it. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 144 | We are very concerned about the road congestion and noise. | Comment noted. Refer to Common Response #4, Vehicle Traffic Impacts. |
| 145 | "I would like the Village at Fisher's Landing neighborhood to remain the same.<br><br>Mixed-use development would change the safety and health of the existing neighborhood.<br><br>The vacant land on the west side of 164th can be used for mixed-use development." | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood.<br><br>The Preferred Alternative zones the land west of 164th near SR14 as Regional Activity Center. |
| 146 | One of the reasons I drive from east vancouver to downtown is to experience the small business shops. As a resident of the east, I've seen the development with increasing distress. While I love the idea of having more on the east side of town, all I'm seeing are luxury homes and big brand stores. As the east side developes, what I'd really like to see are mixed use buildings that provide housing and affordable rent for shops below. I'd love to be able to walk to different | Comment noted. The Preferred Alternative includes zoning for mixed use buildings on the east side of the city, as well as throughout central and west Vancouver. Refer to the Our Vancouver 2045 website for more details about the Comprehensive Plan Land Use Chapter, which includes discussion of mixed use buildings. |

| 148 | "I would like Vancouver to live up to its vision statement: as a city for ""all residents,"" offering ""quality of life"" and ""walkable neighborhoods,"" and ""address[ing] climate change.""<br><br>Please make us proud of ""community well-being"" and ""community feel,"" with parks and open spaces and places for people to gather.<br><br>Business and people CAN go together, as at Columbia Tech Center. By contrast, fast food construction and dealerships on Mill Plain are a terrible sight--using vast areas of land, with little or no community value.<br><br>I fear the planning team has missed the mark. I know you're working hard for the future. You can do better!" | Comment noted.<br><br>Refer to Common Response #2: General Growth and Quality of Life Concerns and Common Response #3: Car Dealerships |
| 149 | The Planning Commission should reject both Alternatives A and B which include commercial development and multi family buildings along SE 165th St. in the Village at Fisher's Landing. There can be no access to these establishments from SE 164th as the traffic is too heavy and access would require the destruction of the sound wall. The only access would be at 168th, the main entrance to the Village, and then along the now quiet residential streets. Having commercial, heavy residential development near mass transit is a good idea in theory but not when it requires disruption or destruction of a cohesive, long established, thriving neighborhood. Alternatives A & B remind me of Urban Renewal, a high flying theory of revitalization conceived in Washington D.C. which resulted in the destruction of long established neighborhoods, some of which as in Portland, are still vacant land. Residents suffered for a theory which didn't make sense on the ground. An allied point: mass transit ridership has plummeted since the Pandemic. This plummet would be a data source to review. There is much less need for dense residential development near a transit center. On the noise point: the sound wall around the Village should remain intact to protect the quality of life of Village residents. The Planning Commission should be in the business of protecting thriving neighborhoods not undermining them. We've lived in the Village since 1990 and served on a series of very active boards determined to protect the Village quality of life. We have succeeded in enforcing our CC&R's but it's almost impossible for individuals or even neighborhood boards to protect our homes and lifestyle from theories erroneously applied on the ground. In this instance, we depend on the pragmatic wishom of the Planning Commission. Thanks for listening. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 150 | "I have been a resident of the Southcliff neighborhood for 27 years. Southcliff is a mature residential neighborhood, developed in the mid-1950's, and is characterized by a peaceful and inviting atmosphere. It includes a mix of families and older residents (of which I am one), mainly living in single-family homes that they own. The quality of life in Southcliff is unparalleled. Neighbors take pride in homeownership and take the time to get to know one another, fostering a strong sense of community and camaraderie. Our neighborhood park also offers residents opportunities for spontaneous, informal recreation and social engagement.<br><br>Southcliff was meticulously planned and developed to be a community of single-family homes. Neighborhood CC&Rs have governed Southcliff since 1954. They were intentionally written to include guidelines to maintain a sense of long-term stability and safety, ensuring that property owners would be protected from divided lots or commercial endeavors. These goals are also reflected in Southcliff's 2001 Neighborhood Action Plan.<br><br>In terms of physical layout, Southcliff is a secluded community of approximately 100 homes situated on cul-de-sac and crescent loop street types. Ingress and regress access is fed by three streets that connect to East Mill Plain Boulevard (the neighborhood's northern border). No thru-streets or major thoroughfares pass directly through the neighborhood. This unique street configuration is by design as the eastern, southern, and western borders of the neighborhood are either bound by a ravine (e.g., the Blandford Greenway) or cliffs with sharp drop-offs. This street layout effectively reduces vehicular traffic, as it primarily serves residents and their guests. Further, Southcliff 's streets have curbs but no sidewalks to easily accommodate walking and cycling and are well used for those activities.<br><br>The original residents also made a thoughtful decision to plant trees to create a positive and lasting impact on both the environment and resident well-being. Today, Southcliff enjoys 47% tree canopy—well above city and neighborhood averages—which lowers air pollution, adds natural shade, and supports local wildlife. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| | I acknowledge the exhaustive effort Vancouver city planners are making to update the city's Comprehensive Plan to guide the projected growth of approximately 80,000 new residents over the next 20 years. As applied to Southcliff, the proposed revision would overlay mixed use and medium density zoning along the East Mill Plain Boulevard northern boundary of the neighborhood, and inward to Oregon Drive.<br><br>The proposed mixed-use development along the northern boundary of Southcliff will adversely impact our entire neighborhood. It also conflicts with the CC&R's that govern the neighborhood and our 2001 Action Plan. This designation is problematic in several ways:<br><br>• Access Limitations: City planning staff have asserted that no access from Mill Plain is contemplated with this zoning redesignation because Mill Plain is a main arterial. Therefore, all traffic would need to access Mixed-Use buildings from the three neighborhood streets which feed from Mill Plain.<br><br>• Parking Limitations: There are no minimum off-street parking requirements associated with the rezoning proposal. Concentrating multiple land uses in one area can lead to challenges in providing enough parking for all businesses and households on neighborhood streets. It also potentially causes traffic congestion and increased safety risks to those who use neighborhood streets for recreational activity.<br><br>• Environmental Impacts: Bioretention systems recently installed as part of the Blandford Basin Stormwater Project will be inadequate to accommodate increased density. The neighborhood's tree canopy would also be compromised.<br><br>• Noise: Because new buildings would face inward, residents, and particularly those who live on Oregon Drive, may experience added noise from commercial activities and increased traffic.<br><br>• Impact of the Heights District Plan: The eastern boundary of Southcliff directly adjoins to the Heights District. Potential repercussions of the Heights Plan, now proposed as a Regional Activity Center, should be closely examined to assess and address additional impacts to Southcliff.<br><br>In conclusion, Historic Southcliff extends across a short stretch along Mill Plain Boulevard, with limited potential for development. It would not contribute a significant number of housing and commercial units but would create significant challenges for current and future residents to manage.<br><br>Studies have shown that stable neighborhoods with a sense of history give back to their communities. Living in Southcliff offers a unique quality of life that is not easily replicated in other neighborhoods and should be preserved.<br><br>As an alternative to the proposed rezoning of Southcliff, I encourage city planners and council members to explore opportunities to improve and develop underutilized expanses of land along Mill Plain. For example, the Park Hill Center may easily accommodate high rise housing and commercial business. In so doing, the city can achieve its growth goals while respecting and preserving Southcliff's unique character, history, and quality of life for both current and future generations." | |

| 152 | "My name is Margot Krissiep, and I have lived [address] in Southcliff since 1970—that's 55 years. We moved here because it is a pleasant traditional quiet neighborhood with streets wide enough to walk and bike safely for exercise. Traffic is very light and very few cars are parked on the street. Now our neighborhood is facing a substantial negative impact not only from the Heights District Plan (now Regional Activity Center), but also from the impact of the imposition of Mixed-Use and Medium-scale/Low-scale designations which would detrimentally change the quality of life for the residents and the character of our neighborhood. I have reviewed the zoning change proposals being put forth in the City's Draft EIS, and I am opposed to both Alternatives 1 and 2 for the following reasons. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

|---|---|---|
| | Traffic/Parking: It is highly unrealistic to assume there won't be at least one car per family or single adult. Using a bus is not always realistic and neither is riding a bike. I could get to work in under 10 minutes by car, whereas the bus would take over 45 minutes, assuming the 5 minute window for a transfer worked. The added cars mean a lot more noise and traffic in the neighborhood and no place to park except on the streets, which would already be impacted by people from the Tower Mall development looking for places to park their cars in the surrounding neighborhoods. Cars parked on both sides of the curved streets would make them more difficult for large vehicles like trash collectors, emergency vehicles, and trades people to navigate, especially in the cul-de-sacs. These parked cars and the significant increase in traffic will also create a safety hazard for pedestrians and bike riders.<br><br>Mixed-Use: There is no ingress or egress from Mill Plain for these properties, which means all traffic associated with them would have to enter the neighborhood on three residential streets, none of which are through streets and one of which is a right turn only for both entrance and exit. Parking would saturate the residential streets especially considering the expected overflow from the Heights District/Regional Activity Center. Implementing any kind of pay-to-park at these establishments would impact residents and would likely encourage clientele to move to free on-street parking within the neighborhood.<br><br>Stormwater runoff and Heat island effect: The increase in impervious surfaces and soil compaction would affect water infiltration and natural drainage patterns, and might prevent groundwater recharge. The increase in surface runoff would mean more opportunity for pollutants to travel to urban streams and cause erosion. It would also undermine the recently implemented Blandford Basin Stormwater Project to mitigate untreated runoff from the neighborhood's current density. Additionally, the loss of tree canopy, lawns, and gardens that support wildlife would increase the overall temperature and create another heat island. With the already warming climate this means using even more power during our increasingly warm summers.<br><br>Both alternatives violate Southcliff's existing regulations which allow for one single family dwelling per lot of no more than two stories high. These regulations have been in place since 1954, plus the 2001 Neighborhood Action Plan. It was my understanding that the Heights District redevelopment was to be where commercial and mixed-use hi-rise buildings would be built. If the City needs more density, please add it to the Heights plan and not to Southcliff. Southcliff is a an historic mid-century modern neighborhood that should be preserved as is and not destroyed by the City just to make room for people who might (or might not) move here by 2045" | |
| 154 | "To: Comments to the City of Vancouver, WA<br><br>From: Raymond Maly, Southcliff Resident 1974 -1989 and then again 2006 – 2025<br><br>RE: Environmental Impact Statement (EIS)<br><br>I attended the following meetings to become familiar with (EIS) and to understand the comprehensive plan required by Washington State to the City of Vancouver, reviewed every 10 years:<br><br>July 28, 2025 - Southcliff Neighborhood Homeowner Meeting<br><br>August 4, 2025 - Vancouver City Hall Meeting<br><br>August 9, 2025 – Attended EIS Talk Session with Questions & Answers<br><br>I learned about these proposed zoning changes as they relate to our Southcliff neighborhood:<br><br>1. |---|---|---|
| | I have deep concerns about this project, which could result in the destruction of the historic character of Southcliff, a neighborhood with a welcoming single-family character that makes Southcliff such a desirable place to live. My concerns include the following:<br>Re: The proposed zoning changes:<br>* This could be destroying the very nature of the place we live.<br>* The proposed zoning changes directly violate Southcliff's long-standing covenants since 1954, updated in 2001, which allows for single-family residential use, and building heights of no more than 2 stories.<br>* No zoning changes. The new adjacent town plaza (Heights district) contradicts the tenets to concentrate the greatest height and density in the commercial core.<br>Re: Increase in the number of cars:<br>* Would there be enough parking? Where would new parking come from?<br>* Noise pollution - loud noises from cars speeding on Mill Plain and on Blandford, happening now, would only increase.<br>* Car traffic jams, and noise, with limited entrances/exits into our neighborhood.<br>* Automobile control –drivers using our streets to cut through to E. Mill Plain.<br>* Reduced safety - in a potential emergency evacuation, exits blocked due to overcrowding ie: in a wildfire or earthquake.<br>* It would be unsafe to use our streets for walks, biking, and other activities as we are currently doing.<br>* Making these proposed zoning changes in Southcliff, without new access on Mill Plain, will funnel curvilinear residential streets including dead-ends & cul-de-sacs, creating parking issues & safety hazards for pedestrians & bicyclists caused by parking overflow from the zoning along Southcliff's Mill Plain entrances, as well as the new constructions in the Heights district.<br>Re: Our comfort and privacy:<br>* Potential loss of our personal property, reduced home value.<br>* Inescapable light pollution from tall commercial buildings - bright lights left on at all hours from commercial and residential buildings, and their vehicles.<br>* Loss of privacy - residents in high-rise buildings looking down on us in our private space, our backyards.<br>* Management of commercial & residential garbage, attracting rodents. We would be looking at their mess." | |

| | 2. Adding commercial and mixed-use to our neighborhood would mean construction of many multi-story buildings which would mean losing many mature trees and the habitat they provide for wildlife.<br><br>3. I understood (and was very concerned) that the Heights District redevelopment was to be where commercial and mixed-use hi-rise buildings would be built. If the City needs more density, please add it to the Heights plan and not to Southcliff.<br><br>4. I moved to Southcliff for its quiet, walkable, bikeable streets and beautiful trees, privacy via large lots and wide streets.<br><br>5. Adding commercial and mixed-use with no parking required would mean our streets would be jammed with cars parked on both sides and would no longer be quiet or walkable, not to mention tree loss and noise.<br><br>6. Access to commercial and mixed-use high rises would not be from Mill Plain but rather from our neighborhood streets creating huge congestion on those streets not to mention safety issues for pedestrians and cyclists because there are no sidewalks.<br><br>Southcliff is a a historic mid-century modern neighborhood that should be preserved as-is and not destroyed by the City just to make room for people who might (or might not) move here by 2045.<br><br>Sincerely, Rob Anderson" | |
| 156 | I do not believe that you should change zoning of established neighborhoods- eg Southcliff or Dubois Park as you have done- Southcliff in both alternatives and Dubois Park in alternative 2. I guess alternative 1 is slightly better from the standpoint of my concern. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 157 | "I am opposed to any rezoning of the Southcliff Neighborhood for an increase in density as proposed by Alternative #! and #2.<br><br>The established covenants of the HA of Southcliff allows for a single family house per lot and only two stories and those regulations have been honored since 1954.<br><br>The quiet established culture of Southcliff should not be sacrificed to increase density further with the HEIGHTS DISTRICT PLAN already in place and will contribute a solid contribution from this neighborhood to the housing and density needs of the city<br><br>Zoning for commercial and mixed use would dramatically alter traffic and parking in Southcliff in a very negative way.<br><br>The trees are now mature and contribute well to the overall canopy of the city and should not be sacrificed.<br><br>There would be water and drainage issues for the Blandford watershed. There has already been a solid expenditure on this drainage that would be lost.<br><br>The quiet culture of this neighborhood with wide and walkable streets should not be sacrificed for retail traffic and crowding with ongoing parking concerns.<br><br>Southcliff is a contributing mid-century neighborhood that should not be re-zoned for light commercial and mixed use which would destroy the wonder of this quiet beautiful neighborhood. The contribution to density needs of the city for 2045 is already honored solidly by Southcliff with the Heights District Plan." | Comment noted. | | 2. Adding commercial and mixed-use to our neighborhood would mean construction of many multi-story buildings which would negatively affect mature trees and the loss of habitat for wildlife that is already impacted by the increase of population to our area.<br><br>3. My understanding of the Heights District redevelopment is the increase of commercial and mixed-use hi-rise buildings. This will already increase pressure on the area with additional cars and noise that goes along with adding people who will live, work or visit the development.<br><br>4. I moved to Southcliff specifically for it's spacious layout, quiet, walkable streets, mature landscapes and trees.<br><br>5. Adding commercial and mixed-use with no parking required would be hazardous to the neighborhood. We do not have sidewalks and most residents jammed with cars parked on both sides and would no longer be quiet or walkable, not to mention tree loss and noise.<br><br>6. Access to commercial and mixed-use high rises would not be from Mill Plain but rather from our neighborhood streets creating huge congestion on those streets not to mention safety issues for pedestrians and cyclists because there are no sidewalks.<br><br>Southcliff is a a historic mid-century modern neighborhood that should be preserved as-is and not destroyed by the City just to make room for people who might (or might not) move here by 2045.<br><br>Sincerely, Rob Anderson" | |
| 159 | "Comments to the City Planners, City Council and Mayor of Vancouver.<br><br>My name is Anthony Haulk and I live at [address] in the Southcliff neighborhood.<br><br>I have reviewed the zoning change proposals being put forth in the City's Draft EIS. The two alternatives- Alternative 1 and Alternative 2 are not acceptable to me. I am against them. I am sure the City Planners can find a better way forward to comply with their mandates to plan for the future of Vancouver without destroying this neighborhood.<br><br>Having participated in (and suffering the unintended consequences of) planning activities in the past, I know first-hand that well-intentioned but faulty planning leads to unintended consequences, often uncorrectable changes. This is especially true for zoning decisions. The proposed plans are entirely counter to the regulations this community has adhered to since it was planned and built in 1954. The wide, curving streets are walkways in addition to accommodating cyclists and automobile traffic. There are no sidewalks. Simply increasing the planned population density without adding infrastructure (sidewalks and crosswalks, increasing the amount of planned parking, improved storm drainage, and pollution mitigation) will lead to streets crowded with cars, pedestrian injuries, and an overall negative effect on residents' satisfaction. Increased building increases hardscape and decreases the tree canopy. Not a very "green" result.<br><br>When we retired, my wife and I relocated from Southern Oregon to be near family. We searched for months to find a livable place. We found it in Southcliff. It has safe, quiet streets, a playground for our grandchildren to play. We knocked on doors and found the residents friendly and welcoming. We were told that the Southcliff Restrictive Covenants—created when this development was planned—limited development, so we could be assured that no one would build an apartment building next door. The placement of the homes on the curving streets was planned to allow privacy with the shades open. The homes are close enough to allow me to get to know my neighbors. The wide streets follow a curving path, discouraging speeding. There are no sidewalks. Our streets allow pedestrians, bicyclists and motor vehicles to co-exist. We don't need bike lanes for safety. This was for us a unique neighborhood, and that's why we purchased a home here. The proposed plan will allow building in such a way as to destroy our sense of community, privacy and safety.<br><br>The proposed density for my neighborhood will encourage the highest possible density of housing. The homes with the best view of the river will soon be converted to high-rise, high-rent apartments blocking glimpses of the river and Portland across the river. The parking built will not be enough, and the overflow will crowd the streets. Now we will need sidewalks. Are there plans to build them? Where will that money come from? Where will my wife and I safely walk through the neighborhood? How will we visit with our neighbors? Increasing the density will require more hardscape. The storm run-off will puddle in the streets. The city has been working on that for some time and recently | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | placed a swale to cut the pollution in the drainage. Will that swale have to be expanded with the increased hardscape to support the increased density?<br><br>This neighborhood keeps its cars off the street at night limiting the targets for car thieves. Will the off-street parking keep up with the residential building? Or will I be seeing smashed car windows and cars that have been robbed of their catalytic converters?<br><br>The Southcliff development was planned and built for single family homes. People who bought homes here have agreed to abide by the Southcliff Restrictive Covenant so that we all can enjoy a safe and beautiful place to live. Encouraging the individual owners to break that covenant cheapens the environment for the other residents.<br><br>The Height District redevelopment plan is manifested near my home as a chain link fenced area on Mill Plain. Weeds grow in much of it. There is a bicycle training area for children, which is admirable. Where is the touted high-rise housing and commercial development? We have been waiting for some development there since we moved in. Why not increase the planned density of that largely vacant area, instead of destroying the quality of our lives in Southcliff?<br><br>Changing the zoning without providing for infrastructure will lead to a blighted area. Find another way.<br><br>Sincerely,<br><br>Anthony Haulk" | |
| 161 | I do not want to see more mixed use housing in existing neighborhoods. It would make our neighborhood noisier, more traffic and detracts from the landscape and livability of the community. Instead, in areas that are not already developed, it would be reasonable to add mixed use housing there with proper planning and resources to support mixed use communities. Please do not allow mixed use units in established areas that have limited current vacant space. | Comment noted. Refer to Common Response #4: Vehicle Traffic Impacts, Common Response #12: Neighborhood Character<br><br>Refer to the Noise section of Final EIS Chapter 3 for more information on the potential impacts to this topic areas, as well as proposed measures to address those impacts. |
| 162 | "My name is Nancy Anderson, and I have lived at [address] in the Southcliff neighborhood since 1994. I have been online and reviewed the zoning change proposals being put forth in the City's Draft EIS.<br><br>I am against the adoption of both Alternative 1 and Alternative 2 as currently proposed.<br><br>My reasons for opposing these alternatives are:<br><br>1. Both alternatives violate Southcliff's covenants and regulations which specifically assign one single family dwelling per lot of no more than two stories high. These regulations have been in place and enforced since 1954.<br><br>2. Adding commercial and mixed-use to our neighborhood would mean construction of many multi-story buildings which would completely change the neighborhood's pleasing and open aesthetic, not to mention the loss of mature plants, trees and the habitat they provide for wildlife.<br><br>3. I understood that the Heights District redevelopment was to be where commercial and mixed-use hi-rise buildings would be built. This development will already impact our neighborhood with more noise and congestion.<br><br>4. I moved to Southcliff because it was an established, well cared for, quiet, walkable neighborhood. The mature landscaping and beautiful trees offer privacy via large lots.<br><br>5. Adding commercial and mixed-use with no parking required into this established neighborhood - where there is no space for it - does not make sense. It would cause a lot of congestion. We do not have sidewalks in the neighborhood, but since the lots are large, most people are able to park in their garages and driveways which leaves the streets clear for safer walking. However, if the streets are jammed with cars parked on both sides it would no longer be safe for pedestrians and cyclists. In addition, with the Tower Mall development I am already concerned about additional traffic from folks parking in the neighborhood in order to access the services at Tower Mall.<br><br>The Southcliff neighborhood is a historic mid-century modern community that should be preserved as-is. We have seen many original owners move on to more manageable living arrangements as they age, allowing the next generation of young families to move here to care for these homes and to raise their children in a safe community-centered neighborhood. I would like to see improvements to the already established mixed-use areas along Mill Plain | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

Access to commercial and mixed-use high rises would not be from Mill Plain but rather from our neighborhood streets creating huge congestion on those streets not to mention safety issues for pedestrians and cyclists because there are no sidewalks.<br><br>Southcliff is a a historic mid-century modern neighborhood that should be preserved as-is and not destroyed by the City just to make room for people who might (or might not) move here by 2045." | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 164 | "I oppose both of the City's Alternatives 1 and 2 with respect to our small South Cliff neighborhood for the following reasons.<br><br>Cost: The City and/or the developers will incur significant costs to redo Mill Plain to accommodate commercial and high-density housing. Currently there are only two points where you can make a left turn off of Mill Plain into South Cliff when traveling westbound. Significant tree removal, median removal, etc. would be required to rectify this limited access.<br><br>Historic Preservation: South Cliff was developed as a "Lady Bird" type neighborhood whereby the overhead power lines are in the backyards and not in the streets. This approach was taken in part to encourage interaction and socializing among the residents in the front of the homes. Also, if you come to our neighborhood you will notice there are no walls or fences in the front yards of any of the homes in South Cliff. The proposed changes in both Alternative 1 and Alternative 2 would destroy this unique character of the South Cliff neighborhood. Also, transforming portions of the neighborhood to commercial uses would cost more in our neighborhood relative to other neighborhoods that have a more standard electric power supply configuration (See Cost topic above).<br><br>Conflict with South Cliff Restrictive Covenants and the 2001 Neighborhood Action Plan: Both Alternatives (not to mention the new state-mandated density prescribed by H.B. 1110) are in direct conflict with the longstanding South Cliff Restrictive Covenants and 2001 Neighborhood Action Plan. I live on Willamette Drive and I am very concerned about having future commercial businesses being accessed from Willamette Drive where currently young children | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | play in their front yards and at times in the street. I am concerned about my privacy and safety and the safety of adjacent families that live on Willamette Drive.<br><br>Lack of Scale: I completely understand the need for additional affordable housing in our community. My question to the City is that for all the development and anticipated legal costs that will most likely be required to proceed with these concepts – is it worth it for such a small area?<br><br>Questionable Market Need: Is there really any market need for commercial development with already having close access to services and businesses to both the west and east of us? Especially with the Heights Development on the horizon.<br><br>Equity/Sharing the Load: The South Cliff residents are already going to be severely adversely impacted by the proposed Tower Mall redevelopment (Town Plaza, Regional Activity Center) in terms of increased traffic, noise and stress on parking that this development will cause. Why are we now being asked to shoulder even more heartache to our neighborhood which has been here since the 1950s?<br><br>Safety: Most mixed use/commercial developments have much better access/egress from multiple directions. Due to the topography, South Cliff has very limited access/egress as it is hemmed in by the "Cliff" of course to the south and by an elementary school and power substation to the north.<br><br>Also with regard to MLK Jr. Elementary school, how many mixed use developments with commercial businesses are directly across the street from an elementary school in our region or across the country? Will such an approach be safe for the children attending this school with this type of development that close?<br><br>Consistent with my concerns, I concur with the points made by the South Cliff Neighborhood Association task force as well as what I have seen from other South Cliff residents who have submitted comments.<br><br>My suggestion is that the City select the No-Action approach for South Cliff and focus your plans for additional commercial and housing density in areas where it would be more appropriate, less costly, have less adverse environmental & cultural impacts, and provide more benefits to the overall goals that the City and State are pursuing.<br><br>For example, additional commercial development of the area along Mill Plain just west of Andresen could be incentivized by the City making much more financial, environmental and social sense for the community.<br><br>Thank you for your consideration." | |
| 165 | "I prefer a hybrid option of alternatives 1 and 2 that concentrates mixed used/higher density residential/commercial development along corridors. I believe this would better reflect existing/current city plans. For example, in my neighborhood, the Evergreen and Grand Commercial Corridor Strategy was recently adopted in 2022. This strategy designated Grand and Evergreen Blvds for mixed use development, with the tallest buildings and most intensive commercial uses along grand compared to evergreen. The strategy did not call for changes to the land a block or more away from the corridor. Neither alternatives 1 or 2 quite captures this concept. Alternative 1 has medium density along evergreen and grand which wouldn't allow for the mixed use residential/commercial ideas called out in the Evergreen and Grand Commercial Corridor Strategy. Alternative 2 calls for mixed use all along all throughout the Hudson Bay neighborhood which includes Evergreen and Grand Blvds and the neighborhood blocks surrounding them. Neither alternative seems quite right. I recommend a hybrid of the two alternatives that calls for mixed use along evergreen and grand and low/medium residential a block or two away.<br><br>For the grand central area, I prefer the mixed use as shown in alternative 2 vs the light industrial zoning as shown in alternative 1. Alternative 2 better reflects what is already built up in the area.<br><br>There seems to be a mistake in alternative 1 in this area. It designates Hudson Bay High School, VITA elementary, and Memory/Mill park as mixed use development. These would stay schools/parks, right? And alternative 2 shows no colored overlay for these areas and they are labeled as a regional activity center.<br><br>In general, I support more housing options and higher density/mixed use commercial along corridors all throughout Vancouver, a mix of alternatives 1 and 2. | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>The Preferred Alternative would include Mixed Use Neighborhood zoning in the area of Evergreen and Grand and some Medium Scale Neighborhood in select areas of this neighborhood. The Grand Central area is zoned for Industrial/Employment, more similar to Alternative 1. Hudsons Bay High School and VITA elementary are Regional Activity Center. Memory/Mill Park is zoned Parks.<br><br>Refer to the Plants and Animals section of Final EIS Chapter 4 for more information on the potential impacts to trees, as well as proposed measures to address those impacts. |

|---|---|---|
| | As we invite more housing density and housing choices in to Vancouver, please be mindful of setting goals/policies/development code that protects existing mature trees and requires planting of new trees. Please increase the required number of trees for all parking lots and required setback areas and increase the required planting strip size along roads to be 5-8 ft+. Require landscaping space that supports the largest maturing trees possible. Just like the City has a street tree list for different parking strip sizes and requires the largest appropriate trees to be planted from the list, develop the same type of list for parking lots and setbacks. Require that a wide area be provided for trees in setbacks and parking lots and then require that a large-maturing tree be planted. (Otherwise, developers will choose small-maturing trees to fulfill their tree planting obligation and this is a lost opportunity in an urban area with limited space for trees. As Vancouver grows up, literally upward, we need taller maturing trees in order to cast shade on upper levels of housing. We know trees provide air quality, climate, and human health benefits. To benefit people living in upper stories, we need to plant trees that can reach them. Also, imagine the difference in ecosystem services between a tree that matures at 25 ft tall and 20 ft wide vs a tree that matures at 75 ft tall and 50 ft wide! It only takes a few more feet on the ground to enable planting a tall maturing tree. Please plan space on the ground for tall, maturing trees to grow up and branch out over paved areas and give shade to tall buildings.<br><br>As more residents build ADUs and other residential units on their properties, please provide outreach/education materials to help property owners design their additional units around their existing mature trees. Many of our backyards have beautiful, large mature trees that benefit the surrounding properties too. Adjusting development code, allowing variances, and providing resources for homeowners and architects to design around mature trees would be helpful for supporting new housing while protecting trees." | |
| 166 | "My name is Jennifer Small, and I live in the Southcliff neighborhood. I have been a resident of Southcliff since 1985. This neighborhood is not just where I grew up; it's where I've had the privilege of raising my own children. Southcliff is more than a place on a map; it's a community defined by its quiet streets, mature trees, and the sense of peace and belonging that comes from decades of thoughtful stewardship.<br><br>I have reviewed the zoning change proposals being put forth in the City's Draft Environmental Impact Statement (DEIS), and I am strongly opposed to the adoption of both Alternative 1 and Alternative 2 as currently proposed.<br><br>My reasons for opposing these alternatives include:<br><br>• Violation of Longstanding Zoning Protections: Both alternatives contradict Southcliff's established CC&R, which have allowed for one single-family dwelling per lot of no more than two stories since 1954. These rules have preserved the character and integrity of our neighborhood for generations.<br><br>• Loss of Mature Trees and Wildlife Habitat: Introducing commercial and mixed-use development would necessitate multi-story construction, resulting in the removal of mature trees and the destruction of critical habitat for local wildlife. These trees are not just aesthetic—they are ecological assets.<br><br>• Misalignment with the Heights District Plan: The City previously designated the Heights District for commercial and mixed-use high-rise development, with carefully considered restrictions—including lower height limits than those now proposed for Southcliff under both Alternative 1 and Alternative 2. This discrepancy is not only inconsistent with the original Heights District vision, but it undermines the integrity of a plan that was more thoroughly vetted and aligned with community input. If additional density is needed, it should be directed to the Heights District, where infrastructure and zoning were intentionally designed to support it—not imposed on Southcliff, a neighborhood never intended to absorb such scale or intensity.<br><br>• Traffic, Parking, and Safety Concerns: Southcliff's streets were designed for residential use. Adding commercial and mixed-use buildings without parking requirements would overwhelm our streets with parked cars, making them less walkable, noisier, and more dangerous for pedestrians and cyclists.<br><br>• Environmental Impact on Rain Gardens and Runoff: Our neighborhood rain garden was engineered to handle runoff based on current traffic volumes. Increasing vehicle count and impervious surfaces would lead to more pollutants and runoff, undermining the garden's effectiveness and harming local water quality. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| | • Preservation of Historic Character: Southcliff is a historic mid-century modern neighborhood. Its architectural and cultural identity deserves protection—not erasure—in the name of speculative population growth by 2045.<br><br>I urge the City of Vancouver to reconsider these proposals and preserve the integrity of Southcliff. Thoughtful urban planning should honor the legacy of established neighborhoods while directing growth to areas already designated for higher density.<br><br>Thank you for your time and consideration.<br><br>Jennifer Small" | |
| 167 | "Bridget Marick & David Curran<br><br>[address]<br><br>Vancouver, WA 98661-5921<br><br>August 23, 2025<br><br>Meredith Herbst & Vancouver City Planners, City Hall<br><br>PO Box 1995<br><br>Vancouver, WA<br><br>Dear Ms. Herbst and Vancouver City Planners,<br><br>My husband, David, are both medical professionals and we moved to Vancouver in November 2015. We did not want to live in Portland for several reasons. Therefore, we limited our search for a home to Camas and Vancouver. We looked at several properties including 13912 NE 7th Place in Vancouver which is a nice home. It was built in 1992 with a 3 car garage and everything one would think a home buyer would want. However, the back yard of this particular property butts up to duplexes and multi-family homes. We did not buy the house on 7th Place for that reason.<br><br>David and I chose to buy a home in Southcliff because it is a beautiful neighborhood with larger lots and the majority of the homes are established and well maintained from the 1950's. Our home at 4310 Oregon Drive was built in 1957 by Bob and Wilma Dungan. They lived in this home for 30 years until they sold it to David and Kelly Christel. The Christels lived in this home for 28 years before my husband and I bought it in 2015. Like other houses in Southcliff, our home is well built by an individual, not a developer, which makes the entire neighborhood unique. Southcliff is not a cookie-cutter, put up over night, kind of a neighborhood.<br><br>Because Southcliff is an older, established neighborhood, there is a large, mature tree population, which is another reason my husband and I love the neighborhood. With mature trees there are birds, including owls, and other wildlife, like deer, raccoon, and Opposum. You can catch a glimpse of them if you are up at the right time of early morning or night. Without a doubt, trees will be taken down to allow for mixed use, medium scale, and even low-scale development. With loss of mature trees comes loss of habitat and food for wildlife, especially birds. I will never forget the first time I saw a Western Tanager. It was perched way up high in a mature tree in my yard. The Western Tanager is a brightly colored and beautiful bird that breeds in Western US and Canada. It winters in Mexico and Central America. This bird relies on mature trees for habitat and food. Without these mature trees, the birds will be most affected.<br><br>As outlined in the profile of the Southcliff Neighborhood City Plan of January 22, 2001, the shape of this neighborhood is dictated by topography rather than public roads. The boundaries of this place are made up of steep bluffs, hence the name and one can only access it by 3 streets: Rhododendron, Manzanita, and Umatilla. It is a small neighborhood with minimal access. Commercial development and high rise apartments would, without a doubt, impact traffic, parking, safety, and the uniqueness of the place. People seek out this neighborhood to walk, exercise their dogs, and teach their children how to ride a bike because the streets are safe and quiet.<br><br>There is great history associated with Southcliff. It is the southwest corner of McLoughlin Heights which is one of 6 housing developments brought on by the influx of population to Vancouver sparked by WWII and Kaiser shipyards. Even back in 1945, when WWII ended, residents expressed concerns that the land of the housing developments would | Comment noted. |---|---|---|
| | be released, willy-nilly, to private investors. Their concerns were warranted because it would spell disaster to real estate values for private home owners in Vancouver.<br><br>I am one of 10 children who was fortunate enough to go to college and earn a degree. My parents could not afford to pay for my college or help me buy a home. But, they taught me values such as working hard and earning my way. My husband and I are wage earners. We worked hard in order to pay for our home in Southcliff. I often worked two jobs. David and I are concerned that the mixed use plans have little regard for the small home owners whose life saving may be at stake. Do we want future generations to have an opportunity to purchase a home in and live in Southcliff? The answer is yes. But a home located adjacent to mixed use, combination housing, and commercial businesses in Southcliff is not what my husband and I currently have. We want to ensure future home owners of our property have the opportunity to buy it, as is, in the neighborhood as it currently is without tall apartment buildings and commercial influence.<br><br>There are plenty of other locations to consider for housing development projects in and around Vancouver. It seems there is potential for developing the vacant lots near Winco on Andresen Road. There are Vacant lots along NE Vancouver Mall Drive. Perhaps better use could be made of the 23.22 acres that consists of Forth Plain Center. Maybe a deal could be arranged with Living Hope Church on Andresen Road for a mixed-use neighborhood. The old Tower Mall development is already underway. The City of Vancouver discontinued lease of the land for Vanco Golf Range for a Heights District Development project. Other golf courses such as Lakeview Par 3 Golf Challenge, The Cedars on Salmon Creek, and Hartwood in Brush Prairie are already being developed. Maybe sights could be set on Royal Oaks Golf Club for a housing development. I dare to wonder how the members of Royal Oaks would react to that type of plan. I dare even more to think of their reaction to plans for mixed-use housing in their very own neighborhoods.<br><br>David and I feel blessed to have been able to buy our home in Southcliff and as such, we are stewards of this property and the neighborhood as a whole. We would not have chosen to move to Vancouver if there was no opportunity to buy a home in a neighborhood like we currently have. As honest stewards of Southcliff, we oppose the proposed comprehensive zoning plan.<br><br>Sincerely,<br><br>Bridget Marick & David Curran" | |
| 168 | "My wife and I are opposed to both alternative 1 and 2 as stated in the DEIS as it relates to the Southcliff Neighborhood. The Mixed-Use rezoning along East Mill Plain would drastically affect our neighborhood and the environment that makes this a desirable place to live.<br><br>In reviewing the DEIS it's clearly stated that both alternative 1 and 2 will have significant negative impacts to our neighborhood by increased traffic count, increased noise pollution, increased water runoff due to increased impervious hard surfaces and decreased air quality. Another serious impact will be the reduction in overall Tree Canopy. See our letter submitted via email today to OurVancouver2045@cityofvancouver.us for a more complete description of why we are opposed to Alternative 1 and 2 as currently proposed.<br><br>As my wife likes to say why change a neighborhood that's working well into one that isn't." | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 169 | "I would first like to say that I understand, fully, the challenge presented to the City of Vancouver relative to the need for additional housing and the need for more density in our county having been involved in local economic development for 50 years.<br><br>Focusing on Economic development, one of the key attractions to employers when considering communities to expand or move their companies is whether there are neighborhoods to which they would want to relocate, and/or their senior management team would want to relocate. For the City of Vancouver, I consider Southcliff one of the few neighborhoods that our city has to offer that meets that standard (and the county for that matter). The proposed Alternative 1 and Alternative 2 overlays would literally destroy the value of Southcliff, in that regard, for most employers looking to bring jobs to our community. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

|---|---|---|
| | Southcliff you may know, and as I understand others have shared, is a historic neighborhood, having been established by the Vancouver Housing Authority following World War II, creating a walkable, ungated community with well maintained homes and yards that literally become the poster for the city when working to attract employers to our city.<br><br>Having invested in this neighborhood in 1985 to raise my family, it would be devastating for the city to lose a neighborhood so well maintained so close to the city center.<br><br>Once the DEIS was published our neighborhood consulted our CCNRs as to whether these CCNRs or the new statutes brought forward by the legislature, and now these proposed overlays labeled Alternative 1 and Alternative 2, addressing density would govern Southcliff going forward. As I understand it, CCNRs have been found, in a court of law, to be the ultimate governing document. If that is true, then what is proposed in Alt 1 and Alt 2 would not be enforceable in our neighborhood.<br><br>Additionally, both alternatives ignore current city codes regarding access to commercial property. The Southcliff neighborhood has only 3 points of access to our 110-home neighborhood. That means that if the currently proposed uses are approved and move forward that would force access to the commercial properties into our neighborhood and any multifamily development accompanying the commercial properties to park on the neighborhood streets, since current code in Vancouver, as I understand it includes minimal parking requirements for multifamily development, i.e., less than one space per unity for those located near a frequent transit line.<br><br>Recently, the city has approved and is moving forward with the Heights District Plan which is literally a block east of Southcliff neighborhood. The density of the Heights District, having just been re-zoned to Regional Activity Center, has the flexibility to accommodate the increased density potential development within Southcliff and along Mill Plain Boulevard.<br><br>While being a supporter of 'going up and not out', additional mixed use commercial along Mill Plain by rezoning the Southcliff neighborhood, I believe is not in the best interest of the City of Vancouver and suggest reconsideration focusing on the Heights District Plan as a way of addressing the opportunity for additional density." | |
| 170 | "August 25, 2025<br><br>Subject: Comment on Draft EIS – Vancouver Comprehensive Plan Update 2045<br><br>Dear City of Vancouver Planning Department,<br><br>As a Southcliff resident for more than 40 years, I want to express my strong opposition to the proposed rezoning of our neighborhood under Alternatives 1 and 2 of the Draft Environmental Impact Statement (EIS). My family and I love this neighborhood and our neighbors, and we are deeply concerned that the proposed changes would irreversibly harm its character, safety, and livability.<br><br>Southcliff is more than just a place to live — it is a community. Barbara runs in the neighborhood daily and values its quiet, safe streets. We also walk our grandchildren here, and many of our neighbors walk regularly as well. Increased traffic from high-density development would funnel onto narrow, curving residential streets that were never designed for such volumes, making them dangerous for pedestrians, runners, children, and seniors alike.<br><br>The proposed zoning also conflicts with Southcliff's long-standing restrictive covenants and the 2001 Neighborhood Action Plan, which both protect single-family residential use. Allowing buildings up to 8 stories along Mill Plain and increased density throughout Southcliff is incompatible with our historic mid-century neighborhood character. Parking shortages, "strategic pricing" mechanisms, and loss of our 47% tree canopy would further diminish the quality of life that has made this neighborhood so special for generations.<br><br>I urge the City to instead focus higher-density and mixed-use growth in the adjacent Town Plaza Regional Activity Center and along Mill Plain Boulevard's existing commercial areas. This approach would achieve housing and economic goals while protecting the unique history and character of Southcliff.<br><br>Thank you for including my comment in the public record. | Comment noted. |---|---|---|
| | I have reviewed the zoning change proposals being put forth in the City's Draft EIS. I am strongly opposed to the adoption of both Alternative 1 and Alternative 2 as currently proposed as outlined in the following reasons:<br>* Both alternatives violate Southcliff's regulations which allow for one single family dwelling per lot of no more than two stories high. These regulations have been in place since 1954.<br>* Adding commercial and mixed-use to our neighborhood would mean construction of many multi-story buildings which would mean losing many mature trees and the habitat they provide for wildlife.<br>* It was my understanding that the Height District redevelopment was to be where commercial and mixed-use high-rise buildings would be built. If the City needs more density, please add it to the Heights plan and not to Southcliff.<br>* We currently have walkable streets and no sidewalks. Adding commercial and mixed-use with no parking required would mean our streets would be jammed with cars parked on both sides and would no longer be quiet or walkable. Likewise, this additional congestion would cause safety issues for our pedestrians and cyclists.<br>* Southcliff is a historic, mid-century modern neighborhood that should be preserved as is and not destroyed by the City just to accommodate the potential for people who may or may not move here by 2045." | |
| 174 | "I have been a resident of Southcliff for 16 years and have been residing at [address], a proposed Mixed-used lot, for 13 years. I chose to live in Southcliff, a well- established community, because of the historical aspect of the neighborhood - wider roads, well maintained homes, green and usable park, friendliness of the people and the quiet atmosphere. Southcliff has always been a desirable neighborhood. I understand the need for growth - affordable housing and more businesses to provide jobs. However, the proposed mapping of mixed-use along Mill Plain and the building high rise housing/duplexes on the interior of Southcliff will impact the whole neighbor. There will be more traffic - vehicles and people. A new development will affect the cleanliness, and the ability to keep the neighborhood safe - by adding more people with less regulations that Southcliff has established. Southcliff is a community that takes pride in their homes and is a respectful neighborhood.<br>With the growth of the Heights Project, I already see an impact on traffic. I live along Mill Plain now and I do not have an impact from road noise, or people walking along the sidewalk. As more development comes, the outcome will be different. More people will be accessing Southcliff. If the homes along Mill Plain become Mixed-used - parking will be a problem. I believe there are other locations that mixed used properties can be developed. It is a shame to drive through Vancouver now and see so many warehouses or retail space empty for many years. These properties could be rezoned and made into affordable housing units instead of developing on existing owned, occupied properties. I do oppose the 20 year plan for redeveloping of Southcliff Neighborhood. Thank You." | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 175 | I would like to express that I have lived in Vancouver since 1965, my spouse and I have successful careers that take us to many parts of the world. I recently inherited my families 2 acre property at [address]. We have made a very concious and philanthropic choice to create an urban farm with the property my parents nurtured since 1960. Our "urban" farm is fostering a needed sense of community, providing nutritious vegetable and fruit choices close in. We are restoring the 1920's barn and 1941 home at the site. Although the plan is complex to the average lay person, Alternative 1 seems to be a much better choice for the Walnut Grove area that is currently made up of mixed housing and long time residents. Please do not implement Alternative 2. Please add our urban farm to your plans, the city is capitalizing on a 2 acre piece of property that provides for the community at our expense. We seek to do the right thing and not reep the benefits of development. Additionally we have interest in working with the city to ensure upon our death the farm continues to exist. Our plans are to move forward with the farm in partnership with the city for at least the next 20 Years of our life expectancy at which time it will move to our son for continued prosperity or gifting to a non profit organization. | Comment noted. | | Vancouver, WA 98661<br><br>To:<br><br>The Honorable Mayor and City Councilmembers<br><br>City of Vancouver Planning Department<br><br>P.O. Box 1995<br><br>Vancouver, WA 98668<br><br>Subject: Formal Opposition to the ""OUR VANCOUVER Comprehensive Plan Update"" and its Impact on the Southcliff Neighborhood<br><br>Dear Mayor Pollard, City Councilmembers, and Planning Department Staff,<br><br>We are writing to you today as concerned parents and homeowners at 4615 Oregon Drive to formally state our opposition to the proposed Mixed-Use and Medium-Scale Neighborhood designations for the Southcliff neighborhood as outlined in Alternatives 1 and 2 of the Comprehensive Plan Update. As parents of three young sons who play daily on our streets and in Southcliff Park, our primary concern is the severe degradation of safety that this unwarranted upzoning would inevitably cause.<br><br>While we support thoughtful, well-planned growth for Vancouver, the current proposal for our neighborhood is functionally flawed and dangerously overlooks the reality of how our community lives.<br><br>An Unacceptable Threat to Child Safety<br><br>Southcliff is a unique enclave designed with wide, curvilinear, non-through streets that naturally calm traffic, creating a safe environment where our sons and their friends can ride their bikes and play. The proposed high-density developments along Mill Plain Boulevard would shatter this sense of security. Since these developments would lack direct arterial access, all vehicle traffic—including delivery trucks and the cars of hundreds of new residents—would be funneled onto our quiet residential streets like Umatilla Way, Manzanita Way, and our own street, Oregon Drive.<br><br>The city's own Draft Environmental Impact Statement (EIS) acknowledges that these alternatives will lead to ""higher projected new traffic volumes on city safety corridors"". For our children, this isn't an abstract statistic; it's a direct threat to their well-being every time they step out our front door.<br><br>The Degradation of Southcliff Park and Family Recreation<br><br>Our family, like many others, considers Southcliff Park an extension of our backyard. It is a vital community space for recreation and connection. The proposed increase in population density, without any corresponding plan for increased public amenities, will lead to overcrowding and overuse of this cherished 2.7-acre park.<br><br>Furthermore, the inevitable overflow parking from new high-density housing will saturate the streets surrounding the park, making it more difficult and dangerous for families to access. Our 2001 Neighborhood Action Plan already highlighted the desire to improve the park's appearance and amenities; this proposal would actively degrade its accessibility and safety.<br><br>Conflicts with Covenants and Neighborhood Character<br><br>Beyond safety and park access, the proposed high-density zoning directly conflicts with the established covenants and architectural guidelines that have carefully preserved Southcliff's unique mid-century modern character and charm since the 1950s. These covenants were put in place by residents to ensure harmonious development and maintain the aesthetic integrity of our community. Introducing mixed-use and medium-scale designations disregards the very principles that have shaped our neighborhood's identity and created the desirable living environment we now cherish.<br><br>A Better, More Responsible Path to Growth | |

| ID | Full comment | Response |
|---|---|---|
| | We believe the city can and must meet its growth targets without sacrificing the safety and character of established neighborhoods. We urge you to consider a more logical and sustainable approach:<br><br>Concentrate Density Where It Belongs: Focus the highest-density Mixed-Use and Medium-Scale developments within the core of the Heights District and other designated urban centers that are already equipped with the necessary infrastructure. This aligns with the city's goal to ""promote efficient land use by focusing new development in areas with existing infrastructure"".<br><br>Implement Step-Down Zoning: Where new density does approach existing neighborhoods, mandate strict transitional height and scale limits. This ""step-down"" approach would create a buffer and ensure that new development is compatible with the established single-family character of communities like Southcliff.<br><br>Prioritize Redevelopment of Underutilized Commercial Lots: Encourage and incentivize the redevelopment of vacant or underperforming commercial properties that already exist along major corridors. This is a far more sustainable path to growth than destroying the green space and character of stable residential areas.<br><br>Formal Request<br><br>The proposed high-density overlays for Southcliff are not just incompatible with our neighborhood's historical mid-century modern character; they are a direct threat to our children's safety and our family's quality of life.<br><br>Therefore, we formally request that the City Council and Planning Department completely remove the Mixed-Use and Medium-Scale Neighborhood designations from all parcels within the Southcliff neighborhood in the final version of the Comprehensive Plan.<br><br>We ask you to please prioritize the safety of our children and the preservation of our community over a one-size-fits-all approach to density.<br><br>Thank you for your consideration.<br><br>Sincerely,<br><br>Aaron and Katie Sutliff" | |
| 177 | "Given the resources available to use, it would be very smart to allow developers to propose parking off street with parking studies during the development process. Having developed properties in Portland, OR for many years, seeing people move away from owning cars and utilizing more services that have become available for transportation I see the need for less cars parked. The trade off is encouraging developers to design nicer buildings. The developers always have the ability to design for parking but the requirement I believe should be available and not so hardly mandated. I have built buidlings where I have incorporated lobby's, co working spaces that double as a space to wait for the uber to arrive when they order their ride and seen that work successfully in a few properties. I would like the City of Vancouver to consider adopting this in the future. As automation becomes available and ride sharing this is a huge upside in development. Also helps build up walkable neighborhoods as the businesses see the need to open in areas with more people living in them.<br><br>In the neighborhood development it creates a better atmosphere than if you were to have a couple large parking lots." | Comment noted. Refer to Common Response #6 Vehicle Parking, Common Response #4: Vehicle Traffic Impacts and Common Response #10: Businesses in Residential Zones. |
| 178 | We bought our house because of the zoning and being NOT high density. I understand that a project that will change the zoning to allow high density development is on the books for vacant land on Esther St near | Comment noted. The Final EIS evaluates proposed zoning changes and their impacts in Chapter 3: Land and Shoreline Use and Chapter 3: Housing. Concerns about neighborhood compatibility and the transition from lower-density to higher-density zoning are acknowledged. Refer to Common Response #2: General Growth and Quality of Life Concerns. |
| 179 | "To Whom it may concern,<br><br>I have lived in the Southcliff neighborhood for over 17 years. I have Parkinson's Disease and depend on the easily walkable and safe streets for my daily therapy. I am horrified by the proposed zoning changes to our iconic neighborhood. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

|---|---|---|
| | I worked my entire adult life to be able to live in just such a neighborhood. Before buying, I familiarized myself with the applicable zoning laws and CC and R's, which clearly restricted our neighborhood to single family dwellings of no more than two stories. Purchasing a home is one of the most consequential decisions of one's life. In order to make a qualified choice, one needs to be able to count on the consistency of rules and regulations.<br><br>Two alternatives have been proposed, both unacceptable. If either of these proposals are executed, it won't just compromise the livability of our unique neighborhood, it will destroy it.<br><br>I understand the push towards higher density land use in Vancouver and, while it negatively impacts our neighborhood, the Heights project is an appropriate and common sense compromise. Aside from being patently unjust, the proposed zoning changes would be a mistake which could harm the entire community. Vancouver needs to protect, not destroy neighborhoods such as Southcliff. They give our fine city personality.<br><br>I implore all involved to reconsider the proposed dismantling of one of the most iconic historical neighborhoods in Vancouver and direct your energy towards maximizing the efficacy of the Heights project and the like.<br><br>Thank you and kind regards,<br><br>David and Kat Moore" | |
| 180 | "I support the ""Alternative 2"" map for future city planning. I think that denser, more mixed-use, space will keep the city more affordable and make it more vibrant as we attracted new residents and businesses to the area.<br><br>I would also like to comment that we do not have enough food cart pods in Vancouver. I wish that we could relax zoning and regulations to allow more pod cart pods to establish themselves here so that we can grow our own local food scene instead of commuting into Portland to eat.<br><br>Lastly, I think completing our neighborhood sidewalks it a more valuable goal than the city has given it credit for so far. In the Lincoln neighborhood, I can rarely walk more than 1-2 blocks without crossing the street and it becomes a game of Frogger where we have to jog across the street watching for cars every block or two when all we're trying to do is take a stroll in our neighborhood. The fragments of disconnected sidewalk throughout Lincoln and some other neighborhoods of Vancouver is both ugly and unsafe. Complete sidewalks would improve community and attract more residents to the area.<br><br>Thank you for working hard for our city!" | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>The Final EIS also acknowledges the importance of supporting local businesses and food access. While food cart pods are not specifically addressed, mixed-use zoning and reduced regulatory barriers are intended to expand opportunities for neighborhood-serving businesses, including small-scale food vendors, consistent with Comprehensive Plan goals to improve access to grocery stores and dining options.<br><br>Refer to Common Response #5: Traffic Safety and Common Response #7: Sidewalks for more information on those topics. |
| 181 | "GENERAL COMMENTS: Over the nearly thirty years that my family and I have lived in Vancouver, I participated in an advisory capacity on several public projects, some of which included the Columbia Crossing project, and the advisory group that centered around the upgrading of Vancouver's public transportation system. I mention this only to demonstrate that I am concerned about the future of Vancouver for not only my wife and me, but for future generations as well.<br><br>I am quite sure that planning staff believes that the timeline that is described in the section on Scoping Process that begins on page 7 is generous. I disagree, and, I should add, so do a number of my neighbors and friends who reside in the city. My wife and I consider ourselves to be relatively well-informed, but we were quite surprised to learn of this project less than a month ago from acquaintances who live in an adjoining neighborhood. Indeed, had it not been for that conversation, we would not have know about the workshops that were just held.<br><br>The reason for this, in my opinion, is that time and time again the city's outreach relies more often on electronic means than on printed materials that are delivered to residents and property owners by mail. I perfectly understand the economics, but the electronic process leaves out a large number of individuals who have a stake in the city's future. That said, once someone is on the email list, communications are much better ..... provided that an individual has email access, and, equally important, the time to process the large volume of information that must be researched and digested to make an informed decision. I suggest that the timeline for comments be extended for at least two months and that a mailing program be instituted as soon as possible to inform and guide residents. More workshops would be a great help if staff wants to really engage residents. | Comment noted. Refer to Common Response #1: Selection of Preferred Alternative, Common Response #6: Vehicle Parking, Common Response #8: Housing Affordability/Options, Common Response #10: Businesses in Residential Zones and Common Response #4: Vehicle Traffic Impacts for more details on these topics.<br><br>The Final EIS acknowledges the importance of meaningful public engagement and transparency in the planning process. Outreach efforts are described in Chapter 1: Introduction and Scoping Process, Appendix D of the Final EIS, and in the appendix of the proposed Comprehensive Plan. Outreach has been conducted since 2023 and included a wide variety of methods, including in-person and print/hardcopy methods. The City recognizes that not all community members have access to digital tools, so voicemail and mailed comments were also accepted and recorded.<br><br>Land and shoreline use impacts are addressed in Final EIS Chapter 3: Land and Shoreline Use. The plan emphasizes mixed-use development near transit corridors and centers, Public spaces, parks, and river access are prioritized, with policies to preserve and expand open space and ensure equitable access to the Columbia River.<br><br>Housing capacity and impacts are analyzed in Final EIS Chapter 3: Housing. The Final EIS acknowledges concerns about neighborhood compatibility, gentrification, and affordability. State law requires that all neighborhoods allow a broader range of housing types, while emphasizes design standards, tree preservation, and infrastructure improvements to maintain livability. Compact growth is intended to reduce housing costs, expand options for families and seniors, and support climate and equity goals. |

|---|---|---|
| | I realize that state mandates are driving much of what city planners are trying to accommodate, but we must be constantly mindful of the real capacity for growth that exists within the city's boundaries. Estimates must be carefully—and conservatively—calculated. I believe the worst mistake communities can make is to constantly plan for a level of growth that the taxpayer and the physical geographic boundaries cannot sustain. Otherwise, the tendency to build to an erroneous perceived capacity might well ruin our city.<br><br>In closing, I should also point out that during my long career I have learned all too well that in these types of projects most often suffer from several problems, the most serious being that all of us do not know what we do not know, and that often individuals in all roles forget the consequences of trying to make conditions or solutions better, a word that, to paraphrase Voltaire, is the enemy of good enough.<br><br>The comments below relate to the subjects listed in the survey.<br><br>ALTERNATIVES: The suggested alternatives are well presented. My only comment on them is that the final preferred alternative should be arrived at by using accurate data and realistic assumptions derived from real-world experience. After all, it will be the taxpayers who will end up paying for all of the services, so be realistic and remain aware that growth must be approached with an open mind and a tight fist on the purse.<br><br>LAND AND SHORELINE USE: The existing Comprehensive Plan for the city has many laudable goals, such as "[tailoring] regulations, incentives and investments to facilitate development and community resources near current and future transit stations" and "[incentivizing] and [removing] regulatory barriers to locating grocery stores and neighborhood markets near housing and in underserved neighborhoods." These should be adopted wherever there are areas of residential units that are not served by large grocery stores within reasonable walking distance. Small grocery stores can be located in new high-density mixed-use projects.<br><br>Re: outdoor public spaces, it is crucial that Vancouver's public areas remain as they are or be expanded (e.g., designing neighborhood parks into new neighborhoods as they are being renewed). The number of open spaces, parks, and forests are very much a part of why many people choose to live in the city. The proximity to the Columbia River is equally compelling, and careful planning for housing and industry must ensure that the flavor of the city not be tainted in an attempt to find solutions to problems that do not exist. The public must not lose their access to the river, so, again, maintaining or creating public spaces must be accomplished. The redevelopment of the downtown property along the river is a welcome addition, but as has been happening here and elsewhere throughout the nation, this area—like the Pearl District in Portland—has become so gentrified that almost none of the local workforce will be able to afford living there.<br><br>HOUSING: My wife and I had a lengthy conversation on this subject with a staffer at the 9 August workshop at City Hall. Having lived in large cities, very small towns, and areas known for outdoor recreation, we have a very good idea of the problems associated with gentrification and the rising costs of housing in all types of communities here and abroad, including those fueled by agriculture and outdoor recreation.<br><br>Changing zoning in established neighborhoods to multi-use or higher density is fraught with problems, beginning with the fact that people choose to live where they do for specific reasons, chief among them cost, location, and ambiance. More important, however, is the quality of life that a place offers. In my particular case, when my wife and I began searching for a house, we looked from the Columbia River north to Woodland, east to Hockinson and Washougal and just about everywhere in between. After dozens of trips, we settled on a neighborhood with all of the things we were looking for: a quiet established neighborhood with wide, walkable, meandering streets, proximity to an airport, large trees, and good schools for our then high-school-age daughter. Coming from Florida, where real estate was relatively inexpensive back then, the prices of houses here were somewhat shocking, but we stretched a bit and found the house we still own and love. Under the proposed zoning, our neighborhood has a good change of being adversely affected on a number of levels.<br><br>When I look at the published alternatives, I believe that in many cases, these proposed changes are based on erroneous assumptions. As an example, proposed changes on one street of residential housing that has no on-street parking on a bordering arterial street, would require parking be increased on the residential side of the property. This, | Seismic safety and geotechnical considerations are addressed in Final EIS Chapter 3: Geology and Soils, with requirements for site-specific review during permitting.<br><br>Aesthetics and greenspace preservation are addressed in Final EIS Chapter 3: Vegetation and Wildlife, Chapter 3: Aesthetics, and Chapter 3: Land and Shoreline Use. The Comprehensive Plan emphasizes tree canopy preservation, landscaping requirements, and integration of parks and open space into new development. Architectural design review and context-sensitive standards are identified as tools to ensure compatibility with existing neighborhoods and public spaces.<br><br>Historic and cultural preservation is addressed in Final EIS Chapter 3: Historic and Cultural Resources. The Final EIS recognizes Vancouver's rich history and emphasizes protection of key sites such as the Historic Reserve, Pearson Field, and Officer's Row. Adaptive reuse and modernization are supported where appropriate to maintain historic structures while ensuring their long-term viability.<br><br>Refer to the Noise section in Final EIS Chapter 3 for more details on impacts and analysis.<br><br>Public services and utilities are addressed in Final EIS Chapter 3: Public Services and Utilities. The Final EIS evaluates the fiscal impacts of growth on police, fire, schools, and other services, noting that compact growth reduces per-capita service costs compared to sprawl.<br><br>Natural environment concerns are addressed across several chapters. Final EIS Chapter 3: Geology and Final EIS Soils and Chapter 3: Surface Water and Groundwater evaluate erosion, impervious surfaces, and runoff impacts, with mitigation measures such as stormwater management, erosion control, and low-impact development standards. Final EIS Chapter 4: Air Quality, Greenhouse Gases and Climate analyzes emissions, noting that compact growth and expanded transit reduce greenhouse gases compared to the No Action Alternative.<br><br>Water quality concerns are addressed in Final EIS Chapter 3: Surface Water and Groundwater, with requirements for construction best management practices to protect creeks and aquifers. Drinking water supply is evaluated, with coordination planned to ensure long-term capacity.<br><br>Plants and animals are addressed in Final EIS Chapter 3: Vegetation and Wildlife. The Final EIS emphasizes preservation of green spaces, wildlife corridors, and tree canopy. Compact growth is intended to reduce sprawl and protect natural areas, while tree replacement and landscaping requirements mitigate canopy loss. The importance of neighborhood tree canopy, including in Southcliff and other areas, is acknowledged as critical to air quality, climate resilience, and livability. |

|---|---|---|
| | in turn, would increase the need for on-street parking in the affected neighborhood and would likely reduce the value of any adjoining residences, including those on the opposite side of the street.<br><br>Vancouver has been popular for its compact, diverse neighborhoods, many of which can boast of having two and three generations of the same families in residence. Changing the flavor of many of these neighborhoods would be highly unfortunate and, based on history, will do nothing but result in lawsuits and disruption. I believe a better solution would be to take a detailed look at the design of the individual areas to identify, for example, whether a particular neighborhood would benefit from being allowed to build small-scale multi-story structures versus single-story residences or commercial spaces. This should be done with the involvement of property owners, many of whom have a greater knowledge of the neighborhood's history, day-to-day workings and aspirations of its residents.<br><br>Vancouver should endeavor to adopt a measure that will demand that new high-density housing have a certain percentage of units reserved for the local workforce. This kind of rule is being instituted in several cities, including Riviera Beach, Florida, where, without safeguards in place, the commercial waterfront redevelopment would have resulted in apartments selling for many millions of dollars (each) on land that, prior to development, was mostly shacks and small, single-story commercial buildings.<br><br>Instead, small businesses can be accommodated in multi-use developments, such as the one being planned for the old Tower Mall property. Small businesses can be accommodated on the ground floor with office and/or residential spaces on the two or three floors above. In almost all cases, new projects of this kind should require underground parking to reduce the amount of non-permeable pavement for parking (residential, commercial, customer, etc.) while reducing large quantities of stormwater runoff and allowing more open greenspace and the planting of a greater number of shade trees to reduce heat gain and conserve power consumption in residences and places of business.<br><br>The belief that turning a block or two of residential property into mixed use, expecting that residents will gladly give up the flavor of their neighborhood for the convenience of having a small shop across the street, is not valid, especially if, as in the case of the Tower Mall Project, spaces for those kinds of businesses are only a few blocks away—easy walking distance and well within the guidelines of the "20-minute rule"—from neighborhoods bordering Mill Plain, MacArthur and other busy streets. It is a fact that our city needs small businesses, especially if they provide services like tailoring, shoe repair and, other trades that allow residents to save money by not having to replace items that could have a longer service life. These businesses, in theory, would also provide jobs. The key to this is the cost of rent. A tailor or cobbler cannot afford to sign an exorbitant lease, so if these types of businesses are desired, there needs to be some kind of rent control to help sustain them.<br><br>To add more affordable housing, increasing the density would be essential. The questions are How? And Where? I suggest that consideration be made to amend the building code to allow high density housing in the form of three to four story apartment buildings to replace the often-vacant parking spaces that rim the parking lots in developed areas like the Vancouver Mall. These kinds of projects could be public/private enterprises that could stimulate increased availability for affordable condominium residences or workforce rentals.<br><br>Requiring multi-story parking structures (in addition to underground parking), would reduce the deleterious effects of large expanses of blacktop. There is no question that seismic concerns enter into the calculus, but this is an obstacle that can be overcome and must be for all new construction in the city.<br><br>AESTHETICS: A common thread that weaves the various parts of town together is greenspace. In the more established parts of town, large trees and mature plants grace our neighborhoods, our historic areas and our many parks and greenways. And while there are various types of houses and commercial spaces, we must plan for the future by preserving the old while embracing the new. This requires proper review, and by this I mean architectural design review, and specific guidelines that become mandatory for architects, builders and developers. Surroundings and existing structures and public spaces must always be considered when planning for newbuilds. Context is important, because to ignore it would be disastrous.<br><br>Historic and Cultural Preservation: Vancouver has a rich history. There are reminders everywhere, and we need to not only preserve them, but remind our current residents and teach our visitors—about what our forebears accomplished. Preservation of the Historic Reserve, Pearson Field, the county historical museum and other important sites should continue and remain untouched, except in such cases as Officer's Row, where interior modernization to allow the | |

| ID | Full comment | Response |
|---|---|---|
| | structures to help pay for their own maintenance, and Pearson Field, where its status as an enterprise fund allows the facility to operate without taxpayer funding.<br><br>TRANSPORTATION: I have commented a bit on this subject in the housing section, because the two are closely related. In addition, I believe that assumptions are being made by staff that are not valid. It appears to me that the assumption is that more and more people will be using the bus system and bicycles to travel around the city. I do not believe that to be correct … yet.<br><br>Having grown up in two cities in New England, I grew up using public transportation, support it, and use it to this day. Wherever I travel, I use public transportation as much as possible. Until such time as the bus system has become fully built-out and more accommodating, many residents will choose alternative forms of transportation.<br><br>The public transportation system in Vancouver is quite young and quite simplistic in comparison to systems elsewhere. We have no subways, no light rail, and very few feeder lines on our existing bus routes. And although taxis and rideshare companies provide alternatives to the personal automobile, their cost is generally far more expensive than the cost of the same trip by bus.<br><br>To increase ridership, interconnectivity between The Vine lines must be expanded to allow bus and light rail users to easier access commercial and residential areas around town. This is crucial for the elderly, the handicapped, and commuters.<br><br>Since moving here, I have witnessed a rise in the number of personal cars on the roads. There are at least two reasons for this: First, on the West Coast, perhaps more than elsewhere, people are closely linked to their cars. It is a cultural phenomenon. Second, having not grown up in areas with robust public transportation systems, people in this area are not fans of public transportation. Consistently, resident have voted against light rail in defense of their automobiles. Many, for what I believe to be selfish reasons, still do not want light rail to expand into Vancouver.<br><br>Poor decisions based on these and other assumptions will come back to haunt us as we plan for the future. Take, for example, the redesign of some of our streets. Mill Plain Boulevard is a good example of what might happen. A number of years ago, a decision was made by the city to remove one traffic lane on each side of MacArthur Boulevard to allow for an expanded bike lane with a safety lane as a buffer. Let's say that a zoning change were to be made to the houses that front Mill Plain, which now has two traffic lanes in each direction. How would the city deal with parking, since there would be no capacity without removing traffic lanes that will be needed to service an increased population?<br><br>Noise: I have no problem living with airport noise, river traffic, train and other sounds that result from our close and convenient proximity to services. Construction noise and noise from unmuffled or artificially enhanced automobile exhausts will always be annoying, and we need to be vigilant to ensure that the noise of growth is not ever-present. It is a given that large projects, such as the restarted Columbia bridge project, will be noisy, dirty and long, but construction projects in and around neighborhoods should be closely monitored.<br><br>Public Services and Utilities: The requirement for more public services requires a very costly long-term commitment on the part of taxpayers. It is yet another reason that growth boundaries and proper design of higher density structures are important to the process. Any alternative that increases housing of any type must have the ability to show that it will not require an undue increase in city staff (including police, fire and other personnel) that will penalize existing taxpayers.<br><br>As to utilities, growth will bring increased demand, and from what I know at the moment, alternatives to what currently exists are few.<br><br>EARTH: My greatest concerns are increases in impervious surfaces and any grade changes that would cause erosion or non-point pollution that would affect drinking water sources or the Columbia River. Tangential to this but equally important is degradation to any creeks that run into the Columbia from any activities, including construction.<br><br>I am also concerned about losing any open greenspaces or wooded areas, even if they are privately owned. The results of this can easily be seen in Orchards, where, in the last few years, forests and farmland have completely | |

|---|---|---|
| | disappeared as housing developments have taken over. In most cases, these houses are single-family structures, and the selling prices appear to be far from what might be considered affordable.<br><br>AIR QUALITY, GREENHOUSE GASES, AND CLIMATE: Growth will affect each of these. An increased use of public transportation will mitigate emissions to some degree, but the transportation system must be modernized and expanded to be able to serve all neighborhoods.<br><br>WATER: As noted, I am concerned about construction runoff into creeks. I also worry about maintaining or improving the quality of drinking water and about our ability to provide drinking water as the population increases.<br><br>PLANTS AND ANIMALS: Again, I must touch on the quality of life represented by many of the neighborhoods in the city. Greenspaces, such as those along Salmon Creek, Burnt Bridge, Blandford Canyon, Vancouver Lake, Columbia Springs, and others provide spaces for wildlife as do neighborhood parks. As previously noted, these spaces are a defining part of Vancouver and should be treasured and properly managed.<br><br>Although this relates to the Earth and Aesthetic categories as well, I must make a reference to the preservation of the existing tree canopy that makes Vancouver so inviting. The neighborhood I live in has the second greatest tree canopy of any neighborhood (40 percent, according to a 2021 study). Only Southcliff exceeds this number. The idea of changing the zoning of such neighborhoods to allow for more housing runs counter to the long-term goals for air quality, greenhouse gasses and reducing climate change if the tree canopy is reduced." | |
| 182 | "My name is Lori Edenfield and I live at [address] in the Southcliff neighborhood of Vancouver, WA. I have resided here, along with my husband, since 2002. We raised 2 boys in this home, who grew up attending our neighborhood schools. This neighborhood is a blessing to our family, with streets that are not ""through streets"", providing less congestion, more walkability, and safety for children playing & riding bikes, enjoying the park, and knowing our neighbors. These were important reasons why we remained in this house for all of these years, first as renters, then as owners.<br><br>The zoning changes proposed by the city in the draft EIS concerns me for the future of our neighborhood. I am against both zoning alternatives (1 & 2) as proposed. Besides the reasons aforementioned, I believe there are alternative locations besides Southcliff where this type of zoning could occur, such as proposals outlined in the neighboring Heights Development plan. It seems changes could be made to that plan, already in motion, to accommodate more housing and parking, without radically changing this neighborhood. If these zoning changes were to move forward in Southcliff, there would certainly be overcrowding of our streets and less safety for all its residents. I must also mention the long-standing trees in this neighborhood, including my own yard with 2 large Douglas Fir trees over 60 years old. The loss of the trees and wildlife habitat are not what Vancouver has stood for in the past. It is not in the best interest of the families living here, and those to come, to destroy the beauty and long-standing peace and rich wildlife habitat that makes this a desirable place to live. Adding commercial and mixed-use construction in this strip along Mill Plain, as well as Oregon Drive, would hurt so much more than help in this small community of Southcliff.<br><br>Thank you for your time spent considering the opinions of the people who call Vancouver home and care about future growth, along with preservation." | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 183 | "Geobiological impacts of rezoning, Southcliff Neighborhood and Surrounding Area<br><br>Comments by Michael F. Donnelly, Ph.D (Geology, Stanford University) and Registered Geologist WA, OR, and CA<br><br>The regional distribution, including Tower Mall development of distribution of soil profiles will negatively impact slope stability, sediment saltation and sedimentation patterns.<br><br>These impacts will in turn negatively impact surface water drainage rates and patterns, and ground-water recharge locations and migration paths, including potable water aquifers of the Troutdale Aquifer System (designated a Sole Source Aquifer in 2006 due to its critical nature).<br><br>These consequential impacts will directly impact wildlife habitat, especially their migration corridors and reproduction success, including loss of tree canopy habitat. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

|---|---|---|
| | These wildlife impacts would be especially damaging to downstream salmon habitat along the nearby Columbia River.<br><br>Wildlife impact would include bats, owls, and other raptors that inhabit these heritage trees, including the Southcliff cypress trees.<br><br>These geologic, geobotanical and geohydrological impacts will also likely impact local and regional human health by disruption of radon-rich soils, contamination of potable groundwater aquifer, and of fault stability due to altered rain-water infiltrations, to excessive and differential distribution of load bearing stress (high rise housing density adjacent to lower rise residential density) and to removal of fault/landslide support buttresses.<br><br>Also, radioactive exposure due to Clark PUD power lines and their distribution in Southcliff neighborhood would statistically affect a greater population.<br><br>We respectfully request access to all relevant data the City used for the Mixed Use and Middle Density analyses, its distribution among all three rezones (including Low Density), and quantitative impact analyses on the surface and subsurface geology and hydrogeology, and on the geobiology and geohazards as discussed above in this email.<br><br>The efficiency and effectiveness of any stated mitigation or offset plan cannot be accurately quantified without this baseline geoscientific data. However, please provide us with any such offset data for the Southcliff neighborhood and adjacent Tower Mall development.<br><br>There are no science-based "guarantees" that any governmental offsets to this environmental damage will be effective.<br><br>This request includes access to all such data provided by the State of Washington used to establish No Change, Low Density rezoning. This Low-Density rezone should have included an evaluation of these same negative impacts that the city's two higher density proposals would cause, perhaps only at a slightly reduced impact intensity." | |
| 184 | "Southcliff Rezoning - Comments on Market Feasibility of Housing Capacity Analysis, Related to the City's Proposed Rezoning Plans, Attachment 2, pp. 1-4, by ECOnorthwest<br><br>Michael F. Donnelly, Ph.D. Geology, Stanford University, and Registered Geologist, WA, OR, CA<br><br>Two proforma models were used to test the financial feasibility of various housing densities. They used housing prototypes that would theoretically reflect density development profiles that could potentially comply with the city's proposed two rezoning plans (in addition to the state's low-density rezoning). The results were intended to "deliver if such zoning was a constraint" for re-zoned market development. This email indicates such a constraint could be likely.<br><br>These pro-forma financial models were based on the Land Budget (Residual Land Value, RLV) to evaluate development feasibility. The RLV is what a developer would theoretically have to pay for land (e.g. a Southcliff single-family rezoned residual lot) after first accounting for projected Development Costs and revenues from projected Rental Value and Ownership Value of rezoned developments. The costs included both "hard costs" (including parking costs and "soft costs" including Impact Fees, both undefined.)<br><br>This equation determines the residual or backed-into derived value of a Southcliff rezoned lot must be for rezoned development to be positive as discussed below (scenario c).<br><br>The Development Cost is then the sum of the derived residual Land Budget and projected Hard/Soft costs. Development Value is equal to the sum of Rental Income and Sale Ownership Values minus the Development Cost. The Rental Value includes the very subjective and sensitive Net Operating Income (NOI) calculation as discussed below (#2, Page 2). "We solved for the Land Budget (the RLV) that was possible given the NOI on the project and potential terms, interest rates, and debt service coverage ratio requirements" (Attachment 2, Page 3).<br><br>Rental (Income) Value would apply, for example, to apartments, and Ownership Value would be net sales of condos or commercial retail sublot. See Exhibit 1 page 2, Attachment 2. This information does not discuss the all-important debt to equity ratio and the developer's threshold return on equity. | Comment noted. The Final EIS evaluates housing feasibility and market conditions in Chapter 3: Housing and Appendix: Housing Capacity and Feasibility Analysis. The ECOnorthwest pro forma models are intended to provide a general indication of development feasibility under different zoning scenarios, recognizing that site-specific conditions such as wetlands, geotechnical constraints, and ownership history may affect actual outcomes. As noted in the analysis, residual land value (RLV) is a relative indicator of feasibility rather than an absolute measure, and assumptions regarding net operating income (NOI), debt service, and capitalization rates are subject to market variability. Requests for access to modeling assumptions and outputs will be considered as part of the public record and review process. The Final EIS also acknowledges the importance of providing housing options for all ages and income levels, including smaller units that support aging in place and equitable access to services. Mixed-use development is intended to improve walkability and access to daily needs, while design standards and land use policies can help ensure compatibility with neighborhood character. Concerns about retail mix and affordability, such as those raised regarding the waterfront, are noted and will be considered in implementation to encourage neighborhood-serving businesses that meet community needs. Tree canopy, parks, and access to services remain priorities under the City's climate action and equity goals. |

|---|---|---|
| | A projected ratio for each rent and sale price was used on each city prototype rezoning density (Rental Value/Ownership Value ratio, Exhibit 1, page 2, Attachment 2). This ratio was defined spatially (geographically) for each rezoned market area in the City.<br><br>Footnote 1 on page 2 of Attachment 2 states that where low rents or no apartments exist in model tracts, this analysis uses interpolated missing rent values by using an average of their "neighbors" with similar rents and tenure splits, ordered by proximity and by adjacency on clustering such neighborhood tracts.<br><br>Negative Observations re the Models and Analyses<br><br>#1: The most sensitive, subjective, and easy factor to miscalculate in this analysis is for the derived Land Budget: Residual Land Value (RLV). This equation component is based on a projection of what a developer would need to pay for an existing Southcliff low-density rezoned lot to determine if the RLV would be commercially feasible. This RLV may not reflect the current RLV of the State of WA Low Density re-zoning or more importantly the single- family residential value of a Southcliff lot prior to the State 's rezoning.<br><br>This is potentially a governmental taking of private land value whether by the prior State or current City rezoning plans.<br><br>The RLV metric was used by these pro forma models to evaluate market development feasibility including the Southclif neighborhood lots:<br><br>a. If the RLV is zero dollars, the development could be feasible if land were donated for free.<br><br>b. If the RLV is less than zero (negative), the the development is likely not feasible unless the developer receives additional government subsidies or incentives, including free land.<br><br>c. If the RLV is equal to or above (positive) derived residual land prices, the development is considered feasible at projected market rates.<br><br>"Results from this method describe a general analysis of prototypes and does not consider the many potential unique conditions that could be factors in development feasibility (e.g. increased predevelopment costs, low land basis from longtime land ownership). For these reasons residual land value analyses should be thought of as a strong indicator of the relative likelihood of development, rather than the absolute measure of return to the investor or developer for any specific site" (beheardvancouver.org/plan2045, Attachment 2, Feasibility Analysis Overview, page3).<br><br>#2: These models could have easily miscalculated the Development Value for higher-density prototypes particularly in the Southcliff Neighborhood by (a) dividing an inappropriate annual net operating income (NOI) by an inappropriate market-driven return on debt-service requirements, or by (b) determining an inappropriate loan capacity given debt service assumptions and the NOI for the models' selected lower-density prototype locations used for the State's rezoning..<br><br>The return of development cost could be the most important metric to get accurate pro-forma results because it establishes the economic threshold where the projected returns (rental value and ownership value) are applied directly against developer's/investor's project risk for rezoned development, particularly for the unique characteristics of the Southcliff neighborhood.<br><br>For higher-density development, the developer's market-driven threshold for return on debt and equity is related to market capitalization rates, in order to determine Rental Value and can be optimistically or inaccurately applied to model scenarios to attract institutional capital, the typical investor in higher density affordable (rent/buy) housing.<br><br>The most accurate economic and financial analyses would likely indicate the non-feasibility for development of higher-density residual and commercial rezoning with Mixed-Use and Middle Density in this historic park-like Southcliff neighborhood.<br><br>We respectfully request access to ECOnorthwest modeling assumptions, inputs and output scenarios, especially related to derived Land Budget (RLV) and NOI for potential Mixed-Use and Middle Density rezoning proposal for the Southcliff Neighborhood. | |

| ID | Full comment | Response |
|---|---|---|
| | This type of economic/financial proforma scenario modeling should also be applied to the State's Low Density rezone assessment of the neighborhood. We also respectfully request access to such State modeling and its outputs as it would have affected the Southcliff neighborhood." | |
| 185 | I appreciate the work to include smaller housing units that accommodate younger and older people. It is important to me that as I age, I can easily get into a much smaller home with a safe park and access to services. Mixed use is fine but please do not make it such that living areas are surrounded by restaurants or shops that really add no value to a community. The current waterfront is ridiculous with the overpriced restaurants and no place to park to access these. Small shops catering to the needs of individuals living in a community are really important or one has to go outside of the area for the most basic of things. | Comment noted. Refer to Common Response #8 Housing Affordability/Options and Common Response #10: Businesses in Residential Areas for more information on these topics. |
| 186 | "City of Vancouver Planning Department<br>[address]<br>Vancouver, WA 98660<br>Subject: Request for Reconsideration of Proposed Zoning Change – Parcel [parcel number]<br>Dear City of Vancouver Planning Department,<br>I am writing to formally request reconsideration of the proposed zoning change for Parcel [parcel number], which is owned by Kondor Express and which I represent as their commercial real estate agent.<br>For the past two years, we have actively marketed this property; however, the existing mixed-use zoning has already limited its sale and development potential. The proposed change to a Regional Activity Center (RAC) designation—requiring high-rise development at a minimum of 64 units per acre—would further hinder any feasible use of this parcel.<br>In addition to market limitations, this site presents significant environmental and geotechnical challenges:<br>• A large wetland area occupies a substantial portion of the property, restricting usable acreage and buildable space.<br>• The ground conditions are unstable and not suitable for high-rise construction without extensive and costly mitigation efforts.<br>Given these constraints, high-density development is impractical and economically unviable. On behalf of the property owner, I respectfully oppose this zoning change and request that the City consider rezoning the parcel to R-22 or R-18, which would provide a realistic development path consistent with the property's physical characteristics and market potential.<br>We appreciate your time and thoughtful review of this request. Please feel free to contact me should you require additional documentation, environmental assessments, or further details to assist in your evaluation.<br>Thank you for your attention to this matter.<br>Sincerely,<br>Larry Krotenko [phone number]<br>Commercial Real Estate Advisor Knipe Realty" | Comment noted. The Final EIS evaluates the impacts of proposed zoning changes, including Regional Activity Center (RAC) designations, in Chapter 3: Land and Shoreline Use and Chapter 3: Housing. The analysis considers market feasibility, environmental constraints such as wetlands, and geotechnical conditions that may limit development potential. While RAC zoning is intended to support compact, connected growth and meet state housing requirements, site-specific challenges are acknowledged and may require further review during implementation. Requests for alternative zoning designations will be considered alongside environmental conditions, infrastructure capacity, and community input as part of the Comprehensive Plan update process. |
| 187 | Because of the Heights Development and the rezoning of the Southcliff neighborhood to include higher density housing and mixed use development, I am concerned about noise, traffic and parking around the area. The City has removed minimum on-site parking requirements for new high density housing, which will result in increased on-street parking around such development. MacArthur Blvd car traffic is already reduced to one lane each direction, with large schools fronting the street. Congestion, especially at school drop off and pick up hours will significantly increase with the additional of high density housing. Parking isn't allowed on MacArthur, which means cars will park in surrounding neighborhoods. Regarding the density in Southcliff, it is totally at odds with the current neighborhood and its neighbors. There is vacant land along Mill Plain between downtown and 192nd Ave which is better suited for | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | mixed use/high density housing, for example: the ball fields south of Mill Plain between Ft Vancouver Way and Reserve; land south of Hudson's Bay HS ball fields on the north side of Mill Plain; land east of 205 on the south side of Mill Plain near the Kaiser medical facility; and land where the Evergreen Air Field was located north of Mill Plain, east of 136th Ave. | |
| 188 | "Thank you for the comprehensive report! While I understand the need for more housing and jobs, I don't see enough information on how the city plans to ensure the amount of cars that will be added can get around easily. The current traffic congestion is quite terrible and cannot handle who is here now. It takes 30 mins to get from the west side to the east side of town!<br><br>There are two other things I feel are lacking in the choices you've presented. Ensuring the history of Vancouver is honored throughout the city with art, nods to what was there, etc. (example: the airfield that used to be on the east side....if building there, somehow tie in that to the development).<br><br>The last thing I feel is very, very important is to add trees wherever possible. Development has taken out soooooooo many trees over the last 20 years alone that need to really be replaced. It would be good for the air, the view, environment and even mental health." | Comment noted. Refer to Common Response #4: Vehicle Traffic Impacts and Common Response #12: Neighborhood Character.<br><br>Tree canopy and vegetation impacts are addressed in Chapter 3: Vegetation and Wildlife. The plan emphasizes compact, connected growth to reduce sprawl and preserve natural areas, while also encouraging tree planting and landscaping requirements in new development. These measures support climate action goals, improve air quality, and contribute to community health and livability. |
| 189 | "We need MORE HOUSING. Not just in west Vancouver or the heights, but everywhere. We need more density, and we need more multifamily apartments/condos in every neighborhood. The Heights, Mill Plain, South Cliff, Fishers Landing, etc. Every neighborhood needs more density and more housing, otherwise we will keep losing out on affordability, homelessness will get worse, and we will create an unsustainable city.<br><br>Please, go with Alternative 2 and build more density and housing everywhere in the city. Anyone who challenges this does not have the right to prevent people from accessing human basics, like housing, and groceries within walking distance of each other." | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 190 | "Hello,<br><br>I would like to give feedback in support of Alternative Two of the Comprehensive Plan you've outlined. In the decades that I've lived in Vancouver, I've noticed the dramatic increase in housing cost, low availability, and a lack of basic essentials within walking distance. I believe we desperately need to build more housing, especially three and four bedroom condos, and townhomes.<br><br>We also need a lot more shops in our neighborhoods. In my recent trips abroad, I noticed how easy it was to walk or bicycle to a nearby grocery store, cafe, or restaurant. Why can't we have that here in Vancouver? It is a basic necessity, and it's something every Vancouver citizen deserves. Our children, our elderly, our disabled, and everyone in between have the right and deserve a city that allows them to get basic amenities within a short walk. It would be unfair and against the city's values to prevent neighborhoods from building more housing and more shops and businesses. Thank you.<br><br>- Susan" | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>Refer to Common Response #8 Housing Affordability/Options and Common Response #10: Businesses in Residential Zones for more information on those topics. |
| 191 | Go with alternative 2 and build, build, build. There's a vocal minority of retired, wealthy, and privileged NIMBYs who don't want to see any change, even to their own detriment. Their privilege should not supersede the right of the public to obtain affordable housing, or to have things like coffee shops and grocery stores in their neighborhoods. Please, CoV, build more housing, more density, and make Vancouver a better place to live. | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>Refer to Common Response #8 Housing Affordability/Options and Common Response #10: Businesses in Residential Zones for more information on those topics. |
| 192 | "I'm commenting on the land use and transportation portion of this draft EIS. We absolutely need to go with alternative 2 and boost our density and housing supply in the city. As it stands, we are falling far behind other cities when it comes to building. Not only that, but our infrastructure is outdated. We need more bike lanes, more transit, and different types of transit, like streetcars.<br><br>This is all possible if we increase density, and create a better environment for our citizens. We need more mixed-use developments across the city in every neighborhood, but especially on transit corridors. Mill Plain, Fourth Plain, and | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>Refer to Common Response #8 Housing Affordability/Options and Common Response #10: Businesses in Residential Zones for more information on those topics. |

|---|---|---|
| | pretty much all of West Vancouver. Fishers Landing, Bagley Downs, etc. We need to be building up, not out, and we need to allow all types of housing and businesses within the city limits." | |
| 193 | *Incomplete form, no comment received* | *N/A* |
| 194 | Id like to see how to encourage less concentration of grocery stores in large footprints to reduce VMT. People keep asking how will get groceries, because they assume you need a car. | Comment noted.<br>The Final EIS discusses how mixed-use zoning and neighborhood centers can reduce vehicle miles traveled (VMT) by allowing daily needs, such as groceries, to be located closer to where people live (Chapter 3: Land and Shoreline Use and Chapter 3: Transportation). Encouraging smaller-format grocery stores and neighborhood-serving retail within residential areas is one strategy to improve access without requiring car trips. The plan's emphasis on walkable, mixed-use areas and transit-oriented development is intended to provide more options for accessing groceries and services without relying solely on large-format stores or automobiles. |
| 195 | How can we mitigate car noise especially as it relates to excessive noise, long straight paths encourage speed exhibitions. Especially at the waterfront. | Comment noted. Refer to the Noise and Transportation sections of Final EIS Chapter 3 for more information on the potential impacts to those topic areas, as well as proposed measures to address those impacts. |
| 196 | I'm concerned with the plan to encourage more density and building if we can't encourage more developers then we can't meet our housing, as we aren't meeting them now. | Comment noted. Refer to Common Response #1: Selection of Preferred Alternative for more information. |
| 197 | I strongly support for option b | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 198 | *Incomplete form, no comment received* | *N/A* |
| 199 | All neighborhoods need to change as part of this plan and should adopt mixed use zoning. We need more housing density and businesses to be available in all neighborhoods. | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 200 | "I appreciate the work that went into preparing the Draft Environmental Impact Statement (EIS) and strongly support the proposed land use alternatives. I would like to highlight a few areas where I believe the plan will have positive impacts:<br>1. Built Environment<br>The proposed land use alternatives appear to promote thoughtful growth that balances housing, transportation, and economic development. I support the emphasis on creating more walkable neighborhoods, investing in transit-oriented development, and encouraging mixed-use areas. These strategies will strengthen the local economy while improving livability and access for residents.<br>2. Natural Environment<br>I am encouraged by the EIS's attention to protecting sensitive habitats, waterways, and tree canopy. Preserving and expanding green spaces will not only enhance biodiversity but also provide health and recreational benefits for the community. Integrating climate resilience strategies, such as reducing greenhouse gas emissions and supporting sustainable building practices, is particularly important for Vancouver's long-term environmental health.<br>3. Cumulative Effects<br>I appreciate that the EIS evaluates cumulative effects rather than looking at impacts in isolation. The coordinated approach to land use, transportation, and environmental protection reduces the risk of unintended consequences. By planning growth in a comprehensive way, Vancouver can ensure that development improves quality of life for current and future residents without degrading the natural resources we all depend on.<br>Conclusion | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |

| | Overall, I support the Draft EIS and the land use alternatives presented. I encourage the City of Vancouver to continue prioritizing sustainability, equity, and resiliency as guiding principles in the final plan." | |
| 201 | "I believe every neighborhood should have access to groceries, cafes, restaurants, and more mixed commercial developments. This access will provide people from all abilities and socioeconomic statuses equal access to basic necessities which are currently barred behind expensive car costs and long distances.<br><br>It is not fair that specific privileged neighborhoods should be able to prevent others from having access to housing and other amenities. These basics should be accessible to everyone, and we need to reflect that by building more housing and mixed developments everywhere. It should not be a privilege for some to deny this." | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 202 | "I would like to see traffic lights taken down and replaced with roundabouts. Some of the lights are on Mill Plain are so poorly timed you are forced to wait at lights. Roundabouts also typically have less annual maintenance and a longer life span that stop lights do. Where able, let's start scraping them.<br><br>Please stop approving land use for unnecessary things, like a Lexus Dealership on Mill Plain instead of more affordable housing.<br><br>Love the ideas to adjust zoning. Let's make our neighborhoods more walkable by allowing smaller restaurants and grocery stores to be built. A mixture of living of shopping feels especially doable in places like mill plain rather than turning it into a mini-highway with a ton of dealerships around which helps no one. Keep that stuff out by the Vancouver mall.<br><br>More large scale bike paths should be built to help encourage folks to ride or scooter to work instead of driving. Main issues right now are cramped sidewalks or riding on the street which never feels safe.<br><br>We should ensure developers have incentives to build more affordable housing and make it more difficult for large corporations or landlords to own multiple properties. Landlords offer zero value when they rent out single-family homes that would otherwise be purchased by home-buyers who will actually live in there." | Comment noted. The City's Transportation System Plan (TSP) includes roundabouts in recommendations for some Future Large Capital Transportation System Improvement Projects. For more information, see the Transportation System Plan webpage on the City's website for more information.<br><br>Refer to Common Response #3 for the City's response to comments about car dealerships.<br><br>Refer to Common Response #10 about businesses in residential zones.<br><br>The Transportation section of Final EIS Chapter 3 addresses potential impacts of the alternatives on transportation. Proposed mitigation measures include improving bicycling access and infrastructure.<br><br>Refer to Common Response #8 about housing affordability/options and #9 about homeownership opportunities. |
| 203 | The Village at Fisher's Landing is a safe, walkable neighborhood. We have access to parks and the nearby elementary school. We have lived here for many decades and value our homeowner investment. The sound barrier wall along 164th keeps undue noise and traffic out of our area. Yet we have easy close access to public transportation and needed commercial businesses. There is no reason to change this peaceful environment where property owners carefully maintain their investments. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 204 | The Village at Fishers Landing is already close to commercial businesses and public transportation. There is no need to disrupt the safe quiet neighborhood that has been established over forty years. The sound barrier wall keeps traffic noises away, and prevents intruders from invading our yards. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 205 | The Village at Fishers Landing is a strong safe community where neighbors know each other well. The Residents feel safe, and the streets are walkable without worry. It is very convenient to major roads, yet the sound barrier wall keeps it apart from unnecessary traffic and noises on 164th and 34th. There is no reason to change this situation. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 206 | The Village at Fishers Landing is already close to public transportation and streets connecting us to important businesses and highways. We can use the bus service if we so decide. We have parks nearby, and a good elementary school within walking distance. There is no reason to change our well-kept community. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 207 | The Village at Fishers Landing has good access to public transportation and important streets. The sound barrier wall does a good job of keeping the traffic noise and unnecessary traffic from entering our neighborhood. The houses and yards are kept up well, so there is no reason to change anything here. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 208 | The Village at Fishers Landing is a quiet, safe, and well-kept neighborhood. The sound barrier wall on two sides stops traffic noise and undue traffic from entering our neighborhood. If we want to ride a city bus, we can do that easily. We live close enough to businesses that it is easy to buy what we need. We do not want any commercial businesses to change our neighborhood. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |

|---|---|---|
| 209 | The Village at Fishers Landing Neighborhood Association does have access to adequate commercial businesses as well as public transportation. There is no reason to change the safe quiet culture of this established neighborhood. The current sound wall on two sides of this neighborhood adequately keeps out unnecessary noise and traffic. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 210 | The Village at Fishers Landing Neighborhood Association does have plenty of access to public transportation and commercial businesses, both within walking distance or a very short drive. There is no reason to change the current sound barrier wall -- this wall does a very good job of keeping out noise and curious strangers. The homes and properties in this neighborhood are relatively new and well-kept so there is no reason to change anything. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 211 | The Village at Fishers Landing is a safe and family-friendly place, where neighbors know one another. It is close to major roads, public transportation, and businesses. The sound barrier wall keeps out noises and unnecessary street traffic. The houses and yards are well-maintained and up-to-date. There is no reason to change this neighborhood unnecessarily. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 212 | The Village at Fishers Landing is a neighborhood that is well-established and well-cared-for. The sound barrier wall keeps the noises and traffic from 164th and 34th away from the yards and homes. There is good access to city buses on 34th and at the transit center. There is no need to bring commercial businesses into our neighborhood as they are easy to access right now. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 213 | The Village at Fishers Landing Neighborhood is just what my family needs to feel safe and secure. It is a private neighborhood with only necessary traffic. It is safe to walk my children to parks and playgrounds. The sound barrier wall keeps out extra traffic noise and strangers. If we want to ride a city bus, we can easily get to a nearby bus stop. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 214 | People are renovating their homes to create separated living quarters out of a single family home. It lets people live with someone, but not "on top" of them. It lets older people create living spaces for caregivers they feel they will want in the future. Some people want the convenience of their business and home being combined, so they want a duplex or a SFH to remodel. And of course, it lets all people live in a home at a realistic-for-them expense because they share the space or if they're the homeowner, they can earn a little rental income. As I understand it, both Map 1 and 2 would allow these modifications. I'd like to see these choices in all neighborhoods. | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 215 | Some of us have family members who travel to a different drummer. They need autonomy, but within boundaries. They need the opportunity for responsibility, but with firm support that living clear across town in an apartment wouldn't provide. Group homes are not that prevalent, but small apartment complexes close to family would help. Why not allow us the dignity to continue to live close to each other? I think both Map 1 and 2 would permit this mix of housing, and it irks me that someone with more money would deny others this opportunity. I'd like to see all neighborhoods mixed. | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 216 | "When I was 5, the little boy across the street and I planned out that we would get married and live together when we grew up. But where would we live? Both of us wanted to live with our parents. Our solution: we would live right in the middle of the street between our two houses.<br><br>The desire to live near family matured, of course, but when people say they don't want the new zoning to allow any residential option other than single family, I wonder about their families. Lots of us would like to continue living near our families after the kids leave. Are their kids or grandkids rich enough to afford single family homes nearby or even at all? When I look at home prices, I can't imagine that's possible. Our grandkids had good jobs when they left home, but finding even apartments they could afford was not that easy. I think this is called mixed use, and I favor the map that offers it." | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 217 | Have you ever been to New Columbia, just north of the Columbia Slough in Portland? What an interesting mix of housing types, both cost and style-wise, and also with so many amenities near everything: retail, park, community garden, community center, etc. I don't know what type of zoning that is, but I take it that Map 2 would allow us to do something like that, so I favor it. Please don't let the naysayers' fears and loud voices stop flexibility for the rest of us. | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 218 | I'm lucky enough to live very near a coffee shop, a restaurant, and a grocery. I can walk or ride my bike to any of these places in less than 15 minutes and get to the doctor in 20. I can take the Vine, too, and I love it. I like it that we have a real mix of single family homes, duplexes, multi-family complexes, apartments, and retail. I would like to see more | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive |

| | options, but as I understand it that will happen when the Heights Development gets built. I'm looking forward to those changes that will bring things I need and want closer together. I'd guess many people in my neighborhood have no idea how I feel about zoning for flexibility and density because I quit going to those meetings early on. Angry people started yelling within minutes of every meeting start. Raised in a barn, I guess. (Actually, barn animals behave far better.) I favor all of both Maps 1 and 2. | Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 219 | "I ride my bike to Portland and absolutely love the way small businesses are tucked into neighborhoods everywhere. First, the smaller shops are always more interesting than chains. Second, when the weather has turned nasty or I got really hungry or tired, I've gratefully pulled into a coffee shop or corner grocery right where I least expected it, but really needed it. I've hopped on a bus and taken the MAX many times as a rescue, too.<br><br>A similar surprise shop here is the little cupcake shop on Columbia St. It's pretty unexpected when you first find it among all the houses, and once it really saved the day for a friend who was new to bike riding and got really hungry and tired on our way home.<br><br>I would like to see this sort of flexible zoning all over Vancouver in all neighborhoods, so I like both Maps 1 and 2." | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 220 | "I don't understand the maps in detail, but I talk to others who understand it even less. The most common misconception I hear is the fear that all neighborhoods will mandate high rise buildings and people don't want that.<br><br>I DO want changes but as I understand it, the rezoning simply allows flexibility where there is none now. I don't think some neighborhoods should be allowed to opt out just because they don't want other people to "come in" which I take to mean people who have less money or a different skin color.<br><br>The craziest example I have of this was when I was walking on the little path from South Cliff neighborhood that leads to the MacArthur slip lane. It's overgrown and I commented to another person walking there that it was tough to use and should be cleaned up. She said she lives there and that her neighbors wanted the path completely closed off -- they didn't want people from outside coming into their neighborhood. I laughed and asked if they knew about Rhododendron, Umatilla, and Manzanita and if so what were they going to do about them!<br><br>Please give us the options in both Maps 1 and 2." | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 221 | Our current housing in The Village at Fisher's Landing offers my family and me privacy and personal space, thanks to generous setback, mature landscaping, and quiet streets. This area is safe for walking, biking, and driving. There is no need to invade this situation with undo demolition of safe attractive buildings in order to add density to our city. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 222 | The Village at Fisher's Landing is convenient to major roads and public transportation services, yet is distinct from the high-density or commercial zones nearby. There is no need to invade this neighborhood with any commercial establishments. Let it remain a calm and safe neighborhood. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 223 | The Village at Fishers Landing offers my family and me privacy. Our homes are set back from the streets, with a sound barrier wall protecting us from commercial areas and busy corridors. We have lived here for a very long time, and continue to live here because it is safe and quiet. We do not want our neighborhood changed unnecessarily. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 224 | Although I am pleased the DuBois neighborhood is listed as low density housing I am concerned regarding the impact of such options as ADUs/ four-plexes, etc. The mid-century character of our neighborhood will be greatly impacted by such additions with the impact of itinerant occupants, increased traffic, increased noise, etc. Our neighborhood will already be impacted with the new Heights development and any additional incursions will impact traffic, crime and aesthetics of the neighborhood we have made our home. This neighborhood is one of the highest in Vancouver in property taxes, philanthropic support, and tree canopy. The neighboring Southcliff neighborhood will be even more impacted with the proposed development along Mill Plain Blvd with that incursion potentially impacting the neighboring DuBois neighborhood. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 225 | This area is convenient to our family because it is close to major roads, services, and recreation. But our neighborhood is distinct from the high-density and commercial zones nearby. The public transportation system is close enough to be convenient. The block and brick sound barrier wall prevents unnecessary noise and traffic from | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |

|---|---|---|
| | entering our neighborhood. These elements should not be changed. If they are changed, it will threaten our neighborhood. | |
| 226 | The Village of Fishers Landing Neighborhood has a strong community identity. This has been built through decades of homeowner investment and neighborhood pride. Our neighborhood is quiet and safe. It is close to public transportation and commercial businesses, yet they are kept separate with a sound barrier wall and a wise system of streets and intersections. The homes and yards are well-maintained. There is no reason to upset this peaceful neighborhood. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 227 | The Village of Fishers Landing is close to major highways and streets that have public transportation. We have easy access to commercial businesses. Yet our sound barrier wall keeps our neighborhood quiet and private. There is no need to disrupt a well-maintained neighborhood where families feel safe to walk and bike. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 228 | The Village at Fishers Landing is a long-established neighborhood that is safe and quiet. The sound barrier wall on 164th and 34th keep out traffic noise and unnecessary foot or vehicle traffic. The transit system is easy to access on 34th or by driving or walking to the transit center. It is easy to get to businesses such as Fred Meyer or the gas station. The character of this neighborhood should not change. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 229 | The Village at Fishers Landing is a stable community that is safe and quiet. We already have easy access to the city bus and transit center. Our Sound Barrier Wall does an adequate job of keeping out noise and strange foot traffic. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 230 | The Village at Fishers Landing is a long-time neighborhood that is well-maintained and safe. There is not unnecessary traffic within our neighborhood. Families can safely walk to parks, playgrounds, and schools. We are able to use the city bus or nearby transit system easily from our neighborhood. There are businesses within walking or short driving distance already. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 231 | The Village at Fishers Landing is a well-established neighborhood that is safe and convenient. The public transit system is easy to access. There are already many businesses within walking distance or a very short drive. The sound barrier wall does a good job of keeping out undue noise or unnecessary traffic. The access to our neighborhood should not be changed. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 232 | The Village at Fishers Landing is a quiet and safe neighborhood. It has good access right now to public transportation and nearby commercial businesses. There is no reason to change anything. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 233 | We are Fred and Polly Bullert and for 22 years we have resided at [address], Southcliff neighborhood. We oppose any changes to the Southcliff zoning. Our neighbors have identified numerous reasons to oppose the changes. We agree with all of them. Southcliff was developed as a single-family neighborhood which is the primary reason we moved to Southcliff. A number of years ago a State of Washington architectural historian delivered a lecture on Vancouver architecture. He noted that Southcliff represented a model single-family development with a park set aside and a wide variety of home styles. He added that Southcliff significantly added to the diversity of the Vancouver housing stock. It would be folly to degrade Southcliff even assuming Vancouver's population increased as speculated. The need to change the zoning is certainly questionable; the resultant damage to Southcliff would unquestionably be profound. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 235 | "I would like to comment on the alternatives offered for moving forward. It is my strong opinion that, if we want to meet the future head-on, we must go directly to Alternative 2. We don't have the option to half-ass the future of this city, not if we want to thrive and provide for the needs of all our people. We don't want to continue being Portland's shy little sister. We need to step into our big girl shoes and dance! | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 236 | I understand the arguments for not planning anything and for Alternative 1. They feel safer, but bottomline is that they are about fear, fear of change. The city IS going to grow. If we don't plan for that, housing will be slapped up wherever it fits. The homeless population will grow even faster as more people are left out of the marketplace. I vote YES for Alternative 2! | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |

| 238 | "To: City Council<br>City of Vancouver<br>From: Bryant Carlson and Family<br>[address]<br>Vancouver, WA 98661<br>Re: Feedback on Proposed Mixed-Use Zoning<br><br>Dear City Council Members,<br>My name is Bryant Carlson, and my family and I live [address] in the Southcliff neighborhood. Other than some graduate school years on the east coast and in California, I am a proud lifelong resident of Vancouver. I am a product of Vancouver schools, my daughter attends school in Vancouver, and my wife and I both have parents and siblings who live and work in Vancouver. My roots in and affection for Vancouver run deep, beginning with my childhood years near Oakbrook Park in Orchards.<br>We purchased our home in the Southcliff neighborhood 18 months ago and recently moved into the home after using each of those months to renovate. We have made a considerable investment and worked as thoughtfully as possible to preserve the historic character of both the home and neighborhood during our renovation.<br>We have studied the zoning change proposals put forth in the City of Vancouver's Draft EIS and we are writing to oppose the adoption of Alternative 1 and Alternative 2 as currently proposed.<br>We have children and an older adult parent who live in our home, and we bought in the Southcliff neighborhood largely because of its safe and quiet streets. My retired mother walks along our street every day, and our children join her on their bikes. The mixed-use zoning proposals would invariably direct hundreds of additional car trips throughout the neighborhood, considerably increasing congestion and reducing safety, and making walking and biking untenable as the neighborhood streets are set up in the mid-century style with wide streets and without sidewalks. The proposals would also result in an increase in noise pollution, a loss of privacy, environmentally undermine the rich natural habitat (e.g., deer and other wildlife routinely roam through our back yard) and broad tree canopy coverage in the neighborhood, and destroy the area's historic single-family character. The proposed changes seem to disregard the neighborhood's long history and planning, particularly related to the Southcliff Restrictive Covenants and the 2001 Neighborhood Action Plan.<br>I played in the Southcliff neighborhood as a child at a friend's house in the 1980s, so I am familiar with the long-established character of the neighborhood and its mid-century planning and development, and believe that the vestiges of that time, only some of which I have described, are worthy of preservation. I am also keenly aware and strongly supportive of the need to create additional affordable housing; however, it seems especially short-sighted for the city to consider proposals to achieve that goal which profoundly degrade the quality of one of the many neighborhoods that has made Vancouver such a desirable and safe community in the first place.<br>My family and I certainly understand that our city must plan for growth, but we believe that there are more effective ways of achieving this than by compromising the unique features of Southcliff. Rather than re-zoning parts of Southcliff as a mixed-use neighborhood, please instead consider concentrating new commercial development in the Tower Mall Heights District area, particularly since the city is already planning to invest in the infrastructure needed to help new commercial spaces thrive in that area. This would align with the city's goals to develop new economic hubs and affordable housing, while also preserving the unique attributes of our neighborhood.<br>We appreciate your leadership of our community, and thank you for the opportunity to provide feedback.<br>Best regards,<br>The Carlson Family" | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| 239 | "September 3, 2025<br><br>Hello:<br><br>My name is Cherie Briggs and I live at [address] in the Southcliff neighborhood.<br><br>After reviewing the zoning change proposals that have been put forth in the City's Draft EIS, I would like to give my personal input. I am against the adoption of both Alternative 1 and Alternative 2 as currently proposed.<br><br>Labor Day Weekend is always special for us as that is the weekend we moved into Southcliff with our young family and no knowledge of "Vancouver USA" except for that funny sign on I-5 we would drive past. This year marked our 40th year living in this neighborhood. We spotted a "House For Sale by Owner" sign and knew this was the place for us. Although we knew nothing about Vancouver at the time, this neighborhood gave me the vibes of a perfect place to raise my kids. I was right! Very little has changed about this neighborhood since that day. This neighborhood has a special charm that makes Vancouver special. It offers quiet, wide streets with low traffic flow that encourages bike riding, walking, and taking your little ones on a stroll. Walkers and bikers regularly travel though our neighborhood feeling safe and enjoying the full growth canopy of trees. I always felt safe with my kids outside.<br><br>Forty years is a long time in one place. As my family has evolved and I have aged, the neighborhood has continued to be my place to live. I am hoping it will continue to be that special place for the new families that arrive. I moved here because of the quiet, walkable neighborhood in the city limits which is special for most cities. Adding commercial and mixed-use with no parking required would mean our streets would be jammed with cars parked on both sides and would no longer be quiet or walkable. And even worse would be the loss of trees/canopy that the wildlife that chooses to live here needs to be healthy. We will have lots of development coming with the Heights District redevelopment. That would be the perfect place to design in the extra housing.<br><br>As my family gathered at our home for the weekend, they continually mentioned how special and nice this neighborhood is as my grandchildren enjoyed the peaceful environment. It was hard for them to hear about the changes that may come. Please consider rethinking your long-range plan for Southcliff and those neighborhoods immediately around us and keep this area feeling like the mid-century community it has always been.<br><br>Sincerely,<br><br>Cherie Briggs; [email]" | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 240 | Regarding this project our major concern for the Dubois neighborhood is congestion/traffic/parking issues. One of our favorite things about our neighborhood is the beauty and walkability that we can enjoy with our whole family. It feels safe with minimal traffic and minimal cars parked on the street and we fear that will change with this development plan. We do not have strong CC&Rs so with an influx of many more people and cars we will not be able to maintain that safe and quiet neighborhood feeling. | Comment noted. Refer to Common Response #4: Vehicle Traffic Impacts and Common Response #6: Vehicle Parking for more information. |
| 241 | "There are (at least) two elements that I see that lead me to favor alternative 1 over alternative 2. First, I see in table 3 (p31) that alt 2 provides less land for Heavy Industrial, Industrial/Employment and Institutional Campus than does alt1. This troubles me for two reasons. Fewer of these jobs means residents travel farther to, say, Portland for that kind of job. This does not help traffic. On top of this is a glance at table 8 (p51) which indicates that these zoning designations provide amongst the best wages - perhaps a better way to reduce the poverty level.<br><br>The second element made me think of two trips I've made to Singapore, the first being in the early '80s and the other nearly 40 years later. In the early '80s Singapore was rapidly urbanizing, tearing down most all of ""old Singapore"" with its colonial architecture and replacing with 20 story apartments. I had heard that there was quite an uproar and the city spared some of these old neighborhoods. Now, they are tourist magnets. Hough and Arnada neighborhoods both date to roughly the beginning of the 20th century. Alt 2 would lead to more conversion of ""old/quaint"" to ""new/boring"". Once torn down, the old stuff cannot be put back in.<br><br>Given that alt 1 achieves residential growth goals, I'd suggest that it's easier to take a step, gather one's bearing and then take another step, rather than to overstep and try to back-up." | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>The Preferred Alternative zones a similar amount of land for Heavy Industrial and Industrial/ Employment compared to Alternative 2, and more land is zoned for Institutional/Campus compared to No Action and Alternatives 1 and 2.<br><br>Refer to Common Response #12 Neighborhood Character for more information on that topic. |

| 243 | "Southcliff is a mid-century modern neighborhood and should not be changed. I have lived in Southcliff for over 50 years and raised five children in this neighborhood. It has always been a safe, quiet, private neighborhood. I have always enjoyed the classic architecture. I have always felt safe in my home and have only had one minor episode of trouble in my 50 years of living here. That was approximately two years ago when a transient person was sleeping in my front yard under my tree. The proposed changes to the zoning, would undoubtedly increase crime in Southcliff. Why make our neighborhood less safe?<br><br>Southcliff is not built with adequate infrastructure for the proposed zoning changes. The proposed changes would be increasing traffic by 100 to 200 vehicles of all sizes daily, along with their associated noise and congestion into the neighborhood ruining the historic character of Southcliff. It doesn't make any sense to change the zoning in Southcliff when the former Town Plaza is wide open for mixed-use development. A better alternative is to develop the Fourth Plain Corridor or Vancouver Plaza. I understand that Vancouver is a growing community, but I feel that the growth should be in locations which do not require people to have their homes unwillingly rezoned thus changing the quality, character and value of the neighborhood." | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 244 | I live at [address] and respectfully ask that 35th Street and Washington Street not be included in the proposed institutional/campus rezoning under Possibility 1 & 2. Applying an institutional designation to only one side of the street creates an inconsistent and awkward transition that undermines neighborhood cohesion. Our block is firmly residential in both character and use, and rezoning just one side introduces uncertainty, lowers homeowner confidence, and diminishes the stability that makes this neighborhood livable and attractive. A consistent residential designation on both sides of the street would preserve the integrity of the area while still allowing for thoughtful campus planning elsewhere. | Comment noted. The Preferred Alternative would zone this parcel as Medium Scale Neighborhood. |
| 245 | "Greetings,<br><br>My name is William Rogers, and I live at [address] in the Southcliff neighborhood. In reviewing the zoning change proposals put forth in the City's Draft EIS, several serious concerns have come to mind. My concerns are motivated by a desire for livability, vitality, inclusion, public health and safety, and the preservation of cultural and natural resources in the city of Vancouver. The Southcliff neighborhood contributes to all of these factors for the city of Vancouver. I would like to point out some ways in which the City's Draft EIS degrades or detracts from these goals in the hope that revisions can be made to preserve what is good about Southcliff.<br><br>I located my family in the Southcliff neighborhood in 2011 for its quiet, walkable streets and large, majestic, and diverse trees. The urban canopy in the Southcliff neighborhood is second to none in the city, providing 47% tree coverage per the 2021 survey, up from 45% in the 2011 survey. We see nature in our park, backyards, and on the streets. Animals thrive, with deer, rabbits, squirrels, and other wildlife making Southcliff and the surrounding green space their homes. The diversity of trees, including oak, maple, birch, sycamore, redwood, conifer, pine, fruit trees, and many mature ornamental tree, makes Southcliff valuable. This diversity supports many types of birds—not just hardy urban landscape species, but delicate wilderness species as well. Where animals and birds thrive, adults and children thrive.<br><br>Many people beyond Southcliff homeowners enjoy walking, cycling, and jogging through Southcliff, finding it a peaceful retreat in the city. The park hosts guests from the adjacent neighborhoods, making Southcliff not just a jewel for a lucky few, but also something precious to steward and share with others. Southcliff neighbors are inclusive and welcoming. I desire to see the character of the Southcliff neighborhood preserved as a model to study and learn from. While not all attributes of Southcliff can be replicated in every neighborhood, as a historic mid-century modern neighborhood, it maintains a unique collection of features worth studying and preserving as a reference for city planning.<br><br>The Southcliff neighborhood was established in the 1950s, with CC&Rs dating back to 1954. These CC&Rs allow for one single-family dwelling per lot of no more than two stories high and thus are violated by Alternatives 1 and 2 as currently proposed. Therefore, I stand opposed to both alternatives.<br><br>The proposed alternatives allow the addition of commercial and mixed-use buildings to our neighborhood. Such projects would mean the elimination of mature trees and would degrade the neighborhood's ability to support | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | wildlife. They would increase cars parked along streets and reduce the walkability of the neighborhood. Cycling and jogging would be less safe and less convenient.<br><br>I support urban growth and understood that the Heights District redevelopment is to be where commercial and mixed-use high-rise buildings are to be built. If the City needs more density, please add it to the Heights plan and not to Southcliff. Access to commercial and mixed-use high-rises would not be from Mill Plain but rather from our neighborhood streets, creating huge congestion on those streets—not to mention safety issues for pedestrians and cyclists. I am concerned that limited access to Southcliff due to roadways and terrain would mean only a limited buildout of mixed-use development, which would result in destroying the character of the Southcliff neighborhood while providing minimal benefit to the city.<br><br>For these reasons, I am against the adoption of both Alternative 1 and Alternative 2 as currently proposed. Instead, I encourage the City to preserve the qualities that make Southcliff a living example of what a thriving, sustainable, and inclusive neighborhood can be: quiet and walkable streets, a diverse and flourishing tree canopy, safe spaces for recreation, and a welcoming community spirit. Protecting Southcliff is not just about safeguarding one neighborhood—it is about keeping alive a model of livability and stewardship that benefits the entire city of Vancouver.<br><br>Sincerely,<br><br>William Rogers<br><br>[address]<br><br>Vancouver, WA 98661-5913" | |
| 246 | "To whom it may concern:<br><br>My neighbors and I are very concerned! As a homeowner and resident in the historic Southcliff neighborhood in the Heights area of Vancouver, I am troubled to hear that our single family dwelling lots are slated to be rezoned throughout the neighborhood for various business and high-density housing uses.<br><br>In my experience, city planning means careful consideration of a city's future needs and making a thoughtful plan to accommodate growth in a way that preserves beauty, livability, and sanity for the residents. It puts careful consideration into where the different types of structures should go, putting businesses in business districts, homes in neighborhoods, apartments in apartment blocks, etc., while protecting spaces for trees and animals, bushes and birds, as well as playgrounds and walking spaces. Such planning takes deliberate effort, but it makes sense if planners want residents to be healthy and happy and willing to make the city their home.<br><br>The current plan proposed for historic Southcliff, and other neighborhoods throughout the city, appears to have missed this meaning of planning! In an effort to accommodate a large influx of new residents in the coming decades, a sweeping change of the current zoning of residential lots will haphazardly allow high density housing and businesses to be built in places current residents would never have dreamed of!<br><br>Our neighborhood was developed in the 1950's. The lots are large and the streets are wide. No sidewalks, but a huge variety of large old trees and a vast array of little critters and birds. It's an old, quiet neighborhood with history and character, a uniquely quaint and peaceful slice of Vancouver. Most homes have copious driveways, so very few cars are parked on the roadways. This lends the neighborhood a safe and friendly feeling, inviting outside residents to join us here to enjoy a stroll, walk their dogs, and play with their kids in the park. The simplicity and wholesomeness of a bygone era can by tangibly felt here. It is a place to protect for the benefit of all!<br><br>One can only imagine how altered this peaceful historic neighborhood would be if even one of the old homes were transformed into a business or a high-rise multiplex. If such an event were to happen, it would be sure to create a destructive domino effect. The lots would go one after another, because residents here would lose something extraordinarily special, something they pledged to protect when they purchased their homes and agreed to the neighborhood's longstanding CC&R's. With this new threat of such an unexpected and undesirable event, residents such as myself are reconsidering value-enhancing investments in our homes and pondering selling out. Why bother making improvements if the homes will just be sold for development fodder? And if the neighborhood is to be violated | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

|---|---|---|
| | in such a way, why should we stay to see it happen? Our neighborhood will be irrevocably damaged by the city's proposed rezoning.<br><br>There are many reasons our Southcliff neighborhood should be protected from the new zoning. Tree coverage is a big one! Southcliff has the greatest tree coverage of any neighborhood in Vancouver at 47% and growing, while the city as a whole has just 19%. With Vancouver's overall goal of 28% by 2047, taking out our lovely old trees to build tall multiplexes would definitely be a step in the wrong direction. Our trees should be protected! Old trees like ours are far bigger than new development trees, providing much-needed habitats for otherwise endangered birds and other small animals, and working mightily to clean the polluted city air. Protecting these large trees is so important to the livability of our city! Allowing them to be destroyed in the name of high density housing and replaced with tiny saplings would be a travesty. Our environment must be cared for, even within city lines. No place better than here in Southcliff where we are already making a positive impact!<br><br>And an important aspect to note regarding our trees: taking a peaceful stroll through our beautiful neighborhood will reveal that our trees are not all of one kind. The apparent diversity of our large trees is absolutely astounding! Each one is invaluable. This is not what you would find in a more modern development, with lines of trees of all the same sort. We have enormous regal evergreens as well as imposing old deciduous trees of so many kinds! They provide boundless beauty and so many animal homes. And those innumerable green leaves furnish us with fresh clean air as well as protective shade. To redevelop our neighborhood into high-rises would desecrate nature's presence here in our city.<br><br>There are other concerning impacts that my neighbors will note regarding the proposed rezoning, such as excessive neighborhood traffic and on-street parking, watershed issues, loss of historic architecture, loss of privacy and safety, etc. But my greatest concern is the threat of destruction to this peaceful haven of a neighborhood, a neighborhood that helps make Vancouver a more livable and beautiful city.<br><br>I realize that our city faces the pressure of increasing population and housing needs. But high-density housing types should be placed where they make good sense, not where they will destroy a well-planned historic neighborhood! And I might add here that the homes in our neighborhood are already large enough to accommodate more residents. For example, our home is currently occupied by 10 family members from 3 generations, and we have accommodated as many as 12. Another home just up the road is occupied by a large group of young adult housemates. The homes in Southcliff already have high density usage and potential. They can find their best uses without tearing them down and replacing them with multiplexes and businesses!<br><br>Please, city planners, reconsider your "plan" with regard to Vancouver's historic neighborhoods like Southcliff. You would not consider rezoning Officer's Row would you? I would propose that Southcliff has similar historic value in Vancouver and should be protected for the city, for the trees, for the animals, and for the people city-wide.<br><br>Please, protect Southcliff! Your consideration is greatly appreciated.<br><br>Sincerely,<br><br>Julianne Rogers<br><br>[address]<br><br>Vancouver, WA 98661" | |

|---|---|---|
| | We have been residents in the Southcliff neighborhood since the Fall of 2004, going on 20 plus years. We had many options on where to mover our family from Salmon Creek in 2003. However, we chose the Southcliff neighborhood for its location near work and school. large private lots, walkable streets, a local park, a safe neighborhood with minimal traffic, established landscaping and tree canopy, and the exclusive reputation that Southcliff has had since the 1950's and 1960's, when it was formed. When we moved in, we had original owners on either side of us, both of whom raised their families in Southcliff and had built in the 50's. This is very common, people don't leave Southcliff for the charm and points I listed above. Our neighborhood was, and still is, known for being home to a large number of professionals, including doctors, lawyers, business owners, board presidents, schoolteachers, homemakers, philanthropists, pilots, restaurant owners, government officials, TV broadcasters, and the list goes on. Our neighborhood is hardworking, and it shows in the pride of ownership evident in the yards and homes of this established enclave, governed by its Covenants, Conditions and Restrictions. We have a stable, historic neighborhood that serves and contributes back to its community. We rely on our CC&R's to guide our neighborhood, ensuring that we can maintain the foundation and heritage that Southcliff was built upon.<br><br>I write to you today to oppose the mixed-use and medium-scale housing that you are proposing to implement within the boundaries of the Southcliff neighborhood. These changes would severely impact our property values. It has been calculated that Southcliff property values total 80 to 100 million dollars. I think it is a reasonable question to ask: Will the city be compensating homeowners for property loss in our property value? These changes would add stress, traffic, and public safety concerns. Our per capita rate for officers is already the lowest in the state. We should have 3/2 officers per every 1000 residents. Vancouver has only 1.2 officers per 1,000 residents. It seems that the priority to make our city safer and cleaner is an afterthought. We should not be adding density until the public safety problem is under control.<br><br>The mixed and medium scale would add additional traffic and street parking to our quiet neighborhood. It would greatly change our single-family homes, with a minimum of 1800 square feet and a maximum of two stories in height. The changes you are proposing are prohibited by our Covenents, Conditions and Restrictions (CC&R's). It is my understanding that the Middle Housing Bill does not trump our current active and enforceable CC&R's.<br><br>I was also shocked to learn that the Tower Mall project has now been zoned as a regional activity center. Southcliff as a whole was opposed to the Tower Mall project, due to the added density and traffic concerns. Change is unknown and done without proper planning can result in negative outcomes. I, for one, was hopeful that Tower Mall could add some services to our area, but upwards of 1300+ housing units, with little parking, and now a building height that has no restrictions, is troublesome. I am also concerned that our arterial streets, such as Blanford Canyon, are not included in the plan to be updated to accommodate the increased traffic. Blanford Canyon historically has poor lighting, no sidewalks, or protected areas for walking and biking.<br><br>Additionally, it connects to Old Evergreen Blvd, which was not updated for heavy traffic when the Rose Vista property was developed for mass-density housing. Don't get me wrong, I am for the Tower Mall project as long as it has components to fit in and blend with the Southcliff, Dubois, Buena Vista, and the surrounding neighborhoods in a respectful capacity. Allow medium-scale development, 3 to 5 stories tall, with ample parking, improve the road arterials, and increase the number of officers to improve public safety with increased density.<br><br>My vote is for the No Action Alternative. Growth in inevitable, but growth that occurs too quickly without infrastructure and public safety at the forefront will only cause leadership to work backwards, chasing its tail, and never able to get ahead of the problems that exponential growth brings.<br><br>Thank you for your time and leadership.<br><br>Sincerely, Michele Rudi" | |
| 248 | "Page 1 of 3<br><br>Hello to those who are planning for the future of Vancouver, Washington: I was going into sixth grade in 1957 when we moved into the house that my parents built in the new neighborhood of Southcliff.. I grew up there, went to college in Seattle, moved to the Bay area, then Los Angeles, then to midtown Manhattan in NYC. Although I spent most of adult life living in rentals in large urban cities, when I retired I returned to my family's home on Umatilla Way. | Comment noted. | | My mother spent many years working for the betterment of Vancouver. She served on the Planning Commission and on City Council. She was a cheerleader for the City of Vancouver, and strongly believed that it could grow and thrive without losing the inherent beauty and homeyness of a big / small city. She had encouraged me to study City Planner.<br><br>So I was incredulous when I learned that city planners aimed to change the zoning of Southcliff. Why would anyone want to downgrade what is arguably one Vancouver's most beautiful neighborhoods? I was disbelieving when I heard that the city planned to change zoning classifications and countermand the CC&R's that have been honored by Southcliff residents since the area was first developed<br><br>You may know the war time history of the Heights area. If not, please see the attached page for an article from the Columbian. It was a gigantic task and the city met the challenge. After WWII the Vancouver Housing Authority created new neighborhoods to replace its temporary war housing. They moved or tore down hundreds of small houses on small lots.<br><br>The new developments had large lots and the restrictions imposed on these neighborhoods show that they were designed to be the OPPOSITE of the war housing they were replacing. Again, the city met the challenge.<br><br>Southcliff, one of those new neighborhoods, is one of the most gracious neighborhoods in Vancouver. It was planned to be a place with low-rise single family houses. The CC&Rs set a minimum house size of 1400 to 1800 square feet. Most houses are "ranch style" and several are in the mode now known as mid-century modern. Because of the large lots many houses<br><br>have large front yards with lots of greenery.<br><br>Southcliff is basically a cu-de-sac. There are no "through streets" and there is very little traffic. We have no sidewalks so people walk, bike, skateboard and chitchat on our streets; some do these things several times a day.<br><br>Why would anyone want to destroy the character of this very unique neighborhood? Like most of my neighbors, I worry that zoning changes will lead to traffic overwhelming our quiet streets. Re-zoning for multi-story high-rise buildings at the only entrances and exits from Southcliff would, in effect, destroy our neighborhood.<br><br>The Southcliff CC&Rs are restrictions that the residents have upheld since the beginning. We have kept our end of the bargain, but now local government is planning to break its end of the bargain.<br><br>The Tower Mall is about ½ mile from my street. That development will increase traffic on this stretch of Mill Plain. Attached is a recent opinion piece from the The Columbian warning about potential traffic congestion. Increased density in Southcliff would further compound the complexities that come with rapid growth.<br><br>In my experience urban density offers many benefits. I appreciate the vibrancy that can come with urban growth, but I am absolutely opposed to any plan that will change the nature of Southcliff, a very special small neighborhood. I think it will be<br><br>a BIG mistake to do anything that changes the qualities of this space. It is a model that has worked very well for close to 70 years.<br><br>Respectfully,<br><br>Laura Besserman<br><br>Umatilla Way<br><br>Page 2 of 3<br><br>Clark County History: Kaiser Shipyards<br><br>A Tale of Six Cities<br><br>By Martin Middlewood, for The Columbian<br><br>Published: December 27, 2020, 6:00am | |

| | https://www.columbian.com/news/2020/dec/27/clark-county-history-kaiser-shipyards/<br><br>Employment at the Kaiser Shipyards brought 45,000 workers and their families to Vancouver right after World War II started, and they needed housing. Suddenly villages sprung up forming a ring around middle-class Vancouver. This 1942 photo taken on the new communities' opening day shows the areas offering temporary homes for shipyard workers and their families: McLaughlin Heights, Fruit Valley, Ogden Meadows, Bagley Downs, Burton Homes and Harney Hill. (Contributed by Clark County History Museum)<br><br>Once World War II broke out, the Kaiser Shipyards worker recruitment ballooned Vancouver's population.<br><br>Abruptly, a town of 18,000 faced an influx of 45,000 more. Stunned by a population spike of two-and-a-half times its own, the city turned to planning.<br><br>First, it established the Vancouver Housing Authority to work with the federal government to solve its housing and municipal crises by creating one of the world's largest housing developments. The VHA purchased land, applied for government funding, and assembled 125 architects, draftsmen and engineers to plan and create new communities. Overnight, 12,343 dwellings and two 5,000-bed dormitories, the Hudson House and Columbia House near the shipyard, cropped up. In 18 months, six new developments embraced Vancouver.<br><br>Each new borough needed essential services. The government constructed electric networks and worked with the public utility district to deliver electricity. Residents required police and fire stations, medical offices and churches, schools and sewers, roads widened and extended.<br><br>Vancouver's downtown businesses couldn't handle the flood of war workers and families needing to shop for groceries and clothes. So authority planners constructed five shopping centers and leased the space to private business owners. The Boulevard Shopping Center at Devine Road and MacArthur Boulevard arose as one of the nation's first one-stop shopping malls.<br><br>Eight schools, seven child care centers and nurseries for working mothers popped up. Five staffed libraries appeared at community centers. The Vancouver Council of Churches found auditoriums, gyms and community rooms for services. Each community held beautification contests, making temporary houses feel permanent.<br><br>Hundreds of Victory gardens stretched dollars and ration tickets.<br><br>Many new families found living around Vancouver an adventure. The VHA designed playgrounds for the thousands of children who came with their parents. Saturdays, two thousand kids saw free movies. Weekly family movie nights brought in 2,700. Frequent dances brought in hundreds.<br><br>The VHA never saw a fiscal deficit during the war years. And after the war, returning veterans found housing in these communities. Inevitably, fears of temporary housing slipping into permanent slums saw most of them torn down.<br><br>Martin Middlewood is editor of the Clark County Historical Society Annual. Reach him at [email]<br><br>Page 3 of 3<br><br>In Our View: Closely eye Heights District plan's traffic impact<br><br>https://www.columbian.com/news/2025/aug/29/in-our-view-closely-eye-heights-district-plans-traffic-impact/<br><br>The following is presented as part of The Columbian's Opinion content, which offers a point of view in order to provoke thought and debate of civic issues. Unsigned editorials represent the consensus opinion of The Columbian's editorial board, which operates independently of the news department.<br><br>By The Columbian Published: August 29, 2025, 6:03am<br><br>The city of Vancouver's plan for the Heights District is ambitious, expansive and well-considered. But no plan is perfect. As the 20-year proposal for remaking a neglected piece of central Vancouver moves forward, some questions remain. | |

| ID | Full comment | Response |
|---|---|---|
| | Primary among them is traffic. Although the development is designed to maximize the access and availability of public transportation, an increase in housing density invariably will result in an increase in auto congestion.<br><br>The 644-page proposal developed by city staff reads: “Regionally, the Heights District is well connected to the State and Interstate Highway system. Mill Plain Boulevard provides direct connections to I-5, approximately two miles to the west, and I-205, approximately 2 miles to the east. Andresen Road provides access to SR 500 approximately a mile and a half to the north, and MacArthur Boulevard connects to SR 14 via Lieser Road, approximately a mile to the southeast.”<br><br>That likely understates the impact along arterials leading to local highways, and it fails to prepare for increased congestion — particularly for a city that is actively reducing traffic lanes. But it does exemplify the complexity of a transformational development.<br><br>Starting with the city’s purchase of the former Tower Mall site in 2017, the project has moved along incrementally.<br><br>Eventually, the area near Mill Plain and MacArthur boulevards — plus Devine Road — will be a 205-acre, mixed-use walkable neighborhood with office and retail space, housing and recreational outlets.<br><br>The plan is to create a “20-minute neighborhood” where residents may walk, bike and take transit to meet their daily needs. The philosophy has been adopted by cities throughout the world and is transforming urban planning.<br><br>As the London-based Town and Country Planning Association writes: “The benefits of this approach are multiple: People become more active, improving their mental and physical health; traffic is reduced, and air quality improved; local shops and businesses thrive; and people see more of their neighbours, strengthening community bonds.”<br><br>Vancouver’s planning documents hail the proposal as “an opportunity to create a new vibrant mixed-use urban neighborhood that is strategically located in the heart of Vancouver ... with easy access to major commercial uses, social services, schools, places of worship, parks and open spaces and downtown.”<br><br>That plan took another step forward this week, with the city council agreeing to purchase four parcels of land within the planning zone for approximately $11.5 million. The properties currently house PeaceHealth’s Southwest Hospice, medical offices, storage and a parking lot. PeaceHealth may continue to lease the site until the sale’s closing date in 2030; in the meantime, construction on two multifamily residential units is expected to begin next year on another portion of the development.<br><br>Most important, the vast proposal turns attention to a long-overlooked part of Vancouver. As a former city official said during the early phase of planning: “This is an area of the city that had been passed over by the market forces that had transformed downtown to the west, as well as many of the corridors and the neighborhoods in many of the eastern portions of the city.”<br><br>Yet while the development is designed to be largely self-sufficient, its impact will extend beyond the Heights District. That calls for more details from the city about traffic and long-term plans for arterials. Even the most extensive plans, after all, can be incomplete." | |
| 249 | "A Letter In Support of the Neighborhood of Southcliff<br><br>I believe that we will be needing housing for everyone as our city grows, low-income, affordable, single-family and otherwise, as the population in our area increases. Adequate housing is a very important issue.<br><br>I know what it’s like -- our family rented for twenty years before we were able to finally buy our first home. While I was in years of schooling and then training, often times we were paying 70% of our total income for rent. Our home in Southcliff, which we purchased twenty years ago, is a wonderful place. We were fortunate to be able to buy a home instead of renting, not everyone can.<br><br>Our house, and the lot we have, is not the biggest in the neighborhood by a long shot. This is an old neighborhood, thoughtfully designed about 70 years ago. It’s quite comfortable and there’s enough elbow room for everyone to live happily here, whatever religious, political, philosophical, or other differences we may have. There are people from all | Comment noted. Refer to Common Response #14 for the City’s response to comments about the Southcliff neighborhood. |

|---|---|---|
| | walks of life here, with many different income levels. Neighbors generally respect one another's space and many will help one another when needed.<br><br>With the way Southcliff was laid out, we have only three ways to enter and exit this neighborhood, all coming off of Mill Plain. To have our entrances built up with commercial and residential high-rise buildings makes absolutely no logistical sense. Hundreds of new units, lots of people, no parking and no back way out of here?<br><br>How about this idea instead: There are a number of areas in Vancouver that have shut down or failing businesses. Identify those and make them a model of newly constructed mixed-use residential/commercial spaces. Many of these failed places are closed storefronts and the huge, sprawling malls, which are out of date and impractical with extremely large single-story footprints and lots of parking. They could be designed to house many residents in multi-level buildings, provide convenient shopping within walking distance, and offer public transportation to central areas of the city. (Much like the plan in place now for the old Tower Mall Site in the Heights District, but in a much larger space.)<br><br>The Pacific Northwest has a very desirable climate, Washington State is beautiful and well-run, Vancouver has a thriving little downtown and a great school system. We're near the coast and the mountains, close by a world-class international airport, convenient to jobs, and next to Portland. Of course people will want to live here.<br><br>I believe we will be having a significant influx of climate refugees into our area as time goes by, in fact it's already happening. We've met a number of people who have fled the wildfires in California after losing their homes, and talked with a guy who moved his family here from Arizona, where it's become so hot their young kids couldn't play outdoors at all. In addition to these newcomers, there will be the people who will be born here who just love it and want to stay close to family.<br><br>We know we have to plan for this. Let's be smart about it. Let's be open-minded and flexible in how we see our hometown, and look at the space around us, what we've got to work with. In doing this, we can preserve our historic neighborhoods that have been thriving for decades, like Southcliff and others, communities in Vancouver that have been a great place to live for so many years.<br><br>Let's revitalize, rethink, and rebuild the spaces that need a different, more progressive model, and will be well-suited to this job. What an opportunity we have in all these failed commercial enterprises that can be re-zoned to be mixed-use commercial/residential sites. If we are prepared, this population increase will be something we can welcome, and handle what is coming. With good planning and forethought, the mind-set in our community will be more stable, and more able to deal with this population growth. Speaking on behalf of the members of this community, I'd like to say thank you, to each of you, for taking part in this process.<br><br>And let's be a model for other states in our country who certainly will be facing these same issues." | |
| 250 | "My name is Terrence G. Popravak and I live at [address] in the Southcliff Neighborhood.<br><br>I have reviewed the City's draft EIS and proposed zoning changes.<br><br>I am adamantly against either Alternative 1 or Alternative 2 as the City has currently proposed.<br><br>Southcliff is a historic mid-century modern neighborhood which should be preserved as it is, and not destroyed by the city to make room for people presumed to be here by some estimates by 2045.<br><br>There is no logic in these proposals to renovate or savage one of the best, if not the best, residential neighborhood in Clark County. You reason that is for a proposed influx of residents while the current birth rate is at below replacement levels. Where are the presumed immigrants coming from?<br><br>I moved to Southcliff in 1988 because of its quiet, walkable streets and mature, beautiful trees. These alternatives would demolish that with their destruction of single-family homes, trees and greenspace, as well as replacement of these with structures forcing exponentially more traffic and parking into the neighborhood.<br><br>These alternatives also completely disregard Southcliff regulations in place since 1954 provide for one single-family dwelling per lot no more than two stories high. Both alternatives violate these regulations. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | In addition, construction of commerical/mixed-use high-rise buildings in the Southcliff area would have these negative impacts:<br><br>1. Destroying the social fabric of the neighborhood by forcing existing members of the community out of their long-existing homes, thereby severing the ties between neighbors and friends, those forced out and those remaining.<br><br>2. Loss of mature trees and habitat benefitting residents and wildlife<br><br>3. Significant degradation of the quality of life for remaining Southcliff community members from the proposed commerical and high-density housing activity due to:<br><br>a. Reduced vehicular and pedestrian access as neighborhood streets are encroached upon for access and parking of new construction<br><br>b. Increased traffic and parking congestion<br><br>c. Increased pedestrian and cyclist safety hazards<br><br>d. Increased environmental noise pollution<br><br>e. Increased vehicle pollution from exhaust as well as petroleum, oil and lubricant leakages. Our neighborhood rain garden was designed to help remove pollutants in rain water runn-off based on the current number of vehicles. Adding prospectively hundreds of cars to Southcliff streets would greatly increase the volume of pollutants. Paving over more of the surface area would greatly increase the run-off, with environmental impact downstream of that flow.<br><br>When the city presented its plan for redevelopment of the Heights District, particularly the former Tower Mall area, it was billed as the place in this part of Vancouver where commercial/mixed use high rises would be built, not encroaching whatsoever into long-established neighborhoods. If the city believes it needs more high-density housing, if your concern is about estimated population growth, why not consider lifting up some of the neighborhoods that are in rundown condition and have an above average crime rate? Consider alternate sites in neighborhoods like Central Park, North Garrison, Shumway, Fruit Valley, Bagley Downs or Rose Village.<br><br>I feel this proposal is nothing more than a top-down, globalist view of how people should live. This collective mentality is nothing more than a euphemistic platform to control how people should exist in their daily lives. As such I cannot support either alternative which you are proposing." | |
| 251 | There is some confusion about how properties currently zoned CN may be used in the future if the zoning changes to medium density residential. Should we expect grandfathering of the designation, or reverting back to medium density residential? Will we be allowed conditional use in the interim? | Comment noted. Refer to the draft Zoning Code on BeHeard Our Vancouver for more information regarding updates to Vancouver's Zoning Code. |
| 252 | I believe the city should adopt the Alternative 2 zoning map. I think the city should be aggressive in planning for many types of development and housing. Just because an area is zoned for more density doesn't mean that it ends up getting developed that way and allowing for variety and flexibility in the development of our city over the next 20 years is going to serve us well when it comes to addressing whatever challenges may arise. I like Alternative 2 and wish it went further in zoning more of the city as mixed use. | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 253 | I think Alternative 1 best balances the needs for increased development and preserving quality of life for existing property owners and residents, the environment, and demand on public services. | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 254 | "Based on the provided text, the main themes and points to be summarized in a city planning document review are as follows.<br><br>Strategic Growth and Vision | Comment noted. |

|---|---|---|
| | Vancouver faces significant population growth, with an estimated 200,000 new residents to come over the next two decades. The city's current infrastructure and urban boundaries are insufficient to support this expansion, leading to a reliance on resources outside the county.<br><br>The proposed Neighborhood Center Strategy aims to address these challenges by creating self-sufficient, mixed-use hubs within the city. This approach is designed to:<br><br>Accommodate growth within existing urban boundaries, preventing sprawl into rural and natural areas.<br><br>Foster a more independent and resilient local economy.<br><br>Protect the unique character of existing communities.<br><br>Key Principles and Focus Areas<br><br>The plan focuses on three core areas to achieve its goals:<br><br>Housing Development and Community Character: The city's current housing stock is predominantly single-family homes, with limited land zoned for multifamily housing. The plan proposes increasing density, especially in the central districts, to an average of 13-14 units per acre. This would be achieved by focusing on the Neighborhood Centers, which would feature a variety of housing types and densities.<br><br>Transportation Planning: Currently, a majority of residents rely on private vehicles, and the existing transit system is insufficient for future needs. The plan aims to significantly increase public transit ridership by 2045 (from 33% to 48% of commuters) through a robust, high-capacity rail and bus network. This will reduce traffic congestion and connect the new Neighborhood Centers, attracting both housing and business investment.<br><br>Economic Independence: By improving housing and transportation infrastructure, the city intends to attract businesses and create local job opportunities. This will reduce residents' dependence on jobs in neighboring cities, creating a more sustainable and independent local economy.<br><br>Conclusion<br><br>The document presents a comprehensive vision for managing growth and ensuring financial stability by focusing on compact, integrated development within the city's existing urban growth boundary. The scenarios provided are a starting point for community discussion to ensure the plan aligns with the diverse needs and desires of residents." | |
| 255 | We need as much affordable and middle housing as possible. Less parking spots! Less car friendly infrastructure in our downtown. Make it walkable! So much noise pollution from noisy cars. | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>Refer to Common Response #8: Housing Affordability/Options and Common Response #10: Businesses in Residential Zones for more information on those topics. |
| 256 | "Housing and Growth<br><br>Clark County has seen significant population growth over the past few decades, which has led to issues such as a reliance on jobs outside the county, a limited housing supply, and increasing traffic congestion. These problems will only worsen unless we create a thoughtful strategy for growth that addresses housing, transportation, and job opportunities while preserving the county's history. The comprehensive plan does a great job of addressing these issues. To make it successful, we need to allow significant portions of Vancouver to have mixed-use zoning and update our zoning codes and development restrictions to allow for a wider variety of housing types and densities on smaller lots.<br><br>Addressing Transportation Needs<br><br>Public transit ridership is currently low due to a disconnected system with limited destinations. This lack of investment hinders public support for future expansions. By implementing effective strategies, we can make transportation a cornerstone of future development, attracting housing and businesses and creating a more connected city. It's | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |

|---|---|---|
| | essential to learn from our neighbors in Portland and Seattle, adopting their successful approaches while avoiding their pitfalls. Developing Bus Rapid Transit and potentially Light Rail Transit along major corridors like Hwy 99, St. John's, 4th Plain, and Mill Plain can support higher-density housing and attract businesses, making Clark County more financially sustainable and independent.<br><br>A Sustainable, Independent Economy<br><br>Our city and county are heavily dependent on job opportunities in Portland, a reliance that is unsustainable. By improving our transportation and housing infrastructure, we can attract investment and businesses, improve access for existing companies, and create new economic opportunities for residents. A stronger housing market and better transit access will lessen our dependence on outside jobs and amenities, creating a more accessible and sustainable economy. This will also help current residents avoid being priced out of the city, a common problem due to our limited job market.<br><br>Creating a Vibrant Cityscape<br><br>Current development patterns often lead to limited housing options and disconnected neighborhoods. Our resistance to new developments results in products that fail to meet housing demand or improve access to amenities. This approach does little to increase density or variety and can disrupt the historic character of Vancouver. Furthermore, our current transportation capacity is unlikely to keep up with growth, potentially leading to highway expansions that divide neighborhoods and still fail to address traffic issues. By prioritizing a mix of housing types and promoting mixed-use neighborhoods, we can create unique and beautiful urban spaces while preserving the rural character of our county.<br><br>The comprehensive plan does a great job of addressing many of these topics, and I want to highlight a few that are crucial for the comprehensive plan to be successful." | |
| 257 | The population you are attracting to Vancouver is not good. Low Income Housing is encouraging more people to come over from Portland and these people are responsible for the rise in crime. Drive through these projects and count the vehicles with Oregon plates. Our city and County is full of them. We need "for sale", reasonably priced (under $500k) multi-family housing in the waterfront. I would prefer buy a decent one bedroom condo downtown or in the waterfront and they don't exist. I am a single person with a good income but had to buy a house in east Vancouver because it was all I could find in 2020. There was nothing I could afford downtown and that was where I wanted to live. Vancouver is nothing but apartments and it's ridiculous to read that you are focused on "low income housing" in the waterfront. This city needs to focus on making it affordable for builders to create high density "for sale" projects in the downtown area. East Vancouver needs a nice mixed use for sale area with nicer shops and restaurants, something like Bridgeport village but with condos upstairs from retail. Nice outside patios to enjoy a meal or wine at. Instead it's strip mall central with asphalt parking lots. Does no one in city planning have a clue what a nice community looks like? Vancouver could be such a nice place but you are destroying any hope for it to attract solid, middle class people that take care of their homes and cars and don't steal from their neighbors. Please wake up. | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. Refer to Common Response #8: Housing Affordability/Options for more information on these topics. |
| 258 | "My wife and I want NO CHANGE!!! We don't want BIG BUSINESS and Apartments/Condos in our neighborhood (Village of Fishers Landing)!!<br><br>We bought our property 10 years ago; there was no indication/disclosure indicating that our subdivision was subject to re-zoning. We bought for the peacefulness, beauty, and location relative to community services (doctors, hospitals, restaurants, etc.). For our city government to unilaterally change this environment is outrageous and most likely illegal.<br><br>Our city government is treating this MEGA CHANGE PROJECT the same way they did with re-purposing of our streets (bike lanes). The decision was already made by the government, but it went through the motions to make the citizens think they had a choice. You treated us like children! Our opinions didn't matter whatsoever, even though some neighborhoods objected vehemently. You changed the rules of the game midstream do defeat the citizens and proceed with your flawed plans. Hardly anyone uses the bike lanes!!! | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |

| | We understand our City is taking its planning marching orders from the State. Apparently no one in our City government opposes those marching orders. Otherwise , you would react like our State government does when the US President writes an Executive Order that our State doesn't like....LAWSUITS!!!<br><br>It is our opinion that we have no free thinkers in our city government, just good soldiers marching to the orders from the State and being highly influenced by Developers and BIG BUSINESS.<br><br>Your plans are REGRESSIVE and REPRESSIVE!!! I can't say enough about how strongly we OPPOSE your already-in-place-plans. I also can't believe I wasted my time writing this letter. I'd be highly surprised if anyone reads it.<br><br>And, in case you didn't catch the flavor of this letter, WE OPPOSE your processes, your plans, and your being so heavily influenced by developers, big business, and the State!!<br><br>WE VOTE NO CHANGE!!!!!" | |
| 259 | "My name is Robert Douglass and I live at [address]. I write to address and list my objections to the proposed commercial/mixed use rezoning along Mill Plain, just west of the Heights Redevelopment (RAC) project which is already in place. Specifically, I find Alternatives 1 and 2 to be particularly deleterious to Southcliff neighborhood, where I have lived for the past 33 years.<br><br>My first concern is the amount of traffic and parking which would result from rezoning. It would crowd our streets and endanger the pedestrian traffic, as the neighborhood streets are set up in the mid-century style – wide streets and without sidewalks. There would be no access to proposed businesses directly from Mill Plain as it is a main arterial, instead it will be from it's parallel Oregon Drive – a now pleasant street with dead ends at either end, and which also connects to two small cul-de-sacs. Development along Mill Plain (and thus Oregon Drive)<br><br>would place no interior neighborhood home further than 6 to 7 houses away from stated development. With increased traffic, I can easily imagine speeders and frustrated drivers who are searching for parking to be a danger to those walking their dogs, riding bicycles, or just being out in the neighborhood.<br><br>My second concern is for the impact on the currently beautiful environs of the neighborhood.<br><br>We have a broad 47% tree canopy in the neighborhood, and Mill Plain itself is a nicely shaded boulevard on the strip in question. New construction will undoubtedly alter/eradicate much of this significantly. It will drive out birds, squirrels, deer, and other wildlife. This is another benefit of living here – to be able to enjoy nature in a city environment. Other residents will write with more authority about the technical aspects of the watershed along Blandford Canyon, and this has been well studied and documented with our recent rain garden project. It is doubtful the area could accommodate more structures right here with environmental safety – we seem to be at our limit.<br><br>A third concern, one dear to me as someone interested in history, is the mid-century modern story of the neighborhood and it's design. It came about during the mid 1950s post World War II exuberance following the removal of the temporary housing of the Kaiser shipyards. The layout of the streets: broad, and without definite focal point, the design of homes: many are ranch style, a few more daring in their architecture, altogether are outstanding examples of the period. Many vestiges of that time remain in the neighborhood and are worthy of preservation.<br><br>The Washington State Department of Archaeology and Historic Preservation representative we contacted has been enthusiastic in encouraging us to seek official designation, even up to the national registry level. I believe this history should be honored. CC&Rs were written at the very inception of this beautiful enclave purposefully for this to be a neighborhood of single-family homes. Commercial buildings, high rises, or other such structures would be incompatible with the character of the neighborhood and violate the CC&R rules.<br><br>A very reasonable alternative to the commercial district proposed along Mill Plain is the fact that the Heights/RAC project is directly adjacent and planning for that development is nearly complete. Southcliff has been involved with that from the beginning, and overall looks forward to its construction and having that area fulfill the goals of increased housing and commercial activity. As far as the current proposal affecting Southcliff, planners should have walked the streets, familiarized themselves with the neighborhood, and involved homeowners long before the EIS | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

|---|---|---|
| | stage. Residents here are not opposed to change, but feel it should be step wise, needs based, and well thought out. Alternatives 1 and 2 do not fulfill that.<br><br>Another potential fear of mine is the "domino effect" – where development of one parcel occurs making it inevitable that close or adjacent properties will follow. This may cause alienation amongst neighbors, diminished property values, further selling out, with the end result being homes in a once beautiful and historic area succumbing to the developer's sprawl. What an absolute shame that would be – and I am sure across the country (and the world) there are many instances where cities and planners have gone on to regret losing beautiful and significant places for shortsighted goals. Perish the thought.<br><br>As a final comment, in my attendance at sponsored presentations, I sometimes found the attitude of some planning staff to be that Southcliff is just another "affluent" neighborhood and that residents here somehow owe a "debt" to solve the housing shortage because we have "housing security". I find this largely insulting, as it unfairly places what is really a greater societal issue as somehow being the responsibility of targeted homeowners. I recognize the need for and am a firm supporter of the creation of affordable housing, and would prefer to offer the benefit of the doubt for my observations above, but I don't think anyone should be made to feel guilty or overly privileged for living in a nice neighborhood. As further final comment, I would also request that these, and perhaps all comments be readily available to the City Council, who will be the final arbiters of these proposals.<br><br>Sincerely,<br><br>Robert Douglass<br><br>[address]<br><br>[phone number]<br><br>[email address]" | |
| 260 | Do not make changes to Vancouver's Historic areas. This is the one thing that sets Vancouver apart. I am a second generation Vancouver resident. It would be a crime of any current Historic areas were taken away or re allocated for housing. We have a unique treasure. | Comment noted. Refer to Common Response #12: Neighborhood Character for more information. |
| 261 | "Hello,<br><br>My name is Connie Pappas and I live at [address] in the Southcliff neighborhood. I have reviewed the zoning change proposals being put forth in the City's Draft EIS. I am against the adoption of both Alternative 1 and Alternative 2as currently proposed.<br><br>What a gorgeous neighborhood! I have lived in many places in Vancouver, (condo in Loowit Loop, Officer's Row, Steamboat Landing) but when we sold our home in Steamboat Landing in 2009 and bought a condo in Portland only to sell it in 2013 (not the condo type, lol) and discover the best kept secret in Vancouver. Southcliff.<br><br>We love the midcentury houses and were lucky enough to stumble upon a fixer. But with all the time and house scouting on the West side of the city, we never saw Southcliff. Swoon worthy beauty! The tree canopy and easy access to downtown, both Vancouver and Portland and there was our house. My only regret was that we didn't discover it sooner!<br><br>Back to the alternatives... Both alternatives violate Southcliff's regulations which allow for one single family dwelling per lot of no more than two stories high. These regulations have been in place since 1954.<br><br>Adding commercial and mixed-use to our neighborhood would mean construction of many multi-story buildings which would mean losing many mature trees and the habitat they provide for wildlife. We have an abundance of wildlife we tend to in our own yard.<br><br>I understood that the Heights District redevelopment was to be where commercial and mixed-use hi-rise buildings would be built. If the City needs more density, please add it to the Heights plan and not to Southcliff. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | I moved to Southcliff for its spectacular beauty and the quiet, walkable streets and beautiful mature trees. Adding commercial and mixed-use with no parking required would mean our streets would be jammed with cars parked on both sides and would no longer be quiet or walkable, not to mention tree loss and noise.<br><br>Access to commercial and mixed-use high rises would not be from Mill Plain but rather from our neighborhood streets creating congestion on those streets not to mention safety issues for pedestrians and cyclists. It's already challenging being a cyclist or walker because drivers are distracted and some bike lanes and zones are not clearly marked.<br><br>Our neighborhood rain garden was designed to help remove pollutants in rain-water run-off based on the current volume of vehicles. Adding more cars and the constant traffic of cars to Southcliff streets would greatly increase the volume of pollutants which will add more impervious surfaces and increase run-off.<br><br>Southcliff is a marvelous, historic mid-century modern neighborhood that should be preserved, celebrated, even appreciated as is. It's such a rare neighborhood in Clark County and it should not be compromised or altered by the City. Living in Southcliff is something I could never have predicted. I always wanted this neighbohood and this house and it's been a true labor (and labor of love) to bring it back to its former glory but better. Neighborhoods like this should be protected and nurtured. The City should be proud of them. Celebrate them as we approach the century they've been around. That's progress too!<br><br>Thank you for your time.<br><br>Constance Pappas<br><br>[address]" | |
| 262 | "We are writing to formally request that the zoning designation of the two parcels located at [addresses] be treated the same as [address] and either be upzoned to Mixed Use or left as R-22 zoning.<br><br>For context, we recently acquired the Pacific Pointe Apartments located on [address] as well as the two adjacent parcels at [addresses]. All three parcels are currently operated as one cohesive rental apartment community for middle income residents of Vancouver. Under current zoning, the possibility exists to add additional rental housing to the complex – under alternatives 1 & 2 of the proposed re-zoning, this much needed additional workforce housing would not be permitted.<br><br>All three parcels are currently zoned R-22 Higher Density Residential. In the July 2025 Comprehensive Plan update, zoning proposals "Alternative #1" and "Alternative #2" seek to down zone [addresses] to Low Scale Residential while upzoning [address] to Mixed Use.<br><br>It is our understanding that the City has a desire to increase the supply of middle-income housing – we strongly believe that the downzoning of [addresses] is not aligned with this policy objective.<br><br>For clarity, we have attached snapshots of the parcels in questions below.<br><br>Thank you for your attention to this request and we look forward to hearing back from the planning committee on how we can best help the City achieve its long-term goals.<br><br>Best,<br><br>Crown Point Real Estate Partners<br><br>Jamie Robertson<br><br>[phone number]" | Comment noted. The Preferred Alternative would zone these properties as Mixed Use. |
| 263 | "My name is Charles Hankel, and I live at [address], in the Southcliff neighborhood.<br><br>I have reviewed the zoning change proposals being put forth in the City's Draft EIS.<br><br>I am against the adoption of both Alternative 1 and Alternative 2 as currently proposed.<br><br>My reasons for opposing these alternatives are: | Comment noted. |---|---|---|
| | 1. The safety of the community and the residents of our neighborhood. I have lived in the South Cliff neighborhood going on 6 years now and the intersection of Rhododendron and Mill Plain is ridiculously dangerous. There has been at least 1 major accident a year. We had a drunk lady drive her car through our cinder block wall. Yet, zero precautions have been taken to make this intersection safer. What's even worse, the city put in a Vine bus stop there.<br><br>Both alternatives violate Southcliff's regulations which allow for one single family dwelling per lot of no more than two stories high. These regulations have been in place since 1954.<br><br>Adding commercial and mixed-use to our neighborhood would mean construction of many multi-story buildings which would mean losing many mature trees and the habitat they provide for wildlife.<br><br>I understood that the Heights District redevelopment was to be where commercial and mixed-use hi-rise buildings would be built. If the City needs more density, please add it to the Heights plan and not to Southcliff.<br><br>I moved to Southcliff for its quiet, walkable streets and beautiful trees. This is a safe neighborhood, you can walk your dog in the middle of the night without worry's.<br><br>Adding commercial and mixed-use with no parking required would mean our streets would be jammed with cars parked on both sides and would no longer be quiet or walkable, not to mention tree loss and noise.<br><br>Access to commercial and mixed-use high rises would not be from Mill Plain but rather from our neighborhood streets creating huge congestion on those streets not to mention safety issues for pedestrians and cyclists.<br><br>Our neighborhood rain garden was designed to help remove pollutants in rain-water run-off based on the current volume of vehicles. Adding hundreds of cars to Southcliff streets would greatly increase the volume of pollutants. And adding more impervious surfaces would greatly increase run-off.<br><br>Southcliff is a a historic mid-century modern neighborhood that should be preserved as is and not destroyed by the City just to make room for people who might (or might not) move here by 2045." | |
| 264 | I support the increased development of mixed-use neighborhoods from industrial/employment. The increase in these neighborhoods seems to me to best support the two primary goals of increased housing and increased jobs. | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 265 | Prefer Alternative 2 | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 266 | "6 September, 2025<br><br>Greetings,<br><br>My first comment us a question. Why would a Intelligent group of city leaders want to turn a long time High level Neighborhood into a mid to low scale neighborhood ?<br><br>We are composed of a majority of older, more responsible and helpful volunteering segment of the city's population. We don't stay up late at night, have loud parties, or misbehave. No police calls, we are your best kind of neighbors. Most of us have lived here for many years. We are stable neighbors – The Ideal Kind of Neighbors...!<br><br>We maintain our properties, clean up our streets, have no trashy derelict automobiles parked about our homes, or have junk in yards. We are the kind of neighbors you would want to have as your next door neighbor.<br><br>Now add in 1340 residential units at the Tower Mall Area not a block away and you are going to make parking on our local streets very busy. How would you like having 6 story apartments across the street from your house...?<br><br>Thank for the time and space for my comments, Robert Cravens" | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

|---|---|---|
| 267 | My name is Marise Scott and live in the condominiums called Madrona Lane. As President of our Association, I am writing with our concerns regarding the impact to Southcliff and surrounding neighborhoods. We are against the adoption of both Alternate 1 and 2 as proposed. Our reasons by adding commercial and mixed use to well established neighborhoods create a construction nightmare for residents. Losing the mature trees and habitat for wildlife is definitely against the City's Master Plan of Tree Green Space. It was our understanding the Heights District development was to be commercial and mixed use high rise buildings. The impact of traffic on Mill Plain is already destroying the walkability of the neighborhoods with cars running red lights. On the corner of Brandt and Mill Plain there have been a minimum of six accidents careening into fences and homes within the past two years. As planners, the traffic litigation will only increase as high density housing will create more traffic entering Southcliff, DuBois, Madrona Lane and the Height neighborhood. This plan will destroy the walkability of the neighborhood. As a spokesperson for Madrona Lane, we are definitely against these proposals. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 268 | "My Name Lance Shaffer and I live in Southcliff neighborhood. I have reviewed the Zoning change proposals being put forth in the City's Draft EIS, Alternative 1 and 2. I am against both adoptions.<br><br>Both alternatives violate Southcliff's Regulations which only allow the single family dwelling per lotto no more than two stories. Regulation in place since 1954.<br><br>I invested hundreds of thousands in my property, developing a safe environment for my family. This rezoning proposal will destroy this mid-century neighborhood." | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 269 | My name is Angela Shaffer and I live at [address] Vancouver Wa 98661in the Southcliff neighborhood. I moves to Southcliff for its quiet, walkable streets and beautiful trees. Adding Commercial and mixed-use with no parking required would mean our streets would be jammed with cars parked on both sides and would no longer be quiet and walkable. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 270 | I have a home in both the west and central sections of Vancouver. I wanted to provide comment on the shift in zoning presented in Alternative 2 that shifted the heavy industrial area between SE Columbia Way and the river to the south to Regional Activity Center zoning district. My feeling is the land along the river offers greater bennefit to the City of Vancouver residents and businesses if the current industrial lands were replaced with additional waterfront developments (hotels, restaurants, apartments, etc) that could serve all resdients and visitors verses the few industrial tenants located there now. The Port of Vancouver provides much better property downstream for industrial facilities. I also feel the elimination of these industrial businesses would promote a better Insterstate 5 bridge design by lowering the current Coast Guard bridge height requirement. | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>The Preferred Alternative would include a mix of Regional Activity Center, Medium Scale Neighborhood and Parks Land between SE Columbia Way and the Columbia River. |
| 271 | Please stop filling up the Waterfront with rental housing. It creates a massive transient community with people continually moving in and out. Let's plan for a more permanent community where people can buy property, invest time and effort towards getting to know the shop and restaurant owners and work towards making the waterfront a better community. | Comment noted. Refer to Common Response #8: Housing Affordability/Options for more information. |
| 272 | I would really like to see the "middle income housing" actually come to fruition. Seniors such as myself, whom are disabled veterans seem to supposedly make too much from disability, soc security etc but not enough to pay for market rate apts without a struggle along with the general cost of living. We end up moving every 2 yrs because we can't afford where we live or the rent increases. As we continue to age, the constant moving gets harder especially if you are a single senior with health challenges & mobility issues. So for years we've just continued to read about the coming middle housing & struggle thru hope for the housing that will allow us to "age in place". Even those that receive taxpayer money for the newer bldgs make sure their rent prices are kept high. So we can't get a decent apartment in return & are still priced out of their units. How is this allowed to continue? | Comment noted. Refer to Common Response #8: Housing Affordability/Options for more information. |
| 273 | "My name is Nathan Petz and I live with my wife, Carrie at [address] in the Southcliff neighborhood. Our family moved into Southcliff in 2006 and our children grew up here.<br><br>We have reviewed the zoning change proposals being put forth in the City's Draft EIS and are against the adoption of both Alternative 1 and Alternative 2 as currently proposed for the Southcliff neighborhood.<br><br>Our reasons for opposing these alternatives are as follows. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | Both alternatives violate Southcliff's regulations which allow for one single family dwelling per lot of no more than two stories high. These regulations have been in place since 1954.<br><br>For the past 70+ years Southcliff has been, and still is, a neighborhood where children can safely ride their bicycles on the quiet streets and where neighbors out for a walk often stop to converse. All of which provide a sense of community that is often absent from newer developments. The rezoning proposals noted above will increase neighborhood traffic and parked cars along our streets, making those streets increasingly unsafe for children and other pedestrians.<br><br>Adding commercial and mixed-use to our neighborhood would mean construction of many multi-story buildings which would mean losing many mature trees and the habitat they provide for wildlife.<br><br>In summary, Southcliff is a community and family centered historic mid-century modern neighborhood that should be preserved and not be destroyed by commercial and high rise buildings, so we very much oppose the Alternate 1 and Alternate 2 plans. A more practical and less impactful option for increasing population density in the immediate area is the Heights District redevelopment.<br><br>Thank you for your attention to this matter.<br><br>Nathan and Carrie Petz<br><br>[address]<br><br>Vancouver, WA 98661<br><br>m:[phone number]" | |
| 274 | "I read the city manager's newsletter and as I understand it, the middle housing option he described is something I favor because it tries to solve several problems I see.<br><br>We have a housing shortage that at the worst puts people on the street, forces us to pay more than our budget allows, makes us choose substandard housing to fit our budget, or causes us to seek housing farther away from our jobs/families.<br><br>Having the middle housing options also gives us the alternative to travel more on a human scale. I like to walk to the store. I like the plan that lets more housing and retail intermix so I don't have to drive across town for everything.<br><br>I hope you select the plan that gives us the most choices." | Comment noted. Refer to Common Response #8: Housing Affordability/Options for more information.<br><br>Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 275 | "My top priorities for Vancouver's future are housing, transportation, and climate. A housing map that gives us more choices in type, location, and cost, will make it easier to also improve transportation and climate issues.<br><br>The Vine is growing and I hope CTran continues to expand smaller bus lines to connect to it. I walk, bike or bus whenever possible – year round. Putting retail and housing closer together with connecting bus routes helps me avoid almost all car trips – which I use mostly when I'm stocking up on heavy or bulky items like bags of cat food or toilet paper.<br><br>Since the city published the first climate map (2019?), I've been especially conscious that what I do matters. Cars are convenient, no doubt about it. But I know quite a few people who just don't drive. For those of us walking or biking along roadways, we know vehicles are noisy, smelly, and dangerous to the health of plants and all of us animals.<br><br>Please select a housing map that creates denser housing options, better transportation connections, and a safer, healthier population and planet for our entire city, not just select neighborhoods." | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 276 | "My name is David Rice, MD, and I live at [address]. I am writing because of my deep concern about proposed zoning changes that would greatly affect our neighborhood of Southcliff. I have reviewed the zoning change proposals as presented in the City's draft EIS. I am strongly opposed to both Alternative 1 and Alternative 2 as they are currently written. Both are directly in opposition to our neighborhood regulations which have been in place since the 1950's and limit lots to single family dwellings and no more than two stories high. Ignoring these regulations to allow for commercial and multistory buildings would destroy our neighborhood. Southcliff is an oasis from the bustling city | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

|---|---|---|
| | around us. If these changes happen, there would be a dramatic increase in traffic flow which would endanger the many children and adults that use the neighborhood streets for recreation and socialization. Some of our beautiful old trees would likely need to be removed for new construction, leading to irreplaceable loss of their beauty and habitat for animals. This would also likely raise temperatures locally as trees are known to help reduce heat on sunny days. We are also concerned about property values, as the neighborhood's unique charm and large lots lots would be lost along the with appeal to potential future buyers. Southcliff is an historic gem and should not become subject to zoning changes that would forever harm it's character and turn it into a less desirable and less safe place to live.<br><br>Respectfully,<br><br>David S. Rice, MD" | |
| 277 | "Dear City of Vancouver,<br><br>I'm writing to share my concerns about the proposed zoning changes that would affect our neighborhood of Southcliff. I've looked over the draft EIS, and I believe both Alternative 1 and Alternative 2 would cause real harm to our community if they go forward.<br><br>Southcliff has always been a quiet, safe place to live. It's where kids can play outside, neighbors walk their dogs, and families gather in their yards. The changes being suggested — allowing larger buildings and commercial development — would completely shift the feel of the neighborhood.<br><br>Here are some of the biggest worries I have:<br><br>Parking and congestion: Our streets aren't built to handle extra cars from new businesses or big apartment buildings. Parking is already limited in some areas, and more congestion would make things frustrating and unsafe.<br><br>Noise and light pollution: Commercial or taller buildings would bring more lights, deliveries, and late-night activity that would disrupt the peaceful environment that makes Southcliff so special.<br><br>Strain on schools and services: Adding more housing density would put pressure on our local schools, which are already crowded, and on city services like water, sewer, and emergency response.<br><br>Loss of privacy: Taller buildings right next to single-family homes would mean neighbors suddenly looking down into backyards where families have always enjoyed privacy.<br><br>Southcliff is unique because it feels like an oasis inside the city. The trees, the quiet streets, and the long-standing single-family zoning are what drew families like mine here in the first place. Changing that would take away the character that has made this neighborhood thrive for decades.<br><br>I ask that you listen to the residents who live here every day and protect what makes Southcliff a safe, family-friendly, and desirable place to live.<br><br>Sincerely,<br><br>Yvonne B. Rice" | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 278 | "To the City of Vancouver,<br><br>My name is Enzo Rice, and I am 15 years old. I have lived in South Cliff for 13 years, and I am writing to share my concerns about the proposal to rezone our neighborhood to allow commercial use and multi-family housing.<br><br>South Cliff is a very special community. It is peaceful, safe, and family-friendly. One of the things I love most about living here is how welcoming it feels — neighbors walk their dogs, kids ride their bikes, and families go on walks together. It is a place where people feel comfortable being outside. I worry that if our neighborhood is rezoned, the increase in cars and traffic will make it harder and less enjoyable for people to do those things.<br><br>I also feel safe in South Cliff in a way I don't always feel in other parts of the city, such as downtown or on buses. That sense of safety is very important to me and my family, and I am worried that adding more commercial businesses and | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | dense housing will take that away. South Cliff has a unique character, and it is one of the few neighborhoods where families can really enjoy the outdoors without the stress of traffic or crime.<br><br>I completely understand that our city is growing and that there is a need for housing and development. But I believe changes like this should be carefully thought out so that they do not damage the neighborhoods that are already thriving. South Cliff is thriving right now, and rezoning could put that at risk. I believe it would be better to direct new development to areas that already have more businesses, bus routes, and infrastructure, such as downtown, instead of changing a neighborhood that is working well the way it is.<br><br>I am still young, but I care deeply about my community. South Cliff has been my home almost my entire life, and I hope it can stay the safe and beautiful neighborhood it is today. Please take into account the voices of families and residents like me who want to preserve the qualities that make this place so special.<br><br>Thank you for your time and for listening to my perspective.<br><br>Sincerely,<br><br>Enzo Rice" | |
| 279 | "Dear City of Vancouver,<br><br>My name is Leo, I'm 13 years old, and I've lived in Southcliff almost my whole life — 12 years. This neighborhood is where I learned to ride my bike, play basketball in the street, and walk to my friends' houses without my parents worrying. It feels safe here, and I don't want that to change.<br><br>I've heard about the proposed zoning changes, and honestly, they make me nervous. If Southcliff gets turned into a place with bigger buildings, more cars, and fewer trees, it won't be the same neighborhood I grew up in. The streets where kids like me play would become busier and more dangerous. The big trees that give shade in the summer and make everything feel calm might be cut down. It's hard to imagine losing that.<br><br>I know I'm just a kid, but this is my home. I don't have a say in big decisions like this the way adults do, but the choices you make now will affect my whole future here. Please think about what it would mean for kids like me if Southcliff turns into just another busy part of the city instead of staying the safe, quiet neighborhood it is.<br><br>I hope you'll protect Southcliff, not change it into something unrecognizable. It would be really sad if, when I grow up, I can't show my own kids the same neighborhood where I made so many good memories.<br><br>Sincerely,<br><br>Leo Rice" | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 280 | The example you listed of Mixed-use is leading people to buy into what you want for certain areas, such as Southcliff and the Heights, which is a huge mistake. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 281 | I support Alternative 1, which offers a more balanced approach by designating Hudson's Bay as a Medium-Scale Neighborhood. This option still meets the City's projected housing and job needs while preserving the neighborhood's existing character and housing mix. Hudson's Bay is uniquely situated along Evergreen, a corridor the City has long envisioned as walkable and connected. Pushing the area into Mixed-Use density under Alternative 2 would intensify traffic and simultaneously pedestrian safety, plus light and noise pollution—already a challenge given the neighborhood's hilltop location next to Grand Avenue and just south of Mill Plain— and would put homeowners at risk of displacement in favor of large rental developments. Rather than improving livability, this change would erode it. Preserving Hudson's Bay's historic charm and proximity to Fort Vancouver, one of the City's greatest public assets, should be a priority. Alternative 1 achieves growth goals while protecting the integrity and character of this special neighborhood. | Comment noted. Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |

| 283 | I have recently been made aware that the city of Vancouver is wanting turn the northern border of Southcliff neighborhood into mixed use housing and retail. When my mother recently told me, I was outraged. Southcliff is where I not only grew up, but it is the neighborhood that shaped me. I have grown to be a leader in my field and a thoughtful human being. It is one of the last beautiful areas of original Vancouver that is quiet, free of crime and well maintained by it's inhabitants. Countless community leaders have resided there for the past 60 years and this is how the city thanks them for their community efforts? To turn their neighborhood and homes into not only mixed use housing, but also to decrease the value of their homes that they have worked so hard to obtain? This seems like robbery and penalizing good hardworking/contributing citizens for their tireless efforts. I voted for our current Mayor in the last election, as I thought she was doing good things for our community and if this is her stance, I was clearly wrong in my vote. There are so many areas in Vancouver that can benefit from mixed use housing, but Southcliff and Dubois Park are not two of them. If our city continues to demolish Vancouvers history, and not honor it, then in 2045 and beyond, we will have nothing to reflect on by my Grandchildren and those of their generation. In the last few years, the city tore down Tower Mall and continues to do NOTHING with that piece of property. Now, behind closed door shady dealings, they want to kick Southcliff homeowners out of their hard earned homes for no good reason and rezone areas that have been inhabited for 50+ years. Are they waiting for my family to die off so they can take what was earned with hard work? I'm embarrassed and outraged if this is what our current Vancouver "leadership" is choosing do to, and if that is the case, I will give my personal vote elsewhere. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 284 | I am concerned that the number of high heat areas will increase as a result of the building that is done. I live south of the 162nd Blvd., Northeast that in the last few years has had massive, massive warehouses built on land that previously was completely covered or almost completely covered with deciduous trees. There were a few evergreens too. It is right next to and abutting to a residential area and overtime will significantly increase the temperature of the residential area, adjacent humongous concrete buildings that involve massive amounts of trucks and cars going in and out of those buildings because they distribution centers When there is no direct freeway access significantly degrade the adjacent residential areas. If such things are going to happen, they need to happen so that there is a proportionate revenue increase for Vancouver and all of its residents. I do not think that happened in the case of these two massive warehouses and your plans to add more stuff just like that in the few blocks remaining between them and the residential neighborhood and the watershed the watershed is right there.. as it stands now people can cut down trees on their property. I saw building going in right now off of 18th St. and they took out 30 3540 I don't know many Douglas to put in houses there needs to be some kind of plan to mitigate the loss of that many mature Douglas firs. As far as I know in my experience so far in Vancouver, it seems like removing trees for construction is Jim Dandy fine. | Comment noted. Refer to the Plants and Animals sections of Final EIS Chapter 4 for more information on the potential impacts to those topic areas, as well as proposed measures to address those impacts.<br>Refer to Common Response #4: Vehicle Traffic Impacts for more information on that topic. |
| 285 | "Sept. 7,2025<br>To: City of Vancouver: City Council, City Planning Commission & Others<br>Re: Draft EIS and zoning change proposals<br>My name is Chris Keinath, and I live at [address] in the Southcliff neighborhood.<br>I have reviewed the zoning change proposals being put forth in the City's Draft EIS, and am strongly opposed to the adoption of both Alternative 1 and Alternative 2 as currently proposed.<br>When I drive along E. Mill Plain Blvd from MacArthur to Rhododendron, it always brings a smile to my face. A beautiful tree-lined street; peaceful and exemplifying the charm of a Vancouver neighborhood.<br>(contrast this, if you will, driving east along Mill Plain from I-205 to, say, Morrison: Ugly, tacky, and an example of what should not be characteristic of our City).<br>The proposed changes seem to disregard what makes Vancouver USA such a wonderful place to live: Neighborhoods that people cherish. Community. Beauty. Peaceful and Safe. Historic.<br>The Southcliff neighborhood, of course, is an example of all of these. The EIS draft proposes significant changes that could drastically alter the character of Southcliff; and thus is unacceptable. | Comment noted. | | There certainly must be undeveloped/underdeveloped land within the city boundaries that could accommodate State mandates, without the fear of destruction of the character of established neighborhoods. ??<br><br>I am also concerned about other neighborhoods, and fear greatly a precedent that would introduce the sort of development that has been seen, for example, in North Portland. Worse: a move toward "Brutalist Architecture." NO. Please, not here; not in Vancouver.<br><br>I echo many of the other comments that many of my neighbors have made (copied below).<br><br>Thanks much for your kind consideration, and may you proceed with Wisdom—not expediency.<br><br>Sincerely,<br><br>Chris Keinath<br><br>Additional comments from my Neighbors<br><br>Both alternatives violate Southcliff's regulations which allow for one single family dwelling per lot of no more than two stories high. These regulations have been in place since 1954.<br><br>Adding commercial and mixed-use to our neighborhood would mean construction of many multi-story buildings which would mean losing many mature trees and the habitat they provide for wildlife.<br><br>I understood that the Heights District redevelopment was to be where commercial and mixed-use hi-rise buildings would be built. If the City needs more density, please add it to the Heights plan and not to Southcliff.<br><br>I moved to Southcliff for its quiet, walkable streets and beautiful trees. Adding commercial and mixed-use with no parking required would mean our streets would be jammed with cars parked on both sides and would no longer be quiet or walkable, not to mention tree loss and noise.<br><br>Access to commercial and mixed-use high rises would not be from Mill Plain but rather from our neighborhood streets creating huge congestion on those streets not to mention safety issues for pedestrians and cyclists.<br><br>Our neighborhood rain garden was designed to help remove pollutants in rain-water run-off based on the current volume of vehicles. Adding hundreds of cars to Southcliff streets would greatly increase the volume of pollutants. And adding more impervious surfaces would greatly increase run-off.<br><br>Southcliff is a a historic mid-century modern neighborhood that should be preserved as is and not destroyed by the City just to make room for people who might (or might not) move here by 2045." | |
| 286 | The Alt 1 classification of the very new development (townhomes and apartments) at 154th Ave and Fourth Plain as to be turned into Industrial/Employment is confusing. At the very least, it seems to me that it ignores the objective reality, which is that a bunch of stuff was just developed in the past 5 years and isn't going to change within this planning period. I understand the objective, which is to provide for more industrial land, but I do not think the Alt 1 vision for the next 20 years is realistic for this location. The Mixed Use classification in Alt 2 is more grounded in reality. Furthermore, in 2024, at a C-Tran meeting, it was shared that there's a concept of a "mini" transit center area with a number of transfer opportunities in the vicinity of 156th Ave. It seems to me that not mixing uses in proximity to a substantial transit facility like that would be a suboptimal use of that resource if its sole use became employment-related transit rather than a mix of things. | Comment noted. The Preferred Alternative would zone this area as Mixed Use Neighborhood. |
| 287 | Save Southcliff Neighborhood | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 288 | "Save Southcliff Neighborhood<br><br>September 7th, 2025<br><br>Dear Mayor and City Council Members,<br><br>Our names our Steve Schmitt and Angela Paterson and we live at 801 Manzanita Way in the Southcliff neighborhood. | Comment noted. | | When we moved to Southcliff in 2012, we discovered this hidden gem of a neighborhood. It is a beautiful neighborhood full of long-term residents and peace. Here, we've enjoyed walking our dogs, playing in our yard, and hosting friends and family in a safe and pleasant environment. You know your neighbor is always there for you.<br><br>We have reviewed the zoning change proposals being put forth in the City's Draft EIS.<br><br>We are against the adoption of both Alternative 1 and Alternative 2 as currently proposed.<br><br>Both alternatives violate Southcliff's regulations which allow for one single family dwelling per lot of no more than two stories high. These regulations have been in place since 1954.<br><br>Adding commercial and mixed-use with no parking required would mean our streets would be jammed with cars parked on both sides and would no longer be quiet or walkable, not to mention tree loss and noise.<br><br>We understand that the Heights District redevelopment was to be where commercial and mixed-use hi-rise buildings would be built. If the City needs more density, please add it to the Heights plan and not to Southcliff. Already there are real concerns regarding parking and traffic to the Heights District which is adjacent to Southcliff.<br><br>We understand the City must plan for 2045. We suggest if you haven't, please actually take the time to visit our neighborhood versus arbitrarily looking at a map only to rezone the city. We are confident this alone will give you pause and reconsider this proposal. Shape<br><br>Respectively,<br><br>Steve Schmitt & Angela Paterson" | |
| 289 | "Typo on page 94 ""The C-TRAN 2021-2016 Transit Development Plan"". 2021-2016 would involve time travel.<br><br>Please consider updating the data so that the latest annual transit ridership data is considered -- the 2025-2030 TDP was recently posted to C-TRAN's website. Using 2023 or 2023 transit numbers as input to any modeling risks being a ""garbage in, garbage out"" exercise due to lingering effects of the pandemic affecting mode share. Further, writing that the 2021-20[2]6 TDP calls for a 10% increase to transit service is nearly pointless to a 20-year plan starting in 2025 -- those improvements have already been substantially realized, so what's next?<br><br>Furthermore, the City's Climate Action Framework includes ""Strategy TLU-2. Shift driving trips to clean, active modes of transportation."" The RTC data included in the 2025 table depicts effectively unchanging mode share, with transit mode share slightly decreasing, bike mode share flat, and walking decreasing. This is utterly discordant with City policies and seems to defy logic. It makes no sense how improving sidewalks, improving bike lanes and pushing for bike storage in new development, and building denser mixed-use developments would result in flat bike use, a decrease in walking, and only a token increase in transit mode share. I'm well aware that regional transportation modeling borders on being junk science, but leaning on junk data for this plan threatens the value of this plan. If we take RTC garbage in, I am concerned that the transportation component of the comprehensive plan we get out will also be garbage, which is unacceptable in a climate crisis, because that will lock in a destructive status quo by steering investments toward antiquated and destructive modes of transportation." | Comment noted.<br><br>The Final EIS has been updated to reference the C-TRAN 2025-2030 Transit Development Plan, which was not available at the time the Draft EIS was prepared. Please note that this update provides more current information for readers but does not affect the findings of the Final EIS analysis. The regional transportation model for the EIS analysis used 2023 data to represent existing conditions for consistency with the baseline year for the Comprehensive Plan Update.<br><br>This is consistent with the 2023 base planning year for the Comprehensive Plan Update and census data used in related analyses. Given the three-year Comprehensive Plan Update process, a base year allowed staff to align and compare data while tracking key shifts and trends year-over-year. The City continues to monitor transit ridership, partner with C-TRAN, and align long-range plans.<br><br>The Transportation section in Chapter 3 of the Final EIS uses the Regional Transit Council (RTC) data and model to analyze the potential impacts of the alternatives, which are generally differentiated by the extent and location of mixing of uses and residential density. The results of the RTC model are based on expected future population, housing, and employment growth and changes in land use under the different alternatives and on reasonably foreseeable future transportation projects. However, it does not factor in other policy and programmatic choices, like those noted in the Avoidance, Minimization, and Mitigation Measures subsection of the Transportation section.<br><br>The City acknowledges that a model cannot fully demonstrate real-world potential impacts and used a variety of sources, including the Climate Action Framework and Transportation System Plan, to inform the creation of the Preferred Alternative, proposed Comprehensive Plan, and preferred Zoning Code. The Transportation and Climate chapters in the proposed Comprehensive Plan, which can be found on the Comprehensive Plan page of the City's website, includes goals and policies to support reductions in vehicle miles traveled, reductions in greenhouse gases, and improvements in options to walk, bike, roll, or take transit. |

| 292 | I think Alternative 2 is best for our city moving forward. Having more concentrated density allows for more efficient land use, more efficient transportation patterns (shorter trip lengths, more feasible high-frequency transit service, etc), and therefore less negative impact on the environment. It also creates more housing capacity which is desperately needed as we are in the midst of a housing crisis. One important unavoidable negative externality of any option that allows for less housing is an increase in unhoused people, because the more housing (even market-rate) that is built, through filtering, the more housing becomes available at the most affordable end of the spectrum. If we want to address GHG emissions and the housing crisis, as well as providing people more choices in what type of housing to live in and how to get around, I believe Alternative 2 is the most efficient and effective way of doing that. | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 293 | "Dear Bryan and Team:<br><br>On behalf of our client DG Holsinger, LLC we would like to request a site specific request to change the Comprehensive Plan and Zoning designation on Parcel Nos. [parcel number] and [parcel number] to go from Industrial with Zoning OCI to Commercial. After reviewing the maps, we believe s that Alternatives 1 and 2 show this change.<br><br>These parcels have a long and storied history as it was first approved by Clark County as the first horizontal mixed use project in the County and the development is currently built out including these parcels. The City subsequently annexed the property. We know that the City knows some of the history with this site. One of the challenges though is that the uses allowed in the OCI zone limit the ability to get tenants that are more conducive to the space as the surrounding built environment has developed. Furthermore, it may be better from a revenue standpoint to the City to allow uses that generate sales tax revenue. | Comment noted. The Preferred Alternative would zone these parcels as Mixed Use Neighborhood. |

| | We look forward to providing the City more detail as the process develops, but wanted to make sure that this comment is included in the record. We appreciate the consideration of this site specific request.<br><br>Best,<br><br>Jamie" | |
| 294 | "Hello I live at [address]. This address is zoned light industrial, along with the residences on my side of this street. Across the street, all the houses are zoned residential.<br><br>As I have just under 1 acre of property, I've contacted several agencies regarding building an ADU or allowing folks to live in tiny homes on my property. I have been told no and further that there is little chance of my ever being allowed to do this.<br><br>My house is down the street from Fruit Valley Elementary School and Fruit Valley Park. In this area there is private and public housing, a mobile home park, apartments and single family homes. About a mile down the street from me you can get to Shillapoo WThis is one of the people densest and POOREST areas of Vancouver.<br><br>I would like to ask that rezoning be considered for my address at [address] so that I can help to make more housing options available for Vancouver residents. If the city is sincere in in its efforts to create more housing opportunities for Vancouver, and also assist those with lesser resources, I would encourage looking into options like these rather than continue to encourage rampant industrial and business growth in the area. Current industry in the area already creates noise, pollution and traffic throughout the day and night." | Comment noted. The Preferred Alternative would zone this parcel as Low Scale Neighborhood. |
| 295 | "I'm excited about the upzoning across Vancouver, but for this plan to succeed, we MUST address car ownership and usage in the Hough neighborhood and Uptown specifically. If we don't take action now, more residents will bring more cars, which—combined with the already heavy cut-through traffic—will make it difficult, if not impossible, to walk, bike, or enjoy the area peacefully. The noise, pollution, and congestion will ruin the very quality of life we're trying to improve.<br><br>I strongly urge you to include road diets for Mill Plain, Fourth Plain, Kauffman, Lincoln, Franklin, and Columbia in this plan! We need to reduce car dependence and promote micro-mobility if we want to add more housing while actually improving the neighborhood.<br><br>Additionally, let's use this upzoning as a chance to force the property at Kauffman and Fourth Plain to be sold to someone who will do something useful with the space. This is a prime location, and it's frustrating to see an empty, rundown parking lot sitting in the heart of the neighborhood. Imagine what that space could become—a food truck park, a venue, a grocery store, apartments —anything other than the useless space it is now!<br><br>Otherwise, the plan is a great step forward for Vancouver's bright future! Thank you!" | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>See also Common Response #4: Vehicle Traffic Impacts for more information.<br><br>The Preferred Alternative zones the property on the NE corner of Kauffman Ave and Fourth Plain as Mixed Use. |
| 296 | I would like the Southcliff neighborhood to remain intact as single family homes. The city should preserve this unique neighborhood which was originally built with brick and sidewalk pathways between the homes creating access to their neighbors and formed a real community. I grew up in Southcliff, moved away for school and work and now have retired in the Braewood neighborhood. It really makes no sense to allow homes to be converted into businesses or multilevel housing along Mill Plain. If planning for the Tower Mall area is done well, there should be no need to encroach on a thriving established neighborhood. Instead we should protect these areas which make Vancouver a livable and desirable city. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| 298 | "The proposed changes to the zoning of the South Cliff neighborhood are very draconian. With only 111 homes in our neighborhood, the proposed changes have an outsized effect. Is there any other neighborhood with as great as percentage change proposed? This should certainly be part of the criteria when proposing change. An analysis of all neighborhoods of proposed percentage change would show the unfair burden being placed on South Cliff.<br><br>In addition, we already have massive change in the very near future with the Town Plaza Regional Activity Center. Fair play would require that the city wait until the new development is complete and any issues addressed before imposing more change. Mill Plain/Fourth Plain/Grand/Evergreen have quite a bit of commercial property that is underdeveloped/used. Shouldn't the first step be to incentivize the redevelopment of current commercial property before adding more? If all of the underutilized commercial property along our major arterials were identified, and redeveloped, isn't this a better solution? Infrastructure is already in place.<br><br>Our historic neighborhood will lose its unique characteristics. Greater car density on heavy walked/biked streets will decrease safety. And to reiterate my first point, the residents of South Cliff will have a disproportionate burden compared with other neighborhoods. I am firmly opposed to both alternatives." | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 299 | "PARKS: I would like to see an increase in parks in both Alternative 1 and 2. For example, in east Vancouver, Burnt Bridge Creek School Park (currently zoned as a park) is listed as a mixed use neighborhood (Alt 1) or medium scale neighborhood (Alt 2). Especially in areas that have old trees (like Burnt Bridge Creek School Park), I would like to see those areas preserved as parks. Because of the potential for higher grown in Alternative 2, I prefer Alternative 1 since it allows for the possibility that some of the land under proposed development could be kept as parks / greenspace.<br><br>AESTHETICS / HOUSING: To preserve the character of existing neighborhoods, I would propose that there should be transition areas to go to the parts of the city with denser housing. However, this does not appear to be the case under Alt 2 in my neighborhood, where there is a proposed mixed use neighborhood (red) within a low scale neighborhood (proposed for along NE 162nd Ave between NE 4th Way and NE 48th Cir). This would significantly change the aesthetics of this neighborhood and increase traffic and noise (which is already significant because of increased traffic on 162nd). Instead, I would propose that there are mixed use / higher density housing be sited in areas that can transition to this, rather than going from low density to high density without a ""transition zone."""" | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>The Preferred Alternative would include a similar amount of land zoned for parks and natural areas as compared to Alternatives 1 and 2.<br><br>Refer to Common Response # 12 Neighborhood Character and Common Response #4 Vehicle Traffic Impacts for more information on those topics. |

|---|---|---|
| 302 | Hudson's Bay should not be rezoned as mixed-use under Alternative 2. Allowing 110-foot housing would cast shadows, displace existing homes/homeowners, and encourage developers to demolish homes in favor of dense housing that prioritizes developer profit over livability and neighborhood character. This is one of the last areas of affordable single-family homes for first-time buyers, and increasing density at this scale would erode affordability, devalue current properties, and disrupt the small-lot, historic fabric of the community. Alternative 1 is far better suited for Hudson's Bay, or Alternative 2 should be modified to protect this neighborhood's identity and quality of life. | Comment noted. The Preferred Alternative would zone Hudsons Bay as a mix of Mixed Use Neighborhood and Medium Scale Neighborhood.<br><br>Refer to the Aesthetics and Housing sections of Final EIS Chapter 3 for more information on the potential impacts to these topic areas, as well as proposed measures to address impacts.<br><br>Refer to Common Response #8: Housing Affordability/Options, Common Response #9: Homeownership Opportunities and Common Response #12 Neighborhood Character. |
| 303 | "On Page 172-3 of the Draft EIS it states that:<br><br>> Alternative 2 would encourage a walkable, compact, and mixed-use style of development in the most parts of the city compared to the No Action Alternative and Alternative 1. Therefore, Alternative 2 would be the most likely to shift vehicle trips to zero-emission modes, facilitate shorter vehicle trips, and support further reductions of air pollutant and GHG emissions.<br><br>Because of this I encourage the city to adopt alternative #2. I would add that I live in the Southcliff neighborhood and frequently walk to the Safeway at Mill Plain & Andresen. However, because I avoid the most dangerous parts of Mill Plain this walk is 2.8mi round trip for me. I welcome the day that we have more facilities in Southcliff and it doesn't take me an hour to walk to the store and back.<br><br>I also appreciate the manner in which Alternative 2 clusters higher density developments along our BRT lines. I think that every single BRT stop should be a hub for dense mixed use development, especially the stops at Brandt Rd and Devine Rd." | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 304 | "Our names are Dave and Beth Christensen. We have lived in Southcliff since 1993. The proposed plans for our neighbor and adjacent areas are completely destructive to the 110ssence of our community. We are opposed to the proposed zoning changes. Southcliff is a historic mid-century modern neighborhood that must be reserved as is and not destroyed by the Cityjust to make room for people who might move here by 1945.<br><br>We moved to Southcliff for the quiet streets and beautiful trees.<br><br>Proposed changes would destroy the essence of our community. Tall buildings, excessive street parking will replace beautiful landscapes and beautiful generation homes. This is unacceptable. Look elsewhere in your Heights plan for increases in "density improvements." | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 305 | I appreciate the concern for the natural environment incorporated in the proposed plans; it's essential to preserve trees and green spaces, as well as water quality. For the long-term vision, I prefer Option #2, which, by taking a longer view, prevents a potential hodge-podge of expansion from occurring in a piecemeal manner, which I believe will ultimately cost everyone more. | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 306 | "I am writing to share a professional observations on the Comprehensive Plan Update and its Draft Environmental Impact Statement (DEIS), with a focus on LEED for Neighborhood Development (LEED-ND) alignment, transportation-noise exposure along SR-14/SR-500, vacant land and growth, and the City's goal to expand urban tree canopy.<br><br>Executive summary<br><br>Under a conservative plan-level evaluation, the Update as drafted would likely achieve ~50–52 LEED-ND points (Silver). With targeted code and overlay updates, the City can credibly reach Gold (60–79). That would keep the goal of implementation across the city as seen in the high returns of the Vancouver Waterfront Redevelopment building requirement of LEED Gold.<br><br>The DEIS confirms persistent transportation noise exposure along SR-14/SR-500 (as well as I-5/I-205 and rail). A predictable, health-protective Noise Exposure Overlay will safeguard residents and reduce future retrofit costs.<br><br>The City's land-capacity model (VBLM) points substantial new housing capacity toward areas that currently have below-average canopy, which risks widening environmental inequity unless urban forestry performance is made enforceable. | Comment noted. Many of the suggested actions are included in the Comprehensive Plan, Code or other City policy documents. Refer to the Noise section of Final EIS Chapter 3 and Plants and Animals section of Final EIS Chapter 4 for more information on the potential impacts to these topic areas, as well as proposed measures to address impacts. |

|---|---|---|
| | If Vancouver aspires to double canopy from ~19–20% toward ~38–40% over time, the Comprehensive Plan should translate goals into clear standards, funding, and maintenance aligned with growth areas.<br><br>I have attached a LEED-ND Plan scorecard, a one-page "Gold Pathway" with an implementation Gantt, and noise value-uplift tables that quantify near-term benefits for homes along major corridors when noise is reduced.<br><br>Findings<br><br>LEED-ND alignment (Plan level)<br><br>Strengths: Centers & corridors strategy; compact, mixed-use growth; active transportation emphasis; open-space and stormwater protection; parcel-level land-capacity analysis.<br><br>Gap to Gold: Many LEED-ND credits require binding standards (not just policy intent). The current draft doesn't yet codify performance thresholds for parking/TDM, green infrastructure volumes, green-building certification, tree-canopy delivery, or design requirements in noise-exposed areas.<br><br>Estimated score today: ~50–52 points (Silver).<br><br>Path to Gold: Adopt a short set of code-level levers (listed below) that convert plan language into measurable outcomes at entitlement.<br><br>2) Transportation noise — SR-14 / SR-500 Residential Neighborhoods<br><br>The DEIS' noise mapping identifies high exposure near SR-14/SR-500 and other corridors. Allowing additional housing in these bands without predictable mitigation invites health, livability, and economic costs.<br><br>Using standard "noise depreciation index" literature (home value change per 1 dB), reducing corridor noise yields tangible equity gains:<br><br>–3 dB (half the sound energy) → roughly +0.9% to +3.0% in home value.<br><br>–10 dB (half the perceived loudness) → roughly +3% to +10% in home value.<br><br>At ~$510,000 median values, that's ~+$4.6k to +$51k per home, depending on the scenario and local conditions.<br><br>In practical terms, working with DOT to study lowering speed of rail and road through a Noise Exposure Overlay that requires acoustical studies, façade STC/IIC minimums, and non-mechanical ventilation; so windows can be opened for cross ventilation for natural cooling. This a cost-effective, predictable approach that protects residents and ensures durable community support for infill and tax revenue.<br><br>3) Vacant land, capacity, and siting<br><br>The plan's use of the Vacant Buildable Lands Model (VBLM) is a strong foundation. It allows Vancouver to prioritize infill parcels that deliver transit access and services while avoiding critical constraints exactly the siting discipline LEED-ND favors.<br><br>4) Urban forestry — closing the canopy gap (and doubling over time)<br><br>Vancouver's measured canopy is ~19–20% (vs. the earlier goal of 28% by 2030). The DEIS shows most added housing capacity is in sub-average canopy tracts; absent enforceable standards, average canopy is likely to stagnate or decline.<br><br>To double canopy long-term, the City needs enforceable planting, soil-volume, species, and maintenance requirements tied to development, plus a Canopy Fund to plant where on-site delivery is impractical.<br><br>Recommendations "Gold Pathway"<br><br>Adopt a Noise Exposure Overlay for housing, schools, and childcare in mapped high-exposure bands (SR-14/SR-500, I-5/I-205, rail). Require acoustical studies to lower speed limits, minimum façade STC/IIC, and mechanical ventilation; pair with targeted off-site abatement where feasible. | |

|---|---|---|
| | the city. They complain their streets aren't safe for their kids to play because of the traffic and parking at nearby businesses.<br><br>If that happens to Southcliff, where would my daughter and the little friends she has made at the park ride their bikes and play?" | |
| 308 | "My name is Ryan Grimm. I live in the Southcliff neighborhood at [address].<br><br>I strongly oppose the zoning changes to Southcliff in Alternative 1 and Alternative 2 of the Draft EIS.<br><br>As background, my family relocated to Washington state from Asia in 2021. Working remotely, we had many potential communities in the state to choose from.<br><br>We chose Vancouver over Camas and many others primarily because the Southcliff neighborhood offered a unique combination of nature, with its beautiful, mature trees; quiet, safe streets for our kids to play in; and close proximity to many urban attractions, all just a short car, bus or bike ride away.<br><br>Learning about the Southcliff restrictive covenants and the Tower Plaza redevelopment area reassured us our neighborhood would maintain its special character while the city could continue to grow and thrive around us.<br><br>That would all be threatened if the development encouraged in Alternatives 1 or 2 took place.<br><br>Many of the mature trees we love in the neighborhood would have to be cut down to build apartment or commercial buildings along Oregon Drive. My wife and I both cried when we lost a 75-foot spruce tree in our yard during a 2022 winter storm. We replanted with a ponderosa pine and a giant sequioa, but such large evergreens (which Vancouver is rightly famous for) couldn't be planted among the dense new development contemplated in Alternatives 1 and 2.<br><br>The quiet streets my daughter rides her tricycle through would be overwhelmed with hundreds of cars from the new development. Because there are no sidewalks in the neighborhood, it would no longer be safe for her to ride to the Southcliff park.<br><br>The Tower Plaza redevelopment area already contemplates significant new residential and commercial construction, including much needed affordable housing. My family welcomes that redevelopment and is prepared to share the burden of the dramatically increased traffic congestion and pollution it will bring to Southcliff and other surrounding neighborhoods. If further development is required in our immediate vicinity, please concentrate it in Tower Plaza, which currently contemplates even lower building heights than Alternative 2 would allow in Southcliff." | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 309 | "I like the higher density of Alternative 2 and the increased Regional Centers, but I don't think a "one size fits all" solution should be applied to all neighborhoods equally along the transit lines.<br><br>I live in the Southcliff neighborhood and feel we may get a double whammy of noise and congestion with both high density planned along the north side of MillPlain and the Heights District Development being implemented at the same time." | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 310 | "After review of your Comprehensive Plan for 2045 Draft Environmental Impact Statement, the great influence of UN Agenda 2030, World Economic Forcum and leftist Diversity, Equity and Inclusion precepts have on your Vancouver 2045 plan is readily apparent. These influences are fundamentally un-American and anti-human, intended to implement control schemes over humanity to extract and funnel yet more power, money and control upward from the masses into the hands of the so-called elites of our world, the masterminds who think they know best how the rest of humanity should live. It's sad, but apparently these masterminds exist at all levels, global, national, state and local, as evidenced in your current operations and 2045 plan, with centralized, collectivist, top-down mandated schemes for utopian dreams.<br><br>Ascribing the driving force to reduce the human footprint on "mother earth" to our putative overlords in Olympia, you justify the heavy-handed, downward-directed planning with the usual totalitarian excuse, "we were just following orders." But it's clear you are part and parcel of this effort to constrain your citizens, and are hostile to their reasonable concerns. You steamroll right over the citizens of the city and their concerns and do what your darn well please to implement your utopian plans. | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |

|---|---|---|
| | Repeated instances of unwanted, unasked for top-down initiatives from the city reveal your true colors, like in creating the Vine network with bus stops in traffic lanes, not off to the side, a vine that is choking the flow of personal vehicles of conveyance as well as creating safety hazards, especially at stops near major intersections. Or consider your plans to destroy established neighborhoods and drive residents out of their single-family homes in order to create high-density mixed used rabbit hutches along both sides of Mill Plan west of the Tower Mall project. Or your demolition of habitability around the city, approving any and every bid to build row houses or apartment complexes in neighborhoods with no apparent concern for saturation of infrastructure and environmental impact on the existing community. Even the urban flora and fauna are suffering from your reckless concentrations of concrete. Or consider your ongoing campaign to narrow public streets for personal operated vehicle access on East Fourth Plain Blvd, on Fort Vancouver Way, on SE 34th Street and your latest target, SE McGillivray Blvd. These last two roads are perhaps the most ludicrous impositions, and oxymoronic given the recent expansion of the number of lanes on State Highway 14 between SE 164th Avenue and I-205 into which these streets feed and receive traffic.<br><br>That you base these plans for increasing concentration of humanity on requirements to accommodate projected population growth in Vancouver makes it questionable as well. I believe these various estimates of population growth are fallacious because they require an undesired, unnecessary, sustained level of immigration to attain. And you seem to make no difference between legal and illegal in your calculations, even as the present administration is significantly reducing the number of illegal aliens in this country. Without increased population numbers, your plan is inappropriate and not required.<br><br>In short, your leftist, globalist, totalitarian values are not welcome here in Vancouver, USA. We don't want to lose the quality of life we enjoy to become a bunch of high-density lab rats penned up in 15-minute cell blocks, exploited by the "you will own nothing and like it" attitude of masterminds, denied the freedom of movement that is our birthright and heritage in these United States. Your 2045 plan should be utterly, completely rejected. As should be the politicians and bureaucrats who came up with this drivel." | |
| 311 | "I am writing to voice my concerns and strong opposition to the proposed re-zoning of Vancouver's Southcliff neighborhood that is included in "Alternative 1" and "Alternative 2" of the Draft EIS Statement for Vancouver's Comprehensive Plan 2045. I have been a resident of the Southcliff neighborhood for over 9 years, and the proposed re-zoning of the neighborhood would negatively impact Southcliff, its residents, and the city of Vancouver.<br><br>My husband and I chose to live in Southcliff primarily because it is an established neighborhood with historical significance and because we appreciated its current, established planning that allows for low congestion, public safety, and quiet. Re-zoning Southcliff to allow for Low-Scale, Medium-Scale and/or Mixed-Use development anywhere in the neighborhood would destroy the neighborhood's character and contradict the established restrictive covenants that have been in effect in the area since the 1950s. As early as the 1950s, restrictive covenants for this neighborhood limited development to single-family, residential homes and limited building heights to a maximum of two stories. These covenants are still in effect and have been reinforced by Southcliff's 2001 Neighborhood Action plan. Any Low-Scale, Medium-Scale and/or Mixed-Use development would directly contradict this long-established neighborhood planning guidance.<br><br>The proposed re-zoning would also have a direct negative impact on my family. As the mother of a small toddler who is just learning to walk, I want to raise my child in a neighborhood where it is safe for her to play outside as she grows and where she can see greenery during our neighborhood walks. If the lots abutting Mill Plain are re-zoned to Mixed-Use, my child and I would be looking at concrete, businesses, and parking lots during our neighborhood walks instead of trees, squirrels, and flowers. The increased congestion (whether due to cars, bicycles, motorcyles/mopeds, or pedestrians) within the neighborhood as well as at neighborhood entry points would create safety concerns that would limit my child's ability to play outside in her own neighborhood, and it would also increase noise pollution and potentially increase exposure to vehicle emissions that could negatively impact my child's growth and development. Additionally, having 4-,6-, or 8-story apartment buildings overlooking our house and yard would shatter our family's privacy. My husband and I love our current home and would like to raise our child here, but I fear that such changes would likely result in our family leaving Southcliff.<br><br>I understand the City's need to plan for future growth, but instead of re-zoning parts of Southcliff (a relatively small neighborhood) for Low-Scale, Medium-Scale, and/or Mixed-Use development, I would urge the City instead to | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | consider concentrating commercial development and providing opportunities for more multi-family housing developments in the portion of the Mill Plain corridor just West of I-205. While that stretch of Mill Plain is already commercial, it is considerably under-developed, with a number of single family homes and/or trailers that have been converted to businesses. The density of commercial businesses in this area could be markedly increased. Also, a number of the commercial properties in that vicinity are currently in disrepair and/or house businesses that are not family-friendly (e.g. massage parlor, vape shop); currently, I do not feel safe visiting commercial businesses on that stretch of Mill Plain (either when alone or when my child is with me), and redevelopment of this area could potentially attract new residents and jobs to the area, supporting further growth of the City without making existing residents feel the need to leave.<br><br>Thank you for considering my comments." | |
| 312 | "SE 146th Ave. Can we get a speed monitor, speed-activated flash camera, signs and/or a speed bump, and a little road work starting at the roller-coaster-asphalt at the top corner of SE 146th Ave and 20th?<br><br>Instead of $$$$$pending a bunch of dough on your controversial plans for McGillivray, could you please just fix the crumbling neighborhood roads first?" | Comment noted. This comment is outside of the scope of the EIS. |
| 313 | "RE: Parcel [parcel number] ""SRHV, LLC""<br><br>Please consider rezoning to R50 as conceptually presented in (Draft) Pre-App correspondence with Jordan Ramis representatives in late 2022 into 2023. Rezoning to R50 harmonizes the surrounding variably zoned parcels, fosters retention of the existing grove of Oregon White Oaks, and catalyzes the City of Vancouver's "Rezone" ambitions to improve urban housing affordability while reducing environmental footprint via greater residential density near major arterials and bus routes." | Comment noted. The Preferred Alternative would zone this parcel as Heavy Industrial, maintaining the zone from current zoning. |
| 314 | I would like to see more parks and not taking over any existing parks for housing . In particular the Burnt Bridge Park should be left alone. Many people including myself use this park as is close to my neighborhood. You should not zone the corridor along 162nd Avenue where housing is present now to mixed as that would bring noise and take away from the the remaining neighborhood that has been established for years. I understand that you need more housing within the city limits but there should be consideration given to the surrounding neighborhood that is existing around that development and how a dense population would effect those single dwellings that have larger lots. There should be a compromise between lots that ae 2,000 square feet when it is presently zoned R9. I am speaking in particular the 7.3 acre property off NE 34th street and NE 152nd avenue with the 4 radio towers that is developed by Ginn Corp. There has goo to be a solution to affecting the existing neighborhoods so adversely. | Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 315 | "Concerns for Market Feasibility for Southcliff Neighborhood – 9/8/2025<br><br>This filing addresses the issue of commercial feasibility of high-density housing rezoning in the historical Southcliff neighborhood. Also please refer to my filing of 8/28/2025, final paragraph on Page 2 and the last paragraph on Page 3 of Attachment 2.<br><br>I am more convinced that the unique characteristics, from scientific, economic and financial standpoints, when accurately included in the City's EIS alternative rezoning models, will demonstrate that all of the City's current rezoning pro-forma model outcomes for the demand prototypes (City and State) for all three rezoning designations will indicate a very low probability of competitive commercial development.<br><br>This conclusion is based primarily on the unique scientific and historical characteristics of the Southcliff neighborhood (refer to my 8/27 and 8/28 filings) . Furthermore, inclusion of such characteristics would preclude the use of city "averages over a substantial range" of proforma model inputs to estimate commercial feasibility of such rezoning. Of the three current outcomes, two would require free land (RLV) and taxpayer subsidy when using this "city average" methodology (see Attachment 2 ECOnorthwest).<br><br>No information is available in the Attachment 2 for the range of any positive outcomes for land value of these 111 Southcliff lots. Model inputs can be manipulated to either increase revenue and/or decrease costs, in order to generate positive Development Value and Land Budget and derived Residual Land Value. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | I again request all relevant data used by ECOnorthwest or other City consultant(s) for the EIS regarding the analyses of the potential probability for competitive commercial development of rezoning for high-density housing in our neighborhood.<br><br>My interpretation of the Attachment 2 strongly indicates that even using "average city" inputs (not the Southcliff Neighborhood unique characteristics) for higher density housing, such development of the this neighborhood would lack both the demand scale and the income/cost repeatability to sustain long-term (10 years or greater ) economics needed to support the threshold financing (return of competitive debt and equity at market capitalization rates) and would increase the economic risk for institutional investors who are the likely investors for such high density affordable housing. Such risk would likely divert their funds to more competitive projects.<br><br>I would suggest that the City consider the transfer of any such higher density rezoning, including the State's Low-Density, wrongly mandated for this neighborhood, to alternative regional developments where both economic scale and long-term income/cost repeatability would be more sustainable than at Southcliff.<br><br>Such a transfer would greatly benefit the City's effort with the State's Low Density housing objectives with the least environmental impact mitigation costs (not fully offset by planned mitigation measures to other regional environments) with the least investment of taxpayer revenues related to this planned rezoning of the Southcliff neighborhood.<br><br>Conclusions<br><br>Southcliff neighborhood's specific capital and operating costs into the City's model equations to determine competitive Commercial Development feasibility would include:<br><br>1. Environmental remediation (e.g. tree canopy and bird habitats, others)<br><br>2. Surface and groundwater restoration and related soil stabilization (e.g. for upriver remediation of Columbia River salmon habitat.<br><br>3. Geologic hazards and related seismic instability (e.g. multi-story seismic design)<br><br>4. Historical preservation of unique Southcliff neighborhood<br><br>5. Ingress and egress vehicular and pedestrian safety<br><br>6. Any subsidies from taxpayers<br><br>These costs would certainly reduce rezoning development income generation and would reduce Land Budget Value (RLV) likely below the positive value needed for competitive financing feasibility, unless land is free and taxpayer-based subsidies are provided based on criteria used on Attachment 2." | |
| 316 | *Incomplete form, no comment received* | *N/A* |
| 317 | I live in South Cliff and I prefer Alternative 2 because I favor high density mixed use development. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 318 | Request reconsideration of the proposed zoning change. | Comment noted. |
| 319 | "City of Vancouver Planning Department<br><br>[address]<br><br>Vancouver WA 98660<br><br>Subject: I am the co-owner of parcel [parcel number], Kondor Express.<br><br>Dear Planning Department<br><br>I would like to ask that you reconsider the proposed rezoning to Regional Activity Center (RAC). We have been actively marketing this property for two years, and even under the current mixed zoning, buyer interest has been | Comment noted. The Preferred Alternative would zone this parcel as Medium Scale Neighborhood. |

|---|---|---|
| | limited. The proposed RAC designation, given the high-density, high-rise requirements, would further reduce the site's viability.<br><br>In addition, the property faces significant development challenges:<br><br>The extensive wetland area significantly limits usable floor space, and the unfavorable soil conditions make high-rise construction prohibitively expensive. In addition, the site is located away from a major road and currently has limited or no adequate access.<br><br>Given these constraints, we believe that zoning to R-22 or R-18, or maximum R-33, would better reflect the physical realities of the site and its market potential.<br><br>We thank you for your time and attention hope for your objective understanding.<br><br>Sincerely.<br><br>Ivan Yanyk [phone number]<br><br>[email address]" | |
| 320 | I think it's very important that we consider the climate impacts of all of the alternatives, and I appreciate the callout that Alternative 2 would be most likely to support further reductions of air pollutant and GHG emissions, as well as shifting vehicle trips to zero-emission modes. I think that is an important point that we should be more strongly emphasizing. I find it disappointing that in the executive summary, it calls out that overall emissions are higher for Alternative 2 than Alternative 1, but there is no mention of that potential for further reductions or of per-capita emissions. While the actual DEIS goes into more depth and explains the nuance, I believe too much of the nuance is lost in the executive summary. I also think that it is important to try to estimate, or at least provide a comparison, for per-capita or per-household GHG emissions for each of the alternatives. I believe that any reduction is housing capacity in Vancouver will likely lead to potential residents locating instead in less-dense areas surrounding the city, and that will likely lead to more emissions and more VMT than if they were able to live in Vancouver itself - I would love to see this kind of analysis included. | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS. |
| 321 | As a resident of Hudson's Bay neighborhood, I support Alternative 1. Opening up essentially the entire neighborhood to mixed-use would negatively impact the existing homeowners of the area in regards to noise, aesthetics and sense of community. I understand smart development of the Evergreen corridor to add more housing, however, the shear size of the multi-use district proposed in alternative 2 would completely destroy the quality of life for those who own homes in this area. With that said, it is my great fear that development in Hudson's Bay will not be regulated enough by the City to maintain the quality of life this area provides (walkability, safety, less traffic, quiet). I believe these qualities can be maintained during development, but at great care of the City to set limits on things like business working hours, setbacks, parking, clear noise restrictions, and so on. Please keep the multi-use development to areas on Grand, Evergreen or Mill Plain that do not directly impact the residents who have invested so much into this neighborhood. | Comment noted. The Preferred Alternative would zone Hudsons Bay as a mix of Mixed Use Neighborhood and Medium Scale Neighborhood.<br><br>Refer to the Aesthetics, Noise and Housing sections of Final EIS Chapter 3 for more information on the potential impacts to these topic areas, as well as proposed measures to address impacts.<br><br>Refer to Common Response #6: Vehicle Parking, Common Response #8: Housing Affordability/Options, Common Response #9: Homeownership Opportunities and Common Response #12 Neighborhood Character. |
| 322 | "I am excited for the upzoning but in order for this plan to be successful we need to discourage car ownership and usage in the Hough neighborhood. I worry that with more people living in the area, if nothing is done, more residential cars on top of the existing cut-through traffic will make it less pleasant to bike, walk, and live peacefully in the area without noisy cars polluting the air with smog and noise. I worry about my health living here with the constant car noise and pollution.<br><br>Please make road diets on Mill Plain, Fourth Plain, Kauffman, Lincoln, Franklin, and Columbia part of this plan! We need to discourage driving and encourage micro mobility in order to add housing and make it a better place to live.<br><br>Separately, we need to use this upzoning as an opportunity to force the owner of the property on Kauffman and Fourth Plain to sell to someone who will activate that land. It is a highly valuable parcel and it is incredibly unfortunate that we have a vacant ugly parking lot in the middle of an amazing place to be. How nice would it be to have a food truck park, venue, grocery story, anything other than that ramshackle building!<br><br>Please also provide trees for urban shade, it is needed. | Comment noted. The Preferred Alternative would zone the property on the NE corner of Kauffman Ave and Fourth Plain as Mixed Use.<br><br>Refer to Common Response #4: Vehicle Traffic Impacts. Refer to the Noise and Transportation sections of Final EIS Chapter 3 and the Air Quality, Greenhouse Gases and Climate; and Plants and Animals sections of Final EIS Chapter 4 for more information on the potential impacts to those topic areas, as well as proposed measures to address those impacts. |

|---|---|---|
| | Other than that the plan looks FANTASTIC. Thanks so much – you've done an excellent job communicating this." | |
| 323 | DO NOT ALTER THE EIS PLAN FOR THE VILLAGE AT FISHER'S LANDING. ALREADY ONE CANNOT GET PROPERTIES LIKE OURS CLOSE IN WITH EASY ACCESS TO HIGHWAY 14 BECAUSE OF THE WAY THE CITY LIMITED LOT SIZES AND PLANS. PLEASE KEEP THESE HOUSES AS THEY ARE, CHANGING IT WILL MAKE THE NEIGHBORHOOD LESS SAFE, DECREASE PROPERTY VALUES, AND DISPLACE LONG TERM RESIDENTS OF THE VILLAGE AT FISHER'S LANDING AREA. IT WILL ALSO BE GOVERNMENT OVERREACH TO THE FULLEST. YOU CAN'T TAKE OUR FREEDOM AWAY TO ENJOY AND LIVE ON THE PROPERTY WE PURCHASED LONG AGO. THERE IS ALREADY TOO MUCH HIGH DENSITY HOUSING IN THIS AREA, AND YOU DIDN'T LISTEN TO RESIDENTS ABOUT TAKING TRAVEL LANES AWAY FROM SE 34TH ST, WHICH YOU DID ANYWAY. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 324 | Leave the Land Use Map for the Village at Fisher's Landing the same. If you change the character of the neighborhood, you will only be making the neighborhood more unsafe, displacing long term residents, change and remove old growth trees and plants, and hurt property values. Vancouver needs more single family residences, especially since city annexation made the lots smaller and changed the character of the neighborhoods. The Village is just right as it is, and putting in more mixed use and higher density housing will only make the congestion on 164th worse due to the convergence of more people trying to get to the same access point to Hwy 14th. You already annexed the neighborhood from Camas, do not go further and ruin the character of the neighborhood. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 325 | "My comments are regarding the potential rezoning options for The Village at Fishers Landing. As a resident of the neighborhood since 1991, I urge no change in the current zoning. I am concerned about the impact of traffic, congestion, and the impact of long-term residents losing the character of the neighborhood.<br><br>But I have little confidence the Vancouver City Council will change direction based on the very frustrating experience when giving feedback about closing lanes on 34th Street. At every meeting I attended for that project, 100% of the feedback was vehemently against the proposal. But none of the feedback was considered, and the lanes were closed anyway.<br><br>For this current proposal, if more development is desired near the Fishers Landing Transit Center, it should be done north and west of the transit center and/or along 39th Street. When I moved to The Village in 1991, 39th Street was open to 164th Avenue. 39th Street was easily accessible when exiting Highway 14 onto 164th Avenue. Reopening 39th Street would be a better option than rezoning The Village." | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |
| 326 | "To Our Vancouver,<br><br>I'm writing to you as a concerned citizen and resident of the area to be affected by the new rezoning happening in Vancouver. While I understand that Vancouver is in need of affordable housing - and rezoning plays an important role in that - there are many aspects of rezoning that will impart long-term damage on our city.<br><br>My partner and I bought a house in the Central Park neighborhood last year and a major factor in why we purchased a home in Central Park is the location. Downtown Vancouver has a historic charm that is now at risk due to rezoning requirements.<br><br>In our neighborhood, we have a lot of long-time residents and seniors who have lived here for decades. This new redistricting policy opens up the possibility for old, well-built homes and properties to be destroyed and redeveloped - completely changing the landscape of one of Vancouver's historic neighborhoods. I think it's important to note that once these buildings are torn down and redeveloped, there is no bringing them back. The motto of our Central Park neighborhood association is "open space, a heritage worth preserving." Vancouver has a heritage worth preserving - and it resides in the historic buildings and neighborhoods that surround downtown.<br><br>The population of Vancouver will continue to grow. Rather than destroying older neighborhoods, I believe our city should invest in making Vancouver more accessible for different modes of transportation to make the amenities of downtown more available to a wider radius of the population, particularly to those who are not within walking distance to downtown Vancouver. There's plenty of space for mixed-use zones throughout Vancouver that could be used to solve our housing crisis; my fear is that the rezoning of the Central Park neighborhood and other surrounding | Comment noted. The Preferred Alternative would zone Central Park as a mix of Mixed Use Neighborhood and Medium Scale Neighborhood.<br><br>Refer to the Aesthetics and Housing sections of Final EIS Chapter 3 for more information on the potential impacts to these topic areas, as well as proposed measures to address impacts.<br><br>Refer to Common Response #8: Housing Affordability/Options and Common Response #12 Neighborhood Character. |

| ID | Full comment | Response |
|---|---|---|
| | historic neighborhoods would be a temporary solution for the larger issue. The density of population you're proposing in these neighborhoods makes up a fairly small portion of the total housing needed.<br><br>With both Alternates 1 and 2, we are being rezoned as either mid-scale or mid-scale/mixed use. I would implore you to consider a low-scale designation for Central Park. This could completely reshape the neighborhood and eliminate that environment that brings people in to begin with. I can acknowledge that the higher density designation in our neighborhood may be necessary in the future, but preserving these homes and communities for as long as possible and opening up other alternatives in the meantime will allow the beauty of our city to shine. With the low-scale designation, it still allows for an increase in density with ADUs and smaller developments to be constructed.<br><br>Another concern with Alternative 1 is the rezoning of the Mill Plain corridor between Fort Vancouver Way and E Reserve St. Historically, as part of Fort Vancouver, I again hesitate with a mixed use designation in this space. Green space is an important aspect of good city planning and fear eliminating this space will take away from the beauty of Vancouver<br><br>I completely empathize with the position you are in and the need to accommodate our growing population. My hope is that we can maintain the charm and quaintness that makes Vancouver special and maintain, at least for the time being, some of these neighborhoods.<br><br>Thank you." | |
| 327 | "I'd like to advocate for the use of Alternative 1 over Alternative 2 in the Central Park Neighborhood. Given its historic nature, it's my experience that many families in the area, myself included, would like to preserve the homes in the neighborhood. My biggest concern with Alternative 2 is the likelihood for gentrification that would push many families out due to increased prices and larger corporations buying land along Grand and Mill Plain.<br><br>Thanks for your consideration and for allowing this opportunity for feedback!" | Comment noted. The Preferred Alternative would zone Central Park as a mix of Mixed Use Neighborhood and Medium Scale Neighborhood.<br><br>Refer to the Aesthetics and Housing sections of Final EIS Chapter 3 for more information on the potential impacts to these topic areas, as well as proposed measures to address impacts.<br><br>Refer to Common Response #8: Housing Affordability/Options and Common Response #12 Neighborhood Character. |
| 328 | "My name is John Evans and I live in the Southcliff neighborhood.<br><br>I have reviewed the zoning change proposals being put forth in the City's Draft EIS.<br><br>I am against the adoption of both Alternative 1 and Alternative 2 as currently proposed.<br><br>Taking one look at Millplain just east of my neighborhood" | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| 329 | "Subject: Comment on Draft EIS & Zoning – Protect Southcliff's Scale, Access, and Safety<br><br>Dear Planning Commission, City Council, and Staff,<br><br>My name is Jaynel Gilmore, and I am a recent graduate first-time homeowner at [address], Vancouver, WA 98661. I bought my home last year from the original owner, Alan Leland, who raised his family here beginning in the 1960s. I am a single mom with three school-age children—boy/girl twins Andrew and Vivian, and my youngest, Stetson. After saving for eight years, through soaring housing prices and interest rates, I was finally able to purchase this home. It is my family's version of the American dream: a safe place where my kids can walk, play, and grow up in a community that feels like home.<br><br>I fully recognize the City's responsibility to plan for significant growth through 2045. Vancouver must make space for new residents, housing, and jobs. However, the Draft EIS "Action Alternatives" would impose high-density, mixed-use, and medium-scale zoning at the very entrance of Southcliff—specifically along Mill Plain and inward toward Oregon Drive—directly across from my home. This would drastically and permanently alter both daily life for my family and the historic character of our neighborhood.<br><br>Specific Impacts to My Family and Home<br><br>•Safety for children: My kids walk and bike on our quiet streets and play in the neighborhood park. With only three dead-end entrances and no new access from Mill Plain, funneling additional cars, delivery trucks, and rideshare traffic through these points would create dangerous conditions for children and pedestrians. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | •Privacy and livability: Allowing 3–8 story mixed-use buildings at the edge of Willamette Drive would overlook my home, remove privacy from our yard, and add noise, light, and congestion where quiet residential living has always existed.<br><br>•Financial hardship: As a single parent, I put everything into my 20% down payment. I am stretched by my mortgage, property taxes, and raising my children with the rising cost of living, and tuition to nearby St Joseph Catholic School. Rezoning the SouthCliff neighborhood reduces home values or burdens us with parking and traffic problems risks undermining the fragile security I've worked years to achieve.<br><br>•Environmental quality: Mature tree canopy and recent stormwater upgrades are vital to this neighborhood's health. Large new buildings, pavement, and runoff will undo those investments, harming air quality, shade, and water management.<br><br>Conflict With Existing Guidance<br><br>Southcliff's restrictive covenants (since 1954) and the 2001 Neighborhood Action Plan both protect its single-family character and two-story scale. Allowing taller, mixed-use development at our entries ignores decades of policy and community input. It also contradicts the City's own design for the Town Plaza/Heights area, where the greatest height and density are supposed to be focused.<br><br>Constructive Alternatives<br><br>I urge the City to:<br><br>1.Concentrate height and commercial activity in the Town Plaza Regional Activity Center, where infrastructure already supports it.<br><br>2.Prioritize redevelopment of existing commercial parcels along Mill Plain instead of rezoning Southcliff's residential blocks. Incentives like fee reductions and faster permit reviews could encourage developers to revitalize these areas.<br><br>3.Require traffic, parking, emergency access, and stormwater analyses specific to Southcliff before considering any rezoning.<br><br>My Request<br><br>Please select a Preferred Alternative that keeps Southcliff's residential blocks low-scale and removes the proposed mixed-use and medium-scale zoning at our entries on Mill Plain. Protecting this neighborhood's historic, family-friendly character does not prevent growth—it simply directs it to places better suited for large-scale development.<br><br>Southcliff is not just where I live—it's the community I chose as a safe haven to raise my children, after years of sacrifice. I am committed to this neighborhood, and I ask that the City commit to preserving its scale, safety, and livability for families like mine.<br><br>Thank you for your service and for considering my comments.<br><br>Sincerely,<br><br>Jaynel Gilmore<br><br>[address]<br><br>Vancouver, WA 98661<br><br>[email address]<br><br>[phone number]" | |
| 330 | "August 14, 2045<br><br>Dear City Planners,<br><br>RE: Our Future 2045 Plan Review | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |

|---|---|---|
| | I am a long-time resident of the Village at Fishers Landing. My comments below will walk you through the key overlooked points and solutions I see with the City of Vancouver [aka the City] "Our Future 2045 Plan" zoning regulations and private covenants of our neighborhood and probably several other neighborhoods, when it comes to mixed-use housing development.<br><br>1. The Fundamental Conflict<br><br>The core issue stems from two different regulatory systems operating simultaneously. The City's municipal zoning represents public policy goals - we want walkable communities, reduced car dependency, and efficient land use. Meanwhile, private covenants reflect the original intentions of property developers, homeowners and neighborhood associations, often prioritizing property values and maintaining specific neighborhood character.<br><br>2. Where These Systems Clash<br><br>•Timing and Intent Misalignment: Many residential covenants were written decades ago when single-family development was the norm. The 2045 Plan zoning updates promote mixed-use density, but it is not a simply exercise to override existing legal agreements between private parties. We've all seen neighborhoods where the city rezones for mixed-use, but century-old covenants still prohibit any commercial activity particularly in Portland, and the result is a patchwork of residences and services that never developed as planned.<br><br>•Scale of Impact: Zoning changes affect broad areas and serve regional and state planning goals. Covenants operate at the subdivision level with hyperlocal concerns. A corridor might need transit-oriented development from a regional perspective, but individual covenant areas within that corridor that already exist, very possibly, will resist the commercial components essential to true mixed-use success.<br><br>3. Practical Planning Challenges<br><br>•Development Uncertainty: Developers and property owners will face a maze of approvals. Even with supportive zoning, covenant restrictions can kill projects or force expensive legal challenges. This uncertainty increases development costs and reduces the feasibility of innovative housing types that are in the City's plan.<br><br>•Piecemeal Development Patterns: The City will end up with fragmented mixed-use districts. Properties without restrictive covenants develop as intended, while covenant-protected areas remain single-family, creating an inefficient patchwork that undermines walkability and transit viability.<br><br>•Community Engagement Complications: The City's public planning processes become more complex when the residents feel their private property agreements should supersede public zoning decisions. This will create tension in community meetings and can polarize voters and neighborhoods. The current 2045 Plan has the potential of sending many, many neighborhoods into litigation.<br><br>4. Strategic Approaches<br><br>•Proactive Covenant Analysis and Additions:<br><br>oRealistic Zoning Categories: The City can conduct covenant research early in rezoning processes. Understanding existing restrictions will help craft more realistic zoning categories and identify where public-private partnerships might help resolve conflicts.<br><br>oProhibited Small Businesses: Include in the City's plan prohibited small business and mixed-use buildings that could be problematic and impact the surrounding residents. Nuisance small businesses like auto-repair shops, marijuana depots, bars, adult entertainment, pool halls, tire shops, all-night restaurants, pawn shops, tattoo parlors and other businesses that can create traffic and parking problems, plus physical and emotional disturbances for the residents in family-friendly neighborhoods. So far in the "2045 Plan" I have not seen any protections or character preservation for existing neighborhoods.<br><br>oAesthetic Preservation: Include in the City's plan design standard that addresses the aesthetic concerns of our neighborhoods | |

|---|---|---|
| | •Proactive Geographical Analysis: There are several points of contention with "Alternative 1" and "Alternative 2" that run along the eastside of SE 164th Avenue between Highway 14 and SE 34th Street. The City can conduct a simple visual survey to evaluate where the planned mixed-use areas will find:<br>o physical barriers, like sound walls and access points<br>o already existing services and small business with easy access for the neighborhood before rezoning,<br>o alternative undeveloped land on the westside of SE 164th Avenue that could fulfill the mixed-use requirement<br>o lack of infrastructure to support the rezoning plan<br>If the City and the State of Washington are to be successful in the mixed-use development, it will require both regulatory alignment and community buy-in. This often means longer timelines and more creative solutions, but the alternative - ignoring either zoning goals or covenant rights - typically leads to litigation and stalled development that serves no one's interests. In my opinion, a successful plan will be one that the citizens feel confident that the City listens, designs a logical approach, includes nuisance protections, and is considerate of the character of the existing neighborhoods.<br>My ask is:<br>•The eastside of SE 164th Avenue between Highway 14 and SE 34th Street, and The Village at Fishers Landing be designated as a Low or Medium Scale Neighborhood for all the reasons stated above [Proactive Geographical Analysis].<br>•Please remove the "RED" Commercial Zone on the maps for the eastside of SE 164th Avenue between Highway 14 and SE 34th Street.<br>•If you move forward with Alternative 1 or 2 or No Action, please add a provision to prohibit nuisance small businesses to protect my family-friendly neighbors in The Village at Fishers Landing from future conflicts with the City's 2045 Plan.<br>I welcome your feedback.<br>Sincerely,<br>Jolene<br>Jolene George<br>[address]<br>Vancouver, WA 98683<br>[email address]" | |
| A | "When a neighborhood is re-designated from Low Scale to Medium Scale, what does that mean for single-family housing in that neighborhood, e.g. the northern half of east and west Cascade Park in Plan B?<br>Will Medium Scale allow for replacement of existing single-family houses with single-family houses or will replacements of single-family houses only be allowed with townhomes, rowhouses, multifamily buildings, and other higher occupancy buildings?<br>Will new construction or replacement of existing single-family houses with cafes, restaurants, small offices, and retail buildings be allowed be allowed in Medium Scale?<br>For Plan B, has there been a traffic impact analysis conducted for the area around the I-205 and Mill Plan intersection? What plans are being addressed for Plan B to mitigate traffic congestion at and near that Mill Plain intersection?<br>Sincerely, | Comment noted. The Preferred Alternative would zone Cascade Park as a mix of Low Scale Neighborhood, Medium Scale Neighborhood, and Mixed Use Neighborhood along Mill Plain Blvd and Regional Activity Center along SE 164th Ave.<br>Medium Scale Neighborhood allows a broad range of single, middle, and multifamily housing types, with a maximum building height of 75 feet and allows a slightly increased range of neighborhood commercial uses compared to the low scale neighborhood.<br>Refer to Common Response #4 Vehicle Traffic Impacts. |

|---|---|---|
| | I would like to talk to someone about the traffic on my road. It has been changed to heavy industrial and over the last five years, unliveable for me. My condo is the one most affected by the industrial complex ten feet from my bedroom window.<br><br>After years of no sleep watching them work 247 in unsafe conditions. Letting them take and block the road for busses and emergency responders, crashing into the sound wall that is too low, killing two of my pets, we are looking into legal action against the business owner as well as the city of Vancouver's zoning and traffic departments.<br><br>I have requested and encouraged the employee or committee who encourages this to come to my home and visit , see for yourselves what I live with, and then explain to me why I should accept that this is just the way it is: business and trucks and commerce have to be next to lower income residents because they only work in warehouses anyway, and should be grateful they are allowed housing at all.<br><br>I have to call 311 sometimes 15 times per day. Seven days a week, 24 hours a day. but they never come<br><br>Everyone at the city says I have to call 311. The police are asking us to stop calling. So what do we do? I have had a semi almost crash into my kitchen multiple times. The vibration and impact has destroyed the main line water to the sprinklers . I cannot go into my back yard because it is so loud at all times, banging, clanging, beeping, shouting, honking, and shaking the foundation of my home so bad I have cracks around my windows.<br><br>Am I really to accept that since I do not have the income for a SFH that this is what I deserve and will live with forever? How long until you take the condos and tear them down to make the warehouse business happy? Because a tiny two lane road, with vehicles parked on both sides the entire street, cannot handle the amount of semi truck traffic we have<br><br>The neighborhood next to me has ONE way in and out. They are blocked multiple times a day from leaving or coming home. School busses, police, ambulances, garbage trucks cannot get through and sometimes just leave. The intersection next to rocket delivery has so many trucks, we cannot see to leave our complex and have at least three accidents a week<br><br>It's only a matter of time before it's not two cars, but a car and a small child. They have no where to play or ride bikes on this road. Nothing. So they ride on the sidewalk and in the warehouse parking lots. I watched a child zoom out from behind the disgusting smelly garbage dumpster I have to see and smell every day and almost was hit by a semi going the wrong way at 11 pm at night.<br><br>Living this way is not sustainable and I'm at the end of my rope and have reached out to an attorney . I cannot sell. No one will buy this specific unit because of the traffic and noise. My pets cannot go on the porch: they have already killed two of my cats. I can't risk the last two, so they are confined now.<br><br>The sound wall from the early 90s needs to be replaced and upgraded. I don't want these men staring at me while I sleep any more. The wall is falling apart anyway and dangerous, I had a huge chunk of concrete fall on me two weeks ago when the main line burst.<br><br>This neeee to be addressed and not pushed to the side anymore. Before rocket delivery moved in, it was fine. Just box trucks and the occasional semi. Now it's 50 plus semi trucks 24 hours a day.<br><br>I don't know what they are doing at night in the dark but I don't think it's legal in any way. Is there any actual human that can help address this and avoid litigation?<br><br>Can anyone look at the photos provided and tell me why I should accept this?<br><br>Traci Ellis " | |
| E | "Hello!<br><br>Thank you for all the work you're doing on Our Vancouver. It's refreshing to see all of the effort you've put into community input. I teach History of Housing Inequality at WSU Vancouver. In that class, the students learn that essentially the crux of housing inequality has been our over reliance on single-family homes over the past century. | Comment noted. Thank you for reaching out. The City appreciated the opportunity to speak with your students last fall 2025 about the Comprehensive Plan Update, planning, and housing.. |

| ID | Full comment | Response |
|---|---|---|
| | I'm wondering if there might be a way for us to collaborate on an activity to have the students think about possible solutions to historic housing inequality in Vancouver through analysis of the two plan alternatives. Even an in-class presentation could be really cool.<br><br>Thank you!<br><br>Shiloh" | |
| F | "Hello City of Vancouver Planners and Leaders,<br><br>As a Vancouver resident and nearby neighbor (approx.. 136th and McGillivray) to the new Holman Lexus new construction on Mill Plain Blvd + 136th, I would like to express my sadness and concern of the scale of this concrete development within my neighborhood.<br><br>I understand that this lot is zoned for Mixed Use but would like an opportunity to view the plans and discuss why the city believes it is an acceptable design to allow a 4+ story concrete parking/ vehicular storage structure and bldg totaling over 225,000sf of structure so close to street and pedestrian view?<br><br>Is it the City's long range plan for Mill Plain corridor to be urbanized with unfettered bldg sizes and heights and uses with only 15% planting overage?<br><br>What does Mixed-Use zoning allow and disallow? What about the residents that utilize this main roadway for their daily commute to and from home? This will set a precedent for other design and will change the expectation for those that live here.<br><br>Based on the 15% minimum required landscaping and the architect LRS frontage rendering, the approval for this design shows a heavy disparity in thoughtful design in regards to the residences that live here.<br><br>This email is not intended to hold back any economical advances and development for the City of Vancouver. My issues are as listed below and I'd like to know how the city to fix this:<br><br>1. The structure is too tall and close to the street – too urban. Setting it back further is no longer an option, therefore please provide additional architectural articulation to step down and soften the structure to a human scale. The rendering shows expansive amounts of glass, concrete and steel – which does not fit the surrounding architecture and pace.<br><br>2. What is the lighting design for the site and interior of bldg? Will this relatively match the existing lighting conditions of the current surroundings or brighter? I don't want this kind of light pollution here.<br><br>3. It may help to increase the planting density via more tall trees screening where adjacent to primary public view, that includes roadways. Based on the rendering snipped from LRS website, the few trees do very little to screen the 70' + tall structure. No other building in proximity is as tall and this close to the street. CTC area is thoughtfully planned and still reflects focus on greenscape campus and park-like appeal. Please help correct this.<br><br>Feel free to call me back and discuss. I would make the time to meet with any of you to discuss why and how the city will this.<br><br>Thank you,<br><br>Linda Huynh<br><br>[phone number]" | Comment noted. Refer to Common Response #3 Car Dealerships.<br><br>Mixed use zoning allows a broad range of housing, commercial, and civic/institutional use types, with a maximum building height of 110 feet.<br><br>Refer to the Aesthetics, Noise and Transportation sections of Final EIS Chapter 3 and the Air Quality, Greenhouse Gases and Climate; and Plants and Animals sections of Final EIS Chapter 4 for more information on the potential impacts to those topic areas, as well as proposed measures to address those impacts.<br><br>Refer to the draft Code updates, available on BeHeard Our Vancouver, for more information on building heights, build setbacks, lighting design and landscaping. |
| G | "In light of my comments (attached), please place a moratorium on car dealerships near 136th and Mill Plain Blvd.<br><br>Please preserve this neighborhood from further industrial development.<br><br>Thank you,<br><br>Jean M. Avery<br><br>[address] | Comment noted. Refer to Common Response #3 Car Dealerships. |

| I | "I need a link to the zoning map alternative changes ya'll want to make, it seems to be missing now from the site. Both alternatives totally overtake my home and turn it heavy industrial, i need that map so I can try and figure out a path to walk to i205, since that's going to be the only way we will be able to leave our complex when you authorize heavy industrial in our faces. Thanks so much, won't be able to sell my condo, can't even INSURE it because of you! At least when i lose my condo, I won't be here to see the semi trucks descend and ruin the whole street.<br>So the link please, to the map of how you plan to destroy my future, so I can show my neighbors what you have planned for us low income losers. Unbelievable. Been trying to attend meetings and get help for 9 months, and it was all for nothing, wasn't it? You already started allowing heavy industry when you left Amazon sublet the tiny warehouse next to me, didn't you? There was never a chance for us residents, was there? We never had a chance in making a change, did we?<br>So just the link, my neighbors might be able to sell before their banks figure it out and rip the mortgage financing away.<br>Thanks for ruining any future i may have had, that's what I want my headstone to read. Because I can't fight the city, amazon, you just take what you want anyway. I give up, i'll leave the condo to the city, you wanted it that bad, i;ll deed it to you when I take my walk on 205 smh" | Please refer to the comment response to comment 39. |
| J | "Hello,<br>I recently moved to an unincorporated area in the Vancouver UGA.<br>I've been reading about the possibility, long-term blueprint (if not specific plan) and mechanisms for annexation (e.g. the ""Vancouver Urban Growth Area Annexation Blueprint- 2007 update"" and on your website).<br>How can I determine whether there are any specific plans or any ongoing process that could lead to my area being annexed to the city?<br>Thank you for your consideration,<br>Philippe Samama<br>[address], Vancouver WA 98682" | Comment noted. Your comment was reviewed and is outside the scope of the SEPA analysis for the Our Vancouver Comprehensive Plan Update.<br>Refer to the draft Comprehensive Plan on BeHeard Our Vancouver, chapter 10 Annexation for the vision, goals and policies related to annexation. |
| K | "As a resident of The Village at Fisher's Landing, I oppose both rezoning Alternatives 1 and 2 currently proposed for our neighborhood. I respectfully urge the City to preserve our current zoning in recognition of the area's established character, safety, and community integrity.<br>I believe that The village at Fisher's Landing is a gem of a neighborhood and is worth preserving as it is:<br>- The Village at Fisher's Landing offers my family and me privacy and personal space - thanks to generous setbacks, landscaping, and quiet streets. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | - We live at The Village at Fisher's Landing because it is a stable, long-term community - where many residents have lived for decades and neighbors know one another.<br><br>- It is important to me that The Village at Fisher's Landing remains a safe and family-friendly place - where children can play outside and residents feel secure in their homes.<br><br>- I enjoy and love living at The Village at Fisher's Landing because its streets are walkable and well-connected to parks and schools - including Fisher's Landing Elementary and nearby green spaces.<br><br>- I treasure the strong community identity that we have at The Village at Fisher's Landing - built through the decades of homeowner investment and neighborhood pride.<br><br>- The Village at Fisher's Landing is convenient because it is close to majro roads services and recreaiton - yet remains distinct form the high-density or commercial zones nearby.<br><br>- The Village at Fisher's Landing offers me peace, stress-free lifestyle and quiet - providing a calm retreat from city noise and high-traffic areas." | |
| L | "Hi Rebecca--<br><br>We've reviewed the comp plan alternatives and I have a few suggestions/comments. Am happy to put them in as official comment, too — but wanted to send them directly to you first and also am happy to discuss if needed.<br><br>• Consider making the Reserve, or at least the city-owned portions (Officers Row and West Barracks), Regional Activity Center designation instead of institutional/campus. Reason being that RAC supports a mix of civic, commercial, entertainment, and open space uses that promote daily community activity and complement downtown. Some of the uses we have now and also are considering (restaurants, shops, lodging), might require conditional use permits under the Institutional Campus designation, and be more cumbersome to execute as we align with city economic development goals.<br><br>• Consider reclassifying Police Admin building plot to Mixed-Use, to allow future by-right housing and commercial development<br><br>• We are more supportive of Alternative 1 overall, appreciating Memory/Mill Plain area and WSDOT parcel as mixed-use, giving more opportunity in the future for housing, commercial, etc.<br><br>• With regard to the city-owned properties on the Reserve, we are mainly looking to have zoning that supports the EIS statement about protecting and promoting Fort Vancouver and the Historic Reserve through inclusive programming, heritage-based economic development, and strong public investment — and want to be sure zoning changes don't make it harder to permit uses that support these goals.<br><br>Thanks!<br><br>-Temple" | Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>The Preferred Alternative would designate the Reserve area, including the Vancouver Police Administrative parcel as Institutional/Campus. The Mill Plain area would be zoned a mix of Mixed Use Neighborhood and Medium Scale neighborhood. |
| M | "FYI<br><br>I was uncomfortable submitting email into a big black box, so I am forwarding a copy of my CompPlan comments to a couple of names.<br><br>Kristian - you expressed an interest<br><br>Hailey - I trust you to make sure this finds itself in the correct hands<br><br>To that other addressee - whodat?<br><br>Hopefully this gets into the record before the deadline.<br><br>Thanks,<br><br>Steve | Comment noted. The Plants and Animals section of Chapter 4 of the Final EIS notes that implementation of proposed Comprehensive Plan policy measures would help to avoid, minimize, and mitigate potential impacts to plants and animals identified for the action alternatives.<br><br>The City of Vancouver 2022-2031 Parks, Recreation and Cultural Services Comprehensive Plan emphasizes the community and environmental health benefits of nature spaces and native species. This includes Goal 5.3 Incorporate native plant species in park and natural area designs and enhancements to support pollinator species within 25 percent of the planned landscaped area, and Goal 7.23 Develop and establish restorative native planting spaces that are pollinator friendly and support the realization of a carbon neutral community.<br><br>Many 2022-2031 Parks Plan goals have been incorporated into the Parks, Recreation and Cultural Services Element of the proposed updated Comprehensive Plan, including goals and policies support biodiversity, embedding pollinator habitat into public and private development, and incorporating native plans into parks |

|---|---|---|
| | 5 August 2025<br>ATTN: Meredith Herbst<br>City Hall<br>P.O. Box 1995<br>Vancouver, WA 98668<br>RE: CompPlan 2025<br>Dear Ms. Herbst,<br>Thank you for the opportunity to comment on the SEPA draft EIS document, aka the Comp Plan, 2045 for the City of Vancouver. I am most interested in Chapter 4: Natural Environment and am generally supportive of the provided discussion. However, it is the discussion I didn't see that prompts me to submit comments.<br>What concerns me, that I didn't see, was a discussion about invasive or noxious organisms and how the City can contribute to the control of these undesirable species. Invasive species are defined as plants, animals, insects, and pathogens that are introduced to an area and cause harm to the environment, economy, or society. Not all non-native species are invasive; they must also cause negative impacts to be classified as such.<br>Noxious weeds are specifically defined as any plant designated as injurious to public health, agriculture, recreation, wildlife or property. Weeds can be native or non-native, invasive on non-invasive, and noxious or not noxious. Legally, a noxious weed is any plant designated as injurious to public health, agriculture, recreation, wildlife or property. The Washington State Noxious Weed Control Board maintains the official list and classes of noxious weeds that landowners may be required to control.<br>Washington Governor Ferguson recently stated that "Invasive species and noxious weeds already are a big problem in Washington and species that have yet to reach our state could pose even greater challenges in the future. We all need to do our part to prevent the spread of invasive species." Examples of species not yet here include: Pomacea apple snails, several species of freshwater mussels, emerald ash borers, and creeping bellflower. A 2017 state study estimated that some species not yet in Washington, such as invasive freshwater mussels, would cost more than $100 million annually in damage and loss if they establish in the state.<br>While some species of invasive plant are prohibited from sale, transportation, and distribution within Washington State, others can still be found at nurseries, home improvement stores, and online retailers due to their ornamental value or perceived benefits. Examples of invasive plants you might encounter for sale in Washington are: Butterfly bush, garlic mustard, knotweeds, purple loosestrife, large and small periwinkle, pokeweed, and water chestnut. Washington recently passed amendments to Chapter 16-752 WAC to ban the sale of English Ivy and its cultivars throughout the state.<br>Major characteristics and Impacts of invasive species include:<br>• Ecological Disruption: Invasive species can outcompete native species for resources such as food and habitat, leading to declines or extinctions of native populations. They often lack natural predators in their new environments, allowing them to proliferate unchecked.<br>• Economic Consequences: The presence of invasive species can lead to significant economic losses in sectors such as agriculture, forestry, and fisheries. For example, invasive plants can reduce crop yields, while invasive animals can disrupt fishing industries.<br>• Biodiversity Threat: Invasive species are considered one of the most significant threats to global biodiversity, second only to habitat loss. They can alter ecosystem functions and reduce the overall health of natural habitats.<br>Efforts the city can take to manage invasive species include regulations to prevent their introduction, public awareness campaigns, and active removal programs.<br>The following resources are readily available to the City to provide valuable insights and guidance. | and public spaces in Vancouver. In addition, Comprehensive Plan policy 103 Pollinator Habitats has been updated to specifically call out removal and reduction of invasive species as a City policy objective.<br>The City also has a Pollinator Subcommittee who help inform changes to policies and regulations that support pollinators, such as increasing the use of native and climate-adaptive plants.<br>More information about how the City handles invasive plants is on the Guide to Invasive Trees in the City of Vancouver page on the City's website. Clark County also has resources related to noxious weed management. |

| P | you must you have to as soon as possible you people need to come up with some kind of a public transportation system not the buses because they don't go the right way but it goes up and down like main street so that people could go from the waterfront to uptown it's all one area it needs to be incorporated like either a tram or poly or a free bus or if you go to any of the bigger cities in the country everybody except portland and we don't follow them everybody has one freebie circuit fred there's so many different names but they're just services that you can either get an app for or stand and wait for kind of like the ryd program you guys already have they've got the market idea in place but they need to expand it into the public where we can meet them have a ride tip the driver nobody else has to get paid any money it's a volunteer program they make money off of tips the businesses can contribute and sponsor them there's a billion ways to do this but we shouldn't have to have to take an uber or walk or drive and waste our gas and fuel and all that kind of stuff and try to park in your stupid parking lots there's parking spaces which you don't have any more so this is something that has been oncoming it should have happened sooner and the longer you wait the worse it's going to be especially when you start developing the area right around the city hall it's a major thing so it's something that is it's very simple if someone needs a job just buy a couple cars and people the one in the florida keys they use solar powered teslas which were provided to them by the city and everybody sponsors them and you just call in the app and they pick you up and drop you off that's the simplest 1 otherwise get like a little trolley car and go up and down on the weekends even to there's a billion ways to do this you'd have all these people could park uptown come to the waterfront and play or park at the goddamn waterfront and pay all the money which we do and then go up to uptown and play but it's or go to nature or new season there's so many things you can do parking here is crazy i know the mayor loves it it's her baby and she's probably in bed with all the people who have built this parking lot in the the waterfront the problem is no woman in their right mind will ever go up there past about 5:00 at night alone there's rape and murder i know you have cameras on there but all they're gonna do is watch the person rape and murder the person so let's think this all out again open up outdoor parking lots again make it safe for the public let's have some transportation systems let's just kind of you know don't we don't need to follow portland we can do this and no light rail because yes the criminals can ride it the problem is it ruins the environment all around it you look at portland and every single property value along that railroad track has gone to hell anyway i'm done good luck | Comment noted. Your comment was reviewed and is outside the scope of the SEPA analysis for the Our Vancouver Comprehensive Plan Update. |

| R | "August 14, 2045<br>Meredith Herbst<br>City Hall<br>PO Box 1995<br>Vancouver, WA 98668<br>Dear Meredith,<br>RE: Our Future 2045 Plan Review<br>I am a long-time resident of the Village at Fishers Landing. My comments below will walk you through the key overlooked points and solutions I see with the City of Vancouver [aka the City] "Our Future 2045 Plan" zoning regulations and private covenants of our neighborhood and probably several other neighborhoods, when it comes to mixed-use housing development.<br>1. The Fundamental Conflict<br>The core issue stems from two different regulatory systems operating simultaneously. The City's municipal zoning represents public policy goals - we want walkable communities, reduced car dependency, and efficient land use. Meanwhile, private covenants reflect the original intentions of property developers, homeowners and neighborhood associations, often prioritizing property values and maintaining specific neighborhood character. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |

|---|---|---|
| | 2. Where These Systems Clash<br>• Timing and Intent Misalignment: Many residential covenants were written decades ago when single-family development was the norm. The 2045 Plan zoning updates promote mixed-use density, but it is not a simply exercise to override existing legal agreements between private parties. We've all seen neighborhoods where the city rezones for mixed-use, but century-old covenants still prohibit any commercial activity particularly in Portland, and the result is a patchwork of residences and services that never developed as planned.<br>• Scale of Impact: Zoning changes affect broad areas and serve regional and state planning goals. Covenants operate at the subdivision level with hyperlocal concerns. A corridor might need transit-oriented development from a regional perspective, but individual covenant areas within that corridor that already exist, very possibly, will resist the commercial components essential to true mixed-use success.<br>3. Practical Planning Challenges<br>• Development Uncertainty: Developers and property owners will face a maze of approvals. Even with supportive zoning, covenant restrictions can kill projects or force expensive legal challenges. This uncertainty increases development costs and reduces the feasibility of innovative housing types that are in the City's plan.<br>• Piecemeal Development Patterns: The City will end up with fragmented mixed-use districts. Properties without restrictive covenants develop as intended, while covenant-protected areas remain single-family, creating an inefficient patchwork that undermines walkability and transit viability.<br>• Community Engagement Complications: The City's public planning processes become more complex when the residents feel their private property agreements should supersede public zoning decisions. This will create tension in community meetings and can polarize voters and neighborhoods. The current 2045 Plan has the potential of sending many, many neighborhoods into litigation.<br>4. Strategic Approaches<br>• Proactive Covenant Analysis and Additions:<br>o Realistic Zoning Categories: The City can conduct covenant research early in rezoning processes. Understanding existing restrictions will help craft more realistic zoning categories and identify where public-private partnerships might help resolve conflicts.<br>o Prohibited Small Businesses: Include in the City's plan prohibited small business and mixed-use buildings that could be problematic and impact the surrounding residents. Nuisance small businesses like auto-repair shops, marijuana depots, bars, adult entertainment, pool halls, tire shops, all-night restaurants, pawn shops, tattoo parlors and other businesses that can create traffic and parking problems, plus physical and emotional disturbances for the residents in family-friendly neighborhoods. So far in the "2045 Plan" I have not seen any protections or character preservation for existing neighborhoods.<br>o Aesthetic Preservation: Include in the City's plan design standard that addresses the aesthetic concerns of our neighborhoods<br>• Proactive Geographical Analysis: There are several points of contention with "Alternative 1" and "Alternative 2" that run along the eastside of SE 164th Avenue between Highway 14 and SE 34th Street. The City can conduct a simple visual survey to evaluate where the planned mixed-use areas will find:<br>o physical barriers, like sound walls and access points<br>o already existing services and small business with easy access for the neighborhood before rezoning,<br>o alternative undeveloped land on the westside of SE 164th Avenue that could fulfill the mixed-use requirement<br>o lack of infrastructure to support the rezoning plan<br>If the City and the State of Washington are to be successful in the mixed-use development, it will require both regulatory alignment and community buy-in. This often means longer timelines and more creative solutions, but the | |

| | alternative - ignoring either zoning goals or covenant rights - typically leads to litigation and stalled development that serves no one's interests. In my opinion, a successful plan will be one that the citizens feel confident that the City listens, designs a logical approach, includes nuisance protections, and is considerate of the character of the existing neighborhoods.<br><br>My ask is:<br><br>• The eastside of SE 164th Avenue between Highway 14 and SE 34th Street, and The Village at Fishers Landing be designated as a Low or Medium Scale Neighborhood for all the reasons stated above [Proactive Geographical Analysis].<br><br>• Please remove the "RED" Commercial Zone on the maps for the eastside of SE 164th Avenue between Highway 14 and SE 34th Street.<br><br>• If you move forward with Alternative 1 or 2 or No Action, please add a provision to prohibit nuisance small businesses to protect my family-friendly neighbors in The Village at Fishers Landing from future conflicts with the City's 2045 Plan.<br><br>I welcome your feedback.<br><br>Sincerely,<br><br>Jolene<br><br>Jolene George<br><br>[address]<br><br>Vancouver, WA 98683<br><br>[email address]<br><br>" | |
| S | "Vancouver Comprehensive Plan Update 2045<br><br>To: Meredith Herbst, City of Vancouver<br><br>From: Jennifer Hubbert<br><br>Date: August 17, 2025<br><br>Re: Opposition to Proposed Zoning Changes in Southcliff Neighborhood<br><br>Dear Ms. Herbst and City Planning Officials,<br><br>I am writing to formally oppose the proposed zoning changes to the Southcliff neighborhood outlined in Alternatives 1 and 2 of the Draft Environmental Impact Statement for Vancouver's Comprehensive Plan Update 2045. As a homeowner in Southcliff since 1999, I have witnessed firsthand the unique character and value that this neighborhood brings to our city, and I am deeply concerned about the irreversible damage these proposed changes would cause.<br><br>My Personal Investment in Southcliff<br><br>I have owned a house in Southcliff for over 25 years. I chose this neighborhood specifically for its quiet residential character, well-planned curvilinear streets, and the sense of community fostered by its thoughtful mid-century modern design. Like many of my neighbors, I have invested not just financially but emotionally in maintaining and preserving what makes this area special. The proposed zoning changes threaten to undermine decades of careful stewardship by residents who chose Southcliff for its established residential character.<br><br>Fundamental Conflicts with Established Planning<br><br>The proposed rezoning directly contradicts decades of established planning principles and legal commitments: | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | Violation of Restrictive Covenants: Since 1954, Southcliff has operated under restrictive covenants that mandate single-family residential use and limit building heights to two stories. These covenants represent a legal commitment to maintaining the neighborhood's character, and the proposed zoning changes would effectively nullify these long-standing agreements that property owners have relied upon for nearly 70 years.<br><br>Contradiction of the 2001 Neighborhood Action Plan: The city-approved 2001 Neighborhood Action Plan specifically reinforces Southcliff's single-family residential designation. Abandoning this plan without compelling justification undermines the collaborative planning process and the trust residents place in city commitments.<br><br>Illogical Height Relationships: The proposal would allow buildings in Southcliff that are taller than those currently planned for the adjacent Town Plaza (Heights) district. This creates an inverted hierarchy that contradicts sound planning principles of concentrating the greatest height and density in designated commercial cores rather than residential neighborhoods.<br><br>Specific Concerns About Proposed Impacts<br><br>Traffic and Safety Hazards: With no new access planned from Mill Plain Boulevard, all traffic from new Mixed-Use and Medium-Scale developments would funnel onto our existing curvilinear residential streets, including dead-ends and cul-de-sacs. As someone who has navigated these streets daily for over two decades, I can attest that they were never designed to handle the volume of traffic that hundreds of new residential units and commercial spaces would generate. This will create dangerous conditions for pedestrians, cyclists, and children who use these streets safely today.<br><br>Parking Crisis: The dramatic increase in density will overwhelm our existing street parking infrastructure. The proposed ""strategic pricing mechanisms"" would essentially charge longtime residents to park in our own neighborhood—an unfair burden on those who have maintained and invested in this community for decades.<br><br>Environmental Degradation: The increased impervious surfaces from high-density development will stress our stormwater infrastructure, potentially rendering the recent $2.3 million Blandford Basin Stormwater Project inadequate. Additionally, Southcliff's impressive 47% tree canopy cover—a vital contributor to Vancouver's ""Tree City USA"" status—would be threatened by the intensive development proposed under these zoning changes.<br><br>After 25 years of homeownership in Southcliff, I have seen how thoughtful planning and community investment can create neighborhoods that serve residents well while contributing to the broader city's character and value. The proposed zoning changes represent a dramatic departure from the principles that have made Southcliff successful, and they would irreversibly alter a neighborhood that represents an important part of Vancouver's mid-century heritage.<br><br>I urge the Planning Commission and City Council to reject the zoning changes proposed for Southcliff in both Alternative 1 and Alternative 2, and instead pursue growth strategies that respect established neighborhoods while meeting our regional obligations. The city can and must find ways to accommodate growth that don't require sacrificing the unique character and livability that make neighborhoods like Southcliff valuable assets to our community.<br><br>Thank you for your consideration of these comments. I look forward to your written response as required by SEPA and hope that the final Comprehensive Plan will reflect the concerns of longtime residents who have invested in making Vancouver a great place to live.<br><br>Sincerely,<br><br>Jennifer Hubbert, Ph.D.<br><br>[email address]<br><br>[phone number]<br><br>--<br><br>Jennifer Hubbert (she/her), PhD | |

|---|---|---|
| | This new zoning plan could cause a dramatic increase in traffic congestion and safety issues by funneling hundreds of cars daily onto Oregon Drive and Umatilla Way. Combining the increased traffic with the anticipated overflow from the Tower Mall Redevelopment Area and our street parking will also be overwhelmed.<br><br>Increased impervious surfaces, like rooftops and driveways, will stress our stormwater infrastructure, rendering the recent $2.3 million Blandford Basin Stormwater Project inadequate for future runoff and pollution mitigation.<br><br>The proposed zoning changes directly violate Southcliff's long-standing restrictive covenants (since 1954) and the 2001 Neighborhood Action Plan, which mandates single-family residential use and limits building heights to two stories.<br><br>The City should protect Southcliff from incompatible projects like this proposed mixed-use zoning. Instead the City should help revitalize a major commercial street by offering financial incentives, such as fee waivers or faster permit reviews, for developers who choose to redevelop existing commercial properties along Mill Plain.<br><br>Sherri Sorensen<br><br>[address]<br><br>Vancouver, WA 98661" | |
| W | "Traffic, Density, and SEPA Compliance<br><br>Traffic impacts to the Southcliff neighborhood will be intolerable under every alternative—including<br><br>No Action. The No Action plan's zoning, apparently imposed by the State, still triggers SEPA under<br><br>WAC 365-196-620, yet no SEPA review is shown. This omission undermines both legal compliance and public transparency.<br><br>Equally concerning, the DEIS presents three growth alternatives with varying housing densities but provides only vague general statements. There is no definitive traffic modeling, congestion analysis, or infrastructure capacity data to compare these alternatives in a meaningful way. SEPA requires data-driven comparisons that allow decision-makers and the public to understand trade-offs and evaluate mitigation. Without this, the DEIS does not meet SEPA's intent.<br><br>The DEIS also ignores the CC&Rs; that established Southcliff in 1954 and were approved by the City. These restrictions remain enforceable and limit density far below what the DEIS assumes. By disregarding them, the DEIS risks overstating both housing potential and traffic impacts in Southcliff.<br><br>Finally, the State Legislature should not impose a "one size fits all" land use framework that dictates zoning and density outcomes without SEPA evaluation. Each community has unique conditions, and bypassing proper environmental review undermines both transparency and neighborhood livability.<br><br>Tree Canopy and Vegetation (p. 190)<br><br>In Section "Potential Impacts to Tree Canopy and Vegetation" (p. 190), the DEIS discusses tree canopy in only general terms. Vancouver's current canopy is approximately 19%, with a City-adopted goal of 28%, yet the DEIS does not provide baseline acreage or a quantitative comparison of canopy impacts across alternatives. Instead, it offers vague statements about possible tree loss or replacement, which is insufficient for SEPA's requirement of meaningful alternative analysis.<br><br>The analysis should clearly show, for each alternative—including No Action—how much canopy would be lost through development and infrastructure expansion, how much could realistically be gained through planting (using survival and growth assumptions), and what the net canopy percentage will be in 10–20 years. Without this, decision-makers and the public cannot determine whether the City's canopy goal is achievable.<br><br>Mitigation measures must be tied to enforceable tools, such as the City's tree density requirements (30 units/acre), street-tree standards, and long-term monitoring commitments. Equally important, the DEIS should map canopy | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | change by neighborhood to address equity and urban heat impacts, ensuring that vulnerable communities are not left behind<br><br>Comment on Tree Canopy and Avian Habitat<br><br>The Draft EIS overlooks the critical role of Vancouver's tree canopy as primary habitat for migratory and resident birds. Tree canopy provides nesting, stopover, and foraging habitat, and its loss or fragmentation harms bird populations during migration and nesting seasons.<br><br>The City has historically been lax in enforcing protections during nesting season, despite the federal requirement under the Migratory Bird Treaty Act (MBTA). This raises both environmental and legal risks if canopy loss is not properly evaluated and mitigated.<br><br>The No Action Alternative is also mischaracterized. Due to the State-mandated density overlay, it will not preserve existing canopy and must be analyzed for habitat loss alongside the other alternatives.<br><br>I request that the Final EIS: (1) Treat tree canopy as avian habitat; (2) Analyze impacts to migratory and nesting birds under all alternatives, including No Action; and (3) Commit to enforcement of seasonal protections in compliance with the MBTA.<br><br>Without these corrections, the DEIS does not provide the public or decision-makers with a complete or accurate assessment of environmental impacts" | |
| X | "To the City of Vancouver, the Vancouver City Council and the City of Vancouver Planning Commission<br><br>RE: Comments to the City of Vancouver Draft Environmental Impact Statement<br><br>(EIS)<br><br>FROM: Donald and Deborah Russo<br><br>[address]<br><br>Vancouver, Wa 98661<br><br>Residents of the Southcliff Neighborhood<br><br>To the Honorable Mayor of the City of Vancouver, Members of the Vancouver City Council and Members of the Vancouver Planning Commission<br><br>We purchased our home at the address noted above in the Southcliff Neighborhood in 1984, more than forty (40) years ago. As a then practicing real estate lawyer, I carefully reviewed our title commitment which included the Covenants, Conditions & Restrictions (CC&Rs) which were first adopted in 1954. The CC&Rs provide in part in Paragraph 2 that "[n]o building shall be erected, altered, placed or permitted to remain on any lot other than one detached single-family dwelling (emphasis added) not to exceed two stories in height …." These CC&Rs have remained intact for over seventy (70) years. Each of our neighbors in Southcliff have purchased their homes in reliance on those very same CC&Rs.<br><br>We are acutely aware of the need for increased housing options, reduced rents and reasonable home prices. This is an important issue in Vancouver, much of our entire state and the Pacific Northwest. Directly as a result of this need, our Legislature passed House Bill 1110 in 2023. This Bill mandates that cities adopt middle housing ordinances within six months of their next comprehensive plan update. More specifically, this Bill calls for fourplexes on residential lots and sixplexes on lots within a quarter mile of major transit stops.<br><br>The City of Vancouver Comp Plan Update calls for the introduction of mixed-use, medium-scale and low-scale neighborhood changes to Southcliff. These proposed changes to Southcliff would turn our neighborhood on its head. First of all, and most importantly, these proposed changes are prohibited by the Southcliff CC&Rs.<br><br>As noted above, our CC&Rs prohibit any building to be erected on any lot "other than one detached single-family not to exceed two stories…." These long-standing CC&Rs trump the Comp Plan Update. Furthermore, even if these | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | CC&Rs did not exist, this neighborhood could not absorb multi-family housing and mixed use buildings on narrow streets that end in cul-de-sacs or dead ends and with no sidewalks.<br><br>The homes in Southcliff were constructed in the mid-1950's. When remodeling our home several years ago, we found a newspaper in the walls as a sort of insulation with a date from 1955. Our homes are largely mid-century modern in nature.<br><br>Adding multi-family housing and mixed use buildings would destroy our unique neighborhood and its architectural integrity.<br><br>We were personally involved in the negotiations for the planning of the former Tower Mall, along with many of our neighbors. We were surprised to learn of the proposed height and density of that development just across the street from Southcliff. Despite objections from Southcliff neighbors, the Tower Mall redevelopment was adopted without recognizing the legitimate objections of our neighborhood. This comp plan proposal would allow for buildings in Southcliff that are even taller than those planned for Town Plaza. And yet there was no mention of this comp plan proposal at those meetings.<br><br>As noted above, Southcliff has narrow curving streets that end in cul-de-sacs or dead ends. There are neither through streets nor sidewalks. We walk in those streets on a daily basis because there are no through streets. We walk our dogs in the streets, as do our numerous neighbors with dogs, because there are no other places to walk. Many of us also bicycle on the streets in Southcliff because they are safe.<br><br>The traffic associated with the new development called for in this proposed comprehensive plan update will immediately overwhelm our streets. More significantly, the development will result in severe traffic congestion and more importantly, safety hazards for our walkers and bicyclists.<br><br>We have five (5) very large, very old oak trees on our eastern boundary along Manzanita Way. More than ten (10) years ago, we asked a City arborist to examine one of the oak trees due to a safety concern. The arborist estimated that the oak tree in question was over two hundred (200) years old, dating the tree back to the days of Lewis and Clark. This proposed development threatens these trees and the families of squirrels who live there, not to mention the canopy of leaves that provide shade to this neighborhood.<br><br>The proposed alternatives to the draft Environmental Impact Statement are not suitable for Southcliff for a host of reasons. First of all, and most significantly, the CC&Rs of Southcliff have been in effect for seventy (70) years and House Bill 1110 (Middle Housing Bill) only applies to subdivisions with restrictive covenants addressing the number of homes on a single lot which are adopted after the effective date of the House Bill. This is clear from a reading of the legislative history of this Bill. In particular, Washington Realtors and its Legal Hotline Lawyer, Annie Fitzsommons, stated in a published video on June 9, 2023 regarding the newly enacted Middle Housing Bill, "[s]pecifically, the question I've been receiving is whether the new law allowing higher-density housing would override CC&Rs that prohibit additional construction on existing single-family residential lots. The Middle Housing Bill does not supersede CC&R's in this scenario if the CC&R's are in place by July 23, 2023. If there are already CC&R limitations on increased density by July 23rd, 2023 (the effective date of the new law), those CC&R's will continue to govern. Therefore, if the CC&R's specify that only one home is allowed per lot, the association is not obligated to accept higher-density housing within the community." (emphasis added).<br><br>Secondly, the Comprehensive Plan Update is not suitable for Southcliff due to its historic design, its curving and dead-end streets, and significant environmental concerns. We respectfully submit that the Comprehensive Plan Update, while needed in Vancouver, does not belong and cannot be located in Southcliff.<br><br>Respectfully submitted,<br><br>Donald and Deborah Russo " | |
| Y | "Subject: Transmission Line Conflict for Alternatives 1 & 2 in the Southcliff Neighborhood<br><br>Both Alternatives 1 and 2 contemplate an overlay of Mixed-Use and Medium-Scale development between Manzanita Way and Umatilla Way, north from Oswego Drive to East Mill Plain Boulevard. In this corridor there are high voltage | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | transmission lines originally installed and managed by the Bonneville Power Administration (BPA). These lines were transferred to the Clark Public Utility District (PUD) in 2009.<br><br>The transmission lines run from a substation near HWY 14, north through the Southcliff neighborhood, across East Mill Plain Blvd., and terminating at East 18th Street.<br><br>Notably, these transmission lines have a 100-foot easement as shown on the maps below, which were obtained from the BPA at the time the transmission lines and accompanying easements were transferred to the PUD. According to the PUD, these lines are energized at 115kV (115,000 volts) and, per OSHA standards, require a minimum 15 feet of clearance.<br><br>Alternative 1 and Alternative 2 map overlays would permit Mixed-Use and Mediumscale development of up to 8 stories (110 feet) and 5 stories (75 feet) respectivelly in the Umatilla – Manzanita corridor. Such development would certainly not be permitted within the 100-foot easement. In fact, neither would the Low-Scale Southcliff parcels be allowed to develop up to 3 stories (45 feet tall) within the transmission line easement.<br><br>Further, the permitted building height of these overlays outside the easement would seemingly not be appropriate even adjacent to these high voltage transmission lines.<br><br>Accordingly, a revision of both the Alternative 1 and Alternative 2 maps to remove both Mixed-Use and Medium-Scale overlays in the Umatilla – Manzanita corridor is necessary as they conflict with the established 100-foot easement for the PUD's high voltage transmission lines." | |

Objectively, it seems evident that low-paying jobs will be created by the proposed zone changes.<br>I believe that it is still the American dream to own an home, rather than to rent an apartment, or even own a condominium. A home provides privacy, freedom from excessive noise, and even security not available to apartment dwellers or condominium residents. Additionally, it provides the opportunity to garden, very important to this homeowner who does all of his own gardening and lawn mowing and grows literally thousands of flowers each season.<br>High paying employers in need of highly skilled employees will not relocate to Vancouver if they do not believe that six-plexes and apartment buildings will enable recruitment of necessary talent. Instead, Vancouver [ingly] will be relegated to lower paying employers whose employees neither expect nor even hope to own their own homes. The best employers will have located their business elsewhere.<br>The proposed plan update for Southcliff, if implemented even partially, makes it clear where Vancouver stands on homeownership, or even increasing issuing building permits; instead, Vancouver's recent history [will/with feature] extreme use of eminent domain to gobble up very fine homes in one of its best neighborhoods.<br>The Growth Management Act puts Vancouver at a crossroads. That our population will increase is certain, but whether its [tax above] keeps pace is uncertain. Vancouver must be able to entice the most prosperous employers if it is to continue its generous services for the low-income and homeless. Home ownership must be prioritized, not discouraged.<br>Respectfully,<br>Charles Burns<br>[address] " | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| AE | "Dear Sirs: My first comment is that of the five (5) officials that will be evaluating the Comprehensive Plan is that three (3) of the five (5) live in Oregon. It seems unfair to the Vancouver residents to have other state owners evaluting possible changes in a Washington state neighborhood.<br>I have been a Southcliff homeowner since March of 1980. At that time my wife and I were looking for a Vancouver neighborhood htat had nice homes with enough lot size to allow a play area for children and pets. We were fortunate enough to find a home for sale in the South Cliff neighborhood. It turned out it was a Peter Walker designed home. At the time he was a noted home designer and builder in Vancouve, Washington.<br>My wife and I became the third owner of this home.<br>This particular home was mostly single level with a one third basement, three bedrooms and two baths. Our neighbors on both sides and across the street were original homeowners in the South Cliff neighborhood. One still occupies their original home. In March of 1980 the South Cliff neighborhood was one where your children could play, ride their bikes in safety and walk your dog without a care in the world. The neighborhood was just right to live in, commute to work in and enjoy throughout the year. | Comment noted. | | Now 2025 the GMA is proposing major changes in the now ideal neighborhood. The GMA has three MIXED-USE plans. The first plan along Mill Plain Boulevard will allow building to max out at EIGHT STORIES with both businesses and apartments. The second plan would allow TWO to FIVE STORIES for civic/institutional buildings and neighborhood commercial space, also aprtments. Finall, the third plan would allow THREE STORIES plus six units per lot apartments.<br><br>The above three MIXED-USE plans would DRASTICALLY change our ideal neighborhood to more of an inner city type of neighborhood/Ghetto. The traffic and parking would cause major changes in the streets. The streets that once were fine and SAFE for walking and riding of bicycles would not be safe. For example: my daughter used to live in the Sellwood and East Moreland neighborhood of Portland, OR. After zoning as proposed here in South Cliff the small business were bought out and the local homes sold to developers. Next thing that happen was hte streets had so much additional traffic and parking that the reamining local residents had only their garages for safe parking. All the on the street parking became very dangerous. On a regular occurrnece parked cars were broken into and or damaged during parallel parking. South Cliff does not want this type of neighborhood.<br><br>At present in the South Cliff Neighborhood there is set of City Covenants that have been in force for decades. They have been given full support by the neighborhood associations of Vancouver and city. They have been perused and approved by lawyers in conjunctions with the neighborhood associations of Vancouver.<br><br>The South Cliff neighborhood also has a governmental High Power Electrical line running through it. This line has caused some special boundary lines to be set so as to provide the home along it to be safe. Future business of three, five and eight stories would also be a concern to new construction.<br><br>Presently in the nearby area formerly know as Tower Mall and Vanco Driving Range have a great deal of space for commercial and apartment building. Shouldn't those areas be built up prior to the MIXED-USE plans put into action? Also, the downtown areas of the City of Vancouver have many buildings for lease/rent available for new businesses. Along with several Condominium apartments ready to lease/rent or being built at this time. (2025)<br><br>In summary, I believe the following reasons should be given considerable thought before the present IDEAL neighborhood of South Cliff should be rezoned.<br><br>1) The additional height on eight, five and three story building would not fit in with the history of the neighborhood.<br><br>2) Our present Covenants support our existing neighborhood and have been previous approved.<br><br>3) The historic IDEAL neighborhood would disappear among the multistoried new businesses and apartment structures.<br><br>4) The existing SAFTY and TRAFFIC patters would disappear and the neighborhood would take on an INNER CITY / Ghetto look.<br><br>5) The now existence NONE STREET parking would become a major SAFTY concern.<br><br>6) The present City of Vancouver should use the existing uninhabited buildings, offices and land in the area for Commercial and Apartment construction.<br><br>To the five officials, mayor and city council please give the above statements your thorough consideration before implementing and updating the GMA developmental plans presently being evaluated." | |

| AH | """August 20, 2025<br><br>To the Vancouver city planners:<br><br>My husband and I moved to Southcliff in 2022 to retire. We wanted space for him to have a 3-car garage so he could have his own workshop, so we had the old 2-car garage torn down and replaced with a nice, new 3-car garage. Plus I like to garden and plant native trees on all the land, which I've been doing. I've planted small trees and looking forward to watching grow into large trees. In addition, I've planted a pollinator garden which has attracted different species of native bees.<br><br>I like the CC&R's because they keep the character of the neighborhood. I like that there are controls on what can be done to houses in the neighborhood, so that its character is maintained. In order to appease the city, I would be OK if the CC&R's were changed to allow ADU's (which are currently prohibited), although we won't be adding one, as we like having all this land.<br><br>Everyone uses our streets here, my husband walks around here, and I do too. I like having the freedom to go on morning or afternoon walks on quiet streets and not have to worry about too many cars. I like to see the greenery and the flowers around the neighborhood.<br><br>This neighborhood is convenient to everything, to shopping and downtown. We are close to downtown and to the large Fred Meyer shopping center on Columbia Street. If I want to take a longer walk, I can walk to either downtown or the Columbia shopping center for coffee. Plus we can ride our bikes downtown or to East Vancouver, and we are close to the start of many Vancouver Bike Club rides.<br><br>I feel that we should keep this neighborhood residential, like it has been, it's what we paid for and recently moved into. We put a lot of money into remodelling the garage, thinking this would be our permanent home. I am concerned that if it is rezoned, it will generate a lot more traffic and noise, and change the character of the neighborhood.<br><br>I would suggest, instead, redeveloping the areas I've listed below, where business has declined and stores have closed due to the pandemic or before the pandemic. All the areas below are near to an actual or proposed Vine bus line. The areas below should be redeveloped with high-rise housing and businesses, as they are already covered with an impermeable surface (parking lot) and lack trees and greenery.<br><br>Here is a listing of the developable areas I'm currently aware of:<br><br>1. A huge parking lot where a K-mart used to be on Andresen. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | 2. A huge parking lot in Vancouver Plaza, on which several big-box stores and businesses have failed or are failing such as Crunch Fitness, the Regal cinemas, and an old restaurant that failed and whose building has never been taken over by a new restaurant.<br><br>3. Another huge parking lot for several big-box stores off of Hazel Dell near 76th and 99th Ave. It appears most of the big-box stores there have failed (there's a few that survive).<br><br>4. In addition, the area around Mill Plain and Chkalov would be a great candidate for redevelopment. The businesses there don't appear to be in trouble, but there is never enough parking there for the businesses there or for the Fred Meyer, and the Fred Meyer has been run down for years (not one I prefer to shop at).<br><br>All of the above-mentioned sites would be great sites for high-rise housing and businesses, which I agree Vancouver needs, as I do oppose expanding the urban growth boundaries further. Developing these sites wouldn't require many trees, if any, to be cut down, nor the creation of new impermeable services. In fact, if they're redeveloped, hopefully green areas would be added where trees and swales can be added, thus making the areas greener while adding new housing and businesses. Additionally, the Fourth Plain, Andresen, and Mill Plain sites are near Vine bus stops and I believe the Hazeldell site is near a planned Vine bus stop.<br><br>Thank you for taking the time to read this letter.<br><br>Sincerely,<br><br>Diane Wills<br><br>[address]<br><br>Vancouver, WA 98661<br><br>[phone number]<br><br>""" | |
| AI | "August 22nd, 2025<br><br>To: Vancouver City Planners, regarding the Southcliff neighborhood<br><br>My name is Frank Woodbery and I live at [address] in the Southcliff neighborhood. My wife and I moved here in 1997 as I had accepted a position as an engineer at Hewlett Packard. While I was at my new job, my wife would scour various neighborhoods and real estate listings looking for our future home. We looked at many homes but we both fell in love with the Southcliff neighborhood. The homes date to the '50s with large lots, mature trees and well maintained properties. It is a safe, quiet and beautiful neighborhood, truly a small oasis within the City of Vancouver. We found a home that we could afford and quickly made and offer and bought the house. We are now friends with several of our neighbors. It's a great place to live. I am now retired from HP, but do volunteer work for the City.<br><br>I recently found out about and have read the proposed zoning changes currently being put forth by the City's Draft EIS. I vigorously oppose both Alternative 1 and Alternative 2.<br><br>There are several problems with these proposals:<br><br>Both alternatives would violate our neighborhoods regulations which only allow for one single family home, no more than two stories high. I understand these original regulations have been in place since 1954.<br><br>I understand that the Heights District redevelopment was intended to be the location of commercial and mixed use high-rise buildings would be located. These buildings belong in The Heights, not in Southcliff.<br><br>Getting in and out of the neighborhood with only three streets entering Mill Plain would mean a row of cars trying to get in or out. Vehicles entering the businesses, and new high density housing would create a traffic problem on both Mill Plain and within Southcliff. Parking for the businesses and multi-family units would spread into the neighborhood.<br><br>The buildings and associated noise, traffic and potential crime would completely destroy the character and livability of the historic neighborhood of Southcliff. There is undoubtedly much more suitable land along Mill Plain that would | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | better accommodate the construction of high-rise, multi-family housing and businesses without tearing down parts our beautiful old neighborhood.<br><br>I would like to thank you for reading this letter. Please consider my thoughts!<br><br>Best regards,<br><br>Frank Woodbery<br><br>[address]<br><br>Vancouver, WA 98661 " | |
| AJ | "Years ago in Portland we had Mayor Bud Clark. He got the citizenry together to plan out what the city should look like and have over the next 20 years. That plan is what we see in Portland today. It is a time consuming task, but in the end you have the blueprint of the hopes and dreams of your people. The amount of innovation was amazing. It gave the mayors plans for the next 20 years to draw from. Like Vera Katz took on the Pearl district that was in that plan. Her job was to figure out how to make that a reality. She circled the area and all taxes and fees generated were used to develop that area. That initial investment has generated lots and lots of development throughout the are. Take a look at the background of the Bud Clark plan and its crude map then look at Portland today and you will see that exercise was completely transformative.<br><br>Just an FYI. Im a Portlander and have seen the power of this 20 year plan first hand from participating in its creation to seeing it come to life. Good luck... You set your own path, but this was an amazing exercise in community innovation and involvement. It has not been repeated even though it was suggested to do so every 20 years. Bud had amazing vision on this one..." | Comment noted. |
| AK | "My name is Julie Falardeau and I live at [address] in the Southcliff neighborhood in Vancouver, WA.<br><br>I have reviewed the proposed zoning changes outlined in the City's Draft Environmental Impact Statement (EIS), and I am writing to express my strong opposition to the adoption of both Alternative 1 and Alternative 2 as currently proposed.<br><br>My concerns include the following:<br><br>1. Conflict with Existing Zoning Regulations<br><br>Both alternatives directly conflict with Southcliff's longstanding zoning regulations, which have limited development to one single-family dwelling per lot, no higher than two stories, since 1954. These protections have helped preserve the character and integrity of our neighborhood for over 70 years.<br><br>2. Environmental Impact and Tree Loss<br><br>The proposed introduction of commercial and mixed-use development would require the construction of larger, multi-story buildings, leading to the loss of mature trees and critical wildlife habitat. This would irreversibly alter the natural landscape of our neighborhood.<br><br>3. Deviation from the Heights District Plan<br><br>I was under the impression that the Heights District was intended to accommodate commercial and mixed-use high-rise development. If the City seeks greater density, this should be concentrated within that district, rather than imposed on a stable, historic residential neighborhood like Southcliff.<br><br>4. Parking and Traffic Congestion<br><br>Eliminating parking requirements for new development would result in significant overflow parking on neighborhood streets, compromising walkability, increasing noise, and diminishing the quiet residential character we value.<br><br>5. Traffic Safety and Access Concerns | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | Access to new commercial and mixed-use developments would not come from Mill Plain, but instead through our residential streets. This would dramatically increase traffic congestion and pose serious safety risks for pedestrians and cyclists, particularly children and seniors.<br>6. Stormwater and Pollution Impacts<br>Southcliff's neighborhood rain garden was designed to manage current levels of stormwater runoff. Introducing hundreds of additional vehicles and impervious surfaces would increase runoff and pollutants, threatening both environmental quality and infrastructure integrity.<br>7. Historic Neighborhood Character<br>Southcliff is a unique and well-preserved mid-century modern neighborhood. Its architectural heritage and community character deserve to be protected—not sacrificed for speculative future growth that may or may not occur by 2045.<br>For all of these reasons, I respectfully urge the City to reject Alternatives 1 and 2 as they currently stand and to preserve Southcliff's zoning and neighborhood integrity.<br>Sincerely,<br>Julie Falardeau" | |
| AL | "To: Mayor Anne McEnerny-Ogle<br>Mayor Pro Tem Erik Paulsen<br>Councilmember Sarah J. Fox<br>Councilmember Bart Hansen<br>Councilmember Kim D. Harless<br>Councilmember Diana H. Perez<br>Councilmember Ty Stober<br>Rebecca Kennedy, Deputy Director, Community Development<br>Bryan Snodgrass, Principal Planner<br>Chad Eiken, Director, Community Development, SEPA Responsible Official<br>Meredith Herbst, Associate Planner, Community Development<br>From: Elson and Jan Strahan, Southcliff Residents, 604 Umatilla Way<br>Date: August 23, 2025<br>Subject: EIS Comment on Our Vancouver - Comprehensive Plan 2045<br>This response is in opposition to elements of both Alternatives 1 and 2 presented in the proposed revision of Vancouver's Comprehensive Plan as applied to the Southcliff Neighborhood. However, along with the objections to the Alternatives, this comment also outlines a solution with the newly designated Regional Activity Center.<br>As stated in the August 7th Memorandum to the Vancouver City Council and planning staff from Southcliff Co-Chairs Olive and Douglass, as well as Elson in his capacity as SNA Task Force Chair, "the overlay of both Mixed-Use and Medium-Scale parcel designations is completely inappropriate with regard to neighborhood ingress and egress, neighborhood street plan, established covenants, unique character, historical<br>significance, and environmental considerations. Further, it is incompatible with the impact of Southcliff's close proximity to the formerly designated Heights District Tower Mall Redevelopment Area, which is now designated as a Regional Activity Center." | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | Importantly, that memorandum was supported by 90 Southcliff residents who added their signatures of agreement, which were obtained in a four-hour period as neighbors came together to voice their support.<br><br>For purposes of this memorandum, we want to primarily focus on one important aspect of the August 7th memorandum, Southcliff's proximity to what is now designated as the Heights Regional Activity Center. See the Southcliff and Regional Activity Center area maps in Appendix A.<br><br>2<br><br>Legislative Zoning Mandate and a Proposed Solution for the Heights<br><br>Clearly, the City must find a way to develop a plan that meets the density requirements imposed by the State's changes in the Growth Management Act to accommodate the addition of some 40 thousand new housing units and an almost equal number of new jobs by 2045. The Alternatives attempt to address this with zoning overlays throughout the City as a means to meet these targets. As noted, with respect to the Southcliff Neighborhood specifically, the overlays include adding unsuitable Mixed-Use and Medium-Scale development.<br><br>If these overlays are not to be imposed on Southcliff, where would that density be best accommodated? The answer is clearly the newly designated Regional Activity Center.<br><br>Southcliff Relation to the Heights District Plan, Now Regional Activity Center<br><br>Elson was pleased to serve on the Heights District Plan Advisory Committee and supported the final plan adoption, including the Tower Mall Redevelopment Area. The Tower Mall Redevelopment Area called for 1.58 million square feet of new development, including an addition of 1,340 residential units and over 120,000 square feet of commercial and office space, as well as 119,000 square feet of hospitality, civic, and church/multi-purpose. Maximum height within the District was restricted to 80 feet or 6 stories, with a focus on the taller structures being in the core plan area.<br><br>Clearly, Southcliff residents recognized that they would be significantly affected by this development, with increased parking demands on neighborhood streets since off-street parking minimums are contemplated to be severely reduced or eliminated, as well as other impacts.<br><br>However, there was no anticipation of the dramatic revision of the Washington State Growth Management Act and its requirement to significantly revise the City's zoning.<br><br>Importantly, while the height limitation in the Heights District Plan was 6 stories (80 feet), the Regional Activity Center has a minimum building height of 3 stories and no<br><br>maximum building heights. Accordingly, the potential impact on Southcliff with the change from the Heights District Plan to that of Regional Activity Center is even more certain, so the proposed Mixed-Use and Medium-Scale overlays in Southcliff compound this impact even more.<br><br>As noted in the August 7th Memorandum, City staff has indicated that the Council has not yet set a policy direction in regard to building height and density under the Regional Activity Center designation, and that it could, but is not obligated to remain as contemplated in the Heights District Plan. This is a critical distinction and a significant opportunity.<br><br>3<br><br>Southcliff Mixed-Use and Medium-Scale Overlay Not Functional<br><br>Under Alternatives 1 and 2, there is a proposed change to Mixed-Use of parcels in Southcliff that directly back up to Mill Plain Boulevard. In addition, both Alternatives provide for an overlay of extensive Medium-Scale development in Southcliff.<br><br>Mixed-Use "Provides for a broad range of housing, commercial, and civic/institutional use types, with building heights of 3 to 8 stories (maximum of 110 feet tall)." MediumScale "Provides a broad range of housing types and building heights of 2 to 5 stories (maximum of 75 feet tall)." | |

| ID | Full comment | Response |
|---|---|---|
| | These overlays fail to recognize that there will be, according to City planning staff, no ingress or egress from Mill Plain Boulevard, as it is a main arterial. Thus, all traffic<br><br>associated with such development would need to access the Mixed-Use and MediumScale developments from three residential streets, none of which is a thoroughfare to an adjoining area, and all of which are only accessed by Mill Plain. Further, one of the three streets, Umatilla Way, is right turn only entrance and exit, and it is the primary street access for the largest proposed massing of both Mixed-Use and Medium-Scale.<br><br>In addition, related parking would undoubtedly saturate neighborhood streets, particularly when combined with overflow parking from the Regional Activity Center.<br><br>Also, these designated parcels are primarily located on dead-end streets with cul-desacs that hardly accommodate current neighborhood street parking. This presents both a density problem as well as a public safety issue. And finally, as noted in an already submitted comment to the EIS, the Alternatives failed to recognize a 100 foot easement for the PUD's high voltage (115kV – 115,000 volt) transmission lines that traverse Southcliff between Manzanita Way and Umatilla Way, under which no Mixed-Use, Medium-Scale, or even Low-Scale development would be allowed, although these are designated overlays on the Alternative maps.<br><br>Regional Activity Center Best Suited to Absorb Density Requirements<br><br>As previously noted, the Mixed-Use overlay maximum height of 8 stories greatly exceeds the maximum height in the Heights Plan of 6 stories, and the Heights Plan envisions the taller structures to be in the center of the development. Even the Regional Activity Center zoning, with a minimum height of 3 stories and no maximum building height, enables a step-up from smaller structures along throughfares to taller structures or higher in the development core. A Mixed-Use overlay in Southcliff of up to 8 stories directly abutting Mill Plain is not only incompatible with the Southcliff neighborhood, it is in direct contrast to the thoughtful planning for the Heights District.<br><br>4<br><br>While the Mixed-Use allowance of up to 8 stories (110 feet) exceeds the development and density standards of the Heights District Plan of 6 stories (80 feet), and the Medium-Scale allowance of up to 5 stories (75 feet) is on par with the highest density standards of the Heights District Plan, as previously noted there is no height limitation for the Regional Activity Center.<br><br>Accordingly, rather than imposing ill-suited Mixed-Use and Medium-Scale overlays in Southcliff, it seems much more appropriate to shift these densities to the Regional Activity Center.<br><br>Development of buildings in the Center of at least 8 stories would at the very least match the Mixed-Use heights proposed for Southcliff, as well as other areas throughout the City. In addition, the Regional Activity Center could include building heights of more than 8 stories as well as a robust mix of buildings between 3 stories and 8 or more.<br><br>Moreover, since the Regional Activity Center is an absolutely clean slate, all of the roads and necessary infrastructure, which need to be developed anyway, can be designed at the outset to maximize the efficiency and best accommodate the increased density. Such planning and development has been incredibly effective and attractive on the Vancouver Waterfront and would seemingly be as successful in the Heights<br><br>Regional Activity Center.<br><br>Final Thoughts<br><br>It is understood that Vancouver Councilmembers and planning staff must find a way to manage projected population growth through the Comprehensive Plan that will facilitate the development of another 40 thousand housing units and related services by 2045.<br><br>While the new Growth Management Act's significant impact on the City's Comprehensive Plan was not anticipated, Southcliff residents had already participated in planning for the Heights District and its Tower Mall Redevelopment Area, recognizing that the Vancouver community was growing and needed to expand its housing and accompanying urban services. | |

| ID | Full comment | Response |
|---|---|---|
| | Since the Heights District's Tower Mall Redevelopment Area is now a designated Regional Activity Center, it can best accommodate the density development that has been proposed in the Alternatives for Southcliff. Accordingly, it seems counterproductive, unnecessary, and contrary to sound planning principles to decimate the historic Southcliff neighborhood with the Mixed-Use and Medium-Scale overlays.<br><br>As detailed in the August 7th Memorandum, such density would negate the $2.3 million investment in the recently installed bioretention systems in the Southcliff and Dubois neighborhoods to protect the Blandford Canyon Watershed, and would significantly reduce Southcliff's 47% tree canopy, which is by far the highest level in the City.<br><br>5<br><br>Moreover, these overlays conflict with existing covenants in Southcliff as established by the then City of Vancouver's Housing Authority in 1955 and through its six development phases to 1966, which have remained in force by Southcliff residents for 70 years. See the brochure from the VHA in Appendix B provided as an exhibit by the Washington State Department of Archaeology and Historic Preservation, which is just one of many such documents of record.<br><br>Importantly, when Washington State Architectural Historian Michael Houser sent us this brochure, he strongly encouraged Southcliff Residents to submit a nomination to have the neighborhood listed as a historic district since it had been so well preserved:<br><br>"Based on what I have seen, the area would be more than worthy of listing on the State and National Register! We have not listed a neighborhood like this anywhere in the state yet..."<br><br>Southcliff residents are and have been steadfast in their stewardship of this neighborhood, are earnest in maintaining its preservation in the future, and will do so as a neighborhood that can thrive in conjunction with the future growth of a vibrant Regional Activity Center.<br><br>" | |
| AM | "Subject: Opposition to Draft EIS Alternatives 1 and 2 for SouthCliff Neighborhood<br><br>I have lived in SouthCliff for just shy of 20 years. My daughter was born in our home at [address]. When she was little we walked every day, rain or shine, to SouthCliff park and enjoyed its beauty. I remember when she was about 10 years old, talking about our favorite places on earth, and she said her's was our backyard. She is now entering Junior year at VSSA. We have had the same wonderful neighbors on either side of us and across the way since we moved in. I really love this little piece of Vancouver and hate to see anything done by City Council which will diminish it.<br><br>I am aware of the needs for Vancouver to grow inward and upward to accommodate its many new residents now and in the future. I was excited to see the City's plans for Tower Mall, adding some 1400 units in the near future. Taking dilapidated buildings and vacant lots and turning them into useful and economically active areas is exciting and should be celebrated. Conversely, converting thriving historic neighborhoods into something else should be done with great care only after the impact of other changes have been assessed. I urge City Council to plan for growth carefully and not lose some of the established neighborhoods.with their beauty, charm and history. Let's embrace growth through repurposing unused land like Tower Mall while still preserving SouthCliff, my family's home.<br><br>Adam Rasky, MD<br><br>[address], Vancouver, WA<br><br>98661 " | Comment noted. |---|---|---|
| | PO Box 1995<br><br>Vancouver, WA<br><br>Dear Ms. Herbst and Vancouver City Planners,<br><br>My husband, David, are both medical professionals and we moved to Vancouver in November 2015. We did not want to live in Portland for several reasons. Therefore, we limited our search for a home to Camas and Vancouver. We looked at several properties including 13912 NE 7th Place in Vancouver which is a nice home. It was built in 1992 with a 3 car garage and everything one would think a home buyer would want. However, the back yard of this particular property butts up to duplexes and multi-family homes. We did not buy the house on 7th Place for that reason.<br><br>David and I chose to buy a home in Southcliff because it is a beautiful neighborhood with larger lots and the majority of the homes are established and well maintained from the 1950's. Our home at [address] was built in 1957 by Bob and Wilma Dungan. They lived in this home for 30 years until they sold it to David and Kelly Christel. The Christels lived in this home for 28 years before my husband and I bought it in 2015. Like other houses in Southcliff, our home is well built by an individual, not a developer, which makes the entire neighborhood unique. Southcliff is not a cookie-cutter, put up over night, kind of a neighborhood.<br><br>Because Southcliff is an older, established neighborhood, there is a large, mature tree population, which is another reason my husband and I love the neighborhood. With mature trees there are birds, including owls, and other wildlife, like deer, raccoon, and Opposum. You can catch a glimpse of them if you are up at the right time of early morning or night. Without a doubt, trees will be taken down to allow for mixed use, medium scale, and even low-scale development. With loss of mature trees comes loss of habitat and food for wildlife, especially birds. I will never forget the first time I saw a Western Tanager. It was perched way up high in a mature tree in my yard. The Western Tanager is a brightly colored and beautiful bird that breeds in Western US and Canada. It winters in Mexico and Central America. This bird relies on mature trees for habitat and food. Without these mature trees, the birds will be most affected.<br><br>As outlined in the profile of the Southcliff Neighborhood City Plan of January 22, 2001, the shape of this neighborhood is dictated by topography rather than public roads. The boundaries of this place are made up of steep bluffs, hence the name and one can only access it by 3 streets: Rhododendron, Manzanita, and Umatilla. It is a small neighborhood with minimal access. Commercial development and high rise apartments would, without a doubt, impact traffic, parking, safety, and the uniqueness of the place. People seek out this neighborhood to walk, exercise their dogs, and teach their children how to ride a bike because the streets are safe and quiet.<br><br>There is great history associated with Southcliff. It is the southwest corner of McLoughlin Heights which is one of 6 housing developments brought on by the influx of population to Vancouver sparked by WWII and Kaiser shipyards. Even back in 1945, when WWII ended, residents expressed concerns that the land of the housing developments would be released, willy-nilly, to private investors. Their concerns were warranted because it would spell disaster to real estate values for private home owners in Vancouver.<br><br>I am one of 10 children who was fortunate enough to go to college and earn a degree. My parents could not afford to pay for my college or help me buy a home. But, they taught me values such as working hard and earning my way. My husband and I are wage earners. We worked hard in order to pay for our home in Southcliff. I often worked two jobs. David and I are concerned that the mixed use plans have little regard for the small home owners whose life saving may be at stake. Do we want future generations to have an opportunity to purchase a home in and live in Southcliff? The answer is yes. But a home located adjacent to mixed use, combination housing, and commercial businesses in Southcliff is not what my husband and I currently have. We want to ensure future home owners of our property have the opportunity to buy it, as is, in the neighborhood as it currently is without tall apartment buildings and commercial influence.<br><br>There are plenty of other locations to consider for housing development projects in and around Vancouver. It seems there is potential for developing the vacant lots near Winco on Andresen Road. There are Vacant lots along NE Vancouver Mall Drive. Perhaps better use could be made of the 23.22 acres that consists of Forth Plain Center. Maybe a deal could be arranged with Living Hope Church on Andresen Road for a mixed-use neighborhood. The old | |

|---|---|---|
| | Tower Mall development is already underway. The City of Vancouver discontinued lease of the land for Vanco Golf Range for a Heights District Development project. Other golf courses such as Lakeview Par 3 Golf Challenge, The Cedars on Salmon Creek, and Hartwood in Brush Prairie are already being developed. Maybe sights could be set on Royal Oaks Golf Club for a housing development. I dare to wonder how the members of Royal Oaks would react to that type of plan. I dare even more to think of their reaction to plans for mixed-use housing in their very own neighborhoods.<br><br>David and I feel blessed to have been able to buy our home in Southcliff and as such, we are stewards of this property and the neighborhood as a whole. We would not have chosen to move to Vancouver if there was no opportunity to buy a home in a neighborhood like we currently have. As honest stewards of Southcliff, we oppose the proposed comprehensive zoning plan.<br><br>Sincerely,<br><br>Bridget Marick & David Curran " | |
| AO | "This letter is from Steve and Jo Marie Hansen. We live in the Southcliff area of Vancouver Heights. We moved into our home on Rhododendron Drive exactly 40 years ago this month and have raised our 4 children here in this very safe and friendly neighborhood. We are only the 2nd owners of this home, built in 1954 where the original owners lived 30 years and also raised their 4 children. It is a very stable area with a mix of young families and older folks like us.<br><br>There is not a lot of turnover as people want to stay here because of it's stability and friendliness where generations mix and help each other out.<br><br>We are writing to oppose both Alternative 1 and 2 in the City of Vancouver's Comprehensive Plan Update 2045. These alternatives would allow Mixed-Use rezoning along East Mill Plain on the northern edge of Southcliff. This would allow both businesses and housing from 3 to 8 stories in elevation. There are only 3 entrance/exits into or out of our quiet neighborhood where we live, walk and play, and all are located along Mill Plain. Where would additional business patrons and apartment dwellers park? It seems like the only space could be into our existing residential streets in front of our homes. This would drastically affect our neighborhood and the environment that makes it a very desirable place to live and raise a family. It feels like it would be changing a neighborhood that is working well into one that isn't. Southcliff will already be impacted a lot in terms of street use and noise and business from from the Heights Redevelopment Plan which is adjacent to our neighborhood and soon to be getting underway.<br><br>We ask you to please reconsider asking Southcliff to be rezoned along Mill Plain corridor within our neighborhood boundaries.<br><br>Aside from the basic livability issues mentioned above, other significant reasons we oppose this rezoning are several. One regards the Tree Canopy and the environmental impact of increased development on their removal. Our neighborhood has been working hard to follow the City of Vancouver's lead in maintaining and protecting a large tree canopy. Southcliff is filled with Douglas Fir and Oak Trees that are very mature and healthy. Our lot has 16 Firs that are at least 80 feet tall and several White Oaks that are enormous. Most other lots are also filled with mature trees. No one in Southcliff takes down a mature tree without City permission and for good reason. In order to build businesses or multilevel living along Mill Plain, there would be wholesale removal of many of those trees. along the perimeter. The same removal of trees in the interior lots would be necessary if multiple dwellings were infilled. The character of our neighborhood which is held up as a model image of a healthy neighborhood would totally change. Many of us haven't until recently even needed air conditioning because our trees kept us cool enough.<br><br>In the Environmental Impact Statement (EIS) regarding this change of zoning it's clearly stated that both alternative 1 and 2 of the rezoning proposals are predicted to have significant impacts on our neighborhood by increasing traffic count, increasing noise pollution, increasing water runoff because of more impervious hard surfaces and decreasing air quality. Not one of these effects is desirable in any neighborhood and the number of housing units and business that would contribute to Vancouver's future need would be a drop in the bucket compared to what it does to a very safe and successful neighborhood. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| AR | "August 24, 2025<br><br>My name is Shannon Soriano and I live at [address] in the Southcliff neighborhood. I have reviewed the zoning change proposals put forth in the City's Draft EIS, I AM AGAINST OF BOTH ALTERNATIVE 1 AND ALTERNATIVE 2 AS CURRENTLY PROPOSED.<br><br>My reasons for opposing these alternatives echo all the same reasons included in every single letter you've been receiving whether it be from losing so many mature trees and the habitat they provide for wildlife from the congestion on these streets it would cause for pedestrians and cyclists.<br><br>I moved into this neighborhood for my forever home with my husband, we chose this area because of the historical, quiet, walkable streets, and how private and peaceful it and has remained throughout all the growth around it. Southcliff is one of the pillars of this community in its long-standing time here, its history, and its well-respected existence in Vancouver. Everyone recognizes its name, they know of it, and they know where it's located, many people still drive to the neighborhood, park their cars here just to walk through it.<br><br>Some additional information I think should be highly considered is that on the corner of Rhododendron and Mill Plain specifically where the light is. Since I've lived here in the 5 years alone, I've witnessed probably 10 accidents, one in particular, a drunk female drove at a high rate of speed THROUGH our 6' cinder block fence... I thought adding the vine bus stop there was a TERRIBLE idea for that reason due to the number of accidents on file... to add a stop with pedestrians putting them at risk like that at the top of hill on a corner... terrible, terrible planning!!!!!!!!!! Weren't there any risk assessment done on that...??? Now you're talking about adding massive retail space and apartment living as well. People treat Mill Plain, especially this particular section like a speedway, flying up or down the hill around the corner and hitting it on the other side no matter which way they're going...<br><br>What would be nice to have installed somewhere up here is a photo radar, speed camera.<br><br>Thank you,<br><br>Shannon M Soriano<br><br>" | Comment noted. | AS | "Jay Crary<br><br>[address]<br><br>Vancouver, WA. 98661<br><br>[email address]<br><br>August 23, 2025<br><br>To the Members of the Planning Commission,<br><br>I am writing to respectfully oppose the proposed rezoning of the Southcliff neighborhood. As a homeowner here since 1999, I have witnessed firsthand the strong commitment our residents have made to preserving the character, safety, and vitality of this community. I have lived in this area since 1967, having gone to Marshall Elementary, Mac Junior High and Fort Vancouver High School. My own children, who are adults now, similarly went to local Vancouver public schools. We are all committed to this area and have tried to contribute positively toVancouver in general and the Heights in particular.<br><br>The proposed rezoning raises several serious concerns:<br><br>1. Traffic and Safety: The plan will inevitably increase traffic in and around Southcliff. Our streets were not designed for such volume, and there is no easy or appropriate access to the proposed site. Increased congestion would diminish the peace and quiet that families have long valued here. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

|---|---|---|
| | 2. Availability of Better Alternatives: There are already more suitable sites nearby that are properly zoned for this type of development. Specifically, the south side of Mill Plain between Andersen and the cemetery offers far better access and infrastructure, minimizing disruption to established neighborhoods.<br>3. Conflict with Ongoing Development: The old Tower Mall property is currently under redevelopment, with plans that will bring much-needed services and growth to the area. Introducing another major project so close by would jeopardize the success of that effort and scatter resources and attention prematurely. A measured approach would allow the Tower Mall project to be built out first, after which other options could be considered.<br>4. Preservation of a Cohesive Neighborhood: Southcliff is more than just a collection of houses—it is a vibrant, engaged, and cohesive community that has been the backbone of this area for generations. Our neighborhood deserves to be protected from rezoning proposals that would erode its character and quality of life.<br>For these reasons, I urge the Commission to reject this rezoning proposal. Growth and development are important, but they must be pursued thoughtfully, with respect for existing neighborhoods and careful attention to long-term planning.<br>Thank you for your consideration.<br>Respectfully,<br>Jay L. Crary<br>Southcliff Homeowner since 1999<br>Sent from my iPad" | |
| AT | "August 24, 2025<br>From:<br>Kristin Abell and Vaughna Cochenour<br>[address]<br>Vancouver, WA 98661<br>To:<br>The Honorable Mayor and City Councilmembers<br>City of Vancouver Planning Department<br>P.O. Box 1995<br>Vancouver, WA 98668<br>Subject: Public Comment in Opposition to Proposed Zoning in Southcliff – ""OUR VANCOUVER<br>Comprehensive Plan Update""<br>Dear Mayor McEnerny-Ogle, City Councilmembers, and Planning Department Staff:<br>We are writing as residents of the Southcliff neighborhood to express our strong and formal opposition to the proposed Mixed-Use and Medium-Scale Neighborhood designations applied to our community in both Alternatives 1 and 2 of the ""OUR VANCOUVER Comprehensive Plan Update."" While we understand the City's obligation under the Washington State Growth Management Act (GMA) to plan for at least 38,129 new housing units and 43,198 new jobs by 2045, this growth must be achieved in a manner that is responsible, functional, and respects the established legal, historical, and environmental character of existing neighborhoods.<br>Our opposition is not an arbitrary rejection of growth; rather, it is a well-founded position informed by the city's own Draft Environmental Impact Statement (EIS), our city-recognized 2001 Southcliff Neighborhood Action Plan, official historical reports on the area, and the legally binding restrictive covenants that define our community. The proposed | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | high-density overlays for Southcliff are fundamentally incompatible with our neighborhood's design, infrastructure, and legal foundation.<br><br>1. Direct Conflict with Historical Significance and Legal Covenants<br><br>Southcliff is not just a collection of houses; it is a historically significant example of post-war, mid-century modern residential development. The ""Clark County: Mid-Century Development (1950-1965)"" report, commissioned to encourage the preservation of this era's heritage, identifies Southcliff as the first subdivision developed during the pivotal redevelopment of McLoughlin Heights.<br><br>This historical character is protected by legally binding restrictive covenants that have been in place since 1954 and were signed by the city's Mayor at the time, potentially making the city a party to the covenants. These covenants run with the land, apply to all properties, are automatically extended and are enforceable by residents. Any attempt by a property owner to develop a multi-story, multi-unit structure as allowed under the proposed Mixed-Use or Medium-Scale designations would be a direct violation and would face immediate legal challenges from the community.<br><br>Furthermore, our 2001 Neighborhood Action Plan, created in partnership with the City, formallyestablished the objective ""To ensure that single family residential re-construction is consistent with the architecture of the neighborhood"" and includes a high-priority action to ""Maintain the current amount of single family homes in the neighborhood." The proposed upzoning directly contradicts this long-standing, city-recognized community vision.<br><br>2. Severe and Unmitigable Traffic and Safety Impacts<br><br>The proposed overlays are functionally unworkable and create a significant public safety issue. No new ingress or egress is proposed from Mill Plain Blvd., so all associated traffic would be funneled onto Southcliff's quiet, residential streets. These curvilinear streets were intentionally designed to<br><br>reduce traffic speeds and never were intended to serve as collectors for high-density housing.<br><br>Our 2001 Action Plan already identified traffic calming as a high-priority issue. The city's own Draft EIS confirms this concern, projecting ""higher projected new traffic volumes on city safety corridors"" under Alternatives 1 and 2. This will inevitably lead to severe parking saturation and endanger the many residents, including children and seniors, who walk and cycle on our streets. We walk our neighborhood every day, so do many others including Southcliff neighbors and people from the surrounding area. There are no sidewalks in Southcliff, so increasing the traffic and parking will take away one of the best features of the neighborhood.<br><br>3. Environmental Degradation Confirmed by the City's Draft EIS<br><br>The proposed upzoning would cause irreversible environmental harm, a fact supported by the city's own analysis.<br><br>Stormwater System Overload: The Draft EIS acknowledges that Alternatives 1 and 2 have a ""higher potential for new impervious surfaces and associated runoff". This new runoff would overwhelm the recently completed $2.3 million Blandford Basin Stormwater Project, rendering a major public investment meant to protect the Blandford Canyon watershed and Columbia River inadequate before it has even had a chance to fully function.<br><br>Destruction of Tree Canopy: Southcliff possesses a 47% tree canopy cover, the highest of any neighborhood and a critical component of Vancouver's 36-year ""Tree City USA"" status. The scale of development required for Mixed-Use and Medium-Scale housing would decimate this vital urban forest. The Draft EIS confirms that both alternatives have a ""higher potential for impacts to vegetation and habitat areas"". Furthermore, Southcliff's tree canopy is vital habitat to several protected bird species we've witnessed in the neighborhood since moving here including bald eagles, red tailed hawk, and peregrine falcon.<br><br>4. Incompatibility with the Adopted Heights District Plan<br><br>Southcliff residents participated in the planning for the adjacent Heights District, accepting the significant density and impact of that major redevelopment. That plan capped building heights at 80 feet (six stories). Inexplicably, the proposed Mixed-Use designation for our single-family neighborhood allows for buildings up to 110 feet (eight stories)—substantially taller than the maximum height permitted in the core of the high-density Heights District. This | |

| ID | Full comment | Response |
|---|---|---|
| | is illogical and competes with the city's plan to make the Heights a Regional Activity Center. Commercial development in Southcliff would compete with and detract from commercial activity in the Heights.<br><br>The city should focus commercial and high-density housing zoning in the Heights, where the infrastructure exists to support it.<br><br>Conclusion and Formal Recommendations<br><br>We are not opposed to Vancouver's growth, but we hope it will be implemented thoughtfully. The application of Mixed-Use and Medium-Scale zoning to Southcliff is contrary to sound public planning, is environmentally irresponsible, and disregards the neighborhood's legal and historical foundations.<br><br>We formally request that the City Council and Planning Department take the following actions:<br><br>1. Completely remove the Mixed-Use and Medium-Scale Neighborhood designations from all parcels within the Southcliff neighborhood in the final version of the Comprehensive Plan and associated zoning maps.<br><br>2. Focus the highest-density Mixed-Use and Medium-Scale developments within established urban centers, such as the Heights District, that are already equipped for such scale. This aligns with the city's goal to ""promote efficient land use by focusing new development in areas with existing infrastructure"".<br><br>3. Mandate contextual downzoning and strict transitional height limits for any parcels bordering established single-family neighborhoods like Southcliff. This would require ""step-down provisions"" that create a sensitive transition and ensure compatibility, which is a stated goal of the Comprehensive Plan.<br><br>4. Incentivize the redevelopment of existing underutilized commercial properties along major corridors before permitting new commercial development to encroach into neighborhoods.<br><br>5. Initiate a process to establish a Southcliff Mid-Century Modern Historic Overlay District to formally recognize and protect the unique architectural and historical character of our neighborhood, a goal that aligns with the city's stated objective to invest in historic preservation.<br><br>Thank you for your time and consideration. We look forward to a collaborative approach that allows<br><br>Vancouver to grow while preserving the unique communities that make it a special place to live.<br><br>Sincerely,<br><br>Kristin Abell and Vaughna Cochenour<br><br>[email address] [phone number]<br><br>[email address] [phone number]" | |
| AU | """Please see the article in Science Advances volume 11, number 30, and perhaps you'll understand why it seems really ignorant that so much time has been wasted on providing this rezoning of our city. I'm specifically referring to the article on climate change and the coming freshwater crisis (Unprecedented continental drying, shrinking freshwater availability, and increasing land contributions to sea level rise).<br><br>Unprecedented continental drying, shrinking freshwater availability, and...<br><br>O<br><br>When I mention our aquifer and our dependence on groundwater in this county, most people seem surprised to discover that this is the case here. What is the condition of our aquifer? How much groundwater is available for pumping into the future? These are questions that should be addressed in the DEIS.<br><br>Rather than discussing how to increase recharge by retaining open space the Vancouver development people are considering densifying the city by increasing the number of housing units that can be built on land that is occupied by single-family neighborhoods, such as Southcliff. Additionally, there is a lack of discussion in the DEIS on the additional decrease in potential recharge by increasing impervious surfaces. | Comment noted. | | It seems ludicrous to me that the DEIS does not have many factual data that can be compared to evaluate alternatives, and that the No-Action alternative is one that the State Legislature in its apparent lack of wisdom has applied to the entire State.<br>Sincerely,<br>Paul Pedone<br>[address]<br>[email address]<br>[phone number]<br>""" | |
| AV | """Hello, All. I have known most of you for many years and have worked with you on countless initiatives to make our city even more outstanding. I appreciate you taking the time to thoughtfully read my comments and consider the impacts I fear could negatively impact the Southcliff Neighborhood.<br>First, I have carefully read the information shared about two alternatives for implementing two things...rezoning a strip along Mill Plain Blvd that backs up to our neighborhood..and the radical proposal to completely ignore long standing CCand Rs that have been in place since 1954. This historic mid-century modern neighborhood has been preserved as a treed, peaceful, well laid out community for families, kids learning to walk and ride a bike, pedestrians and pets. It is a friendly place. While without sidewalks, it is extremely safe and walkable. This morning, a neighbor who has lived here for 54 years chatted with me as he made his therapy walk.<br>The idea that these two suggested changes could be forced upon us is offensive to me. Here's why:<br>1. I understand that Vancouver is faced with needing a great deal of new housing for an influx of new residents. Vancouver has done a great job of creating a city that is a wise choice for new residents.<br>Three solutions (probably among others) come to mind and have been discussed for years: The Evergreen Corridor , Downtown Vancouver (see recent Columbian) and making sure that the Heights Plan is as dense as it can be. These options are already primed for execution. Let's focus on those.<br>2. The Heights project, many fear, will already bring additional traffic and negative impacts to our neighborhood. Do we really need to take another hit?<br>3. Finally, have you ever driven behind a strip mall or line up of businesses that keep their trash bins (unsightly and often smelly) """"in the back'? Where will operators park their cars? Adding new commercial space along Mill Plain will bring activity, random noise (we already know about traffic noise and we understand that). This will undoubtedly lower property values and create hardship for my neighbors. Additional retail space will already be provided in the Heights Plan. I see no need to add more. And, consumers have already become great online purchasers.<br>4. Finally, when it was time for my late husband and I to downsize 23 years ago, this was our top of list choice for a move. We bought a modest home on a quiet street. We felt that our next chapter was going to be 'as is' with the amenities we wanted (peace, quiet, safe, friendly, trees, mature landscaping, and much more...) because it was well defined and guaranteed by existing CCandRs.<br>Please don't decide to move forward with the City"s Draft EIS. Southcliff is so much more than a developer's opportunity. It's my home.<br>Respecfully,<br>Lee Rafferty<br>""" | Comment noted. | | dwelling status on the property itself. We have invested heavily into our home knowing this was our forever home, this was our last purchase; this was it for us. We intend to live here till the end.<br><br>When deciding on our new home location, City of Vancouver, we never imagined in our wildest dreams this could happen.<br><br>Both my wife and I are senior citizens over the age of 65. The very act of moving and relocation expenses would be both cost prohibitive and emotionally exhausting for us as. In addition, anytype of undo pressure put upon us to sell, or relocate would have a catastrophic impact on our quality of life.<br><br>In addition, our property is currently zoned for SINGLE FAMILY RESIDENCE only. This zoning status gives rise to our property being valued at a financial premium. This is common knowledge here in the South Cliff Neighborhood. Any change to this zoning, WOULD IMPACT our property value significantly. My estimates are a decline of 50%.<br><br>We do not consent to this rezoning.<br><br>Thank you.<br><br>Thank you<br><br>Mark & Karen Streeter<br><br>[address]<br><br>Vancouver, Wa<br><br>""" | |
| AX | "In response to:<br><br>OUR VANCOUVER Comprehensive Plan Update Draft Environmental Impact Statement<br><br>How to Provide Comments Comments may be provided via online comment form, email, postal mail or voicemail.<br><br>Online Comment Form (preferred): https://www.surveyhero.com/c/VancouverDEIS<br><br>Email: OurVancouver2045@cityofvancouver.us<br><br>Postal Mail: Meredith Herbst City Hall PO Box 1995 Vancouver, WA 98668<br><br>Voicemail: 360-487-7929<br><br>Dear Staff of OUR VANCOUVER Comprehensive Plan Update Draft Environmental Impact Statement:<br><br>I am writing this letter as a representative of the partners of the Vancouver National Historic Reserve (VNHR), a nationally significant historic district and congressionally designated park largely within the southern portion of the City of Vancouver's Central Park. The VNHR was established by Congress in 1996 (Public Law 104-333, Sec. 502) and encompasses approximately 366 acres of public lands under the ownership and management of the Department of the Interior through the National Park Service (NPS) at Fort Vancouver National Historic Site (FOVA), and the City of Vancouver (COV). The VNHR partners, including NPS, COV, and the State of Washington (through the Department of Archaeology and Historic Preservation –DAHP), manage the VNHR through a publicly approved Cooperative Management Plan, with each agency partner managing its lands consistent with their respective laws, regulations, and policies.<br><br>The shared vision of the VNHR is embodied in the preservation of historic structures and other cultural resources including archaeological sites and cultural landscapes; education and interpretation of the unique people and events that shaped the history of the region centered at the VNHR and including nearby historic properties, and public use and accessibility to the park and its cultural and natural resources. NPS is the lead for interpretation, research, and museum curation, cultural resource compliance and ensures that rehabilitation of historic structures and landscapes conform to the Secretary of the Interior's Standards and Guidelines for historic preservation. DAHP is responsible for | The City, as partner in Vancouver National Historic Reserve and significant property owner within the district, is committed to maintaining its historic character, structures, and archeological and cultural resources. The current Central Park Mixed Use (CPX) zoning district allows for a mix of uses including housing, offices and commercial services, educational and community recreation facilities, medical centers, human service facilities, cultural institutions, and parks and open space. The proposed new zoning districts are Institutional/Campus for areas south of Officers Row and north of McLoughlin Blvd., and Regional Activity Center in between these areas, including portions of Clark College and on both sides of Mill Plain Blvd. Both the Institutional/Campus and Regional Activity Center zoning districts allow for a similar mix of civic, institutional, housing and commercial uses as the existing CPX zoning and in alignment with City policies and goals associated with the Comprehensive Plan update.<br><br>In recognition of the unique character, shared goals for preservation and additional state and federal limitations on development with the Vancouver National Historic Reserve, the new zoning code also applies a new Heritage Overlay Historic Reserve District (see proposed new Title 20 Development Code 20.550.070) that establishes standards beyond the base zoning to protect cultural and historic resources and the historic character of the Vancouver National Historic Reserve. This new overlay establishes boundaries, regulates uses, and provides for special standards that require consistency with the Washington State Historic Building Code, the US Secretary of the Interior's Standards for Treatment of Historic Properties, and other pertinent local, state and federal regulations. The area included in the new overlay includes the full geography of the current Officers Row and Historic Reserve conservation districts that currently exist in the Central Park Mixed Use (CPX) plan district and incorporates all standards from the current Historic Reserve conservation district.<br><br>Additionally, properties located south of Mill Plain Boulevard and directly abutting Officers Row to the north, while proposed to be rezoned to Regional Activity Center to be consistent with the City's Preferred Alternative Framework and adjacent properties, are all currently in public ownership (Clark Public Utilities District, City of Vancouver, and Vancouver Public Schools) and are intended to stay that way for the foreseeable future based on conversation with representatives from those agencies.<br><br>The Central Park Subarea Plan will continue to guide investment decisions in the subarea, and continues to be referenced in Vancouver Municipal Code Title 20 Development Code. Core principles of the subarea plan |

|---|---|---|
| | identifying, evaluating, and protecting significant historic properties in the State of Washington that are worthy of protection, providing guidance and oversight on historic preservation within the VNHR.<br><br>We agree that meticulous planning is critically important to facilitate smart growth and development for Vancouver, Washington, while maintaining those attributes of a proud and desirable community that reflect on its storied past and unique community assets. However, we are troubled by the plans to redesignate the Central Park Plan Mixed Use Zoning to Institutional/Campus that will allow townhouses, apartments, mixed-use residential, and mid-rise buildings within Central Park and VNHR in addition to the more appropriate educational, civic, and recreational buildings and facilities. Further, under Alternative 1, the zoning of a strip of the Central Park area as Mixed Use Neighborhood would split the Central Park into two separate areas separated by a broad swath along Mill Plain associated with a minimum housing density of 32 units/acre, no maximum density, building heights up to a maximum of 110 feet tall, and multifamily buildings. Alternative 2 is even more aggressive within this strip with zoning the same as for downtown (Regional Activity Center), with a minimum density of 64 units per acre, no maximum density, and minimum building heights of three stories with no maximum building heights.<br><br>These zoning changes are not consistent with the character of the VNHR and adjoining properties and could result in significant adverse effects to the historic district including adversely affecting the setting and feel of the park which will impact the way in which the historical significance of the place is conveyed to the visitor. The City's Central Park Plan recognized the unique character of the former historic military post, including the VNHR, and the need to create a unified sense of place that celebrated the shared landscape, while recognizing historically significant grand entrances and roads and interconnecting trail networks which have existed through time. Importantly, the district adjoining the VNHR was dedicated to education and recreation centered on Clark College and Hudson's Bay High School and emphasizing an open campus, parklands, and recreational opportunities.<br><br>Attributes of historic preservation, education and recreation associated with the Central Park Plan are fundamental to the quality of life of Vancouver, Washington and essential to promote a healthy and livable community. The VNHR and related properties of Central Park support recreational activities and park landscapes that support citizens' regular exposure to green space. The VNHR and Central Park are indispensable for citizens to foster well-being, reduce stress, increase creativity, engage in outdoor civic events, while being exposed to the grass, trees, and landscaping. This will be even more important for our residents who will be inhabiting increasingly densely packed areas. Absent the national park's historically significant and open green space, no large open green space of similar scale and historical importance exist, with the exception of Central Park—a place which is open and welcoming to the public. As the population and density of housing continues to increase, it is critical, just as other great cities have done, to set aside large swaths of open green space. Vancouver is incredibly fortunate to have existing—highly historically significant and open green space—which proudly ties to the City's and the PNW's history. Promoting and cultivating this open green space to better serve the people of Vancouver for generations to come appears prudent, forward thinking, and even visionary to offset the greater density of housing and population elsewhere in the city.<br><br>We urge minimally, that zoning recognize three conservation districts intrinsic to the Central Park, Officers Row (20.640.030), Historic Reserve (20.640.040), and Education and Recreation (20.640.050). These existing conservation districts provide development standards and guidelines that are consistent with existing VNHR planning documents, deed restrictions and other covenants, and create a unified Central Park vision that will maintain and preserve, for the benefit of our citizens today and in the future, the unique nationally significant character of this portion of the City of Vancouver.<br><br>Ultimately, the intact nationally significant resources providing opportunities for learning and reflection as well as the integral quality of life provided by open green space of the VNHR, including Officers Row and the national park) and Central Park sets our city apart from most other cities in our nation and is worthy of continued protection and preservation. We hope for forging a path which continues to preserve, what has been historically called, the heart of Vancouver.<br><br>taf<br><br>Tracy A. Fortmann | include preserving and enhancing the Historic Reserve as well as institutions and community resources adjacent to it; implementing Gateways to differentiate Central Park from other areas of the City and recognize its unique character and history; building out the Great Street concept as roadways in Central Park are improved; establishing multimodal pathways with consistent wayfinding; preserving the abundance of open space in the subarea; and ensuring it is well served by transit.<br><br>Throughout the City, proposed changes to the zoning code do not diminish or eliminate the goals in adopted subarea plans; instead, the proposed new zoning code will utilize a new set of land use regulations to implement subarea visions and goals. This is true within Central Park as well as the rest of the City. |

| AY | "Dear Ms. Herbst,<br>1. Regarding the Our Vancouver comprehensive plan update, please record our comments and forward them to all appropriate decision makers. Our names are William and Debra Craine. We have lived at [address] in the Southcliff neighborhood since 2002.<br>2. We have reviewed the zoning change proposals being put forth in the City's Draft EIS.<br>3. We strongly support a ""No Action"" alternative with whatever zoning features would best preserve the historic character of our neighborhood. While we understand that some changes may be required by State mandates, we urge those changes be kept to a minimum.<br>4. Because our property backs Mill Plain Blvd, we are among those owners who would be most severely affected by zoning changes. Our reasoning against the ""Action Alternatives"" include:<br>a. Both Alternate 1 and 2 are incompatible with established long term planning. When we returned to the area in 2002, following a military career, we paid particular attention to existing and proposed land use standards. The Southcliff restrictive covenants (dating to 1954) and the 2001 Neighborhood Action Plan both mandate single-family residential use with building heights restricted to two stories. All the properties have off street parking. Our purchase was based on an expectation the look and feel of the community we were joining would be preserved into the future. The action alternatives could replace our exiting adjacent neighbors with commercial and mixed use buildings up to 8 stories high. I don't see provisions for off street parking. Those changes would fundamentally alter the character and value of our property.<br>b. The action alternatives either disregard or dramatically expand the impacts of the Tower Mall (Heights district) redevelopment. Southcliff is immediately adjacent to that property which is already being redeveloped with commercial and mixed use high rises.<br>The lack of required parking is already expected to spill traffic congestion from there into our neighborhood. I believe Injecting higher density into both locations will make<br>parking impossible. If higher density is required, it should be concentrated at Tower Mall while addressing adequate parking there.<br>c. Southcliff is a historic mid-century neighborhood that should be preserved. The quiet streets and mature tree canopy provide a healthy and safe environment for both children and retirees to get exercise and connect with neighbors. With adjoining undevelopable land, Southcliff is a haven for wildlife. We have friends in Washington and other states where the real estate trends are toward gated communities designed to mimic the look and feel of what exists in Southcliff. We are not gated and welcome visitors to our streets and park. I don't believe allowing higher density zoning to destroy the character and historic identity of Southcliff will actually concentrate land use. It will simply remove green space in Vancouver while shifting low density development to less diverse and more affluent communities.<br>d. In essence, the proposed rezoning is a taking of our assets. Our present quality of life is an asset that significant rezoning would devalue. Our privacy is an asset that the placement of an eight story building on a nearby or adjacent lot would destroy. Our home is a financial asset the changed character of the neighborhood would deflate. The | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

|---|---|---|
| | personal costs of either action alternative are an unreasonable burden to place on people who are already accommodating high density redevelopment on bordering property.<br><br>5. Thank you for the opportunity to comment. We again urge you to pursue plans that focus on renewal and development of existing commercial and mixed use zoned properties along Mill Plain Blvd. Southcliff is a small pocket of land with an established community. It is not in the interest of our neighbors or Vancouver at large to discard decades of community planning in favor of a drastically different vision.<br><br>" | |
| AZ | "Chad & Rebecca,<br><br>Thank you for the opportunity to provide comment on the Draft Environmental Impact Statement (DEIS) for the Vancouver 2045 Comprehensive Plan Update. We commend the City for embracing the complexity of growth and change while continuing to engage the community in shaping a shared future. The DEIS and supporting materials reflect thorough, thoughtful, innovative planning and an earnest commitment to sustainable and inclusive urban development.<br><br>As the City evaluates land use alternatives, we urge special consideration for Columbia Business Center (CBC). Since the mid 20th century CBC has been a significant economic asset in our region supporting a unique, maritime-dependent industrial ecosystem built upon the legacy of the Kaiser Shipyards and enhanced by decades of reinvestment. Comprised of 228 acres and including more than 1 mile of Columbia River shoreline, it plays a distinct role in the regional economy, providing middle wage, traded sector jobs that are increasingly scarce in urbanizing environments. Since 2006 Killian Pacific has been a steward of this site, and in 2024 purchased the westerly 129 acres, consolidating the full property under unified private ownership for the first time in generations1<br><br>Today the CBC is home to more than 2,000 jobs with an average annual wage of approximately $95,000 and contributes an estimated $2 billion in economic impact to our region2<br><br>Request<br><br>Killian Pacific is seeking a change of CBC from its current designations of light industrial (west of Kaiser) and heavy industrial (east of Kaiser) to a Regional Activity Center (RAC) designation for entirety of the site, as reflected in DEIS Alternative 23. Killian Pacific recognizes that, ultimately, the City will adopt a plan that is a combination of the Alternatives included in the DEIS, and that takes into account feedback on the DEIS, additional analysis and ongoing community engagement. We urge you to designate CBC as RAC in the final recommended land use map that emerges from this work.<br><br>General Comments<br><br>In general, DEIS Alternative 2 includes capacity for both job creation and housing production that slightly exceed the growth targets established for the City of Vancouver. This marginal capacity above the jobs and housing targets would provide a greater flexibility in achieving goals included in draft planning documents through the inevitable economic and market fluctuations that will occur over the 20-year planning horizon. This would be a strategic advantage for the City as it seeks to both continue to support job creation as well as encourage investments that address Vancouver's crucial housing deficit. As such, KP encourages the City to consider maintaining some version of this marginal capacity in the final land use plan designations.<br><br>Built Environment<br><br>The current developed condition of CBC is as unique as its size, location and connection to the Columbia River. The western portion of the site (between Columbia Shores and Kaiser Avenue), while active with a range of tenant activities, is relatively underdeveloped and contains more aged structures. The central portion of the site (between Kaiser Avenue and Victory Avenue) is more intensely developed with a mix of shipyard-legacy and newer industrial buildings and active use of outdoor areas for heavy manufacturing storage and assembly. The eastern-most portion of the site (between Victory Avenue and Marine Park) is the most intensely and recently developed, with a mix of manufacturing, warehousing and distribution facilities. For long range planning purposes, a RAC designation is being sought for the entire site with this plan update. However, the nature of these existing development patterns and | Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>The proposed Preferred Alternative land use map applies Regional Activity Center zoning to the area known as Columbia Business Center in recognition of future plans to evolve this area into urban mixed use center. The proposed Preferred Alternative and Vancouver Municipal Code Title 20 Development Code simultaneously apply an Industrial Holding overlay on the same area in order to preserve the current industrial functions and allow for continued legal use and expansion of industrial users until such time that transition to a different development pattern is appropriate. The Industrial Holding overlay is applied in recognition of areas economic contributions and ensures they remain viable and successful at this site. The Industrial Holding designation will remain in place until development and adoption of a comprehensive and likely phased mixed use master plan for the site that addresses future uses, critical infrastructure needs, community space, environmental conditions and phased redevelopment. |

| ID | Full comment | Response |
|---|---|---|
| | active industrial ecosystem suggests that a full build out of the site will not occur within the horizon this comprehensive plan (2045) but rather take decades and be informed by the natural life cycle of tenant businesses.<br><br>Redevelopment under the RAC designation would facilitate long-term potential for increased job creation, economic diversification and resilience, and a net increase in total economic output from CBC while respecting the unique maritime manufacturing uses on site. Through thoughtful master planning in partnership with the City, future development of CBC can enhance pathways to quality jobs, strengthen support for small businesses, create opportunities for innovation and entrepreneurship and stimulate invest in neighborhoods and commercial districts. Based on the planning assumptions underlying the analysis contained in the DEIS, a disciplined, measured, market sensitive conversion of CBC from its current state to regional activity center within the planning horizon could result in creation of significant new direct, middle wage jobs in addition to the existing jobs on site5<br><br>In addition, master planning of CBC under a RAC designation would facilitate the potential development of additional housing to address Vancouver's housing crisis without material displacement of existing jobs. The potential development of CBC consistent with a RAC designation also presents significant opportunities to enhance, restore the ecology of, and expand public access to the Columbia River shoreline6. Such potential development would also present the opportunity for improved community aesthetics and placemaking7 aligned with Vancouver's community vision.<br><br>Development of the site under RAC would necessitate significant investment in the full spectrum of public infrastructure. Current transportation access to the site is limited, and investments in utilities, power, transportation, water quality, parks and open space will all be needed to serve further development of the site. As with all alternatives in the DEIS, further development over time would also increase demand for public services, requiring plans for incremental expansion of public safety, education, and recreation services8<br><br>Mitigation<br><br>Killian Pacific sees the potential for CBC to serve as an even more significant part of the region's economy and vibrancy, while concurrently recognizing the importance of the current industrial ecosystem and the unique maritime-reliant manufacturing that distinguishes this property. CBC is unique in the City of Vancouver. Its legacy rooted in the Kaiser Shipyards makes it an exceptional industrial asset in our region. Additionally, the DEIS accurately identifies the practical challenges associated with further development - including limitations in transportation access and capacity, limitations on power and utility infrastructure, and increased demand for public services. To realize the full potential of the site would require significant investments in the full spectrum of public infrastructure and incremental expansions of public services.<br><br>To balance the preservation of the existing industrial ecosystem at CBC with planning for the longterm potential for future urban development, we propose a mitigation framework that can be embedded in the Comprehensive Plan and its implementing actions. While we will seek to collaborate with the city in crafting the specifics, we recommend this framework include:<br><br>1. A base land use designation of Regional Activity Center: this would embed a vision for the ultimate evolution of CBC to a more dense, compact, mixed-use development that maintains existing and maximizes future employment, residential and open space opportunities. This change in the base land use designation would allow KP to invest in the creation of a master plan with the City during the horizon of this comprehensive plan.<br><br>2. An Industrial Overlay Zone (or equivalent): This overlay should be adopted concurrently with a base RAC designation and preserve CBC's current industrial function, allowing for the continued legal use, expansion, and evolution of industrial operations without classifying them as nonconforming. This approach ensures that the site's economic contributions remain viable during master planning and subsequent development and reassures current industrial businesses of their ability to remain successful at the site.<br><br>3. A master plan requirement as a prerequisite for RAC-based redevelopment: Releasing the industrial holding overlay should be contingent upon the adoption of a comprehensive master plan for the district9. This plan would be created in partnership with the City and would address job and housing needs, infrastructure needs, park and open space plans, transportation solutions, environmental conditions, and phasing. | |

| ID | Full comment | Response |
|---|---|---|
| | 4. Integration into Capital and Public Service Planning: Ensure that public investments in infrastructure and transportation necessary to support urban redevelopment are aligned with both the timing and geography of private investment readiness. We believe this can be done in anticipation of and concurrent with collaborative master planning.<br><br>As a long-term steward of this site and a multi-generational developer in our region, Killian Pacific is committed to both optimizing the current industrial ecosystem located on CBC while planning for a vibrant, evolving future for the site. We believe this approach is an exceptional opportunity to maintain the integrity of Vancouver's remaining industrial base while enabling a thoughtfully managed transition over time.<br><br>Thank you for your leadership and for considering these comments in your continued work on the Comprehensive Plan Update. We look forward to actively working with you as the remaining policy work is matured, through adoption of the plan rewrite and the implementation state beyond. If you have any questions, please do not hesitate to contact me. " | |
| BA | "Dear Vancouver City Council Members,<br><br>I am writing to respectfully oppose the proposed rezoning of the Southcliff neighborhood. As a homeowner here since 1999, I have witnessed firsthand the strong commitment our residents have made to preserving the character, safety, and vitality of this community. I have lived in this area since 1967, having gone to Marshall Elementary, Mac Junior High and Fort Vancouver High School. My own children, who are adults now, similarly went to local Vancouver public schools. We are all committed to this area and have tried to contribute positively to Vancouver in general and the Heights in particular.<br><br>The proposed rezoning raises several serious concerns:<br><br>1. Traffic and Safety: The plan will inevitably increase traffic in and around Southcliff. Our streets were not designed for such volume, and there is no easy or appropriate access to the proposed site. Increased congestion would diminish the peace and quiet that families have long valued here.<br><br>2. Availability of Better Alternatives: There are already more suitable sites nearby that are properly zoned for this type of development. Specifically, the south side of Mill Plain between Andersen and the cemetery offers far better access and infrastructure, minimizing disruption to established neighborhoods.<br><br>You don't often get email from [email address]. Learn why this is important<br><br>2<br><br>3. Conflict with Ongoing Development: The old Tower Mall property is currently under redevelopment, with plans that will bring much-needed services and growth to the area. Introducing another major project so close by would jeopardize the success of that effort and scatter resources and attention prematurely. A measured approach would allow the Tower Mall project to be built out first, after which other options could be considered.<br><br>4. Preservation of a Cohesive Neighborhood: Southcliff is more than just a collection of houses—it is a vibrant, engaged, and cohesive community that has been the backbone of this area for generations. Our neighborhood deserves to be protected from rezoning proposals that would erode its character and quality of life.<br><br>For these reasons, I urge the Commission to reject this rezoning proposal. Growth and development are important, but they must be pursued thoughtfully, with respect for existing neighborhoods and careful attention to long-term planning.<br><br>Thank you for your consideration.<br><br>Respectfully,<br><br>Jay L. Crary<br><br>Southcliff Homeowner since 1999 " | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| BB | """We have lived in Southcliff for 40 years, as have many of our neighbors. We chose this neighborhood for the beauty of the homes here, it's large lots and wide walkable streets. Being a small confined neighborhood gave us a feeling of safety and security, knowing that we would make this your lifetime home.<br><br>This old historic neighborhood is one of this city's gems. City's in which we have visited in the U.S usually include several of these neighborhoods where the homes are higher end homes where the structures and landscapes have been upgraded and maintained over the years, making them unique and special neighborhoods within these cities.<br><br>The proposed plans for the land management in the Southcliff area would significantly alter this unique and historic neighborhood. The large buildings proposed to line Mill Plain in our neighborhood would drastically alter the character for the residents who have moved to Southcliff over the years. Many of us have remodeled and upgraded our landscaping over the years to ensure that Southcliff remained the little gem that it is. Our once peaceful gem of a historic neighborhood would no longer exist.<br><br>After reviewing the Southcliff Neighborhood Action Plan dated January 22, 2001 a few specifics stand out to us:<br><br>1.<br><br>2.<br><br>3. Support improvements for bicycling<br><br>4. (bike lanes, paths, and parking).<br><br>5.<br><br>6.<br><br>7.<br><br>8. Maintain the current amount of single<br><br>9. family homes in the neighborhood.<br><br>10.<br><br>It is our understanding that from the Southclif Action Plan and the restrictive covenants from our > 60 year neighborhood charter (CC and R's) limit extra construction on our personal property lots, thereby ensuring that our neighborhood keep its lonstanding character and importance to the City of Vancouver.<br><br>We have not recently reviewed the proposed new development of Town Plaza. Our understanding is that this plan will include housing for some 1300 people, allowing for new commercial development and other improvements which seem to satisfy many of the goals of this plan. We are already concerned with our safety in Southcliff due to the high influx of individuals who will newly reside nearby in the Town Plaza development.<br><br>It is our view that the city keep this little neighborhood gem as it now exists for future generations to live in and enjoy, as it gives the City of Vancouver a sense of it's history.<br><br>Thank you for allowing our input<br><br>Rose and Terry Williams<br><br>[address]<br><br>""" | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| BC | "To Whom It May Concern:<br><br>I am writing to state my extreme safety concerns with your current zone R-6. Current buyer on the vacant lots is planning on putting high density condos on a neighborhood street , Esther Street off 49th NW. This neighborhood has a narrow street, sub-standard road width, no sidewalks, poor lightening, poor sight distances some intersections, two schools that have much walking traffic, poor drainage (rain runs down my driveway much and floods drains much making it so unsafe not safe for current traffic). Also, on the corner of 49th/Franklin house who have renters that have | Comment noted. The Preferred Alternative zones this area at Esther Street and 49th and 49th and Franklin as Medium Scale Neighborhood. Refer to Common Response #5 Traffic Safety for more information on this topic and Common Response #11 for details on Property Value and Taxes. |

|---|---|---|
| | a parking lot of cars parked in their field. They often drive out from field on to Esther Street ( you can see the tire dirt path next to blackberries bushes super unsafe); as well as members living in house or area being under investigation of burglary of the Archdiocese of Seattle house now owned by buyer wanting to put many condos on small piece of property. Condos don't fix the large housing with large lots to north of property under zone R6 in question. Please stop this destructive process that will make this neighborhood very unsafe as well as lowering value of homes.<br>Teri Moyer<br>[address]<br>3609365767" | |
| BD | "Meredith Herbst<br>City of Vancouver City Hall<br>PO Box 1995<br>Vancouver, WA 98668<br>Email: OurVancouver2045@cityofvancouver.us(External link).<br>Dear Meredith Herbst:<br>Thank you for the opportunity to comment on the City of Vancouver's July 2025 Our Vancouver: Our Future 2045 State Environmental Policy Act Draft Environmental Impact Statement. This plan will establish a vision to guide the growth and development of the City of Vancouver over the next 20 years (to 2045).<br>Planning for the future of the City of Vancouver should recognize those important characteristics of the city that bring people to want to live here. One important aspect is its placement within the amazing natural beauty and resources of the Pacific Northwest, including the Columbia River, the evergreen-clad hills and mountains, and the magnificent volcanoes that are visible throughout the city. In addition, Vancouver's unique and very special history is a particular reason why new residents and visitors are drawn to this place. It's not just the National Park Service's Fort Vancouver National Historic Site, and the City of Vancouver's Officer's Row, the Howard House, and other properties of the Vancouver National Historic Reserve, but also the historic neighborhoods that have developed in response to the nationally-significant events that have occurred here and that are important character-defining parts of our city. Many of our most historic neighborhoods are linked to Hudson's Bay Company and U.S. Army history, like the names of our principal thoroughfares (Mill Plain, Fourth Plain, McLoughlin, Chkalov, and McArthur). Besides the Hough Neighborhood and the Vancouver National Historic Reserve, many of these neighborhoods reflect uniquely Vancouver character and retain a valuable historical aesthetic and setting. Many are worth preserving and listing on local, state, or national historic registers.<br>Some neighborhoods were intentionally created with the goal to preserve the character of their setting. For example, Officers Row is deed-restricted to maintain the historic character of the buildings and landscape. The covenant for Southcliff (where I live) created in the early 1950s, define the number and size of houses that can be placed on each lot. These past decisions have led to distinctive and highly-valued neighborhoods. There are other neighborhoods that are distinctive because they date to a particular time period, reflect important historic events in the history of the city, and retain a character that is distinguishing. For example, Harney Heights contains many streets, houses, and facilities that reflect the character of the World War II housing for shipyard workers who supported the war effort and stayed in Vancouver after the war to make a good life.<br>Both alternatives as described do not address the level of damage that could be done to these historic places and neighborhoods. Many of the zones create circumstances that conflict with the special protective deed restrictions and covenants that were placed on them by forward-looking citizens and governments. Zoning in both alternatives for Southcliff, for example, would create situations that vary dramatically from its covenant. The identification of urban mixed-use development along Mill Plain on the northern edge of Southcliff and southern edge of Harney Heights neighborhoods could lead to construction that would devastate both neighborhoods with potential for 110 ft. tall buildings and extremely high minimum housing densities. The traffic impacts alone associated with this zoning on the | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | adjacent properties would be extremely disadvantageous. Even the base level of low-scale zoning would allow three-story building heights (45 ft.) and six units per lot. These zoning decisions would turn once cohesive neighborhoods into muddled, fractured, and disintegrated districts.<br><br>Central Park is another area of tremendous concern as this represents one of the best ideas of the City of Vancouver. Zoning for Central Park would be inconsistent with maintaining a reflective and peaceful campus of inter-related parks and grounds dedicated to historic preservation in the south and education (Clark College and Hudson's Bay Highschool) and medicine (VA) in the north. The introduction of townhouses, apartments, mixed-use residential, and mid-rise buildings are not consistent with the existing character of Central Park, particularly if they are not related to the goals of maintaining a cohesive park-like setting and the specific functions of the institutions that are situated within them. Likewise, it is imperative that the northern and southern portions of Central Park are unified and not divided by high-density residential housing and commercial businesses. With greater housing density elsewhere in the city, allowed in appropriate locations, the need for open space and places for reflection, recreation, and community events will be even more necessary to keep our citizens healthy, engaged, and spur the creativity that makes Vancouver, Washington unique and special.<br><br>While the need to provide more housing is necessary, it is imperative that decisions are not made that irrevocably harm the quality and historic values of the city. These characteristics create a healthy, welcoming environment. The determination to develop housing in long held green space or long-established historic neighborhoods comes off as a quick, short term, and thoughtless approach to addressing new housing needs. A long-term approach that respects our history and our people will better serve existing and future residents. Our citizens deserve a city that properly represents our community, without the needless destruction of the long established and historically-significant portions of our City. We need to maintain those elements that define the special nature of our community to continue to make Vancouver, Washington a desirable and well-designed place in perpetuity.<br><br>Very Sincerely,<br><br>Douglas C. Wilson, Ph.D.<br><br>[address]<br><br>Vancouver, WA 98661<br><br>Phone: [phone number]<br><br>cc: Jan Bader, CC Historic Preservation Commission<br>Andy Gregg, CC Historic Preservation Commission<br>Chatham Olive, SNA Chair " | |
| BE | "> Meredith Herbst<br><br>> City Hall<br><br>> PO Box 1995<br><br>> Vancouver, WA 98661<br><br>><br><br>><br><br>> My name is Barbara Nunn and I live at [address], in the Southcliff neighborhood. I have reviewed the zoning change proposals being put forth in the City's Draft EIS. I am against the adoption of both Alternative 1 and Alternative 2 as currently proposed.<br><br>><br><br>> My reasons for opposing these alternatives are because adding commercial and mixed-use to our neighborhood would mean losing the qualities that make Southcliff a desirable place to live. These qualities are safe, quiet streets, | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | mature trees and habitat that provide for wildlife and natural beauty. In addition, adding mixed use and commercial with no parking would mean our streets would be jammed with parked cars and additional traffic from proposed businesses, increasing the likelihood of accidents and removing the open, safe quality of the neighborhood.<br>><br>> I enjoy the park where many people from other neighborhoods visit for the peaceful quiet, safe environment with their families. Groups of moms bring their toddlers for these very reasons. The beautiful open space, blooms and shade and wide streets are perfect for walkers and bike riders from other neighborhoods to relax and enjoy as much as I do.<br>><br>> I understood from communications and plans that the Heights District is to be where commercial and mixed-use high rise buildings would be built. If the City needs more density please add it to the Heights plan and not Southcliff.<br>><br>> In addition to population growth, the EIS projects job growth. All kinds of jobs are continuously created by the homes in Southcliff, which because of their age, need repairs and work to keep them functional and updated. All types of contractors, landscapers, arborists, and other trades, roofers, painters, HVAC. Most of these are good paying jobs for members of the community and promote small business growth.<br>><br>> The other logical reason for preserving Southcliff as the historic neighborhood as it stands, is that besides safety, wildlife habitat, tree density and natural beauty, it attracts employers who are seeking highly skilled employees who are looking to live in a neighborhood with these qualities and also close to the downtown core.<br>><br>> I appreciate the opportunity to provide my comments to this important process.<br>><br>> Barbara Nunn" | |
| BF | "My family moved to Southcliff in 2008 after searching for a suitable location that included an appropriately sized home, space for our young children to play both on property and on the street as well as the local park. It was also our hope that we could age in place after retirement, since Southcliff's wide quiet streets allow for walking and biking in relative safety due to low traffic encouraged by the original layout of the neighborhood.<br><br>We discovered that the term "neighbor" extends well past the house on the left or right, and well into the entire community of Southcliff. Relationships are built through casual meetings in the park, on dog walks, more formal activities such as holiday celebrations, and neighborhood meetings, resulting in a truly unique experience for our family.<br><br>Now, as a longtime resident of the Southcliff neighborhood, I am writing to express deep concern on how the proposed zoning changes along Mill Plain Boulevard as outlined in Alternatives 1 and 2 of the Draft Environmental Impact Statement for Vancouver's 2025–2045 Comprehensive Plan would change the character of this special neighborhood.<br><br>Southcliff is a legacy residential neighborhood with a well-established character, mature tree canopy, and a strong sense of community. The proposed Urban Mixed Use and Corridor Mixed Use zoning designations along Mill Plain do not align with the scale, infrastructure, or values of this area. Specifically:<br><br>Safety: Increased density and commercial activity will lead to higher traffic volumes and pedestrian risks on streets not designed for such use.<br><br>Traffic generated by these up to 8-story buildings proposed along Mill Plain, will be forced onto our existing residential streets, none of which are designed as thoroughfares. This will cause increased risks for accidents. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| | Umatilla Way, a primary access point for the largest proposed development, is ""right turn only access,"" further funneling traffic onto already narrow residential roads used by pedestrians and cyclists.<br><br>Parking saturation due to limited onsite parking would push overflow onto Southcliff streets obstructing views, narrowing lanes and making it difficult for first responders especially firefighters to respond to emergencies in a timely manner.<br><br>Privacy: Taller buildings and multi-unit developments will compromise the privacy of adjacent single-family homes:<br><br>Reduced visual privacy due to taller buildings overlooking homes.<br><br>Increased noise and activity, diminishing the quiet residential environment.<br><br>Loss of personal space through parking saturation and greater public presence on private streets.<br><br>Noise: Mixed-use zoning introduces commercial noise, increased foot traffic, and potential late-night activity incompatible with Southcliff's quiet residential environment.<br><br>Parking: The proposed zoning eliminates off-street parking requirements, which will result in overflow parking on narrow residential streets, creating congestion and access issues for the current residents.<br><br>Destruction of Tree Canopy: Redevelopment threatens the removal of mature trees that define Southcliff's environmental character and contribute to climate resilience. Increased zoning density would have a huge impact on our tree canopy which directly conflicts with Vancouver Urban Forester Charles Ray's stated goal to ""support improving the health of our natural systems, increasing our community's tree canopy""<br><br>Southcliff's mature tree canopy adds to the character and innate beauty of the neighborhood, also serving to regulate temperature and providing habitat for a wide variety of wildlife. Many of these trees are over 70 years old and I suspect would qualify for protection as Heritage trees. Southcliff's canopy has been assessed at over 47% -the highest in the City - while the average Vancouver neighborhood is 19%, thus contributing significantly to Vancouver's Tree City status.<br><br>Neighborhood Character: Southcliff's identity is rooted in its mid-century architecture, spacious lots, and cohesive residential rhythm. The proposed zoning undermines this legacy.<br><br>Furthermore, Southcliff has had CC & Rs in place and actively reviewed since 1955 that restrict commercial and multifamily development. These covenants reflect long-standing community standards and should be respected in any future planning decisions.<br><br>There are other areas in Vancouver—such as MacLoughlin Heights, Mill Plain east of Andresen to I-205, and the Fourth Plain corridor—that are far better suited for the proposed mixed-use and higher-density development. These areas already have transit infrastructure, commercial nodes, and zoning patterns that support the city's growth goals without compromising established neighborhoods.<br><br>I urge the city to revise the proposed zoning map to preserve Southcliff's Low-Density Residential designation and consider implementing design overlays or transition zones to buffer the neighborhood from incompatible development. Southcliff deserves thoughtful planning that honors its history, protects its environment, and respects its residents.<br><br>Sincerely,<br><br>Martin Jacobson<br><br>Southcliff Resident<br><br>Vancouver, WA" | |

| | Meredith Herbst<br>City Hall<br>PO Box 1995<br>Vancouver WA 98668<br>Email to: amcenerny-ogle@cityofvancouver.us<br>epaulsen@cityofvancouver.us<br>bhansen@cityofvancouver.us<br>kharless@cityofvancouver.us<br>dperez@cityofvancouver.us<br>tstober@cityofvancouver.us<br>sfox@cityofvancouver.us<br>Re: Draft EIS – SouthcliU Neighborhood<br>The Honorable Mayor McEnerny-Ogle and Councilmembers:<br>My name is Judi Burkdoll and I reside in the Southcliff neighborhood at [address], the most easterly lot of the proposed changes in zoning adjacent to Mill Plain Blvd. Proposes which the City Council will be considering when updating Vancouver's Comprehensive Plan. Proposes to which I strongly object.<br>I chose the purchase in the Southcliff neighborhood twenty-four (24) years ago at considerable risk financially in that I was and remain a single individual with only one income. However, the risk seemed worth it as the neighborhood consisted to single family homes which were not cookie-cutter homes. Additionally, the neighborhood took pride in ownership with excellently maintained homes and yards, as the neighborhood continues today.<br>With Southcliff being so close to Tower Mall/TownPlaza, I understand completely why it might seem wise to go with these proposed zoning changes.<br>Why not, adjacent to The Vine which would key it to the waterfront project.<br>Everything is good, right? Wrong! This matter needs to go back to the drawing board and come up with a Plan D or E for consideration.<br>2<br>Has the Councilmembers, Planning Commission members, or planners for that matter, even driven around the various neighborhoods in Vancouver.<br>Many is the central area of the city could use some updating, perhaps that is where the various proposed zoning should be considered. Neighborhoods needing revitalization wherein a developer or investor could qualify for a lowinterest neighborhood revitalization loan. Not Southcliff which is a beautifully maintained historic neighborhood. I would even venture to say that Southcliff could be a holiday tourist attraction such as Peacock Lane in Portland should the Council encourage such a venue and the Southcliff<br>Neighborhood Association be receptive to such a plan.<br>Additionally, I question the influx of residents proposed for Vancouver in the next twenty (20) years. Where did the State come up with that figure. And, was the number of baby-boomers figured in the calculations as there are many of us who will be dead or in a long-term care facility in twenty (20) or less years. Long-term care facilities which Vancouver has more than its fair share with more being built. Point is, many of the baby-boomers own homes which will be available to new residents in the next decade or two. Has that even been considered when reviewing Vancouver's Comprehensive Plan update for year 2045? | |

|---|---|---|
| | With respect to the three (3) zoning designations proposed in the Southcliff neighborhood, all of which I strongly object, while those lots adjacent to Mill Plain within the proposal might see a slight increase in property value at the time of sale due to the Mixed Use designation, while the remaining neighborhood, particularly those directly across Willamette Drive would likely see a significant decrease in the property value due to the drastic change in the structure of the neighborhood. The current desire for home buyers wanting to live in Southcliff would be drastically diminished due to additional parking limitations and accidents, noise and environmental pollution from vehicles not to mention the filth and congestion. Should the City decide to make Mill Plain between Andresen and Vancouver Way such as Fourth Plain there would be even more congestion and likely accidents. Dependent on what types of businesses were permitted on the ground floor of buildings would also play a part in whether a home-buyer would seriously consider purchasing in the Southcliff neighborhood. Would you want to live next or close to a 3- 5 story-building with apartments and businesses on the ground floor, possibly a strip club, loud bar or rehab/recovery center? Why do I feel<br><br>3<br><br>the City would have limited, or no say, in the types of businesses that would open.<br><br>While I realize change is inevitable and Vancouver will continue to grow, I respectfully ask the City Council to reject these zoning proposals and seek a better avenue than Southcliff for these proposed zoning changes. Why fix something that isn't broken? The City of Vancouver should be proud of the Southcliff neighborhood and fight to keep it intact. And my thinking, the Council represents the City of Vancouver.<br><br>Thank you for your time and consideration.<br><br>Kind Regards,<br><br>Judi A. Burkdoll<br><br>[address]<br><br>Vancouver WA 98661<br><br>" | |
| BH | "To: Committee on Up-Zoning South Cliff Neighborhood/City Officials<br><br>415 West 6th Street<br><br>Vancouver, WA 98661<br><br>To Whom This May Concern:<br><br>My name is Nancy McKibbin, and I have lived in the South Cliff neighborhood for 45 years. My husband and I chose to raise our two children here because of its safety, privacy and the strong sense of community among neighbors.<br><br>I am writing to you to express my strong opposition to the proposed up-zoning changes in Vancouver, specifically within the South Cliff neighborhood and surrounding established residential areas. While I recognize the need for thoughtful planning to support our city's long-term growth, the current proposal represents a total and complete shift in land use—one that is careless, overreaching, and fails to address the real needs of this community.<br><br>South Cliff and its neighboring single-family communities are longstanding, stable and highly valued for the very qualities that make Vancouver an attractive place to live: character, safety, privacy, walkability and genuine sense of community. Families, retirees and individuals have chosen to invest and build their lives here because of these qualities. To replace them with high-density, multi-use development would be to strip away the very essence of what draws people to our neighborhood.<br><br>Beyond undermining community's character, the proposed zoning changes carry serious risk and negative impacts, including:<br><br>• Loss of property value for existing homeowners who have invested in the neighborhood | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | • Reduction in safety due to the increased congestion and traffic hazards.<br>• Loss of privacy as multi-use, high-density structures disrupt established residential living.<br>• Loss of walkability and the safe streets that currently allow children, families and elderly residents to enjoy the neighborhood.<br>• Erosion of community bonds, which thrive when neighbors know and support one another in a stable residential environment<br>The increase in density and commercial activity in areas like South Cliff will create congestion and unsafe conditions for all members of the community; This is not a targeted, balanced approach to zoning—it is a blanket change that disregards the expressed needs and desires of the very residents it impacts most.<br>Comprehensive city planning should carefully weigh growth needs with community preservation, not undermine decades of established character and investment. I urge the City Council to reject the proposed up-zoning in South Cliff and surrounding areas and instead consider zoning adjustments that are more balanced, thoughtful and responsive to both growth pressures and the values of our residents.<br>Thank you for your time and consideration of this matter. I appreciate your commitment to ensuring Vancouver's growth is managed with wisdom and respect for its citizens.<br>Sincerely,<br>Nancy McKibbin<br>[email address]<br>" | |
| BI | "Bridget Marick & David Curran<br>[address]<br>Vancouver, WA 98661-5921<br>August 23, 2025<br>Meredith Herbst & Vancouver City Planners, City Hall<br>PO Box 1995<br>Vancouver, WA<br>Dear Ms. Herbst and Vancouver City Planners,<br>My husband, David, are both medical professionals and we moved to Vancouver in November 2015. We did not want to live in Portland for several reasons. Therefore, we limited our search for a home to Camas and Vancouver. We looked at several properties including [address] in Vancouver which is a nice home. It was built in 1992 with a 3 car garage and everything one would think a home buyer would want. However, the back yard of this particular property butts up to duplexes and multi-family homes. We did not buy the house on 7th Place for that reason.<br>David and I chose to buy a home in Southcliff because it is a beautiful neighborhood with larger lots and the majority of the homes are established and well maintained from the 1950's. Our home at [address] was built in 1957 by Bob and Wilma Dungan. They lived in this home for 30 years until they sold it to David and Kelly Christel. The Christels lived in this home for 28 years before my husband and I bought it in 2015. Like other houses in Southcliff, our home is well built by an individual, not a developer, which makes the entire neighborhood unique. Southcliff is not a cookie-cutter, put up over night, kind of a neighborhood.<br>Because Southcliff is an older, established neighorhood, there is a large, mature tree population, which is another reason my husband and I love the neighborhood. With mature trees there are birds, including owls, and other wildlife, like deer, raccoon, and Opposum. You can catch a glimpse of them if you are up at the right time of early morning or | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

|---|---|---|
| | night. Without a doubt, trees will be taken down to allow for mixed use, medium scale, and even low-scale development. With loss of mature trees comes loss of habitat and food for wildlife, especially birds. I will never forget the first time I saw a Western Tanager. It was perched way up high in a mature tree in my yard. The Western Tanager is a brightly colored and beautiful bird that breeds in Western US and Canada. It winters in Mexico and Central America. This bird relies on mature trees for habitat and food. Without these mature trees, the birds will be most affected.<br><br>As outlined in the profile of the Southcliff Neighborhood City Plan of January 22, 2001, the shape of this neighborhood is dictated by topography rather than public roads. The boundaries of this place are made up of steep bluffs, hence the name and one can only access it by 3 streets: Rhododendron, Manzanita, and Umatilla. It is a small neighborhood with minimal access. Commercial development and high rise apartments would, without a doubt, impact traffic, parking, safety, and the uniqueness of the place. People seek out this neighborhood to walk, exercise their dogs, and teach their children how to ride a bike because the streets are safe and quiet.<br><br>There is great history associated with Southcliff, It is the southwest corner of MeLoughlin Heights which is one of 6 housing developments brought on by the influx of population to Vancouver sparked by WWil and Kaiser shipyards. Even back in 1945, when WWil ended, residents expressed concerns that the land of the housing developments would be released,<br><br>willy-nilly, to private investors. Their concerns were warranted because it would spell disaster to real estate values for private home owners in Vancouver.<br><br>I am one of 10 children who was fortunate enough to go to college and earn a degree. My parents could not afford to pay for my college or help me buy a home. But, they taught me values such as working hard and earning my way. My husband and I are wage earners. We worked hard in order to pay for our home in Southcliff. I often worked two jobs. David and I are concerned that the mixed use plans have little regard for the small home owners whose life saving may be at stake. Do we want future generations to have an opportunity to purchase a home in and live in Southcliff? The answer is yes. But a home located adjacent to mixed use, combination housing, and commercial businesses in Southcliff is not what my husband and currently have. We want to ensure future home owners of our property have the opportunity to buy it, as is, in the neighborhood as it currently is without tall apartment buildings and commercial influence.<br><br>There are plenty of other locations to consider for housing development projects in and around Vancouver. It seems there is potential for developing the vacant lots near Winco on Andresen Road. There are Vacant lots along NE Vancouver Mall Drive. Perhaps better use could be made of the 23.22 acres that consists of Forth Plain Center. Maybe a deal could be arranged with Living Hope Church on Andresen Road for a mixed-use neighborhood. The old Tower Mall development is already underway. The City of Vancouver discontinued lease of the land for Vanco Golf Range for a Heights District Development project. Other golf courses such as Lakeview Par 3 Golf Challenge, The Cedars on Salmon Creek, and Hartwood in Brush Prairie are already being developed. Maybe sights could be set on Royal Oaks Golf Club for a housing development. I dare to wonder how the members of Royal Oaks would react to that type of plan. I dare even more to think of their reaction to plans for mixed-use housing in their very own neighborhoods.<br><br>David and I feel blessed to have been able to buy our home in Southcliff and as such, we are stewards of this property and the neighborhood as a whole. We would not have chosen to move to Vancouver if there was no opportunity to buy a home in a neighborhood like we currently have. As honest stewards of Southcliff, we oppose the proposed comprehensive zoning plan.<br><br>Sincerely,<br><br>Bridget Marick & David Curran<br><br>" | |

|---|---|---|
| BK | "I moved to Southcliff for its quiet, walkable streets and beautiful trees. Adding commercial and mixed-use with no parking required would mean our streets would be jammed with cars parked on both sides and would no longer be quiet or walkable, not to mention tree loss and noise.<br><br>Access to commercial and mixed-use high rises would not be from Mill Plain but rather from our neighborhood streets creating huge congestion on those streets not to mention safety issues for pedestrians and cyclists.<br><br>Our neighborhood rain garden was designed to help remove pollutants in rain-water run-off based on the current volume of vehicles. Adding hundreds of cars to Southcliff streets would greatly increase the volume of pollutants. And adding more impervious surfaces would greatly increase run-off.<br><br>Southcliff is a historic mid-century modern neighborhood that should be preserved as in and no destroyed by the City just to make room for people who might (or might now) move here by 2045.<br><br>Jim and Sharon Walling" | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| BL | "Our Vancouver 2045 @city of Vancouver.us<br><br>Meredith Herbst<br><br>City Hall<br><br>PO Box 1995<br><br>Vancouver, WA 98668<br><br>RE: Réponse to city zoning changes<br><br>FR: Leann Nolan, home owner since 1980s at [address],<br><br>Vancouver, WA 98661<br><br>hann Man<br><br>Introduction of a Southcliff home owner:<br><br>, Leann Nolan, have lived in the Southcliff neighborhood since 1980. \| chose the area for the established trees and landscape, the safety and freedom to exercise, the neighborhood atmosphere to raise our daughter, and the quiet streets. The following is my personal response to the city proposed rezoning plans.<br><br>Review and comments on the Rationale for rezoning changes to single home house neighborhoods and response to planning proposed zoning for the Southcliff neighborhood:<br><br>Proposed Alternative1 and Alternative 2. This plan essentially rezones for a massive mixed use for all single Southcliff home lots. The Mixed-use along Mill Plain the northern edge would allow housing of 3-8 stories and commercial use(businesses) with ground-floor retail or office. Or, the medium-scle neighborhood from Mill Plain to Oregon Dr and much of Umatilla Way would accommodate 2-5 story high use for broad range of housing types, civic/institutional buildings?, and neighborhood commercial space.<br><br>But even the remaining of the Southcliff neighborhood is now all rezoned for 3 story dwellings.<br><br>Essentially all of these planned city proposals do not support single dwellings in a once established cohesive neighborhood. These plans will essentially destroy the existing Southcliff neighborhood. This would open up a total mismatched style of construction: businesses and mixed dwellings among existing single family homes.<br><br>In fact, the rezoning plans include for ALL Vancouver city single home lots to be rezoned for up to 3 stories high 6 units. Essentially the city wants to eradicate all single home lots? If not this needs further explanation to city Vancouver city dwellers and potential buyers. This plan will create a non cohesive, visual displeasing unappealing appearances high rise among single home as not all dwellers will sell at equal times), congested transportation patterns along either air pollution, safety concerns with cars using two neighborhood entrances to a now unlivable neighborhoods. Is this an answer/approach to Agenda 30 and the 15 minute neighborhoods? | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

|---|---|---|
| | Where does HB 1110 tell the planners to do such drastic rezoning? Does the city promote this and if so the city elected officials need to explain this to ALL Vancouver City constituents. In the name of equity and inclusion is the city making this type of rezoning throughout all of Vancouver city:<br><br>HazelDell (there is a large bus inclusion there) to East Vancouver?<br><br>Southcliff is exceptional and has a city_granted covenant.. Why would this be legal for the city to make such drastic powers to destroy a cohesive neighborhood? Currently the Southcliff has a neighborhood covenant granted by the city which was recently update. Does this rezoning negate this covenant? Nowhere in the covenant does the city give freedom to plan for several units on a one lot. Nowhere does it state that the city has the right to change zoning without the neighborhood consent. Is the city essentially land grabbing by these actions?<br><br>Safety and air quality is a key formidable issue is these rezoning_proposals.<br><br>These safety issues leaves the city vulnerable for further legal actions.<br><br>Additional building units in the Southcliff neighborhood with the two existing entrances is a grave concern. All the future traffic would be funnel through these two entrances to make it so busy that it would negate much walking besides increase the level of air pollution from additional exhausts from cars either visiting or living there. Reminder that Mill Plain is on the north edge of Southcliff. This rezoning will only add stress to air livability.<br><br>In addition the federal powers lines cross through the entire neighborhood for Southcliff. In fact many of the lots are larger to accommodate any power issues for owners health. Building higher dwellings near high rising voltage PUD lines needs careful review to dwellers health as compared to the Southcliff midcentury lower style. These issues need careful review and planning beyond simple rezoning increased population housing. Again, the federal power lines have an easement that demands a careful review for the city, PUD for any higher rise buildings.<br><br>Southcliff has an unprecedented unique historical mid-century cohesive style neighborhood in the Vancouver city limits.. The proposed rezoning to Southcliff will certainly destroy many of these features. The homes of Southcliff tends to have higher city tax value with kept landscapes, access to ridge views of Portland, and maintained homes. The imposing of up to 6 units on each property is a major change in all the city ordinances. This promotes the displeasing appearance of no cohesiveness. Home owners could randomly build in any style, compact any number of dwellers and totally upend the usability.<br><br>I, a homeowner, do not see this as progressive/proactive in the need to increase housing in the city of Vancouver but rather I view this as totally destructive. There are many undeveloped areas within the city limits to equally include density. Your plans suppose that Vancouver will exponentially have growth rates of overwhelming numbers. Your plans do not discuss impaction factors that may or may not influence the current population increases such as economics, political issues of other states as well as our own state of Washington. The border explosion of population has slowed which has seemingly pushed many to seek more housing and caused much population movement. Also, people moving here may not choose to live in compacted areas such as proposed but rather more out to more nearby counties. Not everyone wants the unlivable overcrowded Portland style neighborhood such as Sellwood or the insattion of housing in an established neighborhood such as EastMoreland. This rezoning created these for examples of compacting unnecessarily to unlivable areas.<br><br>But, what if the numbers of people moving from areas such as Portland and California decrease? Your projections do not allow for alterations. By the time you make al alterations to the zoning you will have destroyed much of the good this city possesses. The patterns of unending flux will not last to perpetuity. History verifies this. And in the meantime the rezoning would potentially create a hodgepodge and destroy much of the historical heritage city image. Again, once cohesive neighborhoods would have be broken to high-rises among single dwelling homes, poor traffic and parking patterns and gone/eradicated forever. Unlivable and undesirable.<br><br>Plan instead:<br><br>Why not equally plan for increase of city dwellers throughout the city instead of a heavy concentration in particular neighborhoods like | |

| ID | Full comment | Response |
|---|---|---|
| | Southcliff? Review growth in areas where more land allows new buildings such as Fourth Plain and north city Vancouver without upending a cohesive neighborhood. Why is the city heavily rezoning Southcliff when other neighborhoods seemingly are more exempt? I only observe more concentrated rezoning in particular areas.<br><br>Why not wait for the completion of Tower Mall to see the impact to the community it surrounds before just projecting way beyond for massive neighborhood changes such as proposed to Southcliff and even the impact of Braewood?<br><br>Questions that need addressing for all Southcliff and Vancouver city. taxpayers.<br><br>Why not involve all of the city dwellers in planning rezoning? There currently is little rezoning planning published in the local paper or any neighborhood flyers presented to the current city dwellers. The city website is totally inadequate to disperse information to all. In fact, the website is difficult to maneuver and truly get the whole picture of what is proposed.<br><br>Even little is published in the local newspaper regarding these plannings.<br><br>Review the HB 1110 more carefully as to what planners have rights to do to a city. Did the state of Washington give rights to the city planners to destroy city covenants and forever alter established neighborhoods throughout all the city? In fact, I did not perceive this when reviewing it.<br><br>Why increase air pollution on particular bus lines along with increased cars to create pockets of air non livability?<br><br>Do the city leaders desire the destabilization of established neighborhoods? Do they see this as equitable or fair to all city citizens they represent? How does this affect property value and what are their projected estimates? The neighborhood of Southcliff is particular heavily impacted by the proposed rezoning and deserves a better explanation. Is Southcliff used as an example of removing property owners rights?<br><br>How would our city elected leaders feel and react if this proposal was happening where they had lived for an extended period of time? What does this say about city leaders looking for the best interest of their citizens? Our city leaders need to better explain why Southcliff is seemingly singled out for destruction.<br><br>Does the city promote the destruction of matured vegetation and trees that will be impacted in proposed housing units? Surely, vegetation will be destroyed in new high rise building.<br><br>Does the city promote congestion and increased air pollution in concentrated areas as Southcliff? Does the city promote less safety for the Southcliff neighborhood because the increased hodgepodge development along with more cars with high rise units among existing established homes? Does the city promote less home security with the influx businesses and rentals/leases on the north end of Southcliff? Are you increasing police security to accommodate?.<br><br>How does this impact my property value? Or is the city looking for more tax revenue by cramming more people in my back yard?<br><br>Any building development as described for Southcliff will occur in a hodgepodge manner and will be very dependent on economics and desires as to the type of living conditions desired by new incoming people. Based on the city actions of Tower Mall, I do not expect any type of projected completion as described.<br><br>In conclusion, I a long time city dweller and long time house owner in Southcliff, am greatly concerned for my and my neighbor's wellbeing. I question the support by my city elected officials and the degradation of my rights in a once stable area of Vancouver. I am deeply concerned on the impact to my property and its value. I am greatly concerned that the city has the right to rezone any neighborhood and change the established buildings and quality of life. Hopefully, you might read my comments and seriously consider the impact of my thoughts. I feel so let down from some type of functioning representative governing body. Is the city looking out for its citizens best interest? Is the city listening or asking for citizens concerns and desires? I need more explanation and responses as to how the city<br><br>planners and elected officials would feel if this happened to them. As a city home owner, what and where are my rights? Are we as citizens improving living conditions for future generations or are we promoting areas of non desirability and non livability? I do not see any desirability but much chaos in the rezoning proposals. | |

| BM | "For The Mayor, City Council, City Planners of Vancouver:<br>Having served as an elected official for nearly 20 years, I know how difficult decisions can be. I don't envy you with the current political and economic situation. Nonetheless, I am compelled to oppose the Draft EIS Action Alternatives 1 and 2. I understand your sense of urgency to build affordable housing; however the new proposal to provide more density along Mill Plain to include the Southcliff Neighborhood, shows no concern for existing housing and residents of our small neighborhood. It demonstrates a lack of cultural understanding, history, and knowledge of neighborhood and park. Why would you want to cause grave damage a high functioning, healthy neighborhood? The proposal will create serious safety issues for the many neighborhood walkers and children going to and from the park. The park is a very small, quiet place enjoyed by families and young children for t-ball and soccer, picnics, and dog walkers. The expediency by city planners to fill in gaps on a map without proper infrastructure planning is shortsighted and will be a long term detriment to the city.<br>The lack of planning for adequate parking in particular is appalling in the approved Heights area. A Vancouver city planner recently stated that surveys showed that people, when offered a choice, preferred to have housing rather than parking. This is a specious (I mean really ridiculous) non-choice. The new Draft EIS zoning changes would further exacerbate the Heights District issue. The traffic and noise along Mill Plain is already bad. I can't imagine the future with another 4,500 residents just blocks away. The lack of foresight for future needs is startling. The need for jobs, solid economic base, and strong schools must be a priority for the future of the City of Vancouver.<br>Decisions made by the City and State have put enormous pressure on our Vancouver School District south end schools and infrastructure in urban neighborhoods. Our county and nearby cities must take their share necessary housing. Vancouver alone cannot take responsibility for the needed low income and mixed use housing and related infrastructure requirements. Poverty, high numbers of English Language Learners, have swamped our schools. Despite hard work by caring educators, staff, and wonderful community resource centers, there is increased need for counselors, nurses, interventions, and family support in this era of declining budgets. Programs and staff have been cut. Limited AP classes in the VPS south end high schools and poor attendance, are demonstrated by low test scores. Middle class families or families of means move to "Homeschooling", Camas, Ridgefield, our north end schools, or private schools. The disparity of the SES (socioeconomic status) among our students keeps growing. The state ranking by Niche of our VPS south end schools is lower. Extra curricular and sports activities also suffer with less parental involvement and team support. Our VPS north end school kids have referred to the south end as "Ghetto" kids!<br>We know that the correlation SES and success is hugely determined by income, education, occupation, and neighborhood environment. To have large numbers of high needs kids in our south end buildings is overwhelming. When my husband and I moved here over four decades ago, the schools in the district were more balanced and thus more able to help kids in need. For that reason I also oppose increasing the buildings to eight stories in the Heights District to avoid a "tenement" feeling to that area. Smaller is healthier, meaning less crowding and crime. (By the way you should look again at your original architectural drawings by Seattle architects of the Heights Plan. An engineer friend calls those schematics "sucker drawings". I can't help but think that city council members and public alike were suckered or misled by those beautiful drawings...)<br>Thank you for your concern and attention to detail. Your service to our community is greatly appreciated.<br>Mari Greves<br>[address] | Comment noted. | BN | Memorandum<br>VIA EMAIL<br>To: Chad Eiken, Community Development Director; Rebecca Kennedy, Deputy Community Development Director; Bryan Snodgrass, Principal Planner<br>c/o Meredith Herbst<br>cc Mayor Anne McEnerny-Ogle, Vancouver City Councilmember Kim Harless, Vancouver City Councilmember Diana Perez, Vancouver City Councilmember Ty Stober, Vancouver City Councilmember Sarah Fox, Vancouver City Councilmember Erik Paulsen, Vancouver City Councilmember Bart Hansen<br>From: Stephen W. Horenstein<br>Date: September 3, 2025<br>Subject: Southcliff Homeowners Association Comments on the Draft Environmental Impact Statement and Initial Comments on the Vancouver 2045 Comprehensive Plan Update<br>Dear Chad, Rebecca, Bryan, and Meredith,<br>Thank you for the opportunity to provide comments on the Draft Environment Impact Statement ("DEIS" or "EIS") for the Vancouver 2045 Comprehensive Plan Update ("Plan") We do so on behalf of the Southcliff Neighborhood ("Southcliff").<br>We commend the City of Vancouver's ("City") efforts to do its best to address housing legislation passed by the Washington State Legislature over the last few years. However, we do believe that your designation of Commercial and Medium Scale Neighborhood for Southcliff will be ineffective in implementing the Plan, and as to the proposed middle housing, is violative of a contract between Southcliff property owners and the City and its instrumentality the Vancouver Housing Authority and goes beyond the legislative mandates you have received.<br>THE NEIGHBORHOOD<br>Southcliff is a neighborhood of midcentury modern homes created in the mid-1950s and built out through the mid-50s well into the 1960s. Its infrastructure is designed for single-family residential use including road width, water and sewer. It has a Bonneville Power Administration ("BPA") power line running through the proposed area to be changed. It has limited access through only three locations from Mill Plain Boulevard. Historically, it had commercial development close by, including a Safeway store and the Tower Mall. Across MacArthur Boulevard from Southcliff's east side is new mixed-use development, which is currently owned by Vancouver and is designated for a mix of commercial and residential uses.<br>THE COMMERCIAL DESIGNATION<br>Alternatives 1 and 2 of the DEIS include a designation Mixed Use Neighborhood ("MX") for the houses that backup to Mill Plain, a major arterial without the opportunity for additional access into the neighborhood. This designation is inappropriate for this location.<br>In a Simplified Draft Use Table on page 25 of the recent PowerPoint provided to the City Council, staff has indicated that office, primary retail, residential, and perhaps institutional and secondary retail would all be allowed in this zone. These uses other than single family residential are entirely incompatible with the existing neighborhood. It is highly unlikely that these uses would ever occur at this location.<br>The strip of a MX is designated along the entire border of Southcliff. The lots are largely not deep enough to support the type of development contemplated for a mix of uses, building size, and particularly, parking. As to the latter, this will push parking into the single-family residential neighborhood and create traffic and safety issues. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood.<br>The proposed Preferred Alternative documented in the Final EIS applies Low-Scale Neighborhood and Medium-Scale Neighborhood zoning to the Southcliff neighborhood. Medium-Scale Neighborhood is applied to properties adjacent to Mill Plain Boulevard and Southcliff Park, in alignment with the Council's Framework for getting to a Preferred Alternative. Mixed-Use Neighborhood zoning, which was proposed for portions of Southcliff in Alternative 2 analyzed in the Draft EIS, has been removed. Refer to Common Response #1 for more information about the Preferred Alternative, including how it was developed.<br>The Public Facilities and Services element in the Comprehensive Plan and associated Capital Facilities Plan that lists planned capital facilities projects or six and 20-year time horizons are mandatory components of the City's Comprehensive Plan periodic review update. The Public Facilities and Services chapter identifies existing City capital facilities and services, existing capacities and likely future demands, level of services standards, planned future investments and costs, and funding sources for these future investments. The Capital Facilities Plan provides detailed project lists for the 1-6 year and 7-20 year planning periods for all required facilities and services including wastewater, water, surface water, solid waste, fire and emergency services, police and public safety, transportation, parks, recreation and cultural services, and general government facilities that serve multiple service areas like the new City operations center and City Hall, among others, supported by a six-year financing plan. These components meet the requirements for capital facilities and service planning under the Growth Management Act and relevant state statutes.<br>Refer to the Transportation and Public Services and Utilities sections of Final EIS Chapter 3 for information about measures for addressing transportation infrastructure and utilities needs under the Preferred Alternative. Refer to the Plants and Animals section of Final EIS Chapter 4 for more information about measures to meet the City's tree canopy goals.<br>H.B. 1110, the middle housing law enacted by the legislature in 2023 requiring the City to allow a minimum of 4-6 units per residential lot, is not the only state requirement that the City is required to meet. H.B. 1220, passed in 2021, requires the City to accommodate a set number of units distributed by income band. In Vancouver's allocation, the City needs to show capacity for nearly half of the units to be affordable below 100% area median income. This requires the City to demonstrate allowances for smaller and relatively more affordable dwelling units in addition to total capacity requirements. Medium-Scale Neighborhood zoning allows for more multifamily development in areas across the City to help meet this requirement.<br>The City of Vancouver is not a party to and does not interpret or enforce private contracts, including private conditions, covenants and restricts (CC&Rs). It is the responsibility of parties to these private contracts to enforce them. |

|---|---|---|
| | Designating this location as mixed use may solve a math problem by showing commercial uses on the map, but it doesn't address the reality of providing the amount of commercial development/jobs the community needs and staff is required to plan for and present to elected officials for consideration and approval . Staff has advised that this designation is there for the long term. This neighborhood is already approaching 70 years old. It and its homes remain extremely well kept, and property owners are active in ensuring it stays this way. There is no reason to believe that now or in future years property owners would be willing to allow MX development to occur on their various properties.<br><br>A review of an early draft of the proposed form-based code language for MX provide for the following densities:<br><br>• Residential densities – 32 units per acre minimum with no maximum<br><br>• Residential height – 3 to 8 stories with a maximum height of 90 feet<br><br>This proposed code would also include, along with midrise residential buildings, related commercial activities such as professional offices, medical services, cafés, restaurants, grocery stores, markets and other retail shops.<br><br>Again, although the math may work for the overall proposed citywide plan, from a planning perspective this is not a reasonable development scale at this location.<br><br>THE RESIDENTIAL DESIGNATION<br><br>Across the residential street from the proposed MX designation identified above, the DEIS map indicates that the land use would be changed to the Medium Scale Neighborhood designation. This designation is also inappropriate at this location. This designation calls for more density on single family lots as provided for in recent housing legislation. Again, a reference table presented to the City Council identified the following densities:<br><br>• Density – 16 units per acre minimum with no maximum<br><br>• Height – two stories and 25 feet up to five stories and 60 feet maximum<br><br>These densities and heights, even at the minimum level, are out of scale with the neighborhood and are certainly not supported by the required capital facilities as indicated below.<br><br>The Medium Scale Neighborhood appears to provide for not only larger residential uses but civic/industrial uses, office uses, and primary retail uses as well. Together with the MX zone across the street, an entirely different set of incompatible uses would be imposed on the neighborhoods. And, it would do so with the only access being provided from existing streets sized for single family homes at one per lot.<br><br>CAPITAL FACILITIES<br><br>Washington's Growth Management Act ("GMA") requires comprehensive plans to have a capital facilities element. See RCW 36.70A.070(3). Included within this element must be a financing plan identifying how capital facilities will be paid for. A separate transportation element must be specifically included and must be coordinated with the land-use plan. It is the law under GMA that if the capital facilities plan and its funding are insufficient to support the proposed land use comprehensive plan, the land use plan must be revised accordingly.<br><br>Capital facilities in the Southcliff Neighborhood as they exist today are generally 70 years old and woefully inadequate to support both the MX and Medium Scale Neighborhood designations proposed in the draft EIS:<br><br>Roads are relatively narrow and built to 1950s-1960s standards without room to expand them and add the turn lanes and sidewalks necessary to serve much more dense commercial and residential development.<br><br>Sewer capacity has not been sized to serve additional commercial and residential density beyond the current and fully built out residential neighborhood.<br><br>Stormwater facilities were recently upgraded at a cost of $2.7 million to serve the Blandford Canyon to ensure that runoff traveling down the canyon and ultimately reaching the Columbia River has been properly treated according to current legal standards for existing developments and the Heights project. The DEIS does not address any further improvements in this regard to accommodate more dense development. This is exacerbated by the proposal to | |

| ID | Full comment | Response |
|---|---|---|
| | increase development density and perhaps uses for the Heights project by applying the Regional Activity Center for that project.<br><br>The Southcliff Neighborhood has a significant tree canopy in the area proposed for MX and Medium Scale Neighborhood designations. Removal of the trees necessary for buildout under these new designations will require significant tree removal with no real ability to replace them in connection with such redevelopment, creating noncompliance with the City's tree ordinance that would be difficult if not impossible to mitigate for.<br><br>The draft EIS is devoid of any discussion of the foregoing capital facilities issues for the new land use designations for Southcliff.<br><br>The comprehensive plan cannot be fully completed without also completing capital facilities planning that addresses the issue set forth above. This is true as to planning for all of Vancouver. We do not believe that required public share of this funding will be available to address the significant capital facilities the issues associated with the proposed new zoning designations will create.<br><br>The capital facilities implications of the redesignation of land for Southcliff (and communitywide) are enormous. None of these issues are adequately addressed in the DEIS and facilities planning materials have not been released that identify how the City plans to upgrade roads, sewer, and water, and address the environmental impact on the Blandford Canyon.<br><br>REDESIGNATION AS PROPOSED IS NOT LEGAL<br><br>There are a number of legal issues that make the MX and Medium Scale Residential comprehensive plan/zoning designations indefensible as changes to the comprehensive plan and zoning code:<br><br>A. The Proposed Plan and Maps Exceed the Legislative Mandates of E2SHB 1110 ("1110").<br><br>1110, passed by the legislature in 2023 and signed by the governor, certainly did its best to address "missing middle" housing for those communities planning under GMA. This legislation required such communities to revise their comprehensive plans and zoning designations to increase the number and types of housing in areas previously dedicated for single family detached housing.<br><br>1110 requires communities planning under GMA to authorize more dense development within its existing residential zones. It is not, by any reading of the statute or its legislative history , a mandate that cities provide wholesale redesignation of large swaths of property for more dense development, leaving existing single-family dwellings as nonconforming uses. A review of early draft code language implementing the "middle housing requirement" does not provide any protection as conforming uses for such properties. The DEIS does not address this issue. Staff has informally indicated that redesignation of land for "middle housing" is intended to take a long-term view of the redevelopment of Vancouver, including Southcliff. This fails to take into account the problem of residential dwelling units burning down or otherwise being destroyed and the impact on property values of such designations.<br><br>B. Redesignation of Properties Within Southcliff is Violative of Washington Law and Long-Established Covenants:<br><br>Southcliff's Covenants contain restrictions only allowing single family dwellings on its platted lots. 1110, allowing for increased density on single family lots, does not apply to subdivisions whose covenants containing such limitations were in place prior to July 1, 2023.This particular covenant is imposed on all six phases of Southcliff. Staff has promulgated a creative argument that such limitations do not need to be recognized by local government but is rather an issue left to be dealt with by homeowners in the subdivision. Staff has also indicated that it will seek to have this retroactive limitation eliminated by the legislature. These two arguments are inconsistent at best. The City must deal with GMA as it currently exists for purpose of amending its comprehensive plans and zoning codes and its accompanying EIS.<br><br>Viking Properties Inc, v. Holm, 155 Wash 2nd 112 (2005) is controlling authority here. That case involved resolution of an inconsistency between a neighborhood covenant providing for single family lots only versus a requested rezone for more density.<br><br>In this Washington Supreme Court case, the covenant was upheld for a variety of reasons: | |

| ID | Full comment | Response |
|---|---|---|
| | 1. The Court recognized that restrictive covenants are enforceable promises relating to the use of land. Here we have such a covenant.<br><br>2. The Court recognized that a public policy favoring higher densities as set forth in GMA conflicts with an existing restrictive covenant making it impossible to develop the property, causing a violation of any property owners' due process rights. Here, we have a legislative mandate for additional density on lots zoned for single-family use, with a covenant restricting more than one dwelling unit per single-family lot, resulting in a violation of due process; in order for the redevelopment of the properties in the manner the City proposes to occur litigation would be necessary to either clear title of the covenant or eliminate anything other than single-family zoning protected by such covenant.<br><br>3. The Court made it clear that, in order to find a restrictive covenant to be in conflict with a public policy, the record must demonstrate the legislature's intent to declare general public policy sufficient to override a contractual property right. Here, the legislature in 1110 promulgated a public policy to actually protect covenants applied to property prior to July 2023.<br><br>4. Recognizing that GMA applies prospectively in its ongoing application (influencing future planning decisions), it is not to be used to challenge prior planning decisions which created single dwelling, only lots from both the land use and covenant perspectives.<br><br>5. The Court also made the strong point that enforcement of restrictive covenants protecting private property rights actually enforces the goal of GMA relating to protection of private property rights, and indeed recognized restrictive covenants as valuable property interests, subject to takings claims when violated.<br><br>Covenants imposed on all phases of Southcliff are imposed on this neighborhood not by an HOA, but rather the subdivisions' developer – the Vancouver Housing Authority ("VHA") – an instrumentality of and created by the City of Vancouver primarily for the contracted purposes resulting in the creation of the Southcliff Neighborhood. This covenant is a contract, enforceable under Washington law. | |
| BO | """From: Michele Rudi<br><br>Resident owner of: [address], Vancouver, WA 98661, Southcliff Neighborhood<br><br>[email address]<br><br>[phone number]<br><br>Dear City of Vancouver, the Vancouver City Council, and the City of Vancouver Planning Commission.<br><br>We have been residents in the Southcliff neighborhood since the Fall of 2004, going on 20 plus years. We had many options on where to move our family from Salmon Creek in 2003. However, we chose the Southcliff neighborhood for its location near work and school, large private lots, walkable streets, a local park, a safe neighborhood with minimal traffic, established landscaping and tree canopy, and the exclusive reputation that Southcliff has had since the 1950s and 1960s, when it was formed. When we moved in, we had original owners on either side of us, both of whom had been built in the 1950s. This is very common; people don't leave Southcliff. Our neighborhood was, and still is, known for being home to a large number of professionals, including doctors, lawyers, business owners, board presidents, school teachers, homemakers, philanthropists, pilots, restaurant owners, government officials, TV broadcasters, and the list goes on. Our neighborhood is hardworking, and it shows in the pride of ownership evident in the yards and homes of this established enclave, governed by its HOA and CC&Rs. We have a stable, historic neighborhood that serves and contributes back to its community. We rely on our CC&Rs to guide our neighborhood, ensuring that we can maintain the foundation and heritage that Southcliff was built upon.<br><br>I write to you today to oppose the mixed-use and medium-scale housing that you are proposing to implement within the boundaries of the Southcliff neighborhood. These changes would severely impact our property values. It has been calculated that Southcliff property values total 80 to 100 million dollars. I think it is a reasonable question to ask: Will the city be compensating homeowners for loss in property value? These changes would add stress, traffic, and public safety concerns. Our per capita rate for officers is already the lowest in the state. We should have 3.2 officers per | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | every 1000 residents. Vancouver has only 1.2 officers per 1,000 residents. It seems that the priority to make our city safer and cleaner is an afterthought. We should not be adding density until the public safety problem is under control.<br><br>The mixed and medium scale would add additional traffic and street parking to our quiet neighborhood. It would greatly change our single-family homes, with a minimum of 1800 square feet and a maximum of two stories in height. The changes you are proposing are prohibited by our Covenants, Conditions, and Restrictions (CC&Rs). It is my understanding that the Middle Housing Bill does not trump our current active and enforceable CC&Rs.<br><br>I was also shocked to learn that the Tower Mall project has now been zoned as a regional activity center. Southcliff as a whole was opposed to the Tower Mall project. Change is unknown, and done without proper planning can result in negative outcomes. I, for one, was hopeful that Tower Mall could add some services to our area, but upwards of 1300+ housing units, with little parking, and now a building height that has no restrictions, is troublesome. I am also concerned that our arterial streets, such as Blanford Canyon, are not included in the plan to be updated to accommodate the increased traffic. Blanford Canyon historically has poor lighting, no sidewalks, or protected areas for walking or biking.<br><br>Additionally, it connects to Old Evergreen Blvd, which was not updated for heavy traffic when the Rose Vista property was developed for mass-density housing. Don't get me wrong, I am for the Tower Mall project as long as it has components to fit in and blend with the Southcliff, Dubois, Buena Vista, and the surrounding neighborhoods in a respectful capacity. Allow medium-scale development, 3 to 5 stories tall, with ample parking, improve the road arterials, and increase the number of officers to improve public safety with increased density.<br><br>My vote is for the No Action Alternative. Growth is inevitable, but growth that occurs too quickly without infrastructure and public safety at the forefront will only cause leadership to work backwards, chasing its tail, and never be able to get ahead of the problems that exponential growth brings.<br><br>Thank you for your time and leadership.<br><br>Sincerely, Michele Rudi<br><br>""" | |
| BP | """To whom it may concern:<br><br>My neighbors and I are very concerned! As a homeowner and resident in the historic Southcliff neighborhood in the Heights area of Vancouver, I am troubled to hear that our single family dwelling lots are slated to be rezoned throughout the neighborhood for various business and high-density housing uses.<br><br>In my experience, city planning means careful consideration of a city's future needs and making a thoughtful plan to accommodate growth in a way that preserves beauty, livability, and sanity for the residents. It puts careful consideration into where the different types of structures should go, putting businesses in business districts, homes in neighborhoods, apartments in apartment blocks, etc., while protecting spaces for trees and animals, bushes and birds, as well as playgrounds and walking spaces. Such planning takes deliberate effort, but it makes sense if planners want residents to be healthy and happy and willing to make the city their home.<br><br>The current plan proposed for historic Southcliff, and other neighborhoods throughout the city, appears to have missed this meaning of planning! In an effort to accommodate a large influx of new residents in the coming decades, a sweeping change of the current zoning of residential lots will haphazardly allow high density housing and businesses to be built in places current residents would never have dreamed of!<br><br>Our neighborhood was developed in the 1950's. The lots are large and the streets are wide. No sidewalks, but a huge variety of large old trees and a vast array of little critters and birds. It's an old, quiet neighborhood with history and character, a uniquely quaint and peaceful slice of Vancouver. Most homes have copious driveways, so very few cars are parked on the roadways. This lends the neighborhood a safe and friendly feeling, inviting outside residents to join us here to enjoy a stroll, walk their dogs, and play with their kids in the park. The simplicity and wholesomeness of a bygone era can by tangibly felt here. It is a place to protect for the benefit of all! | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | One can only imagine how altered this peaceful historic neighborhood would be if even one of the old homes were transformed into a business or a high-rise multiplex. If such an event were to happen, it would be sure to create a destructive domino effect. The lots would go one after another, because residents here would lose something extraordinarily special, something they pledged to protect when they purchased their homes and agreed to the neighborhood's longstanding CC&R's. With this new threat of such an unexpected and undesirable event, residents such as myself are reconsidering value-enhancing investments in our homes and pondering selling out. Why bother making improvements if the homes will just be sold for development fodder? And if the neighborhood is to be violated in such a way, why should we stay to see it happen? Our neighborhood will be irrevocably damaged by the city's proposed rezoning.<br><br>There are many reasons our Southcliff neighborhood should be protected from the new zoning. Tree coverage is a big one! Southcliff has the greatest tree coverage of any neighborhood in Vancouver at 47% and growing, while the city as a whole has just 19%. With Vancouver's overall goal of 28% by 2047, taking out our lovely old trees to build tall multiplexes would definitely be a step in the wrong direction. Our trees should be protected! Old trees like ours are far bigger than new development trees, providing much-needed habitats for otherwise endangered birds and other small animals, and working mightily to clean the polluted city air. Protecting these large trees is so important to the livability of our city! Allowing them to be destroyed in the name of high density housing and replaced with tiny saplings would be a travesty. Our environment must be cared for, even within city lines. No place better than here in Southcliff where we are already making a positive impact!<br><br>And an important aspect to note regarding our trees: taking a peaceful stroll through our beautiful neighborhood will reveal that our trees are not all of one kind. The apparent diversity of our large trees is absolutely astounding! Each one is invaluable. This is not what you would find in a more modern development, with lines of trees of all the same sort. We have enormous regal evergreens as well as imposing old deciduous trees of so many kinds! They provide boundless beauty and so many animal homes. And those innumerable green leaves furnish us with fresh clean air as well as protective shade. To redevelop our neighborhood into high-rises would desecrate nature's presence here in our city.<br><br>There are other concerning impacts that my neighbors will note regarding the proposed rezoning, such as excessive neighborhood traffic and on-street parking, watershed issues, loss of historic architecture, loss of privacy and safety, etc. But my greatest concern is the threat of destruction to this peaceful haven of a neighborhood, a neighborhood that helps make Vancouver a more livable and beautiful city.<br><br>I realize that our city faces the pressure of increasing population and housing needs. But high-density housing types should be placed where they make good sense, not where they will destroy a well-planned historic neighborhood! And I might add here that the homes in our neighborhood are already large enough to accommodate more residents. For example, our home is currently occupied by 10 family members from 3 generations, and we have accommodated as many as 12. Another home just up the road is occupied by a large group of young adult housemates. The homes in Southcliff already have high density usage and potential. They can find their best uses without tearing them down and replacing them with multiplexes and businesses!<br><br>Please, city planners, reconsider your "plan" with regard to Vancouver's historic neighborhoods like Southcliff. You would not consider rezoning Officer's Row would you? I would propose that Southcliff has similar historic value in Vancouver and should be protected for the city, for the trees, for the animals, and for the people city-wide.<br><br>Please, protect Southcliff! Your consideration is greatly appreciated.<br><br>Sincerely,<br><br>Julianne Rogers<br><br>[address]<br><br>Vancouver, WA 98661<br><br>""" | |

| BQ | "To: Mayor Anne McEnerny-Ogle, Mayor Pro Tem Erik Paulsen, Councilmember Sarah J. Fox,<br><br>Councilmember Bart Hansen, Councilmember Kim D. Harless, Councilmember Diana H. Perez, Councilmember Ty Stober, Rebecca Kennedy, Deputy Director, Community Development, Bryan Snodgrass, Principal Planner, Chad Eiken, Director, Community Development, SEPA Responsible Official, Meredith Herbst, Associate Planner, Community Development<br><br>From: Christina (Chris) Parks, Realtor and Southcliff resident for 26 years<br><br>Date: August 30, 2025<br><br>Subject: Our Vancouver - Comprehensive Plan 2045<br><br>To the Vancouver City Planning Team<br><br>I am a professional Realtor with Windermere NW Living and a resident of Southcliff. I came to this special neighborhood with my husband 26 years ago, 6 months pregnant and with a one-year-old in tow and we loved raising our children here. We look forward to aging in place in our day-ranch home that allows one-level living with room for guests, a garden, a green house and long safe walks every morning and evening. I am writing to respectfully oppose Alternatives 1 and 2 of the proposed Comprehensive Plan revisions that would rezone parts of Southcliff from Low Density Residential to Medium-Scale or Mixed-Use.<br><br>Key Concerns<br><br>1. Existing CC&Rs & Legal Precedents<br><br>Southcliff has long-standing CC&Rs (in place since 1954 and updated periodically) that restrict additional construction on existing single-family lots. Under Washington's 2023 Middle Housing Act (HB 1110), CC&Rs established before July 23, 2023, remain enforceable. This interpretation of the Middle Housing Bill comes from the Washington Realtors' and its attorney —therefore, zoning changes here would face significant legal barriers and challenges for implementation.<br><br>2. Neighborhood Character & Property Values<br><br>Southcliff's historic, mid-century character—with large lots, mature trees and iconic tree canopy and rhododendrons, wide streets, park and larger single-family homes—has strong market value and community identity. High-density or mixeduse development would irreversibly alter this and likely decrease property values.<br><br>3. Traffic & Safety<br><br>Southcliff was designed as a low-traffic, pedestrian-friendly neighborhood with no sidewalks and wide, curving streets. Increased density and mixed-use development would add traffic, on-street parking, and safety hazards for walkers, cyclists, and children.<br><br>4. Environmental & Urban Forestry Impacts<br><br>Southcliff has one of Vancouver's highest tree canopies (47%) and serves as a critical green corridor. Increased density would lead to canopy loss, strain the Blandford Canyon watershed, and undermine the city's urban forestry goal of reaching 28% canopy by 2030.<br><br>Requests<br><br>• Remove Mixed-Use and Medium-Scale designations from Southcliff.<br><br>• Redirect density goals to more suitable corridors (E. Mill Plain, Fourth Plain and Evergreen Boulevards) where redevelopment would increase property values and community vibrancy.<br><br>• Require planners and consultants to visit and walk proposed impact areas before advancing plans to confirm viability.<br><br>• Engage citizens earlier in the planning process rather than only during the Environmental Impact Statement phase. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | Constructive Alternatives<br>• Focus medium-scale and mixed-use zoning along Mill Plain Boulevard and Fourth Plain Boulevard where underutilized lots, commercial parcels, and vacant/underutilized properties exist (e.g., old golf driving range, unused cemetery section, Fircrest apartments, vacant commercial spaces near Safeway, small homes as massage parlors, spa and psychic, etc.).<br>• Refine density and affordable housing goals within the Heights District and Evergreen Boulevard corridor, which are already positioned for growth.<br>• Work with real estate, legal professionals (e.g., Washington Realtors legal counsel) and developers to ensure that new zoning proposals respect existing CC&Rs and practical development constraints (e.g., PUD power line easements, traffic safety, tree canopy/watershed challenges).<br>Closing<br>The City of Vancouver faces a significant challenge in meeting future growth goals, but rezoning Southcliff is not the solution. It would bring lasting harm to an established, historic neighborhood without meaningfully advancing the city's housing and job targets. I urge you to collaborate with residents and professionals to identify locations where increased density will enhance—not diminish—Vancouver's quality of life.<br>Respectfully,<br>Chris Parks<br>Realtor, Windermere NW Living<br>26-Year Southcliff Resident" | |
| BR | """Greetings,<br>My name is William Rogers, and I live at [address] in the Southcliff neighborhood. In reviewing the zoning change proposals put forth in the City's Draft EIS, several serious concerns have come to mind. My concerns are motivated by a desire for livability, vitality, inclusion, public health and safety, and the preservation of cultural and natural resources in the city of Vancouver. The Southcliff neighborhood contributes to all of these factors for the city of Vancouver. I would like to point out some ways in which the City's Draft EIS degrades or detracts from these goals in the hope that revisions can be made to preserve what is good about Southcliff.<br>I located my family in the Southcliff neighborhood in 2011 for its quiet, walkable streets and large, majestic, and diverse trees. The urban canopy in the Southcliff neighborhood is second to none in the city, providing 47% tree coverage per the 2021 survey, up from 45% in the 2011 survey. We see nature in our park, backyards, and on the streets. Animals thrive, with deer, rabbits, squirrels, and other wildlife making Southcliff and the surrounding green space their homes. The diversity of trees, including oak, maple, birch, sycamore, redwood, conifer, pine, fruit trees, and many mature ornamental tree, makes Southcliff valuable. This diversity supports many types of birds—not just hardy urban landscape species, but delicate wilderness species as well. Where animals and birds thrive, adults and children thrive.<br>Many people beyond Southcliff homeowners enjoy walking, cycling, and jogging through Southcliff, finding it a peaceful retreat in the city. The park hosts guests from the adjacent neighborhoods, making Southcliff not just a jewel for a lucky few, but also something precious to steward and share with others. Southcliff neighbors are inclusive and welcoming. I desire to see the character of the Southcliff neighborhood preserved as a model to study and learn from. While not all attributes of Southcliff can be replicated in every neighborhood, as a historic mid-century modern neighborhood, it maintains a unique collection of features worth studying and preserving as a reference for city planning.<br>The Southcliff neighborhood was established in the 1950s, with CC&Rs dating back to 1954. These CC&Rs allow for one single-family dwelling per lot of no more than two stories high and thus are violated by Alternatives 1 and 2 as currently proposed. Therefore, I stand opposed to both alternatives. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | The proposed alternatives allow the addition of commercial and mixed-use buildings to our neighborhood. Such projects would mean the elimination of mature trees and would degrade the neighborhood's ability to support wildlife. They would increase cars parked along streets and reduce the walkability of the neighborhood. Cycling and jogging would be less safe and less convenient.<br><br>I support urban growth and understood that the Heights District redevelopment is to be where commercial and mixed-use high-rise buildings are to be built. If the City needs more density, please add it to the Heights plan and not to Southcliff. Access to commercial and mixed-use high-rises would not be from Mill Plain but rather from our neighborhood streets, creating huge congestion on those streets—not to mention safety issues for pedestrians and cyclists. I am concerned that limited access to Southcliff due to roadways and terrain would mean only a limited buildout of mixed-use development, which would result in destroying the character of the Southcliff neighborhood while providing minimal benefit to the city.<br><br>For these reasons, I am against the adoption of both Alternative 1 and Alternative 2 as currently proposed. Instead, I encourage the City to preserve the qualities that make Southcliff a living example of what a thriving, sustainable, and inclusive neighborhood can be: quiet and walkable streets, a diverse and flourishing tree canopy, safe spaces for recreation, and a welcoming community spirit. Protecting Southcliff is not just about safeguarding one neighborhood—it is about keeping alive a model of livability and stewardship that benefits the entire city of Vancouver.<br><br>Sincerely,<br><br>William Rogers<br><br>[address]<br><br>"""" | |
| BS | "To the City of Vancouver, 9/4/25<br><br>I understand that the city of Vancouver is required to update and propose a new plan for growth and development. This sounds good, but the plan as proposed makes no sense for the Southcliff neighborhood that we have lived in for 20 + years.The drafted EIS would establish a mixed use Neighborhood along Millplain Blvd, allowing 3 to 8 story buildings, including apartments and a ground floor retail office space. Also proposed is a Medium Scale Neighborhood for Oregon Drive and Umatilla street. We do not want buildings 2 to 5 stories high with commercial spaces.These changes would cause a dramatic increase in traffic and parking issues to the sleepy streets of Southcliff that are walked by many everyday, all day. These proposed changes violate the longstanding covenants of the Southcliff Neighborhood that mandate single family residential use. These proposed changes will also destroy the historic character of the neighborhood. The changes will destroy the relatively safe and quiet environment that we currently live in, walk in and enjoy. Our neighborhood is also enjoyed by other individuals who don't live in our neighborhood but come into it to walk our safe streets and enjoy the beauty of it.<br><br>Rather than rezoning parts of Southcliff as ""Mixed - Use Neighborhood"", please consider new commercial development in the adjacent Town Plaza, Regional Activity Center. This creates a successful business district needed to help businesses thrive, it aligns with City goals for economic hubs, and protects our beloved quiet Southcliff neighborhood for all to enjoy.<br><br>We the people of Southcliff do not want this!<br><br>Sincerely,<br><br>Jon & Teri Spassov<br><br>Home owners and residents of Southcliff" | Comment noted. | BU | "Dear Meredith, Mayor and City Council Members,<br><br>Objection to the Proposed Zoning Changes to Southcliff Neighborhood<br><br>September 4, 2025<br><br>My name is Rudolph Munzel, I am the owner (through my company R.E.H.A.M. 7, LLC) of the property at [address], Vancouver, Washington (in the Southcliff Neighborhood).<br><br>I have reviewed the zoning changes proposed in the City's Draft EIS. I am in opposition to adoption of both Alternative 1 and Alternative 2 as currently proposed. My two main objections, amongst others, are that:<br><br>1) It will destroy a Historically rare example of Vancouver's early Mid Century Modern Architectural Heritage.<br><br>2) It will destroy unique quite, walkable streets with a beautiful mature tree canopy that cannot be reproduced again close to the downtown area.<br><br>Although I understand the need for more density in Vancouver I also know that these changes need to be made with care not to destroy unique areas of Vancouver that can never be replaced – the Southcliff neighborhood is one such area. This neighborhood has an irreplaceable Mid-Century Modern character that grew in the 1950s and 1960s that cannot be replaced. It has a charm and maturity that also cannot be replicated. Imposing the proposed Zoning Changes would be heavy handed and ignorant of these unique qualities. A carefully implemented density strategy would identify areas that give Vancouver it's special character by maintaining Historically important and special places while increasing density in less historically and important areas. If this strategy is not taken then the result will be a homogeneous, depressing city that has no unique qualities compared to other cities. This would be a self-imposed disaster that is avoidable.<br><br>Please take care in your planning decisions and choices to keep the special areas that make Vancouver a place that future generations and businesses are inspired to move to and develop. Please do not handle every area of our City in a homogeneous manner that will ruin it for the future. The Southcliff Neighborhood is one such jewel, don't destroy it.<br><br>Sincerely,<br><br>Rudolph Munzel<br><br>[address]<br><br>[phone number]<br><br>" | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
| BV | "To Our City Officials:<br><br>We are residents of the South Cliff neighborhood, residing at [address]. We are aware of the proposed zoning change proposals set forth in the City's draft EIS which would impact the neighborhood. We are against the adoption of both Alternative 1 and Alternative 2 as currently proposed. Our reasons for opposing these alternatives are set forth in, and we would greatly appreciate your review and consideration of, the attached letter.<br><br>With respect and appreciation for all you do—<br><br>Sincerely,<br><br>Bill and Lori Thayer<br><br>[phone number] (Bill)<br><br>[phone number] (Lori)<br><br>" | Comment noted. | | City Hall<br>PO BOX 1995<br>Vancouver, WA 98668<br>RE: City of Vancouver Draft Environmental Impact Stateme<br>Thank you for the opportunity to comment on the Draft Environmental Impact Statement. Per RCW 36.70A.115 (1): Counties and cities that are required or choose to plan under RCW 36.70A.040 shall ensure that, taken collectively, adoption of and amendments to their comprehensive plans and/or development regulations provide sufficient capacity of land suitable for development within their jurisdictions to accommodate their allocated housing and employment growth, including the accommodation of, as appropriate, the medical, governmental, educational, institutional, commercial, and industrial facilities related to such growth, as adopted in the applicable countywide planning policies and consistent with the twenty-year population forecast from the office of financial management.<br>Based on Office of Financial Management's population projection the County Council adopted a 20-year population target for 2045 of 718,154 (RES2023-05-03). Based on the 2045 population number the countywide total number of housing units and jobs needed for growth between 2023 and 2045 are 103,695 housing units and 88,100 jobs. The portion of growth allocated to the City of Vancouver per RES2024-05-05 is for 36,527 housing units and 26,317 jobs.<br>The number of new housing units(38,129) and new jobs (43,198) the City is planning for, as cited on page 2 of the DEIS, are not consistent with the allocation made to the City of Vancouver in RES2024-05-05. As the city proceeds to the preferred plan, these figures will need to be reconciled to be consistent as required in<br>RCW36.70A.100.<br>Sincerely,<br>Oliver Orjiako<br>Community Planning Director" | higher amounts of residential growth than allocated by Clark County, and more significantly higher levels of employment growth than allocated.<br>The City is in compliance with RCW 36.70A.115 requirements that it provide sufficient land to accommodate allocated growth. RCW 36.70A.100 more generally requires coordination and consistency on planning issues between jurisdictions sharing a border or common regional issues. GMA Hearings Boards have generally defined interjurisdictional consistency not as requiring identical approaches, but rather as requiring compatible approaches where one jurisdiction's approach does not thwart the other. The differences in technical opinion stem from different capacity estimate methodologies over how much growth the zoning designations within the City of Vancouver will produce during the planning period. RCW 36.70.A.110 and 36.70A.215 envision some level of jurisdiction-specific choices. Most importantly, the higher growth estimates used by the City of Vancouver within its city limits for its internal planning purposes do not prevent Clark County or other jurisdictions from zoning more or less land for residential or commercial purposes within the Vancouver UGA or beyond.<br>The higher growth estimate methodology used by the City of Vancouver reflects technical concerns about the accuracy of the Clark County Vacant and Buildable Lands Model, particularly as regards employment. The 2020 advisory committee process which updated the VBLM focused primarily on residential capacity assumptions, with far less time devoted to employment, and the committee process was halted before all employment recommendations could be provided. As a result, the VBLM has retained many outdated employment assumptions which significantly underestimate overall capacity. The VBLM for example assumes home based work throughout Clark County will only account for 4% of job growth during the 20-year planning period, when the Clark County Draft Environmental Impact Statement for this Comprehensive Plan update reports that the current actual number Clark County number is 16%, and economists at the Washington State Employment Security Department (WESD) are on record as projecting that 20% of future Clark County job growth would be work from home. The VBLM also assumes there will be little to no job growth for the next 20 years through redevelopment of existing buildings, or job growth through more filling up of existing buildings. The City's technical concerns with the Clark County VBLM are well documented in the County record. |
| BX | "September 5th, 2025<br>Attn: Meredith Herbst<br>Community Development, City of Vancouver<br>City Hall<br>PO Box 1995<br>Vancouver, WA 98668<br>Submitted via email: OurVancouver2045@cityofvancouver.us<br>Dear Meredith Herbst:<br>The Port of Vancouver, USA (the Port) respectfully submits these recommendations and comments on the Draft Environmental Impact Statement (EIS) issued by the City of Vancouver (City) on July 8, 2025, under the State Environmental Policy Act (SEPA) for the Our Vancouver Comprehensive Plan 2045. The comments are provided pursuant to Washington Administrative Code Section 197-11 and the City's public comment period. Our comments and recommendations are offered to support a balanced approach between the City's housing and job growth objectives and safeguarding long-term development opportunities and continued use of industrial land at the Port.<br>The Port is a global hub of opportunity positioned at the crossroads of river shipping, interstate and national rail lines. Moving over 7 million tons of cargo annually and home to 50 industrial tenant businesses, we are a strategic industrial gateway to the US, Canada, Asia, and Central and South America. | The City appreciates the Port of Vancouver's participation in the Comprehensive Plan and Vancouver Municipal Code Title 20 Development Code update process, both prior to publication of the DEIS and on drafts of the Plan and Code, including specific input on development regulations in the Heavy Industrial zoning district.<br>The proposed updated Comprehensive Plan Land Use and Development, Economic Opportunity and Transportation and Mobility Chapters reflect engagement with Port of Vancouver staff to align goals and policies in support of building and maintaining a thriving economy that meets the needs of community members and reflects changing regional and global economic conditions.<br>The City appreciates the Port of Vancouver's participation in the Comprehensive Plan and code update process, including specific input on development regulations in the Heavy Industrial zoning district.<br>As described in Chapter 2 of the Final EIS, the proposed Preferred Alternative would preserve Light and Heavy Industrial areas in and around the Port of Vancouver and in many areas throughout the City to ensure future capacity for employment. The updated zoning code reflects Port feedback on maintaining flexibility for employment uses while modifying some regulations that are no longer needed, and providing flexibility for industrial users and options for mitigating impacts.<br>Relevant proposed Comprehensive Plan Update goals and policies are referenced in the avoidance, minimization, and mitigation measures for the Land and Shoreline Use and Transportation sections of Chapter 3 of the Final EIS. These goals and policies include: |

|---|---|---|
| | industrial areas. Proactive planning will be key to mitigating future conflicts related to noise, lighting, and freight traffic.<br><br>The Port requests that the City include mitigation measures in the Final EIS to ensure new residential developments and other sensitive uses are designed to prevent conflicts with existing<br><br>industrial areas. At present, most of the regulations to minimize off-site impacts in the Vancouver Municipal Code (VMC) are intended to reduce impacts from new development, but do not address how new developments should be designed to avoid on-site impacts from the permitted use of adjacent areas. Some of the mitigation measures that the City should consider include, but are not limited to:<br><br>- Use transitional zones or step-downs in building height for proposed residential developments and other sensitive uses adjacent or near to industrial areas to minimize visual and/or auditory impacts.<br><br>- Develop site design, landscaping, and building standards for residential developments and other sensitive uses proposed adjacent or near to industrial areas, such as sound proofing structures and windows.<br><br>- Develop and implement anti-displacement strategies for industrial uses in Vancouver to protect the long-term viability of local jobs.<br><br>Future Development of Policy and Code Language<br><br>The Port asks that the City continue to proactively coordinate with the Port and other business leaders when updating policies and code, ensuring that Comprehensive Plan policy language and regulations align with the needs and long-term plans of local businesses. The business consequences, and help craft policies that support local industries, job retention, and the City's long-term economic goals.<br><br>Early review and input from local business leaders will clarify how new standards could affect long-term activities and offer suggestions to balance housing needs and environmental protection with industrial requirements. The City's business leaders working group is a key opportunity to obtain input on the proposed form-based code, minimizing incompatibility between uses through transitional zone requirements and design standards, and ensuring heavy industrial/light industrial uses and regulations remain flexible and responsive to current and future market demands.<br><br>Transportation - Freight Mobility<br><br>The Port supports the proposed policy to "Designate and enhance freight corridors to facilitate efficient movement of goods and reduce congestion. Improve infrastructure and connectivity to and from the Port of Vancouver to streamline freight operations" (pg. 105 of the Draft EIS).<br><br>As a recognized national and regional leader in high/wide/heavy freight movement, freight corridors are essential to Port operations. Two key priorities are preserving Mill Plain Boulevard as a designated freight corridor and improving access via the Fruit Valley route. While Mill Plain<br><br>Boulevard presents some limitations due to its narrow width, it remains a vital west-east connection for the Port's freight operations.<br><br>The Port appreciates the City's efforts to date on the Fruit Valley Freight Access and Safety Improvements, and requests that the City continue to progress design and funding for this important project.<br><br>The Port also supports the City's goals for a citywide multimodal transportation system and looks forward to continuing to improve and integrate the Port's SR 501/Lower River Road Multi-Use Trail with other planned improvements in the city for people who walk, bike, and roll.<br><br>The Draft EIS notes that "The City works to integrate design and policy treatments so freight and vulnerable users can navigate the same streets" (pg. 90 of the Draft EIS). While "vulnerable users" is not defined, the Port assumes the City is referring to active transportation users. The Port would like to note that, in some cases, physical separation of freight and active transportation is necessary and a common best practice for creating a safe and functional multimodal system. | |

| ID | Full comment | Response |
|---|---|---|
| | The City should continue to work with the Port to ensure that freight mobility needs are taken into consideration when designating and designing multimodal facilities. The needs and requirements of freight traffic (e.g., turning movements and freight load sizes) are important considerations for multimodal mobility.<br><br>Equity and Social Vulnerability; Health Impact Assessment<br><br>The Port supports the City's efforts to integrate equity into planning processes. These efforts align with the Port's own initiatives to reduce inequality—such as the Port's education and workforce development programs, the Community Fund Program, and various projects to improve air and water quality and climate resiliency. " | |
| BY | VIA EMAIL (OurVancouver2045@cityofvancouver.us)<br><br>Meredith Herbst<br><br>City Hall<br><br>P.O. Box 1995<br><br>Vancouver, WA 98668<br><br>RE: HP Inc.'s Comments on the Our Vancouver Our Future 2045, State Environmental<br><br>Policy Act Draft Environmental Impact Statement<br><br>Dear Ms. Herbst,<br><br>This office represents HP Inc. ("HP") as local land use and real estate counsel advising on<br><br>the company's development activity in Vancouver's Section 30. HP is currently constructing its first research and development and office building consistent with the City of Vancouver – HP Inc. Development Agreement ("HP Development Agreement"). The HP Development Agreement currently covers approximately 98 acres located at 18208 SE 1st Street, Vancouver, WA. Please accept and consider these comments on the Our Vancouver Our Future 2045, State Environmental Policy Act Draft Environmental Impact Statement (the "DEIS"). Please include these comments in the record.<br><br>At this time, the City of Vancouver ("City") DEIS does not adequately address the existing<br><br>conditions and impacts of the potential alternatives. HP is concerned that the DEIS uses broad conclusions about potential impacts from the two alternatives and formulaic responses to address and mitigate environmental impacts by an over-reliance on incremental development without assessing the likely environmental impacts that will result from the proposed Comprehensive Plan.<br><br>HP's specific concerns are set forth below.<br><br>I. The DEIS inadequately address the incompatibility of land uses as related to impacts resulting from the Regional Activity Center Zone. Alternative 1 shows Section 30 as zoned mostly Mixed Use and surrounded by the Regional Activity Center ("RAC") zone to the south. DEIS, p. 26. In assessing the impacts of Alternative 1, the DEIS states, "Alternative 1 would have a modestly higher potential for incompatibility between existing land uses compared to the No Action Alternative, as it would accommodate denser and more intense building types and growth, and a greater mix of residential and commercial land uses, in more areas of the city." DEIS, p. 55.<br><br>The DEIS's description of incompatibility does not address the mixed use designation in Section 30 and associated impacts based on known approved uses, including mostly low-density housing development in the northern portion of the section. Further, the overall statement of denser and more intense building types does not give enough detail about the impacts of a RAC to HP's employment-focused development and to housing anticipated in Section 30. The impacts associated with extreme traffic, noise, and other environmental impacts that could occur with the RAC zone designation are not given enough attention. This is true when reviewing the DEIS as a holistic document, where incremental development is used as a justification to not consider the overall impacts of the significant impacts that are known and anticipated under the RAC zone. | The proposed Preferred Alternative as documented in the Final EIS assigns Institutional/Campus zoning to portions of Section 30 that include HP properties, reflecting ongoing collaboration between the City and HP to more appropriately align zoning with current and planned future investments at the HP Campus. This approach modifies the previous proposed application of Mixed Use Neighborhood and Regional Activity Center zoning districts to these areas that was documented in the Draft EIS.<br><br>The Final EIS analysis reflects updated modeling of future citywide transportation impacts of the proposed Preferred Alternative, using the Regional Transportation Council Regional Transportation Model.<br><br>The Final EIS acknowledges that all alternatives have the potential to create impacts to existing transportation infrastructure as a result of expected population and job growth and development, with greater potential impacts under Alternatives 1 and 2 and the Preferred Alternative than the No Action Alternative. Metrics used to assess potential transportation impacts were multimodal and included vehicle miles traveled, level of mode shift, and mobility units. Environmental analysis at the nonproject stage is typically less detailed and is intended to form the basis for future environmental reviews and permitting processes for specific projects.<br><br>The anticipated changes to the transportation system would occur incrementally, and with the implementation of avoidance, minimization, and mitigation measures, no significant unavoidable adverse impacts to transportation are anticipated for any of the alternatives. Future growth and associated increased demand for transportation facilities will be addressed as part of the City's regular capital project planning efforts and updates to its six-year Transportation Improvement Program, as well as through relevant proposed Comprehensive Plan Update goals and policies.<br><br>Refer to the Transportation section of Chapter 3 of the Final EIS for more information about potential impacts related to the Preferred Alternative and proposed avoidance, minimization and mitigation measures.<br><br>The Public Facilities and Services element in the Comprehensive Plan and associated Capital Facilities Plan that lists planned capital facilities projects for six and 20-year time horizons are mandatory components of the City's Comprehensive Plan periodic review update. The Public Facilities and Services chapter identifies existing City capital facilities and services, existing capacities and likely future demands, level of services standards, planned future investments and costs, and funding sources for these future investments. The Capital Facilities Plan provides detailed project lists for the 1-6 year and 7-20 year planning periods for all required facilities and services including wastewater, water, surface water, solid waste, fire and emergency services, police and public safety, transportation, parks, recreation and cultural services, and general government facilities that serve multiple service areas like the new City operations center and City Hall, among others. These components meet the requirements for capital facilities and service planning under the Growth Management Act and relevant state statutes. The City is not required to forecast future capital facilities needs for electricity or energy demand under the GMA because it does not own or operate these utilities, but the Capital Facilities and Services element does reflect coordination with energy provides who have confirmed their ability to meet energy demand associated with the proposed Preferred Alternative. |

|---|---|---|
| | Alternative 2 designates most of Section 30 as RAC. DEIS, p. 29. Similar to the impacts analysis above in relation to Alternative 1, the impacts of the RAC designation on the HP property and other Section 30 properties are not fully assessed against this intense designation. No effort is made to address whether RAC is a compatible use to employment development on the HP property or whether generally low-density housing would be approved along the northern portion of Section 30. In addition, while the general description of impacts acknowledges that eastern Vancouver would be one of the most impacted areas under Alternative 2, the DEIS does not acknowledge the actual or potential impacts from the RAC zoning. DEIS, p. 56. As with Alternative 1, the Alternative 2 analysis is based on a false premise that the entire Section 30 would develop as a RAC, when the most recent approvals in Section 30 include generally low-density housing to the north of HP's property and employment uses on the HP property, including both pre-annexation development agreements ("PADAs") and the HP Development Agreement would be highly unlikely to redevelop over the life of the Comprehensive Plan update. All of these agreements will limit the ultimate redevelopment and development within Section 30.<br><br>The DEIS should be supplemented to more accurately represent the anticipated pattern of development within Section 30 in order to assess the amounts of housing and jobs to be developed in this area, and to assess the full range of impacts from the RAC zone to properties within Section 30 that will be developed pursuant to approvals under the PADAs or other existing development agreements.<br><br>II. The DEIS inadequately addresses transportation impacts.<br><br>As the City is aware, RCW 36.70A.070(6) requires that the Comprehensive Plan update forecast multimodal demands and needs within the City for at least ten years and identify state and local system needs to equitably meet the current and future demands. HP retained TENW to peer review the transportation section of the DEIS. See Attachment 1. The TENW memorandum methodically outlines the shortfalls in the DEIS including, but not limited to:<br><br>• Failure to assess multimodal level of service standards;<br><br>Inadequate analysis of the zoning designations in the alternatives and their impacts to the transportation network and the required comparison between alternatives based on those impacts; and<br><br>• Inadequate assessment of transportation improvements to mitigate impacts.<br><br>Therefore, the DEIS does not include the necessary analysis required under SEPA or the GMA. For all these reasons, the overall conclusion in the DEIS that there are no significant unavoidable adverse impacts to transportation anticipated for any of the alternatives is not supported.<br><br>Further, the public is foreclosed from full participation because the DEIS did not fully assess transportation impacts. A supplemental EIS should be issued with a comment period once the required analysis to address all transportation impacts is complete, or the DEIS should be reissued for additional comment after the analysis is performed.<br><br>III. The DEIS inadequately addresses Energy Utilities as a Public Service.<br><br>The DEIS contains only a terse review of energy infrastructure and plans to expand the same to accommodate future growth. DEIS, p. 127. In that narrow discussion, the DEIS includes conflicting information. Relying on Clark Public Utilities' ("CPU") planning documents, the DEIS states that, "In their 2024 Integrated Resource Plan, CPU forecast that sufficient energy resources are available to meet customer demand through 2035; however, there is already a deficit in energy capacity, which is expected to grow through 2044. (CPU 2022)." Id. (Emphasis added).<br><br>This acknowledged deficit deserves more and necessary attention and analysis in the DEIS.<br><br>As shown in the attached memorandum from HP's energy consultants, PAE, HP's first<br><br>building under construction and future buildings could take a significant portion of the existing and planned CPU energy load in the early years (upwards of 75% of CPU's expected new load in 2026) assessed in the Integrated Resource Plan ("IRP"). Attachment 2. As PAE describes, it is unclear whether HP's demand could result in a shortfall of energy supply and delivery for the company's development authorized in the HP Development Agreement; or for other users over the planning horizon. Further, if a short term energy supply problem occurs, then there is no ability to accurately assess or rely on "long-term planning" as a panacea in the DEIS for addressing the impacts of existing and | |

| ID | Full comment | Response |
|---|---|---|
| | future energy demand both by known users and other planned for but unidentified users under the alternatives examined in the EIS.<br><br>Given the foregoing, the conclusions regarding consistency with Capital Improvement Plans at DEIS, pp. 135 and 137 are unsupported. The IRP anticipates a deficit of energy supply over the planning period. Further, the DEIS relies on formulaic answers to impacts to public services from Alternatives 1 and 2 at DEIS p. 136-137 that are also unsupported. The overall call for long-term planning as a mitigation measure is not adequate to address known environmental impacts. No understanding of the electrical supply or location of expanded facilities for energy have been discussed or disclosed. Attachment 2. Without any supporting evidence identifying mitigation through an open-ended term phrased as "long-term planning" is inadequate. The public, including HP, deserve full disclosure and analysis about the impacts to the provision of energy supply and related infrastructure now in the DEIS process.<br><br>The failure to consider HP's employment-focused development on energy supply and infrastructure is a significant impact that has not been assessed in the DEIS. This failure also highlights that the energy capacity deficit already anticipated is going to be potentially more significant and must be assessed. Now is the time to do this assessment and supplement the DEIS to anticipate and coordinate the energy demand needs of HP's development, as well as the significant growth in housing and jobs anticipated by the DEIS and the comprehensive planning effort.<br><br>At this point, the DEIS is doing a disservice to the public and the coordinated efforts among various provider agencies, like CPU, by failing to fully assess impacts under WAC 197-11- 600(3)(b) and RCW 36.70A.070(3). A supplemental EIS with comment period should issue once the required analysis to address all energy impacts is complete, including, but not limited to, a forecast of the future needs for capital facilities, proposed locations and capacities of such facilities, an ability to meet existing, known future demand, and energy needs for the alternatives in the DIES; or the Draft EIS should reissue for additional comment after the analysis is performed.<br><br>IV. Cumulative effects cannot be fully assessed.<br><br>Since the DEIS is deficient in its analysis of the land use differences between Alternatives 1<br><br>and 2; the transportation impacts; and the energy utilities deficit, the DEIS conclusion that cumulative effects can be addressed through regulatory changes is inadequate. The City is trying to kick the can down the road without the supporting analysis required under SEP A.<br><br>Finally, given the insufficient analysis in the DEIS, it is difficult to see how the public should comment on alternatives for the Comprehensive Plan or how the City Council can be meaningfully informed in choosing an alternative. The City Council should not choose an alternative until the SEPA analysis requested herein is complete. | |
| BZ | "My name is David Hayes and I live in the Southcliff neighborhood.<br><br>I am writing to express my opposition to the Draft EIS action alternatives 1 and 2. The very idea of destroying an historically vibrant neighborhood by demolishing homes to make apartment complexes, multiplexes and commercial enterprises is an anathema to the concept of community.<br><br>Listening to planners at Height Development info meetings I understand there will be no parking provided for the potentially 4,000 new residents. That is unbelievable! While the idea of using bikes and public transportation is laudable, the vast majority of families and adults will own automobiles which end up plugging area streets, creating high traffic, noise, and pollution.<br><br>Reality is that public transportation isn't efficient or convenient for many tasks, trips, jobs or vacations. A planner said a survey found people preferred housing over parking – ""would you prefer housing or a place to park your car"? That is not a legitimate survey question! A development of this size needs a parking garage either above or below ground.<br><br>Southcliff is an attractive neighborhood because of its' quiet walkable tree lined streets. Commercial building as planned by the city would destroy trees and habitat and crowd the streets with parked cars. This additional traffic would add both ambient and runoff pollution. We have all made serious investments in our homes and neighborhood | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| | > The loss of mature trees that would result from redevelopment are 70 years old and some are over 100 feet high. Southcliff has one of the highest foliage tree canopy coverages in the city of Vancouver, (a vital contributor to the city's Tree City USA)<br><br>I understood that the Heights District redevelopment would mean construction of commercial and multi-story buildings. If the City needs more density, please add it to the Heights plan and not Southcliff. In addition, the city/state could provide incentives to developers to improve and add to underused commercial properties with space to achieve 2045 goals for commercial development. A good example of this is the former<br><br>Garrison Square. Also provide grants to developers, Apt owners, Vancouver Housing Authority to rebuild on existing properties to increase housing density to 2045 requirements.<br><br>> The loss of trees and shrubs will mean the loss of wildlife habitat and shade, and an increase in noise from Mill Plain traffic.<br><br>Increased housing and commercial use will decrease impervious surfaces as they will become covered by rooftops and driveways. This will stress our stormwater infrastructure, putting more stress on Blanford stormwater basin that due to climate change and more rain in winter is inadequate for future runoff and pollution mitigation.<br><br>> In addition, adding mixed use commercial, with no parking means our streets will be jammed with parked cars and additional traffic from proposed businesses will increase the likelihood of accidents and remove the open and safe quality of our neighborhood. With no new access planned from Mill Plain Blvd, all new development will funnel onto our curvilinear residential streets, creating severe congestion and safety hazards for pedestrians and cyclists.<br><br>> The proposed zoning changes directly violate Southcliff's long-standing restrictive<br><br>> covenants (since 1954) and the 2001 Neighborhood Action Plan which mandates single family residential building height to two stories. This covenant has not been revoked by Southcliff property owners.<br><br>> Southcliff is a historical mid-century modern neighborhood. The imposition of high density, mixed-use development will irrevocably alter its unique architectural and historical identity.<br><br>> With the dynamic increase in density of housing combined with an anticipated overflow from the Heights District, this will overwhelm existing street parking and will not allow parking for other neighbors using Southcliff Park as they do today. As a mixed-use neighborhood, the proposed strategic pricing mechanism for on street parking in areas would also effectively charge residents for parking in our own neighborhood.<br><br>><br><br>> Our property has a 100ft utility easement for the 115 KV transmission line that was installed prior to 1947. If this rezoning is to take place, the city or the developer would incur the cost of the relocation of the transmission lines, not the utility company.<br><br>><br><br>> I enjoy the park with many people from other neighborhoods who visit for the quiet peaceful setting, and safe environment for families to grow and appreciate nature, and for younger families in our neighborhood. Groups of moms bring their toddlers for these very reasons because of the open space, safe environment and shade. The wide streets are perfect for walkers, bikers, and dog walkers who come from all over.<br><br>> Southcliff is like a PBS Nature Program for all seasons. Winter, when the snow is on the ground you see the tracks of deer, coyotes, raccoons, possums , rabbits and various bird tracks. Hummingbirds will be close to the feeder, no more than 6 feet away when the snow is falling and it's 20° outside. In spring with trees budding, and birds singing, our flowering cherry is in bloom for all to enjoy. Migrating birds and bees use that tree for sustenance while it is flowering. Many bird varieties visit.<br><br>> At night you can see the barn owl, the great horn owl and Screech Owl in our tall trees if you look hard enough. In our garden, first my mason bees, which are out before the honeybees, begin pollinating the fruit trees and flowers. Other bees, wasps and hummingbirds follow | |

| | safety issues for our neighborhood walkers and cyclists. Today, there is no traffic congestion; vehicles are generally limited to our residents and their visitors.<br><br>Increase in volume of pollutants and run-off would be the result of increased volume of vehicles in our neighborhood and added impervious surfaces to accommodate commercial and mixed-use development. Our neighborhood rain garden was intended to help remove pollutants in rainwater run-off based on the current volume of vehicles.<br><br>Property values will be negatively impacted. The proximity of commercial and mixed-use buildings in our neighborhood will greatly decrease the value of our residential properties.<br><br>It is my understanding that the Heights District redevelopment was intended to be the place where commercial and mixed-use high rises would be built. In my view, if the City needs more density it should be added to the Heights District, and not to Southcliff.<br><br>Southcliff is a historic mid-century modern neighborhood that deserves to be preserved. It is appreciated by its residents for its quiet walkable streets and beautiful trees. A sense of peace, quiet and privacy prevails. It is a happy neighborhood; we feel safe here. Adoption of the zoning changes in the city's Draft EIS, Alternatives 1 and 2 would change all of that. Our way of life would be destroyed. Please don't do that. I implore you to reject Alternatives 1 and 2; please find another way to meet your density requirements.<br><br>Sincerely,<br><br>Shirley A. Hartman<br><br>Email: [email address]<br><br>Phone: [phone number]<br><br>Residence and US Mail address:<br><br>[address]<br><br>Vancouver, WA 98661 | |
| CF | "9/7/2025<br><br>Dear City of Vancouver,<br><br>My Name is David Pelkey, and I live with my family in the Southcliff neighborhood at [address]. I have reviewed the zoning change proposals being put forth in the City's Draft EIS and discussed the impacts of the plan with many of my neighbors. Like all my neighbors, my family is against both Alternative 1 and Alternative 2 as proposed.<br><br>We purchased our home in Southcliff six years ago so that we could enjoy the neighborhood for its many wonderful attributes. We enjoy the size of our lot, the trees and landscaping, wildlife, low level car traffic, our park, getting to know our neighbors, and the short walk to River Maiden for coffee. The proposed changes would dramatically change the personality and usability of the neighborhood we invested in and love.<br><br>Southcliff would surely see constant construction activity, foot and vehicle traffic increase for residents and visitors, shrinking yards, and high turnover of residents. Accessing parking for retail would bring hundreds of additional cars into the neighborhood each week. The neighborhood would become busy, crowded, and noisy. Southcliff would no longer be Southcliff. It will turn into another busy, crowded, high density neighborhood. Many of those already exist in Vancouver. The new development going into The Heights will bring much greater density, multi-family options, and retail for those looking to live in that environment. This development is a great use for that open space and very welcome.<br><br>Both alternatives violate Southcliff's regulations which allow for one single family dwelling per lot of no more than two stories high. These regulations have been in place since 1954.<br><br>We moved to Southcliff for its quiet, walkable streets and beautiful trees. | Comment noted. | CI | "Dear City Planners and Officials,<br>My name is Leslie Conboy, and I am writing to you today on behalf of my family – Auginne, our young children, and our aging parents – to express our profound concerns regarding the proposed zoning changes outlined in the City's Draft EIS. We reside at [address] in the Southcliff neighborhood, a community we chose specifically for its tranquil atmosphere, walkable streets, and the mature, picturesque trees that define its character.<br>The proposed Alternative 1 and Alternative 2, in their current form, represent a significant threat to the very qualities that make Southcliff such a desirable place to live and raise a family. The addition of commercial and mixed-use developments, particularly multi-story buildings, would irrevocably alter the neighborhood's landscape. This would result not only in the loss of numerous mature trees – a vital component of our community's aesthetic appeal and ecological health – but also in the destruction of valuable wildlife habitats. This is simply unacceptable.<br>We understand the city's need for increased density, but believe that the Heights District, already designated for high-rise development, presents a far more suitable location for such projects. Redirecting development to Southcliff would be a short-sighted decision with long-term, detrimental consequences.<br>The current proposal would transform our quiet, child-friendly streets into congested thoroughfares, with vehicles parked on both sides, significantly impacting walkability and increasing noise pollution. Furthermore, directing access | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | to these new high-rises through our residential streets, instead of utilizing Mill Plain Boulevard, would create substantial safety hazards for pedestrians and cyclists, including our young children and our elderly parents.<br><br>The environmental impact is also a serious concern. Southcliff's meticulously planned rain garden is designed to manage rainwater runoff based on existing traffic patterns. A significant increase in vehicle volume, as proposed, would overwhelm this system, leading to increased pollution and potentially harming the environment our children will inherit.<br><br>Southcliff is a historic mid-century modern neighborhood, a unique asset to our city. It deserves preservation, not demolition for projects that cater to projected population growth well into the future. We urge you to carefully reconsider these proposals and prioritize the preservation of our community's character, safety, and environmental well-being. We believe a more thoughtful and integrated approach, focusing on the already designated Heights District, is crucial for sustainable development.<br><br>We implore you to listen to the concerns of your residents and work towards solutions that protect the unique identity and quality of life in Southcliff.<br><br>Sincerely,<br><br>Leslie Conboy<br><br>[address], Vancouver, WA 98661<br><br>[email address]<br><br>[email address]<br><br>" | |
| CJ | "Hello I live at [address]. This address is zoned light industrial, along with all the residences on my side of this street. Across the street from my house, all the homes are zoned residential.<br><br>As I have just under 1 acre of property, most of which I don't use, I've contacted several agencies regarding building an ADU or allowing folks to live in tiny homes on my property. I have been told no to all of that and further that there is little chance of my ever being allowed to do this, because of the light industrial zoning.<br><br>My house is down the street from Fruit Valley Elementary School and Fruit Valley Park, which has recently been upgraded and is now wildly popular with children and parents. There is also private and public housing, a mobile home park, multi-plex apartments and single family homes. About a mile down the street from me you can get to Shillapoo Wildlife Area where folks can fish, hunt, hike, bike and access Vancouver Lake. This is also one of the most people dense and low-income areas of Vancouver.<br><br>I would like to ask that rezoning be considered for my address at [address]. so that I can help to make more housing options available for Vancouver residents. This would also allow me to create an income stream for me to be able to stay in the area through my retirement, and sustain my efforts to help with housing and maintain my local community connections. I would also be happy to consider working with any local organizations to make this happen or perhaps create a tiny house community.<br><br>If the city is sincere in its efforts to create more housing opportunities for the people of Vancouver, and also sincere in its efforts to assist those with lesser resources, I would ask that the city of Vancouver look into options like these rather than continue to encourage rampant industrial and business growth in the Fruit Valley area. Current industry in the area already creates noise, pollution and traffic throughout the day and night. Allowing more industry would add more noise and more pollution.<br><br>I can also tell you that as of this time I have no intention of using this property for a light industrial business of any kind. Further, whenever I am ready to sell the property, I will do my best to insure that it is sold to a family and not a business.<br><br>Thank you for your time, | Please refer to the response to Comment 294. |

| CK | "Dear Ms. Major<br><br>Attached are comments we have submitted regarding updates to the comprehensive plan. If you avoid opening attachments, I have pasted the body of the letter below. In short, we are in favor of ""No Action"" as both our quality of life and our property value would be severely affected by zoning changes.<br><br>Thank you,<br><br>William Craine<br><br>[address]<br><br>Vancouver WA 98661<br><br>1. Regarding the Our Vancouver comprehensive plan update, please record our comments and forward them to all appropriate decision makers. Our names are William and Debra Craine. We have lived at [address] in the Southcliff neighborhood since 2002.<br><br>2. We have reviewed the zoning change proposals being put forth in the City's Draft EIS.<br><br>3. We strongly support a "No Action" alternative with whatever zoning features would best preserve the historic character of our neighborhood. While we understand that some changes may be required by State mandates, we urge those changes be kept to a minimum.<br><br>4. Because our property backs Mill Plain Blvd, we are among those owners who would be most severely affected by zoning changes. Our reasoning against the "Action Alternatives" include:<br><br>a. Both Alternate 1 and 2 are incompatible with established long term planning. When we returned to the area in 2002, following a military career, we paid particular attention to existing and proposed land use standards. The Southcliff restrictive covenants (dating to 1954) and the 2001 Neighborhood Action Plan both mandate single-family residential use with building heights restricted to two stories. All the properties have off street parking. Our purchase was based on an expectation the look and feel of the community we were joining would be preserved into the future. The action alternatives could replace our exiting adjacent neighbors with commercial and mixed use buildings up to 8 stories high. I don't see provisions for off street parking. Those changes would fundamentally alter the character and value of our property.<br><br>b. The action alternatives either disregard or dramatically expand the impacts of the Tower Mall (Heights district) redevelopment. Southcliff is immediately adjacent to that property which is already being redeveloped with commercial and mixed use high rises. The lack of required parking is already expected to spill traffic congestion from there into our neighborhood. I believe Injecting higher density into both locations will make parking impossible. If higher density is required, it should be concentrated at Tower Mall while addressing adequate parking there.<br><br>c. Southcliff is a historic mid-century neighborhood that should be preserved. The quiet streets and mature tree canopy provide a healthy and safe environment for both children and retirees to get exercise and connect with neighbors. With adjoining undevelopable land, Southcliff is a haven for wildlife. We have friends in Washington and other states where the real estate trends are toward gated communities designed to mimic the look and feel of what exists in Southcliff. We are not gated and welcome visitors to our streets and park. I don't believe allowing higher density zoning to destroy the character and historic identity of Southcliff will actually concentrate land use. It will simply remove green space in Vancouver while shifting low density development to less diverse and more affluent communities.<br><br>d. In essence, the proposed rezoning is a taking of our assets. Our present quality of life is an asset that significant rezoning would devalue. Our privacy is an asset that the placement of an eight story building on a nearby or adjacent lot would destroy. Our home is a financial asset the changed character of the neighborhood would deflate. The personal costs of either action alternative are an unreasonable burden to place on people who are already accommodating high density redevelopment on bordering property. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| | 5. Thank you for the opportunity to comment. We again urge you to pursue plans that focus on renewal and development of existing commercial and mixed use zoned properties along Mill Plain Blvd. Southcliff is a small pocket of land with an established community. It is not in the interest of our neighbors or Vancouver at large to discard decades of community planning in favor of a drastically different vision.<br>Respectfully<br>William L. Craine Debra A. Craine" | |
| CL | "September 8th, 2025<br>Meredith Herbst<br>City Hall<br>PO Box 1995<br>Vancouver, WA 98668<br>Subject: City of Vancouver Comprehensive Plan Update Draft Environmental Impact Statement.<br>Dear Meredith,<br>The Washington Department of Fish and Wildlife (WDFW) appreciates the opportunity to review the Draft Environmental Impact Statement (DEIS) for the Vancouver Comprehensive Plan Update as well as the earlier opportunity to comment on the scope of the EIS. We are pleased to see that many of our initial comments have been incorporated into this DEIS and commend the City for its efforts to integrate ecological considerations into its planning process.<br>WDFW worked collaboratively with the City of Vancouver on the development of its Critical Areas Ordinance (CAO), and we are confident that the adopted ordinance provides a strong foundation to ensure no net loss of ecological functions. In reviewing the DEIS, we support whichever alternative offers the greatest protections for critical areas, recognizing that minimizing cumulative impacts near key habitats is essential to maintaining ecological resilience and preserving critical habitat functions over the long term. We also support options that allow for more flexibility for future development to avoid and minimize impacts to critical areas.<br>Zoning Designations and Priority Habitats and Species (PHS)<br>WDFW supports the City's use of the Natural Areas zoning designation, which include lands currently zoned for greenways and natural areas, where housing would not be allowed, as this aligns with the goals of WAC 365-196-815, which encourages innovative zoning techniques to protect critical areas. WDFW recognizes that the zoning adjacent to most areas of Burnt Bridge Creek is currently designated as Medium Scale Neighborhood (MSN). Given the current MSN zoning in place along the creek, WDFW recommends the City consider clustering development away from critical habitat and incorporating low-impact, green infrastructure to minimize ecological disruption and enhance habitat connectivity.<br>We also note that some of the proposed rezones are located on parcels heavily encumbered by Oregon White Oaks (OWO). We sincerely appreciate that the City has incorporated WDFW's OWO management recommendations into its CAO. However, allowing an upzone on parcels dominated by OWO will likely lead to development pressures that trigger reasonable use provisions, resulting in unavoidable impacts to these ecologically significant habitats. We have included Attachment 1: "Oregon White Oaks in Zone Change Areas" for review and encourage the City to carefully consider zoning designations on such parcels to avoid scenarios where protection of these habitats becomes more difficult due to incompatible land use expectations.<br>Prairie Ecosystems<br>Historically, the Vancouver area hosted prairie ecosystems, which are now rare in southwest Washington. A Washington Department of Natural Resources Natural Heritage Program (DNR NHP) report documents the locations of historical prairie areas, contemporary grassland areas, and areas with soil types suitable for prairies in Clark County, including locations within the City of Vancouver (Caplow and Miller 2004). Westside prairie is a category of | The proposed Preferred Alternative maintains the Naturals Areas zoning designation citywide, which prohibits new development in these areas. With the Preferred Alternative, zoning adjacent to the Burnt Bridge Creek corridor would include a mixture of Natural Areas, Parks, Low Scale Neighborhood and Medium Scale Neighborhood.<br>The Plants and Animals section of Chapter 4 of the Final EIS notes that regardless of alternative, all future development projects will be required to comply with city, state, and federal requirements for protecting plants, animals, and their resources and resulting in no net loss of functions and values in critical areas. Locally, these requirements include the City's updated Critical Areas Ordinance (CAO), which reflects best available science and complies with all state requirements for protection of critical lands and environmental resources. The CAO will apply to all development that occurs under the proposed Preferred Alternative, offering protections for critical areas including White Oak habitat.<br>The Preferred Alternative aligns with proposed Comprehensive Plan Update goals and policies in the Climate and Environment, Parks, Recreation and Cultural Services, and Land Use and Development elements designed to facilitate planned growth while protecting critical areas, environmental resources, and open space and natural areas that contribute to community and environmental health and wellness. Relevant policy measures proposed in the Comprehensive Plan Update to avoid, minimize, and mitigate potential impacts on plants and animals of the Preferred Alternative are referenced in the Final EIS and include the following:<br>• Meet tree canopy coverage goal of 28%, using the City's Equity Index to target investment in underserved neighborhoods lacking coverage.<br>• Take inventory of and protect climate refugia and fish and wildlife habitat needs for species under stress from climate change.<br>• Prioritize integrating green infrastructure into new development, redevelopment, replacement of existing infrastructure, and development of public spaces within the City to improve stormwater quality and reduce urban heat island effect.<br>• Support a healthy urban ecosystem by embedding pollinator habitat into public and private development, prioritizing pesticide-free landscaping, enhancing biodiversity, and connecting natural spaces across the City through pollinator-friendly plantings.<br>• Incorporate native plantings, food forests, and agroforestry into parks and public spaces to support food security, ecological health, and cultural knowledge sharing.<br>• Create an expansive network of linear parks that encourage active transportation, improve community health and wellbeing, enhance tree canopy and stormwater management, and link parks and open space with housing.<br>Updated landscape and tree standards in the proposed Vancouver Municipal Code Title 20 Development Code were developed in collaboration with the City's Urban Forester, include best management practices, and reflect increased requirements for retention of mature trees and the addition of new trees. The proposed code updates exclude critical areas from density calculations to ensure flexibility for new development to meet other standards while preserving environmental resources. |

|---|---|---|
| | priority habitat per WDFW's Priority Habitat and Species (PHS) List, and they can host priority species such as the Taylor's checkerspot butterfly, valley silverspot butterfly, monarch butterfly, and Western bumblebee. WDFW recommends that critical areas surveys conducted prior to development include surveys for diagnostic prairie species, particularly in the areas identified in the DNR NHP report (Attachment 2). WDFW's PHS List provides lists of diagnostic vegetation species for both dry and wet westside prairies. We recommend that such vegetation surveys be conducted during the growing season; when possible, it is beneficial to conduct multiple surveys throughout the growing season to facilitate the identification of species that flower at different points in the season.<br>Tree Canopy<br>Lastly, a recent study of western Washington neighborhoods identified "brightspots", areas where housing density increased while maintaining or enhancing tree canopy cover. Notably, one such brightspot was located in the Orchards area of Clark County. This example demonstrates that thoughtful urban growth and ecological protection can coexist. Most brightspot neighborhoods were within existing urban areas, underscoring that housing densification can be compatible with tree preservation, biodiversity, and ecosystem function. We support the City exploring these "brightening" outcomes and building on local successes.<br>Thank you for the opportunity to provide input. WDFW looks forward to continued collaboration with the City of Vancouver.<br>Thank you for your consideration,<br>Brittney Salter, WDFW Southwest Washington Land Use Planning Lead<br>Reviewed and approved by:<br>Dave Howe, WDFW Region 5 Habitat Program Manager<br>Amaia Smith, WDFW Region 5 Assistant Habitat Program Manager<br>Joy Peplinski, WDFW Region 5 Habitat Biologist<br>" | Continued implementation of the City's Urban Forestry Management Plan will help to enhance the level of tree canopy cover citywide, which can help to reduce stormwater and flooding damage, improve air quality, provide habitat, and improve health outcomes. Continued updates to this plan will help to identify areas of the City that have fewer trees than others and develop strategies to help increase the tree canopy in these areas.<br>The City appreciates the comments and collaboration with the Washington Department of Fish and Wildlife and looks forward to ongoing partnership to ensure responsible growth that maintains the quality and health of environmental resources and critical areas across the City. |
| CO | "Aug. 30th. 2025<br>Meredith Herbst<br>City Hall<br>P.O. Box 1995<br>Van. Wash. 98668<br>My name is Darlene Lehmann and I live at [address] in the Southcliff neighborhood.<br>I am against the adoption of both Alternative I and Alternative II as currently proposed.<br>Both of these Alternatives violate how this Southcliff neighborhood was zoned. The zoning was single family homes on each lot. Not over two stories. This zoning has been in force since 1954 and it should remain as single family homes.<br>We bought our home in 1995 with the idea of living out our lives in a nice quiet neighborhood.<br>We love this neighborhood. Everyone living in Southcliff does also.<br>Now the streets are saf there are a lot of us who walk the streets. This will change with heavy traffic that goes along with rezoning.<br>Kids ride there bikes to the park to play in the park on the slides, swings.<br>Lots of us older neighbors walk their dogs on the streets with not much traffic, which would change with the proposed new rezoning.<br>Please leave our neighborhood in Southcliff alone. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

|---|---|---|
| | People living here love their homes and love the way we can all be safe here. Rezoning would destroy that.<br>Yours truly<br>Darlene Lehmann<br>+<br>Richard Bjerke" | |
| CQ | "Southcliff<br>I'm writing to express my objections to the zoning change proposals that the City's Draft EIS has set forth. Also I want to describe our neighborhood in hop[es that you will better understand how our lives will be impacted if Alternative 1 or Alternative 2 is adopted.<br>I moved around a lot as a kid. I was 13 when my family moved here. My dad was in the Army and we were stationed at Vancouver Barracks. We had lived in at least eight cities. I learned things about neighborhoods living in all these cities. There was always one or more neighborhoods that stood out. Large or small, old or new, grand or modest, the neighborhoods had these things in common. The lawns were trimmed, the houses were in good repair, the streets were nice, there were green trees, and usually we'd see children playing. The neighborhoods had a certain aura to them. It was easy to see why; they were attractive and appealing. The owners cared about and took pride in them.<br>Fast forward quite a few years. My husband and I had the wonderful opportunity to buy a home in Southcliff. We bought it from the original homeowners. We felt like we had won the lottery because Southcliff was one of THESE naeighborhoods. We were always proud to say we lived here. We raised our family and grandkids here. We have lived here for 39 years. We have many memories and history here.<br>The following are memories I have which all took place in the street. I'm mentioning this because these streets are very important to us today. Just as they are; no sidewalks, very little traffic – just nice wide streets.<br>Memories. In any given day we knew that our wide and not-very-busy streets were safe for the often wobbly bicycle riders. We were confident that our skateboarder would not be run over and that he had the necessary space to ""keey trying"". Both our kids and grandkids learned how to drive on these streets. In fact one daughter learned how to drive a ""stick shift"" hopping and jumping all around the neighborhood. We watched kids running back forth between houses for play dates. We saw hundreds of tricker treater at Halloween because parents knew that we were a dependable, welcoming neigborhood. And again, our wide streets were not busy. Our daughters practiced tennis for hours on Rhododendron. Occasionally they would have to move for an ongoing car. There has been square dancing street parties where the street was blocked off (permission granted by the city) and all ages were welcomed... the list goes on and on.<br>I'm an older woman now. Every single day I look out my window and see people walking. Some are walking dogs. Kids are playing basketball. Young parents strolling by with babies. I see an elderly couple holding hands walking slowly and carefully. I see a woman and her aging mother go by. I see quite a few joggers and several cyclists. I see an old woman with her cane walk to the corner.<br>I see Eagles circling and birds of many species. I see the Cooper Hawks that come back year after year to the nest in the trees next door. They are protected by federal law.<br>And I wonder... where would this all go<br>When my husband and I took out the mortgage on our home we acknowledged that the neighborhood had certain covenants. We considered it our priveledge and duty to abide by them. We took this very seriously. The covenants were established to protect us, the homeowner. It is a formal agreement of legal validity. Attached is a copy of the original copy of these covenants. Aren't covenants honored today?<br>I'm opposed to Alternative 1 and Alternative 2. I don't want ANY buildings to be built that would alter what is already here. I don't want multiple parking problems and congestion that would be a natural offshoot from the proposed building. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | Congestion would be so unsafe especially for our elderly population who walk in these streets daily. It would be unsafe for children. And for many of us.<br><br>I'm opposed to these changes that would happen to our natural habitat. And mostly, I'm opposed to the demise of our neighborhoods as we know it today.<br><br>Southcliff is an older, established neighborhood. It is a good place. It is a neighborhood the city can take pride in. It is a treasure well worth preserving.<br><br>Toni Henderson<br><br>[address]<br><br>Vancouver, Washington 98661" | |
| CR | "The following comment concerns the Alternatives (Maps), Housing, Aesthetics, and Historic/Cultural Preservation.<br><br>First and foremost neither Alternative 1 or 2 are acceptable ""as is"" due to the gross rezoning of the Hough and Arnada neighborhoods. The City should instead consider keeping a R9 like zoning posture (what is referenced as Low Scale Neighborhood) through the bulk of these neighborhoods augmented by more use of Mixed Use and/or Medium Scale along the perimeters i.e. along Fourth Plain, adjacent to I5 to H St., and along Kaufman from Fourth Plain to 33rd St. (encompassing the abandoned retail center, old Hidden foundry, etc..). This would be in addition to the Mixed Use corridor along Broadway/Main/Columbia.<br><br>In support of this position please consider the following:<br><br>Enough recognition is not given to the density that can be achieved with the existing State and City land use policies and zoning already existing in these areas. As a Tier A city under HB1110, Vancouver must already allow at least 4 homes per lot. Because these neighborhoods are served by mass transit, those within a quarter mile, which is over two thirds of the neighborhood, are required to support 6 homes per lot. (CTRAN #6 stops 6057, 6058, 6059, 3285, 6060, 6061, 6075, 6076; #2 stops 3285, 3294, 0524, 0525, 2003, 3492; Vine Green stops 6152, 6160). Furthermore, SB5559 and SB1096 have enabled administrative lot splitting to simplify the process of obtaining lots to which these houses can be built. Locally VMC 20.927 allows for narrow lots less than 40' including the provision of flag lots up to four. Under VMC 20.910.50 these can be zero lot line with appropriate covenants. This is important when taken in consideration of VMC 20.410/20.920 which allows specifically for R9 to have infill Tier 1 lots of 1500 sq.ft. (min 22.5ft wide/32.5ft deep). A good example of this is parcel 47284000 on 25th where a 5625 sq.ft. lot will be subdivided into 3 lots with a house and 2 ADU per lot using all of the above provisions thus achieving a density of 46 units per acre. If anything is needed, it would be streamlining processes and cost to achieve this density under R9, not entirely new zoning.<br><br>Historically, Hough and Arnada are irreplaceable assets to this city. I live in Hough and presently restoring one of the 12 homes cited in the filing for the neighborhood's historic designation. I am distraught that the city would want these neighborhoods turned into rows or apartment complexes (Medium Density with 5 story structures). It is actually unusual (we did a search across the nation before selecting Vancouver) to find a vibrant neighborhood of 1900-WWII era housing that has a walkability score in the 90's. As this city, and country for that matter, tries to grapple with what community means, please consider that this housing type is porch oriented, meaning it encourages neighborly interactions, something that is palpable to anyone who spends time in it, and not readily found elsewhere in the city. These neighborhoods also represent an important cultural heritage that is being lost to the community as they were the housing stock for the Kaiser shipyards. There are dozens of fascinating stories we have uncovered in our own house and in talking to neighbors and it is not enough to just memorialize those in the CCHS museum and then tear them down.<br><br>The report does call out ""medium-scale building allowed in this new zoning district [for both Alternatives] could have impacts on neighboring historic properties if they resulted in changes to their settings."" But the report then nonchalantly dismisses the risk by saying it has the ""lowest capacity for new housing units based on market forecasts and feasibility studies"". There are two issues with this. First it wrongly views the significance as a few historical objects when it is the neighborhood itself that is a majority of the significance. Saving a few structures as islands is | Since the Draft EIS, the City has developed a proposed Preferred Alternative land use map, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>The Preferred Alternative would zone Hough and Arnada as a mix of Medium-Scale Neighborhood and Mixed-Use Neighborhood, with Regional Activity Center along Main Street, as documented in the Final EIS. This approach aligns with Council direction to focus more housing and mixing of uses in and around key centers (e.g., downtown) and in areas such as Hough and Arnada that are already well served by infrastructure, businesses, transit, parks, schools, and other essential facilities and services.<br><br>More information on streamlining the development process can be found in the draft Comprehensive Plan and draft Zoning Code, both of which are available on BeHeard Our Vancouver.<br><br>Refer to the Historic and Cultural Preservation section in Chapter 3 of the Final EIS for more information on the potential impacts to the Hough and Arnada neighborhoods as well as proposed measures to address those impacts. Refer to the Aesthetics section of Final EIS Chapter 3 for more information on the potential impacts of taller buildings and proposed Comprehensive Plan policies to address these impacts. Refer also to the Common Response #11 Neighborhood Character for additional information. |

|---|---|---|
| | not saving the characteristic of Hough/Arnada. And to what criteria do we hold what gets saved. My house was built by the neighborhood plats' namesake Elbert Biesecker, but he never lived in it as it was a rental property. It's big and Victorian so everyone loves it, but that was after decades of add-ons and renovations and ornamentation added post war, so is it really historical? As a neighborhood there are 512 contributing structure (whereas only 124 non-contributing), so again it is a neighborhood designation. Second, the feasibility study is based on vacant buildable land, which there is not a lot of, but does not account for economics and incentives which eliminate the need for vacancy in order for something to be built. These neighborhoods have already seen close to a dozen tear-downs for newer housing to be built, so the economics are already at our doorstep. Put in place the ability to build 5 story apartments without rezoning requirements, and you open the door to have complexes with single bedroom apartments charging rent equivalent to the mortgage of each the 3 or four homes torn down, not a hard business case to get investors for. This is not my first go around in an urban neighborhood with historic home undergoing gentrification and development pressures. I know from first hand experience that once the door is open it is extremely hard to close back. We had apartments tearing down houses on one end while on the other houses were being torn down to build McMansions. It took the neighborhoods 5 years to finally get designations and zoning changes to stop and only after some significant damage to the historical integrity of the neighborhood.<br><br>I think it is worth mentioning that calling for historic preservation in the context of keeping the existing zoning, is not a call for a freeze on building or a NIMBY argument. A defining part of this historic neighborhood has been the organic nature of how it had developed and should be a part of it going forward. Thoughtfully adding structures and adapting structures has been an important and defining part of the neighborhood, whether that be an old structure from the prune farm that occupied John Ball Park becoming a house with an odd setback or the later construction of appropriately massed and scaled multifamily with street engagement like Manor Court Apartments<br><br>In the report there is mention of only 49% ownership in Vancouver, much lower than the county and state. Although Hough and Arnada have had extreme price appreciation of late, these neighborhoods offer one of the few opportunities for new structures to be easily and cohesively built, with many potentially on subdivided lots, which would enable opportunity for ownership. Zoning for apartments will not increase ownership and will encourage this as the predominant development investment type. It is also unlikely that the wider ranch profiles found in the later developed neighborhoods in the east are candidates for this easy lot subdivision.<br><br>Lastly, in considering the aesthetics, although mentioned, the report, and the city for that matter, needs to seriously address shadow and frankly air rights. One characteristic that stands out in the new development in downtown/riverfront is stark loss of daylight and lack of street activation (other than compulsory gestures on some facades). When looking at the Riva, Claro, Springs et. al there is no daylight in the street except at high noon. Furthermore there is a lack of street activation making walking something you just want expeditiously get through (in stark contrast to the many found strolling everyday in the Hough/Arnada neighborhood today).<br><br>Taking this closer to Hough we have examples of what are my nightmare scenarios. In the first photo (House-wall) we have why this city needs to have stepped height restrictions and/or air rights (House-wall.jpg). Thankfully in R9 we have stepped setbacks which function to allow light (needed for day-lighting and optimal energy siting for passive heating, thus having impact on energy consumption). I have solar and can only think of how that investment would be thrown away if this happened next door. Of course stepped setbacks may not be plausible for all circumstances, thus why having air rights would enable the house in this situation to make an economic decision, potentially allowing this to be built, but being compensated for the devaluation and other losses. Next we have Navalia (Navalia.jpg) which could be a scene from the movie Up. One can see that this lone building is in the shadow (albeit not as bad as it could have been given that the parking adds a descent setback). Similar to the other examples its street presence is uncomfortable, with an attempt at activation on one side with retail, but yet seemingly unsuccessfully. Personally, our house is surrounded by small houses, some abandoned, and empty lots, so this could easily be our house instead of a small shop.<br><br>Todd Spraggins<br><br>Vancouver (Hough) resident; 98660 | |

| CS | "Dear Our Vancouver 2045 Team,<br><br>My name is Darrell Fluit, and I live here in Vancouver. I work in design and construction, and I care deeply about how we build a sustainable, resilient future for our city.<br><br>I want to share an idea that I believe should be part of our long-term planning: Roofs Before Fields™.<br><br>Across Washington, solar developers are clearing hundreds of acres of farmland and open space to install solar fields. While renewable energy is vital, this approach is backwards. Every acre of farmland we lose is an acre of food security and rural heritage gone forever.<br><br>Meanwhile, Vancouver has thousands of rooftops — schools, warehouses, commercial buildings, homes, and parking lots — that sit empty in the sun. These are surfaces we've already built, and using them first for solar power protects farmland, keeps energy local, and saves taxpayers money by avoiding expensive land acquisition and transmission upgrades.<br><br>Roofs Before Fields™ is common sense. It:<br><br>• Protects farmland and food security.<br>• Strengthens the local grid and energy resilience.<br>• Creates good-paying jobs for roofers and electricians here in Vancouver.<br>• Demonstrates leadership in sustainability and innovation.<br><br>I am asking that the City of Vancouver lead by example and make rooftop-first solar development a guiding principle in the Vancouver 2045 plan. This could begin with a pilot requirement: solar on all new schools, public buildings, and large commercial projects. Over time, we can move toward making solar rooftops a standard part of new construction in our city.<br><br>This vision ties directly to Vancouver's motto: "A colorful past, a bright future." By protecting farmland, we honor our past. By investing in rooftop solar, we secure our bright future.<br><br>Thank you for considering this idea as you shape the long-term vision for Vancouver.<br><br>Sincerely,<br><br>Darrell Fluit<br><br>[phone number]" | Comment noted. Your comment was reviewed and is outside the scope of the SEPA analysis for the Our Vancouver Comprehensive Plan Update.<br><br>The Air Quality, Greenhouse Gases and Climate section of Chapter 4 of the Final EIS proposes implementation of several policy measures in the Comprehensive Plan to avoid, minimize and mitigate potential impacts to these environmental resources, including expanding community solar access for low-income homeowners and renters.<br><br>Refer to the draft Comprehensive Plan Climate and Environment chapter, available on BeHeard Our Vancouver, for goals and policies related to energy resources. |
| CT | "Hello , my name is Merrilee McGough, at [address] in the Southcliff neighborhood. I have reviewed the zoning change proposals being put forth in the City's Draft EIS, and I am against the adoption of both Alternative 1 and Alternative 2 as currently proposed.<br><br>I came to Southcliff from Bellevue 23 years ago; it is hard to believe that it has been that long. I did not know at the time how wonderful my neighborhood would turn out to be.<br><br>Our neighborhood was built in a snapshot of history; it cannot be replicated or replaced. Owners bought the lots, created the CC&R's and built their dream homes. It is a piece of an original Master Plan Community that was initiated by them, the then movers and shakers of Vancouver, incorporating the Tower Mall area, which now is planned to become designated as The Heights District. Some of those original owners still live here in the same homes, some have moved on in one way or another. A few did leave, but have now returned for a second time, and some are second generation. It is the people that make a neighborhood great. Turns out, it's just too good for people to leave.<br><br>Today, from my home office I look up to see a lovely doe in the front yard, nibbling away on shrubs as she crosses the street back on the way down into Blandford canyon. Another day she came with her fawn. One day, there is a great blue heron that has landed on the neighbor's roof, then swooping down in to visit my pond. The Mallards have permanent reservations here. At dusk there is a big hoot owl in the old birch tree. When I walk to our park I come across deer playing in the grass. We are part of the greenbelt that includes Blandford Canyon, Southcliff Park & | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |

| ID | Full comment | Response |
|---|---|---|
| | Dubois Park, connecting to other greenspaces. Turns out, it is just too good for the wildlife to leave as well. We hope it can stay that way.<br><br>I fail to see how any redevelopment process that calls for paving over Southcliff is the answer to anyone's current problems. It is just not logical, not for this neighborhood, nor does it serve any other citizens of our city. The illogical loss of something wonderful, something that is as green and irreplaceable as this, would not IMHO be progress.<br><br>Sincerely, Merrilee McGough | |
| CU | "Honorable Commissioners and City Councilmembers,<br><br>On behalf of the Village at Fisher's Landing Neighborhood Association (VFLNA), please find attached our board's public comment on the Draft Environmental Impact Statement (DEIS) for the Vancouver 2045 Comprehensive Plan, along with supporting materials. Our neighborhood strongly favors the No Action Alternative as the best way to preserve livability, protect residential character, and honor long-standing land-use agreements. We appreciate the opportunity to participate in this important process.<br><br>Attachments:<br><br>1. VFLNA Board Public Comment Letter – September 2025 (VFLNA Board public comment – DEIS-Vancouver2045- September 2025.pdf)<br><br>2. Appendix A – Summary of Community Survey Results (VFLNA_Public_Testimony_Survey_Summary_May27.pdf)<br><br>Attachments sent separately (due to file size):<br><br>Appendix B – Resident Petitions (Individual Letters )<br><br>Please let us know if any additional information is needed.<br><br>Sincerely,<br><br>Atul Mathur<br><br>President, Village at Fisher's Landing Neighborhood Association<br><br>www.vflna.com<br><br>September 8th, 2025 City of Vancouver Planning Commission and City Council City Hall, PO Box 1995 Vancouver, WA 98668 Re: Comments on the Our Vancouver 2045 Draft Environmental Impact Statement (DEIS) and Alternatives (maps)<br><br>Honorable Commissioners and Councilmembers,<br><br>On behalf of the Village at Fisher's Landing Neighborhood Association (VFLNA), we appreciate the opportunity to comment on the Our Vancouver 2045 process, including the Draft Environmental Impact Statement (DEIS) released July 8, 2025. We value the City's extensive outreach and the State Environmental Policy Act (SEPA) review framing this decision. We also appreciate the clear invitation for public comment now underway.<br><br>VFLNA represents a well-established single-family neighborhood in East Vancouver adjacent to SE 164th Avenue and the SE 34th Street, including Hamlet at Fisher's Landing. VFLNA is a long-standing neighborhood association actively engaged in citywide initiatives, including the neighborhood sustainability efforts. Our members consistently volunteer their time and contribute feedback to enhance livability, equity, and environmental responsibility. Our members carefully reviewed the Action Alternatives 1 and 2 mapping and the No Action Alternative. We understand these alternatives will inform a "preferred alternative" for final environmental review later this year.<br><br>After surveying our residents (100+ verified responses), over 90% support preserving our current zoning and neighborhood form. While we recognize that even the No Action Alternative must incorporate Washington's Middle Housing mandates, our community strongly favors No Action Alternative as the least disruptive and most aligned with neighborhood character and long-standing private deed restrictions. | Comment noted. Refer to Common Response #13 for the City's response to comments about the Village at Fisher's Landing neighborhood. |

|---|---|---|
| | Primary Issues<br><br>164th Avenue and 34th Street sound walls and noise impacts The wall buffering traffic along SE 164th Avenue and the transit center is integral to livability—limiting traffic noise, preserving quiet streets, and maintaining safety and walkability. Residents are concerned that rezoning and associated redevelopment under Action Alternatives 1 and 2 could lead, directly or indirectly, to removal, lowering, or perforation (e.g., new access points) of the wall, or otherwise reduce its effectiveness.<br><br>We request that the Final EIS provide site-specific noise analysis and mitigation commitments for the 164th Avenue edge, including explicit confirmation that any future street or site reconfiguration will preserve or enhance the wall's noise-attenuation function. Vancouver's development standards already contemplate sound walls as mitigation—please apply those standards here and commit to no net increase in noise at the residential property line.<br><br>Requested clarifications in the Final EIS: • Whether any Action Alternative contemplates removal/modification of the 164th Avenue or 34th Street sound wall (or addition of openings) affecting noise performance. • Project-level triggers that would require wall replacement, height, or design changes to maintain current attenuation levels. • How construction-phase noise at the site of Fisher's Landing transit center during its development will be managed for edge properties.<br><br>2) Strong preference for No Action Alternative<br><br>Our position: The No Action Alternative —with only the state-required housing changes— best preserves neighborhood character, avoids glaring incompatibility with CC&Rs, and minimizes displacement pressures while still meeting state law.<br><br>VFLNA's CC&Rs limit lots to single-family residential use, prohibit commercial activity, and preclude lot-splitting. Applying higher-intensity overlays under Action Alternatives 1 and 2 invites confusion or misalignment: City permits could allow uses and intensities that owners are privately prohibited from pursuing, creating confusion, friction, speculative pressure, and uneven outcomes within the same block.<br><br>We recognize the City must implement state Middle Housing requirements (HB 1110) even under the No Action Alternative, but we believe it represents the least disruptive path for VFLNA. Further, as municipal advisors have noted in related contexts (e.g., ADU law), existing private covenants remain enforceable and are not displaced by state housing mandates. Clear public guidance is needed so residents, builders, and staff understand that zoning allowances do not nullify recorded CC&Rs and how the City will message and administer this interplay. While we recognize that CC&Rs are private instruments not enforced by the City, avoiding zoning overlays that would create potential conflicts between private restrictions and public entitlements would help reduce confusion, speculation, and neighbor dispute.<br><br>Community Evidence<br><br>VFLNA conducted a neighborhood survey (100+ verified households). Over 90% favored preserving the current zoning/character and opposed upzoning overlays that conflict with CC&Rs. Respondents cited quiet streets, mature trees, and intergenerational stability as core values. (Survey summary attached.). Since then, around 20 residents of houses facing the 165th Avenue have also requested VFLNA to submit their individual petitions (See attached PDF with scanned petitions) that also request preserving the current zoning/character<br><br>Policy Recommendations & Specific Requests<br><br>1. Preserve and enhance the 164th Avenue and 34th Street sound wall o Commit in the Final EIS and implement policies to retain or strengthen the sound wall's attenuation (no net noise increases at the residential edge). O Require project-level noise studies and mitigation for any redevelopment along 164th Avenue or near the transit center. O Treat any new pedestrian or vehicular openings as Type I noise-sensitive design with equivalent or better acoustic performance. | |

| ID | Full comment | Response |
|---|---|---|
| | 2. Affirm No Action Alternative as the basis for our area o Use No Action Alternative for VFLNA's residential blocks, implementing only those middle-housing allowances mandated by state law (HB 1110), and defer any additional intensity to appropriate corridors with infrastructure capacity.<br><br>3. Respect private CC&Rs when mapping overlays o Avoid applying higher-intensity overlays within platted areas where recorded CC&Rs prohibit multi-unit or commercial uses; direct growth to corridors and centers without these conflicts. It also provides a clearer picture of realistic housing capacity citywide. O Publish a plain-language guidance bulletin explaining that while zoning determines what the City may permit, existing CC&Rs remain private, enforceable restrictions between property owners.<br><br>4. Transparency in the Final EIS o In the Response to Comments, directly answer: a) Whether any action alternative affects the 164th Avenue or 34th Street wall; b) How the City will communicate the zoning–CC&R relationship to applicants and homeowners; c) Where No Action applies in Village at Fisher's Landing, including Hamlet, with maps in the Final EIS.<br><br>Closing<br><br>We support thoughtful planning for growth and housing choice. For the VFLNA area, we respectfully ask the City to select No Action Alternative, preserve the 164th Avenue and 34th Street sound walls'function, and avoid overlays that directly conflict with recorded CC&Rs. These steps will protect neighborhood stability while the City fulfills state housing obligations.<br><br>Thank you for your consideration and for the City's continued engagement. VFLNA stands ready to collaborate and provide additional data, including details of our survey results and on-the-ground observations.<br><br>Sincerely, Village at Fisher's Landing Neighborhood Association Board of Directors www.vflna.com<br><br>References (for staff) • Vancouver Municipal Code 20.912.080, Sound Walls (height and noise-study standards). |---|---|---|
| | There are very few communities in Vancouver that can be compared to South Cliff and allowing Mixed Use and Medium Density housing on any portion would destroy the character and livability of our neighborhood.<br><br>Mixed Use and Medium Density housing development is incompatible with the neighborhood's character. The increased traffic, noise, and parking congestion will dramatically change our neighborhood's quality of life. Mixed Use will impact the safety of children, elderly, and families who use the streets daily for walking and biking. The layout and traffic flow of the neighborhood is not suitable for increased density or commercial development.<br><br>It was our understanding the development of Tower Mall was the ""solution"" to address the increased housing and commercial needs for Mill Plain communities and the city. Now apparently that's not enough. Rezoning portions of South Cliff would not only harm South Cliff but also surrounding neighborhoods who rely on our shared community streets and park.<br><br>Acknowledge and understand the city's need for growth, but growth must be directed to appropriate areas-not historic, low-density legacy neighborhoods.<br><br>I want to reiterate my strong opposition to both proposed options to the DEIS and ask that the City of Vancouver planning team look for alternate solutions to putting both Mixed Use and Medium Density housing in South Cliff or any other Legacy Neighborhood.<br><br>Best Regards,<br><br>John B Rudi<br><br>[address]<br><br>Vancouver, WA 98661" | |
| CW | "Hello,<br><br>Please accept the attached petition titled 'Keep Housing in Vancouver's Future' as formal public input for the City of Vancouver's Comprehensive Plan update.<br><br>This petition has been signed by 97 community members and reflects broad support for prioritizing housing in Vancouver's long term planning. We respectfully request that it be entered into the public record and shared with the City Council for consideration.<br><br>Attached are both the petition text and the signature data for your review.<br><br>Thank you for your time and for ensuring that community feedback is included in this important process.<br><br>Best,<br><br>Kayla Slater<br><br>Keep Housing in Vancouver's Future – Support Housing in the Comprehensive Plan<br><br>The City of Vancouver is finalizing its Comprehensive Plan – the blueprint for how and where we grow over the next 20 years. This is our opportunity to ensure enough multi-family housing is built to meet our community's needs and keep homes affordable for the people who live and work here.<br><br>Why This Petition Matters:<br><br>• Vancouver's population is growing faster than our housing supply. When there aren't enough homes costs rise, families are displaced, and our community's stability erodes.<br><br>• Without enough multi-family homes in all neighborhood's prices will rise faster, more families will be pushed out, and stability will slip further out of our reach.<br><br>• Vancouver's population is projected to grow from 200,400 in 2025 to 267,000 by 2045. An increase of more than 66,000 people in just 20 years. | Comment noted. Since the Draft EIS, the City has developed a Preferred Alternative, which combines elements of Alternatives 1 and 2, for further analysis in the Final EIS and consideration for the Comprehensive Plan Update. Refer to Common Response #1, Selection of Preferred Alternative, for more information about how this alternative is similar to and different from the alternatives reviewed in the Draft EIS.<br><br>Refer to Common Response #8 Housing Affordability/Options, #9: Homeownership Opportunities, and #10 Businesses in Residential Areas, which addresses comments related to mixing residential uses with services and commercial uses. |

| | • Roughly 34,000 additional housing units are needed by 2045 to meet the housing demand of our community. From the published Draft EIS: "Alternative 2 would have the highest capacity for new housing units and 49,300 new jobs citywide."<br>• Vacancy rates for affordable units are at historic lows. Without action affordability will worsen, and more families will face the risk of displacement of homelessness.<br>I hear from families in our community who are terrified they'll lose their housing. Parents here are worried that their children will have to sleep in a car if they can't figure out how to prevent an eviction. Seniors on fixed incomes who can't keep up with rent fear losing the community they've spent a lifetime building. Workers that keep our city running can't afford commutes that drain both time and income. Survivors of domestic violence who can't afford an apartment on their own are forced to prioritize housing over safety. Many of our neighbors are in survival more, they don't have time or energy to attend hearings, write policy letters, or organize petitions. This petition is meant to uplift their voices and ensure our leaders have proper community perspective, the ones necessary to plan successfully for Vancouvers future.<br>By signing you're urging Vancouver's City Council to:<br>1. Keep and expand plans for medium scale and mixed-use areas in the Comprehensive Plan.<br>2. Ensure new housing includes a range of price points so people at all stages of life can find a home here.<br>3. Build housing close to jobs, schools, and transit to reduce cost burdens and keep families connected to their communities.<br>Restricting multi-family housing in our neighborhoods will only deepen the shortage, increase displacement, and push more families into crisis. Vancouver can't afford to turn away solutions when our community need is so great." | |
| CX | City Council & Planning Commission,<br>Let me start by saying (honestly) how very disappointed I am with you all. Southcliff is one of the best neighborhoods in Vancouver, Why would you try to ruin it?<br>We had to move from Vancouver to Renton for my husbands job. A few years later we headed back. We knew exactly what neighborhood we wanted to live in!<br>I've been here for 48 years and raised by children here. Generally, when someone moves here, they stay. We have nice people, a good park and wide roads with no sidewalks. People come here to play in the park, walk their dog and enjoy the peace.<br>SouthCliff is a treasure. It would be a shame to ruin it.<br>Vancouver is now full of appartments. We don't need more & we don't need more people!<br>Please listen to our concerns.<br>Sincerely,<br>J.A. | Comment noted. Refer to Common Response #14 for the City's response to comments about the Southcliff neighborhood. |
